**Note:** For remote files not originating from the `salt://` fileserver, such as `http(s)` or `ftp` servers, this state will not re-download the file if the locally-cached copy matches this hash. This is done to prevent unnecessary downloading on repeated runs of this state. To update the cached copy of a file, it is necessary to update this hash.

**source\_hash\_name** See the documentation for this same argument in the *file.managed* state.

**skip\_verify** See the documentation for this same argument in the *file.managed* state.

**Note:** Setting this to `True` will result in a copy of the file being downloaded from a remote (`http(s)`, `ftp`, etc.) source each time the state is run.

**saltenv** Used to specify the environment from which to download a file from the Salt fileserver (i.e. those with `salt://` URL).

This state will in most cases not be useful in SLS files, but it is useful when writing a state or remote-execution module that needs to make sure that a file at a given URL has been downloaded to the `cachedir`. One example of this is in the `archive.extracted` state:

```
result = __states__['file.cached'](source_match,
 source_hash=source_hash,
 source_hash_name=source_hash_name,
 skip_verify=skip_verify,
 saltenv=__env__)
```

This will return a dictionary containing the state's return data, including a `result` key which will state whether or not the state was successful. Note that this will not catch exceptions, so it is best used within a `try/except`.

Once this state has been run from within another state or remote-execution module, the actual location of the cached file can be obtained using `cp.is_cached`:

```
cached = __salt__['cp.is_cached'](source_match, saltenv=__env__)
```

This function will return the cached path of the file, or an empty string if the file is not present in the minion cache.

`salt.states.file.comment`(*name*, *regex*, *char*='#', *backup*='.bak')

Comment out specified lines in a file.

**name** The full path to the file to be edited

**regex** A regular expression used to find the lines that are to be commented; this pattern will be wrapped in parenthesis and will move any preceding/trailing `^` or `$` characters outside the parenthesis (e.g., the pattern `^foo$` will be rewritten as `^(foo)$`) Note that you need the leading `^`, otherwise each time you run `highstate`, another comment char will be inserted.

**char** [#] The character to be inserted at the beginning of a line in order to comment it out

**backup** [.bak] The file will be backed up before edit with this file extension

**Warning:** This backup will be overwritten each time `sed` / `comment` / `uncomment` is called. Meaning the backup will only be useful after the first invocation.

Set to `False/None` to not keep a backup.

Usage:

```
/etc/fstab:
file.comment:
- regex: ^bind 127.0.0.1
```

New in version 0.9.5.

`salt.states.file.copy`(*name*, *source*, *force=False*, *makedirs=False*, *preserve=False*, *user=None*,  
*group=None*, *mode=None*, *subdir=False*, *\*\*kwargs*)

If the file defined by the `source` option exists on the minion, copy it to the named path. The file will not be overwritten if it already exists, unless the `force` option is set to `True`.

---

**Note:** This state only copies files from one location on a minion to another location on the same minion. For copying files from the master, use a `file.managed` state.

---

**name** The location of the file to copy to

**source** The location of the file to copy to the location specified with `name`

**force** If the target location is present then the file will not be moved, specify "force: True" to overwrite the target file

**makedirs** If the target subdirectories don't exist create them

**preserve** New in version 2015.5.0.

Set `preserve: True` to preserve user/group ownership and mode after copying. Default is `False`.

If `preserve` is set to `True`, then user/group/mode attributes will be ignored.

**user** New in version 2015.5.0.

The user to own the copied file, this defaults to the user salt is running as on the minion. If `preserve` is set to `True`, then this will be ignored

**group** New in version 2015.5.0.

The group to own the copied file, this defaults to the group salt is running as on the minion. If `preserve` is set to `True` or on Windows this will be ignored

**mode** New in version 2015.5.0.

The permissions to set on the copied file, aka 644, '0775', '4664'. If `preserve` is set to `True`, then this will be ignored. Not supported on Windows.

The default mode for new files and directories corresponds umask of salt process. For existing files and directories it's not enforced.

**subdir** New in version 2015.5.0.

If the name is a directory then place the file inside the named directory

---

**Note:** The copy function accepts paths that are local to the Salt minion. This function does not support `salt://`, `http://`, or the other additional file paths that are supported by `states.file.managed` and `states.file.recurse`.

---

`salt.states.file.decode`(*name*, *encoded\_data=None*, *contents\_pillar=None*, *encoding\_type='base64'*,  
*checksum='md5'*)

Decode an encoded file and write it to disk

New in version 2016.3.0.

**name** Path of the file to be written.

**encoded\_data** The encoded file. Either this option or `contents_pillar` must be specified.

**contents\_pillar** A Pillar path to the encoded file. Uses the same path syntax as *pillar.get*. The *hashutil.base64\_encodefile* function can load encoded content into Pillar. Either this option or **encoded\_data** must be specified.

**encoding\_type** [base64] The type of encoding.

**checksum** [md5] The hashing algorithm to use to generate checksums. Wraps the *hashutil.digest* execution function.

Usage:

```
write_base64_encoded_string_to_a_file:
 file.decode:
 - name: /tmp/new_file
 - encoding_type: base64
 - contents_pillar: mypillar:thefile

or

write_base64_encoded_string_to_a_file:
 file.decode:
 - name: /tmp/new_file
 - encoding_type: base64
 - encoded_data: |
 Z2V0IHNhbHRlZAo=
```

Be careful with multi-line strings that the YAML indentation is correct. E.g.,

```
write_base64_encoded_string_to_a_file:
 file.decode:
 - name: /tmp/new_file
 - encoding_type: base64
 - encoded_data: |
 {{ salt.pillar.get('path:to:data') | indent(8) }}
```

**salt.states.file.directory**(*name*, *user=None*, *group=None*, *recurse=None*, *max\_depth=None*, *dir\_mode=None*, *file\_mode=None*, *makedirs=False*, *clean=False*, *require=None*, *exclude\_pat=None*, *follow\_symlinks=False*, *force=False*, *backupname=None*, *allow\_symlink=True*, *children\_only=False*, *win\_owner=None*, *win\_perms=None*, *win\_deny\_perms=None*, *win\_inheritance=True*, *win\_perms\_reset=False*, *\*\*kwargs*)

Ensure that a named directory is present and has the right perms

**name** The location to create or manage a directory, as an absolute path

**user** The user to own the directory; this defaults to the user salt is running as on the minion

**group** The group ownership set for the directory; this defaults to the group salt is running as on the minion. On Windows, this is ignored

**recurse** Enforce user/group ownership and mode of directory recursively. Accepts a list of strings representing what you would like to recurse. If *mode* is defined, will recurse on both *file\_mode* and *dir\_mode* if they are defined. If *ignore\_files* or *ignore\_dirs* is included, files or directories will be left unchanged respectively. Example:

```
/var/log/httpd:
 file.directory:
 - user: root
 - group: root
 - dir_mode: 755
 - file_mode: 644
 - recurse:
 - user
```

(continues on next page)

(continued from previous page)

- ```
- group
- mode
```

Leave files or directories unchanged:

```
/var/log/httpd:
file.directory:
- user: root
- group: root
- dir_mode: 755
- file_mode: 644
- recurse:
  - user
  - group
  - mode
  - ignore_dirs
```

New in version 2015.5.0.

max_depth Limit the recursion depth. The default is no limit=None. 'max_depth' and 'clean' are mutually exclusive.

New in version 2016.11.0.

dir_mode / mode The permissions mode to set any directories created. Not supported on Windows.

The default mode for new files and directories corresponds umask of salt process. For existing files and directories it's not enforced.

file_mode The permissions mode to set any files created if 'mode' is run in 'recurse'. This defaults to dir_mode. Not supported on Windows.

The default mode for new files and directories corresponds umask of salt process. For existing files and directories it's not enforced.

makedirs If the directory is located in a path without a parent directory, then the state will fail. If makedirs is set to True, then the parent directories will be created to facilitate the creation of the named file.

clean Make sure that only files that are set up by salt and required by this function are kept. If this option is set then everything in this directory will be deleted unless it is required. 'clean' and 'max_depth' are mutually exclusive.

require Require other resources such as packages or files

exclude_pat When 'clean' is set to True, exclude this pattern from removal list and preserve in the destination.

follow_symlinks [False] If the desired path is a symlink (or `recurse` is defined and a symlink is encountered while recursing), follow it and check the permissions of the directory/file to which the symlink points.

New in version 2014.1.4.

force If the name of the directory exists and is not a directory and force is set to False, the state will fail. If force is set to True, the file in the way of the directory will be deleted to make room for the directory, unless backupname is set, then it will be renamed.

New in version 2014.7.0.

backupname If the name of the directory exists and is not a directory, it will be renamed to the backupname. If the backupname already exists and force is False, the state will fail. Otherwise, the backupname will be removed first.

New in version 2014.7.0.

allow_symlink [True] If allow_symlink is True and the specified path is a symlink, it will be allowed to remain if it points to a directory. If allow_symlink is False then the state will fail, unless force is also set to True, in which case it will be removed or renamed, depending on the value of the backupname argument.

New in version 2014.7.0.

children_only [False] If `children_only` is True the base of a path is excluded when performing a recursive operation. In case of `/path/to/base`, `base` will be ignored while all of `/path/to/base/*` are still operated on.

win_owner [None] The owner of the directory. If this is not passed, user will be used. If user is not passed, the account under which Salt is running will be used.

New in version 2017.7.0.

win_perms [None] A dictionary containing permissions to grant and their propagation. For example: `{'Administrators': {'perms': 'full_control', 'applies_to': 'this_folder_only'}}` Can be a single basic perm or a list of advanced perms. `perms` must be specified. `applies_to` is optional and defaults to `this_folder_subfolder_files`.

New in version 2017.7.0.

win_deny_perms [None] A dictionary containing permissions to deny and their propagation. For example: `{'Administrators': {'perms': 'full_control', 'applies_to': 'this_folder_only'}}` Can be a single basic perm or a list of advanced perms.

New in version 2017.7.0.

win_inheritance [True] True to inherit permissions from the parent directory, False not to inherit permission.

New in version 2017.7.0.

win_perms_reset [False] If True the existing DACL will be cleared and replaced with the settings defined in this function. If False, new entries will be appended to the existing DACL. Default is False.

New in version 2018.3.0.

Here's an example using the above `win_*` parameters:

```
create_config_dir:
  file.directory:
    - name: 'C:\config\'
    - win_owner: Administrators
    - win_perms:
      # Basic Permissions
      dev_ops:
        perms: full_control
      # List of advanced permissions
      appuser:
        perms:
          - read_attributes
          - read_ea
          - create_folders
          - read_permissions
        applies_to: this_folder_only
      joe_snuffy:
        perms: read
        applies_to: this_folder_files
    - win_deny_perms:
      fred_snuffy:
        perms: full_control
    - win_inheritance: False
```

`salt.states.file.exists`(*name*, ***kwargs*)

Verify that the named file or directory is present or exists. Ensures pre-requisites outside of Salt's purview (e.g., keytabs, private keys, etc.) have been previously satisfied before deployment.

This function does not create the file if it doesn't exist, it will return an error.

name Absolute path which must exist

`salt.states.file.line`(*name*, *content=None*, *match=None*, *mode=None*, *location=None*, *before=None*, *after=None*, *show_changes=True*, *backup=False*, *quiet=False*, *indent=True*, *create=False*, *user=None*, *group=None*, *file_mode=None*)

Line-based editing of a file.

New in version 2015.8.0.

Parameters

- **name** – Filesystem path to the file to be edited.
- **content** – Content of the line. Allowed to be empty if mode=delete.
- **match** – Match the target line for an action by a fragment of a string or regular expression.

If neither `before` nor `after` are provided, and `match` is also `None`, `match` becomes the `content` value.

- **mode** – Defines how to edit a line. One of the following options is required:
 - **ensure** If line does not exist, it will be added.
 - **replace** If line already exists, it will be replaced.
 - **delete** Delete the line, once found.
 - **insert** Insert a line.

Note: If `mode=insert` is used, at least one of the following options must also be defined: `location`, `before`, or `after`. If `location` is used, it takes precedence over the other two options.

- **location** – Defines where to place content in the line. Note this option is only used when `mode=insert` is specified. If a location is passed in, it takes precedence over both the `before` and `after` kwargs. Valid locations are:
 - **start** Place the content at the beginning of the file.
 - **end** Place the content at the end of the file.
- **before** – Regular expression or an exact case-sensitive fragment of the string. This option is only used when either the `ensure` or `insert` mode is defined.
- **after** – Regular expression or an exact case-sensitive fragment of the string. This option is only used when either the `ensure` or `insert` mode is defined.
- **show_changes** – Output a unified diff of the old file and the new file. If `False` return a boolean if any changes were made. Default is `True`

Note: Using this option will store two copies of the file in-memory (the original version and the edited version) in order to generate the diff.

- **backup** – Create a backup of the original file with the extension: "Year-Month-Day-Hour-Minutes-Seconds".
- **quiet** – Do not raise any exceptions. E.g. ignore the fact that the file that is tried to be edited does not exist and nothing really happened.
- **indent** – Keep indentation with the previous line. This option is not considered when the `delete` mode is specified.
- **create** – Create an empty file if doesn't exist.

New in version 2016.11.0.

- **user** – The user to own the file, this defaults to the user salt is running as on the minion.

New in version 2016.11.0.

- **group** – The group ownership set for the file, this defaults to the group salt is running as on the minion. On Windows, this is ignored.

New in version 2016.11.0.

- **file_mode** – The permissions to set on this file, aka 644, 0775, 4664. Not supported on Windows.

New in version 2016.11.0.

If an equal sign (=) appears in an argument to a Salt command, it is interpreted as a keyword argument in the format of `key=val`. That processing can be bypassed in order to pass an equal sign through to the remote shell command by manually specifying the kwarg:

```
update_config:
  file.line:
    - name: /etc/myconfig.conf
    - mode: ensure
    - content: my key = my value
    - before: somekey.*?
```

```
salt.states.file.managed(name, source=None, source_hash="", source_hash_name=None,
                        keep_source=True, user=None, group=None, mode=None, attrs=None,
                        template=None, makedirs=False, dir_mode=None, context=None, re-
                        place=True, defaults=None, backup="", show_changes=True, create=True,
                        contents=None, tmp_ext="", contents_pillar=None, contents_grains=None,
                        contents_newline=True, contents_delimiter=":", encoding=None, en-
                        coding_errors='strict', allow_empty=True, follow_symlinks=True,
                        check_cmd=None, skip_verify=False, win_owner=None, win_perms=None,
                        win_deny_perms=None, win_inheritance=True, win_perms_reset=False,
                        **kwargs)
```

Manage a given file, this function allows for a file to be downloaded from the salt master and potentially run through a templating system.

name The location of the file to manage, as an absolute path.

source The source file to download to the minion, this source file can be hosted on either the salt master server (`salt://`), the salt minion local file system (`/`), or on an HTTP or FTP server (`http(s)://`, `ftp://`).

Both HTTPS and HTTP are supported as well as downloading directly from Amazon S3 compatible URLs with both pre-configured and automatic IAM credentials. (see `s3.get` state documentation) File retrieval from Openstack Swift object storage is supported via `swift://container/object_path` URLs, see `swift.get` documentation. For files hosted on the salt file server, if the file is located on the master in the directory named `spam`, and is called `eggs`, the source string is `salt://spam/eggs`. If `source` is left blank or `None` (use `~` in YAML), the file will be created as an empty file and the content will not be managed. This is also the case when a file already exists and the `source` is undefined; the contents of the file will not be changed or managed.

If the file is hosted on a HTTP or FTP server then the `source_hash` argument is also required.

A list of sources can also be passed in to provide a default source and a set of fallbacks. The first source in the list that is found to exist will be used and subsequent entries in the list will be ignored. Source list functionality only supports local files and remote files hosted on the salt master server or retrievable via HTTP, HTTPS, or FTP.

```
file_override_example:
  file.managed:
    - source:
      - salt://file_that_does_not_exist
      - salt://file_that_exists
```

source_hash

This can be one of the following:

1. a source hash string
2. the URI of a file that contains source hash strings

The function accepts the first encountered long unbroken alphanumeric string of correct length as a valid hash, in order from most secure to least secure:

Type	Length
=====	=====
sha512	128
sha384	96
sha256	64
sha224	56
sha1	40
md5	32

Using a Source Hash File The file can contain several checksums for several files. Each line must contain both the file name and the hash. If no file name is matched, the first hash encountered will be used, otherwise the most secure hash with the correct source file name will be used.

When using a source hash file the `source_hash` argument needs to be a url, the standard download urls are supported, ftp, http, salt etc:

Example:

```
tomdroid-src-0.7.3.tar.gz:
  file.managed:
    - name: /tmp/tomdroid-src-0.7.3.tar.gz
    - source: https://launchpad.net/tomdroid/beta/0.7.3/+download/
      ↪tomdroid-src-0.7.3.tar.gz
    - source_hash: https://launchpad.net/tomdroid/beta/0.7.3/+download/
      ↪tomdroid-src-0.7.3.hash
```

The following lines are all supported formats:

```
/etc/rc.conf ef6e82e4006dee563d98ada2a2a80a27
sha254c8525aee419eb649f0233be91c151178b30f0dff8ebbdcc8de71b1d5c8bcc06a /
↪etc/resolv.conf
ead48423703509d37c4a90e6a0d53e143b6fc268
```

Debian file type `*.dsc` files are also supported.

Inserting the Source Hash in the SLS Data

The `source_hash` can be specified as a simple checksum, like so:

```
tomdroid-src-0.7.3.tar.gz:
  file.managed:
    - name: /tmp/tomdroid-src-0.7.3.tar.gz
    - source: https://launchpad.net/tomdroid/beta/0.7.3/+download/tomdroid-
      ↪src-0.7.3.tar.gz
    - source_hash: 79eef25f9b0b2c642c62b7f737d4f53f
```

Note: Releases prior to 2016.11.0 must also include the hash type, like in the below example:

```
tomdroid-src-0.7.3.tar.gz:
  file.managed:
    - name: /tmp/tomdroid-src-0.7.3.tar.gz
    - source: https://launchpad.net/tomdroid/beta/0.7.3/+download/tomdroid-
      ↪src-0.7.3.tar.gz
    - source_hash: md5=79eef25f9b0b2c642c62b7f737d4f53f
```

Known issues: If the remote server URL has the hash file as an apparent sub-directory of the source file, the module will discover that it has already cached a directory where a file should be cached.

For example:

```
tomdroid-src-0.7.3.tar.gz:
  file.managed:
    - name: /tmp/tomdroid-src-0.7.3.tar.gz
    - source: https://launchpad.net/tomdroid/beta/0.7.3/+download/
      ↪tomdroid-src-0.7.3.tar.gz
    - source_hash: https://launchpad.net/tomdroid/beta/0.7.3/+download/
      ↪tomdroid-src-0.7.3.tar.gz/+md5
```

source_hash_name When `source_hash` refers to a hash file, Salt will try to find the correct hash by matching the filename/URI associated with that hash. By default, Salt will look for the filename being managed. When managing a file at path `/tmp/foo.txt`, then the following line in a hash file would match:

```
acbd18db4cc2f85cedef654fccc4a4d8    foo.txt
```

However, sometimes a hash file will include multiple similar paths:

```
37b51d194a7513e45b56f6524f2d51f2    ./dir1/foo.txt
acbd18db4cc2f85cedef654fccc4a4d8    ./dir2/foo.txt
73feffa4b7f6bb68e44cf984c85f6e88    ./dir3/foo.txt
```

In cases like this, Salt may match the incorrect hash. This argument can be used to tell Salt which filename to match, to ensure that the correct hash is identified. For example:

```
/tmp/foo.txt:
  file.managed:
    - source: https://mydomain.tld/dir2/foo.txt
    - source_hash: https://mydomain.tld/ashes
    - source_hash_name: ./dir2/foo.txt
```

Note: This argument must contain the full filename entry from the checksum file, as this argument is meant to disambiguate matches for multiple files that have the same basename. So, in the example above, simply using `foo.txt` would not match.

New in version 2016.3.5.

keep_source [True] Set to `False` to discard the cached copy of the source file once the state completes. This can be useful for larger files to keep them from taking up space in minion cache. However, keep in mind that discarding the source file will result in the state needing to re-download the source file if the state is run again.

New in version 2017.7.3.

user The user to own the file, this defaults to the user salt is running as on the minion

group The group ownership set for the file, this defaults to the group salt is running as on the minion. On Windows, this is ignored

mode The permissions to set on this file, e.g. 644, 0775, or 4664.

The default mode for new files and directories corresponds to the `umask` of the salt process. The mode of existing files and directories will only be changed if `mode` is specified.

Note: This option is **not** supported on Windows.

Changed in version 2016.11.0: This option can be set to `keep`, and Salt will keep the mode from the Salt fileserver. This is only supported when the `source` URL begins with `salt://`, or for files local to the

minion. Because the `source` option cannot be used with any of the `contents` options, setting the mode to `keep` is also incompatible with the `contents` options.

Note: `keep` does not work with `salt-ssh`.

As a consequence of how the files are transferred to the minion, and the inability to connect back to the master with `salt-ssh`, salt is unable to stat the file as it exists on the fileserver and thus cannot mirror the mode on the `salt-ssh` minion

attrs The attributes to have on this file, e.g. `a`, `i`. The attributes can be any or a combination of the following characters: `acdijsuADST`.

Note: This option is **not** supported on Windows.

New in version 2018.3.0.

template If this setting is applied, the named templating engine will be used to render the downloaded file. The following templates are supported:

- `cheetah`
- `genshi`
- `jinja`
- `mako`
- `py`
- `wempy`

makedirs [`False`] If set to `True`, then the parent directories will be created to facilitate the creation of the named file. If `False`, and the parent directory of the destination file doesn't exist, the state will fail.

dir_mode If directories are to be created, passing this option specifies the permissions for those directories. If this is not set, directories will be assigned permissions by adding the execute bit to the mode of the files.

The default mode for new files and directories corresponds umask of salt process. For existing files and directories it's not enforced.

replace [`True`] If set to `False` and the file already exists, the file will not be modified even if changes would otherwise be made. Permissions and ownership will still be enforced, however.

context Overrides default context variables passed to the template.

defaults Default context passed to the template.

backup Overrides the default backup mode for this specific file. See [backup_mode documentation](#) for more details.

show_changes Output a unified diff of the old file and the new file. If `False` return a boolean if any changes were made.

create [`True`] If set to `False`, then the file will only be managed if the file already exists on the system.

contents Specify the contents of the file. Cannot be used in combination with `source`. Ignores hashes and does not use a templating engine.

This value can be either a single string, a multiline YAML string or a list of strings. If a list of strings, then the strings will be joined together with newlines in the resulting file. For example, the below two example states would result in identical file contents:

```
/path/to/file1:
  file.managed:
    - contents:
      - This is line 1
      - This is line 2

/path/to/file2:
```

(continues on next page)

(continued from previous page)

```

file.managed:
  - contents: |
    This is line 1
    This is line 2

```

contents_pillar New in version 0.17.0.

Changed in version 2016.11.0: `contents_pillar` can also be a list, and the pillars will be concatenated together to form one file.

Operates like `contents`, but draws from a value stored in pillar, using the pillar path syntax used in `pillar.get`. This is useful when the pillar value contains newlines, as referencing a pillar variable using a jinja/mako template can result in YAML formatting issues due to the newlines causing indentation mismatches.

For example, the following could be used to deploy an SSH private key:

```

/home/deployer/.ssh/id_rsa:
  file.managed:
    - user: deployer
    - group: deployer
    - mode: 600
    - attrs: a
    - contents_pillar: userdata:deployer:id_rsa

```

This would populate `/home/deployer/.ssh/id_rsa` with the contents of `pillar['userdata']['deployer']['id_rsa']`. An example of this pillar setup would be like so:

```

userdata:
  deployer:
    id_rsa: |
      -----BEGIN RSA PRIVATE KEY-----
      MIIIEowIBAAKCAQEAOiw03JhBquPAalQF9qP1LLZNXVjYMIswrMe2HcWUVBgh+vY
      U7sCwx/dH6+VvNwmCoqmNnP+8gTPKGl1vgA0bJAnMT623dMXjVKwnEagZPRJIxDy
      B/HaAre9euNiY3LvIzBTWRSeMfT+rWvIKVBpvwlgGrfgz70m0pqux+UyFbAGLin+
      GpxzZAMaFpZw4sSbI\RuissXZj/sHpQb8p9M5Ie04Z3rjkCP1cxI
      -----END RSA PRIVATE KEY-----

```

Note: The private key above is shortened to keep the example brief, but shows how to do multiline string in YAML. The key is followed by a pipe character, and the multiline string is indented two more spaces.

To avoid the hassle of creating an indented multiline YAML string, the *file_tree external pillar* can be used instead. However, this will not work for binary files in Salt releases before 2015.8.4.

contents_grains New in version 2014.7.0.

Operates like `contents`, but draws from a value stored in grains, using the grains path syntax used in `grains.get`. This functionality works similarly to `contents_pillar`, but with grains.

For example, the following could be used to deploy a "message of the day" file:

```

write_motd:
  file.managed:
    - name: /etc/motd
    - contents_grains: motd

```

This would populate `/etc/motd` file with the contents of the `motd` grain. The `motd` grain is not a default grain, and would need to be set prior to running the state:

```
salt '*' grains.set motd 'Welcome! This system is managed by Salt.'
```

contents_newline [True] New in version 2014.7.0.

Changed in version 2015.8.4: This option is now ignored if the contents being deployed contain binary data.

If True, files managed using `contents`, `contents_pillar`, or `contents_grains` will have a newline added to the end of the file if one is not present. Setting this option to False will omit this final newline.

contents_delimiter New in version 2015.8.4.

Can be used to specify an alternate delimiter for `contents_pillar` or `contents_grains`. This delimiter will be passed through to `pillar.get` or `grains.get` when retrieving the contents.

encoding If specified, then the specified encoding will be used. Otherwise, the file will be encoded using the system locale (usually UTF-8). See <https://docs.python.org/3/library/codecs.html#standard-encodings> for the list of available encodings.

New in version 2017.7.0.

encoding_errors ['strict'] Error encoding scheme. Default is `'strict'`. See <https://docs.python.org/2/library/codecs.html#codec-base-classes> for the list of available schemes.

New in version 2017.7.0.

allow_empty [True] New in version 2015.8.4.

If set to False, then the state will fail if the contents specified by `contents_pillar` or `contents_grains` are empty.

follow_symlinks [True] New in version 2014.7.0.

If the desired path is a symlink follow it and make changes to the file to which the symlink points.

check_cmd New in version 2014.7.0.

The specified command will be run with an appended argument of a *temporary* file containing the new managed contents. If the command exits with a zero status the new managed contents will be written to the managed destination. If the command exits with a nonzero exit code, the state will fail and no changes will be made to the file.

For example, the following could be used to verify sudoers before making changes:

```
/etc/sudoers:
file.managed:
- user: root
- group: root
- mode: 0440
- attrs: i
- source: salt://sudoers/files/sudoers.jinja
- template: jinja
- check_cmd: /usr/sbin/visudo -c -f
```

NOTE: This `check_cmd` functions differently than the requisite `check_cmd`.

tmp_ext Suffix for temp file created by `check_cmd`. Useful for checkers dependent on config file extension (e.g. the `init-checkconf` upstart config checker).

```
/etc/init/test.conf:
file.managed:
- user: root
- group: root
```

(continues on next page)

(continued from previous page)

```

- mode: 0440
- tmp_ext: '.conf'
- contents:
  - 'description "Salt Minion"'
  - 'start on started mountall'
  - 'stop on shutdown'
  - 'respawn'
  - 'exec salt-minion'
- check_cmd: init-checkconf -f

```

skip_verify [False] If True, hash verification of remote file sources (`http://`, `https://`, `ftp://`) will be skipped, and the `source_hash` argument will be ignored.

New in version 2016.3.0.

win_owner [None] The owner of the directory. If this is not passed, user will be used. If user is not passed, the account under which Salt is running will be used.

New in version 2017.7.0.

win_perms [None] A dictionary containing permissions to grant and their propagation. For example: `{'Administrators': {'perms': 'full_control'}}` Can be a single basic perm or a list of advanced perms. `perms` must be specified. `applies_to` does not apply to file objects.

New in version 2017.7.0.

win_deny_perms [None] A dictionary containing permissions to deny and their propagation. For example: `{'Administrators': {'perms': 'full_control'}}` Can be a single basic perm or a list of advanced perms. `perms` must be specified. `applies_to` does not apply to file objects.

New in version 2017.7.0.

win_inheritance [True] True to inherit permissions from the parent directory, False not to inherit permission.

New in version 2017.7.0.

win_perms_reset [False] If True the existing DACL will be cleared and replaced with the settings defined in this function. If False, new entries will be appended to the existing DACL. Default is False.

New in version 2018.3.0.

Here's an example using the above `win_*` parameters:

```

create_config_file:
  file.managed:
    - name: C:\config\settings.cfg
    - source: salt://settings.cfg
    - win_owner: Administrators
    - win_perms:
      # Basic Permissions
      dev_ops:
        perms: full_control
      # List of advanced permissions
      appuser:
        perms:
          - read_attributes
          - read_ea
          - create_folders
          - read_permissions
      joe_snuffy:
        perms: read
    - win_deny_perms:
      fred_snuffy:
        perms: full_control

```

(continues on next page)

(continued from previous page)

```
- win_inheritance: False
```

`salt.states.file.missing`(*name*, ***kwargs*)

Verify that the named file or directory is missing, this returns True only if the named file is missing but does not remove the file if it is present.

name Absolute path which must NOT exist

`salt.states.file.mknod`(*name*, *ntype*, *major=0*, *minor=0*, *user=None*, *group=None*, *mode='0600'*)

Create a special file similar to the 'nix mknod command. The supported device types are **p** (fifo pipe), **c** (character device), and **b** (block device). Provide the major and minor numbers when specifying a character device or block device. A fifo pipe does not require this information. The command will create the necessary dirs if needed. If a file of the same name not of the same type/major/minor exists, it will not be overwritten or unlinked (deleted). This is logically in place as a safety measure because you can really shoot yourself in the foot here and it is the behavior of 'nix mknod. It is also important to note that not just anyone can create special devices. Usually this is only done as root. If the state is executed as none other than root on a minion, you may receive a permission error.

name name of the file

ntype node type 'p' (fifo pipe), 'c' (character device), or 'b' (block device)

major major number of the device does not apply to a fifo pipe

minor minor number of the device does not apply to a fifo pipe

user owning user of the device/pipe

group owning group of the device/pipe

mode permissions on the device/pipe

Usage:

```
/dev/chr:
file.mknod:
- ntype: c
- major: 180
- minor: 31
- user: root
- group: root
- mode: 660

/dev/blk:
file.mknod:
- ntype: b
- major: 8
- minor: 999
- user: root
- group: root
- mode: 660

/dev/fifo:
file.mknod:
- ntype: p
- user: root
- group: root
- mode: 660
```

New in version 0.17.0.

`salt.states.file.mod_run_check_cmd`(*cmd*, *filename*, ***check_cmd_opts*)

Execute the `check_cmd` logic.

Return a result dict if `check_cmd` succeeds (`check_cmd == 0`) otherwise return True

`salt.states.file.not_cached`(*name*, *saltenv*='base')

New in version 2017.7.3.

Ensures that a file is saved to the minion's cache. This state is primarily invoked by other states to ensure that we do not re-download a source file if we do not need to.

name The URL of the file to be cached. To cache a file from an environment other than base, either use the *saltenv* argument or include the *saltenv* in the URL (e.g. `salt://path/to/file.conf?saltenv=dev`).

Note: A list of URLs is not supported, this must be a single URL. If a local file is passed here, the state will take no action.

saltenv Used to specify the environment from which to download a file from the Salt fileserver (i.e. those with `salt://` URL).

`salt.states.file.patch`(*name*, *source*=None, *options*=", *dry_run_first*=True, ***kwargs*)

Ensure that a patch has been applied to the specified file

Note: A suitable patch executable must be available on the minion

name The file to which the patch should be applied

source The source patch to download to the minion, this source file must be hosted on the salt master server. If the file is located in the directory named spam, and is called eggs, the source string is `salt://spam/eggs`. A source is required.

hash The hash of the patched file. If the hash of the target file matches this value then the patch is assumed to have been applied. For versions 2016.11.4 and newer, the hash can be specified without an accompanying hash type (e.g. `e138491e9d5b97023cea823fe17bac22`), but for earlier releases it is necessary to also specify the hash type in the format `<hash_type>:<hash_value>` (e.g. `md5:e138491e9d5b97023cea823fe17bac22`).

options Extra options to pass to patch.

dry_run_first [True] Run patch with `--dry-run` first to check if it will apply cleanly.

saltenv Specify the environment from which to retrieve the patch file indicated by the *source* parameter. If not provided, this defaults to the environment from which the state is being executed.

Usage:

```
# Equivalent to `patch --forward /opt/file.txt file.patch`
/opt/file.txt:
file.patch:
- source: salt://file.patch
- hash: e138491e9d5b97023cea823fe17bac22
```

Note: For minions running version 2016.11.3 or older, the hash in the example above would need to be specified with the hash type (i.e. `md5:e138491e9d5b97023cea823fe17bac22`).

`salt.states.file.prepend`(*name*, *text*=None, *makedirs*=False, *source*=None, *source_hash*=None, *template*='jinja', *sources*=None, *source_hashes*=None, *defaults*=None, *context*=None, *header*=None)

Ensure that some text appears at the beginning of a file

The text will not be prepended again if it already exists in the file. You may specify a single line of text or a list of lines to append.

name The location of the file to append to.

text The text to be appended, which can be a single string or a list of strings.

makedirs If the file is located in a path without a parent directory, then the state will fail. If `makedirs` is set to `True`, then the parent directories will be created to facilitate the creation of the named file. Defaults to `False`.

source A single source file to append. This source file can be hosted on either the salt master server, or on an HTTP or FTP server. Both HTTPS and HTTP are supported as well as downloading directly from Amazon S3 compatible URLs with both pre-configured and automatic IAM credentials (see `s3.get` state documentation). File retrieval from Openstack Swift object storage is supported via `swift://container/object_path` URLs (see `swift.get` documentation).

For files hosted on the salt file server, if the file is located on the master in the directory named `spam`, and is called `eggs`, the source string is `salt://spam/eggs`.

If the file is hosted on an HTTP or FTP server, the `source_hash` argument is also required.

source_hash

This can be one of the following:

1. a source hash string
2. the URI of a file that contains source hash strings

The function accepts the first encountered long unbroken alphanumeric string of correct length as a valid hash, in order from most secure to least secure:

Type	Length
sha512	128
sha384	96
sha256	64
sha224	56
sha1	40
md5	32

See the `source_hash` parameter description for `file.managed` function for more details and examples.

template The named templating engine will be used to render the appended-to file. Defaults to `jinja`. The following templates are supported:

- `cheetah`
- `genshi`
- `jinja`
- `mako`
- `py`
- `wempy`

sources A list of source files to append. If the files are hosted on an HTTP or FTP server, the `source_hashes` argument is also required.

source_hashes A list of `source_hashes` corresponding to the `sources` list specified in the `sources` argument.

defaults Default context passed to the template.

context Overrides default context variables passed to the template.

ignore_whitespace New in version 2015.8.4.

Spaces and Tabs in text are ignored by default, when searching for the appending content, one space or multiple tabs are the same for salt. Set this option to `False` if you want to change this behavior.

Multi-line example:

```
/etc/motd:
file.prepend:
- text: |
    Thou hadst better eat salt with the Philosophers of Greece,
    than sugar with the Courtiers of Italy.
    - Benjamin Franklin
```

Multiple lines of text:

```
/etc/motd:
file.prepend:
- text:
  - Trust no one unless you have eaten much salt with him.
  - "Salt is born of the purest of parents: the sun and the sea."
```

Optionally, require the text to appear exactly as specified (order and position). Combine with multi-line or multiple lines of input.

```
/etc/motd:
file.prepend:
- header: True
- text:
  - This will be the very first line in the file.
  - The 2nd line, regardless of duplicates elsewhere in the file.
  - These will be written anew if they do not appear verbatim.
```

Gather text from multiple template files:

```
/etc/motd:
file:
- prepend
- template: jinja
- sources:
  - salt://motd/devops-messages.tpl
  - salt://motd/hr-messages.tpl
  - salt://motd/general-messages.tpl
```

New in version 2014.7.0.

`salt.states.file.recurse`(*name*, *source*, *keep_source=True*, *clean=False*, *require=None*, *user=None*, *group=None*, *dir_mode=None*, *file_mode=None*, *sym_mode=None*, *template=None*, *context=None*, *replace=True*, *defaults=None*, *include_empty=False*, *backup=""*, *include_pat=None*, *exclude_pat=None*, *maxdepth=None*, *keep_symlinks=False*, *force_symlinks=False*, *win_owner=None*, *win_perms=None*, *win_deny_perms=None*, *win_inheritance=True*, ***kwargs*)

Recurse through a subdirectory on the master and copy said subdirectory over to the specified path.

name The directory to set the recursion in

source The source directory, this directory is located on the salt master file server and is specified with the salt:// protocol. If the directory is located on the master in the directory named spam, and is called eggs, the source string is salt://spam/eggs

keep_source [True] Set to False to discard the cached copy of the source file once the state completes. This can be useful for larger files to keep them from taking up space in minion cache. However, keep in mind that discarding the source file will result in the state needing to re-download the source file if the state is run again.

New in version 2017.7.3.

clean Make sure that only files that are set up by salt and required by this function are kept. If this option is set then everything in this directory will be deleted unless it is required.

require Require other resources such as packages or files

user The user to own the directory. This defaults to the user salt is running as on the minion

group The group ownership set for the directory. This defaults to the group salt is running as on the minion. On Windows, this is ignored

dir_mode The permissions mode to set on any directories created.

The default mode for new files and directories corresponds umask of salt process. For existing files and directories it's not enforced.

Note: This option is **not** supported on Windows.

file_mode The permissions mode to set on any files created.

The default mode for new files and directories corresponds umask of salt process. For existing files and directories it's not enforced.

Note: This option is **not** supported on Windows.

Changed in version 2016.11.0: This option can be set to `keep`, and Salt will keep the mode from the Salt fileserver. This is only supported when the `source` URL begins with `salt://`, or for files local to the minion. Because the `source` option cannot be used with any of the `contents` options, setting the `mode` to `keep` is also incompatible with the `contents` options.

sym_mode The permissions mode to set on any symlink created.

The default mode for new files and directories corresponds umask of salt process. For existing files and directories it's not enforced.

Note: This option is **not** supported on Windows.

template If this setting is applied, the named templating engine will be used to render the downloaded file. The following templates are supported:

- *cheetah*
- *genshi*
- *jinja*
- *mako*
- *py*
- *wempy*

Note: The `template` option is required when recursively applying templates.

replace [True] If set to `False` and the file already exists, the file will not be modified even if changes would otherwise be made. Permissions and ownership will still be enforced, however.

context Overrides default context variables passed to the template.

defaults Default context passed to the template.

include_empty Set this to `True` if empty directories should also be created (default is `False`)

backup Overrides the default backup mode for all replaced files. See [backup_mode documentation](#) for more details.

include_pat When copying, include only this pattern from the source. Default is glob match; if prefixed with `'E@'`, then regexp match. Example:

```
- include_pat: hello*      :: glob matches 'hello01', 'hello02'
                          ... but not 'otherhello'
- include_pat: E@hello    :: regexp matches 'otherhello',
                          'hello01' ...
```

exclude_pat Exclude this pattern from the source when copying. If both `include_pat` and `exclude_pat` are supplied, then it will apply conditions cumulatively. i.e. first select based on `include_pat`, and then within that result apply `exclude_pat`.

Also, when `'clean=True'`, exclude this pattern from the removal list and preserve in the destination.

Example:

```
- exclude_pat: APPDATA*           :: glob matches APPDATA.01,
                                APPDATA.02,.. for exclusion
- exclude_pat: E@(APPDATA) | (TEMPDATA) :: regexp matches APPDATA
                                or TEMPDATA for exclusion
```

maxdepth When copying, only copy paths which are of depth *maxdepth* from the source path. Example:

```
- maxdepth: 0           :: Only include files located in the source
                        directory
- maxdepth: 1           :: Only include files located in the source
                        or immediate subdirectories
```

keep_symlinks Keep symlinks when copying from the source. This option will cause the copy operation to terminate at the symlink. If desire behavior similar to rsync, then set this to True.

force_symlinks Force symlink creation. This option will force the symlink creation. If a file or directory is obstructing symlink creation it will be recursively removed so that symlink creation can proceed. This option is usually not needed except in special circumstances.

win_owner [None] The owner of the symlink and directories if **makedirs** is True. If this is not passed, **user** will be used. If **user** is not passed, the account under which Salt is running will be used.

New in version 2017.7.7.

win_perms [None] A dictionary containing permissions to grant

New in version 2017.7.7.

win_deny_perms [None] A dictionary containing permissions to deny

New in version 2017.7.7.

win_inheritance [None] True to inherit permissions from parent, otherwise False

New in version 2017.7.7.

salt.states.file.rename(*name*, *source*, *force=False*, *makedirs=False*)

If the source file exists on the system, rename it to the named file. The named file will not be overwritten if it already exists unless the force option is set to True.

name The location of the file to rename to

source The location of the file to move to the location specified with name

force If the target location is present then the file will not be moved, specify "force: True" to overwrite the target file

makedirs If the target subdirectories don't exist create them

salt.states.file.replace(*name*, *pattern*, *repl*, *count=0*, *flags=8*, *bufsize=1*, *append_if_not_found=False*, *prepend_if_not_found=False*, *not_found_content=None*, *backup='.bak'*, *show_changes=True*, *ignore_if_missing=False*, *backslash_literal=False*)

Maintain an edit in a file.

New in version 0.17.0.

name Filesystem path to the file to be edited. If a symlink is specified, it will be resolved to its target.

pattern A regular expression, to be matched using Python's `search()`.

Note: If you need to match a literal string that contains regex special characters, you may want to use salt's custom Jinja filter, `regex_escape`.

```
{{ 'http://example.com?foo=bar%20baz' | regex_escape }}
```

repl The replacement text

- count** Maximum number of pattern occurrences to be replaced. Defaults to 0. If count is a positive integer n, no more than n occurrences will be replaced, otherwise all occurrences will be replaced.
- flags** A list of flags defined in the `re` module documentation from the Python standard library. Each list item should be a string that will correlate to the human-friendly flag name. E.g., [`'IGNORECASE'`, `'MULTILINE'`]. Optionally, `flags` may be an int, with a value corresponding to the XOR (`|`) of all the desired flags. Defaults to 8 (which equates to [`'MULTILINE'`]).

Note: `file.replace` reads the entire file as a string to support multiline regex patterns. Therefore, when using anchors such as `^` or `$` in the pattern, those anchors may be relative to the line OR relative to the file. The default for `file.replace` is to treat anchors as relative to the line, which is implemented by setting the default value of `flags` to [`'MULTILINE'`]. When overriding the default value for `flags`, if `'MULTILINE'` is not present then anchors will be relative to the file. If the desired behavior is for anchors to be relative to the line, then simply add `'MULTILINE'` to the list of flags.

- bufsize** How much of the file to buffer into memory at once. The default value 1 processes one line at a time. The special value `file` may be specified which will read the entire file into memory before processing.
- append_if_not_found** [`False`] If set to `True`, and pattern is not found, then the content will be appended to the file.

New in version 2014.7.0.

- prepend_if_not_found** [`False`] If set to `True` and pattern is not found, then the content will be prepended to the file.

New in version 2014.7.0.

- not_found_content** Content to use for append/prepend if not found. If `None` (default), uses `repl`. Useful when `repl` uses references to group in pattern.

New in version 2014.7.0.

- backup** The file extension to use for a backup of the file before editing. Set to `False` to skip making a backup.
- show_changes** [`True`] Output a unified diff of the old file and the new file. If `False` return a boolean if any changes were made. Returns a boolean or a string.

- ignore_if_missing** [`False`] New in version 2016.3.4.

Controls what to do if the file is missing. If set to `False`, the state will display an error raised by the execution module. If set to `True`, the state will simply report no changes.

- backslash_literal** [`False`] New in version 2016.11.7.

Interpret backslashes as literal backslashes for the `repl` and not escape characters. This will help when using `append/prepend` so that the backslashes are not interpreted for the `repl` on the second run of the state.

For complex regex patterns, it can be useful to avoid the need for complex quoting and escape sequences by making use of YAML's multiline string syntax.

```

complex_search_and_replace:
  file.replace:
    # <...snip...>
    - pattern: |
      CentOS \((2.6.32[^\n]+)\n\s+root[^\n]+\n\)+
  
```

Note: When using YAML multiline string syntax in `pattern:`, make sure to also use that syntax in the `repl:` part, or you might lose line feeds.

`salt.states.file.retention_schedule` (*name*, *retain*, *strptime_format*=`None`, *timezone*=`None`)

Apply retention scheduling to backup storage directory.

New in version 2016.11.0.

Parameters

- **name** – The filesystem path to the directory containing backups to be managed.
- **retain** – Delete the backups, except for the ones we want to keep. The `N` below should be an integer but may also be the special value of `all`, which keeps all files matching the criteria. All of the retain options default to `None`, which means to not keep files based on this criteria.
 - most_recent** `N` Keep the most recent `N` files.
 - first_of_hour** `N` For the last `N` hours from now, keep the first file after the hour.
 - first_of_day** `N` For the last `N` days from now, keep the first file after midnight. See also `timezone`.
 - first_of_week** `N` For the last `N` weeks from now, keep the first file after Sunday midnight.
 - first_of_month** `N` For the last `N` months from now, keep the first file after the start of the month.
 - first_of_year** `N` For the last `N` years from now, keep the first file after the start of the year.
- **strptime_format** – A python strptime format string used to first match the file-names of backups and then parse the filename to determine the datetime of the file. <https://docs.python.org/2/library/datetime.html#datetime.datetime.strptime> Defaults to `None`, which considers all files in the directory to be backups eligible for deletion and uses `os.path.getmtime()` to determine the datetime.
- **timezone** – The timezone to use when determining midnight. This is only used when datetime is pulled from `os.path.getmtime()`. Defaults to `None` which uses the timezone from the locale.

Usage example:

```
/var/backups/example_directory:
  file.retention_schedule:
    - retain:
      most_recent: 5
      first_of_hour: 4
      first_of_day: 7
      first_of_week: 6      # NotImplemented yet.
      first_of_month: 6
      first_of_year: all
    - strptime_format: example_name_%Y%m%dT%H%M%S.tar.bz2
    - timezone: None
```

`salt.states.file.serialize(name, dataset=None, dataset_pillar=None, user=None, group=None, mode=None, backup="", makedirs=False, show_changes=True, create=True, merge_if_exists=False, encoding=None, encoding_errors='strict', **kwargs)`

Serializes dataset and store it into managed file. Useful for sharing simple configuration files.

name The location of the file to create

dataset The dataset that will be serialized

dataset_pillar Operates like `dataset`, but draws from a value stored in pillar, using the pillar path syntax used in `pillar.get`. This is useful when the pillar value contains newlines, as referencing a pillar variable using a jinja/mako template can result in YAML formatting issues due to the newlines causing indentation mismatches.

New in version 2015.8.0.

formatter Write the data as this format. See the list of `serializer` modules for supported output formats.

encoding If specified, then the specified encoding will be used. Otherwise, the file will be encoded using the system locale (usually UTF-8). See <https://docs.python.org/3/library/codecs.html#standard-encodings>

for the list of available encodings.

New in version 2017.7.0.

encoding_errors ['strict'] Error encoding scheme. Default is `'strict'`. See <https://docs.python.org/2/library/codecs.html#codec-base-classes> for the list of available schemes.

New in version 2017.7.0.

user The user to own the directory, this defaults to the user salt is running as on the minion

group The group ownership set for the directory, this defaults to the group salt is running as on the minion

mode The permissions to set on this file, e.g. 644, 0775, or 4664.

The default mode for new files and directories corresponds umask of salt process. For existing files and directories it's not enforced.

Note: This option is **not** supported on Windows.

backup Overrides the default backup mode for this specific file.

makedirs Create parent directories for destination file.

New in version 2014.1.3.

show_changes Output a unified diff of the old file and the new file. If `False` return a boolean if any changes were made.

create Default is `True`, if `create` is set to `False` then the file will only be managed if the file already exists on the system.

merge_if_exists Default is `False`, if `merge_if_exists` is `True` then the existing file will be parsed and the dataset passed in will be merged with the existing content

New in version 2014.7.0.

For example, this state:

```
/etc/dummy/package.json:
file.serialize:
- dataset:
  name: naive
  description: A package using naive versioning
  author: A confused individual <iam@confused.com>
  dependencies:
    express: '>= 1.2.0'
    optimist: '>= 0.1.0'
  engine: node 0.4.1
- formatter: json
```

will manage the file `/etc/dummy/package.json`:

```
{
  "author": "A confused individual <iam@confused.com>",
  "dependencies": {
    "express": ">= 1.2.0",
    "optimist": ">= 0.1.0"
  },
  "description": "A package using naive versioning",
  "engine": "node 0.4.1",
  "name": "naive"
}
```

`salt.states.file.shortcut`(*name*, *target*, *arguments=None*, *working_dir=None*, *description=None*, *icon_location=None*, *force=False*, *backupname=None*, *makedirs=False*, *user=None*, ***kwargs*)

Create a Windows shortcut

If the file already exists and is a shortcut pointing to any location other than the specified target, the shortcut will be replaced. If it is a regular file or directory then the state will return False. If the regular file or directory is desired to be replaced with a shortcut pass force: True, if it is to be renamed, pass a backupname.

name The location of the shortcut to create. Must end with either ".lnk" or ".url"

target The location that the shortcut points to

arguments Any arguments to pass in the shortcut

working_dir Working directory in which to execute target

description Description to set on shortcut

icon_location Location of shortcut's icon

force If the name of the shortcut exists and is not a file and force is set to False, the state will fail. If force is set to True, the link or directory in the way of the shortcut file will be deleted to make room for the shortcut, unless backupname is set, when it will be renamed

backupname If the name of the shortcut exists and is not a file, it will be renamed to the backupname. If the backupname already exists and force is False, the state will fail. Otherwise, the backupname will be removed first.

makedirs If the location of the shortcut does not already have a parent directory then the state will fail, setting makedirs to True will allow Salt to create the parent directory. Setting this to True will also create the parent for backupname if necessary.

user The user to own the file, this defaults to the user salt is running as on the minion

The default mode for new files and directories corresponds umask of salt process. For existing files and directories it's not enforced.

```
salt.states.file.symlink(name, target, force=False, backupname=None, makedirs=False, user=None,
                        group=None, mode=None, win_owner=None, win_perms=None,
                        win_deny_perms=None, win_inheritance=None, **kwargs)
```

Create a symbolic link (symlink, soft link)

If the file already exists and is a symlink pointing to any location other than the specified target, the symlink will be replaced. If the symlink is a regular file or directory then the state will return False. If the regular file or directory is desired to be replaced with a symlink pass force: True, if it is to be renamed, pass a backupname.

name The location of the symlink to create

target The location that the symlink points to

force If the name of the symlink exists and is not a symlink and force is set to False, the state will fail. If force is set to True, the file or directory in the way of the symlink file will be deleted to make room for the symlink, unless backupname is set, when it will be renamed

backupname If the name of the symlink exists and is not a symlink, it will be renamed to the backupname. If the backupname already exists and force is False, the state will fail. Otherwise, the backupname will be removed first.

makedirs If the location of the symlink does not already have a parent directory then the state will fail, setting makedirs to True will allow Salt to create the parent directory

user The user to own the file, this defaults to the user salt is running as on the minion

group The group ownership set for the file, this defaults to the group salt is running as on the minion. On Windows, this is ignored

mode The permissions to set on this file, aka 644, 0775, 4664. Not supported on Windows.

The default mode for new files and directories corresponds umask of salt process. For existing files and directories it's not enforced.

win_owner [None] The owner of the symlink and directories if makedirs is True. If this is not passed, user will be used. If user is not passed, the account under which Salt is running will be used.

New in version 2017.7.7.

win_perms [None] A dictionary containing permissions to grant

New in version 2017.7.7.

win_deny_perms [None] A dictionary containing permissions to deny

New in version 2017.7.7.

win_inheritance [None] True to inherit permissions from parent, otherwise False

New in version 2017.7.7.

salt.states.file.touch(*name*, *atime=None*, *mtime=None*, *makedirs=False*)

Replicate the 'nix "touch" command to create a new empty file or update the atime and mtime of an existing file.

Note that if you just want to create a file and don't care about atime or mtime, you should use `file.managed` instead, as it is more feature-complete. (Just leave out the `source/template/contents` arguments, and it will just create the file and/or check its permissions, without messing with contents)

name name of the file

atime atime of the file

mtime mtime of the file

makedirs whether we should create the parent directory/directories in order to touch the file

Usage:

```
/var/log/httpd/logrotate.empty:  
file.touch
```

New in version 0.9.5.

salt.states.file.uncomment(*name*, *regex*, *char='#'*, *backup='.bak'*)

Uncomment specified commented lines in a file

name The full path to the file to be edited

regex A regular expression used to find the lines that are to be uncommented. This regex should not include the comment character. A leading `^` character will be stripped for convenience (for easily switching between `comment()` and `uncomment()`). The regex will be searched for from the beginning of the line, ignoring leading spaces (we prepend `^[t]*`)

char [#] The character to remove in order to uncomment a line

backup [.bak] The file will be backed up before edit with this file extension;

Warning: This backup will be overwritten each time `sed / comment / uncomment` is called. Meaning the backup will only be useful after the first invocation.

Set to False/None to not keep a backup.

Usage:

```
/etc/adduser.conf:  
file.uncomment:  
- regex: EXTRA_GROUPS
```

New in version 0.9.5.

20.19.82 salt.states.firewall module

State to check firewall configurations

New in version 2016.3.0.

salt.states.firewall.check(*name*, *port=None*, ***kwargs*)

Checks if there is an open connection from the minion to the defined host on a specific port.

name host name or ip address to test connection to

port The port to test the connection on

kwargs

Additional parameters, parameters allowed are: proto (tcp or udp) family (ipv4 or ipv6) timeout

```
testgoogle:
  firewall.check:
    - name: 'google.com'
    - port: 80
    - proto: 'tcp'
```

20.19.83 salt.states.firewalld

Management of firewalld

New in version 2015.8.0.

The following example applies changes to the public zone, blocks echo-reply and echo-request packets, does not set the zone to be the default, enables masquerading, and allows ports 22/tcp and 25/tcp. It will be applied permanently and directly before restart/reload.

```
public:
  firewalld.present:
    - name: public
    - block_icmp:
      - echo-reply
      - echo-request
    - default: False
    - masquerade: True
    - ports:
      - 22/tcp
      - 25/tcp
```

The following example applies changes to the public zone, enables masquerading and configures port forwarding TCP traffic from port 22 to 2222, and forwards TCP traffic from port 80 to 443 at 192.168.0.1.

```
my_zone:
  firewalld.present:
    - name: public
    - masquerade: True
    - port_fwd:
      - 22:2222:tcp
      - 80:443:tcp:192.168.0.1
```

The following example binds the public zone to interface eth0 and to all packets coming from the 192.168.1.0/24 subnet. It also removes the zone from all other interfaces or sources.

```
public:
  firewalld.present:
    - name: public
    - interfaces:
      - eth0
    - sources:
      - 192.168.1.0/24
```

Here, we define a new service that encompasses TCP ports 4505 4506:

```

saltmaster:
firewalld.service:
- name: saltmaster
- ports:
  - 4505/tcp
  - 4506/tcp

```

To make this new service available in a zone, the following can be used, which would allow access to the salt master from the 10.0.0.0/8 subnet:

```

saltzone:
firewalld.present:
- name: saltzone
- services:
  - saltmaster
- sources:
  - 10.0.0.0/8

```

class `salt.states.firewalld.ForwardingMapping(srcport, destport, protocol, destaddr)`

Represents a port forwarding statement mapping a local port to a remote port for a specific protocol (TCP or UDP)

todict()

Returns a pretty dictionary meant for command line output.

`salt.states.firewalld.present(name, block_icmp=None, prune_block_icmp=False, default=None, masquerade=False, ports=None, prune_ports=False, port_fwd=None, prune_port_fwd=False, services=None, prune_services=None, interfaces=None, prune_interfaces=False, sources=None, prune_sources=False, rich_rules=None, prune_rich_rules=False)`

Ensure a zone has specific attributes.

name The zone to modify.

default [None] Set this zone as the default zone if True.

masquerade [False] Enable or disable masquerade for a zone.

block_icmp [None] List of ICMP types to block in the zone.

prune_block_icmp [False] If True, remove all but the specified block_icmp from the zone.

ports [None] List of ports to add to the zone.

prune_ports [False] If True, remove all but the specified ports from the zone.

port_fwd [None] List of port forwards to add to the zone.

prune_port_fwd [False] If True, remove all but the specified port_fwd from the zone.

services [None] List of services to add to the zone.

prune_services [True] If True, remove all but the specified services from the zone. .. note:: Currently defaults to True for compatibility, but will be changed to False in a future release.

interfaces [None] List of interfaces to add to the zone.

prune_interfaces [False] If True, remove all but the specified interfaces from the zone.

sources [None] List of sources to add to the zone.

prune_sources [False] If True, remove all but the specified sources from the zone.

rich_rules [None] List of rich rules to add to the zone.

prune_rich_rules [False] If True, remove all but the specified rich rules from the zone.

`salt.states.firewalld.service(name, ports=None, protocols=None)`

Ensure the service exists and encompasses the specified ports and protocols.

New in version 2016.11.0.

20.19.84 salt.states.gem

Installation of Ruby modules packaged as gems

A state module to manage rubygems. Gems can be set up to be installed or removed. This module will use RVM or rbenv if they are installed. In that case, you can specify what ruby version and gemset to target.

```
addressable:
  gem.installed:
    - user: rvm
    - ruby: jruby@jgemset
```

`salt.states.gem.installed` (*name*, *ruby=None*, *gem_bin=None*, *user=None*, *version=None*, *rdoc=False*, *ri=False*, *pre_releases=False*, *proxy=None*, *source=None*)

Make sure that a gem is installed.

name The name of the gem to install

ruby: None Only for RVM or rbenv installations: the ruby version and gemset to target.

gem_bin: None Custom gem command to run instead of the default. Use this to install gems to a non-default ruby install. If you are using rvm or rbenv use the ruby argument instead.

user: None The user under which to run the gem command

New in version 0.17.0.

version [None] Specify the version to install for the gem. Doesn't play nice with multiple gems at once

rdoc [False] Generate RDoc documentation for the gem(s).

ri [False] Generate RI documentation for the gem(s).

pre_releases [False] Install pre-release version of gem(s) if available.

proxy [None] Use the specified HTTP proxy server for all outgoing traffic. Format: [http://hostname\[{}\]:port](http://hostname[{}]:port)

source [None] Use the specified HTTP gem source server to download gem. Format: [http://hostname\[{}\]:port](http://hostname[{}]:port)

`salt.states.gem.removed` (*name*, *ruby=None*, *user=None*, *gem_bin=None*)

Make sure that a gem is not installed.

name The name of the gem to uninstall

gem_bin [None] Full path to gem binary to use.

ruby [None] If RVM or rbenv are installed, the ruby version and gemset to use. Ignored if `gem_bin` is specified.

user: None The user under which to run the gem command

New in version 0.17.0.

`salt.states.gem.sources_add` (*name*, *ruby=None*, *user=None*)

Make sure that a gem source is added.

name The URL of the gem source to be added

ruby: None For RVM or rbenv installations: the ruby version and gemset to target.

user: None The user under which to run the gem command

New in version 0.17.0.

`salt.states.gem.sources_remove` (*name*, *ruby=None*, *user=None*)

Make sure that a gem source is removed.

name The URL of the gem source to be removed

ruby: None For RVM or rbenv installations: the ruby version and gemset to target.

user: None The user under which to run the gem command

New in version 0.17.0.

20.19.85 salt.states.git

States to manage git repositories and git configuration

Important: Before using git over ssh, make sure your remote host fingerprint exists in your `~/.ssh/known_hosts` file.

Changed in version 2015.8.8: This state module now requires git 1.6.5 (released 10 October 2009) or newer.

`salt.states.git.cloned` (*name*, *target=None*, *branch=None*, *user=None*, *password=None*, *identity=None*, *https_user=None*, *https_pass=None*, *output_encoding=None*)

New in version 2018.3.3, Fluorine.

Ensure that a repository has been cloned to the specified target directory. If not, clone that repository. No fetches will be performed once cloned.

name Address of the remote repository

target Name of the target directory where repository should be cloned

branch Remote branch to check out. If unspecified, the default branch (i.e. the one to the remote HEAD points) will be checked out.

Note: The local branch name will match the remote branch name. If the branch name is changed, then that branch will be checked out locally, but keep in mind that remote repository will not be fetched. If your use case requires that you keep the clone up to date with the remote repository, then consider using `git.latest`.

user User under which to run git commands. By default, commands are run by the user under which the minion is running.

password Windows only. Required when specifying `user`. This parameter will be ignored on non-Windows platforms.

identity Path to a private key to use for ssh URLs. Works the same way as in `git.latest`, see that state's documentation for more information.

https_user HTTP Basic Auth username for HTTPS (only) clones

https_pass HTTP Basic Auth password for HTTPS (only) clones

output_encoding Use this option to specify which encoding to use to decode the output from any git commands which are run. This should not be needed in most cases.

Note: This should only be needed if the files in the repository were created with filenames using an encoding other than UTF-8 to handle Unicode characters.

`salt.states.git.config_set` (*name*, *value=None*, *multivar=None*, *repo=None*, *user=None*, *password=None*, *output_encoding=None*, ***kwargs*)

New in version 2014.7.0.

Changed in version 2015.8.0: Renamed from `git.config` to `git.config_set`. For earlier versions, use `git.config`.

Ensure that a config value is set to the desired value(s)

name Name of the git config value to set

value Set a single value for the config item

multivar Set multiple values for the config item

Note: The order matters here, if the same parameters are set but in a different order, they will be

removed and replaced in the order specified.

New in version 2015.8.0.

repo Location of the git repository for which the config value should be set. Required unless `global` is set to `True`.

user User under which to run git commands. By default, the commands are run by the user under which the minion is running.

password

Windows only. Required when specifying `user`. This parameter will be ignored on non-Windows platforms.

New in version 2016.3.4.

global [False] If `True`, this will set a global git config option

output_encoding Use this option to specify which encoding to use to decode the output from any git commands which are run. This should not be needed in most cases.

Note: This should only be needed if the files in the repository were created with filenames using an encoding other than UTF-8 to handle Unicode characters.

New in version 2018.3.1.

Local Config Example:

```
# Single value
mylocalrepo:
  git.config_set:
    - name: user.email
    - value: foo@bar.net
    - repo: /path/to/repo

# Multiple values
mylocalrepo:
  git.config_set:
    - name: mysection.myattribute
    - multivar:
      - foo
      - bar
      - baz
    - repo: /path/to/repo
```

Global Config Example (User “foo”):

```
mylocalrepo:
  git.config_set:
    - name: user.name
    - value: Foo Bar
    - user: foo
    - global: True
```

`salt.states.git.config_unset`(*name*, *value_regex*=None, *repo*=None, *user*=None, *password*=None, *output_encoding*=None, ***kwargs*)

New in version 2015.8.0.

Ensure that the named config key is not present

name The name of the configuration key to unset. This value can be a regex, but the regex must match the entire key name. For example, `foo\.` would not match all keys in the `foo` section, it would be necessary to use `foo\..+` to do so.

value_regex Regex indicating the values to unset for the matching key(s)

Note: This option behaves differently depending on whether or not `all` is set to `True`. If it is, then all values matching the regex will be deleted (this is the only way to delete multiple values from a multivar). If `all` is set to `False`, then this state will fail if the regex matches more than one value in a multivar.

all [False] If `True`, unset all matches

repo Location of the git repository for which the config value should be set. Required unless `global` is set to `True`.

user User under which to run git commands. By default, commands are run by the user under which the minion is running.

password

Windows only. Required when specifying `user`. This parameter will be ignored on non-Windows platforms.

New in version 2016.3.4.

global [False] If `True`, this will set a global git config option

output_encoding Use this option to specify which encoding to use to decode the output from any git commands which are run. This should not be needed in most cases.

Note: This should only be needed if the files in the repository were created with filenames using an encoding other than UTF-8 to handle Unicode characters.

New in version 2018.3.1.

Examples:

```
# Value matching 'baz'
mylocalrepo:
  git.config_unset:
    - name: foo.bar
    - value_regex: 'baz'
    - repo: /path/to/repo

# Ensure entire multivar is unset
mylocalrepo:
  git.config_unset:
    - name: foo.bar
    - all: True

# Ensure all variables in 'foo' section are unset, including multivars
mylocalrepo:
  git.config_unset:
    - name: 'foo\..+'
    - all: True

# Ensure that global config value is unset
mylocalrepo:
  git.config_unset:
    - name: foo.bar
    - global: True
```

```
salt.states.git.detached(name, rev, target=None, remote='origin', user=None, password=None,
                        force_clone=False, force_checkout=False, fetch_remote=True,
                        hard_reset=False, submodules=False, identity=None, https_user=None,
                        https_pass=None, onlyif=None, unless=None, output_encoding=None,
                        **kwargs)
```

New in version 2016.3.0.

Make sure a repository is cloned to the given target directory and is a detached HEAD checkout of the commit ID resolved from `rev`.

name Address of the remote repository.

rev The branch, tag, or commit ID to checkout after clone. If a branch or tag is specified it will be resolved to a commit ID and checked out.

ref Deprecated since version 2017.7.0: Use `rev` instead.

target Name of the target directory where repository is about to be cloned.

remote [origin] Git remote to use. If this state needs to clone the repo, it will clone it using this value as the initial remote name. If the repository already exists, and a remote by this name is not present, one will be added.

user User under which to run git commands. By default, commands are run by the user under which the minion is running.

password

Windows only. Required when specifying `user`. This parameter will be ignored on non-Windows platforms.

New in version 2016.3.4.

force_clone [False] If the `target` directory exists and is not a git repository, then this state will fail. Set this argument to `True` to remove the contents of the target directory and clone the repo into it.

force_checkout [False] When checking out the revision ID, the state will fail if there are unwritten changes. Set this argument to `True` to discard unwritten changes when checking out.

fetch_remote [True] If `False` a fetch will not be performed and only local refs will be reachable.

hard_reset [False] If `True` a hard reset will be performed before the checkout and any uncommitted modifications to the working directory will be discarded. Untracked files will remain in place.

Note: Changes resulting from a hard reset will not trigger requisites.

submodules [False] Update submodules

identity A path on the minion (or a SaltStack fileservers URL, e.g. `salt://path/to/identity_file`) to a private key to use for SSH authentication.

https_user HTTP Basic Auth username for HTTPS (only) clones

https_pass HTTP Basic Auth password for HTTPS (only) clones

onlyif A command to run as a check, run the named command only if the command passed to the `onlyif` option returns true

unless A command to run as a check, only run the named command if the command passed to the `unless` option returns false

output_encoding Use this option to specify which encoding to use to decode the output from any git commands which are run. This should not be needed in most cases.

Note: This should only be needed if the files in the repository were created with filenames using an encoding other than UTF-8 to handle Unicode characters.

New in version 2018.3.1.

```
salt.states.git.latest(name, rev='HEAD', target=None, branch=None, user=None, password=None, update_head=True, force_checkout=False, force_clone=False, force_fetch=False, force_reset=False, submodules=False, bare=False, mirror=False, remote='origin', fetch_tags=True, sync_tags=True, depth=None, identity=None, https_user=None, https_pass=None, onlyif=None, unless=None, refspec_branch='*', refspec_tag='*', output_encoding=None, **kwargs)
```

Make sure the repository is cloned to the given directory and is up-to-date.

name Address of the remote repository, as passed to `git clone`

Note: From the [Git documentation](#), there are two URL formats supported for SSH authentication. The below two examples are equivalent:

```
# ssh:// URL
ssh://user@server/project.git

# SCP-like syntax
user@server:project.git
```

A common mistake is to use an `ssh://` URL, but with a colon after the domain instead of a slash. This is invalid syntax in Git, and will therefore not work in Salt. When in doubt, confirm that a `git clone` works for the URL before using it in Salt.

It has been reported by some users that SCP-like syntax is incompatible with git repos hosted on [Atlassian Stash/BitBucket Server](#). In these cases, it may be necessary to use `ssh://` URLs for SSH authentication.

rev [HEAD] The remote branch, tag, or revision ID to checkout after clone / before update. If specified, then Salt will also ensure that the tracking branch is set to `<remote>/<rev>`, unless `rev` refers to a tag or SHA1, in which case Salt will ensure that the tracking branch is unset.

If `rev` is not specified, it will be assumed to be HEAD, and Salt will not manage the tracking branch at all.

Changed in version 2015.8.0: If not specified, `rev` now defaults to the remote repository's HEAD.

target Name of the target directory where repository is about to be cloned

branch Name of the local branch into which to checkout the specified `rev`. If not specified, then Salt will not care what branch is being used locally and will just use whatever branch is currently there.

New in version 2015.8.0.

Note: If this argument is not specified, this means that Salt will not change the local branch if the repository is reset to another branch/tag/SHA1. For example, assume that the following state was run initially:

```
foo_app:
  git.latest:
    - name: https://mydomain.tld/apps/foo.git
    - target: /var/www/foo
    - user: www
```

This would have cloned the HEAD of that repo (since a `rev` wasn't specified), and because `branch` is not specified, the branch in the local clone at `/var/www/foo` would be whatever the default branch is on the remote repository (usually `master`, but not always). Now, assume that it becomes necessary to switch this checkout to the `dev` branch. This would require `rev` to be set, and probably would also require `force_reset` to be enabled:

```
foo_app:
  git.latest:
    - name: https://mydomain.tld/apps/foo.git
    - target: /var/www/foo
    - user: www
    - rev: dev
    - force_reset: True
```

The result of this state would be to perform a hard-reset to `origin/dev`. Since `branch` was not specified though, while `/var/www/foo` would reflect the contents of the remote repo's `dev` branch,

the local branch would still remain whatever it was when it was cloned. To make the local branch match the remote one, set `branch` as well, like so:

```
foo_app:
  git.latest:
    - name: https://mydomain.tld/apps/foo.git
    - target: /var/www/foo
    - user: www
    - rev: dev
    - branch: dev
    - force_reset: True
```

This may seem redundant, but Salt tries to support a wide variety of use cases, and doing it this way allows for the use case where the local branch doesn't need to be strictly managed.

user Local system user under which to run git commands. By default, commands are run by the user under which the minion is running.

Note: This is not to be confused with the username for http(s)/SSH authentication.

New in version 0.17.0.

password Windows only. Required when specifying `user`. This parameter will be ignored on non-Windows platforms.

New in version 2016.3.4.

update_head [True] If set to `False`, then the remote repository will be fetched (if necessary) to ensure that the commit to which `rev` points exists in the local checkout, but no changes will be made to the local HEAD.

New in version 2015.8.3.

force_checkout [False] When checking out the local branch, the state will fail if there are unwritten changes. Set this argument to `True` to discard unwritten changes when checking out.

force_clone [False] If the `target` directory exists and is not a git repository, then this state will fail. Set this argument to `True` to remove the contents of the target directory and clone the repo into it.

force_fetch [False] If a fetch needs to be performed, non-fast-forward fetches will cause this state to fail. Set this argument to `True` to force the fetch even if it is a non-fast-forward update.

New in version 2015.8.0.

force_reset [False] If the update is not a fast-forward, this state will fail. Set this argument to `True` to force a hard-reset to the remote revision in these cases.

submodules [False] Update submodules on clone or branch change

bare [False] Set to `True` if the repository is to be a bare clone of the remote repository.

mirror Set to `True` if the repository is to be a mirror of the remote repository. This implies that `bare` set to `True`, and thus is incompatible with `rev`.

remote [origin] Git remote to use. If this state needs to clone the repo, it will clone it using this value as the initial remote name. If the repository already exists, and a remote by this name is not present, one will be added.

fetch_tags [True] If `True`, then when a fetch is performed all tags will be fetched, even those which are not reachable by any branch on the remote.

sync_tags [True] If `True`, then Salt will delete tags which exist in the local clone but are not found on the remote repository.

New in version 2018.3.4.

depth Defines depth in history when git a clone is needed in order to ensure latest. E.g. `depth: 1` is useful when deploying from a repository with a long history. Use `rev` to specify branch. This is not compatible with tags or revision IDs.

identity Path to a private key to use for ssh URLs. This can be either a single string, or a list of strings. For example:

```
# Single key
git@github.com:user/repo.git:
  git.latest:
    - user: deployer
    - identity: /home/deployer/.ssh/id_rsa

# Two keys
git@github.com:user/repo.git:
  git.latest:
    - user: deployer
    - identity:
      - /home/deployer/.ssh/id_rsa
      - /home/deployer/.ssh/id_rsa_alternate
```

If multiple keys are specified, they will be tried one-by-one in order for each git command which needs to authenticate.

Warning: Unless Salt is invoked from the minion using `salt-call`, the key(s) must be passphrase-less. For greater security with passphraseless private keys, see the `sshd(8)` manpage for information on securing the keypair from the remote side in the `authorized_keys` file.

Changed in version 2015.8.7: Salt will no longer attempt to use passphrase-protected keys unless invoked from the minion using `salt-call`, to prevent blocking waiting for user input.

Changed in version 2016.3.0: Key can now be specified as a SaltStack fileserver URL (e.g. `salt://path/to/identity_file`).

https_user HTTP Basic Auth username for HTTPS (only) clones

New in version 2015.5.0.

https_pass HTTP Basic Auth password for HTTPS (only) clones

New in version 2015.5.0.

onlyif A command to run as a check, run the named command only if the command passed to the `onlyif` option returns true

unless A command to run as a check, only run the named command if the command passed to the `unless` option returns false

refspec_branch [*] A glob expression defining which branches to retrieve when fetching. See `git-fetch(1)` for more information on how refsspecs work.

New in version 2017.7.0.

refspec_tag [*] A glob expression defining which tags to retrieve when fetching. See `git-fetch(1)` for more information on how refsspecs work.

New in version 2017.7.0.

output_encoding Use this option to specify which encoding to use to decode the output from any git commands which are run. This should not be needed in most cases.

Note: This should only be needed if the files in the repository were created with filenames using an encoding other than UTF-8 to handle Unicode characters.

New in version 2018.3.1.

Note: Clashing ID declarations can be avoided when including different branches from the same git repository in the same SLS file by using the `name` argument. The example below checks out the `gh-pages` and `gh-pages-prod` branches from the same repository into separate directories. The example also sets up the `ssh_known_hosts` ssh key required to perform the git checkout.

Also, it has been reported that the SCP-like syntax for

```
gitlab.example.com:
  ssh_known_hosts:
    - present
    - user: root
    - enc: ecdsa
    - fingerprint: 4e:94:b0:54:c1:5b:29:a2:70:0e:e1:a3:51:ee:ee:e3

git-website-staging:
  git.latest:
    - name: git@gitlab.example.com:user/website.git
    - rev: gh-pages
    - target: /usr/share/nginx/staging
    - identity: /root/.ssh/website_id_rsa
    - require:
      - pkg: git
      - ssh_known_hosts: gitlab.example.com

git-website-staging:
  git.latest:
    - name: git@gitlab.example.com:user/website.git
    - rev: gh-pages
    - target: /usr/share/nginx/staging
    - identity: salt://website/id_rsa
    - require:
      - pkg: git
      - ssh_known_hosts: gitlab.example.com

git-website-prod:
  git.latest:
    - name: git@gitlab.example.com:user/website.git
    - rev: gh-pages-prod
    - target: /usr/share/nginx/prod
    - identity: /root/.ssh/website_id_rsa
    - require:
      - pkg: git
      - ssh_known_hosts: gitlab.example.com
```

`salt.states.git.mod_run_check`(*cmd_kwargs, onlyif, unless*)

Execute the `onlyif` and `unless` logic. Return a result dict if:

- `onlyif` failed (`onlyif != 0`)
- `unless` succeeded (`unless == 0`)

Otherwise, returns `True`

`salt.states.git.present`(*name, force=False, bare=True, template=None, separate_git_dir=None, shared=None, user=None, password=None, output_encoding=None*)

Ensure that a repository exists in the given directory

Warning: If the minion has Git 2.5 or later installed, `name` points to a `worktree`, and `force` is set to `True`, then the worktree will be deleted. This has been corrected in Salt 2015.8.0.

name Path to the directory

Changed in version 2015.8.0: This path must now be absolute

force [False] If `True`, and if `name` points to an existing directory which does not contain a git repository, then the contents of that directory will be recursively removed and a new repository will be initialized in its place.

bare [True] If `True`, and a repository must be initialized, then the repository will be a bare repository.

Note: This differs from the default behavior of `git.init`, make sure to set this value to `False` if a bare repo is not desired.

template If a new repository is initialized, this argument will specify an alternate template directory.

New in version 2015.8.0.

separate_git_dir If a new repository is initialized, this argument will specify an alternate `$GIT_DIR`

New in version 2015.8.0.

shared Set sharing permissions on git repo. See `git-init(1)` for more details.

New in version 2015.5.0.

user User under which to run git commands. By default, commands are run by the user under which the minion is running.

New in version 0.17.0.

password

Windows only. Required when specifying `user`. This parameter will be ignored on non-Windows platforms.

New in version 2016.3.4.

output_encoding Use this option to specify which encoding to use to decode the output from any git commands which are run. This should not be needed in most cases.

Note: This should only be needed if the files in the repository were created with filenames using an encoding other than UTF-8 to handle Unicode characters.

New in version 2018.3.1.

20.19.86 salt.states.github module

GitHub User State Module

New in version 2016.3.0..

This state is used to ensure presence of users in the Organization.

```
ensure user test is present in github:
  github.present:
    - name: 'Example TestUser1'
    - email: example@domain.com
    - username: 'gitexample'
```

`salt.states.github.absent` (*name*, *profile='github'*, ***kwargs*)

Ensure a github user is absent

ensure user test is absent in github:

```
github.absent:
- name: 'Example TestUser1'
- email: example@domain.com
- username: 'gitexample'
```

The following parameters are required:

name Github handle of the user in organization

```
salt.states.github.present(name, profile='github', **kwargs)
```

Ensure a user is present

ensure user test is present in github:

```
github.present:
- name: 'gitexample'
```

The following parameters are required:

name This is the github handle of the user in the organization

```
salt.states.github.repo_absent(name, profile='github', **kwargs)
```

Ensure a repo is absent.

Example:

ensure repo test is absent in github:

```
github.repo_absent:
- name: 'test'
```

The following parameters are required:

name This is the name of the repository in the organization.

New in version 2016.11.0.

```
salt.states.github.repo_present(name, description=None, homepage=None, private=None,
                               has_issues=None, has_wiki=None, has_downloads=None,
                               auto_init=False, gitignore_template=None, li-
                               cense_template=None, teams=None, profile='github', **kwargs)
```

Ensure a repository is present

name This is the name of the repository.

description The description of the repository.

homepage The URL with more information about the repository.

private The visibility of the repository. Note that private repositories require a paid GitHub account.

has_issues Whether to enable issues for this repository.

has_wiki Whether to enable the wiki for this repository.

has_downloads Whether to enable downloads for this repository.

auto_init Whether to create an initial commit with an empty README.

gitignore_template The desired language or platform for a .gitignore, e.g "Haskell".

license_template The desired LICENSE template to apply, e.g "mit" or "mozilla".

teams The teams for which this repo should belong to, specified as a dict of team name to permission ('pull', 'push' or 'admin').

New in version 2017.7.0.

Example:

Ensure repo my-repo is present in github:

```
github.repo_present:
- name: 'my-repo'
- description: 'My very important repository'
```

New in version 2016.11.0.

`salt.states.github.team_absent`(*name*, *profile*='github', ***kwargs*)

Ensure a team is absent.

Example:

```
ensure team test is present in github:
  github.team_absent:
    - name: 'test'
```

The following parameters are required:

name This is the name of the team in the organization.

New in version 2016.11.0.

`salt.states.github.team_present`(*name*, *description*=None, *repo_names*=None, *privacy*='secret', *permission*='pull', *members*=None, *enforce_mfa*=False, *no_mfa_grace_seconds*=0, *profile*='github', ***kwargs*)

Ensure a team is present

name This is the name of the team in the organization.

description The description of the team.

repo_names The names of repositories to add the team to.

privacy The level of privacy for the team, can be 'secret' or 'closed'. Defaults to secret.

permission The default permission for new repositories added to the team, can be 'pull', 'push' or 'admin'. Defaults to pull.

members The members belonging to the team, specified as a dict of member name to optional configuration. Options include 'enforce_mfa_from' and 'mfa_exempt'.

enforce_mfa Whether to enforce MFA requirements on members of the team. If True then all members without *mfa_exempt: True* configured will be removed from the team. Note that *no_mfa_grace_seconds* may be set to allow members a grace period.

no_mfa_grace_seconds The number of seconds of grace time that a member will have to enable MFA before being removed from the team. The grace period will begin from *enforce_mfa_from* on the member configuration, which defaults to 1970/01/01.

Example:

```
Ensure team test is present in github:
  github.team_present:
    - name: 'test'
    - members:
        user1: {}
        user2: {}

Ensure team test_mfa is present in github:
  github.team_present:
    - name: 'test_mfa'
    - members:
        user1:
            enforce_mfa_from: 2016/06/15
    - enforce_mfa: True
```

New in version 2016.11.0.

20.19.87 salt.states.glance

Managing Images in OpenStack Glance

`salt.states.glance.image_present` (*name*, *visibility*=`'public'`, *protected*=`None`, *checksum*=`None`, *location*=`None`, *disk_format*=`'raw'`, *wait_for*=`None`, *timeout*=30)

Checks if given image is present with properties set as specified.

An image should get through the stages `'queued'`, `'saving'` before becoming `'active'`. The attribute `'checksum'` can only be checked once the image is active. If you don't specify `'wait_for'` but `'checksum'` the function will wait for the image to become active before comparing checksums. If you don't specify `checksum` either the function will return when the image reached `'saving'`. The default timeout for both is 30 seconds.

Supported properties:

- `visibility` (`'public'` or `'private'`)
- `protected` (bool)
- `checksum` (string, md5sum)
- `location` (URL, to copy from)
- `disk_format` (`'raw'` (default), `'vhd'`, `'vhdx'`, `'vmdk'`, `'vdi'`, `'iso'`, `'qcow2'`, `'aki'`, `'ari'` or `'ami'`)

20.19.88 salt.states.glance_image

Management of OpenStack Glance Images

New in version 2018.3.0.

depends `shade`

configuration see `salt.modules.glanceng` for setup instructions

Example States

```
create image:
  glance_image.present:
    - name: cirros
    - filename: cirros.raw
    - image_format: raw

delete image:
  glance_image.absent:
    - name: cirros
```

`salt.states.glance_image.absent` (*name*, *auth*=`None`)

Ensure image does not exist

name Name of the image

`salt.states.glance_image.present` (*name*, *auth*=`None`, ***kwargs*)

Ensure image exists and is up-to-date

name Name of the image

enabled Boolean to control if image is enabled

description An arbitrary description of the image

20.19.89 salt.states.glusterfs

Manage GlusterFS pool.

`salt.states.glusterfs.add_volume_bricks` (*name*, *bricks*)

Add brick(s) to an existing volume

name Volume name

bricks List of bricks to add to the volume

```
myvolume:
  glusterfs.add_volume_bricks:
    - bricks:
      - host1:/srv/gluster/drive1
      - host2:/srv/gluster/drive2

Replicated Volume:
  glusterfs.add_volume_bricks:
    - name: volume2
    - bricks:
      - host1:/srv/gluster/drive2
      - host2:/srv/gluster/drive3
```

salt.states.glusterfs.peered(*name*)

Check if node is peered.

name The remote host with which to peer.

```
peer-cluster:
  glusterfs.peered:
    - name: two

peer-clusters:
  glusterfs.peered:
    - names:
      - one
      - two
      - three
      - four
```

salt.states.glusterfs.started(*name*)

Check if volume has been started

name name of the volume

```
mycluster:
  glusterfs.started: []
```

salt.states.glusterfs.volume_present(*name*, *bricks*, *stripe=False*, *replica=False*, *device_vg=False*, *transport='tcp'*, *start=False*, *force=False*)

Ensure that the volume exists

name name of the volume

bricks list of brick paths

start ensure that the volume is also started

```
myvolume:
  glusterfs.volume_present:
    - bricks:
      - host1:/srv/gluster/drive1
      - host2:/srv/gluster/drive2

Replicated Volume:
  glusterfs.volume_present:
    - name: volume2
    - bricks:
      - host1:/srv/gluster/drive2
      - host2:/srv/gluster/drive3
```

(continues on next page)

(continued from previous page)

- **replica**: 2
- **start**: True

20.19.90 salt.states.gnomedesktop

Configuration of the GNOME desktop

Control the GNOME settings

```
localdesktop_wm_prefs:
  gnomedesktop.wm_preferences:
    - user: username
    - audible_bell: false
    - action_double_click_titlebar: 'toggle-maximize'
    - visual_bell: true
    - num_workspaces: 6
localdesktop_lockdown:
  gnomedesktop.desktop_lockdown:
    - user: username
    - disable_user_switching: true
localdesktop_interface:
  gnomedesktop.desktop_interface:
    - user: username
    - clock_show_date: true
    - clock_format: 12h
```

```

```

20.19.91 salt.states.gpg module

Management of the GPG keychains

New in version 2016.3.0.

```

salt.states.gpg.absent(name, keys=None, user=None, gnupghome=None, **kwargs)

```

Ensure GPG public key is absent in keychain

name The unique name or keyid for the GPG public key.

keys The keyId or keyIds to add to the GPG keychain.

user Remove GPG keys from the specified user's keychain

gnupghome Override GNUPG Home directory

```

salt.states.gpg.present(name, keys=None, user=None, keyserver=None, gnupghome=None, trust=None, **kwargs)

```

Ensure GPG public key is present in keychain

name The unique name or keyid for the GPG public key.

keys The keyId or keyIds to add to the GPG keychain.

user Add GPG keys to the specified user's keychain

keyserver The keyserver to retrieve the keys from.

gnupghome Override GNUPG Home directory

trust Trust level for the key in the keychain, ignored by default. Valid trust levels: expired, unknown, not_trusted, marginally, fully, ultimately

20.19.92 salt.states.grafana

Manage Grafana Dashboards

This module uses `elasticsearch`, which can be installed via package, or pip.

You can specify elasticsearch hosts directly to the module, or you can use an elasticsearch profile via pillars:

```

mygrafanaprofile:

```

```

  hosts:

```

```

    - es1.example.com:9200

```

```

    - es2.example.com:9200

```

```

  index: grafana-dash

```

```
# Basic usage (uses default pillar profile key 'grafana')
Ensure myservice dashboard is managed:
grafana.dashboard_present:
  - name: myservice
  - dashboard_from_pillar: default
  - rows_from_pillar:
    - systemhealth
    - requests

# Passing hosts in
Ensure myservice dashboard is managed:
grafana.dashboard_present:
  - name: myservice
  - dashboard_from_pillar: default
  - rows:
    - collapse: false
      editable: true
      height: 150px
      title: System Health
      panels:
        - aliasColors: {}
          id: 200000
          annotate:
            enable: false
          bars: false
          datasource: null
          editable: true
          error: false
          fill: 7
          grid:
            leftMax: 100
            leftMin: null
            rightMax: null
            rightMin: null
            threshold1: 60
            threshold1Color: rgb(216, 27, 27)
            threshold2: null
            threshold2Color: rgba(234, 112, 112, 0.22)
          leftYAxisLabel: ''
          legend:
            avg: false
            current: false
            max: false
            min: false
            show: false
            total: false
            values: false
          lines: true
          linewidth: 1
          nullPointMode: connected
          percentage: false
          pointradius: 5

```

The behavior of this module is to create dashboards if they do not exist, to add rows if they do not exist in existing dashboards, and to update rows if they exist in dashboards. The module will not manage rows that are not defined, allowing users to manage their own custom rows.

salt.states.grafana.dashboard_absent (*name, hosts=None, profile='grafana'*)

Ensure the named grafana dashboard is deleted.

name Name of the grafana dashboard.

profile A pillar key or dict that contains a list of hosts and an elasticsearch index to use.

salt.states.grafana.dashboard_present (*name, dashboard=None, dashboard_from_pillar=None, rows=None, rows_from_pillar=None, profile='grafana'*)

Ensure the grafana dashboard exists and is managed.

name Name of the grafana dashboard.

dashboard A dict that defines a dashboard that should be managed.

dashboard_from_pillar A pillar key that contains a grafana dashboard dict. Mutually exclusive with dashboard.

rows A list of grafana rows.

rows_from_pillar A list of pillar keys that contain lists of grafana dashboard rows. Rows defined in the pillars will be appended to the rows defined in the state.

profile A pillar key or dict that contains a list of hosts and an elasticsearch index to use.

20.19.93 salt.states.grafana4_dashboard module

Manage Grafana v4.0 Dashboards

New in version 2017.7.0.

configuration This state requires a configuration profile to be configured in the minion config, minion pillar, or master config. The module will use the 'grafana' key by default, if defined.

Example configuration using basic authentication:

```
grafana:
  grafana_url: http://grafana.localhost
  grafana_user: admin
  grafana_password: admin
  grafana_timeout: 3
```

Example configuration using token based authentication:

```
grafana:
  grafana_url: http://grafana.localhost
  grafana_token: token
  grafana_timeout: 3
```

The behavior of this module is to create dashboards if they do not exist, to add rows if they do not exist in existing dashboards, and to update rows if they exist in dashboards. The module will not manage rows that are not defined, allowing users to manage their own custom rows.

```
Ensure minimum dashboard is managed:
grafana4_dashboard.present:
- name: insightful-dashboard
- base_dashboards_from_pillar:
  - default_dashboard
- base_rows_from_pillar:
  - default_row
- base_panels_from_pillar:
  - default_panel
- dashboard:
  rows:
    - title: Usage
      panels:
        - targets:
            - target: alias(constantLine(50), 'max')
              title: Imaginary
              type: graph
```

`salt.states.grafana4_dashboard.absent` (*name*, *orgname=None*, *profile='grafana'*)

Ensure the named grafana dashboard is absent.

name Name of the grafana dashboard.

orgname Name of the organization in which the dashboard should be present.

profile Configuration profile used to connect to the Grafana instance. Default is 'grafana'.

`salt.states.grafana4_dashboard.present` (*name*, *base_dashboards_from_pillar=None*,
base_panels_from_pillar=None,
base_rows_from_pillar=None, *dashboard=None*,
orgname=None, *profile='grafana'*)

Ensure the grafana dashboard exists and is managed.

name Name of the grafana dashboard.

base_dashboards_from_pillar A pillar key that contains a list of dashboards to inherit from

base_panels_from_pillar A pillar key that contains a list of panels to inherit from
base_rows_from_pillar A pillar key that contains a list of rows to inherit from
dashboard A dict that defines a dashboard that should be managed.
orgname Name of the organization in which the dashboard should be present.
profile Configuration profile used to connect to the Grafana instance. Default is 'grafana'.

20.19.94 salt.states.grafana4_datasource module

Manage Grafana v4.0 data sources

New in version 2017.7.0.

configuration This state requires a configuration profile to be configured in the minion config, minion pillar, or master config. The module will use the 'grafana' key by default, if defined.

Example configuration using basic authentication:

```
grafana:
  grafana_url: http://grafana.localhost
  grafana_user: admin
  grafana_password: admin
  grafana_timeout: 3
```

Example configuration using token based authentication:

```
grafana:
  grafana_url: http://grafana.localhost
  grafana_token: token
  grafana_timeout: 3
```

The behavior of this module is to create data sources if the do not exists, and to update data sources if the already exists.

Ensure influxdb data source is present:

```
grafana4_datasource.present:
- name: influxdb
- type: influxdb
- url: http://localhost:8086
- access: proxy
- basic_auth: true
- basic_auth_user: myuser
- basic_auth_password: mypass
- is_default: true
```

salt.states.grafana4_datasource.absent(*name*, *orgname*=None, *profile*='grafana')

Ensure that a data source is present.

name Name of the data source to remove.

orgname Name of the organization from which the data source should be absent.

profile Configuration profile used to connect to the Grafana instance. Default is 'grafana'.

salt.states.grafana4_datasource.present(*name*, *type*, *url*, *access*=None, *user*=None, *password*=None, *database*=None, *basic_auth*=None, *basic_auth_user*=None, *basic_auth_password*=None, *tls_auth*=None, *json_data*=None, *is_default*=None, *with_credentials*=None, *type_logo_url*=None, *orgname*=None, *profile*='grafana')

Ensure that a data source is present.

name Name of the data source.
type Type of the datasource ('graphite', 'influxdb' etc.).
access Use proxy or direct. Default: proxy
url The URL to the data source API.
user Optional - user to authenticate with the data source.
password Optional - password to authenticate with the data source.
database Optional - database to use with the data source.
basic_auth Optional - set to True to use HTTP basic auth to authenticate with the data source.
basic_auth_user Optional - HTTP basic auth username.
basic_auth_password Optional - HTTP basic auth password.
json_data Optional - additional json data to post (eg. "timeInterval").
is_default Optional - set data source as default.
with_credentials Optional - Whether credentials such as cookies or auth headers should be sent with cross-site requests.
type_logo_url Optional - Logo to use for this datasource.
orgname Name of the organization in which the data source should be present.
profile Configuration profile used to connect to the Grafana instance. Default is 'grafana'.

20.19.95 salt.states.grafana4_org module

Manage Grafana v4.0 orgs

New in version 2017.7.0.

configuration This state requires a configuration profile to be configured in the minion config, minion pillar, or master config. The module will use the 'grafana' key by default, if defined.

Example configuration using basic authentication:

```
grafana:
  grafana_url: http://grafana.localhost
  grafana_user: admin
  grafana_password: admin
  grafana_timeout: 3
```

Example configuration using token based authentication:

```
grafana:
  grafana_url: http://grafana.localhost
  grafana_token: token
  grafana_timeout: 3
```

Ensure foobar org is present:

```
grafana4_org.present:
- name: foobar
- theme: ""
- home_dashboard_id: 0
- timezone: "utc"
- address1: ""
- address2: ""
- city: ""
- zip_code: ""
- state: ""
- country: ""
```

`salt.states.grafana4_org.absent(name, profile='grafana')`
 Ensure that a org is present.

name Name of the org to remove.

profile Configuration profile used to connect to the Grafana instance. Default is 'grafana'.

`salt.states.grafana4_org.present` (*name, users=None, theme=None, home_dashboard_id=None, timezone=None, address1=None, address2=None, city=None, zip_code=None, address_state=None, country=None, profile='grafana'*)

Ensure that an organization is present.

name Name of the org.

users Optional - Dict of user/role associated with the org. Example:

```
users:
  foo: Viewer
  bar: Editor
```

theme Optional - Selected theme for the org.

home_dashboard_id Optional - Home dashboard for the org.

timezone Optional - Timezone for the org (one of: "browser", "utc", or "").

address1 Optional - address1 of the org.

address2 Optional - address2 of the org.

city Optional - city of the org.

zip_code Optional - zip_code of the org.

address_state Optional - state of the org.

country Optional - country of the org.

profile Configuration profile used to connect to the Grafana instance. Default is 'grafana'.

20.19.96 salt.states.grafana4_user module

Manage Grafana v4.0 users

New in version 2017.7.0.

configuration This state requires a configuration profile to be configured in the minion config, minion pillar, or master config. The module will use the 'grafana' key by default, if defined.

Example configuration using basic authentication:

```
grafana:
  grafana_url: http://grafana.localhost
  grafana_user: admin
  grafana_password: admin
  grafana_timeout: 3
```

Example configuration using token based authentication:

```
grafana:
  grafana_url: http://grafana.localhost
  grafana_token: token
  grafana_timeout: 3
```

Ensure foobar user is present:

grafana4_user.present:

- **name:** foobar
- **password:** mypass
- **email:** "foobar@localhost"
- **fullname:** Foo Bar
- **is_admin:** true

`salt.states.grafana4_user.absent(name, profile='grafana')`

Ensure that a user is present.

name Name of the user to remove.

profile Configuration profile used to connect to the Grafana instance. Default is 'grafana'.

`salt.states.grafana4_user.present(name, password, email, is_admin=False, fullname=None, theme=None, profile='grafana')`

Ensure that a user is present.

name Name of the user.

password Password of the user.

email Email of the user.

is_admin Optional - Set user as admin user. Default: False

fullname Optional - Full name of the user.

theme Optional - Selected theme of the user.

profile Configuration profile used to connect to the Grafana instance. Default is 'grafana'.

20.19.97 salt.states.grafana_dashboard module

Manage Grafana v2.0 Dashboards

New in version 2016.3.0.

```
grafana:
  grafana_timeout: 3
  grafana_token: qwertyuiop
  grafana_url: 'https://url.com'
```

```
Ensure minimum dashboard is managed:
grafana_dashboard.present:
  - name: insightful-dashboard
  - base_dashboards_from_pillar:
    - default_dashboard
  - base_rows_from_pillar:
    - default_row
  - base_panels_from_pillar:
    - default_panel
  - dashboard:
    rows:
      - title: Usage
        panels:
          - targets:
              - target: alias(constantLine(50), 'max')
                title: Imaginary
                type: graph
```

The behavior of this module is to create dashboards if they do not exist, to add rows if they do not exist in existing dashboards, and to update rows if they exist in dashboards. The module will not manage rows that are not defined, allowing users to manage their own custom rows.

`salt.states.grafana_dashboard.absent(name, profile='grafana')`

Ensure the named grafana dashboard is absent.

name Name of the grafana dashboard.

profile A pillar key or dict that contains grafana information

```
salt.states.grafana_dashboard.present(name, base_dashboards_from_pillar=None,
                                       base_panels_from_pillar=None,
                                       base_rows_from_pillar=None, dashboard=None,
                                       profile='grafana')
```

Ensure the grafana dashboard exists and is managed.

name Name of the grafana dashboard.

base_dashboards_from_pillar A pillar key that contains a list of dashboards to inherit from

base_panels_from_pillar A pillar key that contains a list of panels to inherit from

base_rows_from_pillar A pillar key that contains a list of rows to inherit from

dashboard A dict that defines a dashboard that should be managed.

profile A pillar key or dict that contains grafana information

20.19.98 salt.states.grafana_datasource module

Manage Grafana v2.0 data sources

New in version 2016.3.0.

```
grafana:
  grafana_timeout: 3
  grafana_token: qwertyuiop
  grafana_url: 'https://url.com'
```

```
Ensure influxdb data source is present:
```

```
grafana_datasource.present:
- name: influxdb
- type: influxdb
- url: http://localhost:8086
- access: proxy
- basic_auth: true
- basic_auth_user: myuser
- basic_auth_password: mypass
- is_default: true
```

```
salt.states.grafana_datasource.absent(name, profile='grafana')
```

Ensure that a data source is present.

name Name of the data source to remove.

```
salt.states.grafana_datasource.present(name, type, url, access='proxy', user="", password="",
                                       database="", basic_auth=False, basic_auth_user="",
                                       basic_auth_password="", is_default=False,
                                       json_data=None, profile='grafana')
```

Ensure that a data source is present.

name Name of the data source.

type Which type of data source it is ('graphite', 'influxdb' etc.).

url The URL to the data source API.

user Optional - user to authenticate with the data source

password Optional - password to authenticate with the data source

basic_auth Optional - set to True to use HTTP basic auth to authenticate with the data source.

basic_auth_user Optional - HTTP basic auth username.

basic_auth_password Optional - HTTP basic auth password.

is_default Default: False

20.19.99 salt.states.grains

Manage grains on the minion

This state allows for grains to be set.

Grains set or altered with this module are stored in the 'grains' file on the minions, By default, this file is located at: /etc/salt/grains

Note: This does NOT override any grains set in the minion config file.

`salt.states.grains.absent` (*name*, *destructive=False*, *delimiter=':'*, *force=False*)

New in version 2014.7.0.

Delete a grain from the grains config file

name The grain name

destructive If destructive is True, delete the entire grain. If destructive is False, set the grain's value to None. Defaults to False.

force If force is True, the existing grain will be overwritten regardless of its existing or provided value type. Defaults to False

New in version v2015.8.2.

delimiter A delimiter different from the default can be provided.

New in version v2015.8.2.

Changed in version v2015.8.2.

This state now support nested grains and complex values. It is also more conservative: if a grain has a value that is a list or a dict, it will not be removed unless the *force* parameter is True.

```
grain_name:
  grains.absent
```

`salt.states.grains.append` (*name*, *value*, *convert=False*, *delimiter=':'*)

New in version 2014.7.0.

Append a value to a list in the grains config file. The grain that is being appended to (*name*) must exist before the new value can be added.

name The grain name

value The value to append

convert If convert is True, convert non-list contents into a list. If convert is False and the grain contains non-list contents, an error is given. Defaults to False.

delimiter A delimiter different from the default can be provided.

New in version v2015.8.2.

```
grain_name:
  grains.append:
    - value: to_be_appended
```

`salt.states.grains.exists` (*name*, *delimiter=':'*)

Ensure that a grain is set

name The grain name

delimiter A delimiter different from the default can be provided.

Check whether a grain exists. Does not attempt to check or set the value.

`salt.states.grains.list_absent` (*name*, *value*, *delimiter=':'*)

Delete a value from a grain formed as a list.

New in version 2014.1.0.

name The grain name.
value The value to delete from the grain list.
delimiter A delimiter different from the default `:` can be provided.

New in version v2015.8.2.

The grain should be `list type`

```
roles:
  grains.list_absent:
    - value: db
```

For multiple grains, the syntax looks like:

```
roles:
  grains.list_absent:
    - value:
      - web
      - dev
```

`salt.states.grains.list_present` (*name, value, delimiter=':'*)

New in version 2014.1.0.

Ensure the value is present in the list-type grain. Note: If the grain that is provided in `name` is not present on the system, this new grain will be created with the corresponding provided value.

name The grain name.
value The value is present in the list type grain.
delimiter A delimiter different from the default `:` can be provided.

New in version v2015.8.2.

The grain should be `list type`

```
roles:
  grains.list_present:
    - value: web
```

For multiple grains, the syntax looks like:

```
roles:
  grains.list_present:
    - value:
      - web
      - dev
```

`salt.states.grains.present` (*name, value, delimiter=':', force=False*)

Ensure that a grain is set

Changed in version v2015.8.2.

name The grain name
value The value to set on the grain
force If force is True, the existing grain will be overwritten regardless of its existing or provided value type.
 Defaults to False

New in version v2015.8.2.

delimiter A delimiter different from the default can be provided.

New in version v2015.8.2.

It is now capable to set a grain to a complex value (ie. lists and dicts) and supports nested grains as well.

If the grain does not yet exist, a new grain is set to the given value. For a nested grain, the necessary keys are created if they don't exist. If a given key is an existing value, it will be converted, but an existing value

different from the given key will fail the state.

If the grain with the given name exists, its value is updated to the new value unless its existing or provided value is complex (list or dict). Use *force: True* to overwrite.

```
cheese:
  grains.present:
    - value: edam

nested_grain_with_complex_value:
  grains.present:
    - name: icinga:Apache SSL
    - value:
      - command: check_https
      - params: -H localhost -p 443 -S

with,a,custom,delimiter:
  grains.present:
    - value: yay
    - delimiter: ','
```

20.19.100 salt.states.group

Management of user groups

The group module is used to create and manage group settings, groups can be either present or absent. User/Group names can be passed to the `adduser`, `deluser`, and `members` parameters. `adduser` and `deluser` can be used together but not with `members`.

In Windows, if no domain is specified in the user or group name (i.e. `DOMAIN\username`) the module will assume a local user or group.

```
cheese:
  group.present:
    - gid: 7648
    - system: True
    - addusers:
      - user1
      - users2
    - delusers:
      - foo

cheese:
  group.present:
    - gid: 7648
    - system: True
    - members:
      - foo
      - bar
      - user1
      - user2
```

`salt.states.group.absent(name)`

Ensure that the named group is absent

Parameters **name** (*str*) – The name of the group to remove

Example:

```
# Removes the local group `db_admin`
db_admin:
  group.absent
```

`salt.states.group.present`(*name*, *gid=None*, *system=False*, *addusers=None*, *delusers=None*, *members=None*)

Ensure that a group is present

Parameters

- **name** (*str*) – The name of the group to manage
- **gid** (*str*) – The group id to assign to the named group; if left empty, then the next available group id will be assigned. Ignored on Windows
- **system** (*bool*) – Whether or not the named group is a system group. This is essentially the '-r' option of 'groupadd'. Ignored on Windows
- **addusers** (*list*) – List of additional users to be added as a group members. Cannot conflict with names in delusers. Cannot be used in conjunction with members.
- **delusers** (*list*) – Ensure these user are removed from the group membership. Cannot conflict with names in addusers. Cannot be used in conjunction with members.
- **members** (*list*) – Replace existing group members with a list of new members. Cannot be used in conjunction with addusers or delusers.

Example:

```
# Adds DOMAIN\db_admins and Administrators to the local db_admin group
# Removes Users
db_admin:
  group.present:
    - addusers:
      - DOMAIN\db_admins
      - Administrators
    - delusers:
      - Users

# Ensures only DOMAIN\domain_admins and the local Administrator are
# members of the local Administrators group. All other users are
# removed
Administrators:
  group.present:
    - members:
      - DOMAIN\domain_admins
      - Administrator
```

20.19.101 salt.states.heat module

Management of Heat

New in version 2017.7.0.

depends

- heat Python module

configuration See `salt.modules.heat` for setup instructions.

The heat module is used to create, show, list and delete Heat staks. Stack can be set as either absent or deploy.

```

heat.deployed:
- name:
- template: #Required
- environment:
- params: {}
- poll: 5
- rollback: False
- timeout: 60

heat.absent:
- name:
- poll: 5

```

mysql:

heat.deployed:

- template: salt://templates/mysql.heat.yaml
- params: image: Debian 7
- rollback: True

New in version 2017.7.5,2018.3.1: The spelling mistake in parameter *enviroment* was corrected to *environment*. The misspelled version is still supported for backward compatibility, but will be removed in Salt Neon.

salt.states.heat.absent (*name, poll=5, timeout=60, profile=None*)

Ensure that the named stack is absent

name The name of the stack to remove

poll Poll(in sec.) and report events until stack complete

timeout Stack creation timeout in minutes

profile Profile to use

salt.states.heat.deployed (*name, template=None, environment=None, params=None, poll=5, rollback=False, timeout=60, update=False, profile=None, **connection_args*)

Deploy stack with the specified properties

name The name of the stack

template File of template

environment File of environment

params Parameter dict used to create the stack

poll Poll (in sec.) and report events until stack complete

rollback Enable rollback on create failure

timeout Stack creation timeout in minutes

profile Profile to use

New in version 2017.7.5,2018.3.1: The spelling mistake in parameter *enviroment* was corrected to *environment*. The misspelled version is still supported for backward compatibility, but will be removed in Salt Neon.

20.19.102 salt.states.hg

Interaction with Mercurial repositories

Before using hg over ssh, make sure the remote host fingerprint already exists in `~/.ssh/known_hosts`, and the remote host has this host's public key.

```

https://bitbucket.org/example_user/example_repo:
hg.latest:

```

(continues on next page)

(continued from previous page)

```
- rev: tip
- target: /tmp/example_repo
```

`salt.states.hg.latest`(*name, rev=None, target=None, clean=False, user=None, identity=None, force=False, opts=False, update_head=True*)

Make sure the repository is cloned to the given directory and is up to date

name Address of the remote repository as passed to "hg clone"

rev The remote branch, tag, or revision hash to clone/pull

target Target destination directory path on minion to clone into

clean Force a clean update with -C (Default: False)

user Name of the user performing repository management operations

New in version 0.17.0.

identity Private SSH key on the minion server for authentication (`ssh://`)

New in version 2015.5.0.

force Force hg to clone into pre-existing directories (deletes contents)

opts Include additional arguments and options to the hg command line

update_head Should we update the head if new changes are found? Defaults to True

New in version 2017.7.0.

20.19.103 salt.states.hipchat

Send a message to Hipchat

This state is useful for sending messages to Hipchat during state runs.

The property `api_url` is optional. By default will use the public HipChat API at <https://api.hipchat.com>

New in version 2015.5.0.

```
hipchat-message:
  hipchat.send_message:
    - room_id: 123456
    - from_name: SuperAdmin
    - message: 'This state was executed successfully.'api_url: https://hipchat.myteam.com
    - api_key: peWcBiMOS9HrZG15peWcBiMOS9HrZG15
    - api_version: v1
```

The api key can be specified in the master or minion configuration like below:

```
hipchat:
  api_key: peWcBiMOS9HrZG15peWcBiMOS9HrZG15
  api_version: v1
```

`salt.states.hipchat.send_message`(*name, room_id, from_name, message, api_url=None, api_key=None, api_version=None, message_color='yellow', notify=False*)

Send a message to a Hipchat room.

```
hipchat-message:
  hipchat.send_message:
    - room_id: 123456
    - from_name: SuperAdmin
```

(continues on next page)

(continued from previous page)

```

- message: 'This state was executed successfully.'
- api_url: https://hipchat.myteam.com
- api_key: peWcBiMOS9HrZG15peWcBiMOS9HrZG15
- api_version: v1
- message_color: green
- notify: True

```

The following parameters are required:

name The unique name for this event.

room_id The room to send the message to. Can either be the ID or the name.

from_name The name of that is to be shown in the "from" field. If not specified, defaults to.

message The message that is to be sent to the Hipchat room.

The following parameters are optional:

api_url The API URL to be used. If not specified here or in the configuration options of master or minion, will use the public HipChat API: <https://api.hipchat.com>

api_key The api key for Hipchat to use for authentication, if not specified in the configuration options of master or minion.

api_version The api version for Hipchat to use, if not specified in the configuration options of master or minion.

message_color The color the Hipchat message should be displayed in. One of the following, default: yellow "yellow", "red", "green", "purple", "gray", or "random".

notify Should a notification in the room be raised.

20.19.104 salt.states.host

Management of addresses and names in hosts file

The `/etc/hosts` file can be managed to contain definitions for specific hosts:

```

salt-master:
  host.present:
    - ip: 192.168.0.42

```

Or using the `names` directive, you can put several names for the same IP. (Do not try one name with space-separated values).

```

server1:
  host.present:
    - ip: 192.168.0.42
    - names:
      - server1
      - florida

```

Note: Changing the names in `host.present` does not cause an update to remove the old entry.

```

server1:
  host.present:
    - ip:
      - 192.168.0.42
      - 192.168.0.43
      - 192.168.0.44

```

(continues on next page)

(continued from previous page)

```
- names:
  - server1
```

You can replace all existing names for a particular IP address:

```
127.0.1.1:
host.only:
  - hostnames:
    - foo.example.com
    - foo
```

Or delete all existing names for an address:

```
203.0.113.25:
host.only:
  - hostnames: []
```

`salt.states.host.absent` (*name*, *ip*)

Ensure that the named host is absent

name The host to remove

ip The ip addr(s) of the host to remove

`salt.states.host.only` (*name*, *hostnames*)

Ensure that only the given hostnames are associated with the given IP address.

New in version 2016.3.0.

name The IP address to associate with the given hostnames.

hostnames Either a single hostname or a list of hostnames to associate with the given IP address in the given order. Any other hostname associated with the IP address is removed. If no hostnames are specified, all hostnames associated with the given IP address are removed.

`salt.states.host.present` (*name*, *ip*, *clean=False*)

Ensures that the named host is present with the given ip

name The host to assign an ip to

ip The ip addr(s) to apply to the host. Can be a single IP or a list of IP addresses.

clean [False] Remove any entries which don't match those configured in the `ip` option.

New in version 2018.3.4.

20.19.105 salt.states.htpasswd

Support for htpasswd module. Requires the apache2-utils package for Debian-based distros.

New in version 2014.7.0.

```
username:
webutil.user_exists:
  - password: secr3t
  - htpasswd_file: /etc/nginx/htpasswd
  - options: d
  - force: true
```

`salt.states.htpasswd.user_absent` (*name*, *htpasswd_file=None*, *runas=None*)

Make sure the user is not in the specified htpasswd file

name User name

htpasswd_file Path to the htpasswd file

runas The system user to run htpasswd command with

`salt.states.htpasswd.user_exists(name, password=None, htpasswd_file=None, options="", force=False, runas=None, update=False)`

Make sure the user is inside the specified htpasswd file

name User name

password User password

htpasswd_file Path to the htpasswd file

options See `salt.modules.htpasswd.useradd`

force Touch the file even if user already created

runas The system user to run htpasswd command with

update Update an existing user's password if it's different from what's in the htpasswd file (unlike force, which updates regardless)

20.19.106 salt.states.http

HTTP monitoring states

Perform an HTTP query and statefully return the result

New in version 2015.5.0.

`salt.states.http.query(name, match=None, match_type='string', status=None, wait_for=None, **kwargs)`

Perform an HTTP query and statefully return the result

New in version 2015.5.0.

name The name of the query.

match Specifies a pattern to look for in the return text. By default, this will perform a string comparison of looking for the value of match in the return text.

match_type Specifies the type of pattern matching to use. Default is `string`, but can also be set to `pcr` to use regular expression matching if a more complex pattern matching is required.

Note: Despite the name of `match_type` for this argument, this setting actually uses Python's `re.search()` function rather than Python's `re.match()` function.

status The status code for a URL for which to be checked. Can be used instead of or in addition to the `match` setting.

If both `match` and `status` options are set, both settings will be checked. However, note that if only one option is `True` and the other is `False`, then `False` will be returned. If this case is reached, the comments in the return data will contain troubleshooting information.

For more information about the `http.query` state, refer to the [HTTP Tutorial](#).

```
query_example:
  http.query:
    - name: 'http://example.com/'
    - status: 200
```

`salt.states.http.wait_for_successful_query(name, wait_for=300, **kwargs)`

Like `query` but, repeat and wait until `match/match_type` or `status` is fulfilled. State returns result from last `query` state in case of success or if no successful query was made within `wait_for` timeout.

name The name of the query.

wait_for Total time to wait for requests that succeed.

request_interval Optional interval to delay requests by N seconds to reduce the number of requests sent.

Note: All other arguments are passed to the http.query state.

20.19.107 salt.states.icinga2 module

Icinga2 state

New in version 2017.7.0.

depends

- Icinga2 Python module

configuration See `salt.modules.icinga2` for setup instructions.

The icinga2 module is used to execute commands. Its output may be stored in a file or in a grain.

```
command_id:
icinga2.generate_ticket
- name: domain.tld
- output: "/tmp/query_id.txt"
```

`salt.states.icinga2.generate_cert(name)`

Generate an icinga2 certificate and key on the client.

name The domain name for which this certificate and key will be generated

`salt.states.icinga2.generate_ticket(name, output=None, grain=None, key=None, overwrite=True)`

Generate an icinga2 ticket on the master.

name The domain name for which this ticket will be generated

output grain: output in a grain other: the file to store results None: output to the result comment (default)

grain: grain to store the output (need output=grain)

key: the specified grain will be treated as a dictionary, the result of this state will be stored under the specified key.

overwrite: The file or grain will be overwritten if it already exists (default)

`salt.states.icinga2.node_setup(name, master, ticket)`

Setup the icinga2 node.

name The domain name for which this certificate will be saved

master Icinga2 master node for which this certificate will be saved

ticket Authentication ticket generated on icinga2 master

`salt.states.icinga2.request_cert(name, master, ticket, port='5665')`

Request CA certificate from master icinga2 node.

name The domain name for which this certificate will be saved

master Icinga2 master node for which this certificate will be saved

ticket Authentication ticket generated on icinga2 master

port Icinga2 port, defaults to 5665

`salt.states.icinga2.save_cert(name, master)`

Save the certificate on master icinga2 node.

name The domain name for which this certificate will be saved

master Icinga2 master node for which this certificate will be saved

20.19.108 salt.states.ifttt

Trigger an event in IFTTT

This state is useful for triggering events in IFTTT.

New in version 2015.8.0.

```
ifttt-event:
  ifttt.trigger_event:
    - event: TestEvent
    - value1: 'This state was executed successfully.'
    - value2: 'Another value we can send.'
    - value3: 'A third value we can send.'
```

The api key can be specified in the master or minion configuration like below: .. code-block:: yaml

```
ifttt: secret_key: bzMRb-KKIAaNOwKEEw792J7Eb-B3z7muhdhYblJn4V6
```

`salt.states.ifttt.trigger_event` (*name, event, value1=None, value2=None, value3=None*)

Trigger an event in IFTTT

```
ifttt-event:
  ifttt.trigger_event:
    - event: TestEvent
    - value1: 'A value that we want to send.'
    - value2: 'A second value that we want to send.'
    - value3: 'A third value that we want to send.'
```

The following parameters are required:

name The unique name for this event.

event The name of the event to trigger in IFTTT.

The following parameters are optional:

value1 One of the values that we can send to IFTTT.

value2 One of the values that we can send to IFTTT.

value3 One of the values that we can send to IFTTT.

20.19.109 salt.states.incron

Management of incron, the inotify cron

The incron state module allows for user incrontabs to be cleanly managed.

Incron declarations require a number of parameters. The parameters needed to be declared: `path`, `mask`, and `cmd`. The `user` whose incrontab is to be edited also needs to be defined.

When making changes to an existing incron job, the `path` declaration is the unique factor, so if an existing cron that looks like this:

```
Watch for modifications in /home/user:
  incron.present:
    - user: root
    - path: /home/user
    - mask:
      - IN_MODIFY
    - cmd: 'echo "$$ @$@"'
```

Is changed to this:

Watch for modifications and access in `/home/user`:

```
incron.present:
- user: root
- path: /home/user
- mask:
  - IN_MODIFY
  - IN_ACCESS
- cmd: 'echo "$$ @$@"'
```

Then the existing cron will be updated, but if the cron command is changed, then a new cron job will be added to the user's crontab.

New in version 0.17.0.

`salt.states.incron.absent` (*name, path, mask, cmd, user='root'*)

Verifies that the specified incron job is absent for the specified user; only the name is matched when removing a incron job.

name Unique comment describing the entry

path The path that should be watched

user The name of the user who's crontab needs to be modified, defaults to the root user

mask The mask of events that should be monitored for

cmd The cmd that should be executed

`salt.states.incron.present` (*name, path, mask, cmd, user='root'*)

Verifies that the specified incron job is present for the specified user. For more advanced information about what exactly can be set in the cron timing parameters, check your incron system's documentation. Most Unix-like systems' incron documentation can be found via the incrontab man page: `man 5 incrontab`.

name Unique comment describing the entry

path The path that should be watched

user The name of the user who's crontab needs to be modified, defaults to the root user

mask The mask of events that should be monitored for

cmd The cmd that should be executed

20.19.110 salt.states.influxdb08_database module

Management of Influxdb 0.8 databases

(compatible with InfluxDB version 0.5-0.8)

New in version 2014.7.0.

`salt.states.influxdb08_database.absent` (*name, user=None, password=None, host=None, port=None*)

Ensure that the named database is absent

name The name of the database to remove

user The user to connect as (must be able to remove the database)

password The password of the user

host The host to connect to

port The port to connect to

`salt.states.influxdb08_database.present` (*name, user=None, password=None, host=None, port=None*)

Ensure that the named database is present

name The name of the database to create

user The user to connect as (must be able to remove the database)

password The password of the user

host The host to connect to
port The port to connect to

20.19.111 salt.states.influxdb08_user module

Management of InfluxDB 0.8 users

(compatible with InfluxDB version 0.5-0.8)

New in version 2014.7.0.

`salt.states.influxdb08_user.absent`(*name*, *database=None*, *user=None*, *password=None*,
host=None, *port=None*)

Ensure that the named cluster admin or database user is absent.

name The name of the user to remove
database The database to remove the user from
user The user to connect as (must be able to remove the user)
password The password of the user
host The host to connect to
port The port to connect to

`salt.states.influxdb08_user.present`(*name*, *passwd*, *database=None*, *user=None*, *password=None*,
host=None, *port=None*)

Ensure that the cluster admin or database user is present.

name The name of the user to manage
passwd The password of the user
database The database to create the user in
user The user to connect as (must be able to create the user)
password The password of the user
host The host to connect to
port The port to connect to

20.19.112 salt.states.influxdb_continuous_query module

Management of Influxdb continuous queries

New in version 2017.7.0.

(compatible with InfluxDB version 0.9+)

`salt.states.influxdb_continuous_query.absent`(*name*, *database*, ***client_args*)

Ensure that given continuous query is absent.

name Name of the continuous query to remove.
database Name of the database that the continuous query was defined on.

`salt.states.influxdb_continuous_query.present`(*name*, *database*, *query*, *resample_time=None*,
coverage_period=None, ***client_args*)

Ensure that given continuous query is present.

name Name of the continuous query to create.
database Database to create continuous query on.
query The query content
resample_time [None] Duration between continuous query resampling.
coverage_period [None] Duration specifying time period per sample.

20.19.113 salt.states.influxdb_database

Management of Influxdb databases

(compatible with InfluxDB version 0.9+)

`salt.states.influxdb_database.absent(name, **client_args)`

Ensure that given database is absent.

name Name of the database to remove.

`salt.states.influxdb_database.present(name, **client_args)`

Ensure that given database is present.

name Name of the database to create.

20.19.114 salt.states.influxdb_retention_policy module

Management of Influxdb retention policies

New in version 2017.7.0.

(compatible with InfluxDB version 0.9+)

`salt.states.influxdb_retention_policy.absent(name, database, **client_args)`

Ensure that given retention policy is absent.

name Name of the retention policy to remove.

database Name of the database that the retention policy was defined on.

`salt.states.influxdb_retention_policy.present(name, database, duration='7d', replication=1, default=False, **client_args)`

Ensure that given retention policy is present.

name Name of the retention policy to create.

database Database to create retention policy on.

20.19.115 salt.states.influxdb_user

Management of InfluxDB users

(compatible with InfluxDB version 0.9+)

`salt.states.influxdb_user.absent(name, **client_args)`

Ensure that given user is absent.

name The name of the user to manage

`salt.states.influxdb_user.present(name, password, admin=False, grants=None, **client_args)`

Ensure that given user is present.

name Name of the user to manage

password Password of the user

admin [False] Whether the user should have cluster administration privileges or not.

grants Optional - Dict of database:privilege items associated with the user. Example:

grants: foo_db: read bar_db: all

Example:

```
example user present in influxdb:
influxdb_user.present:
- name: example
```

(continues on next page)

(continued from previous page)

```

- password: somepassword
- admin: False
- grants:
  foo_db: read
  bar_db: all

```

20.19.116 salt.states.infoblox_a

Infoblox A record management.

functions accept api_opts:

api_verifyssl: verify SSL [default to True or pillar value] api_url: server to connect to [default to pillar value] api_username: [default to pillar value] api_password: [default to pillar value]

salt.states.infoblox_a.absent (*name=None, ipv4addr=None, **api_opts*)

Ensure infoblox A record is removed.

State example:

```

infoblox_a.absent:
- name: example-ha-0.domain.com

infoblox_a.absent:
- name:
- ipv4addr: 127.0.23.23

```

salt.states.infoblox_a.present (*name=None, ipv4addr=None, data=None, ensure_data=True, **api_opts*)

Ensure infoblox A record.

When you wish to update a hostname ensure *name* is set to the hostname of the current record. You can give a new name in the *data.name*.

State example:

```

infoblox_a.present:
- name: example-ha-0.domain.com
- data:
  name: example-ha-0.domain.com
  ipv4addr: 123.0.31.2
  view: Internal

```

20.19.117 salt.states.infoblox_cname

Infoblox CNAME management.

functions accept api_opts:

api_verifyssl: verify SSL [default to True or pillar value] api_url: server to connect to [default to pillar value] api_username: [default to pillar value] api_password: [default to pillar value]

salt.states.infoblox_cname.absent (*name=None, canonical=None, **api_opts*)

Ensure the CNAME with the given name or canonical name is removed

salt.states.infoblox_cname.present (*name=None, data=None, ensure_data=True, **api_opts*)

Ensure the CNAME with the given data is present.

name CNAME of record
data raw CNAME api data see: <https://INFOBLOX/wapidoc>
 State example:

```

infoblox_cname.present:
- name: example-ha-0.domain.com
- data:
  name: example-ha-0.domain.com
  canonical: example.domain.com
  zone: example.com
  view: Internal
  comment: Example comment

infoblox_cname.present:
- name: example-ha-0.domain.com
- data:
  name: example-ha-0.domain.com
  canonical: example.domain.com
  zone: example.com
  view: Internal
  comment: Example comment
- api_url: https://INFOBLOX/wapi/v1.2.1
- api_username: username
- api_password: passwd

```

20.19.118 salt.states.infoblox_host_record

Infoblox host record management.

functions accept api_opts:

api_verifyssl: verify SSL [default to True or pillar value] api_url: server to connect to [default to pillar value] api_username: [default to pillar value] api_password: [default to pillar value]

salt.states.infoblox_host_record.absent (*name=None, ipv4addr=None, mac=None, **api_opts*)

Ensure the host with the given Name ipv4addr or mac is removed.

State example:

```

infoblox_host_record.absent:
- name: hostname.of.record.to.remove

infoblox_host_record.absent:
- name:
- ipv4addr: 192.168.0.1

infoblox_host_record.absent:
- name:
- mac: 12:02:12:31:23:43

```

salt.states.infoblox_host_record.present (*name=None, data=None, ensure_data=True, **api_opts*)

This will ensure that a host with the provided name exists. This will try to ensure that the state of the host matches the given data If the host is not found then one will be created.

When trying to update a hostname ensure *name* is set to the hostname of the current record. You can give a new name in the *data.name*.

Avoid race conditions, use `func:nextavailableip`:

- `func:nextavailableip:network/ZG54dfgrDFEFfsLzA:10.0.0.0/8/default`
- `func:nextavailableip:10.0.0.0/8`
- `func:nextavailableip:10.0.0.0/8,externalconfigure_for_dns`
- `func:nextavailableip:10.0.0.3-10.0.0.10`

State Example:

```
# this would update `original_hostname.example.ca` to changed `data`.
infoblox_host_record.present:
- name: original_hostname.example.ca
- data: {'namhostname.example.cae': 'hostname.example.ca',
  'aliases': ['hostname.math.example.ca'],
  'extattrs': [{'Business Contact': {'value': 'EXAMPLE@example.ca'}}],
  'ipv4addrs': [{'configure_for_dhcp': True,
    'ipv4addr': 'func:nextavailableip:129.97.139.0/24',
    'mac': '00:50:56:84:6e:ae'}],
  'ipv6addrs': [], }
```

20.19.119 salt.states.infoblox_range

Infoblox host record management.

functions accept `api_opts`:

`api_verifyssl`: verify SSL [default to True or pillar value] `api_url`: server to connect to [default to pillar value] `api_username`: [default to pillar value] `api_password`: [default to pillar value]

`salt.states.infoblox_range.absent` (`name=None`, `start_addr=None`, `end_addr=None`, `data=None`, `**api_opts`)

Ensure the range is removed

Supplying the end of the range is optional.

State example:

```
infoblox_range.absent:
- name: 'vlan10'

infoblox_range.absent:
- name:
- start_addr: 127.0.1.20
```

`salt.states.infoblox_range.present` (`name=None`, `start_addr=None`, `end_addr=None`, `data=None`, `**api_opts`)

Ensure range record is present.

`infoblox_range.present`: `start_addr: '129.97.150.160'`, `end_addr: '129.97.150.170'`,

Verbose state example:

```
infoblox_range.present:
  data: {
    'always_update_dns': False,
    'authority': False,
    'comment': 'range of IP addresses used for salt.. was used for ghost
↪ images deployment',
    'ddns_generate_hostname': True,
    'deny_all_clients': False,
    'deny_bootp': False,
```

(continues on next page)

```
'disable': False,
'email_list': [],
'enable_ddns': False,
'enable_dhcp_thresholds': False,
'enable_email_warnings': False,
'enable_ifmap_publishing': False,
'enable_snmp_warnings': False,
'end_addr': '129.97.150.169',
'exclude': [],
'extattrs': {},
'fingerprint_filter_rules': [],
'high_water_mark': 95,
'high_water_mark_reset': 85,

depends re

platform all

`salt.states.ini_manage.options_absent(name, sections=None, separator='=')`

```
/home/saltminion/api-paste.ini:
ini.options_absent:
- separator: '='
- sections:
  test:
    - testkey
    - secondoption
  test1:
    - testkey1
```

options present in file and not specified in sections dict will be untouched

changes dict will contain the list of changes made

`salt.states.ini_manage.options_present(name, sections=None, separator='=', strict=False)`

```
/home/saltminion/api-paste.ini:
ini.options_present:
- separator: '='
- strict: True
- sections:
  test:
    testkey: 'testval'
    secondoption: 'secondvalue'
  test1:
    testkey1: 'testval121'
```

options present in file and not specified in sections dict will be untouched, unless *strict: True* flag is used

changes dict will contain the list of changes made

`salt.states.ini_manage.sections_absent(name, sections=None, separator='=')`

```
/home/saltminion/api-paste.ini:
ini.sections_absent:
- separator: '='
- sections:
  - test
  - test1
```

options present in file and not specified in sections will be deleted changes dict will contain the sections that changed

`salt.states.ini_manage.sections_present` (*name*, *sections=None*, *separator='='*)

```
/home/saltminion/api-paste.ini:
ini.sections_present:
- separator: '='
- sections:
  - section_one
  - section_two
```

This will only create empty sections. To also create options, use `options_present` state

options present in file and not specified in sections will be deleted changes dict will contain the sections that changed

20.19.121 salt.states.ipmi

Manage IPMI devices over LAN

The following configuration defaults can be defined in the minion, master config or pillar:

```
ipmi.config:
api_host: 127.0.0.1
api_user: admin
api_pass: apassword
api_port: 623
api_kg: None
```

Every call can override the config defaults:

```
ensure myipmi system is set to network boot:
  ipmi.boot_device:
    - name: network
    - api_host: myipmi.hostname.com
    - api_user: root
    - api_pass: apassword
    - api_kg: None

ensure myipmi system is powered on:
  ipmi.power:
    - name: boot
    - api_host: myipmi.hostname.com
    - api_user: root
    - api_pass: apassword
```

`salt.states.ipmi.boot_device` (*name='default'*, ***kwargs*)

Request power state change

name = default

- network – Request network boot
- hd – Boot from hard drive
- safe – Boot from hard drive, requesting 'safe mode'
- optical – boot from CD/DVD/BD drive
- setup – Boot into setup utility
- default – remove any IPMI directed boot device request

kwargs

- `api_host=localhost`

- `api_user=admin`
- `api_pass=`
- `api_port=623`
- `api_kg=None`

`salt.states.ipmi.power` (*name='power_on', wait=300, **kwargs*)

Request power state change

name

Ensure power state one of:

- `power_on` – system turn on
- `power_off` – system turn off (without waiting for OS)
- `shutdown` – request OS proper shutdown
- `reset` – reset (without waiting for OS)
- `boot` – If system is off, then 'on', else 'reset'

wait wait X seconds for the job to complete before forcing. (defaults to 300 seconds)

kwargs

- `api_host=localhost`
- `api_user=admin`
- `api_pass=`
- `api_port=623`
- `api_kg=None`

`salt.states.ipmi.user_absent` (*name, channel=14, **kwargs*)

Remove user Delete all user (uid) records having the matching name.

name string name of user to delete

channel channel to remove user access from defaults to 14 for auto.

kwargs

- `api_host=localhost`
- `api_user=admin`
- `api_pass=`
- `api_port=623`
- `api_kg=None`

`salt.states.ipmi.user_present` (*name, uid, password, channel=14, callback=False, link_auth=True, ipmi_msg=True, privilege_level='administrator', **kwargs*)

Ensure IPMI user and user privileges.

name name of user (limit 16 bytes)

uid user id number (1 to 7)

password user password (limit 16 bytes)

channel ipmi channel defaults to 14 for auto

callback User Restricted to Callback

False = User Privilege Limit is determined by the User Privilege Limit parameter `privilege_level`, for both callback and non-callback connections.

True = User Privilege Limit is determined by the `privilege_level` parameter for callback connections, but is restricted to Callback level for non-callback connections. Thus, a user can only initiate a Callback when they 'call in' to the BMC, but once the callback connection has been made, the user could potentially establish a session as an Operator.

link_auth User Link authentication True/False user name and password information will be used for link authentication, e.g. PPP CHAP) for the given channel. Link authentication itself is a global setting for the channel and is enabled/disabled via the serial/modem configuration parameters.

ipmi_msg User IPMI Messaging True/False user name and password information will be used for IPMI Messaging. In this case, 'IPMI Messaging' refers to the ability to execute generic IPMI commands that are not associated with a particular payload type. For example, if IPMI Messaging is disabled for a user, but that user is enabled for activating the SOL payload type, then IPMI commands associated with SOL and session management, such as Get SOL Configuration Parameters and Close Session are available, but generic IPMI commands such as Get SEL Time are unavailable.) `ipmi_msg`

privilege_level

- callback
- user
- operator
- administrator
- proprietary
- no_access

kwargs

- api_host=localhost
- api_user=admin
- api_pass=
- api_port=623
- api_kg=None

20.19.122 salt.states.ipset

Management of ipsets

This is an ipset-specific module designed to manage IPsets for use in IPTables Firewalls.

```
setname:
  ipset.set_present:
    - set_type: bitmap:ip
    - range: 192.168.0.0/16
    - comment: True

setname:
  ipset.set_absent:

ipset.flush:

```

salt.states.ipset.absent(*name, entry=None, entries=None, family='ipv4', **kwargs*)

New in version 2014.7.0.

Remove a entry or entries from a chain

name A user-defined name to call this entry by in another part of a state or formula. This should not be an actual entry.

family Network family, ipv4 or ipv6.

salt.states.ipset.flush(*name, family='ipv4', **kwargs*)

New in version 2014.7.0.

Flush current ipset set

family Networking family, either ipv4 or ipv6

salt.states.ipset.present(*name, entry=None, family='ipv4', **kwargs*)

New in version 2014.7.0.

Append a entry to a set

name A user-defined name to call this entry by in another part of a state or formula. This should not be an actual entry.

entry A single entry to add to a set or a list of entries to add to a set

family Network family, ipv4 or ipv6.

salt.states.ipset.set_absent(*name, family='ipv4', **kwargs*)

New in version 2014.7.0.

Verify the set is absent.

family Networking family, either ipv4 or ipv6

salt.states.ipset.set_present(*name, set_type, family='ipv4', **kwargs*)

New in version 2014.7.0.

Verify the set exists.

name A user-defined set name.

set_type The type for the set.

family Networking family, either ipv4 or ipv6

20.19.123 salt.states.iptables

Management of iptables

This is an iptables-specific module designed to manage Linux firewalls. It is expected that this state module, and other system-specific firewall states, may at some point be deprecated in favor of a more generic `firewall` state.

```

httpd:
iptables.append:

    - dport: 80
    - protocol: tcp
    - sport: 1025:65535
    - save: True
```

```
httpd:
  iptables.delete:
    - table: filter
    - family: ipv6
    - chain: INPUT
    - jump: ACCEPT
    - match: state
    - connstate: NEW
    - dport: 80
    - protocol: tcp
    - sport: 1025:65535
    - save: True
```

```
default to accept:
  iptables.set_policy:
    - chain: INPUT
    - policy: ACCEPT
```

Note: Whereas iptables will accept `-p, --proto[c[o[l]]]` as synonyms of `--protocol`, if `--proto` appears in an iptables command after the appearance of `-m policy`, it is interpreted as the `--proto` option of the policy extension (see the `iptables-extensions(8)` man page).

Example rules for IPsec policy:

```

accept_esp_in:
  iptables.append:
    - table: filter
    - chain: INPUT
    - jump: ACCEPT
    - source: 10.20.0.0/24
    - destination: 10.10.0.0/24
    - in-interface: eth0
    - match: policy
    - dir: in
    - pol: ipsec
    - reqid: 1
    - proto: esp
accept_esp_forward_in:
  iptables.append:
    - use:
      - iptables: accept_esp_in
    - chain: FORWARD

accept_esp_out:
  iptables.append:
    - table: filter
    - chain: OUTPUT
    - jump: ACCEPT
    - source: 10.10.0.0/24
    - destination: 10.20.0.0/24
    - out-interface: eth0
    - match: policy
    - dir: out
    - pol: ipsec
    - reqid: 1
    - proto: esp
accept_esp_forward_out:
  iptables.append:
    - use:
      - iptables: accept_esp_out
    - chain: FORWARD

```

Note: Various functions of the `iptables` module use the `--check` option. If the version of `iptables` on the target system does not include this option, an alternate version of this check will be performed using the output of `iptables-save`. This may have unintended consequences on legacy releases of `iptables`.

`salt.states.iptables.append`(*name*, *table*=*'filter'*, *family*=*'ipv4'*, ***kwargs*)

New in version 0.17.0.

Add a rule to the end of the specified chain.

name A user-defined name to call this rule by in another part of a state or formula. This should not be an actual rule.

table The table that owns the chain which should be modified

family Network family, ipv4 or ipv6.

All other arguments are passed in with the same name as the long option that would normally be used for iptables, with one exception: `--state` is specified as `connstate` instead of `state` (not to be confused with `ctstate`).

Jump options that doesn't take arguments should be passed in with an empty string.

`salt.states.iptables.chain_absent(name, table='filter', family='ipv4')`

New in version 2014.1.0.

Verify the chain is absent.

table The table to remove the chain from

family Networking family, either ipv4 or ipv6

`salt.states.iptables.chain_present(name, table='filter', family='ipv4')`

New in version 2014.1.0.

Verify the chain is exist.

name A user-defined chain name.

table The table to own the chain.

family Networking family, either ipv4 or ipv6

`salt.states.iptables.delete(name, table='filter', family='ipv4', **kwargs)`

New in version 2014.1.0.

Delete a rule to a chain

name A user-defined name to call this rule by in another part of a state or formula. This should not be an actual rule.

table The table that owns the chain that should be modified

family Networking family, either ipv4 or ipv6

All other arguments are passed in with the same name as the long option that would normally be used for iptables, with one exception: `--state` is specified as `connstate` instead of `state` (not to be confused with `ctstate`).

Jump options that doesn't take arguments should be passed in with an empty string.

`salt.states.iptables.flush(name, table='filter', family='ipv4', **kwargs)`

New in version 2014.1.0.

Flush current iptables state

table The table that owns the chain that should be modified

family Networking family, either ipv4 or ipv6

`salt.states.iptables.insert(name, table='filter', family='ipv4', **kwargs)`

New in version 2014.1.0.

Insert a rule into a chain

name A user-defined name to call this rule by in another part of a state or formula. This should not be an actual rule.

table The table that owns the chain that should be modified

family Networking family, either ipv4 or ipv6

position The numerical representation of where the rule should be inserted into the chain. Note that `-1` is not a supported position value.

All other arguments are passed in with the same name as the long option that would normally be used for iptables, with one exception: `--state` is specified as `connstate` instead of `state` (not to be confused with `ctstate`).

Jump options that doesn't take arguments should be passed in with an empty string.

`salt.states.iptables.mod_aggregate`(*low, chunks, running*)

The `mod_aggregate` function which looks up all rules in the available low chunks and merges them into a single rules ref in the present low data

`salt.states.iptables.set_policy`(*name, table='filter', family='ipv4', **kwargs*)

New in version 2014.1.0.

Sets the default policy for iptables firewall tables

table The table that owns the chain that should be modified

family Networking family, either ipv4 or ipv6

policy The requested table policy

20.19.124 salt.states.jboss7

Manage JBoss 7 Application Server via CLI interface

New in version 2015.5.0.

This state uses the `jboss-cli.sh` script from a JBoss or Wildfly installation and parses its output to determine the execution result.

In order to run each state, a `jboss_config` dictionary with the following properties must be passed:

```
jboss:
  cli_path: '/opt/jboss/jboss-7.0/bin/jboss-cli.sh'
  controller: 10.11.12.13:9999
  cli_user: 'jbossadm'
  cli_password: 'jbossadm'
```

If the controller doesn't require a password, then the `cli_user` and `cli_password` parameters are optional.

Since same dictionary with configuration will be used in all the states, it may be more convenient to move JBoss configuration and other properties to the pillar.

Example of application deployment from local filesystem:

```
application_deployed:
  jboss7.deployed:
    - salt_source:
        target_file: '/tmp/webapp.war'
    - jboss_config: {{ pillar['jboss'] }}
```

For the sake of brevity, examples for each state assume that `jboss_config` is contained in the pillar.

`salt.states.jboss7.bindings_exist`(*name, jboss_config, bindings, profile=None*)

Ensures that given JNDI binding are present on the server. If a binding doesn't exist on the server it will be created. If it already exists its value will be changed.

jboss_config: Dict with connection properties (see state description)

bindings: Dict with bindings to set.

profile: The profile name (domain mode only)

Example:

```
jndi_entries_created:
  jboss7.bindings_exist:
    - bindings:
        'java:global/sampleapp/environment': 'DEV'
        'java:global/sampleapp/configurationFile': '/var/opt/sampleapp/config.
↪properties'
    - jboss_config: {{ pillar['jboss'] }}
```

`salt.states.jboss7.datasource_exists`(*name*, *jboss_config*, *datasource_properties*, *recreate=False*, *profile=None*)

Ensures that a datasource with given properties exist on the jboss instance. If datasource doesn't exist, it is created, otherwise only the properties that are different will be updated.

name Datasource property name

jboss_config Dict with connection properties (see state description)

datasource_properties Dict with datasource properties

recreate [False] If set to True and datasource exists it will be removed and created again. However, if there are deployments that depend on the datasource, it will not me possible to remove it.

profile [None] The profile name for this datasource (domain mode only)

Example:

```
sampleDS:
  jboss7.datasource_exists:
    - recreate: False
    - datasource_properties:
        driver-name: mysql
        connection-url: 'jdbc:mysql://localhost:3306/sampleDatabase'
        jndi-name: 'java:jboss/datasources/sampleDS'
        user-name: sampleuser
        password: secret
        min-pool-size: 3
        use-java-context: True
    - jboss_config: {{ pillar['jboss'] }}
    - profile: full-ha
```

`salt.states.jboss7.deployed`(*name*, *jboss_config*, *salt_source=None*)

Ensures that the given application is deployed on server.

jboss_config: Dict with connection properties (see state description)

salt_source:

How to find the artifact to be deployed.

target_file: Where to look in the minion's file system for the artifact to be deployed (e.g. '/tmp/application-web-0.39.war'). When source is specified, also specifies where to save the retrieved file.

source: (optional) File on salt master (e.g. salt://application-web-0.39.war). If absent, no files will be retrieved and the artifact in **target_file** will be used for the deployment.

undeploy: (optional) Regular expression to match against existing deployments. When present, if there is a deployment that matches the regular expression, it will be undeployed before the new artifact is deployed.

Examples:

Deployment of a file from minion's local file system:

```
application_deployed:
  jboss7.deployed:
    - salt_source:
        target_file: '/tmp/webapp.war'
    - jboss_config: {{ pillar['jboss'] }}
```

It is assumed that /tmp/webapp.war was made available by some other means. No applications will be undeployed; if an existing deployment that shares that name exists, then it will be replaced with the updated version.

Deployment of a file from the Salt master's file system:

```
application_deployed:
  jboss7.deployed:
```

(continues on next page)

(continued from previous page)

```

- salt_source:
  source: salt://application-web-0.39.war
  target_file: '/tmp/application-web-0.39.war'
  undeploy: 'application-web-.*'
- jboss_config: {{ pillar['jboss'] }}

```

Here, application-web-0.39.war file is downloaded from Salt file system to /tmp/application-web-0.39.war file on minion. Existing deployments are checked if any of them matches 'application-web-.*' regular expression, and if so then it is undeployed before deploying the application. This is useful to automate deployment of new application versions.

If the source parameter of salt_source is specified, it can use any protocol that the file states use. This includes not only downloading from the master but also HTTP, HTTPS, FTP, Amazon S3, and OpenStack Swift.

`salt.states.jboss7.reloaded` (*name, jboss_config, timeout=60, interval=5*)

Reloads configuration of jboss server.

jboss_config: Dict with connection properties (see state description)

timeout: Time to wait until jboss is back in running state. Default timeout is 60s.

interval: Interval between state checks. Default interval is 5s. Decreasing the interval may slightly decrease waiting time but be aware that every status check is a call to jboss-cli which is a java process. If interval is smaller than process cleanup time it may easily lead to excessive resource consumption.

This step performs the following operations:

- Ensures that server is in running or reload-required state (by reading server-state attribute)
- Reloads configuration
- Waits for server to reload and be in running state

Example:

```

configuration_reloaded:
  jboss7.reloaded:
    - jboss_config: {{ pillar['jboss'] }}

```

20.19.125 salt.states.jenkins module

Management of Jenkins

New in version 2016.3.0.

`salt.states.jenkins.absent` (*name, **kwargs*)

Ensure the job is absent from the Jenkins configured jobs

name The name of the Jenkins job to remove

`salt.states.jenkins.present` (*name, config=None, **kwargs*)

Ensure the job is present in the Jenkins configured jobs

name The unique name for the Jenkins job

config The Salt URL for the file to use for configuring the job

20.19.126 salt.states.junos module

State modules to interact with Junos devices.

maturity new

dependencies junos-eznc, jxmlease

Note: Those who wish to use junos-eznc (PyEZ) version $\geq 2.1.0$, must use the latest salt code from github until the next release.

Refer to *junos* for information on connecting to junos proxy.

`salt.states.junos.cli(name, **kwargs)`

Executes the CLI commands and reuturns the text output.

```
show version:
junos:
- cli
- format: xml
```

Parameters

- **Required** –
 - `command`: The command that need to be executed on Junos CLI. (default = None)
- **Optional** –
 - `kwargs`: **Keyworded arguments which can be provided like-**
 - * `format`: Format in which to get the CLI output. (text or xml, default = 'text')
 - * `timeout`: Set NETCONF RPC timeout. Can be used for commands which take a while to execute. (default = 30 seconds)
 - * `dest`: The destination file where the CLI output can be stored. (default = None)

`salt.states.junos.commit(name, **kwargs)`

Commits the changes loaded into the candidate configuration.

```
commit the changes:
junos:
- commit
- confirm: 10
```

Parameters **Optional** –

- `kwargs`: **Keyworded arguments which can be provided like-**
 - `timeout`: Set NETCONF RPC timeout. Can be used for commands which take a while to execute. (default = 30 seconds)
 - `comment`: Provide a comment to the commit. (default = None)
 - `confirm`: Provide time in minutes for commit confirmation. If this option is specified, the commit will be rolledback in the given time unless the commit is confirmed.
 - `sync`: On dual control plane systems, requests that the candidate configuration on one control plane be copied to the other control plane, checked for correct syntax, and committed on both Routing Engines. (default = False)
 - `force_sync`: On dual control plane systems, force the candidate configuration on one control plane to be copied to the other control plane.
 - `full`: When set to True requires all the daemons to check and evaluate the new configuration.
 - `detail`: When true return commit detail.

`salt.states.junos.commit_check(name)`

Perform a commit check on the configuration.

```
perform commit check:
  junos.commit_check
```

`salt.states.junos.diff(name, d_id)`

Gets the difference between the candidate and the current configuration.

```
get the diff:
  junos:
    - diff
    - id: 10
```

Parameters **Optional** –

- `id`: The rollback id value [0-49]. (default = 0)

`salt.states.junos.file_copy(name, dest=None, **kwargs)`

Copies the file from the local device to the junos device.

```
/home/m2/info.txt:
  junos:
    - file_copy
    - dest: info_copy.txt
```

Parameters **Required** –

- `src`: The source path where the file is kept.
- `dest`: The destination path where the file will be copied.

`salt.states.junos.install_config(name, **kwargs)`

Loads and commits the configuration provided.

```
Install the mentioned config:
  junos:
    - install_config
    - path: salt//configs/interface.set
    - timeout: 100
    - diffs_file: 'var/log/diff'
```

```
Install the mentioned config:
  junos:
    - install_config
    - template_path: salt//configs/interface.set
    - timeout: 100
    - template_vars:
        interface_name: lo0
        description: Creating interface via SaltStack.
```

name Path where the configuration/template file is present. If the file has a `*.conf` extension, the content is treated as text format. If the file has a `*.xml` extension, the content is treated as XML format. If the file has a `*.set` extension, the content is treated as Junos OS `set` commands

template_vars The dictionary of data for the jinja variables present in the jinja template

timeout [30] Set NETCONF RPC timeout. Can be used for commands which take a while to execute.

overwrite [False]

Set to **True** if you want this file is to completely replace the configuration file.

replace [False] Specify whether the configuration file uses "replace:" statements. Only those statements under the 'replace' tag will be changed.

comment Provide a comment to the commit. (default = None)

confirm Provide time in minutes for commit confirmation. If this option is specified, the commit will be rolled back in the given time unless the commit is confirmed.

diffs_file Path to the file where the diff (difference in old configuration and the committed configuration) will be stored.

Note: The file will be stored on the proxy minion. To push the files to the master use `cp.push`.

`salt.states.junos.install_os(name, **kwargs)`

Installs the given image on the device. After the installation is complete the device is rebooted, if `reboot=True` is given as a keyworded argument.

```
salt://images/junos_image.tgz:
junos:
- install_os
- timeout: 100
- reboot: True
```

Parameters

- **Required** –
 - `path`: Path where the image file is present on the proxy minion.
- **Optional** –
 - `kwargs`: keyworded arguments to be given such as `timeout`, `reboot` etc
 - * `timeout`: Set NETCONF RPC timeout. Can be used to RPCs which take a while to execute. (default = 30 seconds)
 - * `reboot`: Whether to reboot after installation (default = False)
 - * `no_copy`: When True the software package will not be SCP'd to the device. (default = False)

`salt.states.junos.load(name, **kwargs)`

Loads the configuration provided onto the junos device.

```
Install the mentioned config:
junos:
- load
- path: salt//configs/interface.set
```

```
Install the mentioned config:
junos:
- load
- template_path: salt//configs/interface.set
- template_vars:
  interface_name: lo0
  description: Creating interface via SaltStack.
```

name Path where the configuration/template file is present. If the file has a `*.conf` extension, the content is treated as text format. If the file has a `*.xml` extension, the content is treated as XML format. If the file has a `*.set` extension, the content is treated as Junos OS `set` commands.

overwrite [False] Set to `True` if you want this file is to completely replace the configuration file.

replace [False] Specify whether the configuration file uses "replace:" statements. Only those statements under the 'replace' tag will be changed.

format: Determines the format of the contents.

update [False] Compare a complete loaded configuration against the candidate configuration. For each hierarchy level or configuration object that is different in the two configurations, the version in the loaded configuration replaces the version in the candidate configuration. When the configuration is later committed, only system processes that are affected by the changed configuration elements parse the new configuration. This action is supported from PyEZ 2.1 (default = False)

template_vars Variables to be passed into the template processing engine in addition to those present in `__pillar__`, `__opts__`, `__grains__`, etc. You may reference these variables in your template like so: `{{ template_vars["var_name"] }}`

`salt.states.junos.lock(name)`

Attempts an exclusive lock on the candidate configuration. This is a non-blocking call.

Note: Any user who wishes to use lock, must necessarily unlock the configuration too. Ensure `unlock` is called in the same orchestration run in which the lock is called.

lock the config:

```
junos.lock
```

`salt.states.junos.rollback(name, id, **kwargs)`

Rollbacks the committed changes.

rollback the changes:

```
junos:
- rollback
- id: 5
```

Parameters Optional –

- **id:** The rollback id value [0-49]. (default = 0)
- **kwargs:** **Keyworded arguments which can be provided like-**
 - **timeout:** Set NETCONF RPC timeout. Can be used for commands which take a while to execute. (default = 30 seconds)
 - **comment:** Provide a comment to the commit. (default = None)
 - **confirm:** Provide time in minutes for commit confirmation. If this option is specified, the commit will be rolled back in the given time unless the commit is confirmed.
 - **diffs_file:** Path to the file where any diffs will be written. (default = None)

`salt.states.junos.rpc(name, dest=None, format='xml', args=None, **kwargs)`

Executes the given rpc. The returned data can be stored in a file by specifying the destination path with `dest` as an argument

get-interface-information:

```
junos:
- rpc
- dest: /home/user/rpc.log
- interface_name: lo0
```

Parameters

- **Required –**
 - **cmd:** The rpc to be executed. (default = None)
- **Optional –**
 - **dest:** Destination file where the rpc output is stored. (default = None) Note that the file will be stored on the proxy minion. To push the files to the master use the salt's following execution module: `cp.push`
 - **format:** The format in which the rpc reply must be stored in file specified in the `dest` (used only when `dest` is specified) (default = xml)
 - **kwargs:** **keyworded arguments taken by rpc call like-**
 - * **timeout:** Set NETCONF RPC timeout. Can be used for commands which take a while to execute. (default= 30 seconds)

- * filter: Only to be used with 'get-config' rpc to get specific configuration.
- * terse: Amount of information you want.
- * interface_name: Name of the interface whose information you want.

`salt.states.junos.set_hostname(name, **kwargs)`

Changes the hostname of the device.

```
device_name:
  junos:
    - set_hostname
    - comment: "Host-name set via saltstack."
```

Parameters

- **Required** –
 - hostname: The name to be set. (default = None)
- **Optional** –
 - kwargs: **Keyworded arguments which can be provided like-**
 - * timeout: Set NETCONF RPC timeout. Can be used for commands which take a while to execute. (default = 30 seconds)
 - * comment: Provide a comment to the commit. (default = None)
 - * confirm: Provide time in minutes for commit confirmation. If this option is specified, the commit will be rolled back in the given time unless the commit is confirmed.

`salt.states.junos.shutdown(name, **kwargs)`

Shuts down the device.

```
shut the device:
  junos:
    - shutdown
    - in_min: 10
```

Parameters **Optional** –

- kwargs:
 - reboot: Whether to reboot instead of shutdown. (default=False)
 - at: Specify time for reboot. (To be used only if reboot=yes)
 - in_min: Specify delay in minutes for shutdown

`salt.states.junos.unlock(name)`

Unlocks the candidate configuration.

```
unlock the config:
  junos.unlock
```

`salt.states.junos.zeroize(name)`

Resets the device to default factory settings.

```
reset my device:
  junos.zeroize
```

name: can be anything

20.19.127 salt.states.k8s

Manage Kubernetes

New in version 2016.3.0.

```

kube_label_1:
  k8s.label_present:
    - name: mylabel
    - value: myvalue
    - node: myothernodename
    - apiserver: http://mykubeapiserver:8080

kube_label_2:
  k8s.label_absent:
    - name: mylabel
    - node: myothernodename
    - apiserver: http://mykubeapiserver:8080

kube_label_3:
  k8s.label_folder_present:
    - name: mylabel
    - node: myothernodename
    - apiserver: http://mykubeapiserver:8080

```

`salt.states.k8s.label_absent` (*name*, *node=None*, *apiserver=None*)

Deprecated since version 2017.7.0: This state has been moved to `kubernetes.node_label_absent` <`salt.states.kubernetes.node_label_absent()`.

Ensure the label doesn't exist on the kube node.

name Name of the label.

node Override node ID.

apiserver K8S apiserver URL.

`salt.states.k8s.label_folder_absent` (*name*, *node=None*, *apiserver=None*)

Deprecated since version 2017.7.0: This state has been moved to `kubernetes.node_label_folder_absent` <`salt.states.kubernetes.node_label_folder_absent()`.

Ensure the label folder doesn't exist on the kube node.

name Name of the label folder.

node Override node ID.

apiserver K8S apiserver URL.

`salt.states.k8s.label_present` (*name*, *value*, *node=None*, *apiserver=None*)

Deprecated since version 2017.7.0: This state has been moved to `kubernetes.node_label_present` <`salt.states.kubernetes.node_label_present()`.

Ensure the label exists on the kube node.

name Name of the label.

value Value of the label.

node Override node ID.

apiserver K8S apiserver URL.

20.19.128 salt.states.kapacitor module

Kapacitor state module.

configuration This module accepts connection configuration details either as parameters or as configuration settings in `/etc/salt/minion` on the relevant minions:

```
kapacitor.host: 'localhost'
kapacitor.port: 9092
```

This data can also be passed into pillar. Options passed into opts will overwrite options passed into pillar.

New in version 2016.11.0.

salt.states.kapacitor.task_absent(*name*)

Ensure that a task is absent from Kapacitor.

name Name of the task.

salt.states.kapacitor.task_present(*name*, *tick_script*, *task_type*='stream', *database*=None, *retention_policy*='default', *enable*=True)

Ensure that a task is present and up-to-date in Kapacitor.

name Name of the task.

tick_script Path to the TICK script for the task. Can be a salt:// source.

task_type Task type. Defaults to 'stream'

database Which database to fetch data from. Defaults to None, which will use the default database in InfluxDB.

retention_policy Which retention policy to fetch data from. Defaults to 'default'.

enable Whether to enable the task or not. Defaults to True.

20.19.129 salt.states.kernelpkg

Manage kernel packages and active kernel version

Example state to install the latest kernel from package repositories:

```
install-latest-kernel:
  kernel.latest_installed: []
```

Example state to boot the system if a new kernel has been installed:

```
boot-latest-kernel:
  kernel.latest_active:
    - at_time: 1
```

Example state chaining the install and reboot operations:

```
install-latest-kernel:
  kernel.latest_installed: []

boot-latest-kernel:
  kernel.latest_active:
    - at_time: 1
    - onchanges:
      - kernel: install-latest-kernel
```

Chaining can also be achieved using wait/listen requisites:

```
install-latest-kernel:
  kernel.latest_installed: []

boot-latest-kernel:
  kernel.latest_wait:
    - at_time: 1
```

(continues on next page)

(continued from previous page)

```
- listen:
  - kernel: install-latest-kernel
```

`salt.states.kernelpkg.latest_active(name, at_time=None, **kwargs)`
Initiate a reboot if the running kernel is not the latest one installed.

Note: This state does not install any patches. It only compares the running kernel version number to other kernel versions also installed in the system. If the running version is not the latest one installed, this state will reboot the system.

See `kernelpkg.upgrade` and `latest_installed()` for ways to install new kernel packages.

This module does not attempt to understand or manage boot loader configurations it is possible to have a new kernel installed, but a boot loader configuration that will never activate it. For this reason, it would not be advisable to schedule this state to run automatically.

Because this state function may cause the system to reboot, it may be preferable to move it to the very end of the state run. See `latest_wait()` for a waitable state that can be called with the `listen` requisite.

name Arbitrary name for the state. Does not affect behavior.
at_time The wait time in minutes before the system will be rebooted.

`salt.states.kernelpkg.latest_installed(name, **kwargs)`
Ensure that the latest version of the kernel available in the repositories is installed.

Note: This state only installs the kernel, but does not activate it. The new kernel should become active at the next reboot. See `kernelpkg.needs_reboot` for details on how to detect this condition, and `latest_active()` to initiate a reboot when needed.

name Arbitrary name for the state. Does not affect behavior.

`salt.states.kernelpkg.latest_wait(name, at_time=None, **kwargs)`
Initiate a reboot if the running kernel is not the latest one installed. This is the waitable version of `latest_active()` and will not take any action unless triggered by a watch or listen requisite.

Note: Because this state function may cause the system to reboot, it may be preferable to move it to the very end of the state run using `listen` or `listen_in` requisites.

```
system-up-to-date:
  pkg.uptodate:
    - refresh: true

boot-latest-kernel:
  kernelpkg.latest_wait:
    - at_time: 1
    - listen:
      - pkg: system-up-to-date
```

name Arbitrary name for the state. Does not affect behavior.
at_time The wait time in minutes before the system will be rebooted.

`salt.states.kernelpkg.mod_watch(name, sfun, **kwargs)`
Execute a kernelpkg state based on a watch or listen call

20.19.130 salt.states.keyboard

Management of keyboard layouts

The keyboard layout can be managed for the system:

```
us:
  keyboard.system
```

Or it can be managed for XOrg:

```
us:
  keyboard.xorg
```

`salt.states.keyboard.system(name)`

Set the keyboard layout for the system

name The keyboard layout to use

`salt.states.keyboard.xorg(name)`

Set the keyboard layout for XOrg

layout The keyboard layout to use

20.19.131 salt.states.keystone

Management of Keystone users

depends

- keystoneclient Python module

configuration See `salt.modules.keystone` for setup instructions.

```
Keystone tenants:
```

```
  keystone.tenant_present:
```

- ```
 - names:
 - admin
 - demo
 - service
```

```
Keystone roles:
```

```
 keystone.role_present:
```

- ```
    - names:
      - admin
      - Member
```

```
admin:
```

```
  keystone.user_present:
```

- ```
 - password: R00T_4CC3SS
 - email: admin@domain.com
 - roles:
 admin: # tenants
 - admin # roles
 service:
 - admin
 - Member
 - require:
```

(continues on next page)

(continued from previous page)

```

- keystone: Keystone tenants
- keystone: Keystone roles

nova:
 keystone.user_present:
 - password: '$up3rn0v4'
 - email: nova@domain.com
 - tenant: service
 - roles:
 service:
 - admin
 - require:
 - keystone: Keystone tenants
 - keystone: Keystone roles

demo:
 keystone.user_present:
 - password: 'd3m0n$trati0n'
 - email: demo@domain.com
 - tenant: demo
 - roles:
 demo:
 - Member
 - require:
 - keystone: Keystone tenants
 - keystone: Keystone roles

nova service:
 keystone.service_present:
 - name: nova
 - service_type: compute
 - description: OpenStack Compute Service

```

`salt.states.keystone.endpoint_absent`(*name*, *region=None*, *profile=None*, *interface=None*, *\*\*connection\_args*)

Ensure that the endpoint for a service doesn't exist in Keystone catalog

**name** The name of the service whose endpoints should not exist

**region (optional)** The region of the endpoint. Defaults to `RegionOne`.

**interface** The interface type, which describes the visibility of the endpoint. (for V3 API)

`salt.states.keystone.endpoint_present`(*name*, *publicurl=None*, *internalurl=None*, *adminurl=None*, *region=None*, *profile=None*, *url=None*, *interface=None*, *\*\*connection\_args*)

Ensure the specified endpoints exists for service

**name** The Service name

**publicurl** The public url of service endpoint (for V2 API)

**internalurl** The internal url of service endpoint (for V2 API)

**adminurl** The admin url of the service endpoint (for V2 API)

**region** The region of the endpoint

**url** The endpoint URL (for V3 API)

**interface** The interface type, which describes the visibility of the endpoint. (for V3 API)

`salt.states.keystone.project_absent`(*name*, *profile=None*, *\*\*connection\_args*)

Ensure that the keystone project is absent. Alias for `tenant_absent` from V2 API to fulfill V3 API naming convention.

New in version 2016.11.0.

**name** The name of the project that should not exist

```
delete_nova:
 keystone.project_absent:
 - name: nova
```

`salt.states.keystone.project_present`(*name*, *description=None*, *enabled=True*, *profile=None*,  
*\*\*connection\_args*)

Ensures that the keystone project exists Alias for `tenant_present` from V2 API to fulfill V3 API naming convention.

New in version 2016.11.0.

**name** The name of the project to manage

**description** The description to use for this project

**enabled** Availability state for this project

```
nova:
 keystone.project_present:
 - enabled: True
 - description: 'Nova Compute Service'
```

`salt.states.keystone.role_absent`(*name*, *profile=None*, *\*\*connection\_args*)

Ensure that the keystone role is absent.

**name** The name of the role that should not exist

`salt.states.keystone.role_present`(*name*, *profile=None*, *\*\*connection\_args*)

Ensures that the keystone role exists

**name** The name of the role that should be present

`salt.states.keystone.service_absent`(*name*, *profile=None*, *\*\*connection\_args*)

Ensure that the service doesn't exist in Keystone catalog

**name** The name of the service that should not exist

`salt.states.keystone.service_present`(*name*, *service\_type*, *description=None*, *profile=None*,  
*\*\*connection\_args*)

Ensure service present in Keystone catalog

**name** The name of the service

**service\_type** The type of Openstack Service

**description (optional)** Description of the service

`salt.states.keystone.tenant_absent`(*name*, *profile=None*, *\*\*connection\_args*)

Ensure that the keystone tenant is absent.

**name** The name of the tenant that should not exist

`salt.states.keystone.tenant_present`(*name*, *description=None*, *enabled=True*, *profile=None*,  
*\*\*connection\_args*)

Ensures that the keystone tenant exists

**name** The name of the tenant to manage

**description** The description to use for this tenant

**enabled** Availability state for this tenant

`salt.states.keystone.user_absent`(*name*, *profile=None*, *\*\*connection\_args*)

Ensure that the keystone user is absent.

**name** The name of the user that should not exist

`salt.states.keystone.user_present`(*name*, *password*, *email*, *tenant=None*, *enabled=True*,  
*roles=None*, *profile=None*, *password\_reset=True*,  
*project=None*, *\*\*connection\_args*)

Ensure that the keystone user is present with the specified properties.

**name** The name of the user to manage  
**password** The password to use for this user.

---

**Note:** If the user already exists and a different password was set for the user than the one specified here, the password for the user will be updated. Please set the `password_reset` option to `False` if this is not the desired behavior.

---

**password\_reset** Whether or not to reset password after initial set. Defaults to `True`.  
**email** The email address for this user  
**tenant** The tenant (name) for this user  
**project** The project (name) for this user (overrides tenant in api v3)  
**enabled** Availability state for this user  
**roles** The roles the user should have under given tenants. Passed as a dictionary mapping tenant names to a list of roles in this tenant, i.e.:

```
roles:
 admin: # tenant
 - admin # role
 service:
 - admin
 - Member
```

## 20.19.132 salt.states.keystone\_domain

### Management of OpenStack Keystone Domains

New in version 2018.3.0.

**depends** shade

**configuration** see `salt.modules.keystoneng` for setup instructions

Example States

```
create domain:
 keystone_domain.present:
 - name: domain1

create domain with optional params:
 keystone_domain.present:
 - name: domain1
 - enabled: False
 - description: 'my domain'

delete domain:
 keystone_domain.absent:
 - name: domain1
```

`salt.states.keystone_domain.absent`(*name*, *auth=None*)  
 Ensure domain does not exist  
**name** Name of the domain

`salt.states.keystone_domain.present`(*name*, *auth=None*, *\*\*kwargs*)  
 Ensure domain exists and is up-to-date  
**name** Name of the domain  
**enabled** Boolean to control if domain is enabled

**description** An arbitrary description of the domain

### 20.19.133 salt.states.keystone\_endpoint

#### Management of OpenStack Keystone Endpoints

New in version 2018.3.0.

**depends** shade

**configuration** see *salt.modules.keystoneng* for setup instructions

Example States

```
create endpoint:
 keystone_endpoint.present:
 - name: public
 - url: https://example.org:9292
 - region: RegionOne
 - service_name: glance

destroy endpoint:
 keystone_endpoint.absent:
 - name: public
 - url: https://example.org:9292
 - region: RegionOne
 - service_name: glance

create multiple endpoints:
 keystone_endpoint.absent:
 - names:
 - public
 - admin
 - internal
 - url: https://example.org:9292
 - region: RegionOne
 - service_name: glance
```

`salt.states.keystone_endpoint.absent`(*name*, *service\_name*, *auth=None*, *\*\*kwargs*)

Ensure an endpoint does not exist

**name** Interface name

**url** URL of the endpoint

**service\_name** Service name or ID

**region** The region name to assign the endpoint

`salt.states.keystone_endpoint.present`(*name*, *service\_name*, *auth=None*, *\*\*kwargs*)

Ensure an endpoint exists and is up-to-date

**name** Interface name

**url** URL of the endpoint

**service\_name** Service name or ID

**region** The region name to assign the endpoint

**enabled** Boolean to control if endpoint is enabled

### 20.19.134 salt.states.keystone\_group

## Management of OpenStack Keystone Groups

New in version 2018.3.0.

**depends** shade

**configuration** see *salt.modules.keystoneng* for setup instructions

Example States

```

create group:
 keystone_group.present:
 - name: group1

delete group:
 keystone_group.absent:
 - name: group1

create group with optional params:
 keystone_group.present:
 - name: group1
 - domain: domain1
 - description: 'my group'

```

`salt.states.keystone_group.absent` (*name*, *auth=None*, *\*\*kwargs*)

Ensure group does not exist

**name** Name of the group

**domain** The name or id of the domain

`salt.states.keystone_group.present` (*name*, *auth=None*, *\*\*kwargs*)

Ensure an group exists and is up-to-date

**name** Name of the group

**domain** The name or id of the domain

**description** An arbitrary description of the group

### 20.19.135 salt.states.keystone\_project

## Management of OpenStack Keystone Projects

New in version 2018.3.0.

**depends** shade

**configuration** see *salt.modules.keystoneng* for setup instructions

Example States

```

create project:
 keystone_project.present:
 - name: project1

delete project:
 keystone_project.absent:
 - name: project1

create project with optional params:
 keystone_project.present:
 - name: project1

```

(continues on next page)

(continued from previous page)

```

- domain: domain1
- enabled: False
- description: 'my project'

```

`salt.states.keystone_project.absent`(*name*, *auth=None*, *\*\*kwargs*)

Ensure a project does not exists

**name** Name of the project

**domain** The name or id of the domain

`salt.states.keystone_project.present`(*name*, *auth=None*, *\*\*kwargs*)

Ensure a project exists and is up-to-date

**name** Name of the project

**domain** The name or id of the domain

**description** An arbitrary description of the project

### 20.19.136 salt.states.keystone\_role

#### Management of OpenStack Keystone Roles

New in version 2018.3.0.

**depends** shade

**configuration** see `salt.modules.keystoneng` for setup instructions

Example States

```

create role:
 keystone_role.present:
 - name: role1

delete role:
 keystone_role.absent:
 - name: role1

create role with optional params:
 keystone_role.present:
 - name: role1
 - description: 'my group'

```

`salt.states.keystone_role.absent`(*name*, *auth=None*, *\*\*kwargs*)

Ensure role does not exist

**name** Name of the role

`salt.states.keystone_role.present`(*name*, *auth=None*, *\*\*kwargs*)

Ensure an role exists

**name** Name of the role

**description** An arbitrary description of the role

### 20.19.137 salt.states.keystone\_role\_grant

#### Management of OpenStack Keystone Role Grants

New in version 2018.3.0.

depends shade

configuration see *salt.modules.keystoneng* for setup instructions

Example States

```

create group:
 keystone_group.present:
 - name: group1

delete group:
 keystone_group.absent:
 - name: group1

create group with optional params:
 keystone_group.present:
 - name: group1
 - domain: domain1
 - description: 'my group'

```

`salt.states.keystone_role_grant.absent`(*name*, *auth=None*, *\*\*kwargs*)

`salt.states.keystone_role_grant.present`(*name*, *auth=None*, *\*\*kwargs*)

### 20.19.138 salt.states.keystone\_service

#### Management of OpenStack Keystone Services

New in version 2018.3.0.

depends shade

configuration see *salt.modules.keystoneng* for setup instructions

Example States

```

create service:
 keystone_service.present:
 - name: glance
 - type: image

delete service:
 keystone_service.absent:
 - name: glance

create service with optional params:
 keystone_service.present:
 - name: glance
 - type: image
 - enabled: False
 - description: 'OpenStack Image'

```

`salt.states.keystone_service.absent`(*name*, *auth=None*)

Ensure service does not exist

**name** Name of the service

`salt.states.keystone_service.present`(*name*, *auth=None*, *\*\*kwargs*)

Ensure an service exists and is up-to-date

**name** Name of the group

**type** Service type  
**enabled** Boolean to control if service is enabled  
**description** An arbitrary description of the service

### 20.19.139 salt.states.keystone\_user

#### Management of OpenStack Keystone Users

New in version 2018.3.0.

**depends** shade

**configuration** see *salt.modules.keystoneng* for setup instructions

Example States

```
create user:
 keystone_user.present:
 - name: user1

delete user:
 keystone_user.absent:
 - name: user1

create user with optional params:
 keystone_user.present:
 - name: user1
 - domain: domain1
 - enabled: False
 - password: password123
 - email: "user1@example.org"
 - description: 'my user'
```

`salt.states.keystone_user.absent` (*name*, *auth=None*, *\*\*kwargs*)

Ensure user does not exists

**name** Name of the user

**domain** The name or id of the domain

`salt.states.keystone_user.present` (*name*, *auth=None*, *\*\*kwargs*)

Ensure domain exists and is up-to-date

**name** Name of the domain

**domain** The name or id of the domain

**enabled** Boolean to control if domain is enabled

**description** An arbitrary description of the domain

**password** The user password

**email** The users email address

### 20.19.140 salt.states.kmod

#### Loading and unloading of kernel modules

The Kernel modules on a system can be managed cleanly with the kmod state module:

```

add_kvm:
 kmod.present:
 - name: kvm_amd
remove_beep:
 kmod.absent:
 - name: pcspkr

```

Multiple modules can be specified for both `kmod.present` and `kmod.absent`.

```

add_sound:
 kmod.present:
 - mods:
 - snd_hda_codec_hdmi
 - snd_hda_codec
 - snd_hwdep
 - snd_hda_core
 - snd_pcm
 - snd_timer
 - snd

```

`salt.states.kmod.absent` (*name*, *persist=False*, *comment=True*, *mods=None*)

Verify that the named kernel module is not loaded

**name** The name of the kernel module to verify is not loaded

**persist** Remove module from `/etc/modules`

**comment** Comment out module in `/etc/modules` rather than remove it

**mods** A list of modules to verify are unloaded. If this argument is used, the `name` argument, although still required, is not used, and becomes a placeholder

New in version 2016.3.0.

`salt.states.kmod.present` (*name*, *persist=False*, *mods=None*)

Ensure that the specified kernel module is loaded

**name** The name of the kernel module to verify is loaded

**persist** Also add module to `/etc/modules`

**mods** A list of modules to verify are loaded. If this argument is used, the `name` argument, although still required, is not used, and becomes a placeholder

New in version 2016.3.0.

## 20.19.141 salt.states.kubernetes

### Manage kubernetes resources as salt states

NOTE: This module requires the proper pillar values set. See `salt.modules.kubernetes` for more information.

**Warning:** Configuration options will change in Fluorine.

The kubernetes module is used to manage different kubernetes resources.

```

my-nginx:
 kubernetes.deployment_present:
 - namespace: default
 metadata:
 app: frontend

```

(continues on next page)

```
spec:
 replicas: 1
 template:
 metadata:
 labels:
 run: my-nginx
 spec:
 containers:
 - name: my-nginx
 image: nginx
 ports:
 - containerPort: 80

my-mariadb:
 kubernetes.deployment_absent:
 - namespace: default

kubernetes deployment as specified inside of
a file containing the definition of the the
deployment using the official kubernetes format
redis-master-deployment:
 kubernetes.deployment_present:
 - name: redis-master
 - source: salt://k8s/redis-master-deployment.yml
 require:
 - pip: kubernetes-python-module

kubernetes service as specified inside of
a file containing the definition of the the
service using the official kubernetes format
redis-master-service:
 kubernetes.service_present:
 - name: redis-master
 - source: salt://k8s/redis-master-service.yml
 require:
 - kubernetes.deployment_present: redis-master

kubernetes deployment as specified inside of
a file containing the definition of the the
deployment using the official kubernetes format
plus some jinja directives
nginx-source-template:
 kubernetes.deployment_present:
 - source: salt://k8s/nginx.yml.jinja
 - template: jinja
 require:
 - pip: kubernetes-python-module

Kubernetes secret
k8s-secret:
 kubernetes.secret_present:
 - name: top-secret
 data:
 key1: value1
 key2: value2
 key3: value3
```

`salt.states.kubernetes.configmap_absent` (*name*, *namespace='default'*, *\*\*kwargs*)

Ensures that the named configmap is absent from the given namespace.

**name** The name of the configmap

**namespace** The namespace holding the configmap. The 'default' one is going to be used unless a different one is specified.

`salt.states.kubernetes.configmap_present` (*name*, *namespace='default'*, *data=None*, *source=None*, *template=None*, *\*\*kwargs*)

Ensures that the named configmap is present inside of the specified namespace with the given data. If the configmap exists it will be replaced.

**name** The name of the configmap.

**namespace** The namespace holding the configmap. The 'default' one is going to be used unless a different one is specified.

**data** The dictionary holding the configmaps.

**source** A file containing the data of the configmap in plain format.

**template** Template engine to be used to render the source file.

`salt.states.kubernetes.deployment_absent` (*name*, *namespace='default'*, *\*\*kwargs*)

Ensures that the named deployment is absent from the given namespace.

**name** The name of the deployment

**namespace** The name of the namespace

`salt.states.kubernetes.deployment_present` (*name*, *namespace='default'*, *metadata=None*, *spec=None*, *source=""*, *template=""*, *\*\*kwargs*)

Ensures that the named deployment is present inside of the specified namespace with the given metadata and spec. If the deployment exists it will be replaced.

**name** The name of the deployment.

**namespace** The namespace holding the deployment. The 'default' one is going to be used unless a different one is specified.

**metadata** The metadata of the deployment object.

**spec** The spec of the deployment object.

**source** A file containing the definition of the deployment (metadata and spec) in the official kubernetes format.

**template** Template engine to be used to render the source file.

`salt.states.kubernetes.namespace_absent` (*name*, *\*\*kwargs*)

Ensures that the named namespace is absent.

**name** The name of the namespace

`salt.states.kubernetes.namespace_present` (*name*, *\*\*kwargs*)

Ensures that the named namespace is present.

**name** The name of the namespace.

`salt.states.kubernetes.node_label_absent` (*name*, *node*, *\*\*kwargs*)

Ensures that the named label is absent from the node.

**name** The name of the label

**node** The name of the node

`salt.states.kubernetes.node_label_folder_absent` (*name*, *node*, *\*\*kwargs*)

Ensures the label folder doesn't exist on the specified node.

**name** The name of label folder

**node** The name of the node

`salt.states.kubernetes.node_label_present` (*name*, *node*, *value*, *\*\*kwargs*)

Ensures that the named label is set on the named node with the given value. If the label exists it will be replaced.

**name** The name of the label.

**value** Value of the label.

**node** Node to change.

`salt.states.kubernetes.pod_absent` (*name*, *namespace='default'*, *\*\*kwargs*)

Ensures that the named pod is absent from the given namespace.

**name** The name of the pod

**namespace** The name of the namespace

`salt.states.kubernetes.pod_present` (*name*, *namespace='default'*, *metadata=None*, *spec=None*,  
*source=""*, *template=""*, *\*\*kwargs*)

Ensures that the named pod is present inside of the specified namespace with the given metadata and spec. If the pod exists it will be replaced.

**name** The name of the pod.

**namespace** The namespace holding the pod. The 'default' one is going to be used unless a different one is specified.

**metadata** The metadata of the pod object.

**spec** The spec of the pod object.

**source** A file containing the definition of the pod (metadata and spec) in the official kubernetes format.

**template** Template engine to be used to render the source file.

`salt.states.kubernetes.secret_absent` (*name*, *namespace='default'*, *\*\*kwargs*)

Ensures that the named secret is absent from the given namespace.

**name** The name of the secret

**namespace** The name of the namespace

`salt.states.kubernetes.secret_present` (*name*, *namespace='default'*, *data=None*, *source=None*,  
*template=None*, *\*\*kwargs*)

Ensures that the named secret is present inside of the specified namespace with the given data. If the secret exists it will be replaced.

**name** The name of the secret.

**namespace** The namespace holding the secret. The 'default' one is going to be used unless a different one is specified.

**data** The dictionary holding the secrets.

**source** A file containing the data of the secret in plain format.

**template** Template engine to be used to render the source file.

`salt.states.kubernetes.service_absent` (*name*, *namespace='default'*, *\*\*kwargs*)

Ensures that the named service is absent from the given namespace.

**name** The name of the service

**namespace** The name of the namespace

`salt.states.kubernetes.service_present` (*name*, *namespace='default'*, *metadata=None*,  
*spec=None*, *source=""*, *template=""*, *\*\*kwargs*)

Ensures that the named service is present inside of the specified namespace with the given metadata and spec. If the deployment exists it will be replaced.

**name** The name of the service.

**namespace** The namespace holding the service. The 'default' one is going to be used unless a different one is specified.

**metadata** The metadata of the service object.

**spec** The spec of the service object.

**source** A file containing the definition of the service (metadata and spec) in the official kubernetes format.

**template** Template engine to be used to render the source file.

## 20.19.142 salt.states.layman

### Management of Gentoo Overlays using layman

A state module to manage Gentoo package overlays via layman

```
sunrise:
 layman.present
```

`salt.states.layman.absent` (*name*)  
 Verify that the overlay is absent  
**name** The name of the overlay to delete

`salt.states.layman.present` (*name*)  
 Verify that the overlay is present  
**name** The name of the overlay to add

### 20.19.143 salt.states.ldap

#### Manage entries in an LDAP database

New in version 2016.3.0.

The `states.ldap` state module allows you to manage LDAP entries and their attributes.

`salt.states.ldap.managed` (*name, entries, connect\_spec=None*)  
 Ensure the existence (or not) of LDAP entries and their attributes

Example:

```
ldapi:///:
 ldap.managed:
 - connect_spec:
 bind:
 method: sasl

 - entries:

 # make sure the entry doesn't exist
 - cn=foo,ou=users,dc=example,dc=com:
 - delete_others: True

 # make sure the entry exists with only the specified
 # attribute values
 - cn=admin,dc=example,dc=com:
 - delete_others: True
 - replace:
 cn:
 - admin
 description:
 - LDAP administrator
 objectClass:
 - simpleSecurityObject
 - organizationalRole
 userPassword:
 - {{pillar.ldap_admin_password}}

 # make sure the entry exists, its olcRootDN attribute
 # has only the specified value, the olcRootDN attribute
 # doesn't exist, and all other attributes are ignored
 - 'olcDatabase={1}hdb,cn=config':
 - replace:
 olcRootDN:
```

(continues on next page)

(continued from previous page)

```

- cn=admin,dc=example,dc=com
the admin entry has its own password attribute
olcRootPW: []

note the use of 'default'. also note how you don't
have to use list syntax if there is only one attribute
value
- cn=foo,ou=users,dc=example,dc=com:
- delete_others: True
- default:
 userPassword: changeme
 shadowLastChange: 0
 # keep sshPublicKey if present, but don't create
 # the attribute if it is missing
 sshPublicKey: []
- replace:
 cn: foo
 uid: foo
 uidNumber: 1000
 gidNumber: 1000
 gecos: Foo Bar
 givenName: Foo
 sn: Bar
 homeDirectory: /home/foo
 loginShell: /bin/bash
 objectClass:
 - inetOrgPerson
 - posixAccount
 - top
 - ldapPublicKey
 - shadowAccount

```

### Parameters

- **name** – The URL of the LDAP server. This is ignored if `connect_spec` is either a connection object or a dict with a `'url'` entry.
- **entries** – A description of the desired state of zero or more LDAP entries.

`entries` is an iterable of dicts. Each of these dict's keys are the distinguished names (DNs) of LDAP entries to manage. Each of these dicts is processed in order. A later dict can reference an LDAP entry that was already mentioned in an earlier dict, which makes it possible for later dicts to enhance or alter the desired state of an LDAP entry.

The DN's are mapped to a description of the LDAP entry's desired state. These LDAP entry descriptions are themselves iterables of dicts. Each dict in the iterable is processed in order. They contain directives controlling the entry's state. The key names the directive type and the value is state information for the directive. The specific structure of the state information depends on the directive type.

The structure of `entries` looks like this:

```

[{'dn1': [{'directive1': directive1_state,
 directive2': directive2_state},
 {'directive3': directive3_state}],
 'dn2': [{'directive4': directive4_state,
 directive5': directive5_state}]},
 {'dn3': [{'directive6': directive6_state}]}]

```

These are the directives:

- **'delete\_others'** Boolean indicating whether to delete attributes not mentioned in this dict or any of the other directive dicts for this DN. Defaults to `False`.

If you don't want to delete an attribute if present, but you also don't want to add it if it is missing or modify it if it is present, you can use either the `'default'` directive or the `'add'` directive with an empty value list.

- **'default'** A dict mapping an attribute name to an iterable of default values for that attribute. If the attribute already exists, it is left alone. If not, it is created using the given list of values.

An empty value list is useful when you don't want to create an attribute if it is missing but you do want to preserve it if the `'delete_others'` key is `True`.

- **'add'** Attribute values to add to the entry. This is a dict mapping an attribute name to an iterable of values to add.

An empty value list is useful when you don't want to create an attribute if it is missing but you do want to preserve it if the `'delete_others'` key is `True`.

- **'delete'** Attribute values to remove from the entry. This is a dict mapping an attribute name to an iterable of values to delete from the attribute. If the iterable is empty, all of the attribute's values are deleted.
- **'replace'** Attributes to replace. This is a dict mapping an attribute name to an iterable of values. Any existing values for the attribute are deleted, then the given values are added. The iterable may be empty.

In the above directives, the iterables of attribute values may instead be `None`, in which case an empty list is used, or a scalar such as a string or number, in which case a new list containing the scalar is used.

Note that if all attribute values are removed from an entry, the entire entry is deleted.

- **connect\_spec** - See the description of the `connect_spec` parameter of the `ldap3.connect` function in the `ldap3` execution module. If this is a dict and the `'url'` entry is not specified, the `'url'` entry is set to the value of the `name` parameter.

## Returns

A dict with the following keys:

- **'name'** This is the same object passed to the `name` parameter.
- **'changes'** This is a dict describing the changes made (or, in test mode, the changes that would have been attempted). If no changes were made (or no changes would have been attempted), then this dict is empty. Only successful changes are included.

Each key is a DN of an entry that was changed (or would have been changed). Entries that were not changed (or would not have been changed) are not included. The value is a dict with two keys:

- **'old'** The state of the entry before modification. If the entry did not previously exist, this key maps to `None`. Otherwise, the value is a dict mapping each of the old entry's attributes to a list of its values before any modifications were made. Unchanged attributes are excluded from this dict.
- **'new'** The state of the entry after modification. If the entry was deleted, this key maps to `None`. Otherwise, the value is a dict mapping each of the entry's attributes to a list of its values after the modifications were made. Unchanged attributes are excluded from this dict.

Example 'changes' dict where a new entry was created with a single attribute containing two values:

```
{'dn1': {'old': None,
 'new': {'attr1': ['val1', 'val2']}}}
```

Example 'changes' dict where a new attribute was added to an existing entry:

```
{'dn1': {'old': {}},
 'new': {'attr2': ['val3']}}}
```

- **'result'** One of the following values:
  - True if no changes were necessary or if all changes were applied successfully.
  - False if at least one change was unable to be applied.
  - None if changes would be applied but it is in test mode.

## 20.19.144 salt.states.libcloud\_dns module

Manage DNS records and zones using libcloud

**codeauthor** Anthony Shaw <anthonyshaw@apache.org>

New in version 2016.11.0.

Create and delete DNS records or zones through Libcloud. Libcloud's DNS system supports over 20 DNS providers including Amazon, Google, GoDaddy, Softlayer

This module uses `libcloud`, which can be installed via package, or pip.

**configuration** This module uses a configuration profile for one or multiple DNS providers

```
libcloud_dns:
 profile1:
 driver: godaddy
 key: 2orgk34kgk34g
 profile2:
 driver: route53
 key: blah
 secret: blah
```

Example:

```
my-zone:
 libcloud_dns.zone_present:
 - name: mywebsite.com
 - profile: profile1
my-website:
 libcloud_dns.record_present:
 - name: www
 - zone: mywebsite.com
 - type: A
 - data: 12.34.32.3
 - profile: profile1
 - require:
 - libcloud_dns: my-zone
```

**depends** apache-libcloud

`salt.states.libcloud_dns.record_absent` (*name, zone, type, data, profile*)

Ensures a record is absent.

**Parameters**

- **name** (str) – Record name without the domain name (e.g. www). Note: If you want to create a record for a base domain name, you should specify empty string ("") for this argument.
- **zone** (str) – Zone where the requested record is created, the domain name
- **type** (str) – DNS record type (A, AAAA, ...).
- **data** (str) – Data for the record (depends on the record type).
- **profile** (str) – The profile key

`salt.states.libcloud_dns.record_present` (*name, zone, type, data, profile*)

Ensures a record is present.

**Parameters**

- **name** (str) – Record name without the domain name (e.g. www). Note: If you want to create a record for a base domain name, you should specify empty string ("") for this argument.
- **zone** (str) – Zone where the requested record is created, the domain name
- **type** (str) – DNS record type (A, AAAA, ...).
- **data** (str) – Data for the record (depends on the record type).
- **profile** (str) – The profile key

`salt.states.libcloud_dns.state_result` (*result, message, name, changes=None*)

`salt.states.libcloud_dns.zone_absent` (*domain, profile*)

Ensures a record is absent.

**Parameters**

- **domain** (str) – Zone name, i.e. the domain name
- **profile** (str) – The profile key

`salt.states.libcloud_dns.zone_present` (*domain, type, profile*)

Ensures a record is present.

**Parameters**

- **domain** (str) – Zone name, i.e. the domain name
- **type** (str) – Zone type (master / slave), defaults to master
- **profile** (str) – The profile key

## 20.19.145 salt.states.libcloud\_loadbalancer module

### Apache Libcloud Load Balancer State

Manage load balancers using libcloud

**codeauthor** Anthony Shaw <anthonyshaw@apache.org>

Apache Libcloud load balancer management for a full list of supported clouds, see [http://libcloud.readthedocs.io/en/latest/loadbalancer/supported\\_providers.html](http://libcloud.readthedocs.io/en/latest/loadbalancer/supported_providers.html)

Clouds include Amazon ELB, ALB, Google, Aliyun, CloudStack, Softlayer

New in version 2018.3.0.

**configuration** This module uses a configuration profile for one or multiple Cloud providers

```
libcloud_loadbalancer:
 profile_test1:
 driver: gce
```

(continues on next page)

(continued from previous page)

```

key: G00G0123456789ABCXYZ
secret: mysecret
profile_test2:
 driver: alb
 key: 12345
 secret: mysecret

```

Example:

Using States to deploy a load balancer with extended arguments to specify region

```

lb_test:
 libcloud_loadbalancer.balancer_present:
 - name: example
 - port: 80
 - protocol: http
 - profile: google
 - ex_region: us-east1

```

**depends** apache-libcloud

`salt.states.libcloud_loadbalancer.balancer_absent`(*name*, *profile*, *\*\*libcloud\_kwargs*)

Ensures a load balancer is absent.

**Parameters**

- **name** (str) – Load Balancer name
- **profile** (str) – The profile key

`salt.states.libcloud_loadbalancer.balancer_present`(*name*, *port*, *protocol*, *profile*, *algorithm=None*, *members=None*, *\*\*libcloud\_kwargs*)

Ensures a load balancer is present.

**Parameters**

- **name** (str) – Load Balancer name
- **port** (str) – Port the load balancer should listen on, defaults to 80
- **protocol** (str) – Loadbalancer protocol, defaults to http.
- **profile** (str) – The profile key
- **algorithm** (str) – Load balancing algorithm, defaults to ROUND\_ROBIN. See Algorithm type in Libcloud documentation for a full listing.
- **members** (list of dict (ip, port)) – An optional list of members to create on deployment

`salt.states.libcloud_loadbalancer.member_absent`(*ip*, *port*, *balancer\_id*, *profile*, *\*\*libcloud\_kwargs*)

Ensure a load balancer member is absent, based on IP and Port

**Parameters**

- **ip** (str) – IP address for the member
- **port** (int) – Port for the member
- **balancer\_id** (str) – id of a load balancer you want to detach the member from
- **profile** (str) – The profile key

`salt.states.libcloud_loadbalancer.member_present`(*ip*, *port*, *balancer\_id*, *profile*, *\*\*libcloud\_kwargs*)

Ensure a load balancer member is present

**Parameters**

- **ip** (str) – IP address for the new member
- **port** (int) – Port for the new member
- **balancer\_id** (str) – id of a load balancer you want to attach the member to

- **profile** (str) – The profile key

`salt.states.libcloud_loadbalancer.state_result` (*result, message, name, changes=None*)

## 20.19.146 salt.states.libcloud\_storage module

### Apache Libcloud Storage State

Manage cloud storage using libcloud

**codeauthor** Anthony Shaw <anthonyshaw@apache.org>

Apache Libcloud Storage (object/blob) management for a full list of supported clouds, see [http://libcloud.readthedocs.io/en/latest/storage/supported\\_providers.html](http://libcloud.readthedocs.io/en/latest/storage/supported_providers.html)

Clouds include Amazon S3, Google Storage, Aliyun, Azure Blobs, Ceph, OpenStack swift

New in version 2018.3.0.

**configuration** This module uses a configuration profile for one or multiple Storage providers

```
libcloud_storage:
 profile_test1:
 driver: google_storage
 key: G00G0123456789ABCXYZ
 secret: mysecret
 profile_test2:
 driver: s3
 key: 12345
 secret: mysecret
```

### Examples

#### Creating a container and uploading a file

```
web_things:
 libcloud_storage.container_present:
 name: my_container_name
 profile: profile1
 libcloud_storage.object_present:
 name: my_file.jpg
 container: my_container_name
 path: /path/to/local/file.jpg
 profile: profile1
```

#### Downloading a file

This example will download the file from the remote cloud and keep it locally

```
web_things:
 libcloud_storage.file_present:
 name: my_file.jpg
 container: my_container_name
 path: /path/to/local/file.jpg
 profile: profile1
```

`depends` apache-libcloud

`salt.states.libcloud_storage.container_absent`(*name*, *profile*)

Ensures a container is absent.

Parameters

- **name** (str) – Container name
- **profile** (str) – The profile key

`salt.states.libcloud_storage.container_present`(*name*, *profile*)

Ensures a container is present.

Parameters

- **name** (str) – Container name
- **profile** (str) – The profile key

`salt.states.libcloud_storage.file_present`(*container*, *name*, *path*, *profile*, *overwrite\_existing=False*)

Ensures a object is downloaded locally.

Parameters

- **container** (str) – Container name
- **name** (str) – Object name in cloud
- **path** (str) – Local path to file
- **profile** (str) – The profile key
- **overwrite\_existing** (bool) – Replace if already exists

`salt.states.libcloud_storage.object_absent`(*container*, *name*, *profile*)

Ensures a object is absent.

Parameters

- **container** (str) – Container name
- **name** (str) – Object name in cloud
- **profile** (str) – The profile key

`salt.states.libcloud_storage.object_present`(*container*, *name*, *path*, *profile*)

Ensures a object is present.

Parameters

- **container** (str) – Container name
- **name** (str) – Object name in cloud
- **path** (str) – Local path to file
- **profile** (str) – The profile key

`salt.states.libcloud_storage.state_result`(*result*, *message*, *name*, *changes*)

### 20.19.147 salt.states.linux\_acl

Linux File Access Control Lists

The Linux ACL state module requires the *getfacl* and *setfacl* binaries.

Ensure a Linux ACL is present

```
root:
 acl.present:
 - name: /root
 - acl_type: user
 - acl_name: damian
 - perms: rwx
```

Ensure a Linux ACL does not exist

```

root:
 acl.absent:
 - name: /root
 - acl_type: user
 - acl_name: damian
 - perms: rwx

```

`salt.states.linux_acl.absent(name, acl_type, acl_name="", perms="", recurse=False)`  
 Ensure a Linux ACL does not exist

`salt.states.linux_acl.present(name, acl_type, acl_name="", perms="", recurse=False)`  
 Ensure a Linux ACL is present

## 20.19.148 salt.states.locale

### Management of languages/locales

Manage the available locales and the system default:

```

us_locale:
 locale.present:
 - name: en_US.UTF-8

default_locale:
 locale.system:
 - name: en_US.UTF-8
 - require:
 - locale: us_locale

```

`salt.states.locale.present(name)`  
 Generate a locale if it is not present

New in version 2014.7.0.

**name** The name of the locale to be present. Some distributions require the charmap to be specified as part of the locale at this point.

`salt.states.locale.system(name)`  
 Set the locale for the system  
**name** The name of the locale to use

## 20.19.149 salt.states.logadm module

Management of logs using Solaris logadm.

**maintainer** Jorge Schrauwen <[sjorge@blackdot.be](mailto:sjorge@blackdot.be)>

**maturity** new

**depends** salt.modulus.logadm

**platform** Oracle Solaris, Sun Solaris, illumos

New in version nitrogen.

```

.. note::
 TODO

```

```
salt.states.logadm.remove(name, log_file=None)
```

Remove a log from the logadm configuration

**name** [string] entryname

**log\_file** [string] (optional) log file path

---

**Note:** If `log_file` is specified it will be used instead of the entry name.

---

```
salt.states.logadm.rotate(name, **kwargs)
```

Add a log to the logadm configuration

**name** [string] alias for entryname

**kwargs** [boolean|string|int] optional additional flags and parameters

### 20.19.150 salt.states.logrotate module

Module for managing logrotate.

New in version 2017.7.0.

```
salt.states.logrotate.set_(name, key, value, setting=None, conf_file='/etc/logrotate.conf')
```

Set a new value for a specific configuration line.

#### Parameters

- **key** (*str*) – The command or block to configure.
- **value** (*str*) – The command value or command of the block specified by the key parameter.
- **setting** (*str*) – The command value for the command specified by the value parameter.
- **conf\_file** (*str*) – The logrotate configuration file.

Example of usage with only the required arguments:

```
logrotate-rotate:
 logrotate.set:
 - key: rotate
 - value: 2
```

Example of usage specifying all available arguments:

```
logrotate-wtmp-rotate:
 logrotate.set:
 - key: /var/log/wtmp
 - value: rotate
 - setting: 2
 - conf_file: /etc/logrotate.conf
```

### 20.19.151 salt.states.loop module

Loop state

Allows for looping over execution modules.

New in version 2017.7.0.

```
wait_for_service_to_be_healthy:
 loop.until:
 - name: boto_elb.get_instance_health
```

(continues on next page)

(continued from previous page)

```

- condition: m_ret[0]['state'] == 'InService'
- period: 5
- timeout: 20
- m_args:
 - {{ elb }}
- m_kwargs:
 keyid: {{ access_key }}
 key: {{ secret_key }}
 instances: "{{{ instance }}"

```

**Warning:** This state allows arbitrary python code to be executed through the condition parameter which is literally evaluated within the state. Please use caution.

`salt.states.loop.until`(*name*, *m\_args=None*, *m\_kwargs=None*, *condition=None*, *period=0*, *timeout=604800*)

Loop over an execution module until a condition is met.

**name** The name of the execution module

**m\_args** The execution module's positional arguments

**m\_kwargs** The execution module's keyword arguments

**condition** The condition which must be met for the loop to break. This should contain `m_ret` which is the return from the execution module.

**period** The number of seconds to wait between executions

**timeout** The timeout in seconds

## 20.19.152 salt.states.lvm

### Management of Linux logical volumes

A state module to manage LVMs

```

/dev/sda:
 lvm.pv_present

my_vg:
 lvm.vg_present:
 - devices: /dev/sda

lvroot:
 lvm.lv_present:
 - vgname: my_vg
 - size: 10G
 - stripes: 5
 - stripesize: 8K

```

`salt.states.lvm.lv_absent`(*name*, *vgname=None*)

Remove a given existing Logical Volume from a named existing volume group

**name** The Logical Volume to remove

**vgname** The name of the Volume Group on which the Logical Volume resides

`salt.states.lvm.lv_present`(*name*, *vgname=None*, *size=None*, *extents=None*, *snapshot=None*, *pv=""*, *thinvolume=False*, *thinpool=False*, *force=False*, *\*\*kwargs*)

Create a new Logical Volume

**name** The name of the Logical Volume

**vgname** The name of the Volume Group on which the Logical Volume resides  
**size** The initial size of the Logical Volume  
**extents** The number of logical extents to allocate  
**snapshot** The name of the snapshot  
**pv** The Physical Volume to use  
**kwargs** Any supported options to `lvcreate`. See `linux_lvm` for more details.  
New in version `to_complete`.  
**thinvolume** Logical Volume is thinly provisioned  
**thinpool** Logical Volume is a thin pool  
New in version 2018.3.0.  
**force** Assume yes to all prompts

`salt.states.lvm.pv_absent(name)`

Ensure that a Physical Device is not being used by lvm  
**name** The device name to initialize.

`salt.states.lvm.pv_present(name, **kwargs)`

Set a Physical Device to be used as an LVM Physical Volume  
**name** The device name to initialize.  
**kwargs** Any supported options to `pvcreate`. See `linux_lvm` for more details.

`salt.states.lvm.vg_absent(name)`

Remove an LVM volume group  
**name** The volume group to remove

`salt.states.lvm.vg_present(name, devices=None, **kwargs)`

Create an LVM Volume Group  
**name** The Volume Group name to create  
**devices** A list of devices that will be added to the Volume Group  
**kwargs** Any supported options to `vgcreate`. See `linux_lvm` for more details.

### 20.19.153 salt.states.lvs\_server

#### Management of LVS (Linux Virtual Server) Real Server

`salt.states.lvs_server.absent(name, protocol=None, service_address=None, server_address=None)`

Ensure the LVS Real Server in specified service is absent.  
**name** The name of the LVS server.  
**protocol** The service protocol(only support `tcp`, `udp` and `fwmark` service).  
**service\_address** The LVS service address.  
**server\_address** The LVS real server address.

`salt.states.lvs_server.present(name, protocol=None, service_address=None, server_address=None, packet_forward_method='dr', weight=1)`

Ensure that the named service is present.  
**name** The LVS server name  
**protocol** The service protocol  
**service\_address** The LVS service address  
**server\_address** The real server address.  
**packet\_forward\_method** The LVS packet forwarding method(`dr` for direct routing, `tunnel` for tunneling, `nat` for network access translation).  
**weight** The capacity of a server relative to the others in the pool.

```

lvsrs:
 lvs_server.present:
 - protocol: tcp
 - service_address: 1.1.1.1:80
 - server_address: 192.168.0.11:8080
 - packet_forward_method: dr
 - weight: 10

```

## 20.19.154 salt.states.lvs\_service

### Management of LVS (Linux Virtual Server) Service

`salt.states.lvs_service.absent` (*name*, *protocol=None*, *service\_address=None*)

Ensure the LVS service is absent.

**name** The name of the LVS service

**protocol** The service protocol

**service\_address** The LVS service address

`salt.states.lvs_service.present` (*name*, *protocol=None*, *service\_address=None*, *scheduler='wlc'*)

Ensure that the named service is present.

**name** The LVS service name

**protocol** The service protocol

**service\_address** The LVS service address

**scheduler** Algorithm for allocating TCP connections and UDP datagrams to real servers.

```

lvstest:
 lvs_service.present:
 - service_address: 1.1.1.1:80
 - protocol: tcp
 - scheduler: rr

```

## 20.19.155 salt.states.lxc

### Manage Linux Containers

`salt.states.lxc.absent` (*name*, *stop=False*, *path=None*)

Ensure a container is not present, destroying it if present

**name** Name of the container to destroy

**stop** stop before destroying default: false

New in version 2015.5.2.

**path** path to the container parent default: /var/lib/lxc (system default)

New in version 2015.8.0.

```

web01:
 lxc.absent

```

`salt.states.lxc.edited_conf` (*name*, *lxc\_conf=None*, *lxc\_conf\_unset=None*)

**Warning:** This state is unsuitable for setting parameters that appear more than once in an LXC config file, or parameters which must appear in a certain order (such as when configuring more than one network interface). It is slated to be replaced, and as of version 2015.5.0 it is deprecated.

Edit LXC configuration options

Deprecated since version 2015.5.0.

**path** path to the container parent default: /var/lib/lxc (system default)

New in version 2015.8.0.

```
setconf:
 lxc.edited_conf:
 - name: ubuntu
 - lxc_conf:
 - network.ipv4.ip: 10.0.3.6
 - lxc_conf_unset:
 - lxc.utsname
```

`salt.states.lxc.frozen` (*name*, *start=True*, *path=None*)

New in version 2015.5.0.

Ensure that a container is frozen

---

**Note:** This state does not enforce the existence of the named container, it just freezes the container if it is running. To ensure that the named container exists, use `lxc.present`.

---

**name** The name of the container

**path** path to the container parent default: /var/lib/lxc (system default)

New in version 2015.8.0.

**start** [True] Start container first, if necessary. If `False`, then this state will fail if the container is not running.

```
web01:
 lxc.frozen

web02:
 lxc.frozen:
 - start: False
```

`salt.states.lxc.present` (*name*, *running=None*, *clone\_from=None*, *snapshot=False*, *profile=None*, *network\_profile=None*, *template=None*, *options=None*, *image=None*, *config=None*, *fstype=None*, *size=None*, *backing=None*, *vgname=None*, *lvname=None*, *thinpool=None*, *path=None*)

Changed in version 2015.8.0: The `lxc.created` state has been renamed to `lxc.present`, and the `lxc.cloned` state has been merged into this state.

Create the named container if it does not exist

**name** The name of the container to be created

**path** path to the container parent default: /var/lib/lxc (system default)

New in version 2015.8.0.

**running** [False]

- If `True`, ensure that the container is running
- If `False`, ensure that the container is stopped
- If `None`, do nothing with regards to the running state of the container

New in version 2015.8.0.

**clone\_from** Create named container as a clone of the specified container

**snapshot** [False] Use Copy On Write snapshots (LVM). Only supported with `clone_from`.

**profile** Profile to use in container creation (see the *LXC Tutorial* for more information). Values in a profile will be overridden by the parameters listed below.

**network\_profile** Network Profile to use in container creation (see the *LXC Tutorial* for more information). Values in a profile will be overridden by the parameters listed below.

New in version 2015.5.2.

#### Container Creation Arguments

**template** The template to use. For example, `ubuntu` or `fedora`. For a full list of available templates, check out the `lxc.templates` function.

Conflicts with the `image` argument.

---

**Note:** The `download` template requires the following three parameters to be defined in `options`:

- **dist** - The name of the distribution
- **release** - Release name/version
- **arch** - Architecture of the container

The available images can be listed using the `lxc.images` function.

---

#### options

New in version 2015.5.0.

Template-specific options to pass to the `lxc-create` command. These correspond to the long options (ones beginning with two dashes) that the template script accepts. For example:

```
web01:
 lxc.present:
 - template: download
 - options:
 dist: centos
 release: 6
 arch: amd64
```

Remember to double-indent the options, due to *how PyYAML works*.

For available template options, refer to the `lxc` template scripts which are usually located under `/usr/share/lxc/templates`, or run `lxc-create -t <template> -h`.

**image** A tar archive to use as the roots for the container. Conflicts with the `template` argument.

**backing** The type of storage to use. Set to `lvm` to use an LVM group. Defaults to filesystem within `/var/lib/lxc`.

**fstype** Filesystem type to use on LVM logical volume

**size** Size of the volume to create. Only applicable if `backing` is set to `lvm`.

**vgname** [`lxc`] Name of the LVM volume group in which to create the volume for this container. Only applicable if `backing` is set to `lvm`.

**lvname** Name of the LVM logical volume in which to create the volume for this container. Only applicable if `backing` is set to `lvm`.

**thinpool** Name of a pool volume that will be used for thin-provisioning this container. Only applicable if `backing` is set to `lvm`.

`salt.states.lxc.running` (*name*, *restart=False*, *path=None*)

Changed in version 2015.5.0: The `lxc.started` state has been renamed to `lxc.running`

Ensure that a container is running

---

**Note:** This state does not enforce the existence of the named container, it just starts the container if it is not

running. To ensure that the named container exists, use *lxc.present*.

---

**name** The name of the container

**path** path to the container parent default: /var/lib/lxc (system default)

New in version 2015.8.0.

**restart** [False] Restart container if it is already running

```
web01:
 lxc.running

web02:
 lxc.running:
 - restart: True
```

`salt.states.lxc.set_pass(name, **kwargs)`

Deprecated since version 2015.5.0.

This state function has been disabled, as it did not conform to design guidelines. Specifically, due to the fact that *lxc.set\_password* uses `chpasswd(8)` to set the password, there was no method to make this action idempotent (in other words, the password would be changed every time). This makes this state redundant, since the following state will do the same thing:

```
setpass:
 module.run:
 - name: set_pass
 - m_name: root
 - password: secret
```

`salt.states.lxc.stopped(name, kill=False, path=None)`

Ensure that a container is stopped

---

**Note:** This state does not enforce the existence of the named container, it just stops the container if it running or frozen. To ensure that the named container exists, use *lxc.present*, or use the *lxc.absent* state to ensure that the container does not exist.

---

**name** The name of the container

**path** path to the container parent default: /var/lib/lxc (system default)

New in version 2015.8.0.

**kill** [False] Do not wait for the container to stop, kill all tasks in the container. Older LXC versions will stop containers like this irrespective of this argument.

New in version 2015.5.0.

```
web01:
 lxc.stopped
```

## 20.19.156 salt.states.mac\_assistive module

Allows you to manage assistive access on macOS minions with 10.9+

Install, enable and disable assistive access on macOS minions

```

/usr/bin/osascript:
 assistive.installed:
 - enabled: True

```

`salt.states.mac_assistive.installed` (*name*, *enabled=True*)

Make sure that we have the given bundle ID or path to command installed in the assistive access panel.

**name** The bundle ID or path to command

**enable** Should assistive access be enabled on this application?

## 20.19.157 salt.states.mac\_defaults module

### Writing/reading defaults from a macOS minion

`salt.states.mac_defaults.absent` (*name*, *domain*, *user=None*)

Make sure the defaults value is absent

**name** The key of the given domain to remove

**domain** The name of the domain to remove from

**user** The user to write the defaults to

`salt.states.mac_defaults.write` (*name*, *domain*, *value*, *vtype='string'*, *user=None*)

Write a default to the system

**name** The key of the given domain to write to

**domain** The name of the domain to write to

**value** The value to write to the given key

**vtype** The type of value to be written, valid types are string, data, int[eger], float, bool[ean], date, array, array-add, dict, dict-add

**user** The user to write the defaults to

## 20.19.158 salt.states.mac\_keychain module

### Installing of certificates to the keychain

Install certificats to the macOS keychain

```

/mnt/test.p12:
 keychain.installed:
 - password: test123

```

`salt.states.mac_keychain.default_keychain` (*name*, *domain='user'*, *user=None*)

Set the default keychain to use

**name** The chain in which to use as the default

**domain** The domain to use valid values are user|system|common|dynamic, the default is user

**user** The user to run as

`salt.states.mac_keychain.installed` (*name*, *password*, *keychain='/Library/Keychains/System.keychain'*, *\*\*kwargs*)

Install a p12 certificate file into the macOS keychain

**name** The certificate to install

**password** The password for the certificate being installed formatted in the way described for openssl command in the PASS PHRASE ARGUMENTS section

**keychain** The keychain to install the certificate to, this defaults to /Library/Keychains/System.keychain

**allow\_any** Allow any application to access the imported certificate without warning

**keychain\_password** If your keychain is likely to be locked pass the password and it will be unlocked before running the import

```
salt.states.mac_keychain.uninstalled(name, password, key-
 chain='/Library/Keychains/System.keychain', key-
 chain_password=None)
```

Uninstall a p12 certificate file from the macOS keychain

**name** The certificate to uninstall, this can be a path for a .p12 or the friendly name

**password** The password for the certificate being installed formatted in the way described for openssl command in the PASS PHRASE ARGUMENTS section

**cert\_name** The friendly name of the certificate, this can be used instead of giving a certificate

**keychain** The keychain to remove the certificate from, this defaults to /Library/Keychains/System.keychain

**keychain\_password** If your keychain is likely to be locked pass the password and it will be unlocked before running the import

## 20.19.159 salt.states.mac\_package module

### Installing of mac pkg files

Install any kind of pkg, dmg or app file on macOS:

```
/mnt/test.pkg:
 macpackage.installed:
 - store: True

/mnt/test.dmg:
 macpackage.installed:
 - dmg: True

/mnt/xcode.dmg:
 macpackage.installed:
 - dmg: True
 - app: True
 - target: /Applications/Xcode.app
 - version_check: xcodebuild -version=Xcode 7.1\n.*7B91b
```

```
salt.states.mac_package.installed(name, target='LocalSystem', dmg=False, store=False,
 app=False, mpkg=False, user=None, onlyif=None, un-
 less=None, force=False, allow_untrusted=False, ver-
 sion_check=None)
```

Install a Mac OS Package from a pkg or dmg file, if given a dmg file it will first be mounted in a temporary location

**name** The pkg or dmg file to install

**target** The location in which to install the package. This can be a path or LocalSystem

**dmg** Is the given file a dmg file?

**store** Should the pkg be installed as if it was from the Mac OS Store?

**app** Is the file a .app? If so then we'll just copy that to /Applications/ or the given target

**mpkg** Is the file a .mpkg? If so then we'll check all of the .pkg files found are installed

**user** Name of the user performing the unless or onlyif checks

**onlyif** A command to run as a check, run the named command only if the command passed to the `onlyif` option returns true

**unless** A command to run as a check, only run the named command if the command passed to the `unless` option returns false

**force** Force the package to be installed even if its already been found installed

**allow\_untrusted** Allow the installation of untrusted packages

**version\_check** The command and version that we want to check against, the version number can use regex.

```
version_check: python --version_check=2.7.[0-9]
```

### 20.19.160 salt.states.mac\_xattr module

Allows you to manage extended attributes on files or directories

Install, enable and disable assistive access on macOS minions

```
/path/to/file:
 xattr.exists:
 - attributes:
 - com.file.attr=test
 - com.apple.quarantine=0x00001111
```

**salt.states.mac\_xattr.delete**(*name, attributes*)

Make sure the given attributes are deleted from the file/directory

**name** The path to the file/directory

**attributes** The attributes that should be removed from the file/directory, this is accepted as an array.

**salt.states.mac\_xattr.exists**(*name, attributes*)

Make sure the given attributes exist on the file/directory

**name** The path to the file/directory

**attributes** The attributes that should exist on the file/directory, this is accepted as an array, with key and value split with an equals sign, if you want to specify a hex value then add 0x to the beginning of the value.

### 20.19.161 salt.states.makeconf

Management of Gentoo `make.conf`

A state module to manage Gentoo's `make.conf` file

```
makeopts:
 makeconf.present:
 - value: '-j3'
```

**salt.states.makeconf.absent**(*name*)

Verify that the variable is not in the `make.conf`.

**name** The variable name. This will automatically be converted to upper case since variables in `make.conf` are in upper case

**salt.states.makeconf.present**(*name, value=None, contains=None, excludes=None*)

Verify that the variable is in the `make.conf` and has the provided settings. If `value` is set, `contains` and `excludes` will be ignored.

**name** The variable name. This will automatically be converted to upper case since variables in `make.conf` are in upper case

**value** Enforce that the value of the variable is set to the provided value

**contains** Enforce that the value of the variable contains the provided value

**excludes** Enforce that the value of the variable does not contain the provided value.

### 20.19.162 salt.states.marathon\_app module

Configure Marathon apps via a salt proxy.

```
my_app:
 marathon_app.config:
 - config:
 cmd: "while [true] ; do echo 'Hello Marathon' ; sleep 5 ; done"
 cpus: 0.1
 mem: 10
 instances: 3
```

New in version 2015.8.2.

`salt.states.marathon_app.absent(name)`

Ensure that the marathon app with the given id is not present.

**Parameters** `name` – The app name/id

**Returns** A standard Salt changes dictionary

`salt.states.marathon_app.config(name, config)`

Ensure that the marathon app with the given id is present and is configured to match the given config values.

**Parameters**

- **name** – The app name/id
- **config** – The configuration to apply (dict)

**Returns** A standard Salt changes dictionary

`salt.states.marathon_app.running(name, restart=False, force=True)`

Ensure that the marathon app with the given id is present and restart if set.

**Parameters**

- **name** – The app name/id
- **restart** – Restart the app
- **force** – Override the current deployment

**Returns** A standard Salt changes dictionary

### 20.19.163 salt.states.mdadm

#### Managing software RAID with mdadm

depends mdadm

A state module for creating or destroying software RAID devices.

```
/dev/md0:
 raid.present:
 - level: 5
 - devices:
 - /dev/xvdd
 - /dev/xvde
 - /dev/xvdf
 - chunk: 256
 - run: True
```

`salt.states.mdadm.absent(name)`

Verify that the raid is absent

**name** The name of raid device to be destroyed

```

/dev/md0:
 raid:
 - absent

```

`salt.states.mdadm.present` (*name, level, devices, \*\*kwargs*)

Verify that the raid is present

Changed in version 2014.7.0.

**name** The name of raid device to be created

**level** The RAID level to use when creating the raid.

**devices** A list of devices used to build the array.

**kwargs** Optional arguments to be passed to mdadm.

Example:

```

/dev/md0:
 raid.present:
 - level: 5
 - devices:
 - /dev/xvdd
 - /dev/xvde
 - /dev/xvdf
 - chunk: 256
 - run: True

```

## 20.19.164 salt.states.memcached

### States for Management of Memcached Keys

New in version 2014.1.0.

`salt.states.memcached.absent` (*name, value=None, host='127.0.0.1', port=11211, time=0*)

Ensure that a memcached key is not present.

**name** The key

**value** [None] If specified, only ensure that the key is absent if it matches the specified value.

**host** The memcached server IP address

**port** The memcached server port

```

foo:
 memcached.absent

bar:
 memcached.absent:
 - host: 10.0.0.1

```

`salt.states.memcached.managed` (*name, value=None, host='127.0.0.1', port=11211, time=0, min\_compress\_len=0*)

Manage a memcached key.

**name** The key to manage

**value** The value to set for that key

**host** The memcached server IP address

**port** The memcached server port

```

foo:
 memcached.managed:
 - value: bar

```

### 20.19.165 salt.states.modjk

State to control Apache modjk

`salt.states.modjk.worker_activated` (*name*, *workers=None*, *profile='default'*)  
Activate all the workers in the modjk load balancer

Example:

```
loadbalancer:
 modjk.worker_activated:
 - workers:
 - app1
 - app2
```

`salt.states.modjk.worker_disabled` (*name*, *workers=None*, *profile='default'*)  
Disable all the workers in the modjk load balancer

Example:

```
loadbalancer:
 modjk.worker_disabled:
 - workers:
 - app1
 - app2
```

`salt.states.modjk.worker_recover` (*name*, *workers=None*, *profile='default'*)  
Recover all the workers in the modjk load balancer

Example:

```
loadbalancer:
 modjk.worker_recover:
 - workers:
 - app1
 - app2
```

`salt.states.modjk.worker_stopped` (*name*, *workers=None*, *profile='default'*)  
Stop all the workers in the modjk load balancer

Example:

```
loadbalancer:
 modjk.worker_stopped:
 - workers:
 - app1
 - app2
```

### 20.19.166 salt.states.modjk\_worker

#### Manage modjk workers

Send commands to a `modjk` load balancer via the peer system.

This module can be used with the `prereq` requisite to remove/add the worker from the load balancer before deploying/restarting service.

Mandatory Settings:

- The minion needs to have permission to publish the `modjk.*` functions (see [here](#) for information on configuring peer publishing permissions)
- The modjk load balancer must be configured as stated in the `modjk` execution module [documentation](#)

`salt.states.modjk_worker.activate`(*name*, *lbn*, *target*, *profile*='default', *tgt\_type*='glob',  
*expr\_form*=None)

Changed in version 2017.7.0: The `expr_form` argument has been renamed to `tgt_type`, earlier releases must use `expr_form`.

Activate the named worker from the lbn load balancers at the targeted minions

Example:

```
disable-before-deploy:
 modjk_worker.activate:
 - name: {{ grains['id'] }}
 - lbn: application
 - target: 'roles:balancer'
 - tgt_type: grain
```

`salt.states.modjk_worker.disable`(*name*, *lbn*, *target*, *profile*='default', *tgt\_type*='glob',  
*expr\_form*=None)

Changed in version 2017.7.0: The `expr_form` argument has been renamed to `tgt_type`, earlier releases must use `expr_form`.

Disable the named worker from the lbn load balancers at the targeted minions. The worker will get traffic only for current sessions and won't get new ones.

Example:

```
disable-before-deploy:
 modjk_worker.disable:
 - name: {{ grains['id'] }}
 - lbn: application
 - target: 'roles:balancer'
 - tgt_type: grain
```

`salt.states.modjk_worker.stop`(*name*, *lbn*, *target*, *profile*='default', *tgt\_type*='glob',  
*expr\_form*=None)

Changed in version 2017.7.0: The `expr_form` argument has been renamed to `tgt_type`, earlier releases must use `expr_form`.

Stop the named worker from the lbn load balancers at the targeted minions The worker won't get any traffic from the lbn

Example:

```
disable-before-deploy:
 modjk_worker.stop:
 - name: {{ grains['id'] }}
 - lbn: application
 - target: 'roles:balancer'
 - tgt_type: grain
```

## 20.19.167 salt.states.module

### Execution of Salt modules from within states

With *module.run* these states allow individual execution module calls to be made via states. To call a single module function use a `module.run` state:

```
mine.send:
 module.run:
 - network.interfaces
```

Note that this example is probably unnecessary to use in practice, since the `mine_functions` and `mine_interval` config parameters can be used to schedule updates for the mine (see [here](#) for more info).

It is sometimes desirable to trigger a function call after a state is executed, for this the *module.wait* state can be used:

```
fetch_out_of_band:
 module.run:
 - git.fetch:
 - cwd: /path/to/my/repo
 - user: myuser
 - opts: '--all'
```

Another example:

```
mine.send:
 module.run:
 - network.ip_addrs:
 - interface: eth0
```

And more complex example:

```
eventsviewer:
 module.run:
 - task.create_task:
 - name: events-viewer
 - user_name: System
 - action_type: Execute
 - cmd: 'c:\netops\scripts\events_viewer.bat'
 - trigger_type: 'Daily'
 - start_date: '2017-1-20'
 - start_time: '11:59PM'
```

Please note, this is a new behaviour of *module.run* function.

With the previous *module.run* there are several differences:

- The need of *name* keyword
- The need of *m\_* prefix
- No way to call more than one function at once

For example:

```
mine.send:
 module.wait:
 - name: network.interfaces
 - watch:
 - file: /etc/network/interfaces
```

All arguments that the `module` state does not consume are passed through to the execution module function being executed:

```
fetch_out_of_band:
 module.run:
 - name: git.fetch
 - cwd: /path/to/my/repo
 - user: myuser
 - opts: '--all'
```

Due to how the state system works, if a module function accepts an argument called, `name`, then `m_name` must be used to specify that argument, to avoid a collision with the `name` argument.

Here is a list of keywords hidden by the state system, which must be prefixed with `m_`:

- `fun`
- `name`
- `names`
- `state`
- `saltenv`

For example:

```
disable_nfs:
 module.run:
 - name: service.disable
 - m_name: nfs
```

Note that some modules read all or some of the arguments from a list of keyword arguments. For example:

```
mine.send:
 module.run:
 - func: network.ip_addrs
 - kwargs:
 interface: eth0
```

```
cloud.create:
 module.run:
 - func: cloud.create
 - provider: test-provider
 - m_names:
 - test-vlad
 - kwargs: {
 ssh_username: 'ubuntu',
 image: 'ami-8d6d9daa',
 securitygroup: 'default',
 size: 'c3.large',
 location: 'ap-northeast-1',
 delvol_on_destroy: 'True'
 }
```

Another example that creates a recurring task that runs a batch file on a Windows system:

```
eventsviewer:
 module.run:
 - name: task.create_task
```

(continues on next page)

(continued from previous page)

```

- m_name: 'events-viewer'
- user_name: System
- kwargs: {
 action_type: 'Execute',
 cmd: 'c:\netops\scripts\events_viewer.bat',
 trigger_type: 'Daily',
 start_date: '2017-1-20',
 start_time: '11:59PM'
}

```

Another option is to use the new version of *module.run*. With which you can call one (or more!) functions at once the following way:

```

call_something:
 module.run:
 - git.fetch:
 - cwd: /path/to/my/repo
 - user: myuser
 - opts: '--all'

```

By default this behaviour is not turned on. In order to do so, please add the following configuration to the minion:

```

use_superseded:
- module.run

```

`salt.states.module.wait`(*name*, *\*\*kwargs*)

Run a single module function only if the watch statement calls it

**name** The module function to execute

**\*\*kwargs** Pass any arguments needed to execute the function

**Note:** Like the *cmd.run* state, this state will return `True` but not actually execute, unless one of the following two things happens:

1. The state has a *watch requisite*, and the state which it is watching changes.
2. Another state has a *watch\_in requisite* which references this state, and the state with the *watch\_in* changes.

## 20.19.168 salt.states.mongodb\_database

### Management of MongoDB Databases

#### depends

- pymongo Python module

Only deletion is supported, creation doesn't make sense and can be done using *mongodb\_user.present*.

`salt.states.mongodb_database.absent`(*name*, *user=None*, *password=None*, *host=None*, *port=None*, *authdb=None*)

Ensure that the named database is absent. Note that creation doesn't make sense in MongoDB.

**name** The name of the database to remove

**user** The user to connect as (must be able to create the user)

**password** The password of the user

**host** The host to connect to

**port** The port to connect to

**authdb** The database in which to authenticate

### 20.19.169 salt.states.mongodb\_user

#### Management of MongoDB Users

##### depends

- pymongo Python module

`salt.states.mongodb_user.absent`(*name*, *user=None*, *password=None*, *host=None*, *port=None*, *database='admin'*, *authdb=None*)

Ensure that the named user is absent

**name** The name of the user to remove

**user** MongoDB user with sufficient privilege to create the user

**password** Password for the admin user specified by the `user` parameter

**host** The hostname/IP address of the MongoDB server

**port** The port on which MongoDB is listening

**database** The database from which to remove the user specified by the `name` parameter

**authdb** The database in which to authenticate

`salt.states.mongodb_user.present`(*name*, *passwd*, *database='admin'*, *user=None*, *password=None*, *host='localhost'*, *port=27017*, *authdb=None*, *roles=None*)

Ensure that the user is present with the specified properties

**name** The name of the user to manage

**passwd** The password of the user to manage

**user** MongoDB user with sufficient privilege to create the user

**password** Password for the admin user specified with the `user` parameter

**host** The hostname/IP address of the MongoDB server

**port** The port on which MongoDB is listening

**database** The database in which to create the user

---

**Note:** If the database doesn't exist, it will be created.

---

**authdb** The database in which to authenticate

**roles** The roles assigned to user specified with the `name` parameter

Example:

```

mongouser-myapp:
 mongodb_user.present:
 - name: myapp
 - passwd: password-of-myapp
 - database: admin
 # Connect as admin:sekrit
 - user: admin
 - password: sekret
 - roles:
 - readWrite
 - userAdmin
 - dbOwner

```

### 20.19.170 salt.states.monit

## Monit state

Manage monit states

```
monit_enable_service_monitoring:
```

```
 monit.monitor:
```

- name: service

```
monit_disable_service_monitoring:
```

```
 monit.unmonitor:
```

- name: service

---

**Note:** Use of these states require that the *monit* execution module is available.

---

```
salt.states.monit.monitor(name)
```

Get the summary from module monit and try to see if service is being monitored. If not then monitor the service.

```
salt.states.monit.unmonitor(name)
```

Get the summary from module monit and try to see if service is being monitored. If it is then stop monitoring the service.

## 20.19.171 salt.states.mount

### Mounting of filesystems

Mount any type of mountable filesystem with the mounted function:

```
/mnt/sdb:
 mount.mounted:
 - device: /dev/sdb1
 - fstype: ext4
 - mkmnt: True
 - opts:
 - defaults

/srv/bigdata:
 mount.mounted:
 - device: UUID=066e0200-2867-4ebe-b9e6-f30026ca2314
 - fstype: xfs
 - opts: nobootwait,noatime,nodiratime,nobarrier,logbufs=8
 - dump: 0
 - pass_num: 2
 - persist: True
 - mkmnt: True

/var/lib/bigdata:
 mount.mounted:
 - device: /srv/bigdata
 - fstype: none
```

(continues on next page)

(continued from previous page)

- **opts**: bind
- **dump**: 0
- **pass\_num**: 0
- **persist**: True
- **mkmnt**: True

`salt.states.mount.mod_watch`(*name*, *user=None*, *\*\*kwargs*)

The mounted watcher, called to invoke the watch command.

**Note:** This state exists to support special handling of the `watch requisite`. It should not be called directly.

Parameters for this function should be set by the state being triggered.

**name** The name of the mount point

```
salt.states.mount.mounted(name, device, fstype, mkmnt=False, opts='defaults',
 dump=0, pass_num=0, config='/etc/fstab', persist=True,
 mount=True, user=None, match_on='auto', device_name_regex=None,
 extra_mount_invisible_options=None, extra_mount_invisible_keys=None,
 extra_mount_ignore_fs_keys=None, extra_mount_translate_options=None,
 hidden_opts=None, **kwargs)
```

Verify that a device is mounted

**name** The path to the location where the device is to be mounted

**device** The device name, typically the device node, such as `/dev/sdb1` or `UUID=066e0200-2867-4ebe-b9e6-f30026ca2314` or `LABEL=DATA`

**fstype** The filesystem type, this will be `xfs`, `ext2/3/4` in the case of classic filesystems, `fuse` in the case of fuse mounts, and `nfs` in the case of nfs mounts

**mkmnt** If the mount point is not present then the state will fail, set `mkmnt: True` to create the mount point if it is otherwise not present

**opts** A list object of options or a comma delimited list

**dump** The dump value to be passed into the fstab, Default is 0

**pass\_num** The pass value to be passed into the fstab, Default is 0

**config** Set an alternative location for the fstab, Default is `/etc/fstab`

**persist** Set if the mount should be saved in the fstab, Default is `True`

**mount** Set if the mount should be mounted immediately, Default is `True`

**user** The account used to execute the mount; this defaults to the user salt is running as on the minion

**match\_on** A name or list of fstab properties on which this state should be applied. Default is `auto`, a special value indicating to guess based on `fstype`. In general, `auto` matches on `name` for recognized special devices and `device` otherwise.

**device\_name\_regex** A list of device exact names or regular expressions which should not force a remount. For example, `glusterfs` may be mounted with a comma-separated list of servers in fstab, but the `/proc/self/mountinfo` will show only the first available server.

```
{% set glusterfs_ip_list = ['10.0.0.1', '10.0.0.2', '10.0.0.3'] %}
```

```
mount glusterfs volume:
```

```
 mount.mounted:
```

- name: /mnt/glusterfs\_mount\_point
- device: {{ glusterfs\_ip\_list|join(',') }}:/volume\_name
- fstype: glusterfs
- opts: \_netdev,rw,defaults,direct-io-mode=disable
- mkmnt: True
- persist: True

(continues on next page)

(continued from previous page)

```
- dump: 0
- pass_num: 0
- device_name_regex:
 - ({{ glusterfs_ip_list|join('|') }}):/volume_name
```

New in version 2016.11.0.

**extra\_mount\_invisible\_options** A list of extra options that are not visible through the `/proc/self/mountinfo` interface.

If a option is not visible through this interface it will always remount the device. This option extends the builtin `mount_invisible_options` list.

**extra\_mount\_invisible\_keys** A list of extra key options that are not visible through the `/proc/self/mountinfo` interface.

If a key option is not visible through this interface it will always remount the device. This option extends the builtin `mount_invisible_keys` list.

A good example for a key option is the password option:

```
password=badsecret
```

**extra\_mount\_ignore\_fs\_keys** A dict of filesystem options which should not force a remount. This will update the internal dictionary. The dict should look like this:

```
{
 'ramfs': ['size']
}
```

**extra\_mount\_translate\_options** A dict of mount options that gets translated when mounted. To prevent a remount add additional options to the default dictionary. This will update the internal dictionary. The dictionary should look like this:

```
{
 'tcp': 'proto=tcp',
 'udp': 'proto=udp'
}
```

**hidden\_opts** A list of mount options that will be ignored when considering a remount as part of the state application

New in version 2015.8.2.

`salt.states.mount.swap`(*name*, *persist=True*, *config='/etc/fstab'*)

Activates a swap device

```
/root/swapfile:
mount.swap
```

---

**Note:** swap does not currently support LABEL

---

`salt.states.mount.unmounted`(*name*, *device=None*, *config='/etc/fstab'*, *persist=False*, *user=None*, *\*\*kwargs*)

New in version 0.17.0.

Verify that a device is not mounted

**name** The path to the location where the device is to be unmounted from

**device** The device to be unmounted. This is optional because the device could be mounted in multiple places.

New in version 2015.5.0.

**config** Set an alternative location for the fstab, Default is `/etc/fstab`

**persist** Set if the mount should be purged from the fstab, Default is `False`

**user** The user to own the mount; this defaults to the user salt is running as on the minion

## 20.19.172 salt.states.msteams module

### Send a message card to Microsoft Teams

This state is useful for sending messages to Teams during state runs.

New in version 2017.7.0.

```
teams-message:
 msteams.post_card:
 - message: 'This state was executed successfully.'
 - hook_url: https://outlook.office.com/webhook/837
```

The `hook_url` can be specified in the master or minion configuration like below:

```
msteams:
 hook_url: https://outlook.office.com/webhook/837
```

`salt.states.msteams.post_card`(*name*, *message*, *hook\_url=None*, *title=None*, *theme\_color=None*)

Send a message to a Microsoft Teams channel

```
send-msteams-message:
 msteams.post_card:
 - message: 'This state was executed successfully.'
 - hook_url: https://outlook.office.com/webhook/837
```

The following parameters are required:

**message** The message that is to be sent to the MS Teams channel.

The following parameters are optional:

**hook\_url** The webhook URL given configured in Teams interface, if not specified in the configuration options of master or minion.

**title** The title for the card posted to the channel

**theme\_color** A hex code for the desired highlight color

## 20.19.173 salt.states.mysql\_database

### Management of MySQL databases (schemas)

**depends**

- MySQLdb Python module

**configuration** See `salt.modules.mysql` for setup instructions.

The `mysql_database` module is used to create and manage MySQL databases. Databases can be set as either absent or present.

```
frank:
 mysql_database.present
```

`salt.states.mysql_database.absent` (*name*, *\*\*connection\_args*)

Ensure that the named database is absent

**name** The name of the database to remove

`salt.states.mysql_database.present` (*name*, *character\_set=None*, *collate=None*, *\*\*connection\_args*)

Ensure that the named database is present with the specified properties

**name** The name of the database to manage

## 20.19.174 salt.states.mysql\_grants

### Management of MySQL grants (user permissions)

#### depends

- MySQLdb Python module

**configuration** See `salt.modules.mysql` for setup instructions.

The `mysql_grants` module is used to grant and revoke MySQL permissions.

The name you pass in purely symbolic and does not have anything to do with the grant itself.

The database parameter needs to specify a 'priv\_level' in the same specification as defined in the MySQL documentation:

- \*
- \*.\*
- db\_name.\*
- db\_name.tbl\_name
- etc...

This state is not able to set password for the permission from the specified host. See `salt.states.mysql_user` for further instructions.

```
frank_exampledbs:
 mysql_grants.present:
 - grant: select,insert,update
 - database: exampledb.*
 - user: frank
 - host: localhost

frank_otherdb:
 mysql_grants.present:
 - grant: all privileges
 - database: otherdb.*
 - user: frank

restricted_singletable:
 mysql_grants.present:
 - grant: select
 - database: somedb.sometable
 - user: joe
```

`salt.states.mysql_grants.absent` (*name*, *grant=None*, *database=None*, *user=None*, *host='localhost'*, *grant\_option=False*, *escape=True*, *\*\*connection\_args*)

Ensure that the grant is absent

**name** The name (key) of the grant to add  
**grant** The grant priv\_type (i.e. select,insert,update OR all privileges)  
**database** The database priv\_level (i.e. db.tbl OR db.\*)  
**user** The user to apply the grant to  
**host** The network/host that the grant should apply to

```
salt.states.mysql_grants.present(name, grant=None, database=None, user=None,
 host='localhost', grant_option=False, escape=True,
 revoke_first=False, ssl_option=False, **connection_args)
```

Ensure that the grant is present with the specified properties

**name** The name (key) of the grant to add  
**grant** The grant priv\_type (i.e. select,insert,update OR all privileges)  
**database** The database priv\_level (i.e. db.tbl OR db.\*)  
**user** The user to apply the grant to  
**host** The network/host that the grant should apply to  
**grant\_option** Adds the WITH GRANT OPTION to the defined grant. Default is `False`  
**escape** Defines if the database value gets escaped or not. Default is `True`  
**revoke\_first** By default, MySQL will not do anything if you issue a command to grant privileges that are more restrictive than what's already in place. This effectively means that you cannot downgrade permissions without first revoking permissions applied to a db.table/user pair first.

To have Salt forcibly revoke perms before applying a new grant, enable the `'revoke_first'` options.

WARNING: This will *remove* permissions for a database before attempting to apply new permissions. There is no guarantee that new permissions will be applied correctly which can leave your database security in an unknown and potentially dangerous state. Use with caution!

Default is `False`

**ssl\_option** Adds the specified ssl options for the connecting user as requirements for this grant. Value is a list of single-element dicts corresponding to the list of ssl options to use.

Possible key/value pairings for the dicts in the value:

```
- SSL: True
- X509: True
- SUBJECT: <subject>
- ISSUER: <issuer>
- CIPHER: <cipher>
```

The non-boolean ssl options take a string as their values, which should be an appropriate value as specified by the MySQL documentation for these options.

Default is `False` (no ssl options will be used)

## 20.19.175 salt.states.mysql\_query

### Execution of MySQL queries

New in version 2014.7.0.

#### depends

- MySQLdb Python module

**configuration** See `salt.modules.mysql` for setup instructions.

The `mysql_query` module is used to execute queries on MySQL databases. Its output may be stored in a file or in a grain.

```
query_id:
 mysql_query.run
 - database: my_database
 - query: "SELECT * FROM table;"
 - output: "/tmp/query_id.txt"
```

`salt.states.mysql_query.run`(*name*, *database*, *query*, *output=None*, *grain=None*, *key=None*, *overwrite=True*, *\*\*connection\_args*)

Execute an arbitrary query on the specified database

**name** Used only as an ID

**database** The name of the database to execute the query on

**query** The query to execute

**output** grain: output in a grain other: the file to store results None: output to the result comment (default)

**grain:** grain to store the output (need `output=grain`)

**key:** the specified grain will be treated as a dictionary, the result of this state will be stored under the specified key.

**overwrite:** The file or grain will be overwritten if it already exists (default)

`salt.states.mysql_query.run_file`(*name*, *database*, *query\_file=None*, *output=None*, *grain=None*, *key=None*, *overwrite=True*, *saltenv=None*, *\*\*connection\_args*)

Execute an arbitrary query on the specified database

New in version 2017.7.0.

**name** Used only as an ID

**database** The name of the database to execute the query\_file on

**query\_file** The file of mysql commands to run

**output** grain: output in a grain other: the file to store results None: output to the result comment (default)

**grain:** grain to store the output (need `output=grain`)

**key:** the specified grain will be treated as a dictionary, the result of this state will be stored under the specified key.

**overwrite:** The file or grain will be overwritten if it already exists (default)

**saltenv:** The saltenv to pull the query\_file from

## 20.19.176 salt.states.mysql\_user

### Management of MySQL users

#### depends

- MySQLdb Python module

**configuration** See `salt.modules.mysql` for setup instructions.

```
frank:
 mysql_user.present:
 - host: localhost
 - password: bobcat
```

New in version 0.16.2: Authentication overrides have been added.

The MySQL authentication information specified in the minion config file can be overridden in states using the following arguments: `connection_host`, `connection_port`, `connection_user`, `connection_pass`, `connection_db`, `connection_unix_socket`, `connection_default_file` and `connection_charset`.

```
frank:
 mysql_user.present:
 - host: localhost
 - password: "bob@cat"
 - connection_user: someuser
 - connection_pass: somepass
 - connection_charset: utf8
 - saltenv:
 - LC_ALL: "en_US.utf8"
```

This state is not able to grant permissions for the user. See `salt.states.mysql_grants` for further instructions.

`salt.states.mysql_user.absent` (*name*, *host*='localhost', *\*\*connection\_args*)

Ensure that the named user is absent

**name** The name of the user to remove

`salt.states.mysql_user.present` (*name*, *host*='localhost', *password*=None, *password\_hash*=None, *allow\_passwordless*=False, *unix\_socket*=False, *password\_column*=None, *\*\*connection\_args*)

Ensure that the named user is present with the specified properties. A passwordless user can be configured by omitting `password` and `password_hash`, and setting `allow_passwordless` to `True`.

**name** The name of the user to manage

**host** Host for which this user/password combo applies

**password** The password to use for this user. Will take precedence over the `password_hash` option if both are specified.

**password\_hash** The password in hashed form. Be sure to quote the password because YAML doesn't like the \*. A password hash can be obtained from the mysql command-line client like so:

```
mysql> SELECT PASSWORD('mypass');
+-----+
| PASSWORD('mypass') |
+-----+
| *6C8989366EAF75BB670AD8EA7A7FC1176A95CEF4 |
+-----+
1 row in set (0.00 sec)
```

**allow\_passwordless** If `True`, then `password` and `password_hash` can be omitted to permit a passwordless login.

New in version 0.16.2.

**unix\_socket** If `True` and `allow_passwordless` is `True`, the `unix_socket` auth plugin will be used.

## 20.19.177 salt.states.netacl

### Network ACL

Manage the firewall configuration on the network device managed through NAPALM. The firewall configuration is generated by `Capirca`.

New in version 2017.7.0.

**codeauthor** Mircea Ulinic <mircea@cloudflare.com>

**maturity** new

**depends** capirca, napalm

**platform** unix

## Dependencies

### Capirca

To install Capirca, execute: `pip install capirca`.

### NAPALM

To be able to load configuration on network devices, it requires [NAPALM](#) library to be installed: `pip install napalm`. Please check [Installation](#) for complete details.

```
salt.states.netacl.filter(name, filter_name, filter_options=None, terms=None, prepend=True,
 pillar_key='acl', pillarenv=None, saltenv=None, merge_pillar=False,
 only_lower_merge=False, revision_id=None, revision_no=None, re-
 vision_date=True, revision_date_format='%Y/%m/%d', test=False,
 commit=True, debug=False)
```

Generate and load the configuration of a policy filter.

**filter\_name** The name of the policy filter.

**filter\_options** Additional filter options. These options are platform-specific. See the complete list of [options](#).

**terms** Dictionary of terms for this policy filter. If not specified or empty, will try to load the configuration from the pillar, unless `merge_pillar` is set as `False`.

**prepend: True** When `merge_pillar` is set as `True`, the final list of terms generated by merging the terms from `terms` with those defined in the pillar (if any): new terms are prepended at the beginning, while existing ones will preserve the position. To add the new terms at the end of the list, set this argument to `False`.

**pillar\_key: acl** The key in the pillar containing the default attributes values. Default: `acl`.

**pillarenv** Query the master to generate fresh pillar data on the fly, specifically from the requested pillar environment.

**saltenv** Included only for compatibility with `pillarenv_from_saltenv`, and is otherwise ignored.

**merge\_pillar: False** Merge `terms` with the corresponding value from the pillar. Default: `False`.

---

**Note:** By default this state does not merge, to avoid any unexpected behaviours.

The merge logic depends on the `prepend` argument.

The terms specified through the `terms` argument have higher priority than the pillar.

---

**only\_lower\_merge: False** Specify if it should merge only the terms fields. Otherwise it will try to merge also filters fields. Default: `False`. This option requires `merge_pillar`, otherwise it is ignored.

**revision\_id** Add a comment in the filter config having the description for the changes applied.

**revision\_no** The revision count.

**revision\_date: True** Boolean flag: display the date when the filter configuration was generated. Default: `True`.

**revision\_date\_format: %Y/%m/%d** The date format to be used when generating the perforce data. Default: `%Y/%m/%d` (<year>/<month>/<day>).

**test: False** Dry run? If set as `True`, will apply the config, discard and return the changes. Default: `False` and will commit the changes on the device.

**commit: True** Commit? Default: `True`.

**debug: False** Debug mode. Will insert a new key under the output dictionary, as `loaded_config` containing the raw configuration loaded on the device.

CLI Example:

```
salt 'edge01.flw01' state.sls router.acl test=True
```

Output Example:

```
edge01.flw01:

 ID: my-filter
Function: netacl.filter
 Result: None
 Comment: Testing mode: Configuration discarded.
 Started: 12:24:40.598232
 Duration: 2437.139 ms

 remark $Id: my-filter_state $
 remark $Revision: 5 $
 remark my-other-term
 permit tcp any range 5678 5680 any
 exit

Summary for edge01.flw01

Succeeded: 1 (unchanged=1, changed=1)
Failed: 0

Total states run: 1
Total run time: 2.437 s
```

Pillar example:

```
acl:
- my-filter:
 options:
 - inet6
 terms:
 - my-term:
 source_port: [1234, 1235]
 protocol:
 - tcp
 - udp
```

(continues on next page)

(continued from previous page)

```

 source_address: 1.2.3.4
 action: reject
 - my-other-term:
 source_port:
 - [5678, 5680]
 protocol: tcp
 action: accept

```

State SLS Example:

```

{%- set filter_name = 'my-filter' -%}
{%- set my_filter_cfg = salt.netacl.get_filter_pillar(filter_name, pillar_key=
→'firewall') -%}
my_first_filter_state:
 netacl.filter:
 - filter_name: {{ filter_name }}
 - options: {{ my_filter_cfg['options'] | json }}
 - terms: {{ my_filter_cfg['terms'] | json }}
 - revision_date: false
 - revision_no: 5
 - debug: true

```

Or:

```

my_first_filter_state:
 netacl.filter:
 - filter_name: my-filter
 - merge_pillar: true
 - pillar_key: firewall
 - revision_date: false
 - revision_no: 5
 - debug: true

```

In the example above, as `inet6` has been specified in the `filter_options`, the configuration chunk referring to `my-term` has been ignored as it referred to IPv4 only (from `source_address` field).

---

**Note:** The first method allows the user to eventually apply complex manipulation and / or retrieve the data from external services before passing the data to the state. The second one is more straightforward, for less complex cases when loading the data directly from the pillar is sufficient.

---

---

**Note:** When passing retrieved pillar data into the state file, it is strongly recommended to use the json serializer explicitly (“`| json`”), instead of relying on the default Python serializer.

---

```

salt.states.netacl.managed(name, filters=None, prepend=True, pillar_key='acl', pillarenv=None,
 saltenv=None, merge_pillar=False, only_lower_merge=False, revision_id=None,
 revision_no=None, revision_date=True, revision_date_format='%Y/%m/%d', test=False, commit=True, debug=False)

```

Manage the whole firewall configuration.

**filters** Dictionary of filters for this policy. If not specified or empty, will try to load the configuration from the pillar, unless `merge_pillar` is set as `False`.

**prepend: True** When `merge_pillar` is set as `True`, the final list of filters generated by merging the filters from `filters` with those defined in the pillar (if any): new filters are prepended at the beginning, while

existing ones will preserve the position. To add the new filters at the end of the list, set this argument to `False`.

**pillar\_key:** `acl` The key in the pillar containing the default attributes values. Default: `acl`.

**pillarenv** Query the master to generate fresh pillar data on the fly, specifically from the requested pillar environment.

**saltenv** Included only for compatibility with `pillarenv_from_saltenv`, and is otherwise ignored.

**merge\_pillar:** `False` Merge the `filters` will the corresponding values from the pillar. Default: `False`.

---

**Note:** By default this state does not merge, to avoid any unexpected behaviours.

The merge logic depends on the `prepend` argument.

The filters specified through the `filters` argument have higher priority than the pillar.

---

**only\_lower\_merge:** `False` Specify if it should merge only the filters and terms fields. Otherwise it will try to merge everything at the policy level. Default: `False`. This option requires `merge_pillar`, otherwise it is ignored.

**test:** `False` Dry run? If set as `True`, will apply the config, discard and return the changes. Default: `False` and will commit the changes on the device.

**revision\_id** Add a comment in the policy config having the description for the changes applied.

**revision\_no** The revision count.

**revision\_date:** `True` Boolean flag: display the date when the policy configuration was generated. Default: `True`.

**revision\_date\_format:** `%Y/%m/%d` The date format to be used when generating the perforce data. Default: `%Y/%m/%d` (<year>/<month>/<day>).

**commit:** `True` Commit? Default: `True`.

**debug:** `False` Debug mode. Will insert a new key under the output dictionary, as `loaded_config` containing the raw configuration loaded on the device.

CLI Example:

```
salt 'edge01.bjm01' state.sls router.acl test=True
```

Output Example:

```
edge01.bjm01:

 ID: netacl_example
 Function: netacl.managed
 Result: None

 - revision_no: 2
 - debug: true

```

---

**Note:** The first method allows the user to eventually apply complex manipulation and / or retrieve the data from external services before passing the data to the state. The second one is more straightforward, for less complex cases when loading the data directly from the pillar is sufficient.

---

---

**Note:** When passing retrieved pillar data into the state file, it is strongly recommended to use the json serializer explicitly (“| json”), instead of relying on the default Python serializer.

---

```

salt.states.netacl.term(name, filter_name, term_name, filter_options=None, pillar_key='acl',
 pillarenv=None, saltenv=None, merge_pillar=False, revision_id=None,
 revision_no=None, revision_date=True, revision_date_format='%Y/%m/%d',
 test=False, commit=True, debug=False, source_service=None, destina-
 tion_service=None, **term_fields)

```

Manage the configuration of a specific policy term.

**filter\_name** The name of the policy filter.

**term\_name** The name of the term.

**filter\_options** Additional filter options. These options are platform-specific. See the complete list of [options](#).

**pillar\_key: acl** The key in the pillar containing the default attributes values. Default: `acl`.

**pillarenv** Query the master to generate fresh pillar data on the fly, specifically from the requested pillar environment.

**saltenv** Included only for compatibility with `pillarenv_from_saltenv`, and is otherwise ignored.

**merge\_pillar:** **False** Merge the CLI variables with the pillar. Default: `False`.

The properties specified through the state arguments have higher priority than the pillar.

**revision\_id** Add a comment in the term config having the description for the changes applied.

**revision\_no** The revision count.

**revision\_date:** **True** Boolean flag: display the date when the term configuration was generated. Default: `True`.

**revision\_date\_format:** **%Y/%m/%d** The date format to be used when generating the perforce data. Default: `%Y/%m/%d` (<year>/<month>/<day>).

**test:** **False** Dry run? If set as `True`, will apply the config, discard and return the changes. Default: `False` and will commit the changes on the device.

**commit:** **True** Commit? Default: `True`.

**debug:** **False** Debug mode. Will insert a new key under the output dictionary, as `loaded_config` containing the raw configuration loaded on the device.

**source\_service** A special service to choose from. This is a helper so the user is able to select a source just using the name, instead of specifying a `source_port` and `protocol`.

As this module is available on Unix platforms only, it reads the [IANA](#) port assignment from `/etc/services`.

If the user requires additional shortcuts to be referenced, they can add entries under `/etc/services`, which can be managed using the [file state](#).

**destination\_service** A special service to choose from. This is a helper so the user is able to select a source just using the name, instead of specifying a `destination_port` and `protocol`. Allows the same options as `source_service`.

**term\_fields** Term attributes. To see what fields are supported, please consult the list of supported [keywords](#). Some platforms have few other [optional](#) keywords.

---

**Note:** The following fields are accepted:

- `action`
- `address`
- `address_exclude`
- `comment`
- `counter`
- `expiration`
- `destination_address`
- `destination_address_exclude`
- `destination_port`
- `destination_prefix`
- `forwarding_class`
- `forwarding_class_except`
- `logging`
- `log_name`
- `loss_priority`
- `option`
- `policer`
- `port`
- `precedence`
- `principals`
- `protocol`
- `protocol_except`
- `qos`
- `pan_application`
- `routing_instance`
- `source_address`
- `source_address_exclude`

- source\_port
  - source\_prefix
  - verbatim
  - packet\_length
  - fragment\_offset
  - hop\_limit
  - icmp\_type
  - ether\_type
  - traffic\_class\_count
  - traffic\_type
  - translated
  - dscp\_set
  - dscp\_match
  - dscp\_except
  - next\_ip
  - flexible\_match\_range
  - source\_prefix\_except
  - destination\_prefix\_except
  - vpn
  - source\_tag
  - destination\_tag
  - source\_interface
  - destination\_interface
  - flattened
  - flattened\_addr
  - flattened\_saddr
  - flattened\_daddr
  - priority
- 

**Note:** The following fields can be also a single value and a list of values:

- action
- address
- address\_exclude
- comment
- destination\_address
- destination\_address\_exclude
- destination\_port
- destination\_prefix
- forwarding\_class
- forwarding\_class\_except
- logging
- option
- port
- precedence
- principals
- protocol
- protocol\_except
- pan\_application
- source\_address
- source\_address\_exclude
- source\_port
- source\_prefix

- verbatim
- icmp\_type
- ether\_type
- traffic\_type
- dscp\_match
- dscp\_except
- flexible\_match\_range
- source\_prefix\_except
- destination\_prefix\_except
- source\_tag
- destination\_tag
- source\_service
- destination\_service

Example: `destination_address` can be either defined as:

```
destination_address: 172.17.17.1/24
```

or as a list of destination IP addresses:

```
destination_address:
- 172.17.17.1/24
- 172.17.19.1/24
```

or a list of services to be matched:

```
source_service:
- ntp
- snmp
- ldap
- bgpd
```

**Note:** The port fields `source_port` and `destination_port` can be used as above to select either a single value, either a list of values, but also they can select port ranges. Example:

```
source_port:
- [1000, 2000]
- [3000, 4000]
```

With the configuration above, the user is able to select the 1000-2000 and 3000-4000 source port ranges.

CLI Example:

```
salt 'edge01.bjm01' state.sls router.acl
```

Output Example:

```
edge01.bjm01:

 ID: update_icmp_first_term
 Function: netacl.term
 Result: None
 Comment: Testing mode: Configuration discarded.
 Started: 12:49:09.174179
 Duration: 5751.882 ms
```

(continues on next page)

(continued from previous page)

Changes:

```

diff:
 [edit firewall]
 + family inet {
 + /*
 + ** $Id: update_icmp_first_term $
 + ** $Date: 2017/02/30 $
 + **
 + */
 + filter block-icmp {
 + term first-term {
 + from {
 + protocol icmp;
 + }
 + then {
 + reject;
 + }
 + }
 + }
 + }

```

Summary for edge01.bjm01

-----

Succeeded: 1 (unchanged=1, changed=1)

Failed: 0

-----

Total states run: 1

Total run time: 5.752 s

Pillar example:

```

firewall:
- block-icmp:
 terms:
 - first-term:
 protocol:
 - icmp
 action: reject

```

State SLS example:

```

{%- set filter_name = 'block-icmp' -%}
{%- set term_name = 'first-term' -%}
{%- set my_term_cfg = salt.netacl.get_term_pillar(filter_name, term_name) -%}

```

update\_icmp\_first\_term:

```

netacl.term:
- filter_name: {{ filter_name }}
- filter_options:
 - not-interface-specific
- term_name: {{ term_name }}
- {{ my_term_cfg | json }}

```

Or directly referencing the pillar keys:

```

update_icmp_first_term:
 netacl.term:
 - filter_name: block-icmp
 - filter_options:
 - not-interface-specific
 - term_name: first-term
 - merge_pillar: true

```

---

**Note:** The first method allows the user to eventually apply complex manipulation and / or retrieve the data from external services before passing the data to the state. The second one is more straightforward, for less complex cases when loading the data directly from the pillar is sufficient.

---

---

**Note:** When passing retrieved pillar data into the state file, it is strongly recommended to use the json serializer explicitly ('| json'), instead of relying on the default Python serializer.

---

## 20.19.178 salt.states.netconfig

### Network Config

Manage the configuration on a network device given a specific static config or template.

**codeauthor** Mircea Ulinic <mircea@cloudflare.com> & Jerome Fleury <jf@cloudflare.com>

**maturity** new

**depends** napalm

**platform** unix

### Dependencies

- *NAPALM proxy minion*
- *Network-related basic features execution module*

New in version 2017.7.0.

```

salt.states.netconfig.managed(name, template_name, template_source=None,
 template_path=None, template_hash=None, tem-
 plate_hash_name=None, template_user='root', tem-
 plate_group='root', template_mode='755', template_attrs='-----
 -e--', saltenv=None, template_engine='jinja', skip_verify=False,
 defaults=None, test=False, commit=True, debug=False, re-
 place=False, **template_vars)

```

Manages the configuration on network devices.

By default this state will commit the changes on the device. If there are no changes required, it does not commit and the field `already_configured` from the output dictionary will be set as `True` to notify that.

To avoid committing the configuration, set the argument `test` to `True` (or via the CLI argument `test=True`) and will discard (dry run).

To preserve the changes, set `commit` to `False` (either as CLI argument, either as state parameter). However, this is recommended to be used only in exceptional cases when there are applied few consecutive states and/or

configuration changes. Otherwise the user might forget that the config DB is locked and the candidate config buffer is not cleared/merged in the running config.

To replace the config, set `replace` to `True`. This option is recommended to be used with caution!

**Warning:** The support for NAPALM native templates will be dropped beginning with Salt Fluorine. Implicitly, the `template_path` argument will be deprecated and removed.

**template\_name** Identifies path to the template source. The template can be either stored on the local machine, either remotely. The recommended location is under the `file_roots` as specified in the master config file. For example, let's suppose the `file_roots` is configured as:

```
file_roots:
 base:
 - /etc/salt/states
```

Placing the template under `/etc/salt/states/templates/example.jinja`, it can be used as `salt://templates/example.jinja`. Alternatively, for local files, the user can specify the absolute path. If remotely, the source can be retrieved via `http`, `https` or `ftp`.

Examples:

- `salt://my_template.jinja`
- `/absolute/path/to/my_template.jinja`
- `http://example.com/template.cheetah`
- `https://example.com/template.mako`
- `ftp://example.com/template.py`

**template\_source:** `None` Inline config template to be rendered and loaded on the device.

**template\_path:** `None` Required only in case the argument `template_name` provides only the file basename. E.g.: if `template_name` is specified as `my_template.jinja`, in order to find the template, this argument must be provided: `template_path: /absolute/path/to/`.

**template\_hash:** `None` Hash of the template file. Format: `{hash_type: 'md5', 'hsum': <md5sum>}`

**template\_hash\_name:** `None` When `template_hash` refers to a remote file, this specifies the filename to look for in that file.

**template\_group:** `root` Owner of file.

**template\_user:** `root` Group owner of file.

**template\_mode:** `755` Permissions of file

**template\_attrs:** `"-----e--"` Attributes of file (see *man lsattr*)

New in version 2018.3.0.

**saltenv:** `base` Specifies the template environment. This will influence the relative imports inside the templates.

**template\_engine:** `jinja` The following templates engines are supported:

- `cheetah`
- `genshi`
- `jinja`
- `mako`
- `py`
- `wempy`

**skip\_verify:** `False` If `True`, hash verification of remote file sources (`http://`, `https://`, `ftp://`) will be skipped, and the `source_hash` argument will be ignored.

Changed in version 2017.7.1.

**test:** `False` Dry run? If set to `True`, will apply the config, discard and return the changes. Default: `False` (will commit the changes on the device).

**commit:** `True` Commit? Default: `True`.

**debug:** `False` Debug mode. Will insert a new key under the output dictionary, as `loaded_config` containing the raw result after the template was rendered.

---

**Note:** This argument cannot be used directly on the command line. Instead, it can be passed through the `pillar` variable when executing either of the `state.sls` or `state.apply` (see below for an example).

---

**replace:** `False` Load and replace the configuration. Default: `False` (will apply load merge).

**defaults:** `None` Default variables/context passed to the template.

**template\_vars** Dictionary with the arguments/context to be used when the template is rendered. Do not explicitly specify this argument. This represents any other variable that will be sent to the template rendering system. Please see an example below! In both `ntp_peers_example_using_pillar` and `ntp_peers_example`, `peers` is sent as template variable.

SLS Example (e.g.: under `salt://router/config.sls`):

```

whole_config_example:
 netconfig.managed:
 - template_name: salt://path/to/complete_config.jinja
 - debug: True
 - replace: True
bgp_config_example:
 netconfig.managed:
 - template_name: /absolute/path/to/bgp_neighbors.mako
 - template_engine: mako
prefix_lists_example:
 netconfig.managed:
 - template_name: prefix_lists.cheetah
 - template_path: /absolute/path/to/
 - debug: True
 - template_engine: cheetah
ntp_peers_example:
 netconfig.managed:
 - template_name: http://bit.ly/2gK0j20
 - skip_verify: False
 - debug: True
 - peers:
 - 192.168.0.1
 - 192.168.0.1
ntp_peers_example_using_pillar:
 netconfig.managed:
 - template_name: http://bit.ly/2gK0j20
 - peers: {{ pillar.get('ntp.peers', []) }}

```

Usage examples:

```

$ sudo salt 'juniper.device' state.sls router.config test=True
$ sudo salt -N all-routers state.sls router.config pillar="{ 'debug': True }"

```

`router.config` depends on the location of the SLS file (see above). Running this command, will be executed all five steps from above. These examples above are not meant to be used in a production environment, their sole purpose is to provide usage examples.

Output example:

```

$ sudo salt 'juniper.device' state.sls router.config test=True
juniper.device:

 ID: ntp_peers_example_using_pillar
 Function: netconfig.managed
 Result: None
 Comment: Testing mode: Configuration discarded.
 Started: 12:01:40.744535
 Duration: 8755.788 ms
 Changes:

 diff:
 [edit system ntp]
 peer 192.168.0.1 { ... }
 + peer 172.17.17.1;
 + peer 172.17.17.3;

Summary for juniper.device

Succeeded: 1 (unchanged=1, changed=1)
Failed: 0

Total states run: 1
Total run time: 8.756 s

```

Raw output example (useful when the output is reused in other states/execution modules):

```

$ sudo salt --out=pprint 'juniper.device' state.sls router.config test=True
↳ debug=True

```

```

{
 'juniper.device': {
 'netconfig_|-ntp_peers_example_using_pillar_|-ntp_peers_example_using_
↳ pillar_|-managed': {

 },
 'comment': 'Testing mode: Configuration discarded.',
 'duration': 7400.759,
 'loaded_config': 'system { ntp { peer 172.17.17.1; peer 172.17.17.
↳ 3; } }',
 'name': 'ntp_peers_example_using_pillar',
 'result': None,
 'start_time': '12:09:09.811445'
 }
 }
}

```

## 20.19.179 salt.states.netntp

## Network NTP

Manage the configuration of NTP peers and servers on the network devices through the NAPALM proxy.

**codeauthor** Mircea Ulinic <mircea@cloudflare.com> & Jerome Fleury <jf@cloudflare.com>

**maturity** new

**depends** napalm

**platform** unix

## Dependencies

- Requires `netaddr` to be installed: `pip install netaddr` to check if IP Addresses are correctly specified
- Requires `dnspython` to be installed: `pip install dnspython` to resolve the nameserver entities (in case the user does not configure the peers/servers using their IP addresses)
- `NAPALM proxy minion`
- `NTP operational and configuration management module`

`salt.states.netntp.managed`(*name, peers=None, servers=None*)

Manages the configuration of NTP peers and servers on the device, as specified in the state SLS file. NTP entities not specified in these lists will be removed whilst entities not configured on the device will be set.

SLS Example:

```
netntp_example:
 netntp.managed:
 - peers:
 - 192.168.0.1
 - 172.17.17.1
 - servers:
 - 24.124.0.251
 - 138.236.128.36
```

Output example:

```
{
 'edge01.nrt04': {
 'netntp_|-netntp_example_|-netntp_example_|-managed': {
 'comment': 'NTP servers already configured as needed.',
 'name': 'netntp_example',
 'start_time': '12:45:24.056659',
 'duration': 2938.857,
 'changes': {
 'peers': {
 'removed': [
 '192.168.0.2',
 '192.168.0.3'
],
 'added': [
 '192.168.0.1',
 '172.17.17.1'
]
 }
 }
 }
 },
}
```

(continues on next page)

(continued from previous page)

```

 'result': None
 }
}

```

## 20.19.180 salt.states.netsnmp

### Network SNMP

Manage the SNMP configuration on network devices.

**codeauthor** Mircea Ulinic <mircea@cloudflare.com>

**maturity** new

**depends** napalm

**platform** unix

### Dependencies

- *napalm snmp management module (salt.modules.napalm\_snmp)*

**salt.states.netsnmp.managed**(*name, config=None, defaults=None*)

Configures the SNMP on the device as specified in the SLS file.

SLS Example:

```

snmp_example:
 netsnmp.managed:
 - config:
 location: Honolulu, HI, US
 - defaults:
 contact: noc@cloudflare.com

```

Output example (for the SLS above, e.g. called snmp.sls under /router/):

```

$ sudo salt edge01.hnl01 state.sls router.snmp test=True
edge01.hnl01:

 ID: snmp_example
 Function: snmp.managed
 Result: None
 Comment: Testing mode: configuration was not changed!
 Started: 13:29:06.872363
 Duration: 920.466 ms
 Changes:

 added:

 chassis_id:
 None
 contact:
 noc@cloudflare.com
 location:

```

(continues on next page)

(continued from previous page)

```

 Honolulu, HI, US

Summary for edge01.hnl01

Succeeded: 1 (unchanged=1, changed=1)
Failed: 0

Total states run: 1
Total run time: 920.466 ms

```

## 20.19.181 salt.states.netusers

### Network Users

Manage the users configuration on network devices via the NAPALM proxy.

```

codeauthor Mircea Ulinic <mircea@cloudflare.com>
maturity new
depends napalm
platform unix

```

### Dependencies

- *NAPALM proxy minion*
- *Users configuration management module*

New in version 2016.11.0.

`salt.states.netusers.managed` (*name, users=None, defaults=None*)

Manages the configuration of the users on the device, as specified in the state SLS file. Users not defined in that file will be remove whilst users not configured on the device, will be added.

SLS Example:

```

netusers_example:
 netusers.managed:
 - users:
 admin:
 level: 15
 password: 1knmhgPPv$g8745biu4rb.Zf.IT.F/U1
 sshkeys: []

## 20.19.182 salt.states.network

### Configuration of network interfaces

The network module is used to create and manage network settings, interfaces can be set as either managed or ignored. By default all interfaces are ignored unless specified.

**Note:** RedHat-based systems (RHEL, CentOS, Scientific, etc.) have been supported since version 2014.1.0.

Debian-based systems (Debian, Ubuntu, etc.) have been supported since version 2017.7.0. The following options are not supported: `ipaddr_start`, and `ipaddr_end`.

Other platforms are not yet supported.

**Note:** On Debian-based systems, networking configuration can be specified in `/etc/network/interfaces` or via included files such as (by default) `/etc/network/interfaces.d/*`. This can be problematic for configuration management. It is recommended to use either `file.managed` or `network.managed`.

If using `network.managed`, it can be useful to ensure `interfaces.d/` is empty. This can be done using:

```
/etc/network/interfaces.d:
```

```
file.directory:
```

- clean: True

```
system:
```

```
network.system:
```

- enabled: True
- hostname: server1.example.com
- gateway: 192.168.0.1
- gatewaydev: eth0
- nozeroconf: True
- nisdomain: example.com
- require\_reboot: True

```
eth0:
```

```
network.managed:
```

- enabled: True
- type: eth
- proto: static
- ipaddr: 10.1.0.7
- netmask: 255.255.255.0
- gateway: 10.1.0.1
- enable\_ipv6: true
- ipv6proto: static
- ipv6ipaddrs:
  - 2001:db8:dead:beef::3/64
  - 2001:db8:dead:beef::7/64
- ipv6gateway: 2001:db8:dead:beef::1
- ipv6netmask: 64
- dns:
  - 8.8.8.8
  - 8.8.4.4

```
eth0-range0:
```

```
network.managed:
```

- type: eth
- ipaddr\_start: 192.168.1.1
- ipaddr\_end: 192.168.1.10
- clonenum\_start: 10
- mtu: 9000

```
bond0-range0:
```

```
network.managed:
```

- type: eth
- ipaddr\_start: 192.168.1.1
- ipaddr\_end: 192.168.1.10

(continues on next page)

(continued from previous page)

```
- clonenum_start: 10
- mtu: 9000

eth1.0-range0:
 network.managed:
 - type: eth
 - ipaddr_start: 192.168.1.1
 - ipaddr_end: 192.168.1.10
 - clonenum_start: 10
 - vlan: True
 - mtu: 9000

bond0.1-range0:
 network.managed:
 - type: eth
 - ipaddr_start: 192.168.1.1
 - ipaddr_end: 192.168.1.10
 - clonenum_start: 10
 - vlan: True
 - mtu: 9000

.. note::
 add support of ranged interfaces (vlan, bond and eth) for redhat system,
 Important:type must be eth.

routes:
 network.routes:
 - name: eth0
 - routes:
 - name: secure_network
 ipaddr: 10.2.0.0

- proto: loopback
- onboot: yes
- userctl: no
```

(continues on next page)

(continued from previous page)

```

- ipv6_autoconf: no
- enable_ipv6: true

.. note::
 Apply changes to hostname immediately.

.. versionadded:: 2015.5.0

system:
 network.system:
 - hostname: server2.example.com
 - apply_hostname: True
 - retain_settings: True

.. note::
 Use `retain_settings` to retain current network settings that are not
 otherwise specified in the state. Particularly useful if only setting
 the hostname. Default behavior is to delete unspecified network
 settings.

.. versionadded:: 2016.11.0

```

---

**Note:** When managing bridged interfaces on a Debian or Ubuntu based system, the ports argument is required. Red Hat systems will ignore the argument.

---

**salt.states.network.managed**(*name*, *type*, *enabled=True*, *\*\*kwargs*)

Ensure that the named interface is configured properly.

**name** The name of the interface to manage

**type** Type of interface and configuration.

**enabled** Designates the state of this interface.

**kwargs** The IP parameters for this interface.

**salt.states.network.routes**(*name*, *\*\*kwargs*)

Manage network interface static routes.

**name** Interface name to apply the route to.

**kwargs** Named routes

**salt.states.network.system**(*name*, *\*\*kwargs*)

Ensure that global network settings are configured properly.

**name** Custom name to represent this configuration change.

**kwargs** The global parameters for the system.

### 20.19.183 salt.states.netyang

#### NAPALM YANG state

Manage the configuration of network devices according to the YANG models (OpenConfig/IETF).

New in version 2017.7.0.

## Dependencies

- napalm-yang
- pyangbing > 0.5.11

To be able to load configuration on network devices, it requires [NAPALM](#) library to be installed: `pip install napalm`. Please check [Installation](#) for complete details.

`salt.states.netyang.configured`(*name*, *data*, *\*\*kwargs*)

Configure the network device, given the input data structured according to the YANG models.

---

**Note:** The main difference between this function and `managed` is that the later generates and loads the configuration only when there are differences between the existing configuration on the device and the expected configuration. Depending on the platform and hardware capabilities, one could be more optimal than the other. Additionally, the output of the `managed` is different, in such a way that the `pchange` field in the output contains structured data, rather than text.

---

**data** YANG structured data.

**models** A list of models to be used when generating the config.

**profiles: None** Use certain profiles to generate the config. If not specified, will use the platform default profile(s).

**test: False** Dry run? If set as `True`, will apply the config, discard and return the changes. Default: `False` and will commit the changes on the device.

**commit: True** Commit? Default: `True`.

**debug: False** Debug mode. Will insert a new key under the output dictionary, as `loaded_config` containing the raw configuration loaded on the device.

**replace: False** Should replace the config with the new generate one?

State SLS example:

```
{%- set expected_config = pillar.get('openconfig_interfaces_cfg') -%}
interfaces_config:
 napalm_yang.configured:
 - data: {{ expected_config | json }}
 - models:
 - models.openconfig_interfaces
 - debug: true
```

Pillar example:

```
openconfig_interfaces_cfg:
 _kwargs:
 filter: true
 interfaces:
 interface:
 Et1:
 config:
 mtu: 9000
 Et2:
 config:
 description: "description example"
```

`salt.states.netyang.managed`(*name*, *data*, *\*\*kwargs*)

Manage the device configuration given the input data structured according to the YANG models.

**data** YANG structured data.

**models** A list of models to be used when generating the config.

**profiles: None** Use certain profiles to generate the config. If not specified, will use the platform default profile(s).

**compliance\_report: False** Return the compliance report in the comment. The compliance report structured object can be found however in the `pchanges` field of the output (not displayed on the CLI).

New in version 2017.7.3.

**test: False** Dry run? If set as `True`, will apply the config, discard and return the changes. Default: `False` and will commit the changes on the device.

**commit: True** Commit? Default: `True`.

**debug: False** Debug mode. Will insert a new key under the output dictionary, as `loaded_config` containing the raw configuration loaded on the device.

**replace: False** Should replace the config with the new generate one?

State SLS example:

```
{%- set expected_config = pillar.get('openconfig_interfaces_cfg') -%}
interfaces_config:
 napalm_yang.managed:
 - data: {{ expected_config | json }}
 - models:
 - models.openconfig_interfaces
 - debug: true
```

Pillar example:

```
openconfig_interfaces_cfg:
 _kwargs:
 filter: true
 interfaces:
 interface:
 Et1:
 config:
 mtu: 9000
 Et2:
 config:
 description: "description example"
```

## 20.19.184 salt.states.neutron\_network

### Management of OpenStack Neutron Networks

New in version 2018.3.0.

**depends** `shade`

**configuration** see `salt.modules.neutronng` for setup instructions

Example States

```
create network:
 neutron_network.present:
 - name: network1

delete network:
 neutron_network.absent:
 - name: network1
```

(continues on next page)

(continued from previous page)

**create network with optional params:****neutron\_network.present:**

- **name:** network1
- **vlan:** 200
- **shared:** False
- **external:** False
- **project:** project1

`salt.states.neutron_network.absent` (*name*, *auth=None*, *\*\*kwargs*)

Ensure a network does not exist

**name** Name of the network

`salt.states.neutron_network.present` (*name*, *auth=None*, *\*\*kwargs*)

Ensure a network exists and is up-to-date

**name** Name of the network

**provider** A dict of network provider options.

**shared** Set the network as shared.

**external** Whether this network is externally accessible.

**admin\_state\_up** Set the network administrative state to up.

**vlan** Vlan ID. Alias for provider

- **physical\_network:** provider
- **network\_type:** vlan
- **segmentation\_id:** (vlan id)

## 20.19.185 salt.states.neutron\_secgroup

### Management of OpenStack Neutron Security Groups

New in version 2018.3.0.

**depends** shade

**configuration** see `salt.modules.neutronng` for setup instructions

Example States

```
create security group;
neutron_secgroup.present:
- name: security_group1
- description: "Very Secure Security Group"

delete security group:
neutron_secgroup.absent:
- name_or_id: security_group1
- project_name: Project1

create security group with optional params:
neutron_secgroup.present:
- name: security_group1
- description: "Very Secure Security Group"
- project_id: 1dcac318a83b4610b7a7f7ba01465548

create security group with optional params:
neutron_secgroup.present:
```

(continues on next page)

(continued from previous page)

```
- name: security_group1
- description: "Very Secure Security Group"
- project_name: Project1
```

`salt.states.neutron_secgroup.absent` (*name*, *auth=None*, *\*\*kwargs*)

Ensure a security group does not exist  
**name** Name of the security group

`salt.states.neutron_secgroup.present` (*name*, *auth=None*, *\*\*kwargs*)

Ensure a security group exists.

You can supply either `project_name` or `project_id`.

Creating a default security group will not show up as a change; it gets created through the lookup process.

**name** Name of the security group  
**description** Description of the security group  
**project\_name** Name of Project  
**project\_id** ID of Project

## 20.19.186 salt.states.neutron\_secgroup\_rule

### Management of OpenStack Neutron Security Group Rules

New in version 2018.3.0.

**depends** `shade`

**configuration** see `salt.modules.neutronng` for setup instructions

Example States

```
create security group rule:
 neutron_secgroup_rule.present:
 - name: security_group1
 - project_name: Project1
 - protocol: icmp

delete security group:
 neutron_secgroup_rule.absent:
 - name_or_id: security_group1

create security group with optional params:
 neutron_secgroup_rule.present:
 - name: security_group1
 - description: "Very Secure Security Group"
 - project_id: 1dcac318a83b4610b7a7f7ba01465548
```

`salt.states.neutron_secgroup_rule.absent` (*name*, *auth=None*, *\*\*kwargs*)

Ensure a security group rule does not exist  
**name** name or id of the security group rule to delete  
**rule\_id** uuid of the rule to delete  
**project\_id** id of project to delete rule from

`salt.states.neutron_secgroup_rule.present` (*name*, *auth=None*, *\*\*kwargs*)

Ensure a security group rule exists  
**defaults:** `port_range_min=None`, `port_range_max=None`, `protocol=None`, `remote_ip_prefix=None`, `remote_group_id=None`, `direction='ingress'`, `ethertype='IPv4'`, `project_id=None`

**name** Name of the security group to associate with this rule  
**project\_name** Name of the project associated with the security group  
**protocol** The protocol that is matched by the security group rule. Valid values are None, tcp, udp, and icmp.

## 20.19.187 salt.states.neutron\_subnet

### Management of OpenStack Neutron Subnets

New in version 2018.3.0.

**depends** shade

**configuration** see *salt.modules.neutronng* for setup instructions

Example States

```

create subnet:
 neutron_subnet.present:
 - name: subnet1
 - network_name_or_id: network1
 - cidr: 192.168.199.0/24

delete subnet:
 neutron_subnet.absent:
 - name: subnet2

create subnet with optional params:
 neutron_subnet.present:
 - name: subnet1
 - network_name_or_id: network1
 - enable_dhcp: True
 - cidr: 192.168.199.0/24
 - allocation_pools:
 - start: 192.168.199.5
 - end: 192.168.199.250
 - host_routes:
 - destination: 192.168..0.0/24
 - nexthop: 192.168.0.1
 - gateway_ip: 192.168.199.1
 - dns_nameservers:
 - 8.8.8.8
 - 8.8.8.7

create ipv6 subnet:
 neutron_subnet.present:
 - name: v6subnet1
 - network_name_or_id: network1
 - ip_version: 6

```

`salt.states.neutron_subnet.absent`(*name*, *auth=None*)

Ensure a subnet does not exist

**name** Name of the subnet

`salt.states.neutron_subnet.present`(*name*, *auth=None*, *\*\*kwargs*)

Ensure a subnet exists and is up-to-date

**name** Name of the subnet

**network\_name\_or\_id** The unique name or ID of the attached network. If a non-unique name is supplied, an exception is raised.

**allocation\_pools** A list of dictionaries of the start and end addresses for the allocation pools

**gateway\_ip** The gateway IP address.

**dns\_nameservers** A list of DNS name servers for the subnet.

**host\_routes** A list of host route dictionaries for the subnet.

**ipv6\_ra\_mode** IPv6 Router Advertisement mode. Valid values are: 'dhcpv6-stateful', 'dhcpv6-stateless', or 'slaac'.

**ipv6\_address\_mode** IPv6 address mode. Valid values are: 'dhcpv6-stateful', 'dhcpv6-stateless', or 'slaac'.

## 20.19.188 salt.states.nfs\_export

### Management of NFS exports

New in version 2018.3.0.

To ensure an NFS export exists:

```
add_simple_export:
 nfs_export.present:
 - name: '/srv/nfs'
 - hosts: '10.0.2.0/24'
 - options:
 - 'rw'
```

This creates the following in /etc/exports:

```
/srv/nfs 10.0.2.0/24(rw)
```

For more complex exports with multiple groups of hosts, use 'clients':

```
add_complex_export:
 nfs_export.present:
 - name: '/srv/nfs'
 - clients:
 # First export, same as simple one above
 - hosts: '10.0.2.0/24'
 options:
 - 'rw'
 # Second export
 - hosts: '*.example.com'
 options:
 - 'ro'
 - 'subtree_check'
```

This creates the following in /etc/exports:

```
/srv/nfs 10.0.2.0/24(rw) 192.168.0.0/24,172.19.0.0/16(ro,subtree_check)
```

Any export of the given path will be modified to match the one specified.

To ensure an NFS export is absent:

```
delete_export:
 nfs_export.absent:
 - name: '/srv/nfs'
```

`salt.states.nfs_export.absent` (*name*, *exports*='etc/exports')

Ensure that the named path is not exported

**name** The export path to remove

`salt.states.nfs_export.present` (*name*, *clients*=None, *hosts*=None, *options*=None, *exports*='etc/exports')

Ensure that the named export is present with the given options

**name** The export path to configure

**clients** A list of hosts and the options applied to them. This option may not be used in combination with the 'hosts' or 'options' shortcuts.

```
- clients:
 # First export
 - hosts: '10.0.2.0/24'
 options:
 - 'rw'
 # Second export
 - hosts: '*.example.com'
 options:
 - 'ro'
 - 'subtree_check'
```

**hosts** A string matching a number of hosts, for example:

```
hosts: '10.0.2.123'

hosts: '10.0.2.0/24'

hosts: 'minion1.example.com'

hosts: '*.example.com'

hosts: '*'
```

**options** A list of NFS options, for example:

```
options:
 - 'rw'
 - 'subtree_check'
```

## 20.19.189 salt.states.nftables

### Management of nftables

This is an nftables-specific module designed to manage Linux firewalls. It is expected that this state module, and other system-specific firewall states, may at some point be deprecated in favor of a more generic *firewall* state.

```
httpd:
 nftables.append:
 - table: filter
 - chain: input
 - jump: accept
 - match: state
 - connstate: new
 - dport: 80
 - proto: tcp
```

(continues on next page)

(continued from previous page)

- **sport**: 1025:65535
- **save**: True

**httpd:****nftables.append:**

- **table**: filter
- **family**: ipv6
- **chain**: INPUT
- **jump**: ACCEPT
- **match**: state
- **connstate**: NEW
- **dport**: 80
- **proto**: tcp
- **sport**: 1025:65535
- **save**: True

**httpd:****nftables.insert:**

- **position**: 1
- **table**: filter
- **chain**: INPUT
- **jump**: ACCEPT
- **match**: state
- **connstate**: NEW
- **dport**: 80
- **proto**: tcp
- **sport**: 1025:65535
- **save**: True

**httpd:****nftables.insert:**

- **position**: 1
- **table**: filter
- **family**: ipv6
- **chain**: INPUT
- **jump**: ACCEPT
- **match**: state
- **connstate**: NEW
- **dport**: 80
- **proto**: tcp
- **sport**: 1025:65535
- **save**: True

**httpd:****nftables.delete:**

- **table**: filter
- **chain**: INPUT
- **jump**: ACCEPT
- **match**: state
- **connstate**: NEW
- **dport**: 80
- **proto**: tcp
- **sport**: 1025:65535
- **save**: True

**httpd:**

(continues on next page)

(continued from previous page)

```

nftables.delete:
- position: 1
- table: filter
- chain: INPUT
- jump: ACCEPT
- match: state
- connstate: NEW
- dport: 80
- proto: tcp
- sport: 1025:65535
- save: True

httpd:
nftables.delete:
- table: filter
- family: ipv6
- chain: INPUT
- jump: ACCEPT
- match: state
- connstate: NEW
- dport: 80
- proto: tcp
- sport: 1025:65535
- save: True

```

**salt.states.nftables.append**(*name*, *family='ipv4'*, *\*\*kwargs*)

New in version 0.17.0.

Append a rule to a chain

**name** A user-defined name to call this rule by in another part of a state or formula. This should not be an actual rule.

**family** Network family, ipv4 or ipv6.

All other arguments are passed in with the same name as the long option that would normally be used for nftables, with one exception: *-state* is specified as *connstate* instead of *state* (not to be confused with *ctstate*).

**salt.states.nftables.chain\_absent**(*name*, *table='filter'*, *family='ipv4'*)

New in version 2014.7.0.

Verify the chain is absent.

**family** Networking family, either ipv4 or ipv6

**salt.states.nftables.chain\_present**(*name*, *table='filter'*, *table\_type=None*, *hook=None*, *priority=None*, *family='ipv4'*)

New in version 2014.7.0.

Verify the chain is exist.

**name** A user-defined chain name.

**table** The table to own the chain.

**family** Networking family, either ipv4 or ipv6

**salt.states.nftables.delete**(*name*, *family='ipv4'*, *\*\*kwargs*)

New in version 2014.7.0.

Delete a rule to a chain

**name** A user-defined name to call this rule by in another part of a state or formula. This should not be an actual rule.

**family** Networking family, either ipv4 or ipv6

All other arguments are passed in with the same name as the long option that would normally be used for nftables, with one exception: `-state` is specified as `connstate` instead of `state` (not to be confused with `ctstate`).

`salt.states.nftables.flush`(*name*, *family*='ipv4', *\*\*kwargs*)

New in version 2014.7.0.

Flush current nftables state

**family** Networking family, either ipv4 or ipv6

`salt.states.nftables.insert`(*name*, *family*='ipv4', *\*\*kwargs*)

New in version 2014.7.0.

Insert a rule into a chain

**name** A user-defined name to call this rule by in another part of a state or formula. This should not be an actual rule.

**family** Networking family, either ipv4 or ipv6

All other arguments are passed in with the same name as the long option that would normally be used for nftables, with one exception: `-state` is specified as `connstate` instead of `state` (not to be confused with `ctstate`).

## 20.19.190 salt.states.npm

### Installation of NPM Packages

These states manage the installed packages for node.js using the Node Package Manager (npm). Note that npm must be installed for these states to be available, so npm states should include a requisite to a pkg.installed state for the package which provides npm (simply `npm` in most cases). Example:

```
npm:
 pkg.installed

yaml:
 npm.installed:
 - require:
 - pkg: npm
```

`salt.states.npm.bootstrap`(*name*, *user*=None, *silent*=True)

Bootstraps a node.js application.

Will execute 'npm install -json' on the specified directory.

**user** The user to run NPM with

New in version 0.17.0.

`salt.states.npm.cache_cleaned`(*name*=None, *user*=None, *force*=False)

Ensure that the given package is not cached.

If no package is specified, this ensures the entire cache is cleared.

**name** The name of the package to remove from the cache, or None for all packages

**user** The user to run NPM with

**force** Force cleaning of cache. Required for `npm@5` and greater

New in version 2016.11.6.

`salt.states.npm.installed`(*name*, *pkgs*=None, *dir*=None, *user*=None, *force\_reinstall*=False, *registry*=None, *env*=None)

Verify that the given package is installed and is at the correct version (if specified).

```

coffee-script:
 npm.installed:
 - user: someuser

coffee-script@1.0.1:
 npm.installed: []

```

**name** The package to install

Changed in version 2014.7.2: This parameter is no longer lowercased by salt so that case-sensitive NPM package names will work.

**pkgs** A list of packages to install with a single npm invocation; specifying this argument will ignore the **name** argument

New in version 2014.7.0.

**dir** The target directory in which to install the package, or None for global installation

**user** The user to run NPM with

New in version 0.17.0.

**registry** The NPM registry from which to install the package

New in version 2014.7.0.

**env** A list of environment variables to be set prior to execution. The format is the same as the `cmd.run` state function.

New in version 2014.7.0.

**force\_reinstall** Install the package even if it is already installed

`salt.states.npm.removed` (*name*, *dir=None*, *user=None*)

Verify that the given package is not installed.

**dir** The target directory in which to install the package, or None for global installation

**user** The user to run NPM with

New in version 0.17.0.

## 20.19.191 salt.states.ntp

### Management of NTP servers

New in version 2014.1.0.

This state is used to manage NTP servers. Currently only Windows is supported.

```

win_ntp:
 ntp.managed:
 - servers:
 - pool.ntp.org
 - us.pool.ntp.org

```

`salt.states.ntp.managed` (*name*, *servers=None*)

Manage NTP servers

**servers** A list of NTP servers

## 20.19.192 salt.states.nxos module

State module for Cisco NX OS Switches Proxy minions

For documentation on setting up the nxos proxy minion look in the documentation for *salt.proxy.nxos*.

`salt.states.nxos.config_absent(name)`

Ensure a specific configuration line does not exist in the running config

**name** config line to remove

Examples:

```
add snmp group:
 nxos.config_absent:
 - names:
 - snmp-server community randoSNMPstringHERE group network-operator
 - snmp-server community AnotherRandomSNMPString group network-admin
```

---

**Note:** For certain cases extra lines could be removed based on dependencies. In this example, included after the example for `config_present`, the ACLs would be removed because they depend on the existence of the group.

---

`salt.states.nxos.config_present(name)`

Ensure a specific configuration line exists in the running config

**name** config line to set

Examples:

```
add snmp group:
 nxos.config_present:
 - names:
 - snmp-server community randoSNMPstringHERE group network-operator
 - snmp-server community AnotherRandomSNMPString group network-admin

add snmp acl:
 nxos.config_present:
 - names:
 - snmp-server community randoSNMPstringHERE use-acl snmp-acl-ro
 - snmp-server community AnotherRandomSNMPString use-acl snmp-acl-rw
```

`salt.states.nxos.replace(name, repl, full_match=False)`

Replace all instances of a string or full line in the running config

**name** String to replace

**repl** The replacement text

**full\_match** Whether *name* will match the full line or only a subset of the line. Defaults to False. When False, `*` is added around *name* for matching in the *show run* config.

Examples:

```
replace snmp string:
 nxos.replace:
 - name: randoSNMPstringHERE
 - repl: NEWrandoSNMPstringHERE

replace full snmp string:
 nxos.replace:
 - name: ^snmp-server community randoSNMPstringHERE group network-operator$
 - repl: snmp-server community NEWrandoSNMPstringHERE group network-operator
 - full_match: True
```

---

**Note:** The first example will replace the SNMP string on both the group and the ACL, so you will not lose the ACL setting. Because the second is an exact match of the line, when the group is removed, the ACL is

---

removed, but not readded, because it was not matched.

`salt.states.nxos.user_absent(name)`

Ensure a user is not present

**name** username to remove if it exists

Examples:

```
delete:
 nxos.user_absent:
 - name: daniel
```

`salt.states.nxos.user_present(name, password=None, roles=None, encrypted=False, crypt_salt=None, algorithm='sha256')`

Ensure a user is present with the specified groups

**name** Name of user

**password** Encrypted or Plain Text password for user

**roles** List of roles the user should be assigned. Any roles not in this list will be removed

**encrypted** Whether the password is encrypted already or not. Defaults to False

**crypt\_salt** Salt to use when encrypting the password. Default is None (salt is randomly generated for unhashed passwords)

**algorithm** Algorithm to use for hashing password. Defaults to sha256. Accepts md5, blowfish, sha256, sha512

Examples:

```
create:
 nxos.user_present:
 - name: daniel
 - roles:
 - vdc-admin

set_password:
 nxos.user_present:
 - name: daniel
 - password: admin
 - roles:
 - network-admin

update:
 nxos.user_present:
 - name: daniel
 - password: AiN9jaoP
 - roles:
 - network-admin
 - vdc-admin
```

### 20.19.193 salt.states.openstack\_config

Manage OpenStack configuration file settings.

**maintainer** Jeffrey C. Ollie <jeff@ocjtech.us>

**maturity** new

**depends**

**platform** linux

`salt.states.openstack_config.absent` (*name, filename, section, parameter=None*)

Ensure a value is not set in an OpenStack configuration file.

**filename** The full path to the configuration file

**section** The section in which the parameter will be set

**parameter (optional)** The parameter to change. If the parameter is not supplied, the name will be used as the parameter.

`salt.states.openstack_config.present` (*name, filename, section, value, parameter=None*)

Ensure a value is set in an OpenStack configuration file.

**filename** The full path to the configuration file

**section** The section in which the parameter will be set

**parameter (optional)** The parameter to change. If the parameter is not supplied, the name will be used as the parameter.

**value** The value to set

### 20.19.194 salt.states.openvswitch\_bridge module

Management of Open vSwitch bridges.

`salt.states.openvswitch_bridge.absent` (*name*)

Ensures that the named bridge does not exist, eventually deletes it.

**Parameters** **name** – The name of the bridge.

`salt.states.openvswitch_bridge.present` (*name*)

Ensures that the named bridge exists, eventually creates it.

**Parameters** **name** – The name of the bridge.

### 20.19.195 salt.states.openvswitch\_port module

Management of Open vSwitch ports.

`salt.states.openvswitch_port.absent` (*name, bridge=None*)

Ensures that the named port exists on bridge, eventually deletes it. If bridge is not set, port is removed from whatever bridge contains it.

**Parameters**

- **name** – The name of the port.
- **bridge** – The name of the bridge.

`salt.states.openvswitch_port.present` (*name, bridge, tunnel\_type=None, id=None, remote=None, dst\_port=None, internal=False*)

Ensures that the named port exists on bridge, eventually creates it.

**Parameters**

- **name** – The name of the port.
- **bridge** – The name of the bridge.
- **tunnel\_type** – Optional type of interface to create, currently supports: vlan, vxlan and gre.
- **id** – Optional tunnel's key.
- **remote** – Remote endpoint's IP address.
- **dst\_port** – Port to use when creating tunnelport in the switch.
- **internal** – Create an internal port if one does not exist

### 20.19.196 salt.states.opsgenie

## Create/Close an alert in OpsGenie

New in version 2018.3.0.

This state is useful for creating or closing alerts in OpsGenie during state runs.

```

used_space:
 disk.status:
 - name: /
 - maximum: 79%
 - minimum: 20%

opsgenie_create_action_sender:
 opsgenie.create_alert:
 - api_key: XXXXXXXX-XXXX-XXXX-XXXX-XXXXXXXXXXXX
 - reason: 'Disk capacity is out of designated range.'
 - name: disk.status
 - onfail:
 - disk: used_space

opsgenie_close_action_sender:
 opsgenie.close_alert:
 - api_key: XXXXXXXX-XXXX-XXXX-XXXX-XXXXXXXXXXXX
 - name: disk.status
 - require:
 - disk: used_space

```

`salt.states.opsgenie.close_alert` (*name=None, api\_key=None, reason='Conditions are met.', action\_type='Close'*)

Close an alert in OpsGenie. It's a wrapper function for `create_alert`. Example usage with Salt's requisites and other global state arguments could be found above.

Required Parameters:

**name** It will be used as alert's alias. If you want to use the close functionality you must provide name field for both states like in above case.

Optional Parameters:

**api\_key** It's the API Key you've copied while adding integration in OpsGenie.

**reason** It will be used as alert's default message in OpsGenie.

**action\_type** OpsGenie supports the default values Create/Close for `action_type`. You can customize this field with OpsGenie's custom actions for other purposes like adding notes or acknowledging alerts.

`salt.states.opsgenie.create_alert` (*name=None, api\_key=None, reason=None, action\_type='Create'*)

Create an alert in OpsGenie. Example usage with Salt's requisites and other global state arguments could be found above.

Required Parameters:

**api\_key** It's the API Key you've copied while adding integration in OpsGenie.

**reason** It will be used as alert's default message in OpsGenie.

Optional Parameters:

**name** It will be used as alert's alias. If you want to use the close functionality you must provide name field for both states like in above case.

**action\_type** OpsGenie supports the default values Create/Close for `action_type`. You can customize this field with OpsGenie's custom actions for other purposes like adding notes or acknowledging alerts.

### 20.19.197 salt.states.pagerduty

## Create an Event in PagerDuty

New in version 2014.1.0.

This state is useful for creating events on the PagerDuty service during state runs.

```
server-warning-message:
 pagerduty.create_event:
 - name: 'This is a server warning message'
 - details: 'This is a much more detailed message'
 - service_key: 9abcd123456789efabcde362783cdbaf
 - profile: my-pagerduty-account
```

`salt.states.pagerduty.create_event` (*name, details, service\_key, profile*)

Create an event on the PagerDuty service

```
server-warning-message:
 pagerduty.create_event:
 - name: 'This is a server warning message'
 - details: 'This is a much more detailed message'
 - service_key: 9abcd123456789efabcde362783cdbaf
 - profile: my-pagerduty-account
```

The following parameters are required:

**name** This is a short description of the event.

**details** This can be a more detailed description of the event.

**service\_key** This key can be found by using `pagerduty.list_services`.

**profile** This refers to the configuration profile to use to connect to the PagerDuty service.

## 20.19.198 salt.states.pagerduty\_escalation\_policy

Manage PagerDuty escalation policies.

Schedules and users can be referenced by pagerduty ID, or by name, or by email address.

For example:

```
ensure test escalation policy:
 pagerduty_escalation_policy.present:
 - name: bruce test escalation policy
 - escalation_rules:
 - targets:
 - type: schedule
 id: 'bruce test schedule level1'
 - type: user
 id: 'Bruce Sherrod'
 escalation_delay_in_minutes: 15
 - targets:
 - type: schedule
 id: 'bruce test schedule level2'
 escalation_delay_in_minutes: 15
 - targets:
 - type: user
 id: 'Bruce TestUser1'
 - type: user
 id: 'Bruce TestUser2'
 - type: user
```

(continues on next page)

(continued from previous page)

```

 id: 'Bruce TestUser3'
 - type: user
 id: 'bruce+test4@lyft.com'
 escalation_delay_in_minutes: 15

```

`salt.states.pagerduty_escalation_policy.absent` (*profile='pagerduty', subdomain=None, api\_key=None, \*\*kwargs*)

Ensure that a PagerDuty escalation policy does not exist. Accepts all the arguments that `pagerduty_escalation_policy.present` accepts; but ignores all arguments except the name.

Name can be the escalation policy id or the escalation policy name.

`salt.states.pagerduty_escalation_policy.present` (*profile='pagerduty', subdomain=None, api\_key=None, \*\*kwargs*)

Ensure that a pagerduty escalation policy exists. Will create or update as needed.

This method accepts as args everything defined in [https://developer.pagerduty.com/documentation/rest/escalation\\_policies/create](https://developer.pagerduty.com/documentation/rest/escalation_policies/create). In addition, user and schedule id's will be translated from name (or email address) into PagerDuty unique ids. For example:

```
pagerduty_escalation_policy.present:
```

- name: bruce test escalation policy
- escalation\_rules:
  - targets:
    - \* type: schedule id: 'bruce test schedule level1'
    - \* type: user id: 'Bruce Sherrod'

In this example, 'Bruce Sherrod' will be looked up and replaced with the PagerDuty id (usually a 7 digit all-caps string, e.g. PX6GQL7)

## 20.19.199 salt.states.pagerduty\_schedule

Manage PagerDuty schedules.

Example:

```

ensure test schedule:
 pagerduty_schedule.present:
 - name: 'bruce test schedule level1'
 - schedule:
 name: 'bruce test schedule level1'
 time_zone: 'Pacific Time (US & Canada)'
 schedule_layers:
 - name: 'Schedule Layer 1'
 start: '2015-01-01T00:00:00'
 users:
 - user:
 'id': 'Bruce TestUser1'
 member_order: 1
 - user:
 'id': 'Bruce TestUser2'
 member_order: 2
 - user:
 'id': 'bruce+test3@lyft.com'

```

(continues on next page)

(continued from previous page)

```

 member_order: 3
 - user:
 'id': 'bruce+test4@lyft.com'
 member_order: 4
 rotation_virtual_start: '2015-01-01T00:00:00'
 priority: 1
 rotation_turn_length_seconds: 604800

```

`salt.states.pagerduty_schedule.absent` (*profile='pagerduty', subdomain=None, api\_key=None, \*\*kwargs*)

Ensure that a pagerduty schedule does not exist. Name can be pagerduty schedule id or pagerduty schedule name.

`salt.states.pagerduty_schedule.present` (*profile='pagerduty', subdomain=None, api\_key=None, \*\*kwargs*)

Ensure that a pagerduty schedule exists. This method accepts as args everything defined in <https://developer.pagerduty.com/documentation/rest/schedules/create>. This means that most arguments are in a dict called "schedule."

User id's can be pagerduty id, or name, or email address.

## 20.19.200 salt.states.pagerduty\_service

Manage PagerDuty services

Escalation policies can be referenced by pagerduty ID or by namea.

For example:

```

ensure test service
pagerduty_service.present:
 - name: 'my service'
 - escalation_policy_id: 'my escalation policy'
 - type: nagios

```

`salt.states.pagerduty_service.absent` (*profile='pagerduty', subdomain=None, api\_key=None, \*\*kwargs*)

Ensure a pagerduty service does not exist. Name can be the service name or pagerduty service id.

`salt.states.pagerduty_service.present` (*profile='pagerduty', subdomain=None, api\_key=None, \*\*kwargs*)

Ensure pagerduty service exists. This method accepts as arguments everything defined in <https://developer.pagerduty.com/documentation/rest/services/create>

Note that many arguments are mutually exclusive, depending on the "type" argument.

Examples:

```

create a PagerDuty email service at test-email@DOMAIN.pagerduty.com
ensure generic email service exists:
 pagerduty_service.present:
 - name: my email service
 - service:
 description: "email service controlled by salt"
 escalation_policy_id: "my escalation policy"
 type: "generic_email"
 service_key: "test-email"

```

```
create a pagerduty service using cloudwatch integration
ensure my cloudwatch service exists:
 pagerduty_service.present:
 - name: my cloudwatch service
 - service:
 escalation_policy_id: "my escalation policy"
 type: aws_cloudwatch
 description: "my cloudwatch service controlled by salt"
```

### 20.19.201 salt.states.pagerduty\_user

Manage PagerDuty users.

#### Example

ensure bruce test user 1:

```
pagerduty.user_present:
```

- name: 'Bruce TestUser1'
- email: bruce+test1@lyft.com
- requester\_id: P1GV5NT

```
salt.states.pagerduty_user.absent(profile='pagerduty', subdomain=None, api_key=None,
 **kwargs)
```

Ensure pagerduty user does not exist. Name can be pagerduty id, email address, or user name.

```
salt.states.pagerduty_user.present(profile='pagerduty', subdomain=None, api_key=None,
 **kwargs)
```

Ensure pagerduty user exists. Arguments match those supported by <https://developer.pagerduty.com/documentation/rest/users/create>.

### 20.19.202 salt.states.pcs module

#### Management of Pacemaker/Corosync clusters with PCS

A state module to manage Pacemaker/Corosync clusters with the Pacemaker/Corosync configuration system (PCS)

New in version 2016.110.

```
depends pcs
```

Walkthrough of a complete PCS cluster setup: [http://clusterlabs.org/doc/en-US/Pacemaker/1.1/html/Clusters\\_from\\_Scratch/](http://clusterlabs.org/doc/en-US/Pacemaker/1.1/html/Clusters_from_Scratch/)

**Requirements:** PCS is installed, pcs service is started and the password for the hacluster user is set and known.

**Remark on the cibname variable used in the examples:** The use of the cibname variable is optional. Use it only if you want to deploy your changes into a cibfile first and then push it. This makes only sense if you want to deploy multiple changes (which require each other) at once to the cluster.

At first the cibfile must be created:

```
mysql_pcs__cib_present_cib_for_galera:
 pcs.cib_present:
 - cibname: cib_for_galera
 - scope: None
 - extra_args: None
```

Then the cibfile can be modified by creating resources (creating only 1 resource for demonstration, see also 7.):

```
mysql_pcs__resource_present_galera:
 pcs.resource_present:
 - resource_id: galera
 - resource_type: "ocf:heartbeat:galera"
 - resource_options:
 - 'wsrep_cluster_address=gcomm://node1.example.org,node2.example.org,
↪node3.example.org'
 - '--master'
 - cibname: cib_for_galera
```

After modifying the cibfile, it can be pushed to the live CIB in the cluster:

```
mysql_pcs__cib_pushed_cib_for_galera:
 pcs.cib_pushed:
 - cibname: cib_for_galera
 - scope: None
 - extra_args: None
```

Create a cluster from scratch:

1. Authorize nodes to each other:

```
pcs_auth__auth:
 pcs.auth:
 - nodes:
 - node1.example.com
 - node2.example.com
 - pcsuser: hacluster
 - pcspasswd: hoonetorg
 - extra_args: []
```

2. Do the initial cluster setup:

```
pcs_setup__setup:
 pcs.cluster_setup:
 - nodes:
 - node1.example.com
 - node2.example.com
 - pcsclustername: pcscluster
 - extra_args:
 - '--start'
 - '--enable'
```

3. Optional: Set cluster properties:

```
pcs_properties__prop_has_value_no-quorum-policy:
 pcs.prop_has_value:
 - prop: no-quorum-policy
 - value: ignore
 - cibname: cib_for_cluster_settings
```

4. Optional: Set resource defaults:

```
pcs_properties__resource_defaults_to_resource-stickiness:
 pcs.resource_defaults_to:
 - default: resource-stickiness
 - value: 100
 - cibname: cib_for_cluster_settings
```

5. Optional: Set resource op defaults:

```
pcs_properties__resource_op_defaults_to_monitor-interval:
 pcs.resource_op_defaults_to:
 - op_default: monitor-interval
 - value: 60s
 - cibname: cib_for_cluster_settings
```

6. Configure Fencing (!is often not optional on production ready cluster!):

```
pcs_stonith__created_eps_fence:
 pcs.stonith_present:
 - stonith_id: eps_fence
 - stonith_device_type: fence_eps
 - stonith_device_options:
 - 'pcmk_host_map=node1.example.org:01;node2.example.org:02'
 - 'ipaddr=myepsdevice.example.org'
 - 'power_wait=5'
 - 'verbose=1'
 - 'debug=/var/log/pcsd/eps_fence.log'
 - 'login=hidden'
 - 'passwd=hoonetorg'
 - cibname: cib_for_stonith
```

7. Add resources to your cluster:

```
mysql_pcs__resource_present_galera:
 pcs.resource_present:
 - resource_id: galera
 - resource_type: "ocf:heartbeat:galera"
 - resource_options:
 - 'wsrep_cluster_address=gcomm://node1.example.org,node2.example.org,
↪node3.example.org'
 - '--master'
 - cibname: cib_for_galera
```

8. Optional: Add constraints (locations, colocations, orders):

```
haproxy_pcs__constraint_present_colocation-vip_galera-haproxy-clone-INFINITY:
 pcs.constraint_present:
 - constraint_id: colocation-vip_galera-haproxy-clone-INFINITY
 - constraint_type: colocation
 - constraint_options:
 - 'add'
 - 'vip_galera'
 - 'with'
 - 'haproxy-clone'
 - cibname: cib_for_haproxy
```

New in version 2016.3.0.

`salt.states.pcs.auth`(*name, nodes, pcsuser='hacluster', pcspasswd='hacluster', extra\_args=None*)

Ensure all nodes are authorized to the cluster

**name** Irrelevant, not used (recommended: `pcs_auth__auth`)

**nodes** a list of nodes which should be authorized to the cluster

**pcsuser** user for communication with pcs (default: `hacluster`)

**pcspasswd** password for pcsuser (default: `hacluster`)

**extra\_args** list of extra args for the 'pcs cluster auth' command

Example:

```
pcs_auth__auth:
 pcs.auth:
 - nodes:
 - node1.example.com
 - node2.example.com
 - pcsuser: hacluster
 - pcspasswd: hoonetorg
 - extra_args: []
```

`salt.states.pcs.cib_present`(*name, cibname, scope=None, extra\_args=None*)

Ensure that a CIB-file with the content of the current live CIB is created

Should be run on one cluster node only (there may be races)

**name** Irrelevant, not used (recommended: `{{formulaname}}__cib_present_{{cibname}}`)

**cibname** name/path of the file containing the CIB

**scope** specific section of the CIB (default:

**extra\_args** additional options for creating the CIB-file

Example:

```
mysql_pcs__cib_present_cib_for_galera:
 pcs.cib_present:
 - cibname: cib_for_galera
 - scope: None
 - extra_args: None
```

`salt.states.pcs.cib_pushed`(*name, cibname, scope=None, extra\_args=None*)

Ensure that a CIB-file is pushed if it is changed since the creation of it with `pcs.cib_present`

Should be run on one cluster node only (there may be races)

**name** Irrelevant, not used (recommended: `{{formulaname}}__cib_pushed_{{cibname}}`)

**cibname** name/path of the file containing the CIB

**scope** specific section of the CIB

**extra\_args** additional options for creating the CIB-file

Example:

```
mysql_pcs__cib_pushed_cib_for_galera:
 pcs.cib_pushed:
 - cibname: cib_for_galera
 - scope: None
 - extra_args: None
```

`salt.states.pcs.cluster_node_present`(*name, node, extra\_args=None*)

Add a node to the Pacemaker cluster via PCS Should be run on one cluster node only (there may be races) Can only be run on a already setup/added node

**name** Irrelevant, not used (recommended: `pcs_setup__node_add_{{node}}`)

**node** node that should be added

**extra\_args** list of extra args for the 'pcs cluster node add' command

Example:

```

pcs_setup__node_add_node1.example.com:
 pcs.cluster_node_present:
 - node: node1.example.com
 - extra_args:
 - '--start'
 - '--enable'

```

`salt.states.pcs.cluster_setup` (*name*, *nodes*, *pcsclustername*='pcscluster', *extra\_args*=None)

Setup Pacemaker cluster on nodes. Should be run on one cluster node only (there may be races)

**name** Irrelevant, not used (recommended: pcs\_setup\_\_setup)

**nodes** a list of nodes which should be set up

**pcsclustername** Name of the Pacemaker cluster

**extra\_args** list of extra args for the 'pcs cluster setup' command

Example:

```

pcs_setup__setup:
 pcs.cluster_setup:
 - nodes:
 - node1.example.com
 - node2.example.com
 - pcsclustername: pcscluster
 - extra_args:
 - '--start'
 - '--enable'

```

`salt.states.pcs.constraint_present` (*name*, *constraint\_id*, *constraint\_type*, *constraint\_options*=None, *cibname*=None)

Ensure that a constraint is created

Should be run on one cluster node only (there may be races) Can only be run on a node with a functional pacemaker/corosync

**name** Irrelevant, not used (recommended: {{formulaname}}\_\_constraint\_present\_{{constraint\_id}})

**constraint\_id** name for the constraint (try first to create manually to find out the autogenerated name)

**constraint\_type** constraint type (location, colocation, order)

**constraint\_options** options for creating the constraint

**cibname** use a cached CIB-file named like cibname instead of the live CIB

Example:

```

haproxy_pcs__constraint_present_colocation-vip_galera-haproxy-clone-INFINITY:
 pcs.constraint_present:
 - constraint_id: colocation-vip_galera-haproxy-clone-INFINITY
 - constraint_type: colocation
 - constraint_options:
 - 'add'
 - 'vip_galera'
 - 'with'
 - 'haproxy-clone'
 - cibname: cib_for_haproxy

```

`salt.states.pcs.prop_has_value` (*name*, *prop*, *value*, *extra\_args*=None, *cibname*=None)

Ensure that a property in the cluster is set to a given value

Should be run on one cluster node only (there may be races)

**name** Irrelevant, not used (recommended: pcs\_properties\_\_prop\_has\_value\_{{prop}})

**prop** name of the property

**value** value of the property

**extra\_args** additional options for the pcs property command

**cibname** use a cached CIB-file named like cibname instead of the live CIB

Example:

```
pcs_properties__prop_has_value_no-quorum-policy:
 pcs.prop_has_value:
 - prop: no-quorum-policy
 - value: ignore
 - cibname: cib_for_cluster_settings
```

`salt.states.pcs.resource_defaults_to`(*name, default, value, extra\_args=None, cibname=None*)

Ensure a resource default in the cluster is set to a given value

Should be run on one cluster node only (there may be races) Can only be run on a node with a functional pacemaker/corosync

**name** Irrelevant, not used (recommended: `pcs_properties__resource_defaults_to_{{default}}`)

**default** name of the default resource property

**value** value of the default resource property

**extra\_args** additional options for the pcs command

**cibname** use a cached CIB-file named like cibname instead of the live CIB

Example:

```
pcs_properties__resource_defaults_to_resource-stickiness:
 pcs.resource_defaults_to:
 - default: resource-stickiness
 - value: 100
 - cibname: cib_for_cluster_settings
```

`salt.states.pcs.resource_op_defaults_to`(*name, op\_default, value, extra\_args=None, cibname=None*)

Ensure a resource operation default in the cluster is set to a given value

Should be run on one cluster node only (there may be races) Can only be run on a node with a functional pacemaker/corosync

**name** Irrelevant, not used (recommended: `pcs_properties__resource_op_defaults_to_{{op_default}}`)

**op\_default** name of the operation default resource property

**value** value of the operation default resource property

**extra\_args** additional options for the pcs command

**cibname** use a cached CIB-file named like cibname instead of the live CIB

Example:

```
pcs_properties__resource_op_defaults_to_monitor-interval:
 pcs.resource_op_defaults_to:
 - op_default: monitor-interval
 - value: 60s
 - cibname: cib_for_cluster_settings
```

`salt.states.pcs.resource_present`(*name, resource\_id, resource\_type, resource\_options=None, cibname=None*)

Ensure that a resource is created

Should be run on one cluster node only (there may be races) Can only be run on a node with a functional pacemaker/corosync

**name** Irrelevant, not used (recommended: `{{formulaname}}__resource_present_{{resource_id}}`)

**resource\_id** name for the resource

**resource\_type** resource type (f.e. `ocf:heartbeat:IPaddr2` or `VirtualIP`)

**resource\_options** additional options for creating the resource

**cibname** use a cached CIB-file named like cibname instead of the live CIB

Example:

```
mysql_pcs__resource_present_galera:
 pcs.resource_present:
 - resource_id: galera
 - resource_type: "ocf:heartbeat:galera"
 - resource_options:
 - 'wsrep_cluster_address=gcomm://node1.example.org,node2.example.org,
↪node3.example.org'
 - '--master'
 - cibname: cib_for_galera
```

`salt.states.pcs.stonith_present`(*name*, *stonith\_id*, *stonith\_device\_type*,  
*stonith\_device\_options*=None, *cibname*=None)

Ensure that a fencing resource is created

Should be run on one cluster node only (there may be races) Can only be run on a node with a functional pacemaker/corosync

**name** Irrelevant, not used (recommended: `pcs_stonith__created_{{stonith_id}}`)

**stonith\_id** name for the stonith resource

**stonith\_device\_type** name of the stonith agent `fence_eps`, `fence_xvm` f.e.

**stonith\_device\_options** additional options for creating the stonith resource

**cibname** use a cached CIB-file named like `cibname` instead of the live CIB

Example:

```
pcs_stonith__created_eps_fence:
 pcs.stonith_present:
 - stonith_id: eps_fence
 - stonith_device_type: fence_eps
 - stonith_device_options:
 - 'pcmk_host_map=node1.example.org:01;node2.example.org:02'
 - 'ipaddr=myepsdevice.example.org'
 - 'power_wait=5'
 - 'verbose=1'
 - 'debug=/var/log/pcsd/eps_fence.log'
 - 'login=hidden'
 - 'passwd=hoonetorg'
 - cibname: cib_for_stonith
```

### 20.19.203 salt.states.pecl

#### Installation of PHP Extensions Using pecl

These states manage the installed pecl extensions. Note that `php-pear` must be installed for these states to be available, so pecl states should include a requisite to a `pkg.installed` state for the package which provides pecl (`php-pear` in most cases). Example:

```
php-pear:
 pkg.installed

mongo:
 pecl.installed:
 - require:
 - pkg: php-pear
```

`salt.states.pecl.installed`(*name*, *version*=None, *defaults*=False, *force*=False, *pre-*  
*ferred\_state*='stable')

New in version 0.17.0.

Make sure that a pecl extension is installed.

**name** The pecl extension name to install

**version** The pecl extension version to install. This option may be ignored to install the latest stable version.

**defaults** Use default answers for extensions such as pecl\_http which ask questions before installation. Without this option, the pecl.installed state will hang indefinitely when trying to install these extensions.

**force** Whether to force the installed version or not

**preferred\_state** The pecl extension state to install

`salt.states.pecl.removed(name)`

Make sure that a pecl extension is not installed.

**name** The pecl extension name to uninstall

### 20.19.204 salt.states.pdbedit

Manage accounts in Samba's passdb using pdbedit

**maintainer** Jorge Schrauwen <[sjorge@blackdot.be](mailto:sjorge@blackdot.be)>

**maturity** new

**depends** pdbedit

**platform** posix

New in version 2017.7.0.

**wash:**

```
pdbedit.absent
```

**kylee:**

**pdbedit.managed:**

- **password:** A70C708517B5DD0EDB67714FE25336EB
- **password\_hashed:** True
- **drive:** 'X:'
- **homedir:** '\\serenity\mechanic\profile'

`salt.states.pdbedit.absent(name)`

Ensure user account is absent

**name** [string] username

`salt.states.pdbedit.managed(name, **kwargs)`

Manage user account

**login** [string] login name

**password** [string] password

**password\_hashed** [boolean] set if password is a nt hash instead of plain text

**domain** [string] users domain

**profile** [string] profile path

**script** [string] logon script

**drive** [string] home drive

**homedir** [string] home directory

**fullname** [string] full name

**account\_desc** [string] account description

**machine\_sid** [string] specify the machines new primary group SID or rid

**user\_sid** [string] specify the users new primary group SID or rid

**account\_control** [string] specify user account control properties

---

**Note:** Only the following can be set: - N: No password required - D: Account disabled - H: Home directory required - L: Automatic Locking - X: Password does not expire

---

`reset_login_hours` [boolean] reset the users allowed logon hours  
`reset_bad_password_count` [boolean] reset the stored bad login counter

`salt.states.pdbedit.present`(*name*, *\*\*kwargs*)  
 Alias for `pdbedit.managed`

## 20.19.205 salt.states.pip\_state

### Installation of Python Packages Using pip

These states manage system installed python packages. Note that pip must be installed for these states to be available, so pip states should include a requisite to a `pkg.installed` state for the package which provides pip (`python-pip` in most cases). Example:

```
python-pip:
 pkg.installed

virtualenvwrapper:
 pip.installed:
 - require:
 - pkg: python-pip
```

`salt.states.pip_state.installed`(*name*, *pkgs=None*, *pip\_bin=None*, *requirements=None*, *bin\_env=None*, *use\_wheel=False*, *no\_use\_wheel=False*, *log=None*, *proxy=None*, *timeout=None*, *repo=None*, *editable=None*, *find\_links=None*, *index\_url=None*, *extra\_index\_url=None*, *no\_index=False*, *mirrors=None*, *build=None*, *target=None*, *download=None*, *download\_cache=None*, *source=None*, *upgrade=False*, *force\_reinstall=False*, *ignore\_installed=False*, *exists\_action=None*, *no\_deps=False*, *no\_install=False*, *no\_download=False*, *install\_options=None*, *global\_options=None*, *user=None*, *cwd=None*, *pre\_releases=False*, *cert=None*, *allow\_all\_external=False*, *allow\_external=None*, *allow\_unverified=None*, *process\_dependency\_links=False*, *env\_vars=None*, *use\_vt=False*, *trusted\_host=None*, *no\_cache\_dir=False*, *cache\_dir=None*, *no\_binary=None*, *\*\*kwargs*)

Make sure the package is installed

**name** The name of the python package to install. You can also specify version numbers here using the standard operators `==`, `>=`, `<=`. If `requirements` is given, this parameter will be ignored.

Example:

```
django:
 pip.installed:
 - name: django >= 1.6, <= 1.7
 - require:
 - pkg: python-pip
```

This will install the latest Django version greater than 1.6 but less than 1.7.

**requirements** Path to a pip requirements file. If the path begins with salt:// the file will be transferred from the master file server.

**user** The user under which to run pip

**use\_wheel** [False] Prefer wheel archives (requires pip>=1.4)

**no\_use\_wheel** [False] Force to not use wheel archives (requires pip>=1.4)

**no\_binary** Force to not use binary packages (requires pip >= 7.0.0) Accepts either :all: to disable all binary packages, :none: to empty the set, or a list of one or more packages

Example:

```

django:
 pip.installed:
 - no_binary: ':all:'

flask:
 pip.installed:
 - no_binary:
 - itsdangerous
 - click

```

**log** Log file where a complete (maximum verbosity) record will be kept

**proxy** Specify a proxy in the form user:passwd@proxy.server:port. Note that the user:password@ is optional and required only if you are behind an authenticated proxy. If you provide user@proxy.server:port then you will be prompted for a password.

**timeout** Set the socket timeout (default 15 seconds)

**editable** install something editable (i.e. git+https://github.com/worldcompany/djangoembed.git#egg=djangoembed)

**find\_links** URL to look for packages at

**index\_url** Base URL of Python Package Index

**extra\_index\_url** Extra URLs of package indexes to use in addition to index\_url

**no\_index** Ignore package index

**mirrors** Specific mirror URL(s) to query (automatically adds -use-mirrors)

**build** Unpack packages into build dir

**target** Install packages into target dir

**download** Download packages into download instead of installing them

**download\_cache** Cache downloaded packages in download\_cache dir

**source** Check out editable packages into source dir

**upgrade** Upgrade all packages to the newest available version

**force\_reinstall** When upgrading, reinstall all packages even if they are already up-to-date.

**ignore\_installed** Ignore the installed packages (reinstalling instead)

**exists\_action** Default action when a path already exists: (s)witch, (i)gnore, (w)ipe, (b)ackup

**no\_deps** Ignore package dependencies

**no\_install** Download and unpack all packages, but don't actually install them

**no\_cache\_dir**: Disable the cache.

**cwd** Current working directory to run pip from

**pre\_releases** Include pre-releases in the available versions

**cert** Provide a path to an alternate CA bundle

**allow\_all\_external** Allow the installation of all externally hosted files

**allow\_external** Allow the installation of externally hosted files (comma separated list)

**allow\_unverified** Allow the installation of insecure and unverifiable files (comma separated list)

**process\_dependency\_links** Enable the processing of dependency links

**bin\_env** [None] Absolute path to a virtual environment directory or absolute path to a pip executable. The example below assumes a virtual environment has been created at /foo/.virtualenvs/bar.

**env\_vars** Add or modify environment variables. Useful for tweaking build steps, such as specifying INCLUDE or LIBRARY paths in Makefiles, build scripts or compiler calls. This must be in the form of a dictionary or a mapping.

Example:

```
django:
 pip.installed:
 - name: django_app
 - env_vars:
 CUSTOM_PATH: /opt/django_app
 VERBOSE: True
```

**use\_vt** Use VT terminal emulation (see output while installing)

**trusted\_host** Mark this host as trusted, even though it does not have valid or any HTTPS.

Example:

```
django:
 pip.installed:
 - name: django >= 1.6, <= 1.7
 - bin_env: /foo/.virtualenvs/bar
 - require:
 - pkg: python-pip
```

Or

Example:

```
django:
 pip.installed:
 - name: django >= 1.6, <= 1.7
 - bin_env: /foo/.virtualenvs/bar/bin/pip
 - require:
 - pkg: python-pip
```

---

### Attention

The following arguments are deprecated, do not use.

---

**pip\_bin** [None] Deprecated, use `bin_env`

Changed in version 0.17.0: `use_wheel` option added.

**install\_options**

Extra arguments to be supplied to the `setup.py` install command. If you are using an option with a directory path, be sure to use absolute path.

Example:

```
django:
 pip.installed:
 - name: django
 - install_options:
 --prefix=/blah
 - require:
 - pkg: python-pip
```

**global\_options** Extra global options to be supplied to the `setup.py` call before the install command.

New in version 2014.1.3.

---

### Attention

As of Salt 0.17.0 the pip state **needs** an importable pip module. This usually means having the system's pip package installed or running Salt from an active `virtualenv`.

The reason for this requirement is because pip already does a pretty good job parsing its own requirements. It makes no sense for Salt to do pip requirements parsing and validation before passing them to the pip library. It's functionality duplication and it's more error prone.

---

#### Attention

Please set `reload_modules: True` to have the salt minion import this module after installation.

---

Example:

```
pyopenssl:
 pip.installed:
 - name: pyOpenSSL
 - reload_modules: True
 - exists_action: i
```

`salt.states.pip_state.removed` (*name, requirements=None, bin\_env=None, log=None, proxy=None, timeout=None, user=None, cwd=None, use\_vt=False*)

Make sure that a package is not installed.

**name** The name of the package to uninstall

**user** The user under which to run pip

**bin\_env** [None] the pip executable or virtualenv to use

**use\_vt** Use VT terminal emulation (see output while installing)

`salt.states.pip_state.uptodate` (*name, bin\_env=None, user=None, cwd=None, use\_vt=False*)

New in version 2015.5.0.

Verify that the system is completely up to date.

**name** The name has no functional value and is only used as a tracking reference

**user** The user under which to run pip

**bin\_env** the pip executable or virtualenv to use

**use\_vt** Use VT terminal emulation (see output while installing)

## 20.19.206 salt.states.pkg

### Installation of packages using OS package managers such as yum or apt-get

---

**Note:** On minions running `systemd`  $\geq 205$ , as of version 2015.8.12, 2016.3.3, and 2016.11.0, `systemd-run(1)` is now used to isolate commands which modify installed packages from the `salt-minion` daemon's control group. This is done to keep `systemd` from killing the package manager commands spawned by Salt, when Salt updates itself (see `KillMode` in the `systemd.kill(5)` manpage for more information). If desired, usage of `systemd-run(1)` can be suppressed by setting a *config option* called `systemd.use_scope`, with a value of `False` (no quotes).

---

Salt can manage software packages via the `pkg` state module, packages can be set up to be installed, latest, removed and purged. Package management declarations are typically rather simple:

```
vim:
 pkg.installed
```

A more involved example involves pulling from a custom repository.

```

base:
 pkgrepo.managed:
 - humanname: Logstash PPA
 - name: ppa:wolfnet/logstash
 - dist: precise
 - file: /etc/apt/sources.list.d/logstash.list
 - keyid: 28B04E4A
 - keyserver: keyserver.ubuntu.com

logstash:
 pkg.installed:
 - fromrepo: ppa:wolfnet/logstash

```

Multiple packages can also be installed with the use of the pkgs state module

```

dotdeb.repo:
 pkgrepo.managed:
 - humanname: Dotdeb
 - name: deb http://packages.dotdeb.org wheezy-php55 all
 - dist: wheezy-php55
 - file: /etc/apt/sources.list.d/dotbeb.list
 - keyid: 89DF5277
 - keyserver: keys.gnupg.net
 - refresh_db: true

php.packages:
 pkg.installed:
 - fromrepo: wheezy-php55
 - pkgs:
 - php5-fpm
 - php5-cli
 - php5-curl

```

**Warning:** Package names are currently case-sensitive. If the minion is using a package manager which is not case-sensitive (such as *pkgng*), then this state will fail if the proper case is not used. This will be addressed in a future release of Salt.

`salt.states.pkg.downloaded` (*name*, *version=None*, *pkgs=None*, *fromrepo=None*, *ignore\_epoch=None*, *\*\*kwargs*)

New in version 2017.7.0.

Ensure that the package is downloaded, and that it is the correct version (if specified).

Currently supported for the following pkg providers: *yumpkg* and *zypper*

#### Parameters

- **name** (*str*) – The name of the package to be downloaded. This parameter is ignored if either "pkgs" is used. Additionally, please note that this option can only be used to download packages from a software repository.
- **version** (*str*) – Download a specific version of a package.

---

**Important:** As of version 2015.8.7, for distros which use yum/dnf, packages which have a version with a nonzero epoch (that is, versions which start with a number followed by a colon must have the epoch included when specifying the version number. For example:

```
vim-enhanced:
 pkg.downloaded:
 - version: 2:7.4.160-1.el7
```

An `ignore_epoch` argument has been added to which causes the epoch to be disregarded when the state checks to see if the desired version was installed.

You can install a specific version when using the `pkgs` argument by including the version after the package:

```
common_packages:
 pkg.downloaded:
 - pkgs:
 - unzip
 - dos2unix
 - salt-minion: 2015.8.5-1.el6
```

- **resolve\_capabilities** (*bool*) – Turn on resolving capabilities. This allow one to name “provides” or alias names for packages.

New in version 2018.3.0.

CLI Example:

```
zsh:
 pkg.downloaded:
 - version: 5.0.5-4.63
 - fromrepo: "myrepository"
```

`salt.states.pkg.group_installed` (*name*, *skip=None*, *include=None*, *\*\*kwargs*)

New in version 2015.8.0.

Changed in version 2016.11.0: Added support in *pacman*

Ensure that an entire package group is installed. This state is currently only supported for the *yum* and *pacman* package managers.

**skip** Packages that would normally be installed by the package group (“default” packages), which should not be installed.

```
Load Balancer:
 pkg.group_installed:
 - skip:
 - piranha
```

**include** Packages which are included in a group, which would not normally be installed by a *yum* `groupinstall` (“optional” packages). Note that this will not enforce group membership; if you include packages which are not members of the specified groups, they will still be installed.

```
Load Balancer:
 pkg.group_installed:
 - include:
 - haproxy
```

Changed in version 2016.3.0: This option can no longer be passed as a comma-separated list, it must now be passed as a list (as shown in the above example).

---

**Note:** Because this is essentially a wrapper around *pkg.install*, any argument which can be passed to *pkg.install* may also be included here, and it will be passed on to the call to *pkg.install*.

---

`salt.states.pkg.installed`(*name*, *version=None*, *refresh=None*, *fromrepo=None*, *skip\_verify=False*, *skip\_suggestions=False*, *pkgs=None*, *sources=None*, *allow\_updates=False*, *pkg\_verify=False*, *normalize=True*, *ignore\_epoch=False*, *reinstall=False*, *update\_holds=False*, *\*\*kwargs*)

Ensure that the package is installed, and that it is the correct version (if specified).

**param str name** The name of the package to be installed. This parameter is ignored if either "pkgs" or "sources" is used. Additionally, please note that this option can only be used to install packages from a software repository. To install a package file manually, use the "sources" option detailed below.

**param str version** Install a specific version of a package. This option is ignored if "sources" is used. Currently, this option is supported for the following pkg providers: *apt*, *ebuild*, *pacman*, *pkgin*, *win\_pkg*, *yumpkg*, and *zypper*. The version number includes the release designation where applicable, to allow Salt to target a specific release of a given version. When in doubt, using the `pkg.latest_version` function for an uninstalled package will tell you the version available.

```
salt myminion pkg.latest_version vim-enhanced
myminion:
 2:7.4.160-1.el7
```

**Important:** As of version 2015.8.7, for distros which use yum/dnf, packages which have a version with a nonzero epoch (that is, versions which start with a number followed by a colon like in the `pkg.latest_version` output above) must have the epoch included when specifying the version number. For example:

```
vim-enhanced:
 pkg.installed:
 - version: 2:7.4.160-1.el7
```

In version 2015.8.9, an `ignore_epoch` argument has been added to *pkg.installed*, *pkg.removed*, and *pkg.purged* states, which causes the epoch to be disregarded when the state checks to see if the desired version was installed.

Also, while this function is not yet implemented for all pkg frontends, *pkg.list\_repo\_pkgs* will show all versions available in the various repositories for a given package, irrespective of whether or not it is installed.

```
salt myminion pkg.list_repo_pkgs bash
myminion:

 bash:
 - 4.2.46-21.el7_3
 - 4.2.46-20.el7_2
```

This function was first added for *pkg.list\_repo\_pkgs* in 2014.1.0, and was expanded to *Debian/Ubuntu* and *Arch Linux*-based distros in the 2017.7.0 release.

The version strings returned by either of these functions can be used as version specifiers in pkg states.

You can install a specific version when using the `pkgs` argument by including

the version after the package:

```
common_packages:
 pkg.installed:
 - pkgs:
 - unzip
 - dos2unix
 - salt-minion: 2015.8.5-1.el6
```

If the version given is the string `latest`, the latest available package version will be installed à la `pkg.latest`.

#### WILDCARD VERSIONS

As of the 2017.7.0 release, this state now supports wildcards in package versions for SUSE SLES/Leap/Tumbleweed, Debian/Ubuntu, RHEL/CentOS, Arch Linux, and their derivatives. Using wildcards can be useful for packages where the release name is built into the version in some way, such as for RHEL/CentOS which typically has version numbers like `1.2.34-5.el7`. An example of the usage for this would be:

```
mypkg:
 pkg.installed:
 - version: '1.2.34*'
```

Keep in mind that using wildcard versions will result in a slower state run since Salt must gather the available versions of the specified packages and figure out which of them match the specified wildcard expression.

**param bool refresh** This parameter controls whether or not the package repo database is updated prior to installing the requested package(s).

If `True`, the package database will be refreshed (`apt-get update` or equivalent, depending on platform) before installing.

If `False`, the package database will *not* be refreshed before installing.

If unset, then Salt treats package database refreshes differently depending on whether or not a `pkg` state has been executed already during the current Salt run. Once a refresh has been performed in a `pkg` state, for the remainder of that Salt run no other refreshes will be performed for `pkg` states which do not explicitly set `refresh` to `True`. This prevents needless additional refreshes from slowing down the Salt run.

**param str cache\_valid\_time** New in version 2016.11.0.

This parameter sets the value in seconds after which the cache is marked as invalid, and a cache update is necessary. This overwrites the `refresh` parameter's default behavior.

Example:

```
httpd:
 pkg.installed:
 - fromrepo: mycustomrepo
 - skip_verify: True
 - skip_suggestions: True
 - version: 2.0.6~ubuntu3
 - refresh: True
 - cache_valid_time: 300
```

(continues on next page)

(continued from previous page)

- **allow\_updates**: True
- **hold**: False

In this case, a refresh will not take place for 5 minutes since the last `apt-get update` was executed on the system.

**Note:** This parameter is available only on Debian based distributions and has no effect on the rest.

**param str fromrepo** Specify a repository from which to install

**Note:** Distros which use APT (Debian, Ubuntu, etc.) do not have a concept of repositories, in the same way as YUM-based distros do. When a source is added, it is assigned to a given release. Consider the following source configuration:

```
deb http://ppa.launchpad.net/saltstack/salt/ubuntu precise
↳main
```

The packages provided by this source would be made available via the `precise` release, therefore `fromrepo` would need to be set to `precise` for Salt to install the package from this source.

Having multiple sources in the same release may result in the default install candidate being newer than what is desired. If this is the case, the desired version must be specified using the `version` parameter.

If the `pkgs` parameter is being used to install multiple packages in the same state, then instead of using `version`, use the method of version specification described in the **Multiple Package Installation Options** section below.

Running the shell command `apt-cache policy pkgname` on a minion can help elucidate the APT configuration and aid in properly configuring states:

```
root@saltmaster:~# salt ubuntu01 cmd.run 'apt-cache policy
↳ffmpeg'
ubuntu01:
 ffmpeg:
 Installed: (none)
 Candidate: 7:0.10.11-1~precise1
 Version table:
 7:0.10.11-1~precise1 0
 500 http://ppa.launchpad.net/jon-severinsson/
↳ffmpeg/ubuntu/ precise/main amd64 Packages
 4:0.8.10-0ubuntu0.12.04.1 0
 500 http://us.archive.ubuntu.com/ubuntu/
↳precise-updates/main amd64 Packages
 500 http://security.ubuntu.com/ubuntu/ precise-
↳security/main amd64 Packages
 4:0.8.1-0ubuntu1 0
 500 http://us.archive.ubuntu.com/ubuntu/
↳precise/main amd64 Packages
```

The release is located directly after the source's URL. The actual release name is the part before the slash, so to install version `4:0.8.10-0ubuntu0.12.04.1` either `precise-updates` or `precise-security` could be used for the

fromrepo value.

**param bool skip\_verify** Skip the GPG verification check for the package to be installed

**param bool skip\_suggestions** Force strict package naming. Disables lookup of package alternatives.

New in version 2014.1.1.

**param bool resolve\_capabilities** Turn on resolving capabilities. This allow one to name "provides" or alias names for packages.

New in version 2018.3.0.

**param bool allow\_updates** Allow the package to be updated outside Salt's control (e.g. auto updates on Windows). This means a package on the Minion can have a newer version than the latest available in the repository without enforcing a re-installation of the package.

New in version 2014.7.0.

Example:

```
httpd:
 pkg.installed:
 - fromrepo: mycustomrepo
 - skip_verify: True
 - skip_suggestions: True
 - version: 2.0.6-ubuntu3
 - refresh: True
 - allow_updates: True
 - hold: False
```

**param bool pkg\_verify** New in version 2014.7.0.

For requested packages that are already installed and would not be targeted for upgrade or downgrade, use `pkg.verify` to determine if any of the files installed by the package have been altered. If files have been altered, the `reinstall` option of `pkg.install` is used to force a reinstall. Types to ignore can be passed to `pkg.verify`. Additionally, `verify_options` can be used to modify further the behavior of `pkg.verify`. See examples below. Currently, this option is supported for the following pkg providers: *yumpkg*.

Examples:

```
httpd:
 pkg.installed:
 - version: 2.2.15-30.el6.centos
 - pkg_verify: True
```

```
mypkgs:
 pkg.installed:
 - pkgs:
 - foo
 - bar: 1.2.3-4
 - baz
 - pkg_verify:
 - ignore_types:
 - config
 - doc
```

```

mypkgs:
 pkg.installed:
 - pkgs:
 - foo
 - bar: 1.2.3-4
 - baz
 - pkg_verify:
 - ignore_types:
 - config
 - doc
 - verify_options:
 - nodeps
 - nofiledigest

```

**param list ignore\_types** List of types to ignore when verifying the package

New in version 2014.7.0.

**param list verify\_options** List of additional options to pass when verifying the package. These options will be added to the `rpm -V` command, prepended with `--` (for example, when `nodeps` is passed in this option, `rpm -V` will be run with `--nodeps`).

New in version 2016.11.0.

**param bool normalize** Normalize the package name by removing the architecture, if the architecture of the package is different from the architecture of the operating system. The ability to disable this behavior is useful for poorly-created packages which include the architecture as an actual part of the name, such as kernel modules which match a specific kernel version.

New in version 2014.7.0.

Example:

```

gpfs.gplbin-2.6.32-279.31.1.el6.x86_64:
 pkg.installed:
 - normalize: False

```

**param bool ignore\_epoch** When a package version contains a non-zero epoch (e.g. `1:3.14.159-2.el7`), and a specific version of a package is desired, set this option to `True` to ignore the epoch when comparing versions. This allows for the following SLS to be used:

```

Actual vim-enhanced version: 2:7.4.160-1.el7
vim-enhanced:
 pkg.installed:
 - version: 7.4.160-1.el7
 - ignore_epoch: True

```

Without this option set to `True` in the above example, the package would be installed, but the state would report as failed because the actual installed version would be `2:7.4.160-1.el7`. Alternatively, this option can be left as `False` and the full version string (with epoch) can be specified in the SLS file:

```

vim-enhanced:
 pkg.installed:
 - version: 2:7.4.160-1.el7

```

New in version 2015.8.9.

**MULTIPLE PACKAGE INSTALLATION OPTIONS: (not supported in pkgng)**

**param list pkgs** A list of packages to install from a software repository. All packages listed under `pkgs` will be installed via a single command.

```

mypkgs:
 pkg.installed:
 - pkgs:
 - foo
 - bar
 - baz
 - hold: True

```

**NOTE:** For *apt*, *ebuild*, *pacman*, *winrepo*, *yumpkg*, and *zypper*, version numbers can be specified in the `pkgs` argument. For example:

```

mypkgs:
 pkg.installed:
 - pkgs:
 - foo
 - bar: 1.2.3-4
 - baz

```

Additionally, *ebuild*, *pacman*, *zypper*, *yum/dnf*, and *apt* support the `<`, `<=`, `>=`, and `>` operators for more control over what versions will be installed. For example:

```

mypkgs:
 pkg.installed:
 - pkgs:
 - foo
 - bar: '>=1.2.3-4'
 - baz

```

**NOTE:** When using comparison operators, the expression must be enclosed in quotes to avoid a YAML render error.

With *ebuild* is also possible to specify a use flag list and/or if the given packages should be in `package.accept_keywords` file and/or the overlay from which you want the package to be installed. For example:

```

mypkgs:
 pkg.installed:
 - pkgs:
 - foo: '~'
 - bar: '~>=1.2:slot::overlay[use,-otheruse]'
 - baz

```

**param list sources** A list of packages to install, along with the source URI or local path from which to install each package. In the example below, `foo`, `bar`, `baz`, etc. refer to the name of the package, as it would appear in the output of the `pkg.version` or `pkg.list_pkgs` salt CLI commands.

```

mypkgs:
 pkg.installed:

```

(continues on next page)

(continued from previous page)

```

- sources:
 - foo: salt://rpms/foo.rpm
 - bar: http://somesite.org/bar.rpm
 - baz: ftp://someothersite.org/baz.rpm
 - qux: /minion/path/to/qux.rpm

```

## PLATFORM-SPECIFIC ARGUMENTS

These are specific to each OS. If it does not apply to the execution module for your OS, it is ignored.

**param bool hold** Force the package to be held at the current installed version. Currently works with YUM/DNF & APT based systems.

New in version 2014.7.0.

**param bool update\_holds** If `True`, and this function would update the package version, any packages which are being held will be temporarily unheld so that they can be updated. Otherwise, if this function attempts to update a held package, the held package(s) will be skipped and the state will fail. By default, this parameter is set to `False`.

Currently works with YUM/DNF & APT based systems.

New in version 2016.11.0.

**param list names** A list of packages to install from a software repository. Each package will be installed individually by the package manager.

**Warning:** Unlike `pkgs`, the `names` parameter cannot specify a version. In addition, it makes a separate call to the package management frontend to install each package, whereas `pkgs` makes just a single call. It is therefore recommended to use `pkgs` instead of `names` to install multiple packages, both for the additional features and the performance improvement that it brings.

**param bool install\_recommends** Whether to install the packages marked as recommended. Default is `True`. Currently only works with APT-based systems.

New in version 2015.5.0.

```

httpd:
 pkg.installed:
 - install_recommends: False

```

**param bool only\_upgrade** Only upgrade the packages, if they are already installed. Default is `False`. Currently only works with APT-based systems.

New in version 2015.5.0.

```

httpd:
 pkg.installed:
 - only_upgrade: True

```

**Note:** If this parameter is set to `True` and the package is not already installed, the state will fail.

Parameters **report\_reboot\_exit\_codes** (*bool*) –

If the installer exits with a recognized exit code indicating that a reboot is required, the module function

*win\_system.set\_reboot\_required\_witnessed*

will be called, preserving the knowledge of this event for the remainder of the current boot session. For the time being, 3010 is the only recognized exit code, but this is subject to future refinement. The value of this param defaults to `True`. This parameter has no effect on non-Windows systems.

New in version 2016.11.0.

```
ms vcpp installed:
 pkg.installed:
 - name: ms-vcpp
 - version: 10.0.40219
 - report_reboot_exit_codes: False
```

**return** A dictionary containing the state of the software installation  
**rtype** dict

---

**Note:** The `pkg.installed` state supports the usage of `reload_modules`. This functionality allows you to force Salt to reload all modules. In many cases, Salt is clever enough to transparently reload the modules. For example, if you install a package, Salt reloads modules because some other module or state might require the package which was installed. However, there are some edge cases where this may not be the case, which is what `reload_modules` is meant to resolve.

You should only use `reload_modules` if your `pkg.installed` does some sort of installation where if you do not reload the modules future items in your state which rely on the software being installed will fail. Please see the [Reloading Modules](#) documentation for more information.

---

`salt.states.pkg.latest`(*name*, *refresh=None*, *fromrepo=None*, *skip\_verify=False*, *pkgs=None*, *watch\_flags=True*, *\*\*kwargs*)

Ensure that the named package is installed and the latest available package. If the package can be updated, this state function will update the package. Generally it is better for the `installed` function to be used, as `latest` will update the package whenever a new package is available.

**name** The name of the package to maintain at the latest available version. This parameter is ignored if "pkgs" is used.

**fromrepo** Specify a repository from which to install

**skip\_verify** Skip the GPG verification check for the package to be installed

**refresh** This parameter controls whether or not the package repo database is updated prior to checking for the latest available version of the requested packages.

If `True`, the package database will be refreshed (`apt-get update` or equivalent, depending on platform) before checking for the latest available version of the requested packages.

If `False`, the package database will *not* be refreshed before checking.

If unset, then Salt treats package database refreshes differently depending on whether or not a `pkg` state has been executed already during the current Salt run. Once a refresh has been performed in a `pkg` state, for the remainder of that Salt run no other refreshes will be performed for `pkg` states which do not explicitly set `refresh` to `True`. This prevents needless additional refreshes from slowing down the Salt run.

**param str cache\_valid\_time** New in version 2016.11.0.

This parameter sets the value in seconds after which the cache is marked as

invalid, and a cache update is necessary. This overwrites the `refresh` parameter's default behavior.

Example:

```
httpd:
 pkg.latest:
 - refresh: True
 - cache_valid_time: 300
```

In this case, a refresh will not take place for 5 minutes since the last `apt-get` update was executed on the system.

---

**Note:** This parameter is available only on Debian based distributions and has no effect on the rest.

---

**param bool resolve\_capabilities** Turn on resolving capabilities. This allow one to name "provides" or alias names for packages.

New in version 2018.3.0.

Multiple Package Installation Options:

(Not yet supported for: FreeBSD, OpenBSD, MacOS, and Solaris pkgutil)

**pkgs** A list of packages to maintain at the latest available version.

```
mypkgs:
 pkg.latest:
 - pkgs:
 - foo
 - bar
 - baz
```

**install\_recommends** Whether to install the packages marked as recommended. Default is `True`. Currently only works with APT-based systems.

New in version 2015.5.0.

```
httpd:
 pkg.latest:
 - install_recommends: False
```

**only\_upgrade** Only upgrade the packages, if they are already installed. Default is `False`. Currently only works with APT-based systems.

New in version 2015.5.0.

```
httpd:
 pkg.latest:
 - only_upgrade: True
```

---

**Note:** If this parameter is set to `True` and the package is not already installed, the state will fail.

---

**report\_reboot\_exit\_codes** If the installer exits with a recognized exit code indicating that a reboot is required, the module function

*win\_system.set\_reboot\_required\_witnessed*

will be called, preserving the knowledge of this event for the remainder of the current boot session. For the time being, 3010 is the only recognized exit code, but this is subject to future refinement. The value of this param defaults to True. This parameter has no effect on non-Windows systems.

New in version 2016.11.0.

```
ms vcpp installed:
 pkg.latest:
 - name: ms-vcpp
 - report_reboot_exit_codes: False
```

`salt.states.pkg.mod_aggregate` (*low, chunks, running*)

The `mod_aggregate` function which looks up all packages in the available low chunks and merges them into a single pkgs ref in the present low data

`salt.states.pkg.mod_watch` (*name, \*\*kwargs*)

Install/reinstall a package based on a watch requisite

---

**Note:** This state exists to support special handling of the watch *requisite*. It should not be called directly.

Parameters for this function should be set by the state being triggered.

---

`salt.states.pkg.patch_downloaded` (*name, advisory\_ids=None, \*\*kwargs*)

New in version 2017.7.0.

Ensure that packages related to certain advisory ids are downloaded.

Currently supported for the following pkg providers: *yumpkg* and *zypper*

CLI Example:

```
preparing-to-fix-issues:
 pkg.patch_downloaded:
 - advisory_ids:
 - SUSE-SLE-SERVER-12-SP2-2017-185
 - SUSE-SLE-SERVER-12-SP2-2017-150
 - SUSE-SLE-SERVER-12-SP2-2017-120
```

`salt.states.pkg.patch_installed` (*name, advisory\_ids=None, downloadonly=None, \*\*kwargs*)

New in version 2017.7.0.

Ensure that packages related to certain advisory ids are installed.

Currently supported for the following pkg providers: *yumpkg* and *zypper*

CLI Example:

```
issue-foo-fixed:
 pkg.patch_installed:
 - advisory_ids:
 - SUSE-SLE-SERVER-12-SP2-2017-185
 - SUSE-SLE-SERVER-12-SP2-2017-150
 - SUSE-SLE-SERVER-12-SP2-2017-120
```

`salt.states.pkg.purged` (*name, version=None, pkgs=None, normalize=True, ignore\_epoch=False, \*\*kwargs*)

Verify that a package is not installed, calling `pkg.purge` if necessary to purge the package. All configuration files are also removed.

**name** The name of the package to be purged.

**version** The version of the package that should be removed. Don't do anything if the package is installed with an unmatching version.

---

**Important:** As of version 2015.8.7, for distros which use yum/dnf, packages which have a version with a nonzero epoch (that is, versions which start with a number followed by a colon like in the example above) must have the epoch included when specifying the version number. For example:

```
vim-enhanced:
 pkg.purged:
 - version: 2:7.4.160-1.el7
```

In version 2015.8.9, an `ignore_epoch` argument has been added to `pkg.installed`, `pkg.removed`, and `pkg.purged` states, which causes the epoch to be disregarded when the state checks to see if the desired version was installed. If `ignore_epoch` was not set to `True`, and instead of `2:7.4.160-1.el7` a version of `7.4.160-1.el7` were used, this state would report success since the actual installed version includes the epoch, and the specified version would not match.

---

**normalize** [True] Normalize the package name by removing the architecture, if the architecture of the package is different from the architecture of the operating system. The ability to disable this behavior is useful for poorly-created packages which include the architecture as an actual part of the name, such as kernel modules which match a specific kernel version.

New in version 2015.8.0.

**ignore\_epoch** [False] When a package version contains a non-zero epoch (e.g. `1:3.14.159-2.el7`, and a specific version of a package is desired, set this option to `True` to ignore the epoch when comparing versions. This allows for the following SLS to be used:

```
Actual vim-enhanced version: 2:7.4.160-1.el7
vim-enhanced:
 pkg.purged:
 - version: 7.4.160-1.el7
 - ignore_epoch: True
```

Without this option set to `True` in the above example, the state would falsely report success since the actual installed version is `2:7.4.160-1.el7`. Alternatively, this option can be left as `False` and the full version string (with epoch) can be specified in the SLS file:

```
vim-enhanced:
 pkg.purged:
 - version: 2:7.4.160-1.el7
```

New in version 2015.8.9.

Multiple Package Options:

**pkgs** A list of packages to purge. Must be passed as a python list. The `name` parameter will be ignored if this option is passed. It accepts version numbers as well.

New in version 0.16.0.

`salt.states.pkg.removed`(*name*, *version=None*, *pkgs=None*, *normalize=True*, *ignore\_epoch=False*, *\*\*kwargs*)

Verify that a package is not installed, calling `pkg.remove` if necessary to remove the package.

**name** The name of the package to be removed.

**version** The version of the package that should be removed. Don't do anything if the package is installed with an unmatching version.

---

**Important:** As of version 2015.8.7, for distros which use yum/dnf, packages which have a version with a nonzero epoch (that is, versions which start with a number followed by a colon like in the example

above) must have the epoch included when specifying the version number. For example:

```
vim-enhanced:
 pkg.removed:
 - version: 2:7.4.160-1.el7
```

In version 2015.8.9, an `ignore_epoch` argument has been added to `pkg.installed`, `pkg.removed`, and `pkg.purged` states, which causes the epoch to be disregarded when the state checks to see if the desired version was installed. If `ignore_epoch` was not set to `True`, and instead of `2:7.4.160-1.el7` a version of `7.4.160-1.el7` were used, this state would report success since the actual installed version includes the epoch, and the specified version would not match.

**normalize** [True] Normalize the package name by removing the architecture, if the architecture of the package is different from the architecture of the operating system. The ability to disable this behavior is useful for poorly-created packages which include the architecture as an actual part of the name, such as kernel modules which match a specific kernel version.

New in version 2015.8.0.

**ignore\_epoch** [False] When a package version contains a non-zero epoch (e.g. `1:3.14.159-2.el7`, and a specific version of a package is desired, set this option to `True` to ignore the epoch when comparing versions. This allows for the following SLS to be used:

```
Actual vim-enhanced version: 2:7.4.160-1.el7
vim-enhanced:
 pkg.removed:
 - version: 7.4.160-1.el7
 - ignore_epoch: True
```

Without this option set to `True` in the above example, the state would falsely report success since the actual installed version is `2:7.4.160-1.el7`. Alternatively, this option can be left as `False` and the full version string (with epoch) can be specified in the SLS file:

```
vim-enhanced:
 pkg.removed:
 - version: 2:7.4.160-1.el7
```

New in version 2015.8.9.

Multiple Package Options:

**pkgs** A list of packages to remove. Must be passed as a python list. The `name` parameter will be ignored if this option is passed. It accepts version numbers as well.

New in version 0.16.0.

`salt.states.pkg.uptodate` (*name*, *refresh=False*, *pkgs=None*, *\*\*kwargs*)

New in version 2014.7.0.

Changed in version 2018.3.0: Added support for the `pkgin` provider.

Verify that the system is completely up to date.

**name** The name has no functional value and is only used as a tracking reference

**refresh** refresh the package database before checking for new upgrades

**pkgs** list of packages to upgrade

Parameters

- **cache\_valid\_time** (*str*) – This parameter sets the value in seconds after which cache marked as invalid, and cache update is necessary. This overwrite `refresh` parameter default behavior.

In this case `cache_valid_time` is set, refresh will not take place for amount in seconds since last `apt-get update` executed on the system.

---

**Note:** This parameter available only on Debian based distributions, and have no effect on the rest.

---

- **resolve\_capabilities** (*bool*) – Turn on resolving capabilities. This allow one to name "provides" or alias names for packages.

New in version 2018.3.0.

**kwargs** Any keyword arguments to pass through to `pkg.upgrade`.

New in version 2015.5.0.

### 20.19.207 salt.states.pkgbuild

The `pkgbuild` state is the front of Salt package building backend. It automatically builds DEB and RPM packages from specified sources

New in version 2015.8.0.

```

salt_2015.5.2:
 pkgbuild.built:
 - runas: thatch
 - results:
 - salt-2015.5.2-2.el7.centos.noarch.rpm
 - salt-api-2015.5.2-2.el7.centos.noarch.rpm
 - salt-cloud-2015.5.2-2.el7.centos.noarch.rpm
 - salt-master-2015.5.2-2.el7.centos.noarch.rpm
 - salt-minion-2015.5.2-2.el7.centos.noarch.rpm
 - salt-ssh-2015.5.2-2.el7.centos.noarch.rpm
 - salt-syndic-2015.5.2-2.el7.centos.noarch.rpm
 - dest_dir: /tmp/pkg
 - spec: salt://pkg/salt/spec/salt.spec
 - template: jinja
 - deps:
 - salt://pkg/salt/sources/required_dependency.rpm
 - tgt: epel-7-x86_64
 - sources:
 - salt://pkg/salt/sources/logrotate.salt
 - salt://pkg/salt/sources/README.fedora
 - salt://pkg/salt/sources/salt-2015.5.2.tar.gz
 - salt://pkg/salt/sources/salt-2015.5.2-tests.patch
 - salt://pkg/salt/sources/salt-api
 - salt://pkg/salt/sources/salt-api.service
 - salt://pkg/salt/sources/salt-master
 - salt://pkg/salt/sources/salt-master.service
 - salt://pkg/salt/sources/salt-minion
 - salt://pkg/salt/sources/salt-minion.service
 - salt://pkg/salt/sources/saltpkg.sls
 - salt://pkg/salt/sources/salt-syndic
 - salt://pkg/salt/sources/salt-syndic.service
 - salt://pkg/salt/sources/SaltTesting-2015.5.8.tar.gz
/tmp/pkg:
 pkgbuild.repo

```

```
salt.states.pkgbuild.built(name, runas, dest_dir, spec, sources, tgt, template=None,
 deps=None, env=None, results=None, force=False, saltenv='base',
 log_dir='/var/log/salt/pkgbuild')
```

Ensure that the named package is built and exists in the named directory

**name** The name to track the build, the name value is otherwise unused

**runas** The user to run the build process as

**dest\_dir** The directory on the minion to place the built package(s)

**spec** The location of the spec file (used for rpms)

**sources** The list of package sources

**tgt** The target platform to run the build on

**template** Run the spec file through a templating engine

Changed in version 2015.8.2: This argument is now optional, allowing for no templating engine to be used if none is desired.

**deps** Packages required to ensure that the named package is built can be hosted on either the salt master server or on an HTTP or FTP server. Both HTTPS and HTTP are supported as well as downloading directly from Amazon S3 compatible URLs with both pre-configured and automatic IAM credentials

**env** A dictionary of environment variables to be set prior to execution. Example:

```
- env:
 DEB_BUILD_OPTIONS: 'nocheck'
```

**Warning:** The above illustrates a common PyYAML pitfall, that **yes**, **no**, **on**, **off**, **true**, and **false** are all loaded as boolean `True` and `False` values, and must be enclosed in quotes to be used as strings. More info on this (and other) PyYAML idiosyncrasies can be found [here](#).

**results** The names of the expected rpms that will be built

**force** [False] If `True`, packages will be built even if they already exist in the `dest_dir`. This is useful when building a package for continuous or nightly package builds.

New in version 2015.8.2.

**saltenv** The saltenv to use for files downloaded from the salt fileserver

**log\_dir** [/var/log/salt/rpmbuild] Root directory for log files created from the build. Logs will be organized by package name, version, OS release, and CPU architecture under this directory.

New in version 2015.8.2.

```
salt.states.pkgbuild.repo(name, keyid=None, env=None, use_passphrase=False,
 gnupghome='/etc/salt/gpgkeys', runas='builder', timeout=15.0)
```

Make a package repository and optionally sign it and packages present

The name is directory to turn into a repo. This state is best used with onchanges linked to your package building states.

**name** The directory to find packages that will be in the repository

**keyid** Changed in version 2016.3.0.

Optional Key ID to use in signing packages and repository. Utilizes Public and Private keys associated with `keyid` which have been loaded into the minion's Pillar data.

For example, contents from a Pillar data file with named Public and Private keys as follows:

```
gpg_pkg_priv_key: |
 -----BEGIN PGP PRIVATE KEY BLOCK-----
 Version: GnuPG v1

 lQ0+BFciIfQBCADAPctzx7I5Rl32escCMZsPzaEKWe7bIX1em4KCKkBoX47IG54b
 w82PCE8Y1jF/9Uk2m3RKVWp3YcLlc7Ap3gj6V04ysvVz28UbnhPxsIk0lf2cq8qc
```

(continues on next page)

(continued from previous page)

```

.
.
Ebe+8JCQTWqSXPRTzXmy/b5WXDeM79CkLWvuGpXFor76D+ECMRPv/rawukEcNptn
R50mgHqvdyEn04pWbn8JzQ09YX/Us0SMHBVzLC8eIi5ZIopzalvX
=JvW8
-----END PGP PRIVATE KEY BLOCK-----

gpg_pkg_priv_keyname: gpg_pkg_key.pem

gpg_pkg_pub_key: |
-----BEGIN PGP PUBLIC KEY BLOCK-----
Version: GnuPG v1

mQENBFciIfQBCADAPctzx7I5Rl32escCMZsPzaEKWe7bIX1em4KCKkBoX47IG54b
w82PCE8Y1jF/9Uk2m3RKVWp3YcLlc7Ap3gj6V04ysvVz28UbnhPxsIk0lf2cq8qc
.
.
bYP7t5iwJmQzRMyFInYRt77wkJBPCpJc9FPNebL9vLZcN4zv0KQta+4alcWivvoP
4QIxE+/+trC6QRw2m2dHk6aAeq/J0Sc7ilZufwnNA71hf9SzRIwcFXMsLx4iLlki
inNqW9c=
=s1CX
-----END PGP PUBLIC KEY BLOCK-----

gpg_pkg_pub_keyname: gpg_pkg_key.pub

```

**env** Changed in version 2016.3.0.

A dictionary of environment variables to be utilized in creating the repository. Example:

```
- env:
 OPTIONS: 'ask-passphrase'
```

**Warning:** The above illustrates a common PyYAML pitfall, that **yes**, **no**, **on**, **off**, **true**, and **false** are all loaded as boolean `True` and `False` values, and must be enclosed in quotes to be used as strings. More info on this (and other) PyYAML idiosyncrasies can be found [here](#).

Use of `OPTIONS` on some platforms, for example: `ask-passphrase`, will require `gpg-agent` or similar to cache passphrases.

---

**Note:** This parameter is not used for making yum repositories.

---

**use\_passphrase** [False] New in version 2016.3.0.

Use a passphrase with the signing key presented in `keyid`. Passphrase is received from Pillar data which could be passed on the command line with `pillar` parameter. For example:

```
pillar='{ "gpg_passphrase" : "my_passphrase" }'
```

**gnupghome** [/etc/salt/gpgkeys] New in version 2016.3.0.

Location where GPG related files are stored, used with 'keyid'

**runas** [builder] New in version 2016.3.0.

User to create the repository as, and optionally sign packages.

---

**Note:** Ensure the user has correct permissions to any files and directories which are to be utilized.

---

**timeout** [15.0] New in version 2016.3.4.

Timeout in seconds to wait for the prompt for inputting the passphrase.

## 20.19.208 salt.states.pkgng

### Manage package remote repo using FreeBSD pkgng

Salt can manage the URL pkgng pulls packages from. ATM the state and module are small so use cases are typically rather simple:

```
pkgng_clients:
 pkgng.update_packaging_site:
 - name: "http://192.168.0.2"
```

`salt.states.pkgng.update_packaging_site`(*name*)

## 20.19.209 salt.states.pkgrepo

### Management of APT/DNF/YUM/Zypper package repos

States for managing software package repositories on Linux distros. Supported package managers are APT, DNF, YUM and Zypper. Here is some example SLS:

```
base:
 pkgrepo.managed:
 - humaname: CentOS-$releasever - Base
 - mirrorlist: http://mirrorlist.centos.org/?release=$releasever&arch=$basearch&
↪repo=os
 - comments:
 - 'http://mirror.centos.org/centos/$releasever/os/$basearch/'
 - gpgcheck: 1
 - gpgkey: file:///etc/pki/rpm-gpg/RPM-GPG-KEY-CentOS-6
```

```
base:
 pkgrepo.managed:
 - humaname: Logstash PPA
 - name: deb http://ppa.launchpad.net/wolfnet/logstash/ubuntu precise main
 - dist: precise
 - file: /etc/apt/sources.list.d/logstash.list
 - keyid: 28B04E4A
 - keyserver: keyserver.ubuntu.com
 - require_in:
 - pkg: logstash

 pkg.latest:
 - name: logstash
 - refresh: True
```

```
base:
 pkgrepo.managed:
 - humaname: deb-multimedia
 - name: deb http://www.deb-multimedia.org stable main
 - file: /etc/apt/sources.list.d/deb-multimedia.list
 - key_url: salt://deb-multimedia/files/marillat.pub
```

```
base:
 pkgrepo.managed:
 - humaname: Google Chrome
 - name: deb http://dl.google.com/linux/chrome/deb/ stable main
 - dist: stable
 - file: /etc/apt/sources.list.d/chrome-browser.list
 - require_in:
 - pkg: google-chrome-stable
 - gpgcheck: 1
 - key_url: https://dl-ssl.google.com/linux/linux_signing_key.pub
```

```
base:
 pkgrepo.managed:
 - ppa: wolfnet/logstash
 pkg.latest:
 - name: logstash
 - refresh: True
```

**Note:** On Ubuntu systems, the `python-software-properties` package should be installed for better support of PPA repositories. To check if this package is installed, run `dpkg -l python-software-properties`.

Also, some Ubuntu releases have a [bug](#) in their `python-software-properties` package, a missing dependency on `pycurl`, so `python-pycurl` will need to be manually installed if it is not present once `python-software-properties` is installed.

On Ubuntu & Debian systems, the `python-apt` package is required to be installed. To check if this package is installed, run `dpkg -l python-apt`. `python-apt` will need to be manually installed if it is not present.

`salt.states.pkgrepo.absent` (*name*, *\*\*kwargs*)

This function deletes the specified repo on the system, if it exists. It is essentially a wrapper around `pkg.del_repo`.

**name** The name of the package repo, as it would be referred to when running the regular package manager commands.

#### UBUNTU-SPECIFIC OPTIONS

**ppa** On Ubuntu, you can take advantage of Personal Package Archives on Launchpad simply by specifying the user and archive name.

```
logstash-ppa:
 pkgrepo.absent:
 - ppa: wolfnet/logstash
```

**ppa\_auth** For Ubuntu PPAs there can be private PPAs that require authentication to access. For these PPAs the username/password can be specified. This is required for matching if the name format uses the `ppa:` specifier and is private (requires username/password to access, which is encoded in the URI).

```
logstash-ppa:
 pkgrepo.absent:
```

(continues on next page)

(continued from previous page)

- **ppa**: wolfnets/logstash
- **ppa\_auth**: username:password

**keyid** If passed, then the GPG key corresponding to the passed KeyID will also be removed.

**keyid\_ppa** [False] If set to True, the GPG key's ID will be looked up from ppa.launchpad.net and removed, and the `keyid` argument will be ignored.

---

**Note:** This option will be disregarded unless the `ppa` argument is present.

---

`salt.states.pkgrepo.managed`(*name*, *ppa=None*, *\*\*kwargs*)

This state manages software package repositories. Currently, *yum*, *apt*, and *zypper* repositories are supported.

#### YUM/DNF/ZYPPER-BASED SYSTEMS

---

**Note:** One of `baseurl` or `mirrorlist` below is required. Additionally, note that this state is not presently capable of managing more than one repo in a single repo file, so each instance of this state will manage a single repo file containing the configuration for a single repo.

---

**name** This value will be used in two ways: Firstly, it will be the repo ID, as seen in the entry in square brackets (e.g. [foo]) for a given repo. Secondly, it will be the name of the file as stored in /etc/yum.repos.d (e.g. /etc/yum.repos.d/foo.conf).

**enabled** [True] Whether or not the repo is enabled. Can be specified as True/False or 1/0.

**disabled** [False] Included to reduce confusion due to APT's use of the `disabled` argument. If this is passed for a YUM/DNF/Zypper-based distro, then the reverse will be passed as `enabled`. For example passing `disabled=True` will assume `enabled=False`.

**humanname** This is used as the "name" value in the repo file in /etc/yum.repos.d/ (or /etc/zypp/repos.d for SUSE distros).

**baseurl** The URL to a yum repository

**mirrorlist** A URL which points to a file containing a collection of baseurls

**comments** Sometimes you want to supply additional information, but not as enabled configuration. Anything supplied for this list will be saved in the repo configuration with a comment marker (#) in front.

**gpgautoimport** Only valid for Zypper package manager. If set to True, automatically trust and import public GPG key for the repository. The key should be specified with `gpgkey` parameter. See details below.

Additional configuration values seen in YUM/DNF/Zypper repo files, such as `gpgkey` or `gpgcheck`, will be used directly as key-value pairs. For example:

```
foo:
 pkgrepo.managed:
 - humanname: Personal repo for foo
 - baseurl: https://mydomain.tld/repo/foo/$releasever/$basearch
 - gpgkey: file:///etc/pki/rpm-gpg/foo-signing-key
 - gpgcheck: 1
```

#### APT-BASED SYSTEMS

**ppa** On Ubuntu, you can take advantage of Personal Package Archives on Launchpad simply by specifying the user and archive name. The `keyid` will be queried from launchpad and everything else is set automatically. You can override any of the below settings by simply setting them as you would normally. For example:

```
logstash-ppa:
 pkgrepo.managed:
 - ppa: wolfnet/logstash
```

**ppa\_auth** For Ubuntu PPAs there can be private PPAs that require authentication to access. For these PPAs the username/password can be passed as an HTTP Basic style username/password combination.

```
logstash-ppa:
 pkgrepo.managed:
 - ppa: wolfnet/logstash
 - ppa_auth: username:password
```

**name** On apt-based systems this must be the complete entry as it would be seen in the sources.list file. This can have a limited subset of components (i.e. 'main') which can be added/modified with the `comps` option.

```
precise-repo:
 pkgrepo.managed:
 - name: deb http://us.archive.ubuntu.com/ubuntu precise main
```

**Note:** The above example is intended as a more readable way of configuring the SLS, it is equivalent to the following:

```
'deb http://us.archive.ubuntu.com/ubuntu precise main':
 pkgrepo.managed
```

**disabled** [False] Toggles whether or not the repo is used for resolving dependencies and/or installing packages.  
**enabled** [True] Included to reduce confusion due to YUM/DNF/Zypper's use of the `enabled` argument. If this is passed for an APT-based distro, then the reverse will be passed as `disabled`. For example, passing `enabled=False` will assume `disabled=False`.

**architectures** On apt-based systems, architectures can restrict the available architectures that the repository provides (e.g. only amd64). architectures should be a comma-separated list.

**comps** On apt-based systems, comps dictate the types of packages to be installed from the repository (e.g. main, nonfree, ...). For purposes of this, comps should be a comma-separated list.

**file** The filename for the .list that the repository is configured in. It is important to include the full-path AND make sure it is in a directory that APT will look in when handling packages

**dist** This dictates the release of the distro the packages should be built for. (e.g. unstable). This option is rarely needed.

**keyid** The KeyID of the GPG key to install. This option also requires the `keyserver` option to be set.

**keyserver** This is the name of the keyserver to retrieve gpg keys from. The `keyid` option must also be set for this option to work.

**key\_url** URL to retrieve a GPG key from. Allows the usage of `http://`, `https://` as well as `salt://`.

**Note:** Use either `keyid/keyserver` or `key_url`, but not both.

#### key\_text

The string representation of the GPG key to install.

New in version 2018.3.0.

**Note:** Use either `keyid/keyserver`, `key_url`, or `key_text` but not more than one method.

**consolidate** [False] If set to `True`, this will consolidate all sources definitions to the sources.list file, cleanup the now unused files, consolidate components (e.g. main) for the same URI, type, and architecture to a

single line, and finally remove comments from the sources.list file. The consolidate will run every time the state is processed. The option only needs to be set on one repo managed by salt to take effect.

**clean\_file** [False] If set to True, empty the file before config repo

---

**Note:** Use with care. This can be dangerous if multiple sources are configured in the same file.

---

New in version 2015.8.0.

**refresh** [True] If set to False this will skip refreshing the apt package database on debian based systems.

**refresh\_db** [True] Deprecated since version 2018.3.0: Use **refresh** instead.

**require\_in** Set this to a list of pkg.installed or pkg.latest to trigger the running of apt-get update prior to attempting to install these packages. Setting a require in the pkg state will not work for this.

### 20.19.210 salt.states.portage\_config

#### Management of Portage package configuration on Gentoo

A state module to manage Portage configuration on Gentoo

```
salt:
 portage_config.flags:
 - use:
 - openssl
```

**salt.states.portage\_config.flags**(*name*, *use=None*, *accept\_keywords=None*, *env=None*, *license=None*, *properties=None*, *unmask=False*, *mask=False*)

Enforce the given flags on the given package or DEPEND atom.

**Warning:** In most cases, the affected package(s) need to be rebuilt in order to apply the changes.

**name** The name of the package or its DEPEND atom

**use** A list of USE flags

**accept\_keywords** A list of keywords to accept. ~ARCH means current host arch, and will be translated into a line without keywords

**env** A list of environment files

**license** A list of accepted licenses

**properties** A list of additional properties

**unmask** A boolean to unmask the package

**mask** A boolean to mask the package

### 20.19.211 salt.states.ports

Manage software from FreeBSD ports

New in version 2014.1.0.

---

**Note:** It may be helpful to use a higher timeout when running a `ports.installed` state, since compiling the port may exceed Salt's timeout.

```
salt -t 1200 '*' state.highstate
```

---

`salt.states.ports.installed` (*name*, *options=None*)

Verify that the desired port is installed, and that it was compiled with the desired options.

**options** Make sure that the desired non-default options are set

**Warning:** Any build options not passed here assume the default values for the port, and are not just differences from the existing cached options from a previous `make config`.

Example usage:

```
security/nmap:
 ports.installed:
 - options:
 - IPV6: off
```

## 20.19.212 salt.states.postgres\_cluster module

### Management of PostgreSQL clusters

The `postgres_cluster` state module is used to manage PostgreSQL clusters. Clusters can be set as either absent or present

```
create cluster 9.3 main:
 postgres_cluster.present:
 - name: 'main'
 - version: '9.3'
```

`salt.states.postgres_cluster.absent` (*version*, *name*)

Ensure that the named cluster is absent

**version** Version of the postgresql server of the cluster to remove

**name** The name of the cluster to remove

New in version 2015.XX.

`salt.states.postgres_cluster.present` (*version*, *name*, *port=None*, *encoding=None*, *locale=None*, *datadir=None*)

Ensure that the named cluster is present with the specified properties. For more information about all of these options see `man pg_createcluster(1)`

**version** Version of the postgresql cluster

**name** The name of the cluster

**port** Cluster port

**encoding** The character encoding scheme to be used in this database

**locale** Locale with which to create cluster

**datadir** Where the cluster is stored

New in version 2015.XX.

## 20.19.213 salt.states.postgres\_database

### Management of PostgreSQL databases

The `postgres_database` module is used to create and manage Postgres databases. Databases can be set as either absent or present

```
frank:
 postgres_database.present
```

```
salt.states.postgres_database.absent(name, user=None, maintenance_db=None,
 db_password=None, db_host=None, db_port=None,
 db_user=None)
```

Ensure that the named database is absent

**name** The name of the database to remove

**db\_user** database username if different from config or default

**db\_password** user password if any password for a specified user

**db\_host** Database host if different from config or default

**db\_port** Database port if different from config or default

**user** System user all operations should be performed on behalf of

New in version 0.17.0.

```
salt.states.postgres_database.present(name, tablespace=None, encoding=None,
 lc_collate=None, lc_ctype=None, owner=None,
 owner_recurse=False, template=None, user=None,
 maintenance_db=None, db_password=None,
 db_host=None, db_port=None, db_user=None)
```

Ensure that the named database is present with the specified properties. For more information about all of these options see `man createdb(1)`

**name** The name of the database to manage

**tablespace** Default tablespace for the database

**encoding** The character encoding scheme to be used in this database

**lc\_collate** The LC\_COLLATE setting to be used in this database

**lc\_ctype** The LC\_CTYPE setting to be used in this database

**owner** The username of the database owner

**owner\_recurse** Recurse owner change to all relations in the database

**template** The template database from which to build this database

**user** System user all operations should be performed on behalf of

**db\_user** database username if different from config or default

**db\_password** user password if any password for a specified user

**db\_host** Database host if different from config or default

**db\_port** Database port if different from config or default

New in version 0.17.0.

## 20.19.214 salt.states.postgres\_extension

### Management of PostgreSQL extensions

A module used to install and manage PostgreSQL extensions.

```
adminpack:
 postgres_extension.present
```

New in version 2014.7.0.

```
salt.states.postgres_extension.absent(name, if_exists=None, restrict=None, cascade=None,
 user=None, maintenance_db=None, db_user=None,
 db_password=None, db_host=None, db_port=None)
```

Ensure that the named extension is absent.

**name** Extension name of the extension to remove

**if\_exists** Add if exist slug  
**restrict** Add restrict slug  
**cascade** Drop on cascade  
**user** System user all operations should be performed on behalf of  
**maintenance\_db** Database to act on  
**db\_user** Database username if different from config or default  
**db\_password** User password if any password for a specified user  
**db\_host** Database host if different from config or default  
**db\_port** Database port if different from config or default

```

salt.states.postgres_extension.present(name, if_not_exists=None, schema=None,
 ext_version=None, from_version=None,
 user=None, maintenance_db=None, db_user=None,
 db_password=None, db_host=None, db_port=None)

```

Ensure that the named extension is present.

---

**Note:** Before you can use the state to load an extension into a database, the extension's supporting files must be already installed.

---

For more information about all of these options see CREATE EXTENSION SQL command reference in the PostgreSQL documentation.

**name** The name of the extension to be installed  
**if\_not\_exists** Add an IF NOT EXISTS parameter to the DDL statement  
**schema** Schema to install the extension into  
**ext\_version** Version to install  
**from\_version** Old extension version if already installed  
**user** System user all operations should be performed on behalf of  
**maintenance\_db** Database to act on  
**db\_user** Database username if different from config or default  
**db\_password** User password if any password for a specified user  
**db\_host** Database host if different from config or default  
**db\_port** Database port if different from config or default

### 20.19.215 salt.states.postgres\_group

#### Management of PostgreSQL groups (roles)

The postgres\_group module is used to create and manage Postgres groups.

```

frank:
 postgres_group.present

```

```

salt.states.postgres_group.absent(name, user=None, maintenance_db=None,
 db_password=None, db_host=None, db_port=None,
 db_user=None)

```

Ensure that the named group is absent

**name** The groupname of the group to remove  
**user** System user all operations should be performed on behalf of

New in version 0.17.0.

**db\_user** database username if different from config or default  
**db\_password** user password if any password for a specified user  
**db\_host** Database host if different from config or default  
**db\_port** Database port if different from config or default

`salt.states.postgres_group.present` (*name*, *createdb=None*, *createroles=None*, *createuser=None*, *encrypted=None*, *superuser=None*, *inherit=None*, *login=None*, *replication=None*, *password=None*, *refresh\_password=None*, *groups=None*, *user=None*, *maintenance\_db=None*, *db\_password=None*, *db\_host=None*, *db\_port=None*, *db\_user=None*)

Ensure that the named group is present with the specified privileges Please note that the user/group notion in postgresql is just abstract, we have roles, where users can be seen as roles with the LOGIN privilege and groups the others.

**name** The name of the group to manage

**createdb** Is the group allowed to create databases?

**createroles** Is the group allowed to create other roles/users

**createuser** Alias to create roles, and history problem, in pgsqll normally createuser == superuser

**encrypted** Should the password be encrypted in the system catalog?

**login** Should the group have login perm

**inherit** Should the group inherit permissions

**superuser** Should the new group be a "superuser"

**replication** Should the new group be allowed to initiate streaming replication

**password** The group's password It can be either a plain string or a md5 postgresql hashed password:

```
'md5{MD5OF({password}{role}}'
```

If encrypted is `None` or `True`, the password will be automatically encrypted to the previous format if it is not already done.

**refresh\_password** Password refresh flag

Boolean attribute to specify whether to password comparison check should be performed.

If refresh\_password is `True`, the password will be automatically updated without extra password change check.

This behaviour makes it possible to execute in environments without superuser access available, e.g. Amazon RDS for PostgreSQL

**groups** A string of comma separated groups the group should be in

**user** System user all operations should be performed on behalf of

New in version 0.17.0.

**db\_user** database username if different from config or default

**db\_password** user password if any password for a specified user

**db\_host** Database host if different from config or default

**db\_port** Database port if different from config or default

## 20.19.216 salt.states.postgres\_initdb

### Initialization of PostgreSQL data directory

The postgres\_initdb module is used to initialize the postgresql data directory.

New in version 2016.3.0.

```
pgsql-data-dir:
postgres_initdb.present:
- name: /var/lib/pgsql/data
- auth: password
- user: postgres
- password: strong_password
```

(continues on next page)

(continued from previous page)

- **encoding:** UTF8
- **locale:** C
- **runas:** postgres

`salt.states.postgres_initdb.present` (*name*, *user=None*, *password=None*, *auth='password'*, *encoding='UTF8'*, *locale=None*, *runas=None*)

Initialize the PostgreSQL data directory

**name** The name of the directory to initialize

**user** The database superuser name

**password** The password to set for the postgres user

**auth** The default authentication method for local connections

**encoding** The default encoding for new databases

**locale** The default locale for new databases

**runas** The system user the operation should be performed on behalf of

### 20.19.217 salt.states.postgres\_language

#### Management of PostgreSQL languages

The `postgres_language` module is used to create and manage Postgres languages. Languages can be set as either absent or present

New in version 2016.3.0.

```
plpgsql:
postgres_language.present:
- maintenance_db: testdb
```

```
plpgsql:
postgres_language.absent:
- maintenance_db: testdb
```

`salt.states.postgres_language.absent` (*name*, *maintenance\_db*, *user=None*, *db\_password=None*, *db\_host=None*, *db\_port=None*, *db\_user=None*)

Ensure that a named language is absent in the specified database.

**name** The name of the language to remove

**maintenance\_db** The name of the database in which the language is to be installed

**user** System user all operations should be performed on behalf of

**db\_user** database username if different from config or default

**db\_password** user password if any password for a specified user

**db\_host** Database host if different from config or default

**db\_port** Database port if different from config or default

`salt.states.postgres_language.present` (*name*, *maintenance\_db*, *user=None*, *db\_password=None*, *db\_host=None*, *db\_port=None*, *db\_user=None*)

Ensure that a named language is present in the specified database.

**name** The name of the language to install

**maintenance\_db** The name of the database in which the language is to be installed

**user** System user all operations should be performed on behalf of

**db\_user** database username if different from config or default

**db\_password** user password if any password for a specified user

**db\_host** Database host if different from config or default

**db\_port** Database port if different from config or default

## 20.19.218 salt.states.postgres\_privileges

### Management of PostgreSQL Privileges

The postgres\_privileges module is used to manage Postgres privileges. Privileges can be set as either absent or present.

Privileges can be set on the following database object types:

- database
- schema
- tablespace
- table
- sequence
- language
- group

Setting the grant option is supported as well.

New in version 2016.3.0.

```
baruwa:
 postgres_privileges.present:
 - object_name: awl
 - object_type: table
 - privileges:
 - SELECT
 - INSERT
 - DELETE
 - grant_option: False
 - prepend: public
 - maintenance_db: testdb
```

```
andrew:
 postgres_privileges.present:
 - object_name: admins
 - object_type: group
 - grant_option: False
 - maintenance_db: testdb
```

```
baruwa:
 postgres_privileges.absent:
 - object_name: awl
 - object_type: table
 - privileges:
 - SELECT
 - INSERT
 - DELETE
 - prepend: public
 - maintenance_db: testdb
```

```
andrew:
 postgres_privileges.absent:
 - object_name: admins
```

(continues on next page)

(continued from previous page)

- **object\_type**: group
- **maintenance\_db**: testdb

`salt.states.postgres_privileges.absent`(*name*, *object\_name*, *object\_type*, *privileges=None*, *prepend='public'*, *maintenance\_db=None*, *user=None*, *db\_password=None*, *db\_host=None*, *db\_port=None*, *db\_user=None*)

Revoke the requested privilege(s) on the specified object(s)

**name** Name of the role whose privileges should be revoked

**object\_name** Name of the object on which the revoke is to be performed

**object\_type** The object type, which can be one of the following:

- table
- sequence
- schema
- tablespace
- language
- database
- group
- function

View permissions should specify *object\_type: table*.

**privileges** Comma separated list of privileges to revoke, from the list below:

- INSERT
- CREATE
- TRUNCATE
- CONNECT
- TRIGGER
- SELECT
- USAGE
- TEMPORARY
- UPDATE
- EXECUTE
- REFERENCES
- DELETE
- ALL

**note** privileges should not be set when revoking group membership

**prepend** Table and Sequence object types live under a schema so this should be provided if the object is not under the default *public* schema

**maintenance\_db** The name of the database in which the language is to be installed

**user** System user all operations should be performed on behalf of

**db\_user** database username if different from config or default

**db\_password** user password if any password for a specified user

**db\_host** Database host if different from config or default

**db\_port** Database port if different from config or default

`salt.states.postgres_privileges.present`(*name*, *object\_name*, *object\_type*, *privileges=None*, *grant\_option=None*, *prepend='public'*, *maintenance\_db=None*, *user=None*, *db\_password=None*, *db\_host=None*, *db\_port=None*, *db\_user=None*)

Grant the requested privilege(s) on the specified object to a role

**name** Name of the role to which privileges should be granted

**object\_name** Name of the object on which the grant is to be performed. 'ALL' may be used for objects of type 'table' or 'sequence'.

**object\_type** The object type, which can be one of the following:

- table
- sequence
- schema
- tablespace
- language
- database
- group
- function

View permissions should specify *object\_type*: *table*.

**privileges** List of privileges to grant, from the list below:

- INSERT
- CREATE
- TRUNCATE
- CONNECT
- TRIGGER
- SELECT
- USAGE
- TEMPORARY
- UPDATE
- EXECUTE
- REFERENCES
- DELETE
- ALL

**note** privileges should not be set when granting group membership

**grant\_option** If grant\_option is set to True, the recipient of the privilege can in turn grant it to others

**prepend** Table and Sequence object types live under a schema so this should be provided if the object is not under the default *public* schema

**maintenance\_db** The name of the database in which the language is to be installed

**user** System user all operations should be performed on behalf of

**db\_user** database username if different from config or default

**db\_password** user password if any password for a specified user

**db\_host** Database host if different from config or default

**db\_port** Database port if different from config or default

## 20.19.219 salt.states.postgres\_schema

### Management of PostgreSQL schemas

The postgres\_schemas module is used to create and manage Postgres schemas.

```
public:
postgres_schema.present 'dbname' 'name'
```

```
salt.states.postgres_schema.absent(dbname, name, user=None, db_user=None,
db_password=None, db_host=None, db_port=None)
```

Ensure that the named schema is absent.

**dbname** The database's name will work on

**name** The name of the schema to remove

**user** system user all operations should be performed on behalf of

**db\_user** database username if different from config or default

**db\_password** user password if any password for a specified user

**db\_host** Database host if different from config or default

**db\_port** Database port if different from config or default

`salt.states.postgres_schema.present` (*dbname, name, owner=None, user=None, db\_user=None, db\_password=None, db\_host=None, db\_port=None*)

Ensure that the named schema is present in the database.

**dbname** The database's name will work on

**name** The name of the schema to manage

**user** system user all operations should be performed on behalf of

**db\_user** database username if different from config or default

**db\_password** user password if any password for a specified user

**db\_host** Database host if different from config or default

**db\_port** Database port if different from config or default

## 20.19.220 salt.states.postgres\_tablespace

### Management of PostgreSQL tablespace

A module used to create and manage PostgreSQL tablespaces.

```

ssd-tablespace:
 postgres_tablespace.present:
 - name: indexes
 - directory: /mnt/ssd-data

```

New in version 2015.8.0.

`salt.states.postgres_tablespace.absent` (*name, user=None, maintenance\_db=None, db\_user=None, db\_password=None, db\_host=None, db\_port=None*)

Ensure that the named tablespace is absent.

**name** The name of the tablespace to remove

**user** System user all operations should be performed on behalf of

**maintenance\_db** Database to act on

**db\_user** Database username if different from config or default

**db\_password** User password if any password for a specified user

**db\_host** Database host if different from config or default

**db\_port** Database port if different from config or default

`salt.states.postgres_tablespace.present` (*name, directory, options=None, owner=None, user=None, maintenance\_db=None, db\_password=None, db\_host=None, db\_port=None, db\_user=None*)

Ensure that the named tablespace is present with the specified properties. For more information about all of these options run `man 7 create_tablespace`.

**name** The name of the tablespace to create/manage.

**directory** The directory where the tablespace will be located, must already exist

**options** A dictionary of options to specify for the tablespace. Currently, the only tablespace options supported are `seq_page_cost` and `random_page_cost`. Default values are shown in the example below:

```

my_space:
 postgres_tablespace.present:
 - directory: /srv/my_tablespace
 - options:
 seq_page_cost: 1.0
 random_page_cost: 4.0

```

**owner** The database user that will be the owner of the tablespace. Defaults to the user executing the command (i.e. the `user` option)

**user** System user all operations should be performed on behalf of  
**maintenance\_db** Database to act on  
**db\_user** Database username if different from config or default  
**db\_password** User password if any password for a specified user  
**db\_host** Database host if different from config or default  
**db\_port** Database port if different from config or default

### 20.19.221 salt.states.postgres\_user

#### Management of PostgreSQL users (roles)

The postgres\_users module is used to create and manage Postgres users.

```
frank:
 postgres_user.present
```

**salt.states.postgres\_user.absent** (*name, user=None, maintenance\_db=None, db\_password=None, db\_host=None, db\_port=None, db\_user=None*)

Ensure that the named user is absent

**name** The username of the user to remove

**user** System user all operations should be performed on behalf of

New in version 0.17.0.

**db\_user** database username if different from config or default

**db\_password** user password if any password for a specified user

**db\_host** Database host if different from config or default

**db\_port** Database port if different from config or default

**salt.states.postgres\_user.present** (*name, createdb=None, createroles=None, createuser=None, encrypted=None, superuser=None, replication=None, inherit=None, login=None, password=None, default\_password=None, refresh\_password=None, valid\_until=None, groups=None, user=None, maintenance\_db=None, db\_password=None, db\_host=None, db\_port=None, db\_user=None*)

Ensure that the named user is present with the specified privileges Please note that the user/group notion in postgresql is just abstract, we have roles, where users can be seen as roles with the LOGIN privilege and groups the others.

**name** The name of the system user to manage.

**createdb** Is the user allowed to create databases?

**createroles** Is the user allowed to create other users?

**createuser** Alias to create roles

**encrypted** Should the password be encrypted in the system catalog?

**login** Should the group have login perm

**inherit** Should the group inherit permissions

**superuser** Should the new user be a "superuser"

**replication** Should the new user be allowed to initiate streaming replication

**password** The system user's password. It can be either a plain string or a md5 postgresql hashed password:

```
'md5{MD50F({password}{role}}'
```

If encrypted is None or True, the password will be automatically encrypted to the previous format if it is not already done.

**default\_password** The password used only when creating the user, unless password is set.

New in version 2016.3.0.

**refresh\_password** Password refresh flag

Boolean attribute to specify whether to password comparison check should be performed.

If `refresh_password` is `True`, the password will be automatically updated without extra password change check.

This behaviour makes it possible to execute in environments without superuser access available, e.g. Amazon RDS for PostgreSQL

**valid\_until** A date and time after which the role's password is no longer valid.

**groups** A string of comma separated groups the user should be in

**user** System user all operations should be performed on behalf of

New in version 0.17.0.

**db\_user** Postgres database username, if different from config or default.

**db\_password** Postgres user's password, if any password, for a specified `db_user`.

**db\_host** Postgres database host, if different from config or default.

**db\_port** Postgres database port, if different from config or default.

### 20.19.222 salt.states.powerpath

#### Powerpath configuration support

Allows configuration of EMC Powerpath. Currently only addition/deletion of licenses is supported.

**key:**

```
powerpath.license_present: []
```

`salt.states.powerpath.license_absent` (*name*)

Ensures that the specified PowerPath license key is absent on the host.

**name** The license key to ensure is absent

`salt.states.powerpath.license_present` (*name*)

Ensures that the specified PowerPath license key is present on the host.

**name** The license key to ensure is present

### 20.19.223 salt.states.probes

#### Network Probes

Configure RPM (JunOS)/SLA (Cisco) probes on the device via NAPALM proxy.

**codeauthor** Mircea Ulinic <mircea@cloudflare.com> & Jerome Fleury <jf@cloudflare.com>

**maturity** new

**depends** napalm

**platform** unix

#### Dependencies

- `napalm probes management module`

`salt.states.probes.managed`(*name, probes, defaults=None*)

Ensure the networks device is configured as specified in the state SLS file. Probes not specified will be removed, while probes not configured as expected will trigger config updates.

#### Parameters

- **probes** – Defines the probes as expected to be configured on the device. In order to ease the configuration and avoid repeating the same parameters for each probe, the next parameter (`defaults`) can be used, providing common characteristics.
- **defaults** – Specifies common parameters for the probes.

SLS Example:

```
rpmprobes:
 probes.managed:
 - probes:
 probe_name1:
 probe1_test1:
 source: 192.168.0.2
 target: 192.168.0.1
 probe1_test2:
 target: 172.17.17.1
 probe1_test3:
 target: 8.8.8.8
 probe_type: http-ping
 probe_name2:
 probe2_test1:
 test_interval: 100
 - defaults:
 target: 10.10.10.10
 probe_count: 15
 test_interval: 3
 probe_type: icmp-ping
```

In the probes configuration, the only mandatory attribute is `target` (specified either in probes configuration, either in the defaults dictionary). All the other parameters will use the operating system defaults, if not provided:

- `source` - Specifies the source IP Address to be used during the tests. If not specified will use the IP Address of the logical interface `loopback0`.
- `target` - Destination IP Address.
- `probe_count` - Total number of probes per test (1..15). System defaults: 1 on both JunOS & Cisco.
- `probe_interval` - Delay between tests (0..86400 seconds). System defaults: 3 on JunOS, 5 on Cisco.
- `probe_type` - Probe request type. Available options:
  - icmp-ping
  - tcp-ping
  - udp-ping

Using the example configuration above, after running the state, on the device will be configured 4 probes, with the following properties:

```
probe_name1:
 probe1_test1:
 source: 192.168.0.2
 target: 192.168.0.1
 probe_count: 15
 test_interval: 3
 probe_type: icmp-ping
 probe1_test2:
 target: 172.17.17.1
 probe_count: 15
```

(continues on next page)

(continued from previous page)

```

 test_interval: 3
 probe_type: icmp-ping
 probe1_test3:
 target: 8.8.8.8
 probe_count: 15
 test_interval: 3
 probe_type: http-ping
 probe_name2:
 probe2_test1:
 target: 10.10.10.10
 probe_count: 15
 test_interval: 3
 probe_type: icmp-ping

```

## 20.19.224 salt.states.process

### Process Management

Ensure a process matching a given pattern is absent.

```

httpd-absent:
 process.absent:
 - name: apache2

```

`salt.states.process.absent` (*name*, *user=None*, *signal=None*)

Ensures that the named command is not running.

**name** The pattern to match.

**user** The user to which the process belongs

**signal** Signal to send to the process(es).

## 20.19.225 salt.states.proxy module

Allows you to manage proxy settings on minions

Setup proxy settings on minions

```

192.168.1.4:
 proxy.managed:
 - port: 3128
 - bypass_domains:
 - localhost
 - 127.0.0.1

```

`salt.states.proxy.managed` (*name*, *port*, *services=None*, *user=None*, *password=None*, *by-pass\_domains=None*, *network\_service='Ethernet'*)

Manages proxy settings for this minion

**name** The proxy server to use

**port** The port used by the proxy server

**services** A list of the services that should use the given proxy settings, valid services include http, https and ftp. If no service is given all of the valid services will be used.

**user** The username to use for the proxy server if required

**password** The password to use for the proxy server if required

**bypass\_domains** An array of the domains that should bypass the proxy  
**network\_service** The network service to apply the changes to, this only necessary on macOS

### 20.19.226 salt.states.pushover

#### Send a message to PushOver

This state is useful for sending messages to PushOver during state runs.

New in version 2015.5.0.

```
pushover-message:
 pushover.post_message:
 - user: xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxx
 - token: xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxx
 - title: Salt Returner
 - device: phone
 - priority: -1
 - expire: 3600
 - retry: 5
 - message: 'This state was executed successfully.'
```

The api key can be specified in the master or minion configuration like below: .. code-block:: yaml

```
pushover: token: peWcBiMOS9HrZG15peWcBiMOS9HrZG15
```

```
salt.states.pushover.post_message(name, user=None, device=None, message=None, title=None,
 priority=None, expire=None, retry=None, sound=None,
 api_version=1, token=None)
```

Send a message to a PushOver channel.

```
pushover-message:
 pushover.post_message:
 - user: xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxx
 - token: xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxx
 - title: Salt Returner
 - device: phone
 - priority: -1
 - expire: 3600
 - retry: 5
```

The following parameters are required:

**name** The unique name for this event.

**user** The user or group of users to send the message to. Must be ID of user, not name or email address.

**message** The message that is to be sent to the PushOver channel.

The following parameters are optional:

**title** The title to use for the message.

**device** The device for the user to send the message to.

**priority** The priority for the message.

**expire** The message should expire after specified amount of seconds.

**retry** The message should be resent this many times.

**token** The token for PushOver to use for authentication, if not specified in the configuration options of master or minion.

### 20.19.227 salt.states.pyenv

## Managing python installations with pyenv

This module is used to install and manage python installations with pyenv. Different versions of python can be installed, and uninstalled. pyenv will be installed automatically the first time it is needed and can be updated later. This module will *not* automatically install packages which pyenv will need to compile the versions of python.

If pyenv is run as the root user then it will be installed to /usr/local/pyenv, otherwise it will be installed to the users ~/.pyenv directory. To make pyenv available in the shell you may need to add the pyenv/shims and pyenv/bin directories to the users PATH. If you are installing as root and want other users to be able to access pyenv then you will need to add pyenv\_ROOT to their environment.

This is how a state configuration could look like:

```

pyenv-deps:
 pkg.installed:
 - pkgs:
 - make
 - build-essential
 - libssl-dev
 - zlib1g-dev
 - libbz2-dev
 - libreadline-dev
 - libsqlite3-dev
 - wget
 - curl
 - llvm
python-2.6:
 pyenv.absent:
 - require:
 - pkg: pyenv-deps
python-2.7.6:
 pyenv.installed:
 - default: True
 - require:
 - pkg: pyenv-deps

```

---

**Note:** Git needs to be installed and available via PATH if pyenv is to be installed automatically by the module.

---

`salt.states.pyenv.absent` (*name*, *user=None*)

Verify that the specified python is not installed with pyenv. pyenv is installed if necessary.

**name** The version of python to uninstall

**user: None** The user to run pyenv as.

New in version 0.17.0.

New in version 0.16.0.

`salt.states.pyenv.install_pyenv` (*name*, *user=None*)

Install pyenv if not installed. Allows you to require pyenv be installed prior to installing the plugins. Useful if you want to install pyenv plugins via the git or file modules and need them installed before installing any rubies.

Use the pyenv.root configuration option to set the path for pyenv if you want a system wide install that is not in a user home dir.

**user: None** The user to run pyenv as.

`salt.states.pyenv.installed` (*name*, *default=False*, *user=None*)

Verify that the specified python is installed with pyenv. pyenv is installed if necessary.

**name** The version of python to install  
**default** [False] Whether to make this python the default.  
**user: None** The user to run pyenv as.

New in version 0.17.0.  
New in version 0.16.0.

## 20.19.228 salt.states.pyrax\_queues

### Manage Rackspace Queues

New in version 2015.5.0.

Create and destroy Rackspace queues. Be aware that this interacts with Rackspace's services, and so may incur charges.

This module uses `pyrax`, which can be installed via package, or pip. This module is greatly inspired by `boto_*` modules from SaltStack code source.

```
myqueue:
 pyrax_queues.present:
 - provider: my-pyrax

myqueue:
 pyrax_queues.absent:
 - provider: my-pyrax
```

`salt.states.pyrax_queues.absent`(*name*, *provider*)  
Ensure the named Rackspace queue is deleted.  
**name** Name of the Rackspace queue.  
**provider** Salt Cloud provider

`salt.states.pyrax_queues.present`(*name*, *provider*)  
Ensure the RackSpace queue exists.  
**name** Name of the Rackspace queue.  
**provider** Salt Cloud Provider

## 20.19.229 salt.states.quota

### Management of POSIX Quotas

The quota can be managed for the system:

```
/:
 quota.mode:
 mode: off
 quotatype: user
```

`salt.states.quota.mode`(*name*, *mode*, *quotatype*)  
Set the quota for the system  
**name** The filesystem to set the quota mode on  
**mode** Whether the quota system is on or off  
**quotatype** Must be user or group

## 20.19.230 salt.states.rabbitmq\_cluster

### Manage RabbitMQ Clusters

Example:

```
rabbit@rabbit.example.com:
rabbitmq_cluster.join:
- user: rabbit
- host: rabbit.example.com
```

`salt.states.rabbitmq_cluster.join(name, host, user='rabbit', ram_node=None, runas='root')`

This function is an alias of `joined`.

Ensure the current node joined to a cluster with node `user@host`

**name** Irrelevant, not used (recommended: `user@host`)

**user** The user of node to join to (default: `rabbit`)

**host** The host of node to join to

**ram\_node** Join node as a RAM node

**runas** The user to run the `rabbitmq` command as

`salt.states.rabbitmq_cluster.joined(name, host, user='rabbit', ram_node=None, runas='root')`

Ensure the current node joined to a cluster with node `user@host`

**name** Irrelevant, not used (recommended: `user@host`)

**user** The user of node to join to (default: `rabbit`)

**host** The host of node to join to

**ram\_node** Join node as a RAM node

**runas** The user to run the `rabbitmq` command as

## 20.19.231 salt.states.rabbitmq\_plugin

### Manage RabbitMQ Plugins

New in version 2014.1.0.

Example:

```
some_plugin:
rabbitmq_plugin.enabled: []
```

`salt.states.rabbitmq_plugin.disabled(name, runas=None)`

Ensure the RabbitMQ plugin is disabled.

**name** The name of the plugin

**runas** The user to run the `rabbitmq-plugin` command as

`salt.states.rabbitmq_plugin.enabled(name, runas=None)`

Ensure the RabbitMQ plugin is enabled.

**name** The name of the plugin

**runas** The user to run the `rabbitmq-plugin` command as

## 20.19.232 salt.states.rabbitmq\_policy

### Manage RabbitMQ Policies

**maintainer** Benn Eichhorn <benn@getlocalmeasure.com>

maturity new

platform all

Example:

```
rabbit_policy:
 rabbitmq_policy.present:
 - name: HA
 - pattern: '.*'
 - definition: '{"ha-mode": "all"}'
```

`salt.states.rabbitmq_policy.absent`(*name*, *vhost='/'*, *runas=None*)

Ensure the named policy is absent

Reference: <http://www.rabbitmq.com/ha.html>

**name** The name of the policy to remove

**runas** Name of the user to run the command as

`salt.states.rabbitmq_policy.present`(*name*, *pattern*, *definition*, *priority=0*, *vhost='/'*,  
*runas=None*, *apply\_to=None*)

Ensure the RabbitMQ policy exists.

Reference: <http://www.rabbitmq.com/ha.html>

**name** Policy name

**pattern** A regex of queues to apply the policy to

**definition** A json dict describing the policy

**priority** Priority (defaults to 0)

**vhost** Virtual host to apply to (defaults to '/')

**runas** Name of the user to run the command as

**apply\_to** Apply policy to 'queues', 'exchanges' or 'all' (default to 'all')

### 20.19.233 salt.states.rabbitmq\_user

#### Manage RabbitMQ Users

Example:

```
rabbit_user:
 rabbitmq_user.present:
 - password: password
 - force: True
 - tags:
 - monitoring
 - user
 - perms:
 - '/':
 - '.*'
 - '.*'
 - '.*'
 - runas: rabbitmq
```

`salt.states.rabbitmq_user.absent`(*name*, *runas=None*)

Ensure the named user is absent

**name** The name of the user to remove

**runas** User to run the command

`salt.states.rabbitmq_user.present` (*name*, *password=None*, *force=False*, *tags=None*, *perms=()*, *runas=None*)

Ensure the RabbitMQ user exists.

**name** User name

**password** User's password, if one needs to be set

**force** If user exists, forcibly change the password

**tags** Optional list of tags for the user

**perms** A list of dicts with vhost keys and 3-tuple values

**runas** Name of the user to run the command

### 20.19.234 salt.states.rabbitmq\_vhost

#### Manage RabbitMQ Virtual Hosts

Example:

```
virtual_host:
 rabbitmq_vhost.present:
 - user: rabbit_user
 - conf: .*
 - write: .*
 - read: .*
```

`salt.states.rabbitmq_vhost.absent` (*name*)

Ensure the RabbitMQ Virtual Host is absent

**name** Name of the Virtual Host to remove

**runas** User to run the command

Deprecated since version 2015.8.0.

`salt.states.rabbitmq_vhost.present` (*name*)

Ensure the RabbitMQ VHost exists.

**name** VHost name

**user** Initial user permission to set on the VHost, if present

Deprecated since version 2015.8.0.

**owner** Initial owner permission to set on the VHost, if present

Deprecated since version 2015.8.0.

**conf** Initial conf string to apply to the VHost and user. Defaults to `*`

Deprecated since version 2015.8.0.

**write** Initial write permissions to apply to the VHost and user. Defaults to `*`

Deprecated since version 2015.8.0.

**read** Initial read permissions to apply to the VHost and user. Defaults to `*`

Deprecated since version 2015.8.0.

**runas** Name of the user to run the command

Deprecated since version 2015.8.0.

### 20.19.235 salt.states.rbac\_solaris

Management of Solaris RBAC

**maintainer** Jorge Schrauwen <[sjorge@blackdot.be](mailto:sjorge@blackdot.be)>

```
maturity new
depends rbac_solaris,solaris_user
platform solaris,illumos
```

New in version 2016.11.0.

```
sjorge:
 rbac.managed:
 - roles:
 - netcfg
 - profiles:
 - System Power
 - authorizations:
 - solaris.audit.*
```

`salt.states.rbac_solaris.managed` (*name*, *roles=None*, *profiles=None*, *authorizations=None*)

Manage RBAC properties for user

**name** [string] username

**roles** [list] list of roles for user

**profiles** [list] list of profiles for user

**authorizations** [list] list of authorizations for user

**Warning:** All existing roles, profiles and authorizations will be replaced! An empty list will remove everything.

Set the property to *None* to not manage it.

## 20.19.236 salt.states.rbenv

### Managing Ruby installations with rbenv

This module is used to install and manage ruby installations with rbenv and the ruby-build plugin. Different versions of ruby can be installed, and uninstalled. Rbenv will be installed automatically the first time it is needed and can be updated later. This module will *not* automatically install packages which rbenv will need to compile the versions of ruby. If your version of ruby fails to install, refer to the ruby-build documentation to verify you are not missing any dependencies: <https://github.com/sstephenson/ruby-build/wiki>

If rbenv is run as the root user then it will be installed to `/usr/local/rbenv`, otherwise it will be installed to the users `~/.rbenv` directory. To make rbenv available in the shell you may need to add the `rbenv/shims` and `rbenv/bin` directories to the users `PATH`. If you are installing as root and want other users to be able to access rbenv then you will need to add `RBENV_ROOT` to their environment.

The following state configuration demonstrates how to install Ruby 1.9.x and 2.x using rbenv on Ubuntu/Debian:

```
rbenv-deps:
 pkg.installed:
 - names:
 - bash
 - git
 - openssl
 - libssl-dev
 - make
 - curl
 - autoconf
```

(continues on next page)

(continued from previous page)

```

- bison
- build-essential
- libffi-dev
- libyaml-dev
- libreadline6-dev
- zlib1g-dev
- libncurses5-dev

ruby-1.9.3-p429:
rbenv.absent:
- require:
- pkg: rbenv-deps

ruby-2.0.0-p598:
rbenv.installed:
- default: True
- require:
- pkg: rbenv-deps

```

`salt.states.rbenv.absent` (*name*, *user=None*)

Verify that the specified ruby is not installed with rbenv. Rbenv is installed if necessary.

**name** The version of ruby to uninstall

**user: None** The user to run rbenv as.

New in version 0.17.0.

New in version 0.16.0.

`salt.states.rbenv.install_rbenv` (*name*, *user=None*)

Install rbenv if not installed. Allows you to require rbenv be installed prior to installing the plugins. Useful if you want to install rbenv plugins via the git or file modules and need them installed before installing any rubies.

Use the `rbenv.root` configuration option to set the path for rbenv if you want a system wide install that is not in a user home dir.

**user: None** The user to run rbenv as.

`salt.states.rbenv.installed` (*name*, *default=False*, *user=None*)

Verify that the specified ruby is installed with rbenv. Rbenv is installed if necessary.

**name** The version of ruby to install

**default** [False] Whether to make this ruby the default.

**user: None** The user to run rbenv as.

New in version 0.17.0.

New in version 0.16.0.

## 20.19.237 salt.states.rdp

Manage RDP Service on Windows servers

`salt.states.rdp.disabled` (*name*)

Disable the RDP service

`salt.states.rdp.enabled` (*name*)

Enable the RDP service and make sure access to the RDP port is allowed in the firewall configuration

## 20.19.238 salt.states.redismod

### Management of Redis server

New in version 2014.7.0.

#### depends

- redis Python module

**configuration** See `salt.modules.redis` for setup instructions.

```
key_in_redis:
 redis.string:
 - value: string data
```

The redis server information specified in the minion config file can be overridden in states using the following arguments: `host`, `post`, `db`, `password`.

```
key_in_redis:
 redis.string:
 - value: string data
 - host: localhost
 - port: 6379
 - db: 0
 - password: somuchkittycat
```

`salt.states.redismod.absent` (*name*, *keys=None*, *\*\*connection\_args*)

Ensure key absent from redis

**name** Key to ensure absent from redis

**keys** list of keys to ensure absent, name will be ignored if this is used

`salt.states.redismod.slaveof` (*name*, *sentinel\_host=None*, *sentinel\_port=None*, *sentinel\_password=None*, *\*\*connection\_args*)

Set this redis instance as a slave.

**name** Master to make this a slave of

**sentinel\_host** Ip of the sentinel to check for the master

**sentinel\_port** Port of the sentinel to check for the master

`salt.states.redismod.string` (*name*, *value*, *expire=None*, *expireat=None*, *\*\*connection\_args*)

Ensure that the key exists in redis with the value specified

**name** Redis key to manage

**value** Data to persist in key

**expire** Sets time to live for key in seconds

**expireat** Sets expiration time for key via UNIX timestamp, overrides *expire*

## 20.19.239 salt.states.reg

### Manage the Windows registry

Many python developers think of registry keys as if they were python keys in a dictionary which is not the case. The windows registry is broken down into the following components:

#### Hives

This is the top level of the registry. They all begin with HKEY.

- HKEY\_CLASSES\_ROOT (HKCR)
- HKEY\_CURRENT\_USER (HKCU)
- HKEY\_LOCAL\_MACHINE (HKLM)
- HKEY\_USER (HKU)
- HKEY\_CURRENT\_CONFIG

## Keys

Hives contain keys. These are basically the folders beneath the hives. They can contain any number of subkeys.

When passing the hivekey values they must be quoted correctly depending on the backslashes being used (\ vs \\). The way backslashes are handled in the state file is different from the way they are handled when working on the CLI. The following are valid methods of passing the hivekey:

Using **single backslashes**: HKLMSOFTWAREPython 'HKLMSOFTWAREPython'

Using **double backslashes**: "HKLM\SOFTWARE\Python"

## Values or Entries

Values or Entries are the name/data pairs beneath the keys and subkeys. All keys have a default name/data pair. The name is (Default) with a displayed value of (value not set). The actual value is Null.

## Example

The following example is taken from the windows startup portion of the registry:

```
[HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\Windows\CurrentVersion\Run]
"RTHDVCPL"="\C:\\Program Files\\Realtek\\Audio\\HDA\\RtkNGUI64.exe\" -s"
"NvBackend"="\C:\\Program Files (x86)\\NVIDIA Corporation\\Update Core\\NvBackend.
↳exe\"
"BTMTrayAgent"="rundll32.exe \"C:\\Program Files (x86)\\Intel\\Bluetooth\\btmsllex.
↳dll\",TrayApp"
```

In this example these are the values for each:

**Hive:** HKEY\_LOCAL\_MACHINE

**Key and subkeys:** SOFTWARE\\Microsoft\\Windows\\CurrentVersion\\Run

**Value:**

- There are 3 value names: RTHDVCPL, NvBackend, and BTMTrayAgent
- Each value name has a corresponding value

`salt.states.reg.absent` (*name*, *vname=None*, *use\_32bit\_registry=False*)

Ensure a registry value is removed. To remove a key use `key_absent`.

### Parameters

- **name** (*str*) – A string value representing the full path of the key to include the HIVE, Key, and all Subkeys. For example:

```
HKKEY_LOCAL_MACHINE\\SOFTWARE\\Salt
```

Valid hive values include:

- HKEY\_CURRENT\_USER or HKCU
- HKEY\_LOCAL\_MACHINE or HKLM
- HKEY\_USERS or HKU
- **vname** (*str*) - The name of the value you'd like to create beneath the Key. If this parameter is not passed it will assume you want to set the (Default) value
- **use\_32bit\_registry** (*bool*) - Use the 32bit portion of the registry. Applies only to 64bit windows. 32bit Windows will ignore this parameter. Default is False.

**Returns** A dictionary showing the results of the registry operation.

**Return type** `dict`

CLI Example:

```
'HKEY_CURRENT_USER\\SOFTWARE\\Salt':
 reg.absent
 - vname: version
```

In the above example the value named `version` will be removed from the `SOFTWARE\Salt` key in the `HKEY_CURRENT_USER` hive. If `vname` was not passed, the (Default) value would be deleted.

`salt.states.reg.key_absent` (*name*, *use\_32bit\_registry=False*)

New in version 2015.5.4.

Ensure a registry key is removed. This will remove the key, subkeys, and all value entries.

**Parameters**

- **name** (*str*) - A string representing the full path to the key to be removed to include the hive and the keypath. The hive can be any of the following:
  - HKEY\_LOCAL\_MACHINE or HKLM
  - HKEY\_CURRENT\_USER or HKCU
  - HKEY\_USER or HKU
- **use\_32bit\_registry** (*bool*) - Use the 32bit portion of the registry. Applies only to 64bit windows. 32bit Windows will ignore this parameter. Default is False.

**Returns** A dictionary showing the results of the registry operation.

**Return type** `dict`

CLI Example:

The following example will delete the `SOFTWARE\DeleteMe` key in the `HKEY_LOCAL_MACHINE` hive including all its subkeys and value pairs.

```
remove_key_demo:
 reg.key_absent:
 - name: HKEY_CURRENT_USER\SOFTWARE\DeleteMe
```

In the above example the path is interpreted as follows:

- `HKEY_CURRENT_USER` is the hive
- `SOFTWARE\DeleteMe` is the key

`salt.states.reg.present` (*name*, *vname=None*, *vdata=None*, *vtype='REG\_SZ'*, *use\_32bit\_registry=False*)

Ensure a registry key or value is present.

**Parameters**

- **name** (*str*) - A string value representing the full path of the key to include the HIVE, Key, and all Subkeys. For example:

```
HKEY_LOCAL_MACHINE\\SOFTWARE\\Salt
```

Valid hive values include:

- HKEY\_CURRENT\_USER or HKCU
- HKEY\_LOCAL\_MACHINE or HKLM

- HKEY\_USERS or HKU
- **vname** (*str*) - The name of the value you'd like to create beneath the Key. If this parameter is not passed it will assume you want to set the (Default) value
- **vdata** (*str, int, list, bytes*) - The value you'd like to set. If a value name (vname) is passed, this will be the data for that value name. If not, this will be the (Default) value for the key.

The type of data this parameter expects is determined by the value type specified in `vtype`. The correspondence is as follows:

- REG\_BINARY: Binary data (str in Py2, bytes in Py3)
- REG\_DWORD: int
- REG\_EXPAND\_SZ: str
- REG\_MULTI\_SZ: list of str
- REG\_QWORD: int
- REG\_SZ: str

---

**Note:** When setting REG\_BINARY, string data will be converted to binary automatically. To pass binary data, use the built-in yaml tag `!!binary` to denote the actual binary characters. For example, the following lines will both set the same data in the registry:

- `vdata: Salty Test`
- `vdata: !!binary U2FsdHkgVGZzdA==\n`

For more information about the `!!binary` tag see [here](#)

---

---

**Note:** The type for the (Default) value is always REG\_SZ and cannot be changed. This parameter is optional. If not passed, the Key will be created with no associated item/value pairs.

---

- **vtype** (*str*) - The value type for the data you wish to store in the registry. Valid values are:
  - REG\_BINARY
  - REG\_DWORD
  - REG\_EXPAND\_SZ
  - REG\_MULTI\_SZ
  - REG\_QWORD
  - REG\_SZ (Default)
- **use\_32bit\_registry** (*bool*) - Use the 32bit portion of the registry. Applies only to 64bit windows. 32bit Windows will ignore this parameter. Default is False.

**Returns** A dictionary showing the results of the registry operation.

**Return type** `dict`

### Example

The following example will set the (Default) value for the SOFTWARE\\Salt key in the HKEY\_CURRENT\_USER hive to 2016.3.1:

```
HKEY_CURRENT_USER\\SOFTWARE\\Salt:
 reg.present:
 - vdata: 2016.3.1
```

### Example

The following example will set the value for the `version` entry under the `SOFTWARE\Salt` key in the `HKEY_CURRENT_USER` hive to `2016.3.1`. The value will be reflected in `Wow6432Node`:

```
HKEY_CURRENT_USER\\SOFTWARE\\Salt:
 reg.present:
 - vname: version
 - vdata: 2016.3.1
```

In the above example the path is interpreted as follows:

- `HKEY_CURRENT_USER` is the hive
- `SOFTWARE\Salt` is the key
- `vname` is the value name ('version') that will be created under the key
- `vdata` is the data that will be assigned to 'version'

### Example

Binary data can be set in two ways. The following two examples will set a binary value of `Salty Test`

```
no_conversion:
 reg.present:
 - name: HKLM\SOFTWARE\SaltTesting
 - vname: test_reg_binary_state
 - vdata: Salty Test
 - vtype: REG_BINARY

conversion:
 reg.present:
 - name: HKLM\SOFTWARE\SaltTesting
 - vname: test_reg_binary_state_with_tag
 - vdata: !!binary U2FsdHkgVGZzdA==\n
 - vtype: REG_BINARY
```

### Example

To set a `REG_MULTI_SZ` value:

```
reg_multi_sz:
 reg.present:
 - name: HKLM\SOFTWARE\Salt
 - vname: reg_multi_sz
 - vdata:
 - list item 1
 - list item 2
```

## 20.19.240 salt.states.rsync

State to synchronize files and directories with `rsync`.

New in version 2016.3.0.

```

/opt/user-backups:
 rsync.synchronized:
 - source: /home
 - force: True

```

`salt.states.rsync.synchronized`(*name*, *source*, *delete=False*, *force=False*, *update=False*, *passwordfile=None*, *exclude=None*, *excludefrom=None*, *prepare=False*, *dryrun=False*, *additional\_opts=None*)

Guarantees that the source directory is always copied to the target.

**name** Name of the target directory.

**source** Source directory.

**prepare** Create destination directory if it does not exist.

**delete** Delete extraneous files from the destination dirs (True or False)

**force** Force deletion of dirs even if not empty

**update** Skip files that are newer on the receiver (True or False)

**passwordfile** Read daemon-access password from the file (path)

**exclude** Exclude files, that matches pattern.

**excludefrom** Read exclude patterns from the file (path)

**dryrun** Perform a trial run with no changes made. Is the same as doing `test=True`

New in version 2016.3.1.

**additional\_opts** Pass additional options to rsync, should be included as a list.

New in version 2018.3.0.

## 20.19.241 salt.states.rvm

### Managing Ruby installations and gemsets with Ruby Version Manager (RVM)

This module is used to install and manage ruby installations and gemsets with RVM, the Ruby Version Manager. Different versions of ruby can be installed and gemsets created. RVM itself will be installed automatically if it's not present. This module will not automatically install packages that RVM depends on or ones that are needed to build ruby. If you want to run RVM as an unprivileged user (recommended) you will have to create this user yourself. This is how a state configuration could look like:

```

rvm:
 group.present: []
 user.present:
 - gid: rvm
 - home: /home/rvm
 - require:
 - group: rvm

rvm-deps:
 pkg.installed:
 - pkgs:
 - bash
 - coreutils
 - gzip
 - bzip2
 - gawk
 - sed
 - curl
 - git-core
 - subversion

```

(continues on next page)

```
mri-deps:
 pkg.installed:
 - pkgs:
 - build-essential
 - openssl
 - libreadline6
 - libreadline6-dev
 - curl
 - git-core
 - zlib1g
 - zlib1g-dev
 - libssl-dev
 - libyaml-dev
 - libsqlite3-0
 - libsqlite3-dev
 - sqlite3
 - libxml2-dev
 - libxslt1-dev
 - autoconf
 - libc6-dev
 - libncurses5-dev
 - automake
 - libtool
 - bison
 - subversion
 - ruby

jruby-deps:
 pkg.installed:
 - pkgs:
 - curl
 - g++
 - openjdk-6-jre-headless

ruby-1.9.2:
 rvm.installed:
 - default: True
 - user: rvm
 - require:
 - pkg: rvm-deps
 - pkg: mri-deps
 - user: rvm

jruby:
 rvm.installed:
 - user: rvm
 - require:
 - pkg: rvm-deps
 - pkg: jruby-deps
 - user: rvm

rgemset:
 rvm.gemset_present:
 - ruby: jruby
 - user: rvm
```

(continues on next page)

(continued from previous page)

```

- require:
 - rvm: jruby

mygemset:
 rvm.gemset_present:
 - ruby: ruby-1.9.2
 - user: rvm
 - require:
 - rvm: ruby-1.9.2

```

`salt.states.rvm.gemset_present` (*name*, *ruby='default'*, *user=None*)

Verify that the gemset is present.

**name** The name of the gemset.

**ruby: default** The ruby version this gemset belongs to.

**user: None** The user to run rvm as.

New in version 0.17.0.

`salt.states.rvm.installed` (*name*, *default=False*, *user=None*, *opts=None*, *env=None*)

Verify that the specified ruby is installed with RVM. RVM is installed when necessary.

**name** The version of ruby to install

**default** [False] Whether to make this ruby the default.

**user: None** The user to run rvm as.

**env: None** A list of environment variables to set (ie, RUBY\_CONFIGURE\_OPTS)

**opts: None** A list of option flags to pass to RVM (ie -C, -patch)

New in version 0.17.0.

## 20.19.242 salt.states.salt\_proxy module

Salt proxy state

New in version 2015.8.2.

State to deploy and run salt-proxy processes on a minion.

Set up pillar data for your proxies per the documentation.

Run the state as below

..code-block:: yaml

```

salt-proxy-configure:
 salt_proxy.configure_proxy:
 • proxyname: p8000
 • start: True

```

This state will configure the salt proxy settings within `/etc/salt/proxy` (if `/etc/salt/proxy` doesn't exist) and start the salt-proxy process (default true), if it isn't already running.

`salt.states.salt_proxy.configure_proxy` (*name*, *proxyname='p8000'*, *start=True*)

Create the salt proxy file and start the proxy process if required

Parameters

- **name** – The name of this state
- **proxyname** – Name to be used for this proxy (should match entries in pillar)
- **start** – Boolean indicating if the process should be started

Example:

```
..code-block:: yaml
 salt-proxy-configure:
 salt_proxy.configure_proxy:
 - proxyname: p8000
 - start: True
```

### 20.19.243 salt.states.saltmod

#### Control the Salt command interface

This state is intended for use from the Salt Master. It provides access to sending commands down to minions as well as access to executing master-side modules. These state functions wrap Salt's *Python API*.

Support for masterless minions was added to the `salt.state` function, so they can run orchestration sls files. This is particularly useful when the rendering of a state is dependent on the execution of another state. Orchestration will render and execute each orchestration block independently, while honoring requisites to ensure the states are applied in the correct order.

See also:

More Orchestrate documentation

- [Full Orchestrate Tutorial](#)
- [The Orchestrate runner](#)

```
salt.states.saltmod.function(name, tgt, ssh=False, tgt_type='glob', expr_form=None, ret="",
 ret_config=None, ret_kwargs=None, expect_minions=False,
 fail_minions=None, fail_function=None, arg=None, kwarg=None,
 timeout=None, batch=None, subset=None)
```

Execute a single module function on a remote minion via salt or salt-ssh

**name** The name of the function to run, aka `cmd.run` or `pkg.install`

**tgt** The target specification, aka `*` for all minions

**tgt\_type** The target type, defaults to `gLoB`

**expr\_form** Deprecated since version 2017.7.0: Use `tgt_type` instead

**arg** The list of arguments to pass into the function

**kwarg** The dict (not a list) of keyword arguments to pass into the function

**ret** Optionally set a single or a list of returners to use

**ret\_config** Use an alternative returner configuration

**ret\_kwargs** Override individual returner configuration items

**expect\_minions** An optional boolean for failing if some minions do not respond

**fail\_minions** An optional list of targeted minions where failure is an option

**fail\_function** An optional string that points to a salt module that returns True or False based on the returned data dict for individual minions

**ssh** Set to `True` to use the ssh client instead of the standard salt client

**batch** Execute the command *in batches*. E.g.: 10%.

**subset** Number of minions from the targeted set to randomly use

New in version 2017.7.0.

```
salt.states.saltmod.parallel_runners(name, runners)
```

Executes multiple runner modules on the master in parallel.

New in version 2017.x.0: (Nitrogen)

A separate thread is spawned for each runner. This state is intended to be used with the orchestrate runner in place of the `saltmod.runner` state when different tasks should be run in parallel. In general, Salt states are

not safe when used concurrently, so ensure that they are used in a safe way (e.g. by only targeting separate minions in parallel tasks).

**name:** name identifying this state. The name is provided as part of the output, but not used for anything else.  
**runners:** list of runners that should be run in parallel. Each element of the list has to be a dictionary. This dictionary's name entry stores the name of the runner function that shall be invoked. The optional kwarg entry stores a dictionary of named arguments that are passed to the runner function.

```
parallel-state:
 salt.parallel_runners:
 - runners:
 my_runner_1:
 - name: state.orchestrate
 - kwarg:
 mods: orchestrate_state_1
 my_runner_2:
 - name: state.orchestrate
 - kwarg:
 mods: orchestrate_state_2
```

`salt.states.saltmod.runner`(*name*, *\*\*kwargs*)

Execute a runner module on the master

New in version 2014.7.0.

**name** The name of the function to run

**kwargs** Any keyword arguments to pass to the runner function

```
run-manage-up:
 salt.runner:
 - name: manage.up
```

`salt.states.saltmod.state`(*name*, *tgt*, *ssh=False*, *tgt\_type='glob'*, *expr\_form=None*, *ret=""*, *ret\_config=None*, *ret\_kwargs=None*, *highstate=None*, *sls=None*, *top=None*, *saltenv=None*, *test=False*, *pillar=None*, *pillarenv=None*, *expect\_minions=True*, *fail\_minions=None*, *allow\_fail=0*, *concurrent=False*, *timeout=None*, *batch=None*, *queue=False*, *subset=None*, *orchestration\_jid=None*, *\*\*kwargs*)

Invoke a state run on a given target

**name** An arbitrary name used to track the state execution

**tgt** The target specification for the state run.

Masterless support: When running on a masterless minion, the `tgt` is ignored and will always be the local minion.

**tgt\_type** The target type to resolve, defaults to `glob`

**expr\_form** Deprecated since version 2017.7.0: Use `tgt_type` instead

**ret** Optionally set a single or a list of returners to use

**ret\_config** Use an alternative returner configuration

**ret\_kwargs** Override individual returner configuration items

**highstate** Defaults to `None`, if set to `True` the target systems will ignore any `sls` references specified in the `sls` option and call `state.highstate` on the targeted minions

**top** Should be the name of a top file. If set `state.top` is called with this top file instead of `state.sls`.

**sls** A group of `sls` files to execute. This can be defined as a single string containing a single `sls` file, or a list of `sls` files

**test** Pass `test=true` through to the state function

**pillar** Pass the `pillar` kwarg through to the state function

**pillarenv** The pillar environment to grab pillars from

New in version 2017.7.0.

**saltenv** The default salt environment to pull sls files from  
**ssh** Set to `True` to use the ssh client instead of the standard salt client  
**roster** In the event of using salt-ssh, a roster system can be set  
**expect\_minions** An optional boolean for failing if some minions do not respond  
**fail\_minions** An optional list of targeted minions where failure is an option  
**allow\_fail** Pass in the number of minions to allow for failure before setting the result of the execution to `False`  
**concurrent** Allow multiple state runs to occur at once.

WARNING: This flag is potentially dangerous. It is designed for use when multiple state runs can safely be run at the same Do not use this flag for performance optimization.

**queue** Pass `queue=true` through to the state function

**batch** Execute the command *in batches*. E.g.: 10%.

New in version 2016.3.0.

**subset** Number of minions from the targeted set to randomly use

New in version 2017.7.0.

Examples:

Run a list of sls files via `state.sls` on target minions:

```
webservers:
salt.state:
- tgt: 'web*'
- sls:
 - apache
 - django
 - core
- saltenv: prod
```

Run a full `state.highstate` on target mininons.

```
databases:
salt.state:
- tgt: role:database
- tgt_type: grain
- highstate: True
```

`salt.states.saltmod.wait_for_event` (*name*, *id\_list*, *event\_id='id'*, *timeout=300*, *node='master'*)

Watch Salt's event bus and block until a condition is met

New in version 2014.7.0.

**name** An event tag to watch for; supports Reactor-style globbing.

**id\_list** A list of event identifiers to watch for – usually the minion ID. Each time an event tag is matched the event data is inspected for `event_id`, if found it is removed from `id_list`. When `id_list` is empty this function returns success.

**event\_id** [*id*] The name of a key in the event data. Default is `id` for the minion ID, another common value is `name` for use with orchestrating salt-cloud events.

**timeout** [300] The maximum time in seconds to wait before failing.

The following example blocks until all the listed minions complete a restart and reconnect to the Salt master:

```
reboot_all_minions:
salt.function:
- name: system.reboot
- tgt: '*'

wait_for_reboots:
salt.wait_for_event:
```

(continues on next page)

(continued from previous page)

```

- name: salt/minion/*/start
- id_list:
 - jerry
 - stuart
 - dave
 - phil
 - kevin
 - mike
- require:
 - salt: reboot_all_minions

```

`salt.states.saltmod.wheel`(*name*, *\*\*kwargs*)

Execute a wheel module on the master

New in version 2014.7.0.

**name** The name of the function to run

**kwargs** Any keyword arguments to pass to the wheel function

```

accept_minion_key:
salt.wheel:
 - name: key.accept
 - match: frank

```

## 20.19.244 salt.states.schedule

### Management of the Salt scheduler

```

job3:
 schedule.present:
 - function: test.ping
 - seconds: 3600
 - splay: 10

```

**This will schedule the command:** test.ping every 3600 seconds (every hour) splaying the time between 0 and 10 seconds

```

job2:
 schedule.present:
 - function: test.ping
 - seconds: 15
 - splay:
 start: 10
 end: 20

```

**This will schedule the command:** test.ping every 15 seconds splaying the time between 10 and 20 seconds

```

job1:
 schedule.present:
 - function: state.sls
 - job_args:
 - httpd
 - job_kwargs:
 test: True

```

(continues on next page)

(continued from previous page)

- **when:**
  - Monday 5:00pm
  - Tuesday 3:00pm
  - Wednesday 5:00pm
  - Thursday 3:00pm
  - Friday 5:00pm

**This will schedule the command:** state.sls httpd test=True at 5pm on Monday, Wednesday and Friday, and 3pm on Tuesday and Thursday. Requires that python-dateutil is installed on the minion.

**job1:**

**schedule.present:**

- **function:** state.sls
- **job\_args:**
  - httpd
- **job\_kwargs:**
  - test:** True
- **cron:** '\* / 5 \* \* \* \*

Scheduled jobs can also be specified using the format used by cron. This will **schedule the command:** state.sls httpd test=True to run every 5 minutes. Requires that python-croniter is installed on the minion.

**job1:**

**schedule.present:**

- **function:** state.sls
- **job\_args:**
  - httpd
- **job\_kwargs:**
  - test:** True
- **when:**
  - Monday 5:00pm
  - Tuesday 3:00pm
  - Wednesday 5:00pm
  - Thursday 3:00pm
  - Friday 5:00pm
- **returner:** xmpp
- **return\_config:** xmpp\_state\_run
- **return\_kwargs:**
  - recipient:** user@domain.com

**This will schedule the command:** state.sls httpd test=True at 5pm on Monday, Wednesday and Friday, and 3pm on Tuesday and Thursday. Using the xmpp returner to return the results of the scheduled job, with the alternative configuration options found in the xmpp\_state\_run section.

**job1:**

**schedule.present:**

- **function:** state.sls
- **job\_args:**
  - httpd
- **job\_kwargs:**
  - test:** True
- **hours:** 1
- **skip\_during\_range:**

(continues on next page)

(continued from previous page)

- **start:** 2pm
- **end:** 3pm
- **run\_after\_skip\_range:** True

**This will schedule the command:** `state.sls httpd test=True` at 5pm on Monday, Wednesday and Friday, and 3pm on Tuesday and Thursday. Requires that `python-dateutil` is installed on the minion.

`salt.states.schedule.absent`(*name*, *\*\*kwargs*)

Ensure a job is absent from the schedule

**name** The unique name that is given to the scheduled job.

**persist** Whether the job should persist between minion restarts, defaults to True.

`salt.states.schedule.disabled`(*name*, *\*\*kwargs*)

Ensure a job is disabled in the schedule

**name** The unique name that is given to the scheduled job.

**persist** Whether the job should persist between minion restarts, defaults to True.

`salt.states.schedule.enabled`(*name*, *\*\*kwargs*)

Ensure a job is enabled in the schedule

**name** The unique name that is given to the scheduled job.

**persist** Whether the job should persist between minion restarts, defaults to True.

`salt.states.schedule.present`(*name*, *\*\*kwargs*)

Ensure a job is present in the schedule

**name** The unique name that is given to the scheduled job.

**seconds** The scheduled job will be executed after the specified number of seconds have passed.

**minutes** The scheduled job will be executed after the specified number of minutes have passed.

**hours** The scheduled job will be executed after the specified number of hours have passed.

**days** The scheduled job will be executed after the specified number of days have passed.

**when** This will schedule the job at the specified time(s). The when parameter must be a single value or a dictionary with the date string(s) using the dateutil format. Requires python-dateutil.

**cron** This will schedule the job at the specified time(s) using the crontab format. Requires python-croniter.

**run\_on\_start** Whether the job will run when Salt minion start. Value should be a boolean.

**function** The function that should be executed by the scheduled job.

**job\_args** The arguments that will be used by the scheduled job.

**job\_kwargs** The keyword arguments that will be used by the scheduled job.

**maxrunning** Ensure that there are no more than N copies of a particular job running.

**jid\_include** Include the job into the job cache.

**splay** The amount of time in seconds to splay a scheduled job. Can be specified as a single value in seconds or as a dictionary range with 'start' and 'end' values.

**range** This will schedule the command within the range specified. The range parameter must be a dictionary with the date strings using the dateutil format. Requires python-dateutil.

**once** This will schedule a job to run once on the specified date.

**once\_fmt** The default date format is ISO 8601 but can be overridden by also specifying the `once_fmt` option.

**enabled** Whether the job should be enabled or disabled. Value should be a boolean.

**return\_job** Whether to return information to the Salt master upon job completion.

**metadata** Using the metadata parameter special values can be associated with a scheduled job. These values are not used in the execution of the job, but can be used to search for specific jobs later if combined with the `return_job` parameter. The metadata parameter must be specified as a dictionary, otherwise it will be ignored.

**returner** The returner to use to return the results of the scheduled job.

**return\_config** The alternative configuration to use for returner configuration options.

**return\_kwargs** Any individual returner configuration items to override. Should be passed as a dictionary.

**persist** Whether the job should persist between minion restarts, defaults to True.

**skip\_during\_range** This will ensure that the scheduled command does not run within the range specified. The range parameter must be a dictionary with the date strings using the dateutil format. Requires python-dateutil.

**run\_after\_skip\_range** Whether the job should run immediately after the skip\_during\_range time period ends.

## 20.19.245 salt.states.selinux

### Management of SELinux rules

If SELinux is available for the running system, the mode can be managed and booleans can be set.

```
enforcing:
 selinux.mode

samba_create_home_dirs:
 selinux.boolean:
 - value: True
 - persist: True

nginx:
 selinux.module:
 - enabled: False
```

---

**Note:** Use of these states require that the *selinux* execution module is available.

---

**salt.states.selinux.boolean**(*name, value, persist=False*)

Set up an SELinux boolean

**name** The name of the boolean to set

**value** The value to set on the boolean

**persist** Defaults to False, set persist to true to make the boolean apply on a reboot

**salt.states.selinux.fcontext\_policy\_absent**(*name, filetype='a', sel\_type=None, sel\_user=None, sel\_level=None*)

New in version 2017.7.0.

Makes sure an SELinux file context policy for a given filespec (*name*), filetype and SELinux context type is absent.

**name** filespec of the file or directory. Regex syntax is allowed.

**filetype** The SELinux filetype specification. Use one of [a, f, d, c, b, s, l, p]. See also *man semanage-fcontext*. Defaults to 'a' (all files).

**sel\_type** The SELinux context type. There are many.

**sel\_user** The SELinux user.

**sel\_level** The SELinux MLS range.

**salt.states.selinux.fcontext\_policy\_applied**(*name, recursive=False*)

New in version 2017.7.0.

Checks and makes sure the SELinux policies for a given filespec are applied.

**salt.states.selinux.fcontext\_policy\_present**(*name, sel\_type, filetype='a', sel\_user=None, sel\_level=None*)

New in version 2017.7.0.

Makes sure a SELinux policy for a given filespec (*name*), filetype and SELinux context type is present.

**name** filespec of the file or directory. Regex syntax is allowed.

**sel\_type** SELinux context type. There are many.

**filetype** The SELinux filetype specification. Use one of [a, f, d, c, b, s, l, p]. See also *man semanage-fcontext*. Defaults to 'a' (all files).

**sel\_user** The SELinux user.

**sel\_level** The SELinux MLS range.

`salt.states.selinux.mode(name)`

Verifies the mode SELinux is running in, can be set to enforcing, permissive, or disabled

---

**Note:** A change to or from disabled mode requires a system reboot. You will need to perform this yourself.

---

**name** The mode to run SELinux in, permissive, enforcing, or disabled.

`salt.states.selinux.module(name, module_state='Enabled', version='any', **opts)`

Enable/Disable and optionally force a specific version for an SELinux module

**name** The name of the module to control

**module\_state** Should the module be enabled or disabled?

**version** Defaults to no preference, set to a specified value if required. Currently can only alert if the version is incorrect.

**install** Setting to True installs module

**source** Points to module source file, used only when install is True

**remove** Setting to True removes module

New in version 2016.3.0.

`salt.states.selinux.module_install(name)`

Installs custom SELinux module from given file

**name** Path to file with module to install

New in version 2016.11.6.

`salt.states.selinux.module_remove(name)`

Removes SELinux module

**name** The name of the module to remove

New in version 2016.11.6.

## 20.19.246 salt.states.serverdensity\_device

### Monitor Server with Server Density

New in version 2014.7.0.

**Server Density** Is a hosted monitoring service.

**Warning:** This state module is beta. It might be changed later to include more or less automation.

---

**Note:** This state module requires a pillar for authentication with Server Density To install a v1 agent:

**serverdensity:**

**api\_token:** "b97da80a41c4f61bff05975ee51eb1aa"

**account\_url:** "https://your-account.serverdensity.io"

To install a v2 agent:

```
serverdensity:
 api_token: "b97da80a41c4f61bff05975ee51eb1aa"
 account_name: "your-account"
```

**Note:** Although Server Density allows duplicate device names in its database, this module will raise an exception if you try monitoring devices with the same name.

Example:

```
'server_name':
 serverdensity_device.monitored
```

```
salt.states.serverdensity_device.monitored(name, group=None, salt_name=True,
 salt_params=True, agent_version=1,
 **params)
```

Device is monitored with Server Density.

**name** Device name in Server Density.

**salt\_name** If True (default), takes the name from the `id` grain. If False, the provided name is used.

**group** Group name under which device will appear in Server Density dashboard. Default - *None*.

**agent\_version** The agent version you want to use. Valid values are 1 or 2. Default - 1.

**salt\_params** If True (default), needed config parameters will be sourced from grains and from `status.all_status`.

**params** Add parameters that you want to appear in the Server Density dashboard. Will overwrite the `salt_params` parameters. For more info, see the [API docs](#).

Usage example:

```
'server_name':
 serverdensity_device.monitored
```

```
'server_name':
 serverdensity_device.monitored:
 - group: web-servers
```

```
'my_special_server':
 serverdensity_device.monitored:
 - salt_name: False
 - group: web-servers
 - cpuCores: 2
 - os: '{"code": "linux", "name": "Linux"}'
```

## 20.19.247 salt.states.service

### Starting or restarting of services and daemons

Services are defined as system daemons and are typically launched using system init or rc scripts. This service state uses whichever service module is loaded on the minion with the virtualname of `service`. Services can be defined as either running or dead.

If you need to know if your init system is supported, see the list of supported `service` modules for your desired init system (systemd, sysvinit, launchctl, etc.).

Note that Salt's service execution module, and therefore this service state, uses OS grains to ascertain which service module should be loaded and used to execute service functions. As existing distributions change init systems or new distributions are created, OS detection can sometimes be incomplete. If your service states are running into trouble with init system detection, please see the *Overriding Virtual Module Providers* section of Salt's module documentation to work around possible errors.

**Note:** The current status of a service is determined by the return code of the init/rc script status command. A status return code of 0 it is considered running. Any other return code is considered dead.

```
httpd:
 service.running: []
```

The service can also be set to start at runtime via the enable option:

```
openvpn:
 service.running:
 - enable: True
```

By default if a service is triggered to refresh due to a watch statement the service is restarted. If the desired behavior is to reload the service, then set the reload value to True:

```
redis:
 service.running:
 - enable: True
 - reload: True
 - watch:
 - pkg: redis
```

**Note:** More details regarding watch can be found in the *Requisites* documentation.

`salt.states.service.dead`(*name*, *enable=None*, *sig=None*, *init\_delay=None*, *\*\*kwargs*)

Ensure that the named service is dead by stopping the service if it is running

**name** The name of the init or rc script used to manage the service

**enable** Set the service to be enabled at boot time, `True` sets the service to be enabled, `False` sets the named service to be disabled. The default is `None`, which does not enable or disable anything.

**sig** The string to search for when looking for the service process with `ps`

**init\_delay** Add a sleep command (in seconds) before the check to make sure service is killed.

New in version 2017.7.0.

**no\_block** [False] **For systemd minions only.** Stops the service using `--no-block`.

New in version 2017.7.0.

`salt.states.service.disabled`(*name*, *\*\*kwargs*)

Ensure that the service is disabled on boot, only use this state if you don't want to manage the running process, remember that if you want to disable a service to use the `enable: False` option for the running or dead function.

**name** The name of the init or rc script used to manage the service

`salt.states.service.enabled`(*name*, *\*\*kwargs*)

Ensure that the service is enabled on boot, only use this state if you don't want to manage the running process, remember that if you want to enable a running service to use the `enable: True` option for the running or dead function.

**name** The name of the init or rc script used to manage the service

`salt.states.service.masked`(*name*, *runtime=False*)

New in version 2017.7.0.

---

**Note:** This state is only available on minions which use `systemd`.

---

Ensures that the named service is masked (i.e. prevented from being started).

**name** Name of the service to mask

**runtime** [False] By default, this state will manage an indefinite mask for the named service. Set this argument to `True` to runtime mask the service.

---

**Note:** It is possible for a service to have both indefinite and runtime masks set for it. Therefore, this state will manage a runtime or indefinite mask independently of each other. This means that if the service is already indefinitely masked, running this state with `runtime` set to `True` will `_not_` remove the indefinite mask before setting a runtime mask. In these cases, if it is desirable to ensure that the service is runtime masked and not indefinitely masked, pair this state with a `service.unmasked` state, like so:

```
mask_runtime_foo:
 service.masked:
 - name: foo
 - runtime: True

unmask_indefinite_foo:
 service.unmasked:
 - name: foo
 - runtime: False
```

---

`salt.states.service.mod_watch`(*name*, *sfun=None*, *sig=None*, *reload=False*, *full\_restart=False*, *init\_delay=None*, *force=False*, *\*\*kwargs*)

The service watcher, called to invoke the watch command. When called, it will restart or reload the named service.

---

**Note:** This state exists to support special handling of the watch *requisite*. It should not be called directly.

Parameters for this function should be set by the watching service. (i.e. `service.running`)

---

**name** The name of the init or rc script used to manage the service

**sfun** The original function which triggered the `mod_watch` call (`service.running`, for example).

**sig** The string to search for when looking for the service process with `ps`

**reload** When set, reload the service instead of restarting it. (i.e. `service nginx reload`)

**full\_restart** Perform a full stop/start of a service by passing `--full-restart`. This option is ignored if `reload` is set and is supported by only a few *service modules*.

**force** Use `service.force_reload` instead of `reload` (needs `reload` to be set to `True`)

**init\_delay** Add a sleep command (in seconds) before the service is restarted/reloaded

---

`salt.states.service.running`(*name*, *enable=None*, *sig=None*, *init\_delay=None*, *no\_block=False*, *unmask=False*, *unmask\_runtime=False*, *\*\*kwargs*)

Ensure that the service is running

**name** The name of the init or rc script used to manage the service

**enable** Set the service to be enabled at boot time, `True` sets the service to be enabled, `False` sets the named service to be disabled. The default is `None`, which does not enable or disable anything.

**sig** The string to search for when looking for the service process with `ps`

**init\_delay** Some services may not be truly available for a short period after their startup script indicates to the system that they are. Provide an `'init_delay'` to specify that this state should wait an additional given

number of seconds after a service has started before returning. Useful for requisite states wherein a dependent state might assume a service has started but is not yet fully initialized.

**no\_block** [False] **For systemd minions only.** Starts the service using `--no-block`.

New in version 2017.7.0.

**unmask** [False] **For systemd minions only.** Set to `True` to remove an indefinite mask before attempting to start the service.

New in version 2017.7.0: In previous releases, Salt would simply unmask a service before making any changes. This behavior is no longer the default.

**unmask\_runtime** [False] **For systemd minions only.** Set to `True` to remove a runtime mask before attempting to start the service.

New in version 2017.7.0: In previous releases, Salt would simply unmask a service before making any changes. This behavior is no longer the default.

---

**Note:**

**watch** can be used with `service.running` to restart a service when another state changes ( example: a `file.managed` state that creates the service's config file ). More details regarding `watch` can be found in the [Requisites](#) documentation.

---

`salt.states.service.unmasked`(*name*, *runtime=False*)

New in version 2017.7.0.

---

**Note:** This state is only available on minions which use `systemd`.

---

Ensures that the named service is unmasked

**name** Name of the service to unmask

**runtime** [False] By default, this state will manage an indefinite mask for the named service. Set this argument to `True` to ensure that the service is runtime masked.

---

**Note:** It is possible for a service to have both indefinite and runtime masks set for it. Therefore, this state will manage a runtime or indefinite mask independently of each other. This means that if the service is indefinitely masked, running this state with `runtime` set to `True` will `_not_` remove the indefinite mask.

---

## 20.19.248 salt.states.slack

### Send a message to Slack

This state is useful for sending messages to Slack during state runs.

New in version 2015.5.0.

```
slack-message:
 slack.post_message:
 - channel: '#general'
 - from_name: SuperAdmin
 - message: 'This state was executed successfully.'
 - api_key: peWcBiMOS9HrZG15peWcBiMOS9HrZG15
```

The api key can be specified in the master or minion configuration like below:

```
slack:
 api_key: peWcBiMOS9HrZG15peWcBiMOS9HrZG15
```

`salt.states.slack.post_message` (*name, channel, from\_name, message, api\_key=None, icon=None*)  
Send a message to a Slack channel.

```
slack-message:
 slack.post_message:
 - channel: '#general'
 - from_name: SuperAdmin
 - message: 'This state was executed successfully.'
 - api_key: peWcBiMOS9HrZG15peWcBiMOS9HrZG15
```

The following parameters are required:

**name** The unique name for this event.

**channel** The channel to send the message to. Can either be the ID or the name.

**from\_name** The name of that is to be shown in the "from" field.

**message** The message that is to be sent to the Slack channel.

The following parameters are optional:

**api\_key** The api key for Slack to use for authentication, if not specified in the configuration options of master or minion.

**icon** URL to an image to use as the icon for this message

## 20.19.249 salt.states.smartos

Management of SmartOS Standalone Compute Nodes

**maintainer** Jorge Schrauwen <sjorge@blackdot.be>

**maturity** new

**depends** vmadm, imgadm

**platform** smartos

New in version 2016.3.0.

```
vmtest.example.org:
 smartos.vm_present:
 - config:
 reprovision: true
 - vmconfig:
 image_uuid: c02a2044-c1bd-11e4-bd8c-dfc1db8b0182

 type: lofs
 options:
 - ro
 - nodevices

kvmtest.example.org:
smartos.vm_present:
 - vmconfig:
 brand: kvm
 alias: kvmtest
 cpu_type: host
 ram: 512
 vnc_port: 9
 tags:
 label: 'test kvm'
 owner: 'sjorge'
 disks:
 disk0
 size: 2048
 model: virtio
 compression: lz4
 boot: true
 nics:
 "82:1b:8e:49:e9:15"
 nic_tag: trunk
 mtu: 1500
 ips:
 - dhcp
 vlan_id: 30

cleanup_images:
 smartos.image_vacuum

```

**Note:** Keep in mind that when removing properties from `vmconfig` they will not get removed from the vm's current configuration, except for `nics`, `disk`, `tags`, ... they get removed via `add_*`, `set_*`, `update_*`, and `remove_*`. Properties must be manually reset to their default value. The same behavior as when using `'vmadm update'`.

`salt.states.smartos.config_absent`(*name*)

Ensure configuration property is absent in `/usbkey/config`  
**name** [string] name of property

`salt.states.smartos.config_present`(*name*, *value*)

Ensure configuration property is set to value in `/usbkey/config`  
**name** [string] name of property  
**value** [string] value of property

`salt.states.smartos.image_absent(name)`

Ensure image is absent on the computenode

**name** [string] uuid of image

---

**Note:** computenode.image\_absent will only remove the image if it is not used by a vm.

---

`salt.states.smartos.image_present(name)`

Ensure image is present on the computenode

**name** [string] uuid of image

`salt.states.smartos.image_vacuum(name)`

Delete images not in use or installed via image\_present

`salt.states.smartos.vm_absent(name, archive=False)`

Ensure vm is absent on the computenode

**name** [string] hostname of vm

**archive** [boolean] toggle archiving of vm on removal

---

**Note:** State ID is used as hostname. Hostnames must be unique.

---

`salt.states.smartos.vm_present(name, vmconfig, config=None)`

Ensure vm is present on the computenode

**name** [string] hostname of vm

**vmconfig** [dict] options to set for the vm

**config** [dict] fine grain control over vm\_present

---

**Note:**

The following configuration properties can be toggled in the config parameter.

- `kvm_reboot` (true) - reboots of kvm zones if needed for a config update
  - `auto_import` (false) - automatic importing of missing images
  - `reprovision` (false) - reprovision on image\_uuid changes
  - `enforce_customer_metadata` (true) - false = add metadata only, true = add, update, and remove metadata
  - `enforce_tags` (true) - false = add tags only, true = add, update, and remove tags
- 

**Note:** State ID is used as hostname. Hostnames must be unique.

---

**Note:** If hostname is provided in vmconfig this will take president over the State ID. This allows multiple states to be applied to the same vm.

---

**Note:**

The following instances should have a unique ID.

- `nic` : mac
- `filesystem`: target
- `disk` : path or diskN for zvols

e.g. `disk0` will be the first disk added, `disk1` the 2nd,...

---

`salt.states.smartos.vm_running(name)`

Ensure vm is in the running state on the computenode

---

**name** [string] hostname of vm

---

**Note:** State ID is used as hostname. Hostnames must be unique.

---

`salt.states.smartos.vm_stopped(name)`

Ensure vm is in the stopped state on the computenode

**name** [string] hostname of vm

---

**Note:** State ID is used as hostname. Hostnames must be unique.

---

## 20.19.250 salt.states.smtp

### Sending Messages via SMTP

New in version 2014.7.0.

This state is useful for firing messages during state runs, using the SMTP protocol

```
server-warning-message:
 smtp.send_msg:
 - name: 'This is a server warning message'
 - profile: my-smtp-account
 - recipient: admins@example.com
```

`salt.states.smtp.send_msg(name, recipient, subject, sender=None, profile=None, use_ssl='True')`

Send a message via SMTP

```
server-warning-message:
 smtp.send_msg:
 - name: 'This is a server warning message'
 - profile: my-smtp-account
 - subject: 'Message from Salt'
 - recipient: admin@example.com
 - sender: admin@example.com
 - use_ssl: True
```

**name** The message to send via SMTP

## 20.19.251 salt.states.snapper module

### Managing implicit state and baselines using snapshots

New in version 2016.11.0.

Salt can manage state against explicitly defined state, for example if your minion state is defined by:

```
/etc/config_file:
 file.managed:
 - source: salt://configs/myconfig
```

If someone modifies this file, the next application of the highstate will allow the admin to correct this deviation and the file will be corrected.

Now, what happens if somebody creates a file `/etc/new_config_file` and deletes `/etc/important_config_file`? Unless you have an explicit rule, this change will go unnoticed.

The `snapper` state module allows you to manage state implicitly, in addition to explicit rules, in order to define a baseline and iterate with explicit rules as they show that they work in production.

The workflow is: once you have a working and audited system, you would create your baseline snapshot (eg. with `salt tgt snapper.create_snapshot`) and define in your state this baseline using the identifier of the snapshot (in this case: 20):

```
my_baseline:
 snapper.baseline_snapshot:
 - number: 20
 - include_diff: False
 - ignore:
 - /var/log
 - /var/cache
```

Baseline snapshots can be also referenced by tag. Most recent baseline snapshot is used in case of multiple snapshots with the same tag:

```
my_baseline_external_storage:
 snapper.baseline_snapshot:
 • tag: my_custom_baseline_tag
 • config: external
 • ignore: - /mnt/tmp_files/
```

If you have this state, and you haven't done changes to the system since the snapshot, and you add a user, the state will show you the changes (including full diffs) to `/etc/passwd`, `/etc/shadow`, etc if you call it with `test=True` and will undo all changes if you call it without.

This allows you to add more explicit state knowing that you are starting from a very well defined state, and that you can audit any change that is not part of your explicit configuration.

So after you made this your state, you decided to introduce a change in your configuration:

```
my_baseline:
 snapper.baseline_snapshot:
 - number: 20
 - ignore:
 - /var/log
 - /var/cache

hosts_entry:
 file.blockreplace:
 - name: /etc/hosts
 - content: 'First line of content'
 - append_if_not_found: True
```

The change in `/etc/hosts` will be done after any other change that deviates from the specified snapshot is reverted. This could be for example, modifications to the `/etc/passwd` file or changes in the `/etc/hosts` that could render your the `hosts_entry` rule void or dangerous.

Once you take a new snapshot and you update the baseline snapshot number to include the change in `/etc/hosts` the `hosts_entry` rule will basically do nothing. You are free to leave it there for documentation, to ensure that the change is made in case the snapshot is wrong, but if you remove anything that comes after the `snapper`.

`baseline_snapshot` as it will have no effect; by the moment the state is evaluated, the baseline state was already applied and include this change.

**Warning:** Make sure you specify the baseline state before other rules, otherwise the baseline state will revert all changes if they are not present in the snapshot.

**Warning:** Do not specify more than one baseline rule as only the last one will affect the result.

**codeauthor** Duncan Mac-Vicar P. <dmacvicar@suse.de>

**codeauthor** Pablo Suárez Hernández <psuarezhernandez@suse.de>

**maturity** new

**platform** Linux

`salt.states.snapper.baseline_snapshot`(*name*, *number=None*, *tag=None*, *include\_diff=True*,  
*config='root'*, *ignore=None*)

Enforces that no file is modified comparing against a previously defined snapshot identified by number.

**number** Number of selected baseline snapshot.

**tag** Tag of the selected baseline snapshot. Most recent baseline snapshot is used in case of multiple snapshots with the same tag. (*tag* and *number* cannot be used at the same time)

**include\_diff** Include a diff in the response (Default: True)

**config** Snapper config name (Default: root)

**ignore** List of files to ignore. (Default: None)

### 20.19.252 salt.states.solrcloud module

States for solrcloud alias and collection configuration

New in version 2017.7.0.

`salt.states.solrcloud.alias`(*name*, *collections*, *\*\*kwargs*)

Create alias and enforce collection list.

Use the solrcloud module to get alias members and set them.

You can pass additional arguments that will be forwarded to http.query

**name** The collection name

**collections** list of collections to include in the alias

`salt.states.solrcloud.collection`(*name*, *options=None*, *\*\*kwargs*)

Create collection and enforce options.

Use the solrcloud module to get collection parameters.

You can pass additional arguments that will be forwarded to http.query

**name** The collection name

**options** [{}] options to ensure

### 20.19.253 salt.states.splunk

Splunk User State Module

New in version 2016.3.0..

This state is used to ensure presence of users in splunk.

```
ensure example test user 1:
 splunk.present:
 - name: 'Example TestUser1'
 - email: example@domain.com
```

`salt.states.splunk.absent(email, profile='splunk', **kwargs)`

Ensure a splunk user is absent

```
ensure example test user 1:
 splunk.absent:
 - email: 'example@domain.com'
 - name: 'exampleuser'
```

The following parameters are required:

**email** This is the email of the user in splunk

**name** This is the splunk username used to identify the user.

`salt.states.splunk.present(email, profile='splunk', **kwargs)`

Ensure a user is present

```
ensure example test user 1:
 splunk.user_present:
 - realname: 'Example TestUser1'
 - name: 'exampleuser'
 - email: 'example@domain.com'
 - roles: ['user']
```

The following parameters are required:

**email** This is the email of the user in splunk

## 20.19.254 salt.states.splunk\_search

Splunk Search State Module

New in version 2015.5.0.

This state is used to ensure presence of splunk searches.

```
server-warning-message:
 splunk_search.present:
 - name: This is the splunk search name
 - search: index=main sourcetype=
```

`salt.states.splunk_search.absent(name, profile='splunk')`

Ensure a search is absent

```
API Error Search:
 splunk_search.absent
```

The following parameters are required:

**name** This is the name of the search in splunk

`salt.states.splunk_search.present(name, profile='splunk', **kwargs)`

Ensure a search is present

```

API Error Search:
splunk_search.present:
 search: index=main sourcetype=blah
 template: alert_5min

```

The following parameters are required:  
**name** This is the name of the search in splunk

## 20.19.255 salt.states.sqlite3

### Management of SQLite3 databases

New in version 2016.3.0.

#### depends

- SQLite3 Python Module

**configuration** See *salt.modules.sqlite3* for setup instructions

The sqlite3 module is used to create and manage sqlite3 databases and execute queries

Here is an example of creating a table using sql statements:

```

users:
 sqlite3.table_present:
 - db: /var/www/data/app.sqlite
 - schema: CREATE TABLE `users` (`username` TEXT COLLATE NOCASE UNIQUE NOT NULL,
↪ `password` BLOB NOT NULL, `salt` BLOB NOT NULL, `last_login` INT)

```

Here is an example of creating a table using yaml/jinja instead of sql:

```

users:
 sqlite3.table_present:
 - db: /var/www/app.sqlite
 - schema:
 - email TEXT COLLATE NOCASE UNIQUE NOT NULL
 - firstname TEXT NOT NULL
 - lastname TEXT NOT NULL
 - company TEXT NOT NULL
 - password BLOB NOT NULL
 - salt BLOB NOT NULL

```

Here is an example of making sure a table is absent:

```

badservers:
 sqlite3.table_absent:
 - db: /var/www/data/users.sqlite

```

Sometimes you would to have specific data in tables to be used by other services Here is an example of making sure rows with specific data exist:

```

user_john_doe_xyz:
 sqlite3.row_present:
 - db: /var/www/app.sqlite
 - table: users
 - where_sql: email='john.doe@companyxyz.com'

```

(continues on next page)

(continued from previous page)

```

- data:
 email: john.doe@companyxyz.com
 lastname: doe
 firstname: john
 company: companyxyz.com
 password: abcdef012934125
 salt: abcdef012934125
- require:
 - sqlite3: users

```

Here is an example of removing a row from a table:

```

user_john_doe_abc:
 sqlite3.row_absent:
 - db: /var/www/app.sqlite
 - table: users
 - where_sql: email="john.doe@companyabc.com"
 - require:
 - sqlite3: users

```

Note that there is no explicit state to perform random queries, however, this can be approximated with sqlite3's module functions and module.run:

```

zone-delete:
 module.run:
 - name: sqlite3.modify
 - db: {{ db }}
 - sql: "DELETE FROM records WHERE id > {{ count[0] }} AND domain_id = {{ domain_
↵id }}"
 - watch:
 - sqlite3: zone-insert-12

```

`salt.states.sqlite3.row_absent`(*name*, *db*, *table*, *where\_sql*, *where\_args=None*)

Makes sure the specified row is absent in db. If multiple rows match *where\_sql*, then the state will fail.

**name** Only used as the unique ID

**db** The database file name

**table** The table name to check

**where\_sql** The sql to select the row to check

**where\_args** The list parameters to substitute in *where\_sql*

`salt.states.sqlite3.row_present`(*name*, *db*, *table*, *data*, *where\_sql*, *where\_args=None*, *update=False*)

Checks to make sure the given row exists. If row exists and *update* is True then row will be updated with *data*. Otherwise it will leave existing row unmodified and check it against *data*. If the existing data doesn't match *data\_check* the state will fail. If the row doesn't exist then it will insert data into the table. If more than one row matches, then the state will fail.

**name** Only used as the unique ID

**db** The database file name

**table** The table name to check the data

**data** The dictionary of key/value pairs to check against if row exists, insert into the table if it doesn't

**where\_sql** The sql to select the row to check

**where\_args** The list parameters to substitute in *where\_sql*

**update** True will replace the existing row with *data* When False and the row exists and *data* does not equal the row data then the state will fail

`salt.states.sqlite3.table_absent`(*name*, *db*)

Make sure the specified table does not exist

**name** The name of the table

**db** The name of the database file

`salt.states.sqlite3.table_present` (*name, db, schema, force=False*)

Make sure the specified table exists with the specified schema

**name** The name of the table

**db** The name of the database file

**schema** The dictionary containing the schema information

**force** If the name of the table exists and force is set to False, the state will fail. If force is set to True, the existing table will be replaced with the new table

## 20.19.256 salt.states.ssh\_auth

### Control of entries in SSH authorized\_key files

The information stored in a user's SSH authorized key file can be easily controlled via the `ssh_auth` state. Defaults can be set by the `enc`, `options`, and `comment` keys. These defaults can be overridden by including them in the name.

Since the YAML specification limits the length of simple keys to 1024 characters, and since SSH keys are often longer than that, you may have to use a YAML 'explicit key', as demonstrated in the second example below.

```

AAAAB3NzaC1kc3MAAACBAL0sQ9fJ5bYTEyY==:
 ssh_auth.present:
 - user: root
 - enc: ssh-dss

? AAAAB3NzaC1kc3MAAACBAL0sQ9fJ5bYTEyY==...
:
 ssh_auth.present:
 - user: root
 - enc: ssh-dss

thatch:
 ssh_auth.present:
 - user: root
 - source: salt://ssh_keys/thatch.id_rsa.pub
 - config: '%h/.ssh/authorized_keys'

sshkeys:
 ssh_auth.present:
 - user: root
 - enc: ssh-rsa
 - options:
 - option1="value1"
 - option2="value2 flag2"
 - comment: myuser
 - names:
 - AAAAB3NzaC1kc3MAAACBAL0sQ9fJ5bYTEyY==
 - ssh-dss AAAAB3NzaCL0sQ9fJ5bYTEyY== user@domain
 - option3="value3" ssh-dss AAAAB3NzaC1kcQ9J5bYTEyY== other@testdomain
 - AAAAB3NzaC1kcQ9fJFF435bYTEyY== newcomment

```

`salt.states.ssh_auth.absent` (*name, user, enc='ssh-rsa', comment=', source=', options=None, config='.ssh/authorized\_keys', fingerprint\_hash\_type=None*)

Verifies that the specified SSH key is absent

**name** The SSH key to manage

**user** The user who owns the SSH authorized keys file to modify  
**enc** Defines what type of key is being used; can be ed25519, ecdsa, ssh-rsa or ssh-dss  
**comment** The comment to be placed with the SSH public key  
**options** The options passed to the key, pass a list object  
**source** The source file for the key(s). Can contain any number of public keys, in standard "authorized\_keys" format. If this is set, comment, enc and options will be ignored.

New in version 2015.8.0.

**config** The location of the authorized keys file relative to the user's home directory, defaults to ".ssh/authorized\_keys". Token expansion %u and %h for username and home path supported.  
**fingerprint\_hash\_type** The public key fingerprint hash type that the public key fingerprint was originally hashed with. This defaults to md5 if not specified.

New in version 2016.11.7.

---

**Note:** The default value of the `fingerprint_hash_type` will change to sha256 in Salt 2017.7.0.

---

`salt.states.ssh_auth.present`(*name*, *user*, *enc*='ssh-rsa', *comment*="", *source*="", *options*=None, *config*='.ssh/authorized\_keys', *fingerprint\_hash\_type*=None, *\*\*kwargs*)

Verifies that the specified SSH key is present for the specified user

**name** The SSH key to manage  
**user** The user who owns the SSH authorized keys file to modify  
**enc** Defines what type of key is being used; can be ed25519, ecdsa, ssh-rsa or ssh-dss  
**comment** The comment to be placed with the SSH public key  
**source** The source file for the key(s). Can contain any number of public keys, in standard "authorized\_keys" format. If this is set, comment and enc will be ignored.

---

**Note:** The source file must contain keys in the format <enc> <key> <comment>. If you have generated a keypair using PuTTYgen, then you will need to do the following to retrieve an OpenSSH-compatible public key.

1. In PuTTYgen, click Load, and select the *private* key file (not the public key), and click Open.
  2. Copy the public key from the box labeled Public key for pasting into OpenSSH authorized\_keys file.
  3. Paste it into a new file.
- 

**options** The options passed to the key, pass a list object  
**config** The location of the authorized keys file relative to the user's home directory, defaults to ".ssh/authorized\_keys". Token expansion %u and %h for username and home path supported.  
**fingerprint\_hash\_type** The public key fingerprint hash type that the public key fingerprint was originally hashed with. This defaults to md5 if not specified.

New in version 2016.11.7.

---

**Note:** The default value of the `fingerprint_hash_type` will change to sha256 in Salt 2017.7.0.

---

## 20.19.257 salt.states.ssh\_known\_hosts

### Control of SSH known\_hosts entries

Manage the information stored in the known\_hosts files.

```

github.com:
 ssh_known_hosts:
 - present
 - user: root
 - fingerprint: 16:27:ac:a5:76:28:2d:36:63:1b:56:4d:eb:df:a6:48
 - fingerprint_hash_type: md5

example.com:
 ssh_known_hosts:
 - absent
 - user: root

```

`salt.states.ssh_known_hosts.absent` (*name*, *user=None*, *config=None*)

Verifies that the specified host is not known by the given user

**name** The host name Note that only single host names are supported. If `foo.example.com` and `bar.example.com` are the same machine and you need to exclude both, you will need one Salt state for each.

**user** The user who owns the ssh authorized keys file to modify

**config** The location of the authorized keys file relative to the user's home directory, defaults to `".ssh/known_hosts"`. If no user is specified, defaults to `"/etc/ssh/ssh_known_hosts"`. If present, must be an absolute path when a user is not specified.

`salt.states.ssh_known_hosts.present` (*name*, *user=None*, *fingerprint=None*,  
*key=None*, *port=None*, *enc=None*, *config=None*,  
*hash\_known\_hosts=True*, *timeout=5*, *fingerprint\_hash\_type=None*)

Verifies that the specified host is known by the specified user

On many systems, specifically those running with openssh 4 or older, the `enc` option must be set, only openssh 5 and above can detect the key type.

**name** The name of the remote host (e.g. `"github.com"`) Note that only a single hostname is supported, if `foo.example.com` and `bar.example.com` have the same host you will need two separate Salt States to represent them.

**user** The user who owns the ssh authorized keys file to modify

**fingerprint** The fingerprint of the key which must be present in the `known_hosts` file (optional if key specified)

**key** The public key which must be present in the `known_hosts` file (optional if fingerprint specified)

**port** optional parameter, port which will be used to when requesting the public key from the remote host, defaults to port 22.

**enc** Defines what type of key is being used, can be `ed25519`, `ecdsa ssh-rsa` or `ssh-dss`

**config** The location of the authorized keys file relative to the user's home directory, defaults to `".ssh/known_hosts"`. If no user is specified, defaults to `"/etc/ssh/ssh_known_hosts"`. If present, must be an absolute path when a user is not specified.

**hash\_known\_hosts** [True] Hash all hostnames and addresses in the known hosts file.

**timeout** [int] Set the timeout for connection attempts. If `timeout` seconds have elapsed since a connection was initiated to a host or since the last time anything was read from that host, then the connection is closed and the host in question considered unavailable. Default is 5 seconds.

New in version 2016.3.0.

**fingerprint\_hash\_type** The public key fingerprint hash type that the public key fingerprint was originally hashed with. This defaults to `sha256` if not specified.

New in version 2016.11.4.

Changed in version 2017.7.0:: default changed from `md5` to `sha256`

## 20.19.258 salt.states.stateconf

## Stateconf System

The stateconf system is intended for use only with the stateconf renderer. This State module presents the set function. This function does not execute any functionality, but is used to interact with the stateconf renderer.

`salt.states.stateconf.context`(*name*, *\*\*kwargs*)  
No-op state to support state config via the stateconf renderer.

`salt.states.stateconf.set`(*name*, *\*\*kwargs*)  
No-op state to support state config via the stateconf renderer.

### 20.19.259 salt.states.status

Minion status monitoring

Maps to the *status* execution module.

`salt.states.status.loadavg`(*name*, *maximum=None*, *minimum=None*)  
Return the current load average for the specified minion. Available values for *name* are *1-min*, *5-min* and *15-min*. *minimum* and *maximum* values should be passed in as strings.

`salt.states.status.process`(*name*)  
Return whether the specified signature is found in the process tree. This differs slightly from the services states, in that it may refer to a process that is not managed via the init system.

### 20.19.260 salt.states.statuspage

#### StatusPage

Manage the [StatusPage](#) configuration.

In the minion configuration file, the following block is required:

```
statuspage:
 api_key: <API_KEY>
 page_id: <PAGE_ID>
```

New in version 2017.7.0.

`salt.states.statuspage.create`(*name*, *endpoint='incidents'*, *api\_url=None*, *page\_id=None*,  
*api\_key=None*, *api\_version=None*, *\*\*kwargs*)

Insert a new entry under a specific endpoint.

**endpoint: incidents** Insert under this specific endpoint.

**page\_id** Page ID. Can also be specified in the config file.

**api\_key** API key. Can also be specified in the config file.

**api\_version: 1** API version. Can also be specified in the config file.

**api\_url** Custom API URL in case the user has a StatusPage service running in a custom environment.

**kwargs** Other params.

SLS Example:

```
create-my-component:
 statuspage.create:
 - endpoint: components
 - name: my component
 - group_id: 993vgp1shj12
```

```
salt.states.statuspage.delete(name, endpoint='incidents', id=None, api_url=None,
 page_id=None, api_key=None, api_version=None)
```

Remove an entry from an endpoint.

**endpoint: incidents** Request a specific endpoint.

**page\_id** Page ID. Can also be specified in the config file.

**api\_key** API key. Can also be specified in the config file.

**api\_version: 1** API version. Can also be specified in the config file.

**api\_url** Custom API URL in case the user has a StatusPage service running in a custom environment.

SLS Example:

```
delete-my-component:
 statuspage.delete:
 - endpoint: components
 - id: ftgks51sfs2d
```

```
salt.states.statuspage.managed(name, config, api_url=None, page_id=None, api_key=None,
 api_version=None, pace=1, allow_empty=False)
```

Manage the StatusPage configuration.

**config** Dictionary with the expected configuration of the StatusPage. The main level keys of this dictionary represent the endpoint name. If a certain endpoint does not exist in this structure, it will be ignored / not configured.

**page\_id** Page ID. Can also be specified in the config file.

**api\_key** API key. Can also be specified in the config file.

**api\_version: 1** API version. Can also be specified in the config file.

**api\_url** Custom API URL in case the user has a StatusPage service running in a custom environment.

**pace: 1** Max requests per second allowed by the API.

**allow\_empty: False** Allow empty config.

SLS example:

```
my-statuspage-config:
 statuspage.managed:
 - config:
 components:
 - name: component1
 group_id: uy4g37rf
 - name: component2
 group_id: 3n4uyu4gf
 incidents:
 - name: incident1
 status: resolved
 impact: major
 backfilled: false
 - name: incident2
 status: investigating
 impact: minor
```

```
salt.states.statuspage.update(name, endpoint='incidents', id=None, api_url=None,
 page_id=None, api_key=None, api_version=None, **kwargs)
```

Update attribute(s) of a specific endpoint.

**id** The unique ID of the endpoint entry.

**endpoint: incidents** Endpoint name.

**page\_id** Page ID. Can also be specified in the config file.

**api\_key** API key. Can also be specified in the config file.

**api\_version: 1** API version. Can also be specified in the config file.

**api\_url** Custom API URL in case the user has a StatusPage service running in a custom environment.

SLS Example:

```
update-my-incident:
 statuspage.update:

```

## 20.19.261 salt.states.supervisord

### Interaction with the Supervisor daemon

```
wsgi_server:
 supervisord.running:
 - require:
 - pkg: supervisor
 - watch:
 - file: /etc/nginx/sites-enabled/wsgi_server.conf
```

`salt.states.supervisord.dead`(*name*, *user=None*, *conf\_file=None*, *bin\_env=None*, *\*\*kwargs*)

Ensure the named service is dead (not running).

**name** Service name as defined in the supervisor configuration file

**user** Name of the user to run the supervisorctl command

New in version 0.17.0.

**conf\_file** path to supervisorctl config file

**bin\_env** path to supervisorctl bin or path to virtualenv with supervisor installed

`salt.states.supervisord.mod_watch`(*name*, *restart=True*, *update=False*, *user=None*,  
*conf\_file=None*, *bin\_env=None*, *\*\*kwargs*)

The supervisord watcher, called to invoke the watch command. Always restart on watch

---

**Note:** This state exists to support special handling of the `watch` *requisite*. It should not be called directly.

Parameters for this function should be set by the state being triggered.

---

`salt.states.supervisord.running`(*name*, *restart=False*, *update=False*, *user=None*, *conf\_file=None*,  
*bin\_env=None*, *\*\*kwargs*)

Ensure the named service is running.

**name** Service name as defined in the supervisor configuration file

**restart** Whether to force a restart

**update** Whether to update the supervisor configuration.

**user** Name of the user to run the supervisorctl command

New in version 0.17.0.

**conf\_file** path to supervisorctl config file

**bin\_env** path to supervisorctl bin or path to virtualenv with supervisor installed

## 20.19.262 salt.states.svn

### Manage SVN repositories

Manage repository checkouts via the `svn` vcs system. Note that subversion must be installed for these states to be available, so `svn` states should include a `requisite` to a `pkg.installed` state for the package which provides subversion (`subversion` in most cases). Example:

**subversion:**

pkg.installed

http://unladen-swallow.googlecode.com/svn/trunk/:

**svn.latest:**- **target:** /tmp/swallow

**salt.states.svn.dirty**(*name, target, user=None, username=None, password=None, ignore\_unversioned=False*)

Determine if the working directory has been changed.

**salt.states.svn.export**(*name, target=None, rev=None, user=None, username=None, password=None, force=False, overwrite=False, externals=True, trust=False*)

Export a file or directory from an SVN repository

**name** Address and path to the file or directory to be exported.

**target** Name of the target directory where the checkout will put the working directory

**rev** [None] The name revision number to checkout. Enable "force" if the directory already exists.

**user** [None] Name of the user performing repository management operations

**username** [None] The user to access the name repository with. The svn default is the current user

**password** Connect to the Subversion server with this password

New in version 0.17.0.

**force** [False] Continue if conflicts are encountered

**overwrite** [False] Overwrite existing target

**externals** [True] Change to False to not checkout or update externals

**trust** [False] Automatically trust the remote server. SVN's `-trust-server-cert`

**salt.states.svn.latest**(*name, target=None, rev=None, user=None, username=None, password=None, force=False, externals=True, trust=False*)

Checkout or update the working directory to the latest revision from the remote repository.

**name** Address of the name repository as passed to "svn checkout"

**target** Name of the target directory where the checkout will put the working directory

**rev** [None] The name revision number to checkout. Enable "force" if the directory already exists.

**user** [None] Name of the user performing repository management operations

**username** [None] The user to access the name repository with. The svn default is the current user

**password** Connect to the Subversion server with this password

New in version 0.17.0.

**force** [False] Continue if conflicts are encountered

**externals** [True] Change to False to not checkout or update externals

**trust** [False] Automatically trust the remote server. SVN's `-trust-server-cert`

## 20.19.263 salt.states.sysctl

### Configuration of the Linux kernel using sysctl

Control the kernel sysctl system.

**vm.swappiness:****sysctl.present:**- **value:** 20

**salt.states.sysctl.present**(*name, value, config=None*)

Ensure that the named sysctl value is set in memory and persisted to the named configuration file. The default sysctl configuration file is `/etc/sysctl.conf`

**name** The name of the sysctl value to edit

**value** The sysctl value to apply  
**config** The location of the sysctl configuration file. If not specified, the proper location will be detected based on platform.

### 20.19.264 salt.states.syslog\_ng

#### State module for syslog\_ng

**maintainer** Tibor Benke <btibi@sch.bme.hu>  
**maturity** new  
**depends** cmd, ps, syslog\_ng  
**platform** all

Users can generate syslog-ng configuration files from YAML format or use plain ones and reload, start, or stop their syslog-ng by using this module.

#### Details

The service module is not available on all system, so this module includes *syslog\_ng.reloaded*, *syslog\_ng.stopped*, and *syslog\_ng.started* functions. If the service module is available on the computers, users should use that.

Users can generate syslog-ng configuration with *syslog\_ng.config* function. For more information see *syslog-ng state usage*.

#### Syslog-ng configuration file format

The syntax of a configuration snippet in syslog-ng.conf:

```
object_type object_id {<options>;
```

These constructions are also called statements. There are options inside of them:

```
option(parameter1, parameter2); option2(parameter1, parameter2);
```

You can find more information about syslog-ng's configuration syntax in the Syslog-ng Admin guide: <http://www.balabit.com/sites/default/files/documents/syslog-ng-ose-3.5-guides/en/syslog-ng-ose-v3.5-guide-admin/html-single/index.html#syslog-ng.conf.5>

**salt.states.syslog\_ng.config**(*name*, *config*, *write=True*)

Builds syslog-ng configuration.

*name* : the id of the Salt document  
*config* : the parsed YAML code  
*write* : if True, it writes the config into the configuration file, otherwise just returns it

**salt.states.syslog\_ng.reloaded**(*name*)

Reloads syslog-ng.

**salt.states.syslog\_ng.started**(*name=None*, *user=None*, *group=None*, *chroot=None*, *caps=None*, *no\_caps=False*, *pidfile=None*, *enable\_core=False*, *fd\_limit=None*, *verbose=False*, *debug=False*, *trace=False*, *yydebug=False*, *persist\_file=None*, *control=None*, *worker\_threads=None*, *\*args*, *\*\*kwargs*)

Ensures, that syslog-ng is started via the given parameters.

Users shouldn't use this function, if the service module is available on their system.

`salt.states.syslog_ng.stopped` (*name=None*)  
Kills syslog-ng.

### 20.19.265 salt.states.sysrc

State to work with sysrc

`salt.states.sysrc.absent` (*name, \*\*kwargs*)  
Ensure a sysrc variable is absent.  
**name** The variable name to set  
**file** (optional) The rc file to add the variable to.  
**jail** (option) the name or JID of the jail to set the value in.

`salt.states.sysrc.managed` (*name, value, \*\*kwargs*)  
Ensure a sysrc variable is set to a specific value.  
**name** The variable name to set  
**value** Value to set the variable to  
**file** (optional) The rc file to add the variable to.  
**jail** (option) the name or JID of the jail to set the value in.  
Example:

```
syslogd:
 sysrc.managed:
 - name: syslogd_flags
 - value: -ss
```

### 20.19.266 salt.states.telemetry\_alert

#### Manage Telemetry alert configurations

New in version 2016.3.0.

Create, Update and destroy Mongo Telemetry alert configurations.

This module uses requests, which can be installed via package, or pip.

This module accepts explicit credential (telemetry api key) or can also read api key credentials from a pillar. Example:

```
ensure telemetry alert X is defined on deployment Y:
 telemetry_alert.present:
 - deployment_id: "rs-XXXXXX"
 - metric_name: "testMetric"
 - alert_config:
 max: 1
 filter: SERVER_ROLE_MONGOD_PRIMARY
 escalate_to: "example@pagerduty.com"
 - name: "***MANAGED BY ORCA DO NOT EDIT BY HAND** manages alarm on testMetric"
```

`salt.states.telemetry_alert.absent` (*name, deployment\_id, metric\_name, api\_key=None, profile='telemetry'*)

Ensure the telemetry alert config is deleted

**name** An optional description of the alarms (not currently supported by telemetry API)

**deployment\_id** Specifies the ID of the root deployment resource (replica set cluster or sharded cluster) to which this alert definition is attached

**metric\_name** Specifies the unique ID of the metric to whose values these thresholds will be applied  
**api\_key** Telemetry api key for the user  
**profile** A dict with telemetry config data. If present, will be used instead of `api_key`.

`salt.states.telemetry_alert.present`(*name, deployment\_id, metric\_name, alert\_config, api\_key=None, profile='telemetry'*)

Ensure the telemetry alert exists.

**name** An optional description of the alarm (not currently supported by telemetry API)

**deployment\_id** Specifies the ID of the root deployment resource (replica set cluster or sharded cluster) to which this alert definition is attached

**metric\_name** Specifies the unique ID of the metric to whose values these thresholds will be applied

**alert\_config**: Is a list of dictionaries where each dict contains the following fields:

**filter** By default the alert will apply to the deployment and all its constituent resources. If the alert only applies to a subset of those resources, a filter may be specified to narrow this scope.

**min** the smallest "ok" value the metric may take on; if missing or null, no minimum is enforced.

**max** the largest "ok" value the metric may take on; if missing or null, no maximum is enforced.

**notify\_all** Used to indicate if you want to alert both onCallEngineer and apiNotifications

**api\_key** Telemetry api key for the user

**profile** A dict of telemetry config information. If present, will be used instead of `api_key`.

## 20.19.267 salt.states.test

### Test States

Provide test case states that enable easy testing of things to do with state calls, e.g. running, calling, logging, output filtering etc.

```

always-passes-with-any-kwarg:
 test.nop:
 - name: foo
 - something: else
 - foo: bar

always-passes:
 test.succeed_without_changes:
 - name: foo

always-fails:
 test.fail_without_changes:
 - name: foo

always-changes-and-succeeds:
 test.succeed_with_changes:
 - name: foo

always-changes-and-fails:
 test.fail_with_changes:
 - name: foo

my-custom-combo:
 test.configurable_test_state:
 - name: foo
 - changes: True
 - result: False
 - comment: bar.baz

```

(continues on next page)

(continued from previous page)

```

is-pillar-foo-present-and-bar-is-int:
 test.check_pillar:
 - present:
 - foo
 - integer:
 - bar

```

`salt.states.test.check_pillar` (*name*, *present=None*, *boolean=None*, *integer=None*, *string=None*, *listing=None*, *dictionary=None*, *verbose=False*)

Checks the presence and, optionally, the type of given keys in Pillar. Supported kwargs for types are: - boolean (bool) - integer (int) - string (str) - listing (list) - dictionary (dict)

Checking for None type pillars is not implemented yet.

```

is-pillar-foo-present-and-bar-is-int:
 test.check_pillar:
 - present:
 - foo
 - integer:
 - bar

```

`salt.states.test.configurable_test_state` (*name*, *changes=True*, *result=True*, *comment=""*)

A configurable test state which determines its output based on the inputs.

New in version 2014.7.0.

**name:** A unique string.

**changes:** Do we return anything in the changes field? Accepts True, False, and 'Random' Default is True

**result:** Do we return successfully or not? Accepts True, False, and 'Random' Default is True If test is True and changes is True, this will be None. If test is True and and changes is False, this will be True.

**comment:** String to fill the comment field with. Default is ""

`salt.states.test.fail_with_changes` (*name*)

Returns failure and changes is not empty.

New in version 2014.7.0.

**name:** A unique string.

`salt.states.test.fail_without_changes` (*name*)

Returns failure.

New in version 2014.7.0.

**name:** A unique string.

`salt.states.test.mod_watch` (*name*, *sfun=None*, *\*\*kwargs*)

Call this function via a watch statement

New in version 2014.7.0.

Any parameters in the state return dictionary can be customized by adding the keywords `result`, `comment`, and `changes`.

```

this_state_will_return_changes:
 test.succeed_with_changes

this_state_will_NOT_return_changes:
 test.succeed_without_changes

```

(continues on next page)

(continued from previous page)

```

this_state_is_watching_another_state:
 test.succeed_without_changes:
 - comment: 'This is a custom comment'
 - watch:
 - test: this_state_will_return_changes
 - test: this_state_will_NOT_return_changes

this_state_is_also_watching_another_state:
 test.succeed_without_changes:
 - watch:
 - test: this_state_will_NOT_return_changes

```

`salt.states.test.nop`(*name*, *\*\*kwargs*)

A no-op state that does nothing. Useful in conjunction with the *use* requisite, or in templates which could otherwise be empty due to jinja rendering

New in version 2015.8.1.

`salt.states.test.show_notification`(*name*, *text=None*, *\*\*kwargs*)

Simple notification using text argument.

New in version 2015.8.0.

**name** A unique string.

**text** Text to return in the comment.

`salt.states.test.succeed_with_changes`(*name*)

Returns successful and changes is not empty

New in version 2014.7.0.

**name:** A unique string.

`salt.states.test.succeed_without_changes`(*name*)

Returns successful.

New in version 2014.7.0.

**name** A unique string.

## 20.19.268 salt.states.testinframod module

## 20.19.269 salt.states.timezone

### Management of timezones

The timezone can be managed for the system:

```

America/Denver:
 timezone.system

```

The system and the hardware clock are not necessarily set to the same time. By default, the hardware clock is set to localtime, meaning it is set to the same time as the system clock. If *utc* is set to True, then the hardware clock will be set to UTC, and the system clock will be an offset of that.

```

America/Denver:
 timezone.system:
 - utc: True

```

The Ubuntu community documentation contains an explanation of this setting, as it applies to systems that dual-boot with Windows. This is explained in greater detail [here](#).

`salt.states.timezone.system`(*name*, *utc=True*)

Set the timezone for the system.

**name** The name of the timezone to use (e.g.: America/Denver)

**utc** Whether or not to set the hardware clock to UTC (default is True)

### 20.19.270 salt.states.tls

#### Enforce state for SSL/TLS

`salt.states.tls.valid_certificate`(*name*, *weeks=0*, *days=0*, *hours=0*, *minutes=0*, *seconds=0*)

Verify that a TLS certificate is valid now and (optionally) will be valid for the time specified through weeks, days, hours, minutes, and seconds.

### 20.19.271 salt.states.tomcat

#### Manage Apache Tomcat web applications

---

**Note:** This state requires the Tomcat Manager webapp to be installed and running.

---

The following grains/pillars must be set for communication with Tomcat Manager to work:

```
tomcat-manager:
 user: 'tomcat-manager'
 passwd: 'Passw0rd'
```

#### Configuring Tomcat Manager

To manage webapps via the Tomcat Manager, you'll need to configure a valid user in the file `conf/tomcat-users.xml`.

Listing 1: `conf/tomcat-users.xml`

```
<?xml version='1.0' encoding='utf-8'?>
<tomcat-users>
 <role rolename="manager-script"/>
 <user username="tomcat-manager" password="Passw0rd" roles="manager-script"/>
</tomcat-users>
```

#### Notes

- Using multiple versions (aka. parallel deployments) on the same context path is not supported.
- More information about the Tomcat Manager: <http://tomcat.apache.org/tomcat-7.0-doc/manager-howto.html>
- If you use only this module for deployments you might want to restrict access to the manager so it's only accessible via localhost. For more info: [http://tomcat.apache.org/tomcat-7.0-doc/manager-howto.html#Configuring\\_Manager\\_Application\\_Access](http://tomcat.apache.org/tomcat-7.0-doc/manager-howto.html#Configuring_Manager_Application_Access)

- Last tested on:

Tomcat Version: Apache Tomcat/7.0.54

JVM Vendor: Oracle Corporation

JVM Version: 1.8.0\_101-b13

OS Architecture: amd64

OS Name: Linux

OS Version: 3.10.0-327.22.2.el7.x86\_64

`salt.states.tomcat.mod_watch`(*name*, *url*='http://localhost:8080/manager', *timeout*=180)

The tomcat watcher, called to invoke the watch command. When called, it will reload the webapp in question

---

**Note:** This state exists to support special handling of the watch *requisite*. It should not be called directly.

Parameters for this function should be set by the state being triggered.

---

`salt.states.tomcat.undeployed`(*name*, *url*='http://localhost:8080/manager', *timeout*=180)

Enforce that the WAR will be undeployed from the server

**name** The context path to undeploy.

**url** [http://localhost:8080/manager] The URL of the server with the Tomcat Manager webapp.

**timeout** [180] Timeout for HTTP request to the Tomcat Manager.

Example:

```
jenkins:
 tomcat.undeployed:
 - name: /ran
 - require:
 - service: application-service
```

`salt.states.tomcat.wait`(*name*, *url*='http://localhost:8080/manager', *timeout*=180)

Wait for the Tomcat Manager to load.

Notice that if tomcat is not running we won't wait for it start and the state will fail. This state can be required in the tomcat.war\_deployed state to make sure tomcat is running and that the manager is running as well and ready for deployment.

**url** [http://localhost:8080/manager] The URL of the server with the Tomcat Manager webapp.

**timeout** [180] Timeout for HTTP request to the Tomcat Manager.

Example:

```
tomcat-service:
 service.running:
 - name: tomcat
 - enable: True

wait-for-tomcatmanager:
 tomcat.wait:
 - timeout: 300
 - require:
 - service: tomcat-service

jenkins:
 tomcat.war_deployed:
 - name: /ran
 - war: salt://jenkins-1.2.4.war
```

(continues on next page)

(continued from previous page)

- ```
- require:
  - tomcat: wait-for-tomcatmanager
```

```
salt.states.tomcat.war_deployed(name, war, force=False, url='http://localhost:8080/manager',
                                timeout=180, temp_war_location=None, version=True)
```

Enforce that the WAR will be deployed and started in the context path, while making use of WAR versions in the filename.

Note: For more info about Tomcats file paths and context naming, please see <http://tomcat.apache.org/tomcat-7.0-doc/config/context.html#Naming>

name The context path to deploy (incl. forward slash) the WAR to.

war Absolute path to WAR file (should be accessible by the user running Tomcat) or a path supported by the `salt.modules.cp.get_url` function.

force [False] Force deployment even if the version strings are the same. Disabled by default.

url [<http://localhost:8080/manager>] The URL of the Tomcat Web Application Manager.

timeout [180] Timeout for HTTP requests to the Tomcat Manager.

temp_war_location [None] Use another location to temporarily copy the WAR file to. By default the system's temp directory is used.

version ["] Specify the WAR version. If this argument is provided, it overrides the version encoded in the WAR file name, if one is present.

New in version 2015.8.6.

Use `False` or blank value to prevent guessing the version and keeping it blank.

New in version 2016.11.0.

Example:

```
jenkins:
  tomcat.war_deployed:
    - name: /salt-powered-jenkins
    - war: salt://jenkins-1.2.4.war
    - require:
      - service: application-service
```

Note: Be aware that in the above example the WAR `jenkins-1.2.4.war` will be deployed to the context path `salt-powered-jenkins##1.2.4`. To avoid this either specify a version yourself, or set `version` to `False`.

20.19.272 salt.states.trafficserver

Control Apache Traffic Server

New in version 2015.8.0.

```
salt.states.trafficserver.bounce_cluster(name)
```

Bounce all Traffic Server nodes in the cluster. Bouncing Traffic Server shuts down and immediately restarts Traffic Server, node-by-node.

```
bounce_ats_cluster:
  trafficserver.bounce_cluster
```

`salt.states.trafficserver.bounce_local` (*name*, *drain=False*)

Bounce Traffic Server on the local node. Bouncing Traffic Server shuts down and immediately restarts the Traffic Server node.

This option modifies the behavior of `traffic_line -b` and `traffic_line -L` such that `traffic_server` is not shut down until the number of active client connections drops to the number given by the `proxy.config.restart.active_client_threshold` configuration variable.

```
bounce_ats_local:
  trafficserver.bounce_local
```

```
bounce_ats_local:
  trafficserver.bounce_local
  - drain: True
```

`salt.states.trafficserver.clear_cluster` (*name*)

Clears accumulated statistics on all nodes in the cluster.

```
clear_ats_cluster:
  trafficserver.clear_cluster
```

`salt.states.trafficserver.clear_node` (*name*)

Clears accumulated statistics on the local node.

```
clear_ats_node:
  trafficserver.clear_node
```

`salt.states.trafficserver.config` (*name*, *value*)

Set Traffic Server configuration variable values.

```
proxy.config.proxy_name:
  trafficserver.config:
    - value: cdn.site.domain.tld
```

OR

```
traffic_server_setting:
  trafficserver.config:
    - name: proxy.config.proxy_name
    - value: cdn.site.domain.tld
```

`salt.states.trafficserver.offline` (*name*, *path*)

Mark a cache storage device as offline. The storage is identified by a path which must match exactly a path specified in `storage.config`. This removes the storage from the cache and redirects requests that would have used this storage to other storage. This has exactly the same effect as a disk failure for that storage. This does not persist across restarts of the `traffic_server` process.

```
offline_ats_path:
  trafficserver.offline:
    - path: /path/to/cache
```

`salt.states.trafficserver.refresh` (*name*)

Initiate a Traffic Server configuration file reread. Use this command to update the running configuration after any configuration file modification.

The timestamp of the last reconfiguration event (in seconds since epoch) is published in the `proxy.node.config.reconfigure_time` metric.

```
refresh_ats:
  trafficserver.refresh
```

`salt.states.trafficserver.restart_cluster` (*name*)

Restart the `traffic_manager` process and the `traffic_server` process on all the nodes in a cluster.

```
restart_ats_cluster:
  trafficserver.restart_cluster
```

`salt.states.trafficserver.restart_local` (*name*, *drain=False*)

Restart the `traffic_manager` and `traffic_server` processes on the local node.

This option modifies the behavior of `traffic_line -b` and `traffic_line -L` such that `traffic_server` is not shut down until the number of active client connections drops to the number given by the `proxy.config.restart.active_client_threshold` configuration variable.

```
restart_ats_local:
  trafficserver.restart_local

restart_ats_local_drain:
  trafficserver.restart_local
  - drain: True
```

`salt.states.trafficserver.set_var` (*name*, *value*)

Set Traffic Server configuration variable values.

Deprecated since version Fluorine: Use `trafficserver.config` instead.

```
proxy.config.proxy_name:
trafficserver.set_var:
  - value: cdn.site.domain.tld

OR

traffic_server_setting:
trafficserver.set_var:
  - name: proxy.config.proxy_name
  - value: cdn.site.domain.tld
```

`salt.states.trafficserver.shutdown` (*name*)

Shut down Traffic Server on the local node.

```
shutdown_ats:
  trafficserver.shutdown
```

`salt.states.trafficserver.startup` (*name*)

Start Traffic Server on the local node.

```
startup_ats:
  trafficserver.startup
```

`salt.states.trafficserver.zero_cluster` (*name*)

Reset performance statistics to zero across the cluster.

```
zero_ats_cluster:
  trafficserver.zero_cluster
```

`salt.states.trafficserver.zero_node` (*name*)
Reset performance statistics to zero on the local node.

```
zero_ats_node:
  trafficserver.zero_node
```

20.19.273 salt.states.tuned

Interface to Red Hat tuned-adm module

```
maintainer Syed Ali <alicsyed@gmail.com>
maturity new
depends cmd.run
platform Linux
```

`salt.states.tuned.off` (*name=None*)
Turns 'tuned' off. Example tuned.sls file for turning tuned off:
tuned: tuned.off: []
To see a valid list of states call execution module: `tuned.list`

`salt.states.tuned.profile` (*name*)
This state module allows you to modify system tuned parameters

Example tuned.sls file to set profile to virtual-guest
tuned:
 tuned:
 • profile
 • name: virtual-guest
name tuned profile name to set the system to
To see a valid list of states call execution module: `tuned.list`

20.19.274 salt.states.uptime

Monitor Web Server with Uptime

Uptime is an open source remote monitoring application using Node.js, MongoDB, and Twitter Bootstrap.

```
Warning: This state module is beta. It might be changed later to include more or less automation.
```

Note: This state module requires a pillar to specify the location of your uptime install

```
uptime:
  application_url: "http://uptime-url.example.org"
```

Example:

```

url:
  uptime.monitored
url/sitemap.xml:
  uptime.monitored:
    - polling: 600 # every hour

```

`salt.states.uptime.monitored(name, **params)`

Makes sure an URL is monitored by uptime. Checks if URL is already monitored, and if not, adds it.

20.19.275 salt.states.user

Management of user accounts

The user module is used to create and manage user settings, users can be set as either absent or present

```

fred:
  user.present:
    - fullname: Fred Jones
    - shell: /bin/zsh
    - home: /home/fred
    - uid: 4000
    - gid: 4000
    - groups:
      - wheel
      - storage
      - games

testuser:
  user.absent

```

`salt.states.user.absent(name, purge=False, force=False)`

Ensure that the named user is absent

name The name of the user to remove

purge Set purge to True to delete all of the user's files as well as the user, Default is False.

force If the user is logged in, the absent state will fail. Set the force option to True to remove the user even if they are logged in. Not supported in FreeBSD and Solaris, Default is False.

`salt.states.user.present(name, uid=None, gid=None, gid_from_name=False, groups=None, optional_groups=None, remove_groups=True, home=None, createhome=True, password=None, hash_password=False, enforce_password=True, empty_password=False, shell=None, unique=True, system=False, full_name=None, roomnumber=None, workphone=None, homephone=None, other=None, loginclass=None, date=None, mindays=None, maxdays=None, inactdays=None, warndays=None, expire=None, win_homedrive=None, win_profile=None, win_logonscript=None, win_description=None, nologinit=False, allow_uid_change=False, allow_gid_change=False)`

Ensure that the named user is present with the specified properties

name The name of the user to manage

uid The user id to assign. If not specified, and the user does not exist, then the next available uid will be assigned.

gid The id of the default group to assign to the user. Either a group name or gid can be used. If not specified, and the user does not exist, then the next available gid will be assigned.

gid_from_name [False] If True, the default group id will be set to the id of the group with the same name as the user. If the group does not exist the state will fail.

allow_uid_change [False] Set to `True` to allow the state to update the uid.

New in version 2018.3.1.

allow_gid_change [False] Set to `True` to allow the state to update the gid.

New in version 2018.3.1.

groups A list of groups to assign the user to, pass a list object. If a group specified here does not exist on the minion, the state will fail. If set to the empty list, the user will be removed from all groups except the default group. If unset, salt will assume current groups are still wanted (see issue #28706).

optional_groups A list of groups to assign the user to, pass a list object. If a group specified here does not exist on the minion, the state will silently ignore it.

NOTE: If the same group is specified in both "groups" and "optional_groups", then it will be assumed to be required and not optional.

remove_groups Remove groups that the user is a member of that weren't specified in the state, Default is `True`.

home The custom login directory of user. Uses default value of underlying system if not set. Notice that this directory does not have to exist. This also the location of the home directory to create if `createhome` is set to `True`.

createhome [True] If set to `False`, the home directory will not be created if it doesn't already exist.

Warning: Not supported on Windows or Mac OS.

Additionally, parent directories will *not* be created. The parent directory for `home` must already exist.

nologinit [False] If set to `True`, it will not add the user to lastlog and faillog databases.

Note: Not supported on Windows or Mac OS.

password A password hash to set for the user. This field is only supported on Linux, FreeBSD, NetBSD, OpenBSD, and Solaris. If the `empty_password` argument is set to `True` then `password` is ignored. For Windows this is the plain text password. For Linux, the hash can be generated with `openssl passwd -1`.

Changed in version 0.16.0: BSD support added.

hash_password Set to `True` to hash the clear text password. Default is `False`.

enforce_password Set to `False` to keep the password from being changed if it has already been set and the password hash differs from what is specified in the "password" field. This option will be ignored if "password" is not specified, Default is `True`.

empty_password Set to `True` to enable password-less login for user, Default is `False`.

shell The login shell, defaults to the system default shell

unique Require a unique UID, Default is `True`.

system Choose UID in the range of `FIRST_SYSTEM_UID` and `LAST_SYSTEM_UID`, Default is `False`.

loginclass The login class, defaults to empty (BSD only)

User comment field (GECOS) support (currently Linux, BSD, and MacOS only):

The below values should be specified as strings to avoid ambiguities when the values are loaded. (Especially the phone and room number fields which are likely to contain numeric data)

fullname The user's full name

roomnumber The user's room number (not supported in MacOS)

workphone The user's work phone number (not supported in MacOS)

homephone The user's home phone number (not supported in MacOS)

other The user's other attribute (not supported in MacOS) If GECOS field contains more than 4 commas, this field will have the rest of 'em

Changed in version 2014.7.0: Shadow attribute support added.

Shadow attributes support (currently Linux only):

The below values should be specified as integers.

date Date of last change of password, represented in days since epoch (January 1, 1970).

mindays The minimum number of days between password changes.

maxdays The maximum number of days between password changes.

inactdays The number of days after a password expires before an account is locked.

warndays Number of days prior to maxdays to warn users.

expire Date that account expires, represented in days since epoch (January 1, 1970).

The below parameters apply to windows only:

win_homedrive (Windows Only) The drive letter to use for the home directory. If not specified the home directory will be a unc path. Otherwise the home directory will be mapped to the specified drive. Must be a letter followed by a colon. Because of the colon, the value must be surrounded by single quotes. ie: - win_homedrive: 'U:

Changed in version 2015.8.0.

win_profile (Windows Only) The custom profile directory of the user. Uses default value of underlying system if not set.

Changed in version 2015.8.0.

win_logonscript (Windows Only) The full path to the logon script to run when the user logs in.

Changed in version 2015.8.0.

win_description (Windows Only) A brief description of the purpose of the users account.

Changed in version 2015.8.0.

20.19.276 salt.states.vagrant

Manage Vagrant VMs

Manange execution of Vagrant virtual machines on Salt minions.

Vagrant is a tool for building and managing virtual machine environments. It can use various providers, such as **VirtualBox**, **Docker**, or **VMware**, to run its VMs. Vagrant provides some of the functionality of a light-weight hypervisor. The combination of Salt modules, Vagrant running on the host, and a virtual machine provider, gives hypervisor-like functionality for developers who use Vagrant to quickly define their virtual environments.

New in version 2018.3.0.

The configuration of each virtual machine is defined in a file named `Vagrantfile` which must exist on the VM host machine. The essential parameters which must be defined to start a Vagrant VM are the directory where the `Vagrantfile` is located (argument `cwd`:), and the username which will own the Vagrant box created for the VM (argument `vagrant_runas`:).

A single `Vagrantfile` may define one or more virtual machines. Use the `machine` argument to chose among them. The default (blank) value will select the `primary` (or `only`) machine in the `Vagrantfile`.

[NOTE:] Each virtual machine host must have the following:

- a working salt-minion
- a Salt sdb database configured for `vagrant_sdb_data`.
- Vagrant installed and the `vagrant` command working
- a suitable VM provider

```
# EXAMPLE:
# file /etc/salt/minion.d/vagrant_sdb.conf on the host computer
# -- this sdb database is required by the Vagrant module --
vagrant_sdb_data: # The sdb database must have this name.
  driver: sqlite3 # Let's use SQLite to store the data ...
  database: /var/cache/salt/vagrant.sqlite # ... in this file ...
  table: sdb # ... using this table name.
  create_table: True # if not present
```

`salt.states.vagrant.destroyed(name)`

Stops a VM (or VMs) and removes all references to it (them). (Runs `vagrant destroy`.)

Subsequent re-use of the same machine will require another operation of `vagrant.running` or a call to the `vagrant.init` execution module.

Parameters `name` – May be a Salt_id node or a POSIX-style wildcard string.

```
node_name:
  vagrant.destroyed
```

`salt.states.vagrant.initialized(name, **kwargs)`

Defines a new VM with specified arguments, but does not start it.

Parameters `name` – the Salt_id node name you wish your VM to have.

Each machine must be initialized individually using this function or the "vagrant.running" function, or the `vagrant.init` execution module call.

This command will not change the state of a running or paused machine.

Possible keyword arguments:

- `cwd`: The directory (path) containing the Vagrantfile
- `machine`: (") the name of the machine (in the Vagrantfile) if not default
- `vagrant_runas`: ('root') the username who owns the vagrantbox file
- `vagrant_provider`: the provider to run the VM (usually 'virtualbox')
- `vm`: ({}) a dictionary containing these or other keyword arguments

```
node_name1:
  vagrant.initialized
  - cwd: /projects/my_project
  - vagrant_runas: my_username
  - machine: machine1

node_name2:
  vagrant.initialized
  - cwd: /projects/my_project
  - vagrant_runas: my_username
  - machine: machine2

start_nodes:
  vagrant.start:
    - name: node_name?
```

`salt.states.vagrant.paused(name)`

Stores the state of a VM (or VMs) for fast restart. (Runs `vagrant suspend`.)

Parameters `name` – May be a Salt_id node or a POSIX-style wildcard string.

```
node_name:
  vagrant.paused
```

`salt.states.vagrant.powered_off(name)`

Stops a VM (or VMs) by power off. (Runs `vagrant halt`.)

This method is provided for compatibility with other VM-control state modules. For Vagrant, the action is identical with `stopped`.

Parameters name – May be a Salt_id node or a POSIX-style wildcard string.

```
node_name:
  vagrant.unpowered
```

`salt.states.vagrant.rebooted(name)`

Reboots a running, paused, or stopped VM (or VMs). (Runs `vagrant reload`.)

The will re-run the provisioning

Parameters name – May be a Salt_id node or a POSIX-style wildcard string.

```
node_name:
  vagrant.reloaded
```

`salt.states.vagrant.running(name, **kwargs)`

Defines and starts a new VM with specified arguments, or restart a VM (or group of VMs). (Runs `vagrant up`.)

Parameters name – the Salt_id node name you wish your VM to have.

If `name` contains a `"?"` or `"**"` then it will re-start a group of VMs which have been paused or stopped.

Each machine must be initially started individually using this function or the `vagrant.init` execution module call.

[NOTE:] Keyword arguments are silently ignored when re-starting an existing VM.

Possible keyword arguments:

- `cwd`: The directory (path) containing the Vagrantfile
- `machine`: (") the name of the machine (in the Vagrantfile) if not default
- `vagrant_runas`: ('root') the username who owns the vagrantbox file
- `vagrant_provider`: the provider to run the VM (usually 'virtualbox')
- `vm`: ({} a dictionary containing these or other keyword arguments

```
node_name:
  vagrant.running
```

```
node_name:
  vagrant.running:
    - cwd: /projects/my_project
    - vagrant_runas: my_username
    - machine: machine1
```

`salt.states.vagrant.stopped(name)`

Stops a VM (or VMs) by shutting it (them) down nicely. (Runs `vagrant halt`.)

Parameters name – May be a Salt_id node, or a POSIX-style wildcard string.

```
node_name:
  vagrant.stopped
```

20.19.277 salt.states.vault module

States for managing Hashicorp Vault. Currently handles policies. Configuration instructions are documented in the execution module docs.

maintainer SaltStack

maturity new

platform all

New in version 2017.7.0.

salt.states.vault.policy_present(*name, rules*)

Ensure a Vault policy with the given name and rules is present.

name The name of the policy

rules Rules formatted as in-line HCL

```
demo-policy:
  vault.policy_present:
    - name: foo/bar
    - rules: |
        path "secret/top-secret/*" {
            policy = "deny"
        }
        path "secret/not-very-secret/*" {
            policy = "write"
        }
```

20.19.278 salt.states.vbox_guest

VirtualBox Guest Additions installer state

salt.states.vbox_guest.additions_installed(*name, reboot=False, upgrade_os=False*)

Ensure that the VirtualBox Guest Additions are installed. Uses the CD, connected by VirtualBox.

name The name has no functional value and is only used as a tracking reference.

reboot [False] Restart OS to complete installation.

upgrade_os [False] Upgrade OS (to ensure the latests version of kernel and developer tools installed).

salt.states.vbox_guest.additions_removed(*name, force=False*)

Ensure that the VirtualBox Guest Additions are removed. Uses the CD, connected by VirtualBox.

To connect VirtualBox Guest Additions via VirtualBox graphical interface press 'Host+D' ('Host' is usually 'Right Ctrl').

name The name has no functional value and is only used as a tracking reference.

force Force VirtualBox Guest Additions removing.

salt.states.vbox_guest.grant_access_to_shared_folders_to(*name, users=None*)

Grant access to auto-mounted shared folders to the users.

User is specified by it's name. To grant access for several users use argument *users*.

name Name of the user to grant access to auto-mounted shared folders to.

users List of names of users to grant access to auto-mounted shared folders to. If specified, *name* will not be taken into account.

20.19.279 salt.states.victorops

Create an Event in VictorOps

New in version 2015.8.0.

This state is useful for creating events on the VictorOps service during state runs.

```

webserver-warning-message:
victorops.create_event:
- message_type: 'CRITICAL'
- entity_id: 'webserver/diskspace'
- state_message: 'Webserver diskspace is low.'

```

`salt.states.victorops.create_event`(*name*, *message_type*, *routing_key*='everyone', ***kwargs*)
 Create an event on the VictorOps service

```

webserver-warning-message:
victorops.create_event:
- message_type: 'CRITICAL'
- entity_id: 'webserver/diskspace'
- state_message: 'Webserver diskspace is low.'

database-server-warning-message:
victorops.create_event:
- message_type: 'WARNING'
- entity_id: 'db_server/load'
- state_message: 'Database Server load is high.'
- entity_is_host: True
- entity_display_name: 'dbserver.example.com'

```

The following parameters are required:

name This is a short description of the event.

message_type One of the following values: INFO, WARNING, ACKNOWLEDGEMENT, CRITICAL, RECOVERY.

The following parameters are optional:

routing_key The key for where messages should be routed. By default, sent to 'everyone' route.

entity_id The name of alerting entity. If not provided, a random name will be assigned.

timestamp Timestamp of the alert in seconds since epoch. Defaults to the time the alert is received at VictorOps.

timestamp_fmt The date format for the timestamp parameter. Defaults to '%Y-%m-%dT%H:%M:%S'.

state_start_time The time this entity entered its current state (seconds since epoch). Defaults to the time alert is received.

state_start_time_fmt The date format for the timestamp parameter. Defaults to '%Y-%m-%dT%H:%M:%S'.

state_message Any additional status information from the alert item.

entity_is_host Used within VictorOps to select the appropriate display format for the incident.

entity_display_name Used within VictorOps to display a human-readable name for the entity.

ack_message A user entered comment for the acknowledgment.

ack_author The user that acknowledged the incident.

20.19.280 salt.states.virt module

Manage virt

For the key certificate this state uses the external pillar in the master to call for the generation and signing of certificates for systems running libvirt:

```

libvirt_keys:
  virt.keys

```

`salt.states.virt.keys`(*name*, *basepath*='/etc/pki', ***kwargs*)

Manage libvirt keys.

name The name variable used to track the execution

basepath Defaults to /etc/pki, this is the root location used for libvirt keys on the hypervisor

The following parameters are optional:

country The country that the certificate should use. Defaults to US.

New in version 2018.3.0.

state The state that the certificate should use. Defaults to Utah.

New in version 2018.3.0.

locality The locality that the certificate should use. Defaults to Salt Lake City.

New in version 2018.3.0.

organization The organization that the certificate should use. Defaults to Salted.

New in version 2018.3.0.

expiration_days The number of days that the certificate should be valid for. Defaults to 365 days (1 year)

New in version 2018.3.0.

`salt.states.virt.powered_off`(*name*)

Stops a VM by power off.

New in version 2016.3.0.

```
domain_name:
  virt.stopped
```

`salt.states.virt.rebooted`(*name*)

Reboots VMs

New in version 2016.3.0.

Parameters **name** –

Returns

`salt.states.virt.reverted`(*name*, *snapshot*=None, *cleanup*=False)

Deprecated since version 2016.3.0.

Reverts to the particular snapshot.

New in version 2016.3.0.

```
domain_name:
  virt.reverted:
    - cleanup: True

domain_name_1:
  virt.reverted:
    - snapshot: snapshot_name
    - cleanup: False
```

`salt.states.virt.running`(*name*, ***kwargs*)

Starts an existing guest, or defines and starts a new VM with specified arguments.

New in version 2016.3.0.

```
domain_name:
  virt.running
```

```
domain_name:
  virt.running:
```

(continues on next page)

(continued from previous page)

```
- cpu: 2
- mem: 2048
- eth0_mac: 00:00:6a:53:00:e3
```

`salt.states.virt.saved`(*name*, *suffix=None*)

Deprecated since version 2016.3.0: Use `snapshot()` instead.

Takes a snapshot of a particular VM or by a UNIX-style wildcard.

New in version 2016.3.0.

```
domain_name:
  virt.saved:
    - suffix: periodic

domain*:
  virt.saved:
    - suffix: periodic
```

`salt.states.virt.snapshot`(*name*, *suffix=None*)

Takes a snapshot of a particular VM or by a UNIX-style wildcard.

New in version 2016.3.0.

```
domain_name:
  virt.snapshot:
    - suffix: periodic

domain*:
  virt.snapshot:
    - suffix: periodic
```

`salt.states.virt.stopped`(*name*)

Stops a VM by shutting it down nicely.

New in version 2016.3.0.

```
domain_name:
  virt.stopped
```

`salt.states.virt.unpowered`(*name*)

Deprecated since version 2016.3.0: Use `powered_off()` instead.

Stops a VM by power off.

New in version 2016.3.0.

```
domain_name:
  virt.stopped
```

20.19.281 salt.states.virtualenv

Setup of Python virtualenv sandboxes.

New in version 0.17.0.

```

salt.states.virtualenv_mod.managed(name,          venv_bin=None,          requirements=None,
                                   system_site_packages=False,          distribute=False,
                                   use_wheel=False,          clear=False,          python=None,          ex-
                                   tra_search_dir=None,          never_download=None,
                                   prompt=None,          user=None,          cwd=None,          index_url=None,
                                   extra_index_url=None,          pre_releases=False,          no_deps=False,
                                   pip_download=None,          pip_download_cache=None,
                                   pip_exists_action=None,          pip_ignore_installed=False,
                                   proxy=None,          use_vt=False,          env_vars=None,
                                   no_use_wheel=False,          pip_upgrade=False,          pip_pkgs=None,
                                   pip_no_cache_dir=False,          pip_cache_dir=None,          pro-
                                   cess_dependency_links=False,          no_binary=None,          **kwargs)

```

Create a virtualenv and optionally manage it with pip

name Path to the virtualenv.

venv_bin: virtualenv The name (and optionally path) of the virtualenv command. This can also be set globally in the minion config file as `virtualenv.venv_bin`.

requirements: None Path to a pip requirements file. If the path begins with `salt://` the file will be transferred from the master file server.

use_wheel: False Prefer wheel archives (requires pip >= 1.4).

python [None] Python executable used to build the virtualenv

user: None The user under which to run virtualenv and pip.

cwd: None Path to the working directory where `pip install` is executed.

no_deps: False Pass `-no-deps` to `pip install`.

pip_exists_action: None Default action of pip when a path already exists: (s)witch, (i)gnore, (w)ipe, (b)ackup.

proxy: None Proxy address which is passed to `pip install`.

env_vars: None Set environment variables that some builds will depend on. For example, a Python C-module may have a Makefile that needs `INCLUDE_PATH` set to pick up a header file while compiling.

no_use_wheel: False Force to not use wheel archives (requires pip >= 1.4)

no_binary Force to not use binary packages (requires pip >= 7.0.0) Accepts either `:all:` to disable all binary packages, `:none:` to empty the set, or a list of one or more packages

pip_upgrade: False Pass `-upgrade` to `pip install`.

pip_pkgs: None As an alternative to `requirements`, pass a list of pip packages that should be installed.

process_dependency_links: False Run pip install with the `-process_dependency_links` flag.

New in version 2017.7.0.

Also accepts any kwargs that the virtualenv module will. However, some kwargs, such as the `pip` option, require `- distribute: True`.

```

/var/www/myvirtualenv.com:
  virtualenv.managed:
    - system_site_packages: False
    - requirements: salt://REQUIREMENTS.txt
    - env_vars:
      PATH_VAR: '/usr/local/bin/'

```

20.19.282 salt.states.win_certutil module

Installing of certificates to the Windows Certificate Manager

Install certificates to the Windows Certificate Manager

```

salt://certs/cert.cer:
  certutil.add_store:
    - store: TrustedPublisher

```

`salt.states.win_certutil.add_store(name, store, saltenv='base')`

Store a certificate to the given store

name The certificate to store, this can use local paths or salt:// paths

store The store to add the certificate to

saltenv The salt environment to use, this is ignored if a local path is specified

`salt.states.win_certutil.del_store(name, store, saltenv='base')`

Remove a certificate in the given store

name The certificate to remove, this can use local paths or salt:// paths

store The store to remove the certificate from

saltenv The salt environment to use, this is ignored if a local path is specified

20.19.283 salt.states.win_dacl

Windows Object Access Control Lists

Ensure an ACL is present

parameters: **name** - the path of the object **objectType** - Registry/File/Directory **user** - user account or SID for the ace **permission** - permission for the ace (see module win_acl for available permissions for each objectType) **acetype** - Allow/Deny **propagation** - how the ACL should apply to child objects (see module win_acl for available propagation types)

```
addAcl:
  win_dacl.present:
    - name: HKEY_LOCAL_MACHINE\SOFTWARE\mykey
    - objectType: Registry
    - user: FakeUser
    - permission: FullControl
    - acetype: ALLOW
    - propagation: KEY&SUBKEYS
```

Ensure an ACL does not exist

parameters: **name** - the path of the object **objectType** - Registry/File/Directory **user** - user account or SID for the ace **permission** - permission for the ace (see module win_acl for available permissions for each objectType) **acetype** - Allow/Deny **propagation** - how the ACL should apply to child objects (see module win_acl for available propagation types)

```
removeAcl:
  win_dacl.absent:
    - name: HKEY_LOCAL_MACHINE\SOFTWARE\mykey
    - objectType: Registry
    - user: FakeUser
    - permission: FullControl
    - acetype: ALLOW
    - propagation: KEY&SUBKEYS
```

Ensure an object is inheriting permissions

parameters: **name** - the path of the object **objectType** - Registry/File/Directory **clear_existing_acl** - True/False - when inheritance is enabled, should the existing ACL be kept or cleared out

```
eInherit:
  win_dacl.enableinheritance:
    - name: HKEY_LOCAL_MACHINE\SOFTWARE\mykey
    - objectType: Registry
    - clear_existing_acl: True
```

Ensure an object is not inheriting permissions

parameters: *name* - the path of the object *objectType* - Registry/File/Directory *copy_inherited_acl* - True/False - if inheritance is enabled, should the inherited permissions be copied to the ACL when inheritance is disabled

```
dInherit:
  win_dacl.disableinheritance:
    - name: HKEY_LOCAL_MACHINE\SOFTWARE\mykey
    - objectType: Registry
    - copy_inherited_acl: False
```

`salt.states.win_dacl.absent`(*name, objectType, user, permission, acetype, propagation*)
Ensure an ACL does not exist

`salt.states.win_dacl.disinherit`(*name, objectType, copy_inherited_acl=True*)
Ensure an object is not inheriting ACLs from its parent

`salt.states.win_dacl.inherit`(*name, objectType, clear_existing_acl=False*)
Ensure an object is inheriting ACLs from its parent

`salt.states.win_dacl.present`(*name, objectType, user, permission, acetype, propagation*)
Ensure an ACE is present

20.19.284 salt.states.win_dism module

Installing of Windows features using DISM

Install windows features/capabilities with DISM

```
Language.Basic~~~en-US~0.0.1.0:
  dism.capability_installed

NetFx3:
  dism.feature_installed
```

`salt.states.win_dism.capability_installed`(*name, source=None, limit_access=False, image=None, restart=False*)

Install a DISM capability

Parameters

- **name** (*str*) - The capability to install
- **source** (*str*) - The optional source of the capability
- **limit_access** (*bool*) - Prevent DISM from contacting Windows Update for on-line images
- **image** (*Optional[str]*) - The path to the root directory of an offline Windows image. If *None* is passed, the running operating system is targeted. Default is *None*.
- **restart** (*Optional[bool]*) - Reboot the machine if required by the install

Example

Run `dism.available_capabilities` to get a list of available capabilities. This will help you get the proper name to use.

```
install_dotnet35:
  dism.capability_installed:
    - name: NetFX3~~~
```

`salt.states.win_dism.capability_removed`(*name*, *image=None*, *restart=False*)

Uninstall a DISM capability

Parameters

- **name** (*str*) – The capability to uninstall
- **image** (*Optional[str]*) – The path to the root directory of an offline Windows image. If *None* is passed, the running operating system is targeted. Default is *None*.
- **restart** (*Optional[bool]*) – Reboot the machine if required by the install

Example

Run `dism.installed_capabilities` to get a list of installed capabilities. This will help you get the proper name to use.

```
remove_dotnet35:
  dism.capability_removed:
    - name: NetFX3~~~~
```

`salt.states.win_dism.feature_installed`(*name*, *package=None*, *source=None*, *limit_access=False*, *enable_parent=False*, *image=None*, *restart=False*)

Install a DISM feature

Parameters

- **name** (*str*) – The feature in which to install
- **package** (*Optional[str]*) – The parent package for the feature. You do not have to specify the package if it is the Windows Foundation Package. Otherwise, use package to specify the parent package of the feature
- **source** (*str*) – The optional source of the feature
- **limit_access** (*bool*) – Prevent DISM from contacting Windows Update for online images
- **enable_parent** (*Optional[bool]*) – True will enable all parent features of the specified feature
- **image** (*Optional[str]*) – The path to the root directory of an offline Windows image. If *None* is passed, the running operating system is targeted. Default is *None*.
- **restart** (*Optional[bool]*) – Reboot the machine if required by the install

Example

Run `dism.available_features` to get a list of available features. This will help you get the proper name to use.

```
install_telnet_client:
  dism.feature_installed:
    - name: TelnetClient
```

`salt.states.win_dism.feature_removed`(*name*, *remove_payload=False*, *image=None*, *restart=False*)

Disables a feature.

Parameters

- **name** (*str*) – The feature to disable
- **remove_payload** (*Optional[bool]*) – Remove the feature's payload. Must supply source when enabling in the future.
- **image** (*Optional[str]*) – The path to the root directory of an offline Windows image. If *None* is passed, the running operating system is targeted. Default is *None*.
- **restart** (*Optional[bool]*) – Reboot the machine if required by the install

Example

Run `dism.installed_features` to get a list of installed features. This will help you get the proper name to use.

```
remove_telnet_client:
  dism.feature_removed:
    - name: TelnetClient
    - remove_payload: True
```

`salt.states.win_dism.package_installed`(*name*, *ignore_check=False*, *prevent_pending=False*, *image=None*, *restart=False*)

Install a package.

Parameters

- **name** (*str*) – The package to install. Can be a .cab file, a .msu file, or a folder
- **ignore_check** (*Optional[bool]*) – Skip installation of the package if the applicability checks fail
- **prevent_pending** (*Optional[bool]*) – Skip the installation of the package if there are pending online actions
- **image** (*Optional[str]*) – The path to the root directory of an offline Windows image. If *None* is passed, the running operating system is targeted. Default is *None*.
- **restart** (*Optional[bool]*) – Reboot the machine if required by the install

Example

```
install_KB123123123:
  dism.package_installed:
    - name: C:\Packages\KB123123123.cab
```

`salt.states.win_dism.package_removed`(*name*, *image=None*, *restart=False*)

Uninstall a package

Parameters

- **name** (*str*) – The full path to the package. Can be either a .cab file or a folder. Should point to the original source of the package, not to where the file is installed. This can also be the name of a package as listed in `dism.installed_packages`
- **image** (*Optional[str]*) – The path to the root directory of an offline Windows image. If *None* is passed, the running operating system is targeted. Default is *None*.
- **restart** (*Optional[bool]*) – Reboot the machine if required by the install

Example

```
# Example using source
remove_KB1231231:
  dism.package_installed:
    - name: C:\Packages\KB1231231.cab

# Example using name from `dism.installed_packages`
remove_KB1231231:
  dism.package_installed:
    - name: Package_for_KB1231231~31bf3856ad364e35~amd64~~10.0.1.3
```

20.19.285 salt.states.win_dns_client

Module for configuring DNS Client on Windows systems

`salt.states.win_dns_client.dns_dhcp` (*name*, *interface*='Local Area Connection')

Configure the DNS server list from DHCP Server

`salt.states.win_dns_client.dns_exists` (*name*, *servers*=None, *interface*='Local Area Connection', *replace*=False)

Configure the DNS server list in the specified interface

Example:

```

config_dns_servers:
  win_dns_client.dns_exists:
    - replace: True #remove any servers not in the "servers" list, default is False
    - servers:
      - 8.8.8.8
      - 8.8.8.9

```

`salt.states.win_dns_client.primary_suffix` (*name*, *suffix*=None, *updates*=False)

New in version 2014.7.0.

Configure the global primary DNS suffix of a DHCP client.

suffix [None] The suffix which is advertised for this client when acquiring a DHCP lease When none is set, the explicitly configured DNS suffix will be removed.

updates [False] Allow syncing the DNS suffix with the AD domain when the client's AD domain membership changes

```

primary_dns_suffix:
  win_dns_client.primary_suffix:
    - suffix: sub.domain.tld
    - updates: True

```

20.19.286 salt.states.win_firewall

State for configuring Windows Firewall

`salt.states.win_firewall.add_rule` (*name*, *localport*, *protocol*='tcp', *action*='allow', *dir*='in', *remoteip*='any')

Add a new inbound or outbound rule to the firewall policy

Parameters

- **name** (*str*) – The name of the rule. Must be unique and cannot be "all". Required.
- **localport** (*int*) – The port the rule applies to. Must be a number between 0 and 65535. Can be a range. Can specify multiple ports separated by commas. Required.
- **protocol** (*Optional[str]*) – The protocol. Can be any of the following:
 - A number between 0 and 255
 - icmpv4
 - icmpv6
 - tcp
 - udp
 - any
- **action** (*Optional[str]*) – The action the rule performs. Can be any of the following:
 - allow
 - block

- bypass
- **dir** (*Optional [str]*) - The direction. Can be in or out.
- **remoteip** (*Optional [str]*) - The remote IP. Can be any of the following:
 - any
 - localsubnet
 - dns
 - dhcp
 - wins
 - defaultgateway
 - Any valid IPv4 address (192.168.0.12)
 - Any valid IPv6 address (2002:9b3b:1a31:4:208:74ff:fe39:6c43)
 - Any valid subnet (192.168.1.0/24)
 - Any valid range of IP addresses (192.168.0.1-192.168.0.12)
 - A list of valid IP addresses

Can be combinations of the above separated by commas.

New in version 2016.11.6.

Example:

```
open_smb_port:
  win_firewall.add_rule:
    - name: SMB (445)
    - localport: 445
    - protocol: tcp
    - action: allow
```

`salt.states.win_firewall.disabled` (*name='allprofiles'*)

Disable all the firewall profiles (Windows only)

Parameters **profile** (*Optional [str]*) - The name of the profile to disable. Default is allprofiles. Valid options are:

- allprofiles
- domainprofile
- privateprofile
- publicprofile

Example:

```
# To disable the domain profile
disable_domain:
  win_firewall.disabled:
    - name: domainprofile

# To disable all profiles
disable_all:
  win_firewall.disabled:
    - name: allprofiles
```

`salt.states.win_firewall.enabled` (*name='allprofiles'*)

Enable all the firewall profiles (Windows only)

Parameters **profile** (*Optional [str]*) - The name of the profile to enable. Default is allprofiles. Valid options are:

- allprofiles
- domainprofile
- privateprofile
- publicprofile

Example:

```
# To enable the domain profile
enable_domain:
  win_firewall.enabled:
    - name: domainprofile

# To enable all profiles
enable_all:
  win_firewall.enabled:
    - name: allprofiles
```

20.19.287 salt.states.win_iis module

Microsoft IIS site management

This module provides the ability to add/remove websites and application pools from Microsoft IIS.

New in version 2016.3.0.

salt.states.win_iis.container_setting(*name*, *container*, *settings=None*)

Set the value of the setting for an IIS container.

Parameters

- **name** (*str*) – The name of the IIS container.
- **container** (*str*) – The type of IIS container. The container types are: AppPools, Sites, SslBindings
- **settings** (*str*) – A dictionary of the setting names and their values. Example of usage for the AppPools container:

```
site0-appool-setting:
  win_iis.container_setting:
    - name: site0
    - container: AppPools
    - settings:
      managedPipelineMode: Integrated
      processModel.maxProcesses: 1
      processModel.userName: TestUser
      processModel.password: TestPassword
      processModel.identityType: SpecificUser
```

Example of usage for the Sites container:

```
site0-site-setting:
  win_iis.container_setting:
    - name: site0
    - container: Sites
    - settings:
      logFile.logFormat: W3C
      logFile.period: Daily
      limits.maxUrlSegments: 32
```

salt.states.win_iis.create_app(*name*, *site*, *sourcepath*, *apppool=None*)

Create an IIS application.

Parameters

- **name** (*str*) – The IIS application.
- **site** (*str*) – The IIS site name.
- **sourcepath** (*str*) – The physical path.
- **apppool** (*str*) – The name of the IIS application pool.

Example of usage with only the required arguments:

```
site0-v1-app:
  win_iis.create_app:
    - name: v1
    - site: site0
    - sourcepath: C:\inetpub\site0\v1
```

Example of usage specifying all available arguments:

```
site0-v1-app:
  win_iis.create_app:
    - name: v1
    - site: site0
    - sourcepath: C:\inetpub\site0\v1
    - apppool: site0
```

`salt.states.win_iis.create_apppool(name)`

Create an IIS application pool.

Parameters **name** (*str*) – The name of the IIS application pool.

Usage:

```
site0-approol:
  win_iis.create_apppool:
    - name: site0
```

`salt.states.win_iis.create_binding(name, site, hostheader=", ipaddress='*', port=80, protocol='http', sslflags=0)`

Create an IIS binding.

Parameters

- **site** (*str*) – The IIS site name.
- **hostheader** (*str*) – The host header of the binding.
- **ipaddress** (*str*) – The IP address of the binding.
- **port** (*str*) – The TCP port of the binding.
- **protocol** (*str*) – The application protocol of the binding.
- **sslflags** (*str*) – The flags representing certificate type and storage of the binding.

Example of usage with only the required arguments:

```
site0-https-binding:
  win_iis.create_binding:
    - site: site0
```

Example of usage specifying all available arguments:

```
site0-https-binding:
  win_iis.create_binding:
    - site: site0
    - hostheader: site0.local
    - ipaddress: '*'
    - port: 443
    - protocol: https
    - sslflags: 0
```

`salt.states.win_iis.create_cert_binding(name, site, hostheader=", ipaddress='*', port=443, sslflags=0)`

Assign a certificate to an IIS binding.

Parameters

- **name** (*str*) – The thumbprint of the certificate.
- **site** (*str*) – The IIS site name.
- **hostheader** (*str*) – The host header of the binding.
- **ipaddress** (*str*) – The IP address of the binding.
- **port** (*str*) – The TCP port of the binding.
- **sslflags** (*str*) – Flags representing certificate type and certificate storage of the binding.

Example of usage with only the required arguments:

```
site0-cert-binding:
  win_iis.create_cert_binding:
    - name: 9988776655443322111000AAABBBCCDDDEEEFFF
    - site: site0
```

Example of usage specifying all available arguments:

```
site0-cert-binding:
  win_iis.create_cert_binding:
    - name: 9988776655443322111000AAABBBCCDDDEEEFFF
    - site: site0
    - hostheader: site0.local
    - ipaddress: 192.168.1.199
    - port: 443
    - sslflags: 1
```

New in version 2016.11.0.

`salt.states.win_iis.create_vdir` (*name*, *site*, *sourcepath*, *app*='')

Create an IIS virtual directory.

Parameters

- **name** (*str*) – The virtual directory name.
- **site** (*str*) – The IIS site name.
- **sourcepath** (*str*) – The physical path.
- **app** (*str*) – The IIS application.

Example of usage with only the required arguments:

```
site0-foo-vdir:
  win_iis.create_vdir:
    - name: foo
    - site: site0
    - sourcepath: C:\inetpub\vdirs\foo
```

Example of usage specifying all available arguments:

```
site0-foo-vdir:
  win_iis.create_vdir:
    - name: foo
    - site: site0
    - sourcepath: C:\inetpub\vdirs\foo
    - app: v1
```

`salt.states.win_iis.deployed` (*name*, *sourcepath*, *apppool*=", *hostheader*=", *ipaddress*="*", *port*=80, *protocol*='http')

Ensure the website has been deployed.

Parameters

- **name** (*str*) – The IIS site name.
- **sourcepath** (*str*) – The physical path of the IIS site.

- **apppool** (*str*) – The name of the IIS application pool.
- **hostheader** (*str*) – The host header of the binding.
- **ipaddress** (*str*) – The IP address of the binding.
- **port** (*str*) – The TCP port of the binding.
- **protocol** (*str*) – The application protocol of the binding.

Example of usage with only the required arguments. This will default to using the default application pool assigned by IIS:

```
site0-deployed:
  win_iis.deployed:
    - name: site0
    - sourcepath: C:\inetpub\site0
```

Example of usage specifying all available arguments:

```
site0-deployed:
  win_iis.deployed:
    - name: site0
    - sourcepath: C:\inetpub\site0
    - apppool: site0
    - hostheader: site0.local
    - ipaddress: '*'
    - port: 443
    - protocol: https
```

`salt.states.win_iis.remove_app(name, site)`

Remove an IIS application.

Parameters

- **name** (*str*) – The application name.
- **site** (*str*) – The IIS site name.

Usage:

```
site0-v1-app-remove:
  win_iis.remove_app:
    - name: v1
    - site: site0
```

`salt.states.win_iis.remove_apppool(name)`

Remove an IIS application pool.

Parameters **name** (*str*) – The name of the IIS application pool.

Usage:

```
defaultapppool-remove:
  win_iis.remove_apppool:
    - name: DefaultAppPool
```

`salt.states.win_iis.remove_binding(name, site, hostheader=',', ipaddress='*', port=80)`

Remove an IIS binding.

Parameters

- **site** (*str*) – The IIS site name.
- **hostheader** (*str*) – The host header of the binding.
- **ipaddress** (*str*) – The IP address of the binding.
- **port** (*str*) – The TCP port of the binding.

Example of usage with only the required arguments:

```

site0-https-binding-remove:
  win_iis.remove_binding:
    - site: site0

```

Example of usage specifying all available arguments:

```

site0-https-binding-remove:
  win_iis.remove_binding:
    - site: site0
    - hostheader: site0.local
    - ipaddress: '*'
    - port: 443

```

`salt.states.win_iis.remove_cert_binding(name, site, hostheader=", ipaddress='*', port=443)`

Remove a certificate from an IIS binding.

Parameters

- **name** (*str*) – The thumbprint of the certificate.
- **site** (*str*) – The IIS site name.
- **hostheader** (*str*) – The host header of the binding.
- **ipaddress** (*str*) – The IP address of the binding.
- **port** (*str*) – The TCP port of the binding.

Example of usage with only the required arguments:

```

site0-cert-binding-remove:
  win_iis.remove_cert_binding:
    - name: 9988776655443322111000AAABBBCCDDDEEEFFF
    - site: site0

```

Example of usage specifying all available arguments:

```

site0-cert-binding-remove:
  win_iis.remove_cert_binding:
    - name: 9988776655443322111000AAABBBCCDDDEEEFFF
    - site: site0
    - hostheader: site0.local
    - ipaddress: 192.168.1.199
    - port: 443

```

New in version 2016.11.0.

`salt.states.win_iis.remove_site(name)`

Delete a website from IIS.

Parameters **name** (*str*) – The IIS site name.

Usage:

```

defaultwebsite-remove:
  win_iis.remove_site:
    - name: Default Web Site

```

`salt.states.win_iis.remove_vdir(name, site, app='/')`

Remove an IIS virtual directory.

Parameters

- **name** (*str*) – The virtual directory name.
- **site** (*str*) – The IIS site name.
- **app** (*str*) – The IIS application.

Example of usage with only the required arguments:

```
site0-foo-vdir-remove:
  win_iis.remove_vdir:
    - name: foo
    - site: site0
```

Example of usage specifying all available arguments:

```
site0-foo-vdir-remove:
  win_iis.remove_vdir:
    - name: foo
    - site: site0
    - app: v1
```

`salt.states.win_iis.set_app(name, site, settings=None)`

New in version 2017.7.0.

Set the value of the setting for an IIS web application.

Note: This function only configures existing app. Params are case sensitive.

Parameters

- **name** (*str*) – The IIS application.
- **site** (*str*) – The IIS site name.
- **settings** (*str*) – A dictionary of the setting names and their values.

Available settings:

- `physicalPath` - The physical path of the webapp
- `applicationPool` - The application pool for the webapp
- `userName` "connectAs" user
- `password` "connectAs" password for user

Return type `bool`

Example of usage:

```
site0-webapp-setting:
  win_iis.set_app:
    - name: app0
    - site: Default Web Site
    - settings:
      userName: domain\user
      password: pass
      physicalPath: c:\inetpub\wwwroot
      applicationPool: appPool0
```

20.19.288 salt.states.win_lgpo module

Manage Windows Local Group Policy

New in version 2016.11.0.

This state allows configuring local Windows Group Policy

The state can be used to ensure the setting of a single policy or multiple policies in one pass.

Single policies must specify the policy name, the setting, and the policy class (Machine/User/Both)

Example single policy configuration

```

Ensure Account Lockout Duration:
  lgpo.set:
    - name: Account lockout duration
    - setting: 90
    - policy_class: Machine

```

```

Account lockout duration:
  gpo.set:
    - setting: 120
    - policy_class: Machine

```

Multiple policy configuration

```

Company Local Group Policy:
  lgpo.set:
    - computer_policy:
      Deny logon locally: Guest
      Account lockout duration: 120
      Account lockout threshold: 10
      Reset account lockout counter after: 1440
      Enforce password history: 24
      Maximum password age: 60
      Minimum password age: 1
      Minimum password length: 14
      Password must meet complexity requirements: Enabled
      Store passwords using reversible encryption: Disabled
      Configure Automatic Updates:
        Configure automatic updating: 4 - Auto download and schedule the
↪intsall
          Scheduled install day: 7 - Every Saturday
          Scheduled install time: 17:00
      Specify intranet Microsoft update service location:
        Set the intranet update service for detecting updates: http://mywsus
        Set the intranet statistics server: http://mywsus
    - user_policy:
      Do not process the legacy run list: Enabled

```

```

server_policy:
  lgpo.set:
    - computer_policy:
      Maximum password age: 60
      Minimum password age: 1
      Minimum password length: 14
      Account lockout duration: 1440
      Account lockout threshold: 10
      Reset account lockout counter after: 1440
      Manage auditing and security log:
        - "BUILTIN\Administrators"
      Replace a process level token:
        - "NT AUTHORITY\NETWORK SERVICE"
        - "NT AUTHORITY\LOCAL SERVICE"
      "Accounts: Guest account status": Disabled
      "Accounts: Rename guest account": Not_4_U
      "Audit: Audit the use of Backup and Restore privilege": Enabled
      "Interactive logon: Do not display last user name": Enabled

```

- cumulative_rights_assignments: True

```

```

salt.states.win_lgpo.set_(name, setting=None, policy_class=None, computer_policy=None,
                          user_policy=None, cumulative_rights_assignments=True,
                          adml_language='en-US')

```

Ensure the specified policy is set

name the name of a single policy to configure

setting the configuration setting for the single named policy if this argument is used the computer_policy/user_policy arguments will be ignored

policy_class the policy class of the single named policy to configure this can "machine", "user", or "both"

computer_policy a dict of policyname: value pairs of a set of computer policies to configure if this argument is used, the name/setting/policy_class arguments will be ignored

user_policy a dict of policyname: value pairs of a set of user policies to configure if this argument is used, the name/setting/policy_class arguments will be ignored

cumulative_rights_assignments determine if any user right assignment policies specified will be cumulative or explicit

adml_language the adml language to use for AMDX policy data/display conversions

20.19.289 salt.states.win_license module

Installation and activation of windows licenses

Install and activate windows licenses

```
XXXXX-XXXXX-XXXXX-XXXXX-XXXXX:
  license.activate
```

`salt.states.win_license.activate`(*name*)
Install and activate the given product key
name The 5x5 product key given to you by Microsoft

20.19.290 salt.states.win_network

Configuration of network interfaces on Windows hosts

New in version 2014.1.0.

This module provides the `network` state(s) on Windows hosts. DNS servers, IP addresses and default gateways can currently be managed.

Below is an example of the configuration for an interface that uses DHCP for both DNS servers and IP addresses:

```
Local Area Connection #2:
  network.managed:
    - dns_proto: dhcp
    - ip_proto: dhcp
```

Note: Both the `dns_proto` and `ip_proto` arguments are required.

Static DNS and IP addresses can be configured like so:

```
Local Area Connection #2:
  network.managed:
    - dns_proto: static
    - dns_servers:
      - 8.8.8.8
      - 8.8.4.4
    - ip_proto: static
    - ip_addrs:
      - 10.2.3.4/24
```

Note: IP addresses are specified using the format `<ip-address>/<subnet-length>`. Salt provides a convenience function called `ip.get_subnet_length` to calculate the subnet length from a netmask.

Optionally, if you are setting a static IP address, you can also specify the default gateway using the `gateway` parameter:

```
Local Area Connection #2:
  network.managed:
    - dns_proto: static
```

(continues on next page)

(continued from previous page)

```

- dns_servers:
  - 8.8.8.8
  - 8.8.4.4
- ip_proto: static
- ip_addrs:
  - 10.2.3.4/24
- gateway: 10.2.3.1

```

`salt.states.win_network.managed`(*name*, *dns_proto=None*, *dns_servers=None*, *ip_proto=None*, *ip_addrs=None*, *gateway=None*, *enabled=True*, ***kwargs*)

Ensure that the named interface is configured properly.

Parameters

- **name** (*str*) – The name of the interface to manage
- **dns_proto** (*str*) – None Set to `static` and use the `dns_servers` parameter to provide a list of DNS nameservers. set to `dhcp` to use DHCP to get the DNS servers.
- **dns_servers** (*list*) – None A list of static DNS servers. To clear the list of DNS servers pass an empty list (`[]`). None will make no changes.
- **ip_proto** (*str*) – None Set to `static` and use the `ip_addrs` and (optionally) `gateway` parameters to provide a list of static IP addresses and the default gateway. Set to `dhcp` to use DHCP.
- **ip_addrs** (*list*) – None A list of static IP addresses with netmask flag, ie: `192.168.0.11/24`
- **gateway** (*str*) – None The gateway to set for the interface
- **enabled** (*bool*) – True Set to `False` to ensure that this interface is disabled.

Returns A dictionary of old and new settings

Return type `dict`

Example:

```

Ethernet1:
  network.managed:
    - dns_proto: static
    - dns_servers:
      - 8.8.8.8
      - 8.8.8.4
    - ip_proto: static
    - ip_addrs:
      - 192.168.0.100/24

```

Clear DNS entries example:

```

Ethernet1:
  network.managed:
    - dns_proto: static
    - dns_servers: []
    - ip_proto: dhcp

```

20.19.291 salt.states.win_path

Manage the Windows System PATH

`salt.states.win_path.absent`(*name*)

Remove the directory from the SYSTEM path

index: where the directory should be placed in the PATH (default: 0)

Example:

```
'C:\sysinternals':
  win_path.absent
```

`salt.states.win_path.exists` (*name*, *index=None*)

Add the directory to the system PATH at index location

index Position where the directory should be placed in the PATH. This is 0-indexed, so 0 means to prepend at the very start of the PATH.

Note: If the index is not specified, and the directory needs to be added to the PATH, then the directory will be appended to the PATH, and this state will not enforce its location within the PATH.

Examples:

```
'C:\python27':
  win_path.exists

'C:\sysinternals':
  win_path.exists:
    - index: 0

'C:\mystuff':
  win_path.exists:
    - index: -1
```

20.19.292 salt.states.win_pki module

Microsoft certificate management via the Pki PowerShell module.

platform Windows

New in version 2016.11.0.

`salt.states.win_pki.import_cert` (*name*, *cert_format='cer'*, *context='LocalMachine'*, *store='My'*, *exportable=True*, *password=""*, *saltenv='base'*)

Import the certificate file into the given certificate store.

Parameters

- **name** (*str*) – The path of the certificate file to import.
- **cert_format** (*str*) – The certificate format. Specify 'cer' for X.509, or 'pfx' for PKCS #12.
- **context** (*str*) – The name of the certificate store location context.
- **store** (*str*) – The name of the certificate store.
- **exportable** (*bool*) – Mark the certificate as exportable. Only applicable to pfx format.
- **password** (*str*) – The password of the certificate. Only applicable to pfx format.
- **saltenv** (*str*) – The environment the file resides in.

Example of usage with only the required arguments:

```
site0-cert-imported:
  win_pki.import_cert:
    - name: salt://win/webserver/certs/site0.cer
```

Example of usage specifying all available arguments:

```

site0-cert-imported:
  win_pki.import_cert:
    - name: salt://win/webserver/certs/site0.pfx
    - cert_format: pfx
    - context: LocalMachine
    - store: My
    - exportable: True
    - password: TestPassword
    - saltenv: base

```

`salt.states.win_pki.remove_cert(name, thumbprint, context='LocalMachine', store='My')`

Remove the certificate from the given certificate store.

Parameters

- **thumbprint** (*str*) – The thumbprint value of the target certificate.
- **context** (*str*) – The name of the certificate store location context.
- **store** (*str*) – The name of the certificate store.

Example of usage with only the required arguments:

```

site0-cert-removed:
  win_pki.remove_cert:
    - thumbprint: 9988776655443322111000AAABBBCCDDDEEEFFF

```

Example of usage specifying all available arguments:

```

site0-cert-removed:
  win_pki.remove_cert:
    - thumbprint: 9988776655443322111000AAABBBCCDDDEEEFFF
    - context: LocalMachine
    - store: My

```

20.19.293 salt.states.win_powercfg

This module allows you to control the power settings of a windows minion via powercfg.

New in version 2015.8.0.

```

# Set timeout to 30 minutes on battery power
monitor:
  powercfg.set_timeout:
    - value: 30
    - power: dc

```

`salt.states.win_powercfg.set_timeout(name, value, power='ac', scheme=None)`

Set the sleep timeouts of specific items such as disk, monitor, etc.

Parameters

- **name** (*str*) – The setting to change, can be one of the following:
 - monitor
 - disk
 - standby
 - hibernate
- **value** (*int*) – The amount of time in minutes before the item will timeout
- **power** (*str*) – Set the value for AC or DC power. Default is ac. Valid options are:
 - ac (AC Power)
 - dc (Battery)

- **scheme** (*str*) – The scheme to use, leave as `None` to use the current. Default is `None`. This can be the GUID or the Alias for the Scheme. Known Aliases are:
 - `SCHEME_BALANCED` - Balanced
 - `SCHEME_MAX` - Power saver
 - `SCHEME_MIN` - High performance

CLI Example:

```
# Set monitor timeout to 30 minutes on Battery
monitor:
  powercfg.set_timeout:
    - value: 30
    - power: dc

# Set disk timeout to 10 minutes on AC Power
disk:
  powercfg.set_timeout:
    - value: 10
    - power: ac
```

20.19.294 salt.states.win_servermanager

Manage Windows features via the ServerManager powershell module. Can install and remove roles/features.

maintainer Shane Lee <slee@saltstack.com>

platform Windows Server 2008R2 or greater

depends win_servermanager.install

depends win_servermanager.remove

salt.states.win_servermanager.installed(*name*, *features=None*, *recurse=False*, *restart=False*, *source=None*, *exclude=None*, ***kwargs*)

Install the windows feature. To install a single feature, use the `name` parameter. To install multiple features, use the `features` parameter.

Note: Some features require reboot after un/installation. If so, until the server is restarted other features can not be installed!

Parameters

- **name** (*str*) – Short name of the feature (the right column in `win_servermanager.list_available`). This can be a single feature or a string of features in a comma delimited list (no spaces)

Note: A list is not allowed in the name parameter of any state. Use the `features` parameter if you want to pass the features as a list

- **features** (*Optional[list]*) – A list of features to install. If this is passed it will be used instead of the `name` parameter.

New in version 2018.3.0.

- **recurse** (*Optional[bool]*) – Install all sub-features as well. If the feature is installed but one of its sub-features are not installed set this will install additional sub-features

- **source** (*Optional[str]*) – Path to the source files if missing from the target system. None means that the system will use windows update services to find the required files. Default is None
- **restart** (*Optional[bool]*) – Restarts the computer when installation is complete, if required by the role/feature installed. Default is False
- **exclude** (*Optional[str]*) – The name of the feature to exclude when installing the named feature. This can be a single feature, a string of features in a comma-delimited list (no spaces), or a list of features.

Warning: As there is no exclude option for the Add-WindowsFeature or Install-WindowsFeature PowerShell commands the features named in exclude will be installed with other sub-features and will then be removed. If the feature named in “exclude“ is not a sub-feature of one of the installed items it will still be removed.

Example

Do not use the role or feature names mentioned in the PKGMGR documentation. To get a list of available roles and features run the following command:

```
salt <minion_name> win_servermanager.list_available
```

Use the name in the right column of the results.

```
# Installs the IIS Web Server Role (Web-Server)
IIS-WebServerRole:
  win_servermanager.installed:
    - recurse: True
    - name: Web-Server

# Install multiple features, exclude the Web-Service
install_multiple_features:
  win_servermanager.installed:
    - recurse: True
    - features:
      - RemoteAccess
      - XPS-Viewer
      - SNMP-Service
    - exclude:
      - Web-Server
```

```
salt.states.win_servermanager.removed(name, features=None, remove_payload=False,
                                       restart=False)
```

Remove the windows feature To remove a single feature, use the name parameter. To remove multiple features, use the features parameter.

Parameters

- **name** (*str*) – Short name of the feature (the right column in win_servermanager.list_available). This can be a single feature or a string of features in a comma-delimited list (no spaces)

Note: A list is not allowed in the name parameter of any state. Use the features parameter if you want to pass the features as a list

- **features** (*Optional[list]*) – A list of features to remove. If this is passed it will be used instead of the name parameter.

New in version 2018.3.0.

- **remove_payload** (*Optional[bool]*) – True will cause the feature to be removed from the side-by-side store. To install the feature in the future you will need to specify the source
- **restart** (*Optional[bool]*) – Restarts the computer when uninstall is complete if required by the role/feature uninstall. Default is False

Note: Some features require a reboot after uninstall. If so the feature will not be completely uninstalled until the server is restarted.

Example

Do not use the role or feature names mentioned in the PKGMGR documentation. To get a list of available roles and features run the following command:

```
salt <minion_name> win_servermanager.list_available
```

Use the name in the right column of the results.

```
# Uninstall the IIS Web Server Rol (Web-Server)
IIS-WebserverRole:
  win_servermanager.removed:
    - name: Web-Server

# Uninstall multiple features, reboot if required
uninstall_multiple_features:
  win_servermanager.removed:
    - features:
      - RemoteAccess
      - XPX-Viewer
      - SNMP-Service
    - restart: True
```

20.19.295 salt.states.win_smtp_server module

Module for managing IIS SMTP server configuration on Windows servers.

`salt.states.win_smtp_server.active_log_format` (*name, log_format, server='SmtpSvc/1'*)

Manage the active log format for the SMTP server.

Parameters

- **log_format** (*str*) – The log format name.
- **server** (*str*) – The SMTP server name.

Example of usage:

```
smtp-log-format:
  win_smtp_server.active_log_format:
    - log_format: Microsoft IIS Log File Format
```

`salt.states.win_smtp_server.connection_ip_list` (*name, addresses=None, grant_by_default=False, server='SmtpSvc/1'*)

Manage IP list for SMTP connections.

Parameters

- **addresses** (*str*) – A dictionary of IP + subnet pairs.
- **grant_by_default** (*bool*) – Whether the addresses should be a blacklist or whitelist.
- **server** (*str*) – The SMTP server name.

Example of usage for creating a whitelist:

```
smtp-connection-whitelist:
  win_smtp_server.connection_ip_list:
    - addresses:
        127.0.0.1: 255.255.255.255
        172.16.1.98: 255.255.255.255
        172.16.1.99: 255.255.255.255
    - grant_by_default: False
```

Example of usage for creating a blacklist:

```
smtp-connection-blacklist:
  win_smtp_server.connection_ip_list:
    - addresses:
        172.16.1.100: 255.255.255.255
        172.16.1.101: 255.255.255.255
    - grant_by_default: True
```

Example of usage for allowing any source to connect:

```
smtp-connection-blacklist:
  win_smtp_server.connection_ip_list:
    - addresses: {}
    - grant_by_default: True
```

`salt.states.win_smtp_server.relay_ip_list` (*name*, *addresses=None*, *server='SmtSvc/1'*)

Manage IP list for SMTP relay connections.

Due to the unusual way that Windows stores the relay IPs, it is advisable to retrieve the existing list you wish to set from a pre-configured server.

For example, setting '127.0.0.1' as an allowed relay IP through the GUI would generate an actual relay IP list similar to the following:

```
['24.0.0.128', '32.0.0.128', '60.0.0.128', '68.0.0.128', '1.0.0.0', '76.0.0.0',
 '0.0.0.0', '0.0.0.0', '1.0.0.0', '1.0.0.0', '2.0.0.0', '2.0.0.0', '4.0.0.0',
 '0.0.0.0', '76.0.0.128', '0.0.0.0', '0.0.0.0', '0.0.0.0', '0.0.0.0',
 '255.255.255.255', '127.0.0.1']
```

Note: Setting the list to None corresponds to the restrictive 'Only the list below' GUI parameter with an empty access list configured, and setting an empty list/tuple corresponds to the more permissive 'All except the list below' GUI parameter.

Parameters

- **addresses** (*str*) – A list of the relay IPs. The order of the list is important.
- **server** (*str*) – The SMTP server name.

Example of usage:

```
smtp-relay-list:
win_smtp_server.relay_ip_list:
- addresses:
  - 24.0.0.128
  - 32.0.0.128
  - 60.0.0.128
  - 1.0.0.0
  - 76.0.0.0
  - 0.0.0.0
  - 0.0.0.0
  - 1.0.0.0
  - 1.0.0.0
  - 2.0.0.0
  - 2.0.0.0
  - 4.0.0.0
  - 0.0.0.0
  - 76.0.0.128
  - 0.0.0.0
  - 0.0.0.0
  - 0.0.0.0
  - 0.0.0.0
  - 255.255.255.255
  - 127.0.0.1
```

Example of usage for disabling relaying:

```
smtp-relay-list:
win_smtp_server.relay_ip_list:
- addresses: None
```

Example of usage for allowing relaying from any source:

```
smtp-relay-list:
win_smtp_server.relay_ip_list:
- addresses: []
```

`salt.states.win_smtp_server.server_setting(name, settings=None, server='SmtSvc/1')`
Ensure the value is set for the specified setting.

Note: The setting names are case-sensitive.

Parameters

- **settings** (*str*) – A dictionary of the setting names and their values.
- **server** (*str*) – The SMTP server name.

Example of usage:

```
smtp-settings:
win_smtp_server.server_setting:
- settings:
  LogType: 1
  LogFilePeriod: 1
  MaxMessageSize: 16777216
  MaxRecipients: 10000
  MaxSessionSize: 16777216
```

20.19.296 salt.states.win_snmp module

Module for managing SNMP service settings on Windows servers.

`salt.states.win_snmp.agent_settings(name, contact, location, services=None)`

Manage the SNMP sysContact, sysLocation, and sysServices settings.

Parameters

- **contact** (*str*) – The SNMP contact.
- **location** (*str*) – The SNMP location.
- **services** (*str*) – A list of selected services.

Example of usage:

```

snmp-agent-settings:
  win_snmp.agent_settings:
    - contact: Test Contact
    - location: Test Location
    - services:
      - Physical
      - Internet

```

`salt.states.win_snmp.auth_traps_enabled(name, status=True)`

Manage the sending of authentication traps.

Parameters **status** (*bool*) – The enabled status.

Example of usage:

```

snmp-auth-traps:
  win_snmp.auth_traps_enabled:
    - status: True

```

`salt.states.win_snmp.community_names(name, communities=None)`

Manage the SNMP accepted community names and their permissions.

Parameters **communities** (*str*) – A dictionary of SNMP communities and permissions.

Example of usage:

```

snmp-community-names:
  win_snmp.community_names:
    - communities:
      TestCommunity: Read Only
      OtherCommunity: Read Write

```

20.19.297 salt.states.win_system

Management of Windows system information

New in version 2014.1.0.

This state is used to manage system information such as the computer name and description.

```

ERIK-WORKSTATION:
  system.computer_name: []

This is Erik's computer, don't touch!:
  system.computer_desc: []

```

`salt.states.win_system.computer_desc(name)`

Manage the computer's description field

name The desired computer description

`salt.states.win_system.computer_name(name)`

Manage the computer's name

name The desired computer name

`salt.states.win_system.hostname(name)`

New in version 2016.3.0.

Manage the hostname of the computer

name The hostname to set

`salt.states.win_system.join_domain(name, username=None, password=None, account_ou=None, account_exists=False, restart=False)`

Checks if a computer is joined to the Domain. If the computer is not in the Domain, it will be joined.

Parameters

- **name** (*str*) – The name of the Domain.
- **username** (*str*) – Username of an account which is authorized to join computers to the specified domain. Need to be either fully qualified like `user@domain.tld` or simply user.
- **password** (*str*) – Password of the account to add the computer to the Domain.
- **account_ou** (*str*) – The DN of the OU below which the account for this computer should be created when joining the domain, e.g. `ou=computers,ou=departm_432,dc=my-company,dc=com`.
- **account_exists** (*bool*) – Needs to be set to `True` to allow re-using an existing computer account.
- **restart** (*bool*) – Needs to be set to `True` to restart the computer after a successful join.

Example:

```
join_to_domain:
system.join_domain:
- name: mydomain.local.com
- username: myaccount@mydomain.local.com
- password: mysecretpassword
- restart: True
```

`salt.states.win_system.reboot(name, message=None, timeout=5, force_close=True, in_seconds=False, only_on_pending_reboot=True)`

Reboot the computer

Parameters

- **message** (*str*) – An optional message to display to users. It will also be used as a comment in the event log entry.
The default value is `None`.
- **timeout** (*int*) – The number of minutes or seconds before a reboot will occur. Whether this number represents minutes or seconds depends on the value of `in_seconds`.
The default value is `5`.
- **in_seconds** (*bool*) – If this is `True`, the value of `timeout` will be treated as a number of seconds. If this is `False`, the value of `timeout` will be treated as a number of minutes.
The default value is `False`.
- **force_close** (*bool*) – If this is `True`, running applications will be forced to close without warning. If this is `False`, running applications will not get the opportunity to prompt users about unsaved data.

The default value is True.

- **only_on_pending_reboot** (*bool*) – If this is True, the reboot will only occur if the system reports a pending reboot. If this is False, the reboot will always occur.

The default value is True.

```
salt.states.win_system.shutdown(name, message=None, timeout=5, force_close=True, re-
                                boot=False, in_seconds=False, only_on_pending_reboot=False)
```

Shutdown the computer

Parameters

- **message** (*str*) – An optional message to display to users. It will also be used as a comment in the event log entry.

The default value is None.

- **timeout** (*int*) – The number of minutes or seconds before a shutdown will occur. Whether this number represents minutes or seconds depends on the value of `in_seconds`.

The default value is 5.

- **in_seconds** (*bool*) – If this is True, the value of `timeout` will be treated as a number of seconds. If this is False, the value of `timeout` will be treated as a number of minutes.

The default value is False.

- **force_close** (*bool*) – If this is True, running applications will be forced to close without warning. If this is False, running applications will not get the opportunity to prompt users about unsaved data.

The default value is True.

- **reboot** (*bool*) – If this is True, the computer will restart immediately after shutting down. If False the system flushes all caches to disk and safely powers down the system.

The default value is False.

- **only_on_pending_reboot** (*bool*) – If this is True, the shutdown will only occur if the system reports a pending reboot. If this is False, the shutdown will always occur.

The default value is False.

20.19.298 salt.states.win_update

Management of the windows update agent

This module is being deprecated and will be removed in Salt Fluorine. Please use the `win_wua` state module instead.

New in version 2014.7.0.

Set windows updates to run by category. Default behavior is to install all updates that do not require user interaction to complete.

Optionally set `category` to a category of your choice to only install certain updates. Default is to set to install all available updates.

The following example will install all Security and Critical Updates, and download but not install standard updates.

```
updates:
  win_update.installed:
    - categories:
```

(continues on next page)

(continued from previous page)

```

- 'Critical Updates'
- 'Security Updates'
- skips:
  - downloaded
win_update.downloaded:
- categories:
  - 'Updates'
- skips:
  - downloaded

```

You can also specify a number of features about the update to have a fine grain approach to specific types of updates. These are the following features/states of updates available for configuring:

```

'UI' - User interaction required, skipped by default
'downloaded' - Already downloaded, included by default
'present' - Present on computer, skipped by default
'installed' - Already installed, skipped by default
'reboot' - Reboot required, included by default
'hidden' - Skip updates that have been hidden, skipped by default
'software' - Software updates, included by default
'driver' - driver updates, included by default

```

The following example installs all driver updates that don't require a reboot: .. code-block:: yaml

```

gryffindor:
  win_update.installed:
    - skips: - driver: True - software: False - reboot: False

```

To just update your windows machine, add this your sls:

```

updates:
  win_update.installed

```

```

class salt.states.win_update.PyWinUpdater(categories=None, skipUI=True, skip-
Downloaded=False, skipInstalled=True,
skipReboot=False, skipPresent=False, skipSoft-
wareUpdates=False, skipDriverUpdates=False,
skipHidden=True)

```

```

AutoSearch()
Download()
GetAvailableCategories()
GetCategories()
GetDownloadResults()
GetInstallationResults()
Install()
Search(searchString)
SetCategories(categories)
SetSkip(skip, state)
SetSkips(skips)

```

`salt.states.win_update.downloaded` (*name, categories=None, skips=None, retries=10*)

Cache updates for later install.

name: if categories is left empty, it will be assumed that you are passing the category option through the name. These are separate because you can only have one name, but can have multiple categories.

categories: the list of categories to be downloaded. These are simply strings in the update's information, so there is no enumeration of the categories available. Some known categories:

```
Updates
Windows 7
Critical Updates
Security Updates
Update Rollups
```

skips: a list of features of the updates to cull by. Available features:

```
'UI' - User interaction required, skipped by default
'downloaded' - Already downloaded, skipped by default (downloading)
'present' - Present on computer, included by default (installing)
'installed' - Already installed, skipped by default
'reboot' - Reboot required, included by default
'hidden' - skip those updates that have been hidden.
'software' - Software updates, included by default
'driver' - driver updates, skipped by default
```

retries Number of retries to make before giving up. This is total, not per step.

`salt.states.win_update.installed` (*name, categories=None, skips=None, retries=10*)

Install specified windows updates.

name: if categories is left empty, it will be assumed that you are passing the category option through the name. These are separate because you can only have one name, but can have multiple categories.

categories: the list of categories to be downloaded. These are simply strings in the update's information, so there is no enumeration of the categories available. Some known categories:

```
Updates
Windows 7
Critical Updates
Security Updates
Update Rollups
```

skips: a list of features of the updates to cull by. Available features:

```
'UI' - User interaction required, skipped by default
'downloaded' - Already downloaded, skipped by default (downloading)
'present' - Present on computer, included by default (installing)
'installed' - Already installed, skipped by default
'reboot' - Reboot required, included by default
'hidden' - skip those updates that have been hidden.
'software' - Software updates, included by default
'driver' - driver updates, skipped by default
```

retries Number of retries to make before giving up. This is total, not per step.

20.19.299 salt.states.win_wua module

Installation of Windows Updates using the Windows Update Agent

New in version 2017.7.0.

Salt can manage Windows updates via the "wua" state module. Updates can be installed and removed. Update management declarations are as follows:

For installation:

```
# Install a single update using the KB
KB3194343:
  wua.installed

# Install a single update using the name parameter
install_update:
  wua.installed:
    - name: KB3194343

# Install multiple updates using the updates parameter and a combination of
# KB number and GUID
install_updates:
  wua.installed:
    - updates:
      - KB3194343
      - bb1dbb26-3fb6-45fd-bb05-e3c8e379195c
```

For removal:

```
# Remove a single update using the KB
KB3194343:
  wua.removed

# Remove a single update using the name parameter
remove_update:
  wua.removed:
    - name: KB3194343

# Remove multiple updates using the updates parameter and a combination of
# KB number and GUID
remove_updates:
  wua.removed:
    - updates:
      - KB3194343
      - bb1dbb26-3fb6-45fd-bb05-e3c8e379195c
```

`salt.states.win_wua.installed`(*name*, *updates=None*)

Ensure Microsoft Updates are installed. Updates will be downloaded if needed.

Parameters

- **name** (*str*) – The identifier of a single update to install.
- **updates** (*list*) – A list of identifiers for updates to be installed. Overrides name. Default is None.

Note: Identifiers can be the GUID, the KB number, or any part of the Title of the Microsoft update. GUIDs and KBs are the preferred method to ensure you're installing the correct update.

Warning: Using a partial KB number or a partial Title could result in more than one update being installed.

Returns A dictionary containing the results of the update

Return type `dict`

CLI Example:

```

# using a GUID
install_update:
  wua.installed:
    - name: 28cf1b09-2b1a-458c-9bd1-971d1b26b211

# using a KB
install_update:
  wua.installed:
    - name: KB3194343

# using the full Title
install_update:
  wua.installed:
    - name: Security Update for Adobe Flash Player for Windows 10 Version 1607
↳(for x64-based Systems) (KB3194343)

# Install multiple updates
install_updates:
  wua.installed:
    - updates:
      - KB3194343
      - 28cf1b09-2b1a-458c-9bd1-971d1b26b211

```

`salt.states.win_wua.removed`(*name*, *updates=None*)

Ensure Microsoft Updates are uninstalled.

Parameters

- **name** (*str*) – The identifier of a single update to uninstall.
- **updates** (*list*) – A list of identifiers for updates to be removed. Overrides name. Default is None.

Note: Identifiers can be the GUID, the KB number, or any part of the Title of the Microsoft update. GUIDs and KBs are the preferred method to ensure you're uninstalling the correct update.

Warning: Using a partial KB number or a partial Title could result in more than one update being removed.

Returns A dictionary containing the results of the removal

Return type dict

CLI Example:

```

# using a GUID
uninstall_update:
  wua.removed:
    - name: 28cf1b09-2b1a-458c-9bd1-971d1b26b211

# using a KB
uninstall_update:
  wua.removed:
    - name: KB3194343

# using the full Title
uninstall_update:
  wua.removed:
    - name: Security Update for Adobe Flash Player for Windows 10 Version 1607
↳(for x64-based Systems) (KB3194343)

```

(continues on next page)

(continued from previous page)

```
# Install multiple updates
uninstall_updates:
  wua.removed:
    - updates:
      - KB3194343
      - 28cf1b09-2b1a-458c-9bd1-971d1b26b211
```

`salt.states.win_wua.uptodate`(*name*, *software=True*, *drivers=False*, *skip_hidden=False*, *skip_mandatory=False*, *skip_reboot=True*, *categories=None*, *severities=None*)

Ensure Microsoft Updates that match the passed criteria are installed. Updates will be downloaded if needed.

This state allows you to update a system without specifying a specific update to apply. All matching updates will be installed.

Parameters

- **name** (*str*) – The name has no functional value and is only used as a tracking reference
- **software** (*bool*) – Include software updates in the results (default is True)
- **drivers** (*bool*) – Include driver updates in the results (default is False)
- **skip_hidden** (*bool*) – Skip updates that have been hidden. Default is False.
- **skip_mandatory** (*bool*) – Skip mandatory updates. Default is False.
- **skip_reboot** (*bool*) – Skip updates that require a reboot. Default is True.
- **categories** (*list*) – Specify the categories to list. Must be passed as a list. All categories returned by default.

Categories include the following:

- Critical Updates
- Definition Updates
- Drivers (make sure you set `drivers=True`)
- Feature Packs
- Security Updates
- Update Rollups
- Updates
- Update Rollups
- Windows 7
- Windows 8.1
- Windows 8.1 drivers
- Windows 8.1 and later drivers
- Windows Defender

- **severities** (*list*) – Specify the severities to include. Must be passed as a list. All severities returned by default.

Severities include the following:

- Critical
- Important

Returns A dictionary containing the results of the update

Return type `dict`

CLI Example:

```
# Update the system using the state defaults
update_system:
  wua.uptodate

# Update the drivers
```

(continues on next page)

(continued from previous page)

```

update_drivers:
  wua.uptodate:
    - software: False
    - drivers: True
    - skip_reboot: False

# Apply all critical updates
update_critical:
  wua.uptodate:
    - severities:
      - Critical

```

20.19.300 salt.states.winrepo

Manage Windows Package Repository

salt.states.winrepo.genrepo (*name, force=False, allow_empty=False*)

Refresh the winrepo.p file of the repository (salt-run winrepo.genrepo)

If *force* is True no checks will be made and the repository will be generated if *allow_empty* is True then the state will not return an error if there are 0 packages,

Note: This state only loads on minions that have the `roles: salt-master` grain set.

Example:

```

winrepo:
  winrepo.genrepo

```

20.19.301 salt.states.x509

Manage X509 Certificates

New in version 2015.8.0.

depends M2Crypto

This module can enable managing a complete PKI infrastructure including creating private keys, CA's, certificates and CRLs. It includes the ability to generate a private key on a server, and have the corresponding public key sent to a remote CA to create a CA signed certificate. This can be done in a secure manner, where private keys are always generated locally and never moved across the network.

Here is a simple example scenario. In this example `ca` is the ca server, and `www` is a web server that needs a certificate signed by `ca`.

For remote signing, peers must be permitted to remotely call the `sign_remote_certificate` function.

`/etc/salt/master.d/peer.conf`

```

peer:
  .*:
    - x509.sign_remote_certificate

```

`/srv/salt/top.sls`

```

base:
  '*':
    - cert
  'ca':
    - ca
  'www':
    - www

```

This state creates the CA key, certificate and signing policy. It also publishes the certificate to the mine where it can be easily retrieved by other minions.

```
/srv/salt/ca.sls
```

```

salt-minion:
  service.running:
    - enable: True
    - listen:
      - file: /etc/salt/minion.d/signing_policies.conf

/etc/salt/minion.d/signing_policies.conf:
  file.managed:
    - source: salt://signing_policies.conf

/etc/pki:
  file.directory

/etc/pki/issued_certs:
  file.directory

/etc/pki/ca.crt:
  x509.certificate_managed:
    - signing_private_key: /etc/pki/ca.key
    - CN: ca.example.com
    - C: US
    - ST: Utah
    - L: Salt Lake City
    - basicConstraints: "critical CA:true"
    - keyUsage: "critical cRLSign, keyCertSign"
    - subjectKeyIdentifier: hash
    - authorityKeyIdentifier: keyid,issuer:always
    - days_valid: 3650
    - days_remaining: 0
    - backup: True
    - managed_private_key:
      name: /etc/pki/ca.key
      bits: 4096
      backup: True
    - require:
      - file: /etc/pki

mine.send:
  module.run:
    - func: x509.get_pem_entries
    - kwargs:
      glob_path: /etc/pki/ca.crt
    - onchanges:
      - x509: /etc/pki/ca.crt

```

The signing policy defines properties that override any property requested or included in a CRL. It also can define a restricted list of minions which are allowed to remotely invoke this signing policy.

/srv/salt/signing_policies.conf

```
x509_signing_policies:
  www:
    - minions: 'www'
    - signing_private_key: /etc/pki/ca.key
    - signing_cert: /etc/pki/ca.crt
    - C: US
    - ST: Utah
    - L: Salt Lake City
    - basicConstraints: "critical CA:false"
    - keyUsage: "critical keyEncipherment"
    - subjectKeyIdentifier: hash
    - authorityKeyIdentifier: keyid,issuer:always
    - days_valid: 90
    - copypath: /etc/pki/issued_certs/
```

This state will instruct all minions to trust certificates signed by our new CA. Using Jinja to strip newlines from the text avoids dealing with newlines in the rendered YAML, and the `sign_remote_certificate` state will handle properly formatting the text before writing the output.

/srv/salt/cert.sls

```
/usr/local/share/ca-certificates:
  file.directory

/usr/local/share/ca-certificates/intca.crt:
  x509.pem_managed:
    - text: {{ salt['mine.get']('ca', 'x509.get_pem_entries')['ca']['/etc/pki/ca.crt
↪']|replace('\n', '') }}
```

This state creates a private key then requests a certificate signed by ca according to the `www` policy.

/srv/salt/www.sls

```
/etc/pki/www.crt:
  x509_certificate_managed:
    - ca_server: ca
    - signing_policy: www
    - public_key: /etc/pki/www.key
    - CN: www.example.com
    - days_remaining: 30
    - backup: True
    - managed_private_key:
      name: /etc/pki/www.key
      bits: 4096
      backup: True
```

```
salt.states.x509_certificate_managed(name,
                                     days_remaining=90,
                                     managed_private_key=None,
                                     append_certs=None,
                                     **kwargs)
```

Manage a Certificate

name Path to the certificate

days_remaining [90] The minimum number of days remaining when the certificate should be recreated. A value of 0 disables automatic renewal.

managed_private_key Manages the private key corresponding to the certificate. All of the arguments supported by `x509.private_key_managed` are supported. If `name` is not specified or is the same as the name of the certificate, the private key and certificate will be written together in the same file.

append_certs: A list of certificates to be appended to the managed file.

kwargs: Any arguments supported by `x509.create_certificate` or `file.managed` are supported.

Examples:

```
/etc/pki/ca.crt:
x509.certificate_managed:
- signing_private_key: /etc/pki/ca.key
- CN: ca.example.com
- C: US
- ST: Utah
- L: Salt Lake City
- basicConstraints: "critical CA:true"
- keyUsage: "critical cRLSign, keyCertSign"
- subjectKeyIdentifier: hash
- authorityKeyIdentifier: keyid,issuer:always
- days_valid: 3650
- days_remaining: 0
- backup: True
```

```
/etc/ssl/www.crt:
x509.certificate_managed:
- ca_server: pki
- signing_policy: www
- public_key: /etc/ssl/www.key
- CN: www.example.com
- days_valid: 90
- days_remaining: 30
- backup: True
```

`salt.states.x509.crl_managed`(*name*, *signing_private_key*, *signing_private_key_passphrase*=None, *signing_cert*=None, *revoked*=None, *days_valid*=100, *digest*=", *days_remaining*=30, *include_expired*=False, ***kwargs*)

Manage a Certificate Revocation List

name Path to the certificate

signing_private_key The private key that will be used to sign this crl. This is usually your CA's private key.

signing_private_key_passphrase Passphrase to decrypt the private key.

signing_cert The certificate of the authority that will be used to sign this crl. This is usually your CA's certificate.

revoked A list of certificates to revoke. Must include either a serial number or a the certificate itself. Can optionally include the revocation date and notAfter date from the certificate. See example below for details.

days_valid [100] The number of days the certificate should be valid for.

digest The digest to use for signing the CRL. This has no effect on versions of pyOpenSSL less than 0.14.

days_remaining [30] The crl should be automatically recreated if there are less than `days_remaining` days until the crl expires. Set to 0 to disable automatic renewal.

include_expired [False] If True, include expired certificates in the CRL.

kwargs Any arguments supported by `file.managed` are supported.

Example:

```
/etc/pki/ca.crl:
x509.crl_managed:
- signing_private_key: /etc/pki/myca.key
- signing_cert: /etc/pki/myca.crt
```

(continues on next page)

(continued from previous page)

```

- revoked:
  - compromized_Web_key:
    - certificate: /etc/pki/certs/badweb.crt
    - revocation_date: 2015-03-01 00:00:00
    - reason: keyCompromise
  - terminated_vpn_user:
    - serial_number: D6:D2:DC:D8:4D:5C:C0:F4
    - not_after: 2016-01-01 00:00:00
    - revocation_date: 2015-02-25 00:00:00
    - reason: cessationOfOperation

```

`salt.states.x509.csr_managed(name, **kwargs)`

Manage a Certificate Signing Request

name: Path to the CSR

properties: The properties to be added to the certificate request, including items like subject, extensions and public key. See above for valid properties.

kwargs: Any arguments supported by *file.managed* are supported.

Example:

```

/etc/pki/mycert.csr:
  x509.csr_managed:
    - private_key: /etc/pki/mycert.key
    - CN: www.example.com
    - C: US
    - ST: Utah
    - L: Salt Lake City
    - keyUsage: 'critical dataEncipherment'

```

`salt.states.x509.pem_managed(name, text, backup=False, **kwargs)`

Manage the contents of a PEM file directly with the content in text, ensuring correct formatting.

name: The path to the file to manage

text: The PEM formatted text to write.

kwargs: Any arguments supported by *file.managed* are supported.

`salt.states.x509.private_key_managed(name, bits=2048, passphrase=None, cipher='aes_128_cbc', new=False, overwrite=False, verbose=True, **kwargs)`

Manage a private key's existence.

name: Path to the private key

bits: Key length in bits. Default 2048.

passphrase: Passphrase for encrypting the private key.

cipher: Cipher for encrypting the private key.

new: Always create a new key. Defaults to False. Combining new with *prereq*, or when used as part of a *managed_private_key* can allow key rotation whenever a new certificate is generated.

overwrite: Overwrite an existing private key if the provided passphrase cannot decrypt it.

verbose: Provide visual feedback on stdout, dots while key is generated. Default is True.

New in version 2016.11.0.

kwargs: Any kwargs supported by *file.managed* are supported.

Example:

The jinja templating in this example ensures a private key is generated if the file doesn't exist and that a new private key is generated whenever the certificate that uses it is to be renewed.

```

/etc/pki/www.key:
  x509.private_key_managed:

```

(continues on next page)

(continued from previous page)

```

- bits: 4096
- new: True
{% if salt['file.file_exists']('/etc/pki/ca.key') -%}
- prereq:
  - x509: /etc/pki/www.crt
{%- endif %}

```

20.19.302 salt.states.xmpp

Sending Messages over XMPP

New in version 2014.1.0.

This state is useful for firing messages during state runs, using the XMPP protocol

```

server-warning-message:
  xmpp.send_msg:
    - name: 'This is a server warning message'
    - profile: my-xmpp-account
    - recipient: admins@xmpp.example.com/salt

```

`salt.states.xmpp.send_msg` (*name, recipient, profile*)
Send a message to an XMPP user

```

server-warning-message:
  xmpp.send_msg:
    - name: 'This is a server warning message'
    - profile: my-xmpp-account
    - recipient: admins@xmpp.example.com/salt

```

name The message to send to the XMPP user

`salt.states.xmpp.send_msg_multi` (*name, profile, recipients=None, rooms=None*)
Send a message to an list of recipients or rooms

```

server-warning-message:
  xmpp.send_msg:
    - name: 'This is a server warning message'
    - profile: my-xmpp-account
    - recipients:
      - admins@xmpp.example.com/salt
    - rooms:
      - qa@conference.xmpp.example.com

```

name The message to send to the XMPP user

20.19.303 salt.states.zabbix_host module

Management of Zabbix hosts.

codeauthor Jiri Kotlin <jiri.kotlin@ultimum.io>

`salt.states.zabbix_host.absent` (*name, **kwargs*)
Ensures that the host does not exists, eventually deletes host.

New in version 2016.3.0.

Param name: technical name of the host

Parameters

- **_connection_user** – Optional - zabbix user (can also be set in opts or pillar, see module's docstring)
- **_connection_password** – Optional - zabbix password (can also be set in opts or pillar, see module's docstring)
- **_connection_url** – Optional - url of zabbix frontend (can also be set in opts, pillar, see module's docstring)

TestHostWithInterfaces:

```
zabbix_host.absent
```

`salt.states.zabbix_host.assign_templates` (*host*, *templates*, ***kwargs*)

Ensures that templates are assigned to the host.

New in version 2017.7.0.

Parameters

- **host** – technical name of the host
- **_connection_user** – Optional - zabbix user (can also be set in opts or pillar, see module's docstring)
- **_connection_password** – Optional - zabbix password (can also be set in opts or pillar, see module's docstring)
- **_connection_url** – Optional - url of zabbix frontend (can also be set in opts, pillar, see module's docstring)

add_zabbix_templates_to_host:

```
zabbix_host.assign_templates:
- host: TestHost
- templates:
  - "Template OS Linux"
  - "Template App MySQL"
```

`salt.states.zabbix_host.present` (*host*, *groups*, *interfaces*, ***kwargs*)

Ensures that the host exists, eventually creates new host. NOTE: please use argument `visible_name` instead of `name` to not mess with name from salt sls. This function accepts all standard host properties: keyword argument names differ depending on your zabbix version, see: <https://www.zabbix.com/documentation/2.4/manual/api/reference/host/object#host>

New in version 2016.3.0.

Parameters

- **host** – technical name of the host
- **groups** – groupids of host groups to add the host to
- **interfaces** – interfaces to be created for the host
- **proxy_host** – Optional proxy name or proxyid to monitor host
- **_connection_user** – Optional - zabbix user (can also be set in opts or pillar, see module's docstring)
- **_connection_password** – Optional - zabbix password (can also be set in opts or pillar, see module's docstring)
- **_connection_url** – Optional - url of zabbix frontend (can also be set in opts, pillar, see module's docstring)
- **visible_name** – Optional - string with visible name of the host, use 'visible_name' instead of 'name' parameter to not mess with value supplied from Salt sls file.

create_test_host:

```
zabbix_host.present:
- host: TestHostWithInterfaces
```

(continues on next page)

(continued from previous page)

```

- proxy_host: 12345
- groups:
  - 5
  - 6
  - 7
- interfaces:
  - test1.example.com:
    - ip: '192.168.1.8'
    - type: 'Agent'
    - port: 92
  - testing2_create:
    - ip: '192.168.1.9'
    - dns: 'test2.example.com'
    - type: 'agent'
    - main: false
  - testovaci1_ipmi:
    - ip: '192.168.100.111'
    - type: 'ipmi'

```

20.19.304 salt.states.zabbix_hostgroup module

Management of Zabbix host groups.

codeauthor Jiri Kotlin <jiri.kotlin@ultimum.io>

`salt.states.zabbix_hostgroup.absent(name, **kwargs)`

Ensures that the host group does not exist, eventually delete host group.

New in version 2016.3.0.

Parameters

- **name** – name of the host group
- **_connection_user** – Optional - zabbix user (can also be set in opts or pillar, see module's docstring)
- **_connection_password** – Optional - zabbix password (can also be set in opts or pillar, see module's docstring)
- **_connection_url** – Optional - url of zabbix frontend (can also be set in opts, pillar, see module's docstring)

```

delete_testing_host_group:
  zabbix_hostgroup.absent:
    - name: 'My hostgroup name'

```

`salt.states.zabbix_hostgroup.present(name, **kwargs)`

Ensures that the host group exists, eventually creates new host group.

New in version 2016.3.0.

Parameters

- **name** – name of the host group
- **_connection_user** – Optional - zabbix user (can also be set in opts or pillar, see module's docstring)
- **_connection_password** – Optional - zabbix password (can also be set in opts or pillar, see module's docstring)
- **_connection_url** – Optional - url of zabbix frontend (can also be set in opts, pillar, see module's docstring)

```

create_testing_host_group:
  zabbix_hostgroup.present:
    - name: 'My hostgroup name'

```

20.19.305 salt.states.zabbix_mediatype module

Management of Zabbix mediatypes.

codeauthor Raymond Kuiper <qix@the-wired.net>

salt.states.zabbix_mediatype.absent(*name*, ****kwargs**)

Ensures that the mediatype does not exist, eventually deletes the mediatype.

Parameters

- **name** – name of the mediatype
- **_connection_user** – Optional - zabbix user (can also be set in opts or pillar, see module's docstring)
- **_connection_password** – Optional - zabbix password (can also be set in opts or pillar, see module's docstring)
- **_connection_url** – Optional - url of zabbix frontend (can also be set in opts, pillar, see module's docstring)

```

delete_mediatype:
  zabbix_mediatype.absent:
    - name: 'Email'

```

salt.states.zabbix_mediatype.present(*name*, *mediatype*, ****kwargs**)

Creates new mediatype. NOTE: This function accepts all standard mediatype properties: keyword argument names differ depending on your zabbix version, see: https://www.zabbix.com/documentation/3.0/manual/api/reference/host/object#host_inventory

Parameters

- **name** – name of the mediatype
- **_connection_user** – Optional - zabbix user (can also be set in opts or pillar, see module's docstring)
- **_connection_password** – Optional - zabbix password (can also be set in opts or pillar, see module's docstring)
- **_connection_url** – Optional - url of zabbix frontend (can also be set in opts, pillar, see module's docstring)

```

make_new_mediatype:
  zabbix_mediatype.present:
    - name: 'Email'
    - mediatype: 0
    - smtp_server: smtp.example.com
    - smtp_hello: zabbix.example.com
    - smtp_email: zabbix@example.com

```

20.19.306 salt.states.zabbix_user module

Management of Zabbix users.

codeauthor Jiri Kotlin <jiri.kotlin@ultimum.io>

salt.states.zabbix_user.absent(*name*, ****kwargs**)

Ensures that the user does not exist, eventually delete user.

New in version 2016.3.0.

Parameters

- **name** – user alias
- **_connection_user** – Optional - zabbix user (can also be set in opts or pillar, see module's docstring)
- **_connection_password** – Optional - zabbix password (can also be set in opts or pillar, see module's docstring)
- **_connection_url** – Optional - url of zabbix frontend (can also be set in opts, pillar, see module's docstring)

George:

```
zabbix_user.absent
```

`salt.states.zabbix_user.present` (*alias, passwd, usrgrps, medias, password_reset=False, **kwargs*)

Ensures that the user exists, eventually creates new user. NOTE: use argument `firstname` instead of `name` to not mess values with `name` from salt sls.

New in version 2016.3.0.

Parameters

- **alias** – user alias
- **passwd** – user's password
- **usrgrps** – user groups to add the user to
- **medias** – user's medias to create
- **password_reset** – whether or not to reset password at update
- **_connection_user** – Optional - zabbix user (can also be set in opts or pillar, see module's docstring)
- **_connection_password** – Optional - zabbix password (can also be set in opts or pillar, see module's docstring)
- **_connection_url** – Optional - url of zabbix frontend (can also be set in opts, pillar, see module's docstring)
- **firstname** – string with firstname of the user, use 'firstname' instead of 'name' parameter to not mess with value supplied from Salt sls file.

```
make_user:
  zabbix_user.present:
    - alias: George
    - passwd: donottellanyonE@456x
    - password_reset: True
    - usrgrps:
      - 13
      - 7
    - medias:
      - me@example.com:
          - mediatype: mail
          - period: '1-7,00:00-24:00'
          - severity: NIWAHD
      - make_jabber:
          - active: true
          - mediatype: jabber
          - period: '1-5,08:00-19:00'
          - sendto: jabbera@example.com
      - text_me_morning_disabled:
          - active: false
          - mediatype: sms
          - period: '1-5,09:30-10:00'
          - severity: D
          - sendto: '+42032132588568'
```

20.19.307 salt.states.zabbix_usergroup module

Management of Zabbix user groups.

codeauthor Jiri Kotlin <jiri.kotlin@ultimum.io>

`salt.states.zabbix_usergroup.absent(name, **kwargs)`

Ensures that the user group does not exist, eventually delete user group.

New in version 2016.3.0.

Parameters

- **name** – name of the user group
- **_connection_user** – Optional - zabbix user (can also be set in opts or pillar, see module's docstring)
- **_connection_password** – Optional - zabbix password (can also be set in opts or pillar, see module's docstring)
- **_connection_url** – Optional - url of zabbix frontend (can also be set in opts, pillar, see module's docstring)

```
delete_thai_monks_usrgrp:
  zabbix_usergroup.absent:
    - name: 'Thai monks'
```

`salt.states.zabbix_usergroup.present(name, **kwargs)`

Creates new user group. NOTE: This function accepts all standard user group properties: keyword argument names differ depending on your zabbix version, see: https://www.zabbix.com/documentation/2.0/manual/appendix/api/usergroup/definitions#user_group

New in version 2016.3.0.

Parameters

- **name** – name of the user group
- **_connection_user** – Optional - zabbix user (can also be set in opts or pillar, see module's docstring)
- **_connection_password** – Optional - zabbix password (can also be set in opts or pillar, see module's docstring)
- **_connection_url** – Optional - url of zabbix frontend (can also be set in opts, pillar, see module's docstring)

```
make_new_thai_monks_usergroup:
  zabbix_usergroup.present:
    - name: 'Thai monks'
    - gui_access: 1
    - debug_mode: 0
    - users_status: 0
```

20.19.308 salt.states.zcbuildout

Management of `zc.buildout`

This module is inspired from minitage's buildout maker (<https://github.com/minitage/minitage/blob/master/src/minitage/core/makers/buildout.py>)

New in version 2016.3.0.

Note: This state module is beta; the API is subject to change and no promise as to performance or functionality is yet present

Available Functions

- built

```

installed1
  buildout.installed:
    - name: /path/to/buildout

installed2
  buildout.installed:
    - name: /path/to/buildout
    - parts:
      - a
      - b
    - python: /path/to/pythonpath/bin/python
    - unless: /bin/test_something_installed
    - onlyif: /bin/test_else_installed

```

```

salt.states.zcbuildout.installed(name, config='buildout.cfg', quiet=False, parts=None,
                                user=None, env=(), buildout_ver=None, test_release=False,
                                distribute=None, new_st=None, offline=False, newest=False,
                                python='/usr/bin/python3', debug=False, verbose=False,
                                unless=None, onlyif=None, use_vt=False, loglevel='debug',
                                **kwargs)

```

Install buildout in a specific directory

It is a thin wrapper to modules.buildout.buildout

name directory to execute in

quiet

do not output console & logs

config buildout config to use (default: buildout.cfg)

parts specific buildout parts to run

user user used to run buildout as

New in version 2014.1.4.

env environment variables to set when running

buildout_ver force a specific buildout version (1 | 2)

test_release buildout accept test release

new_st Forcing use of setuptools >= 0.7

distribute use distribute over setuptools if possible

offline does buildout run offline

python python to use

debug run buildout with -D debug flag

onlyif Only execute cmd if statement on the host return 0

unless Do not execute cmd if statement on the host return 0

newest run buildout in newest mode

verbose run buildout in verbose mode (-vvvvv)

use_vt Use the new salt VT to stream output [experimental]

loglevel loglevel for buildout commands

20.19.309 salt.states.zenoss

State to manage monitoring in Zenoss.

New in version 2016.3.0.

This state module depends on the 'zenoss' Salt execution module.

Allows for setting a state of minions in Zenoss using the Zenoss API. Currently Zenoss 4.x and 5.x are supported.

```

enable_monitoring:
  zenoss.monitored:
    - name: web01.example.com
    - device_class: /Servers/Linux
    - collector: localhost
    - prod_state: 1000

```

`salt.states.zenoss.monitored(name, device_class=None, collector='localhost', prod_state=None)`

Ensure a device is monitored. The 'name' given will be used for Zenoss device name and should be resolvable.

```

enable_monitoring:
  zenoss.monitored:
    - name: web01.example.com
    - device_class: /Servers/Linux
    - collector: localhost
    - prod_state: 1000

```

20.19.310 salt.states.zk_concurrency

Control concurrency of steps within state execution using zookeeper

depends kazoo

configuration See `salt.modules.zookeeper` for setup instructions.

This module allows you to "wrap" a state's execution with concurrency control. This is useful to protect against all hosts executing highstate simultaneously if your services don't all HUP restart. The common way of protecting against this is to run in batch mode, but that doesn't protect from another person running the same batch command (and thereby having 2x the number of nodes deploying at once).

This module will block while acquiring a slot, meaning that however the command gets called it will coordinate with zookeeper to ensure that no more than `max_concurrency` steps are executing with a single path.

```

acquire_lock:
  zk_concurrency.lock:
    - name: /trafficeserver
    - zk_hosts: 'zookeeper:2181'
    - max_concurrency: 4
    - prereq:
      - service: trafficserver

trafficserver:
  service.running:
    - watch:
      - file: /etc/trafficserver/records.config

/etc/trafficserver/records.config:

```

(continues on next page)

(continued from previous page)

```

file.managed:
  - source: salt://records.config

release_lock:
  zk_concurrency.unlock:
    - name: /trafficserver
    - require:
      - service: trafficserver

```

This example would allow the file state to change, but would limit the concurrency of the trafficserver service restart to 4.

```

salt.states.zk_concurrency.lock(name, zk_hosts=None, identifier=None, max_concurrency=1,
                                timeout=None, ephemeral_lease=False, profile=None,
                                scheme=None, username=None, password=None, de-
                                fault_acl=None)

```

Block state execution until you are able to get the lock (or hit the timeout)

```

salt.states.zk_concurrency.min_party(name, zk_hosts, min_nodes, blocking=False, pro-
                                     file=None, scheme=None, username=None, pass-
                                     word=None, default_acl=None)

```

Ensure that there are *min_nodes* in the party at *name*, optionally blocking if not available.

```

salt.states.zk_concurrency.unlock(name, zk_hosts=None, identifier=None, max_concurrency=1,
                                   ephemeral_lease=False, profile=None, scheme=None, user-
                                   name=None, password=None, default_acl=None)

```

Remove lease from semaphore.

20.19.311 salt.states.zfs

States for managing zfs datasets

maintainer Jorge Schrauwen <sjorge@blackdot.be>

maturity new

depends salt.utils.zfs, salt.modules.zfs

platform smartos, illumos, solaris, freebsd, linux

New in version 2016.3.0.

Changed in version 2018.3.1: Big refactor to remove duplicate code, better type conversions and improved consistency in output.

```

test/shares/yuki:
  zfs.filesystem_present:
    - create_parent: true
    - properties:
      quota: 16G

test/iscsi/haruhi:
  zfs.volume_present:
    - create_parent: true
    - volume_size: 16M
    - sparse: true
    - properties:
      readonly: on

```

(continues on next page)

(continued from previous page)

```

test/shares/yuki@frozen:
  zfs.snapshot_present

moka_origin:
  zfs.hold_present:
    - snapshot: test/shares/yuki@frozen

test/shares/moka:
  zfs.filesystem_present:
    - cloned_from: test/shares/yuki@frozen

test/shares/moka@tsukune:
  zfs.snapshot_absent

```

```

salt.states.zfs.bookmark_absent(name, force=False, recursive=False)
  ensure bookmark is absent on the system
  name [string] name of snapshot
  force [boolean] try harder to destroy the dataset (zfs destroy -f)
  recursive [boolean] also destroy all the child datasets (zfs destroy -r)

```

```

salt.states.zfs.bookmark_present(name, snapshot)
  ensure bookmark exists
  name [string] name of bookmark
  snapshot [string] name of snapshot

```

```

salt.states.zfs.filesystem_absent(name, force=False, recursive=False)
  ensure filesystem is absent on the system
  name [string] name of filesystem
  force [boolean] try harder to destroy the dataset (zfs destroy -f)
  recursive [boolean] also destroy all the child datasets (zfs destroy -r)

```

Warning: If a volume with name exists, this state will succeed without destroying the volume specified by name. This module is dataset type sensitive.

```

salt.states.zfs.filesystem_present(name, create_parent=False, properties=None,
                                   cloned_from=None)
  ensure filesystem exists and has properties set
  name [string] name of filesystem
  create_parent [boolean] creates all the non-existing parent datasets. any property specified on the command
    line using the -o option is ignored.
  cloned_from [string] name of snapshot to clone
  properties [dict] additional zfs properties (-o)

```

Note: `cloned_from` is only use if the filesystem does not exist yet, when `cloned_from` is set after the filesystem exists it will be ignored.

Note: Properties do not get cloned, if you specify the properties in the state file they will be applied on a subsequent run.

```

salt.states.zfs.hold_absent(name, snapshot, recursive=False)
  ensure hold is absent on the system

```

name [string] name of hold
snapshot [string] name of snapshot
recursive [boolean] recursively releases a hold with the given tag on the snapshots of all descendent file systems.

`salt.states.zfs.hold_present(name, snapshot, recursive=False)`

ensure hold is present on the system

name [string] name of hold
snapshot [string] name of snapshot
recursive [boolean] recursively add hold with the given tag on the snapshots of all descendent file systems.

`salt.states.zfs.promoted(name)`

ensure a dataset is not a clone

name [string] name of fileset or volume

Warning: only one dataset can be the origin, if you promote a clone the original will now point to the promoted dataset

`salt.states.zfs.scheduled_snapshot(name, prefix, recursive=True, schedule=None)`

maintain a set of snapshots based on a schedule

name [string] name of filesystem or volume

prefix [string] prefix for the snapshots e.g. 'test' will result in snapshots being named 'test-yyyymmdd_hhmm'

recursive [boolean] create snapshots for all children also

schedule [dict] dict holding the schedule, the following keys are available (minute, hour, day, month, and year) by default all are set to 0 the value indicated the number of snapshots of that type to keep around.

Warning: snapshots will only be created and pruned every time the state runs. a schedule must be setup to automatically run the state. this means that if you run the state daily the hourly snapshot will only be made once per day!

Changed in version 2018.3.0: switched to localtime from gmtime so times now take into account timezones.

`salt.states.zfs.snapshot_absent(name, force=False, recursive=False)`

ensure snapshot is absent on the system

name [string] name of snapshot

force [boolean] try harder to destroy the dataset (zfs destroy -f)

recursive [boolean] also destroy all the child datasets (zfs destroy -r)

`salt.states.zfs.snapshot_present(name, recursive=False, properties=None)`

ensure snapshot exists and has properties set

name [string] name of snapshot

recursive [boolean] recursively create snapshots of all descendent datasets

properties [dict] additional zfs properties (-o)

`salt.states.zfs.volume_absent(name, force=False, recursive=False)`

ensure volume is absent on the system

name [string] name of volume

force [boolean] try harder to destroy the dataset (zfs destroy -f)

recursive [boolean] also destroy all the child datasets (zfs destroy -r)

Warning: If a filesystem with name exists, this state will succeed without destroying the filesystem specified by name. This module is dataset type sensitive.

`salt.states.zfs.volume_present` (*name*, *volume_size*, *sparse=False*, *create_parent=False*, *properties=None*, *cloned_from=None*)

ensure volume exists and has properties set

name [string] name of volume

volume_size [string] size of volume

sparse [boolean] create sparse volume

create_parent [boolean] creates all the non-existing parent datasets. any property specified on the command line using the -o option is ignored.

cloned_from [string] name of snapshot to clone

properties [dict] additional zfs properties (-o)

Note: `cloned_from` is only use if the volume does not exist yet, when `cloned_from` is set after the volume exists it will be ignored.

Note: Properties do not get cloned, if you specify the properties in the state file they will be applied on a subsequent run.

`volume_size` is considered a property, so the volume's size will be corrected when the properties get updated if it differs from the original volume.

The `sparse` parameter is ignored when using `cloned_from`.

20.19.312 salt.states.zone

Management of Solaris Zones

maintainer Jorge Schrauwen <sjorge@blackdot.be>

maturity new

depends salt.modules.zoneadm, salt.modules.zonecfg

platform solaris

New in version 2017.7.0.

Below are some examples of how to use this state. Lets start with creating a zone and installing it.

```
omipkg1_configuration:
  zone.present:
    - name: omipkg1
    - brand: ipkg
    - zonepath: /zones/omipkg1
    - properties:
      - autoboot: true
      - ip-type: exclusive
      - cpu-shares: 50
    - resources:
      - attr:
        - name: owner
        - value: Jorge Schrauwen
        - type: string
      - attr:
        - name: description
        - value: OmniOS ipkg zone for testing
        - type: string
```

(continues on next page)

(continued from previous page)

```

- capped-memory:
  - physical: 64M
omipkg1_installation:
  zone.installed:
    - name: omipkg1
    - require:
      - zone: omipkg1_configuration
omipkg1_running:
  zone.booted:
    - name: omipkg1
    - require:
      - zone: omipkg1_installation

```

A zone without network access is not very useful. We could update the zone.present state in the example above to add a network interface or we could use a separate state for this.

```

omipkg1_network:
  zone.resource_present:
    - name: omipkg1
    - resource_type: net
    - resource_selector_property: mac-addr
    - resource_selector_value: "02:08:20:a2:a3:10"
    - physical: znic1
    - require:
      - zone: omipkg1_configuration

```

Since this is a single tenant system having the owner attribute is pointless. Let's remove that attribute.

Note: The following state run the omipkg1_configuration state will add it again! If the entire configuration is managed it would be better to add resource_prune and optionally the resource_selector_property properties to the resource.

```

omipkg1_strip_owner:
  zone.resource_present:
    - name: omipkg1
    - resource_type: attr
    - resource_selector_property: name
    - resource_selector_value: owner
    - require:
      - zone: omipkg1_configuration

```

Let's bump the zone's CPU shares a bit.

Note: The following state run the omipkg1_configuration state will set it to 50 again. Update the entire zone configuration is managed you should update it there instead.

```

omipkg1_more_cpu:
  zone.property_present:
    - name: omipkg1
    - property: cpu-shares
    - value: 100

```

Or we can remove the limit altogether!

Note: The following state run the `omipkg1_configuration` state will set it to 50 again. Update the entire zone configuration is managed you should set the property to `None` (nothing after the `:`) instead.

```
omipkg1_no_cpu:
  zone.property_absent:
    - name: omipkg1
    - property: cpu-shares
```

`salt.states.zone.absent`(*name*, *uninstall=False*)

Ensure a zone is absent

name [string] name of the zone

uninstall [boolean] when true, uninstall instead of detaching the zone first.

`salt.states.zone.attached`(*name*, *force=False*)

Ensure zone is attached

name [string] name of the zone

force [boolean] force attach the zone

`salt.states.zone.booted`(*name*, *single=False*)

Ensure zone is booted

name [string] name of the zone

single [boolean] boot in single usermode

`salt.states.zone.detached`(*name*)

Ensure zone is detached

name [string] name of the zone

`salt.states.zone.export`(*name*, *path*, *replace=False*)

Export a zones configuration

name [string] name of the zone

path [string] path of file to export too.

replace [boolean] replace the file if it exists

`salt.states.zone.halted`(*name*, *graceful=True*)

Ensure zone is halted

name [string] name of the zone

graceful [boolean] use shutdown instead of halt if true

`salt.states.zone.import_`(*name*, *path*, *mode='import'*, *nodataset=False*, *brand_opts=None*)

Import a zones configuration

name [string] name of the zone

path [string] path of the configuration file to import

mode [string] either import, install, or attach

nodataset [boolean] do not create a ZFS file system

brand_opts [boolean] brand specific options to pass

Note: The mode argument can be set to `import`, `install`, or `attach`. `import`: will only import the configuration `install`: will import and then try to install the zone `attach`: will import and then try to attach of the zone

```
omipkg1:
  zone.import:
    - path: /foo/bar/baz
```

`salt.states.zone.installed`(*name*, *nodataset=False*, *brand_opts=None*)

Ensure zone is installed

name [string] name of the zone

nodataset [boolean] do not create a ZFS file system

brand_opts [boolean] brand specific options to pass

`salt.states.zone.present`(*name*, *brand*, *zonepath*, *properties=None*, *resources=None*)

Ensure a zone with certain properties and resources

name [string] name of the zone

brand [string] brand of the zone

zonepath [string] path of the zone

properties [list of key-value pairs] dict of properties

resources [list of key-value pairs] dict of resources

Note: If the zone does not exist it will not be installed. You can use the `zone.installed` state for this.

Note:

Default resource selectors:

- fs: dir
 - net: mac-addr
 - device: match
 - rctl: name
 - attr: name
 - dataset: name
 - admin: user
-

Warning: Properties and resource will not be removed when they are absent from the state!

For properties, simple set them to `None`.

For resources, add the `resource_prune` property and set it to `True`. Also specify the `resource_selector_property` if the default is not the one you want.

`salt.states.zone.property_absent`(*name*, *property*)

Ensure property is absent

name [string] name of the zone

property [string] name of property

Note: This does a `zoneacfg clear` call. So the property may be reset to a default value! Does has the side effect of always having to be called.

`salt.states.zone.property_present`(*name*, *property*, *value*)

Ensure property has a certain value

name [string] name of the zone

property [string] name of property

value [string] value of property

`salt.states.zone.resource_absent`(*name*, *resource_type*, *resource_selector_property*, *resource_selector_value*)

Ensure resource is absent

name [string] name of the zone

resource_type [string] type of resource

resource_selector_property [string] unique resource identifier
resource_selector_value [string] value for resource selection

Warning: Both `resource_selector_property` and `resource_selector_value` must be provided, some properties like `name` are already reserved by salt in these states.

Note: You can set both `resource_selector_property` and `resource_selector_value` to `None` for resources that do not require them.

`salt.states.zone.resource_present`(*name*, *resource_type*, *resource_selector_property*, *resource_selector_value*, ***kwargs*)

Ensure resource exists with provided properties
name [string] name of the zone
resource_type [string] type of resource
resource_selector_property [string] unique resource identifier
resource_selector_value [string] value for resource selection
kwargs [string|int|...] resource properties

Warning: Both `resource_selector_property` and `resource_selector_value` must be provided, some properties like `name` are already reserved by salt in states.

Note: You can set both `resource_selector_property` and `resource_selector_value` to `None` for resources that do not require them.

`salt.states.zone.uninstalled`(*name*)

Ensure zone is uninstalled
name [string] name of the zone

20.19.313 salt.states.zookeeper

depends kazoo

configuration See `salt.modules.zookeeper` for setup instructions.

ACLS

For more information about acls, please checkout the kazoo documentation.

http://kazoo.readthedocs.io/en/latest/api/security.html#kazoo.security.make_digest_acl

The following options can be included in the acl dictionary:

- param username** Username to use for the ACL.
- param password** A plain-text password to hash.
- param write** Write permission.
- type write** bool
- param create** Create permission.

```

type create bool
param delete Delete permission.
type delete bool
param admin Admin permission.
type admin bool
param all All permissions.
type all bool

```

`salt.states.zookeeper.absent`(*name*, *version=-1*, *recursive=False*, *profile=None*, *hosts=None*, *scheme=None*, *username=None*, *password=None*, *default_acl=None*)

Make sure znode is absent

```

name path to znode
version Specify the version which should be deleted Default: -1 (always match)
recursive Boolean to indicate if children should be recursively deleted Default: False
profile Configured Zookeeper profile to authenticate with (Default: None)
hosts Lists of Zookeeper Hosts (Default: '127.0.0.1:2181')
scheme Scheme to authenticate with (Default: 'digest')
username Username to authenticate (Default: None)
password Password to authenticate (Default: None)
default_acl Default acls to assign if a node is created in this connection (Default: None)

```

```

delete znode:
zookeeper.absent:
- name: /test
- recursive: True

```

`salt.states.zookeeper.acls`(*name*, *acls*, *version=-1*, *profile=None*, *hosts=None*, *scheme=None*, *username=None*, *password=None*, *default_acl=None*)

Update acls on a znode

```

name path to znode
acls list of acl dictionaries to set on znode
version Specify the version which should be deleted Default: -1 (always match)
profile Configured Zookeeper profile to authenticate with (Default: None)
hosts Lists of Zookeeper Hosts (Default: '127.0.0.1:2181')
scheme Scheme to authenticate with (Default: 'digest')
username Username to authenticate (Default: None)
password Password to authenticate (Default: None)
default_acl Default acls to assign if a node is created in this connection (Default: None)

```

```

update acls:
zookeeper.acls:
- name: /test/name
- acls:
- username: daniel
  password: test
  all: True
- username: gtmanfred
  password: test
  all: True

```

`salt.states.zookeeper.present`(*name*, *value*, *acls=None*, *ephemeral=False*, *sequence=False*, *makepath=False*, *version=-1*, *profile=None*, *hosts=None*, *scheme=None*, *username=None*, *password=None*, *default_acl=None*)

Make sure znode is present in the correct state with the correct acls

name path to znode

value value znode should be set to

acls list of acl dictionaries to set on znode (make sure the ones salt is connected with are included) Default: None

ephemeral Boolean to indicate if ephemeral znode should be created Default: False

sequence Boolean to indicate if znode path is suffixed with a unique index Default: False

makepath Boolean to indicate if the parent paths should be created Default: False

version For updating, specify the version which should be updated Default: -1 (always match)

profile Configured Zookeeper profile to authenticate with (Default: None)

hosts Lists of Zookeeper Hosts (Default: '127.0.0.1:2181')

scheme Scheme to authenticate with (Default: 'digest')

username Username to authenticate (Default: None)

password Password to authenticate (Default: None)

default_acl Default acls to assign if a node is created in this connection (Default: None)

```
add znode:
  zookeeper.present:
    - name: /test/name
    - value: gtmanfred
    - makepath: True

update znode:
  zookeeper.present:
    - name: /test/name
    - value: daniel
    - acls:
      - username: daniel
        password: test
        read: true
      - username: gtmanfred
        password: test
        read: true
        write: true
        create: true
        delete: true
        admin: true
    - makepath: True
```

20.19.314 salt.states.zpool

States for managing zpools

maintainer Jorge Schrauwen <sjorge@blackdot.be>

maturity new

depends salt.utils.zfs, salt.modules.zpool

platform smartos, illumos, solaris, freebsd, linux

New in version 2016.3.0.

Changed in version 2018.3.1: Big refactor to remove duplicate code, better type conversions and improved consistency in output.

```

oldpool:
  zpool.absent:
    - export: true

newpool:
  zpool.present:
    - config:
        import: false
        force: true
    - properties:
        comment: salty storage pool
    - layout:
        - mirror:
            - /dev/disk0
            - /dev/disk1
        - mirror:
            - /dev/disk2
            - /dev/disk3

partitionpool:
  zpool.present:
    - config:
        import: false
        force: true
    - properties:
        comment: disk partition salty storage pool
        ashift: '12'
        feature@lz4_compress: enabled
    - filesystem_properties:
        compression: lz4
        atime: on
        relatime: on
    - layout:
        - /dev/disk/by-uuid/3e43ce94-77af-4f52-a91b-6cdbb0b0f41b

simplepool:
  zpool.present:
    - config:
        import: false
        force: true
    - properties:
        comment: another salty storage pool
    - layout:
        - /dev/disk0
        - /dev/disk1

```

Warning: The layout will never be updated, it will only be used at time of creation. It's a whole lot of work to figure out if a devices needs to be detached, removed, etc. This is best done by the sysadmin on a case per case basis.

Filesystem properties are also not updated, this should be managed by the zfs state module.

```

salt.states.zpool.absent(name, export=False, force=False)
    ensure storage pool is absent on the system
    name [string] name of storage pool
    export [boolean] export instread of destroy the zpool if present

```

force [boolean] force destroy or export

`salt.states.zpool.present`(*name*, *properties=None*, *filesystem_properties=None*, *layout=None*, *config=None*)

ensure storage pool is present on the system

name [string] name of storage pool

properties [dict] optional set of properties to set for the storage pool

filesystem_properties [dict] optional set of filesystem properties to set for the storage pool (creation only)

layout: dict disk layout to use if the pool does not exist (creation only)

config [dict] fine grain control over this state

Note:

The following configuration properties can be toggled in the config parameter.

- `import` (true) - try to import the pool before creating it if absent
- `import_dirs` (None) - specify additional locations to scan for devices on import (comma-separated)
- `device_dir` (None, SunOS=/dev/dsk, Linux=/dev) - specify device directory to prepend for none absolute device paths
- `force` (false) - try to force the import or creation

Note: It is no longer needed to give a unique name to each top-level vdev, the old layout format is still supported but no longer recommended.

```
- mirror:
  - /tmp/vdisk3
  - /tmp/vdisk2
- mirror:
  - /tmp/vdisk0
  - /tmp/vdisk1
```

The above yaml will always result in the following zpool create:

```
zpool create mypool mirror /tmp/vdisk3 /tmp/vdisk2 mirror /tmp/vdisk0 /tmp/vdisk1
```

Warning: The legacy format is also still supported but not recommended, because ID's inside the layout dict must be unique they need to have a suffix.

```
mirror-0:
  /tmp/vdisk3
  /tmp/vdisk2
mirror-1:
  /tmp/vdisk0
  /tmp/vdisk1
```

Warning: Pay attention to the order of your dict!

```
- mirror:
  - /tmp/vdisk0
  - /tmp/vdisk1
  - /tmp/vdisk2
```

The above will result in the following zpool create:

```
zpool create mypool mirror /tmp/vdisk0 /tmp/vdisk1 /tmp/vdisk2
```

Creating a 3-way mirror! While you probably expect it to be mirror root vdev with 2 devices + a root vdev of 1 device!

20.20 thorium modules

| | |
|---------------|--|
| <i>calc</i> | Used to manage the thorium register. |
| <i>check</i> | The check Thorium state is used to create gateways to commands, the checks make it easy to make states that watch registers for changes and then just succeed or fail based on the state of the register, this creates the pattern of having a command execution get gated by a check state via a requisite. |

| <i>wheel</i> | React by calling asynchronous runners |

20.20.1 salt.thorium.calc module

Used to manage the thorium register. The thorium register is where compound values are stored and computed, such as averages etc.

New in version 2016.11.0.

depends statistics PyPi module

salt.thorium.calc.add(*name, num, minimum=0, maximum=0, ref=None*)

Adds together the num most recent values. Requires a list.

USAGE:

```
foo:
  calc.add:
    - name: myregentry
    - num: 5
```

salt.thorium.calc.calc(*name, num, oper, minimum=0, maximum=0, ref=None*)

Perform a calculation on the num most recent values. Requires a list. Valid values for oper are:

- add: Add last num values together
- mul: Multiple last num values together
- mean: Calculate mean of last num values
- median: Calculate median of last num values
- median_low: Calculate low median of last num values

- `median_high`: Calculate high median of last `num` values
- `median_grouped`: Calculate grouped median of last `num` values
- `mode`: Calculate mode of last `num` values

USAGE:

```
foo:
  calc.calc:
    - name: myregentry
    - num: 5
    - oper: mean
```

`salt.thorium.calc.mean`(*name, num, minimum=0, maximum=0, ref=None*)

Calculates the mean of the `num` most recent values. Requires a list.

USAGE:

```
foo:
  calc.mean:
    - name: myregentry
    - num: 5
```

`salt.thorium.calc.median`(*name, num, minimum=0, maximum=0, ref=None*)

Calculates the mean of the `num` most recent values. Requires a list.

USAGE:

```
foo:
  calc.median:
    - name: myregentry
    - num: 5
```

`salt.thorium.calc.median_grouped`(*name, num, minimum=0, maximum=0, ref=None*)

Calculates the grouped mean of the `num` most recent values. Requires a list.

USAGE:

```
foo:
  calc.median_grouped:
    - name: myregentry
    - num: 5
```

`salt.thorium.calc.median_high`(*name, num, minimum=0, maximum=0, ref=None*)

Calculates the high mean of the `num` most recent values. Requires a list.

USAGE:

```
foo:
  calc.median_high:
    - name: myregentry
    - num: 5
```

`salt.thorium.calc.median_low`(*name, num, minimum=0, maximum=0, ref=None*)

Calculates the low mean of the `num` most recent values. Requires a list.

USAGE:

```
foo:
  calc.median_low:
```

(continues on next page)

(continued from previous page)

```
- name: myregistry
- num: 5
```

`salt.thorium.calc.mode`(*name, num, minimum=0, maximum=0, ref=None*)

Calculates the mode of the num most recent values. Requires a list.

USAGE:

```
foo:
  calc.mode:
    - name: myregistry
    - num: 5
```

`salt.thorium.calc.mul`(*name, num, minimum=0, maximum=0, ref=None*)

Multiplies together the num most recent values. Requires a list.

USAGE:

```
foo:
  calc.mul:
    - name: myregistry
    - num: 5
```

20.20.2 salt.thorium.check module

The check Thorium state is used to create gateways to commands, the checks make it easy to make states that watch registers for changes and then just succeed or fail based on the state of the register, this creates the pattern of having a command execution get gated by a check state via a requisite.

`salt.thorium.check.contains`(*name, value, count_lt=None, count_lte=None, count_eq=None, count_gte=None, count_gt=None, count_ne=None*)

Only succeed if the value in the given register location contains the given value

USAGE:

```
foo:
  check.contains:
    - value: itni

run_remote_ex:
  local.cmd:
    - tgt: '*'
    - func: test.ping
    - require:
      - check: foo
```

`salt.thorium.check.eq`(*name, value*)

Only succeed if the value in the given register location is equal to the given value

USAGE:

```
foo:
  check.eq:
    - value: 42

run_remote_ex:
```

(continues on next page)

(continued from previous page)

```

local.cmd:
- tgt: '*'
- func: test.ping
- require:
- check: foo

```

`salt.thorium.check.event`(*name*)

Checks for a specific event match and returns result True if the match happens

USAGE:

```

salt/foo/*/bar:
  check.event

run_remote_ex:
  local.cmd:
- tgt: '*'
- func: test.ping
- require:
- check: salt/foo/*/bar

```

`salt.thorium.check.gt`(*name*, *value*)

Only succeed if the value in the given register location is greater than the given value

USAGE:

```

foo:
  check.gt:
- value: 42

run_remote_ex:
  local.cmd:
- tgt: '*'
- func: test.ping
- require:
- check: foo

```

`salt.thorium.check.gte`(*name*, *value*)

Only succeed if the value in the given register location is greater or equal than the given value

USAGE:

```

foo:
  check.gte:
- value: 42

run_remote_ex:
  local.cmd:
- tgt: '*'
- func: test.ping
- require:
- check: foo

```

`salt.thorium.check.len_eq`(*name*, *value*)

Only succeed if the length of the given register location is equal to the given value.

USAGE:

```

foo:
  check.len_eq:
    - value: 42

run_remote_ex:
  local.cmd:
    - tgt: '*'
    - func: test.ping
    - require:
      - check: foo

```

`salt.thorium.check.len_gt`(*name, value*)

Only succeed if length of the given register location is greater than the given value.

USAGE:

```

foo:
  check.len_gt:
    - value: 42

run_remote_ex:
  local.cmd:
    - tgt: '*'
    - func: test.ping
    - require:
      - check: foo

```

`salt.thorium.check.len_gte`(*name, value*)

Only succeed if the length of the given register location is greater or equal than the given value

USAGE:

```

foo:
  check.len_gte:
    - value: 42

run_remote_ex:
  local.cmd:
    - tgt: '*'
    - func: test.ping
    - require:
      - check: foo

```

`salt.thorium.check.len_lt`(*name, value*)

Only succeed if the length of the given register location is less than the given value.

USAGE:

```

foo:
  check.len_lt:
    - value: 42

run_remote_ex:
  local.cmd:
    - tgt: '*'
    - func: test.ping
    - require:
      - check: foo

```

`salt.thorium.check.len_lte`(*name*, *value*)

Only succeed if the length of the given register location is less than or equal the given value

USAGE:

```
foo:
  check.len_lte:
    - value: 42

run_remote_ex:
  local.cmd:
    - tgt: '*'
    - func: test.ping
    - require:
      - check: foo
```

`salt.thorium.check.len_ne`(*name*, *value*)

Only succeed if the length of the given register location is not equal to the given value.

USAGE:

```
foo:
  check.len_ne:
    - value: 42

run_remote_ex:
  local.cmd:
    - tgt: '*'
    - func: test.ping
    - require:
      - check: foo
```

`salt.thorium.check.lt`(*name*, *value*)

Only succeed if the value in the given register location is less than the given value

USAGE:

```
foo:
  check.lt:
    - value: 42

run_remote_ex:
  local.cmd:
    - tgt: '*'
    - func: test.ping
    - require:
      - check: foo
```

`salt.thorium.check.lte`(*name*, *value*)

Only succeed if the value in the given register location is less than or equal the given value

USAGE:

```
foo:
  check.lte:
    - value: 42

run_remote_ex:
  local.cmd:
```

(continues on next page)

(continued from previous page)

```
- tgt: '*'
- func: test.ping
- require:
  - check: foo
```

`salt.thorium.check.ne`(*name*, *value*)

Only succeed if the value in the given register location is not equal to the given value

USAGE:

```
foo:
  check.ne:
    - value: 42

run_remote_ex:
  local.cmd:
    - tgt: '*'
    - func: test.ping
    - require:
      - check: foo
```

20.20.3 salt.thorium.file module

Writes matches to disk to verify activity, helpful when testing

Normally this is used by giving the name of the file (without a path) that the data will be saved to. If for instance you use `foo` as the name:

Then the file will be saved to:

You may also provide an absolute path for the file to be saved to:

```
/tmp/foo.save:
  file.save
```

Files will be saved in JSON format. However, JSON does not support `set()`'s. If you are saving a register entry that contains a `set()`, then it will fail to save to JSON format. However, you may pass data through a filter which makes it JSON compliant:

```
foo:
  file.save:
    filter: True
```

Be warned that if you do this, then the file will be saved, but not in a format that can be re-imported into Python.

`salt.thorium.file.save`(*name*, *filter=False*)

Save the register to `<salt cachedir>/thorium/saves/<name>`, or to an absolute path.

If an absolute path is specified, then the directory will be created non-recursively if it doesn't exist.

USAGE:

```
foo:
  file.save

/tmp/foo:
  file.save
```

20.20.4 salt.thorium.key module

The key Thorium State is used to apply changes to the accepted/rejected/pending keys

New in version 2016.11.0.

`salt.thorium.key.timeout` (*name*, *delete=0*, *reject=0*)

If any minion's status is older than the timeout value then apply the given action to the timed out key. This example will remove keys to minions that have not checked in for 300 seconds (5 minutes)

USAGE:

```
statreg:
  status.reg

clean_keys:
  key.timeout:
    - require:
      - status: statreg
    - delete: 300
```

20.20.5 salt.thorium.local module

Run remote execution commands via the local client

`salt.thorium.local.cmd` (*name*, *tgt*, *func*, *arg=()*, *tgt_type='glob'*, *ret=""*, *kwarg=None*, ***kwargs*)

Execute a remote execution command

USAGE:

```
run_remote_ex:
  local.cmd:
    - tgt: '*'
    - func: test.ping

run_remote_ex:
  local.cmd:
    - tgt: '*'
    - func: test.sleep
    - arg:
      - 30

run_remote_ex:
  local.cmd:
    - tgt: '*'
    - func: test.sleep
    - kwarg:
      length: 30
```

20.20.6 salt.thorium.reg module

Used to manage the thorium register. The thorium register is where compound values are stored and computed, such as averages etc.

`salt.thorium.reg.clear` (*name*)

Clear the namespace from the register

USAGE:

```
clearns:
  reg.clear:
    - name: myregister
```

`salt.thorium.reg.delete(name)`

Delete the namespace from the register

USAGE:

```
deletens:
  reg.delete:
    - name: myregister
```

`salt.thorium.reg.list_(name, add, match, stamp=False, prune=0)`

Add the specified values to the named list

If `stamp` is `True`, then the timestamp from the event will also be added if `prune` is set to an integer higher than 0, then only the last `prune` values will be kept in the list.

USAGE:

```
foo:
  reg.list:
    - add: bar
    - match: my/custom/event
    - stamp: True
```

`salt.thorium.reg.mean(name, add, match)`

Accept a numeric value from the matched events and store a running average of the values in the given register.

If the specified value is not numeric it will be skipped

USAGE:

```
foo:
  reg.mean:
    - add: data_field
    - match: my/custom/event
```

`salt.thorium.reg.set_(name, add, match)`

Add a value to the named set

USAGE:

```
foo:
  reg.set:
    - add: bar
    - match: my/custom/event
```

20.20.7 salt.thorium.runner module

React by calling asynchronous runners

`salt.thorium.runner.cmd(name, func=None, arg=(), **kwargs)`

Execute a runner asynchronous:

USAGE:

```
run_cloud:
  runner.cmd:
    - func: cloud.create
    - arg:
      - my-ec2-config
      - myinstance

run_cloud:
  runner.cmd:
    - func: cloud.create
    - kwargs:
      provider: my-ec2-config
      instances: myinstance
```

20.20.8 salt.thorium.status module

This thorium state is used to track the status beacon events and keep track of the active status of minions

New in version 2016.11.0.

`salt.thorium.status.reg(name)`

Activate this register to turn on a minion status tracking register, this register keeps the current status beacon data and the time that each beacon was last checked in.

20.20.9 salt.thorium.timer module

Allow for flow based timers. These timers allow for a sleep to exist across multiple runs of the flow

`salt.thorium.timer.hold(name, seconds)`

Wait for a given period of time, then fire a result of True, requiring this state allows for an action to be blocked for evaluation based on time

USAGE:

```
hold_on_a_moment:
  timer.hold:
    - seconds: 30
```

20.20.10 salt.thorium.wheel module

React by calling asynchronous runners

`salt.thorium.wheel.cmd(name, fun=None, arg=(), **kwargs)`

Execute a runner asynchronous:

USAGE:

```
run_cloud:
  wheel.cmd:
    - fun: key.delete
    - match: minion_id
```

20.21 master tops modules

| | |
|------------------------------|--|
| <code>cobbler</code> | Cobbler Tops |
| <code>ext_nodes</code> | External Nodes Classifier |
| <code>mongo</code> | Read tops data from a mongodb collection |
| <code>reclass_adapter</code> | Read tops data from a reclass database |
| <code>saltclass</code> | Saltclass Configuration |
| <code>varstack</code> | Use <i>Varstack</i> < https://github.com/conversis/varstack > to provide tops data |

20.21.1 salt.tops.cobbler

Cobbler Tops

Cobbler Tops is a master tops subsystem used to look up mapping information from Cobbler via its API. The same `cobbler.*` parameters are used for both the Cobbler tops and Cobbler pillar modules.

```

master_tops:
  cobbler: {}
cobbler.url: https://example.com/cobbler_api #default is http://localhost/cobbler_api
cobbler.user: username # default is no username
cobbler.password: password # default is no password

```

Module Documentation

`salt.tops.cobbler.top(**kwargs)`
Look up top data in Cobbler for a minion.

20.21.2 salt.tops.ext_nodes

External Nodes Classifier

The External Nodes Classifier is a master tops subsystem that retrieves mapping information from major configuration management systems. One of the most common external nodes classifiers system is provided by Cobbler and is called `cobbler-ext-nodes`.

The `cobbler-ext-nodes` command can be used with this configuration:

```

master_tops:
  ext_nodes: cobbler-ext-nodes

```

It is noteworthy that the Salt system does not directly ingest the data sent from the `cobbler-ext-nodes` command, but converts the data into information that is used by a Salt top file.

Any command can replace the call to `'cobbler-ext-nodes'` above, but currently the data must be formatted in the same way that the standard `'cobbler-ext-nodes'` does.

See (admittedly degenerate and probably not complete) example:

```

classes:
  - basepackages
  - database

```

The above essentially is the same as a top.sls containing the following:

```
base:
  '*':
    - basepackages
    - database

base:
  '*':
    - basepackages
    - database
```

```
salt.tops.ext_nodes.top(**kwargs)
    Run the command configured
```

20.21.3 salt.tops.mongo

Read tops data from a mongodb collection

This module will load tops data from a mongo collection. It uses the node's id for lookups.

Salt Master Mongo Configuration

The module shares the same base mongo connection variables as `salt.returners.mongo_return`. These variables go in your master config file.

- `mongo.db` - The mongo database to connect to. Defaults to 'salt'.
- `mongo.host` - The mongo host to connect to. Supports replica sets by specifying all hosts in the set, comma-delimited. Defaults to 'salt'.
- `mongo.port` - The port that the mongo database is running on. Defaults to 27017.
- `mongo.user` - The username for connecting to mongo. Only required if you are using mongo authentication. Defaults to ''.
- `mongo.password` - The password for connecting to mongo. Only required if you are using mongo authentication. Defaults to ''.

Configuring the Mongo Tops Subsystem

```
master_tops:
  mongo:
    collection: tops
    id_field: _id
    re_replace: ""
    re_pattern: \.example\.com
    states_field: states
    environment_field: environment
```

Module Documentation

```
salt.tops.mongo.top(**kwargs)
    Connect to a mongo database and read per-node tops data.
    Parameters
```

- **collection** (*) – The mongodb collection to read data from. Defaults to 'tops'.
- **id_field** (*) – The field in the collection that represents an individual minion id. Defaults to '_id'.
- **re_pattern** (*) – If your naming convention in the collection is shorter than the minion id, you can use this to trim the name. *re_pattern* will be used to match the name, and *re_replace* will be used to replace it. Backrefs are supported as they are in the Python standard library. If `None`, no mangling of the name will be performed - the collection will be searched with the entire minion id. Defaults to `None`.
- **re_replace** (*) – Use as the replacement value in node ids matched with *re_pattern*. Defaults to `''`. Feel free to use backreferences here.
- **states_field** (*) – The name of the field providing a list of states.
- **environment_field** (*) – The name of the field providing the environment. Defaults to `environment`.

20.21.4 salt.tops.reclass_adapter

Read tops data from a reclass database

This *master_tops* plugin provides access to the **reclass** database, such that state information (top data) are retrieved from **reclass**.

You can find more information about **reclass** at <http://reclass.pantsfullofunix.net>.

To use the plugin, add it to the `master_tops` list in the Salt master config and tell **reclass** by way of a few options how and where to find the inventory:

```
master_tops:
  reclass:
    storage_type: yaml_fs
    inventory_base_uri: /srv/salt
```

This would cause **reclass** to read the inventory from YAML files in `/srv/salt/nodes` and `/srv/salt/classes`.

If you are also using **reclass** as `ext_pillar` plugin, and you want to avoid having to specify the same information for both, use YAML anchors (take note of the differing data types for `ext_pillar` and `master_tops`):

```
reclass: &reclass
  storage_type: yaml_fs
  inventory_base_uri: /srv/salt
  reclass_source_path: ~/code/reclass

ext_pillar:
  - reclass: *reclass

master_tops:
  reclass: *reclass
```

If you want to run **reclass** from source, rather than installing it, you can either let the master know via the `PYTHONPATH` environment variable, or by setting the configuration option, like in the example above.

```
salt.tops.reclass_adapter.top(**kwargs)
    Query reclass for the top data (states of the minions).
```

20.21.5 salt.tops.saltclass

Saltclass Configuration

```
master_tops:  
  saltclass:  
    path: /srv/saltclass
```

Description

This module clones the behaviour of reclass (<http://reclass.pantsfullofunix.net/>), without the need of an external app, and add several features to improve flexibility. Saltclass lets you define your nodes from simple yaml files (.yaml) through hierarchical class inheritance with the possibility to override pillars down the tree.

Features

- Define your nodes through hierarchical class inheritance
- Reuse your reclass datas with minimal modifications
 - applications => states
 - parameters => pillars
- Use Jinja templating in your yaml definitions
- Access to the following Salt objects in Jinja
 - __opts__
 - __salt__
 - __grains__
 - __pillars__
 - minion_id
- Chose how to merge or override your lists using ^ character (see examples)
- Expand variables \${} with possibility to escape them if needed \$\$ (see examples)
- Ignores missing node/class and will simply return empty without breaking the pillar module completely - will be logged

An example subset of datas is available here: <http://git.mauras.ch/salt/saltclass/src/master/examples>

| Terms usable in yaml files | Description |
|----------------------------|--|
| classes | A list of classes that will be processed in order |
| states | A list of states that will be returned by master_tops function |
| pillars | A yaml dictionary that will be returned by the ext_pillar function |
| environment | Node saltenv that will be used by master_tops |

A class consists of:

- zero or more parent classes
- zero or more states
- any number of pillars

A child class can override pillars from a parent class. A node definition is a class in itself with an added environment parameter for saltenv definition.

Class names

Class names mimic salt way of defining states and pillar files. This means that `default.users` class name will correspond to one of these:

- `<saltclass_path>/classes/default/users.yml`
- `<saltclass_path>/classes/default/users/init.yml`

Saltclass file hierachy

A saltclass tree would look like this:

Saltclass Examples

`<saltclass_path>/nodes/lausanne/qls.node1.yml`

```

environment: base

classes:
{% for class in ['default'] %}

```

(continues on next page)

(continued from previous page)

```

- {{ class }}
{% endfor %}
- subsidiaries.{{ __grains__['id'].split('.')[0] }}

```

<saltclass_path>/classes/default/init.yml

```

classes:
- default.users
- default.motd

states:
- openssh

pillars:
default:
  network:
    dns:
      srv1: 192.168.0.1
      srv2: 192.168.0.2
      domain: example.com
    ntp:
      srv1: 192.168.10.10
      srv2: 192.168.10.20

```

<saltclass_path>/classes/subsidiaries/gnv.yml

```

pillars:
default:
  network:
    sub: Geneva
    dns:
      srv1: 10.20.0.1
      srv2: 10.20.0.2
      srv3: 192.168.1.1
      domain: gnv.example.com
    users:
      adm1:
        uid: 1210
        gid: 1210
        gecos: 'Super user admin1'
        homedir: /srv/app/adm1
      adm3:
        uid: 1203
        gid: 1203
        gecos: 'Super user adm

```

Variable expansions

Escaped variables are rendered as is: `#{test}`

Missing variables are rendered as is: `#{net:dns:srv2}`

```

pillars:
  app:
  config:

```

(continues on next page)

(continued from previous page)

```

dns:
  srv1: ${default:network:dns:srv1}
  srv2: ${net:dns:srv2}
uri: https://application.domain/call?\${test}
prod_parameters:
  - p1
  - p2
  - p3
pkg:
  - app-core
  - app-backend

```

List override

Not using `^` as the first entry will simply merge the lists

```

pillars:
  app:
    pkg:
      - ^
      - app-frontend

```

Note: Known limitation

Currently you can't have both a variable and an escaped variable in the same string as the escaped one will not be correctly rendered - `'${xx}'` will stay as is instead of being rendered as `'{xx}'`

```

salt.tops.saltclass.top(**kwargs)
    Compile tops

```

20.21.6 salt.tops.varstack

Use *Varstack* <<https://github.com/conversis/varstack>> to provide tops data

This *master_tops* plugin provides access to the *varstack* hierarchical yaml files, so you can use *varstack* as a full *external node classifier* and store state information (top data) in it.

Configuring Varstack

To use *varstack* as a master top external node classifier, install *varstack* as documented. Then, add to your master's configuration:

```

master_tops:
  varstack: /path/to/the/config/file/varstack.yaml

```

Varstack will then use `/path/to/the/config/file/varstack.yaml` (usually `/etc/varstack.yaml`) to determine which configuration data to return as adapter information. From there you can take a look at the *README* <<https://github.com/conversis/varstack/blob/master/README.md>> of *varstack* to learn how this file is evaluated. The ENC part will just return the 'states' dictionary for the node.

Ie, if `my.fqdn.yaml` file contains:

```

---
states:
- sudo
- openssh
- apache
- salt.minion

```

these will be returned as `{'base': ['sudo', 'openssh', 'apache', 'salt.minion']}` and managed by salt as if given from a `top.sls` file.

```

salt.tops.varstack.top(*kwargs)
    Query varstack for the top data (states of the minions).

```

20.22 wheel modules

| | |
|---------------------------|---|
| <code>config</code> | Manage the master configuration file |
| <code>error</code> | Error generator to enable integration testing of salt wheel error handling |
| <code>file_roots</code> | Read in files from the <code>file_root</code> and save files to the file root |
| <code>key</code> | Wheel system wrapper for the Salt key system to be used in interactions with the Salt Master programmatically. |
| <code>minions</code> | Wheel system wrapper for connected minions |
| <code>pillar_roots</code> | The <code>pillar_roots</code> wheel module is used to manage files under the pillar roots directories on the master server. |

20.22.1 salt.wheel.config

Manage the master configuration file

```

salt.wheel.config.apply(key, value)
    Set a single key

```

Note: This will strip comments from your config file

```

salt.wheel.config.update_config(file_name, yaml_contents)
    Update master config with yaml_contents.

```

Writes `yaml_contents` to a file named `file_name.conf` under the folder specified by `default_include`. This folder is named `master.d` by default. Please look at `include-configuration` for more information.

Example low data:

```

data = {
  'username': 'salt',
  'password': 'salt',
  'fun': 'config.update_config',
  'file_name': 'gui',
  'yaml_contents': {'id': 1},
  'client': 'wheel',

```

(continues on next page)

(continued from previous page)

```
'eauth': 'pam',
}
```

salt.wheel.config.values()

Return the raw values of the config file

20.22.2 salt.wheel.error

Error generator to enable integration testing of salt wheel error handling

salt.wheel.error.error (*name=None, message=""*)

If name is None Then return empty dict

Otherwise raise an exception with `__name__` from name, message from message

CLI Example:

```
salt-wheel error
salt-wheel error.error name="Exception" message="This is an error."
```

20.22.3 salt.wheel.file_roots

Read in files from the file_root and save files to the file root

salt.wheel.file_roots.find (*path, saltenv='base'*)

Return a dict of the files located with the given path and environment

salt.wheel.file_roots.list_env (*saltenv='base'*)

Return all of the file paths found in an environment

salt.wheel.file_roots.list_roots ()

Return all of the files names in all available environments

salt.wheel.file_roots.read (*path, saltenv='base'*)

Read the contents of a text file, if the file is binary then

salt.wheel.file_roots.write (*data, path, saltenv='base', index=0*)

Write the named file, by default the first file found is written, but the index of the file can be specified to write to a lower priority file root

20.22.4 salt.wheel.key

Wheel system wrapper for the Salt key system to be used in interactions with the Salt Master programmatically.

The key module for the wheel system is meant to provide an internal interface for other Salt systems to interact with the Salt Master. The following usage examples assume that a WheelClient is available:

```
import salt.config
import salt.wheel
opts = salt.config.master_config('/etc/salt/master')
wheel = salt.wheel.WheelClient(opts)
```

Note that importing and using the `WheelClient` must be performed on the same machine as the Salt Master and as the same user that runs the Salt Master, unless `external_auth` is configured and the user is authorized to execute wheel functions.

The function documentation starts with the `wheel` reference from the code sample above and use the `WheelClient` functions to show how they can be called from a Python interpreter.

The wheel key functions can also be called via a `salt` command at the CLI using the *`saltutil execution module`*.

`salt.wheel.key.accept`(*match*, *include_rejected=False*, *include_denied=False*)

Accept keys based on a glob match. Returns a dictionary.

match The glob match of keys to accept.

include_rejected To include rejected keys in the match along with pending keys, set this to `True`. Defaults to `False`.

include_denied To include denied keys in the match along with pending keys, set this to `True`. Defaults to `False`.

```
>>> wheel.cmd('key.accept', ['minion1'])
{'minions': ['minion1']}
```

`salt.wheel.key.accept_dict`(*match*, *include_rejected=False*, *include_denied=False*)

Accept keys based on a dict of keys. Returns a dictionary.

match The dictionary of keys to accept.

include_rejected To include rejected keys in the match along with pending keys, set this to `True`. Defaults to `False`.

New in version 2016.3.4.

include_denied To include denied keys in the match along with pending keys, set this to `True`. Defaults to `False`.

New in version 2016.3.4.

Example to move a list of keys from the `minions_pre` (pending) directory to the `minions` (accepted) directory:

```
>>> wheel.cmd('key.accept_dict',
{
    'minions_pre': [
        'jerry',
        'stuart',
        'bob',
    ],
})
{'minions': ['jerry', 'stuart', 'bob']}
```

`salt.wheel.key.delete`(*match*)

Delete keys based on a glob match. Returns a dictionary.

match The glob match of keys to delete.

```
>>> wheel.cmd_async({'fun': 'key.delete', 'match': 'minion1'})
{'jid': '20160826201244808521', 'tag': 'salt/wheel/20160826201244808521'}
```

`salt.wheel.key.delete_dict`(*match*)

Delete keys based on a dict of keys. Returns a dictionary.

match The dictionary of keys to delete.

```
>>> wheel.cmd_async({'fun': 'key.delete_dict',
'match': {
    'minions': [
        'jerry',
        'stuart',
```

(continues on next page)

(continued from previous page)

```

    ],
    'bob',
  ],
})
{'jid': '20160826201244808521', 'tag': 'salt/wheel/20160826201244808521'}
```

`salt.wheel.key.finger` (*match*, *hash_type=None*)
 Return the matching key fingerprints. Returns a dictionary.
match The key for with to retrieve the fingerprint.
hash_type The hash algorithm used to calculate the fingerprint

```
>>> wheel.cmd('key.finger', ['minion1'])
{'minions': {'minion1': '5d:f6:79:43:5e:d4:42:3f:57:b8:45:a8:7e:a4:6e:ca'}}
```

`salt.wheel.key.finger_master` (*hash_type=None*)
 Return the fingerprint of the master's public key
hash_type The hash algorithm used to calculate the fingerprint

```
>>> wheel.cmd('key.finger_master')
{'local': {'master.pub': '5d:f6:79:43:5e:d4:42:3f:57:b8:45:a8:7e:a4:6e:ca'}}
```

`salt.wheel.key.gen` (*id_=None*, *keysize=2048*)
 Generate a key pair. No keys are stored on the master. A key pair is returned as a dict containing pub and priv keys. Returns a dictionary containing the the pub and priv keys with their generated values.
id_ Set a name to generate a key pair for use with salt. If not specified, a random name will be specified.
keysize The size of the key pair to generate. The size must be 2048, which is the default, or greater. If set to a value less than 2048, the key size will be rounded up to 2048.

```
>>> wheel.cmd('key.gen')
{'pub': '-----BEGIN PUBLIC KEY-----\nMIIBIjANBgkqhkiG9w0BAQEFAAOCAQ8AMIIBC
...
BBPfamX9gGPQTpN9e8HwcZjXQnmg80rcUl10WHw09SDWLOlnW+ueTWugEQpPt\niQIDAQAB\n
-----END PUBLIC KEY-----',
'priv': '-----BEGIN RSA PRIVATE KEY-----\nMIIEpAIBAACAQEA42Kf+w9XeZWgguzv
...
QH3/W74X1+WTBlx4R2KGLYBiH+bCCFEQ/Zvcu4Xp4bIOPtRKozEQ==\n
-----END RSA PRIVATE KEY-----'}
```

`salt.wheel.key.gen_accept` (*id_*, *keysize=2048*, *force=False*)
 Generate a key pair then accept the public key. This function returns the key pair in a dict, only the public key is preserved on the master. Returns a dictionary.
id_ The name of the minion for which to generate a key pair.
keysize The size of the key pair to generate. The size must be 2048, which is the default, or greater. If set to a value less than 2048, the key size will be rounded up to 2048.
force If a public key has already been accepted for the given minion on the master, then the `gen_accept` function will return an empty dictionary and not create a new key. This is the default behavior. If `force` is set to `True`, then the minion's previously accepted key will be overwritten.

```
>>> wheel.cmd('key.gen_accept', ['foo'])
{'pub': '-----BEGIN PUBLIC KEY-----\nMIIBIjANBgkqhkiG9w0BAQEFAAOCAQ8AMIIBC
...
BBPfamX9gGPQTpN9e8HwcZjXQnmg80rcUl10WHw09SDWLOlnW+ueTWugEQpPt\niQIDAQAB\n
-----END PUBLIC KEY-----',
'priv': '-----BEGIN RSA PRIVATE KEY-----\nMIIEpAIBAACAQEA42Kf+w9XeZWgguzv
...

```

(continues on next page)

(continued from previous page)

```
QH3/W74X1+WTB\X4R2KGLYBiH+bCCFEQ/Zvcu4Xp4bIOptRKozEQ==\n
-----END RSA PRIVATE KEY-----'}
```

We can now see that the `foo` minion's key has been accepted by the master:

```
>>> wheel.cmd('key.list', ['accepted'])
{'minions': ['foo', 'minion1', 'minion2', 'minion3']}
```

`salt.wheel.key.gen_keys` (*keydir=None, keyname=None, keysize=None, user=None*)
Generate minion RSA public keypair

`salt.wheel.key.gen_signature` (*priv, pub, signature_path, auto_create=False, keysize=None*)
Generate master public-key-signature

`salt.wheel.key.key_str` (*match*)
Return information about the key. Returns a dictionary.
match The key to return information about.

```
>>> wheel.cmd('key.key_str', ['minion1'])
{'minions': {'minion1': '-----BEGIN PUBLIC KEY-----\nMIIBIjANBgkqhkiG9w0B
...
TWugEQpPt\niQIDAQAB\n-----END PUBLIC KEY-----'}}
```

`salt.wheel.key.list_` (*match*)
List all the keys under a named status. Returns a dictionary.
match The type of keys to list. The `pre`, `un`, and `unaccepted` options will list unaccepted/unsigned keys. `acc` or `accepted` will list accepted/signed keys. `rej` or `rejected` will list rejected keys. Finally, `all` will list all keys.

```
>>> wheel.cmd('key.list', ['accepted'])
{'minions': ['minion1', 'minion2', 'minion3']}
```

`salt.wheel.key.list_all` ()
List all the keys. Returns a dictionary containing lists of the minions in each salt-key category, including `minions`, `minions_rejected`, `minions_denied`, etc. Returns a dictionary.

```
>>> wheel.cmd('key.list_all')
{'local': ['master.pem', 'master.pub'], 'minions_rejected': [],
'minions_denied': [], 'minions_pre': [],
'minions': ['minion1', 'minion2', 'minion3']}
```

`salt.wheel.key.name_match` (*match*)
List all the keys based on a glob match

`salt.wheel.key.reject` (*match, include_accepted=False, include_denied=False*)

Reject keys based on a glob match. Returns a dictionary.

match The glob match of keys to reject.

include_accepted To include accepted keys in the match along with pending keys, set this to `True`. Defaults to `False`.

include_denied To include denied keys in the match along with pending keys, set this to `True`. Defaults to `False`.

```
>>> wheel.cmd_async({'fun': 'key.reject', 'match': 'minion1'})
{'jid': '20160826201244808521', 'tag': 'salt/wheel/20160826201244808521'}
```

`salt.wheel.key.reject_dict` (*match, include_accepted=False, include_denied=False*)
Reject keys based on a dict of keys. Returns a dictionary.

match The dictionary of keys to reject.

include_accepted To include accepted keys in the match along with pending keys, set this to `True`. Defaults to `False`.

New in version 2016.3.4.

include_denied To include denied keys in the match along with pending keys, set this to `True`. Defaults to `False`.

New in version 2016.3.4.

```
>>> wheel.cmd_async({'fun': 'key.reject_dict',
'match': {
    'minions': [
        'jerry',
        'stuart',
        'bob',
    ],
}})
{'jid': '20160826201244808521', 'tag': 'salt/wheel/20160826201244808521'}
```

20.22.5 salt.wheel.minions

Wheel system wrapper for connected minions

`salt.wheel.minions.connected()`

List all connected minions on a salt-master

20.22.6 salt.wheel.pillar_roots

The *pillar_roots* wheel module is used to manage files under the pillar roots directories on the master server.

`salt.wheel.pillar_roots.find(path, saltenv='base')`

Return a dict of the files located with the given path and environment

`salt.wheel.pillar_roots.list_env(saltenv='base')`

Return all of the file paths found in an environment

`salt.wheel.pillar_roots.list_roots()`

Return all of the files names in all available environments

`salt.wheel.pillar_roots.read(path, saltenv='base')`

Read the contents of a text file, if the file is binary then

`salt.wheel.pillar_roots.write(data, path, saltenv='base', index=0)`

Write the named file, by default the first file found is written, but the index of the file can be specified to write to a lower priority file root

21.1 Python client API

Salt provides several entry points for interfacing with Python applications. These entry points are often referred to as `*Client()` APIs. Each client accesses different parts of Salt, either from the master or from a minion. Each client is detailed below.

See also:

There are many ways to access Salt programmatically.

Salt can be used from CLI scripts as well as via a REST interface.

See Salt's *outputter system* to retrieve structured data from Salt as JSON, or as shell-friendly text, or many other formats.

See the *state.event* runner to utilize Salt's event bus from shell scripts.

Salt's *netapi module* provides access to Salt externally via a REST interface. Review the *netapi module* documentation for more information.

21.1.1 Salt's `opts` dictionary

Some clients require access to Salt's `opts` dictionary. (The dictionary representation of the *master* or *minion* config files.)

A common pattern for fetching the `opts` dictionary is to defer to environment variables if they exist or otherwise fetch the config from the default location.

```
salt.config.client_config(path, env_var='SALT_CLIENT_CONFIG', defaults=None)
```

Load Master configuration data

Usage:

```
import salt.config
master_opts = salt.config.client_config('/etc/salt/master')
```

Returns a dictionary of the Salt Master configuration file with necessary options needed to communicate with a locally-running Salt Master daemon. This function searches for client specific configurations and adds them to the data from the master configuration.

This is useful for master-side operations like *LocalClient*.

```
salt.config.minion_config(path, env_var='SALT_MINION_CONFIG', defaults=None,
                        cache_minion_id=False, ignore_config_errors=True, minion_id=None,
                        role='minion')
```

Reads in the minion configuration file and sets up special options

This is useful for Minion-side operations, such as the *Caller* class, and manually running the loader interface.

```
import salt.config
minion_opts = salt.config.minion_config('/etc/salt/minion')
```

21.1.2 Salt's Loader Interface

Modules in the Salt ecosystem are loaded into memory using a custom loader system. This allows modules to have conditional requirements (OS, OS version, installed libraries, etc) and allows Salt to inject special variables (`__salt__`, `__opts__`, etc).

Most modules can be manually loaded. This is often useful in third-party Python apps or when writing tests. However some modules require and expect a full, running Salt system underneath. Notably modules that facilitate master-to-minion communication such as the *mine*, *publish*, and *peer* execution modules. The error `KeyError: 'master_uri'` is a likely indicator for this situation. In those instances use the *Caller* class to execute those modules instead.

Each module type has a corresponding loader function.

```
salt.loader.minion_mods(opts, context=None, utils=None, whitelist=None, initial_load=False,
                      loaded_base_name=None, notify=False, static_modules=None, proxy=None)
```

Load execution modules

Returns a dictionary of execution modules appropriate for the current system by evaluating the `__virtual__()` function in each module.

Parameters

- **opts** (*dict*) – The Salt options dictionary
- **context** (*dict*) – A Salt context that should be made present inside generated modules in `__context__`
- **utils** (*dict*) – Utility functions which should be made available to Salt modules in `__utils__`. See `utils_dirs` in `salt.config` for additional information about configuration.
- **whitelist** (*list*) – A list of modules which should be whitelisted.
- **initial_load** (*bool*) – Deprecated flag! Unused.
- **loaded_base_name** (*str*) – A string marker for the loaded base name.
- **notify** (*bool*) – Flag indicating that an event should be fired upon completion of module loading.

```
import salt.config
import salt.loader

__opts__ = salt.config.minion_config('/etc/salt/minion')
__grains__ = salt.loader.grains(__opts__)
__opts__['grains'] = __grains__
__utils__ = salt.loader.utils(__opts__)
__salt__ = salt.loader.minion_mods(__opts__, utils=__utils__)
__salt__['test.ping']()
```

```
salt.loader.raw_mod(opts, name, functions, mod='modules')
```

Returns a single module loaded raw and bypassing the `__virtual__` function

```
import salt.config
import salt.loader

__opts__ = salt.config.minion_config('/etc/salt/minion')
testmod = salt.loader.raw_mod(__opts__, 'test', None)
testmod['test.ping']()
```

`salt.loader.states`(*opts, functions, utils, serializers, whitelist=None, proxy=None*)

Returns the state modules

Parameters

- **opts** (*dict*) – The Salt options dictionary
- **functions** (*dict*) – A dictionary of minion modules, with module names as keys and funcs as values.

```
import salt.config
import salt.loader

__opts__ = salt.config.minion_config('/etc/salt/minion')
statemods = salt.loader.states(__opts__, None, None)
```

`salt.loader.grains`(*opts, force_refresh=False, proxy=None*)

Return the functions for the dynamic grains and the values for the static grains.

Since grains are computed early in the startup process, grains functions do not have `__salt__` or `__proxy__` available. At proxy-minion startup, this function is called with the proxymodule `LazyLoader` object so grains functions can communicate with their controlled device.

```
import salt.config
import salt.loader

__opts__ = salt.config.minion_config('/etc/salt/minion')
__grains__ = salt.loader.grains(__opts__)
print __grains__['id']
```

`salt.loader.grain_funcs`(*opts, proxy=None*)

Returns the grain functions

```
import salt.config
import salt.loader

__opts__ = salt.config.minion_config('/etc/salt/minion')
grainfuncs = salt.loader.grain_funcs(__opts__)
```

21.1.3 Salt's Client Interfaces

LocalClient

class `salt.client.LocalClient`(*c_path='/etc/salt/master', mopts=None, skip_perm_errors=False, io_loop=None, keep_loop=False, auto_reconnect=False*)

The interface used by the **salt** CLI tool on the Salt Master

`LocalClient` is used to send a command to Salt minions to execute *execution modules* and return the results to the Salt Master.

Importing and using `LocalClient` must be done on the same machine as the Salt Master and it must be done using the same user that the Salt Master is running as. (Unless *external_auth* is configured and

authentication credentials are included in the execution).

Note: The LocalClient uses a Tornado IOloop, this can create issues when using the LocalClient inside an existing IOloop. If creating the LocalClient in partnership with another IOloop either create the IOloop before creating the LocalClient, or when creating the IOloop use `ioloop.current()` which will return the ioloop created by LocalClient.

```
import salt.client

local = salt.client.LocalClient()
local.cmd('*', 'test.fib', [10])
```

cmd(*tgt*, *fun*, *arg*=(), *timeout*=None, *tgt_type*='glob', *ret*=", *jid*=", *full_return*=False, *kwarg*=None, ***kwargs*)

Synchronously execute a command on targeted minions

The cmd method will execute and wait for the timeout period for all minions to reply, then it will return all minion data at once.

```
>>> import salt.client
>>> local = salt.client.LocalClient()
>>> local.cmd('*', 'cmd.run', ['whoami'])
{'jerry': 'root'}
```

With extra keyword arguments for the command function to be run:

```
local.cmd('*', 'test.arg', ['arg1', 'arg2'], kwarg={'foo': 'bar'})
```

Compound commands can be used for multiple executions in a single publish. Function names and function arguments are provided in separate lists but the index values must correlate and an empty list must be used if no arguments are required.

```
>>> local.cmd('*', [
    'grains.items',
    'sys.doc',
    'cmd.run',
],
[
    [],
    [],
    ['uptime'],
])
```

Parameters

- **tgt** (*string* or *list*) – Which minions to target for the execution. Default is shell glob. Modified by the `tgt_type` option.
- **fun** (*string* or *list of strings*) – The module and function to call on the specified minions of the form `module.function`. For example `test.ping` or `grains.items`.

Compound commands Multiple functions may be called in a single publish by passing a list of commands. This can dramatically lower overhead and speed up the application communicating with Salt.

This requires that the `arg` param is a list of lists. The `fun` list and the `arg` list must correlate by index meaning a function that does not take

arguments must still have a corresponding empty list at the expected index.

- **arg** (*list or list-of-lists*) – A list of arguments to pass to the remote function. If the function takes no arguments **arg** may be omitted except when executing a compound command.
- **timeout** – Seconds to wait after the last minion returns but before all minions return.
- **tgt_type** – The type of **tgt**. Allowed values:
 - **glob** - Bash glob completion - Default
 - **pcre** - Perl style regular expression
 - **list** - Python list of hosts
 - **grain** - Match based on a grain comparison
 - **grain_pcre** - Grain comparison with a regex
 - **pillar** - Pillar data comparison
 - **pillar_pcre** - Pillar data comparison with a regex
 - **nodegroup** - Match on nodegroup
 - **range** - Use a Range server for matching
 - **compound** - Pass a compound match string
 - **ipcidr** - Match based on Subnet (CIDR notation) or IPv4 address.

Changed in version 2017.7.0: Renamed from `expr_form` to `tgt_type`

- **ret** – The returner to use. The value passed can be single returner, or a comma delimited list of returners to call in order on the minions
- **kwarg** – A dictionary with keyword arguments for the function.
- **full_return** – Output the job return only (default) or the full return including exit code and other job metadata.
- **kwargs** – Optional keyword arguments. Authentication credentials may be passed when using [external_auth](#).

For example: `local.cmd('*', 'test.ping', username='saltdev', password='saltdev', eauth='pam')`. Or: `local.cmd('*', 'test.ping', token='5871821ea51754fdcea8153c1c745433')`

Returns A dictionary with the result of the execution, keyed by minion ID. A compound command will return a sub-dictionary keyed by function name.

cmd_async (*tgt, fun, arg=(), tgt_type='glob', ret=", jid=", kwarg=None, **kwargs*)
Asynchronously send a command to connected minions

The function signature is the same as `cmd()` with the following exceptions.

Returns A job ID or 0 on failure.

```
>>> local.cmd_async('*', 'test.sleep', [300])
'20131219215921857715'
```

cmd_batch (*tgt, fun, arg=(), tgt_type='glob', ret=", kwarg=None, batch='10%', **kwargs*)
Iteratively execute a command on subsets of minions at a time

The function signature is the same as `cmd()` with the following exceptions.

Parameters batch – The batch identifier of systems to execute on

Returns A generator of minion returns

```
>>> returns = local.cmd_batch('*', 'state.highstate', batch='10%')
>>> for ret in returns:
...     print(ret)
{'jerry': {...}}
{'dave': {...}}
{'stewart': {...}}
```

cmd_iter(tgt, fun, arg=(), timeout=None, tgt_type='glob', ret="", kwarg=None, **kwargs)

Yields the individual minion returns as they come in

The function signature is the same as `cmd()` with the following exceptions.

Normally `cmd_iter()` does not yield results for minions that are not connected. If you want it to return results for disconnected minions set `expect_minions=True` in `kwargs`.

Returns A generator yielding the individual minion returns

```
>>> ret = local.cmd_iter('*', 'test.ping')
>>> for i in ret:
...     print(i)
{'jerry': {'ret': True}}
{'dave': {'ret': True}}
{'stewart': {'ret': True}}
```

cmd_iter_no_block(tgt, fun, arg=(), timeout=None, tgt_type='glob', ret="", kwarg=None, show_jid=False, verbose=False, **kwargs)

Yields the individual minion returns as they come in, or `None` when no returns are available.

The function signature is the same as `cmd()` with the following exceptions.

Returns A generator yielding the individual minion returns, or `None` when no returns are available. This allows for actions to be injected in between minion returns.

```
>>> ret = local.cmd_iter_no_block('*', 'test.ping')
>>> for i in ret:
...     print(i)
None
{'jerry': {'ret': True}}
{'dave': {'ret': True}}
None
{'stewart': {'ret': True}}
```

cmd_subset(tgt, fun, arg=(), tgt_type='glob', ret="", kwarg=None, sub=3, cli=False, progress=False, full_return=False, **kwargs)

Execute a command on a random subset of the targeted systems

The function signature is the same as `cmd()` with the following exceptions.

Parameters

- **sub** – The number of systems to execute on
- **cli** – When this is set to `True`, a generator is returned, otherwise a dictionary of the minion returns is returned

```
>>> SLC.cmd_subset('*', 'test.ping', sub=1)
{'jerry': True}
```

get_cli_returns(jid, minions, timeout=None, tgt='', tgt_type='glob', verbose=False, show_jid=False, **kwargs)

Starts a watcher looking at the return data for a specified JID

Returns all of the information for the JID

get_event_iter_returns(jid, minions, timeout=None)

Gather the return data from the event system, break hard when timeout is reached.

run_job(tgt, fun, arg=(), tgt_type='glob', ret="", timeout=None, jid="", kwarg=None, listen=False, **kwargs)

Asynchronously send a command to connected minions

Prep the job directory and publish a command to any targeted minions.

Returns A dictionary of (validated) `pub_data` or an empty dictionary on failure. The `pub_data` contains the job ID and a list of all minions that are expected to return data.

```
>>> local.run_job('*', 'test.sleep', [300])
{'jid': '20131219215650131543', 'minions': ['jerry']}
```

Salt Caller

class `salt.client.Caller` (*c_path='/etc/salt/minion', mopts=None*)

Caller is the same interface used by the **salt-call** command-line tool on the Salt Minion.

Changed in version 2015.8.0: Added the `cmd` method for consistency with the other Salt clients. The existing `function` and `sminion.functions` interfaces still exist but have been removed from the docs.

Importing and using `Caller` must be done on the same machine as a Salt Minion and it must be done using the same user that the Salt Minion is running as.

Usage:

```
import salt.client
caller = salt.client.Caller()
caller.cmd('test.ping')
```

Note, a running master or minion daemon is not required to use this class. Running `salt-call --local` simply sets `file_client` to `'local'`. The same can be achieved at the Python level by including that setting in a minion config file.

New in version 2014.7.0: Pass the minion config as the `mopts` dictionary.

```
import salt.client
import salt.config
__opts__ = salt.config.minion_config('/etc/salt/minion')
__opts__['file_client'] = 'local'
caller = salt.client.Caller(mopts=__opts__)
```

cmd (*fun, *args, **kwargs*)

Call an execution module with the given arguments and keyword arguments

Changed in version 2015.8.0: Added the `cmd` method for consistency with the other Salt clients. The existing `function` and `sminion.functions` interfaces still exist but have been removed from the docs.

```
caller.cmd('test.arg', 'Foo', 'Bar', baz='Baz')

caller.cmd('event.send', 'myco/myevent/something',
           data={'foo': 'Foo'}, with_env=['GIT_COMMIT'], with_grains=True)
```

RunnerClient

class `salt.runner.RunnerClient` (*opts*)

The interface used by the **salt-run** CLI tool on the Salt Master

It executes *runner modules* which run on the Salt Master.

Importing and using `RunnerClient` must be done on the same machine as the Salt Master and it must be done using the same user that the Salt Master is running as.

Salt's `external_auth` can be used to authenticate calls. The eauth user must be authorized to execute runner modules: (@runner). Only the `master_call()` below supports eauth.

asynchronous (*fun, low, user='UNKNOWN', pub=None*)

Execute the function in a multiprocess and return the event tag to use to watch for the return

cmd (*fun, arg=None, pub_data=None, kwarg=None, print_event=True, full_return=False*)

Execute a function

cmd_async (*low*)

Execute a runner function asynchronously; eauth is respected

This function requires that `external_auth` is configured and the user is authorized to execute runner functions: (@runner).

```
runner.eauth_async({
    'fun': 'jobs.list_jobs',
    'username': 'saltdev',
    'password': 'saltdev',
    'eauth': 'pam',
})
```

cmd_sync (*low, timeout=None, full_return=False*)

Execute a runner function synchronously; eauth is respected

This function requires that `external_auth` is configured and the user is authorized to execute runner functions: (@runner).

```
runner.eauth_sync({
    'fun': 'jobs.list_jobs',
    'username': 'saltdev',
    'password': 'saltdev',
    'eauth': 'pam',
})
```

WheelClient

class `salt.wheel.WheelClient` (*opts=None*)

An interface to Salt's wheel modules

Wheel modules interact with various parts of the Salt Master.

Importing and using `WheelClient` must be done on the same machine as the Salt Master and it must be done using the same user that the Salt Master is running as. Unless `external_auth` is configured and the user is authorized to execute wheel functions: (@wheel).

Usage:

```
import salt.config
import salt.wheel
opts = salt.config.master_config('/etc/salt/master')
wheel = salt.wheel.WheelClient(opts)
```

asynchronous (*fun, low, user='UNKNOWN', pub=None*)

Execute the function in a multiprocess and return the event tag to use to watch for the return

cmd (*fun, arg=None, pub_data=None, kwarg=None, print_event=True, full_return=False*)

Execute a function

```
>>> wheel.cmd('key.finger', ['jerry'])
{'minions': {'jerry': '5d:f6:79:43:5e:d4:42:3f:57:b8:45:a8:7e:a4:6e:ca'}}
```

cmd_async (*low*)

Execute a function asynchronously; eauth is respected

This function requires that *external_auth* is configured and the user is authorized

```
>>> wheel.cmd_async({
    'fun': 'key.finger',
    'match': 'jerry',
    'eauth': 'auto',
    'username': 'saltdev',
    'password': 'saltdev',
})
{'jid': '20131219224744416681', 'tag': 'salt/wheel/20131219224744416681'}
```

cmd_sync (*low, timeout=None, full_return=False*)

Execute a wheel function synchronously; eauth is respected

This function requires that *external_auth* is configured and the user is authorized to execute runner functions: (@wheel).

```
>>> wheel.cmd_sync({
    'fun': 'key.finger',
    'match': 'jerry',
    'eauth': 'auto',
    'username': 'saltdev',
    'password': 'saltdev',
})
{'minions': {'jerry': '5d:f6:79:43:5e:d4:42:3f:57:b8:45:a8:7e:a4:6e:ca'}}
```

CloudClient

class salt.cloud.**CloudClient** (*path=None, opts=None, config_dir=None, pillars=None*)

The client class to wrap cloud interactions

action (*fun=None, cloudmap=None, names=None, provider=None, instance=None, kwargs=None*)

Execute a single action via the cloud plugin backend

Examples:

```
client.action(fun='show_instance', names=['myinstance'])
client.action(fun='show_image', provider='my-ec2-config',
    kwargs={'image': 'ami-10314d79'})
)
```

create (*provider, names, **kwargs*)

Create the named VMs, without using a profile

Example:

```
client.create(provider='my-ec2-config', names=['myinstance'],
    image='ami-1624987f', size='t1.micro', ssh_username='ec2-user',
    securitygroup='default', delvol_on_destroy=True)
```

destroy (*names*)

Destroy the named VMs

extra_action (*names, provider, action, **kwargs*)

Perform actions with block storage devices

Example:

```
client.extra_action(names=['myblock'], action='volume_create',
                    provider='my-nova', kwargs={'voltype': 'SSD', 'size': 1000}
)
client.extra_action(names=['salt-net'], action='network_create',
                    provider='my-nova', kwargs={'cidr': '192.168.100.0/24'}
)
```

full_query (*query_type='list_nodes_full'*)

Query all instance information

list_images (*provider=None*)

List all available images in configured cloud systems

list_locations (*provider=None*)

List all available locations in configured cloud systems

list_sizes (*provider=None*)

List all available sizes in configured cloud systems

low (*fun, low*)

Pass the cloud function and low data structure to run

map_run (*path=None, **kwargs*)

Pass in a location for a map to execute

min_query (*query_type='list_nodes_min'*)

Query select instance information

profile (*profile, names, vm_overrides=None, **kwargs*)

Pass in a profile to create, names is a list of vm names to allocate

vm_overrides is a special dict that will be per node options overrides

Example:

```
>>> client= salt.cloud.CloudClient(path='/etc/salt/cloud')
>>> client.profile('do_512_git', names=['minion01',])
{'minion01': {'backups_active': 'False',
              'created_at': '2014-09-04T18:10:15Z',
              'droplet': {'event_id': 31000502,
                          'id': 2530006,
                          'image_id': 5140006,
                          'name': 'minion01',
                          'size_id': 66},
              'id': '2530006',
              'image_id': '5140006',
              'ip_address': '107.XXX.XXX.XXX',
              'locked': 'True',
              'name': 'minion01',
              'private_ip_address': None,
              'region_id': '4',
              'size_id': '66',
              'status': 'new'}}
```

query (*query_type='list_nodes'*)

Query basic instance information

select_query (*query_type='list_nodes_select'*)
Query select instance information

SSHClient

class salt.client.ssh.client.**SSHClient** (*c_path='/etc/salt/master', mopts=None, disable_custom_roster=False*)

Create a client object for executing routines via the salt-ssh backend

New in version 2015.5.0.

cmd (*tgt, fun, arg=(), timeout=None, tgt_type='glob', kwarg=None, **kwargs*)

Execute a single command via the salt-ssh subsystem and return all routines at once

New in version 2015.5.0.

cmd_iter (*tgt, fun, arg=(), timeout=None, tgt_type='glob', ret=", kwarg=None, **kwargs*)

Execute a single command via the salt-ssh subsystem and return a generator

New in version 2015.5.0.

21.2 netapi modules

21.2.1 Introduction to netapi modules

netapi modules provide API-centric access to Salt. Usually externally-facing services such as REST or WebSockets, XMPP, XMLRPC, etc.

In general netapi modules bind to a port and start a service. They are purposefully open-ended. A single module can be configured to run as well as multiple modules simultaneously.

netapi modules are enabled by adding configuration to your Salt Master config file and then starting the **salt-api** daemon. Check the docs for each module to see external requirements and configuration settings.

Communication with Salt and Salt satellite projects is done using Salt's own *Python API*. A list of available client interfaces is below.

salt-api

Prior to Salt's 2014.7.0 release, netapi modules lived in the separate sister projected `salt-api`. That project has been merged into the main Salt project.

See also:

The full list of netapi modules

21.2.2 Client interfaces

Salt's client interfaces expose executing functions by crafting a dictionary of values that are mapped to function arguments. This allows calling functions simply by creating a data structure. (And this is exactly how much of Salt's own internals work!)

class salt.netapi.**NetapiClient** (*opts*)

Provide a uniform method of accessing the various client interfaces in Salt in the form of low-data data structures. For example:

```
>>> client = NetapiClient(__opts__)
>>> lowstate = {'client': 'local', 'tgt': '*', 'fun': 'test.ping', 'arg': ''}
>>> client.run(lowstate)
```

local (*args, **kwargs)

Run *execution modules* synchronously

See `salt.client.LocalClient.cmd()` for all available parameters.

Sends a command from the master to the targeted minions. This is the same interface that Salt's own CLI uses. Note the `arg` and `kwarg` parameters are sent down to the minion(s) and the given function, `fun`, is called with those parameters.

Returns Returns the result from the execution module

local_async (*args, **kwargs)

Run *execution modules* asynchronously

Wraps `salt.client.LocalClient.run_job()`.

Returns job ID

local_subset (*args, **kwargs)

Run *execution modules* against subsets of minions

New in version 2016.3.0.

Wraps `salt.client.LocalClient.cmd_subset()`

runner (fun, timeout=None, full_return=False, **kwargs)

Run *runner modules* <all-salt.runners> synchronously

Wraps `salt.runner.RunnerClient.cmd_sync()`.

Note that runner functions must be called using keyword arguments. Positional arguments are not supported.

Returns Returns the result from the runner module

runner_async (fun, **kwargs)

Run *runner modules* <all-salt.runners> asynchronously

Wraps `salt.runner.RunnerClient.cmd_async()`.

Note that runner functions must be called using keyword arguments. Positional arguments are not supported.

Returns event data and a job ID for the executed function.

ssh (*args, **kwargs)

Run salt-ssh commands synchronously

Wraps `salt.client.ssh.client.SSHClient.cmd_sync()`.

Returns Returns the result from the salt-ssh command

wheel (fun, **kwargs)

Run *wheel modules* synchronously

Wraps `salt.wheel.WheelClient.master_call()`.

Note that wheel functions must be called using keyword arguments. Positional arguments are not supported.

Returns Returns the result from the wheel module

wheel_async (fun, **kwargs)

Run *wheel modules* asynchronously

Wraps `salt.wheel.WheelClient.master_call()`.

Note that wheel functions must be called using keyword arguments. Positional arguments are not supported.

Returns Returns the result from the wheel module

Writing netapi modules

netapi modules, put simply, bind a port and start a service. They are purposefully open-ended and can be used to present a variety of external interfaces to Salt, and even present multiple interfaces at once.

See also:

The full list of netapi modules

Configuration

All netapi configuration is done in the *Salt master config* and takes a form similar to the following:

```
rest_cherryypy:
  port: 8000
  debug: True
  ssl_cert: /etc/pki/tls/certs/localhost.crt
  ssl_key: /etc/pki/tls/certs/localhost.key
```

The __virtual__ function

Like all module types in Salt, netapi modules go through Salt's loader interface to determine if they should be loaded into memory and then executed.

The `__virtual__` function in the module makes this determination and should return `False` or a string that will serve as the name of the module. If the module raises an `ImportError` or any other errors, it will not be loaded.

The start function

The `start()` function will be called for each netapi module that is loaded. This function should contain the server loop that actually starts the service. This is started in a multiprocess.

Multiple instances

New in version 2016.11.0.

`rest_cherryypy` and `rest_tornado` support running multiple instances by copying and renaming entire directory of those. To start the copied multiple netapi modules, add configuration blocks for the copied netapi modules in the Salt Master config. The name of each added configuration block must match with the name of each directory of the copied netapi module.

Inline documentation

As with the rest of Salt, it is a best-practice to include liberal inline documentation in the form of a module docstring and docstrings on any classes, methods, and functions in your netapi module.

Loader “magic” methods

The loader makes the `__opts__` data structure available to any function in a `netapi` module.

ARCHITECTURE

If you are used to configuration management tools that require you to plan down to the last detail before you install anything, you are probably wondering why this section doesn't appear before the installation instructions. With Salt, you can switch to a high availability architecture at any time, and add additional components to scale your deployment as you go.

Since a single Salt master can manage thousands of systems, we usually recommend that you start by deploying a single Salt master, and then modifying your deployment as needed for redundancy, geographical distribution, and scale.

22.1 High Availability Features in Salt

Salt supports several features for high availability and fault tolerance. Brief documentation for these features is listed alongside their configuration parameters in *Configuration file examples*.

22.1.1 Multimaster

Salt minions can connect to multiple masters at one time by configuring the *master* configuration parameter as a YAML list of all the available masters. By default, all masters are "hot", meaning that any master can direct commands to the Salt infrastructure.

In a multimaster configuration, each master must have the same cryptographic keys, and minion keys must be accepted on all masters separately. The contents of *file_roots* and *pillar_roots* need to be kept in sync with processes external to Salt as well.

A tutorial on setting up multimaster with "hot" masters is here:

Multimaster Tutorial

22.1.2 Multimaster with Failover

Changing the *master_type* parameter from *str* to *failover* will cause minions to connect to the first responding master in the list of masters. Every *master_alive_interval* seconds the minions will check to make sure the current master is still responding. If the master does not respond, the minion will attempt to connect to the next master in the list. If the minion runs out of masters, the list will be recycled in case dead masters have been restored. Note that *master_alive_interval* must be present in the minion configuration, or else the recurring job to check master status will not get scheduled.

Failover can be combined with PKI-style encrypted keys, but PKI is NOT REQUIRED to use failover.

Multimaster with PKI and Failover is discussed in *this tutorial*

`master_type: failover` can be combined with `master_shuffle: True` to spread minion connections across all masters (one master per minion, not each minion connecting to all masters). Adding Salt Syndics into the mix makes it possible to create a load-balanced Salt infrastructure. If a master fails, minions will notice and select another master from the available list.

22.1.3 Syndic

Salt's Syndic feature is a way to create differing infrastructure topologies. It is not strictly an HA feature, but can be treated as such.

With the syndic, a Salt infrastructure can be partitioned in such a way that certain masters control certain segments of the infrastructure, and "Master of Masters" nodes can control multiple segments underneath them.

Syndics are covered in depth in *Salt Syndic*.

22.1.4 Syndic with Multimaster

New in version 2015.5.0.

Syndic with Multimaster lets you connect a syndic to multiple masters to provide an additional layer of redundancy in a syndic configuration.

Syndics are covered in depth in *Salt Syndic*.

22.2 Salt Syndic

The most basic or typical Salt topology consists of a single Master node controlling a group of Minion nodes. An intermediate node type, called Syndic, when used offers greater structural flexibility and scalability in the construction of Salt topologies than topologies constructed only out of Master and Minion node types.

A Syndic node can be thought of as a special passthrough Minion node. A Syndic node consists of a `salt-syndic` daemon and a `salt-master` daemon running on the same system. The `salt-master` daemon running on the Syndic node controls a group of lower level Minion nodes and the `salt-syndic` daemon connects higher level Master node, sometimes called a Master of Masters.

The `salt-syndic` daemon relays publications and events between the Master node and the local `salt-master` daemon. This gives the Master node control over the Minion nodes attached to the `salt-master` daemon running on the Syndic node.

22.2.1 Configuring the Syndic

To setup a Salt Syndic you need to tell the Syndic node and its Master node about each other. If your Master node is located at `10.10.0.1`, then your configurations would be:

On the Syndic node:

```
# /etc/salt/master
syndic_master: 10.10.0.1 # may be either an IP address or a hostname
```

```
# /etc/salt/minion
# id is shared by the salt-syndic daemon and a possible salt-minion daemon
```

(continues on next page)

(continued from previous page)

```
# on the Syndic node
id: my_syndic
```

On the Master node:

```
# /etc/salt/master
order_masters: True
```

The `syndic_master` option tells the Syndic node where to find the Master node in the same way that the `master` option tells a Minion node where to find a Master node.

The `id` option is used by the `salt-syndic` daemon to identify with the Master node and if unset will default to the hostname or IP address of the Syndic just as with a Minion.

The `order_masters` option configures the Master node to send extra information with its publications that is needed by Syndic nodes connected directly to it.

Note: Each Syndic must provide its own `file_roots` directory. Files will not be automatically transferred from the Master node.

22.2.2 Configuring the Syndic with Multimaster

New in version 2015.5.0.

Syndic with Multimaster lets you connect a syndic to multiple masters to provide an additional layer of redundancy in a syndic configuration.

Higher level masters should first be configured in a multimaster configuration. See [Multimaster Tutorial](#).

On the syndic, the `syndic_master` option is populated with a list of the higher level masters.

Since each syndic is connected to each master, jobs sent from any master are forwarded to minions that are connected to each syndic. If the `master_id` value is set in the master config on the higher level masters, job results are returned to the master that originated the request in a best effort fashion. Events/jobs without a `master_id` are returned to any available master.

22.2.3 Running the Syndic

The `salt-syndic` daemon is a separate process that needs to be started in addition to the `salt-master` daemon running on the Syndic node. Starting the `salt-syndic` daemon is the same as starting the other Salt daemons.

The Master node in many ways sees the Syndic as an ordinary Minion node. In particular, the Master will need to accept the Syndic's Minion key as it would for any other Minion.

On the Syndic node:

```
# salt-syndic
or
# service salt-syndic start
```

On the Master node:

```
# salt-key -a my_syndic
```

The Master node will now be able to control the Minion nodes connected to the Syndic. Only the Syndic key will be listed in the Master node's key registry but this also means that key activity between the Syndic's Minions and the Syndic does not encumber the Master node. In this way, the Syndic's key on the Master node can be thought of as a placeholder for the keys of all the Minion and Syndic nodes beneath it, giving the Master node a clear, high level structural view on the Salt cluster.

On the Master node:

```
# salt-key -L
Accepted Keys:
my_syndic
Denied Keys:
Unaccepted Keys:
Rejected Keys:

# salt '*' test.ping
minion_1:
  True
minion_2:
  True
minion_4:
  True
minion_3:
  True
```

22.2.4 Topology

A Master node (a node which is itself not a Syndic to another higher level Master node) must run a `salt-master` daemon and optionally a `salt-minion` daemon.

A Syndic node must run `salt-syndic` and `salt-master` daemons and optionally a `salt-minion` daemon.

A Minion node must run a `salt-minion` daemon.

When a `salt-master` daemon issues a command, it will be received by the Syndic and Minion nodes directly connected to it. A Minion node will process the command in the way it ordinarily would. On a Syndic node, the `salt-syndic` daemon will relay the command to the `salt-master` daemon running on the Syndic node, which then propagates the command to the Minions and Syndics connected to it.

When events and job return data are generated by `salt-minion` daemons, they are aggregated by the `salt-master` daemon they are connected to, which `salt-master` daemon then relays the data back through its `salt-syndic` daemon until the data reaches the Master or Syndic node that issued the command.

22.2.5 Syndic wait

`syndic_wait` is a master configuration file setting that specifies the number of seconds the Salt client should wait for additional syndics to check in with their lists of expected minions before giving up. This value defaults to 5 seconds.

The `syndic_wait` setting is necessary because the higher-level master does not have a way of knowing which minions are below the syndics. The higher-level master has its own list of expected minions and the masters below them have their own lists as well, so the Salt client does not know how long to wait for all returns. The `syndic_wait` option allows time for all minions to return to the Salt client.

Note: To reduce the amount of time the CLI waits for Minions to respond, install a Minion on the Syndic or tune the value of the `syndic_wait` configuration.

While it is possible to run a Syndic without a Minion installed on the same system, it is recommended, for a faster CLI response time, to do so. Without a Minion installed on the Syndic node, the timeout value of `syndic_wait` increases significantly - about three-fold. With a Minion installed on the Syndic, the CLI timeout resides at the value defined in `syndic_wait`.

Note: If you have a very large infrastructure or many layers of Syndics, you may find that the CLI doesn't wait long enough for the Syndics to return their events. If you think this is the case, you can set the `syndic_wait` value in the Master configs on the Master or Syndic nodes from which commands are executed. The default value is 5, and should work for the majority of deployments.

In order for a Master or Syndic node to return information from Minions that are below their Syndics, the CLI requires a short wait time in order to allow the Syndics to gather responses from their Minions. This value is defined in the `syndic_wait` config option and has a default of five seconds.

22.2.6 Syndic config options

These are the options that can be used to configure a Syndic node. Note that other than `id`, Syndic config options are placed in the Master config on the Syndic node.

- `id`: Syndic id (shared by the `salt-syndic` daemon with a potential `salt-minion` daemon on the same system)
- `syndic_master`: Master node IP address or hostname
- `syndic_master_port`: Master node `ret_port`
- `syndic_log_file`: path to the logfile (absolute or not)
- `syndic_pidfile`: path to the pidfile (absolute or not)
- `syndic_wait`: time in seconds to wait on returns from this syndic

22.2.7 Minion Data Cache

Beginning with Salt 2016.11.0, the *Pluggable Minion Data Cache* was introduced. The minion data cache contains the Salt Mine data, minion grains, and minion pillar information cached on the Salt Master. By default, Salt uses the `localfs` cache module, but other external data stores can be used instead.

Using a pluggable minion cache modules allows for the data stored on a Salt Master about Salt Minions to be replicated on other Salt Masters the Minion is connected to. Please see the *Minion Data Cache* documentation for more information and configuration examples.

MINION DATA CACHE

New in version 2016.11.0.

The Minion data cache contains the Salt Mine data, minion grains and minion pillar information cached on the Salt Master. By default, Salt uses the `localfs` cache module to save the data in a `msgpack` file on the Salt Master.

23.1 Pluggable Data Cache

While the default Minion data cache is the `localfs` cache, other external data stores can also be used to store this data such as the `consul` module. To configure a Salt Master to use a different data store, the `cache` setting needs to be established:

```
cache: consul
```

The pluggable data cache streamlines using various Salt topologies such as a *Multi-Master* or *Salt Syndics* configuration by allowing the data stored on the Salt Master about a Salt Minion to be available to other Salt Syndics or Salt Masters that a Salt Minion is connected to.

Additional minion data cache modules can be easily created by modeling the custom data store after one of the existing cache modules.

See *cache modules* for a current list.

23.2 Configuring the Minion Data Cache

The default `localfs` Minion data cache module doesn't require any configuration. External data cache modules with external data stores such as Consul require a configuration setting in the master config.

Here's an example config for Consul:

```
consul.host: 127.0.0.1
consul.port: 8500
consul.token: None
consul.scheme: http
consul.consistency: default
consul.dc: dc1
consul.verify: True

cache: consul
```

SLOTS

New in version 2018.3.0.

Note: This functionality is under development and could be changed in the future releases

Many times it is useful to store the results of a command during the course of an execution. Salt Slots are designed to allow you to store this information and use it later during the *highstate* or other job execution.

Slots extend the state syntax and allows you to do things right before the state function is executed. So you can make a decision in the last moment right before a state is executed.

24.1 Execution functions

Note: Using execution modules return data as a state values is a first step of Slots development. Other functionality is under development.

Slots allow you to use the return from a remote-execution function as an argument value in states.

Slot syntax looks close to the simple python function call.

```
__slot__:salt:<module>.<function>(<args>, ..., <kwargs...>, ...)
```

Also there are some specifics in the syntax coming from the execution functions nature and a desire to simplify the user experience. First one is that you don't need to quote the strings passed to the slots functions. The second one is that all arguments handled as strings.

Here is a simple example:

```
copy-some-file:
  file.copy:
    - name: __slot__:salt:test.echo(text=/tmp/some_file)
    - source: __slot__:salt:test.echo(/etc/hosts)
```

This will execute the *test.echo* execution functions right before calling the state. The functions in the example will return */tmp/some_file* and */etc/hosts* strings that will be used as a target and source arguments in the state function *file.copy*.

WINDOWS

This section contains details on the Windows Package Manager, and specific information you need to use Salt on Windows.

25.1 Windows Software Repository

Note: In 2015.8.0 and later, the Windows Software Repository cache is compiled on the Salt Minion, which enables pillar, grains and other things to be available during compilation time. To support this new functionality, a next-generation (ng) package repository was created. See the *Changes in Version 2015.8.0* for details.

The SaltStack Windows Software Repository provides a package manager and software repository similar to what is provided by yum and apt on Linux. This repository enables the installation of software using the installers on remote Windows systems.

In many senses, the operation is similar to that of the other package managers salt is aware of:

- the `pkg.installed` and similar states work on Windows.
- the `pkg.install` and similar module functions work on Windows.

High level differences to yum and apt are:

- The repository metadata (SLS files) is hosted through either salt or git.
- Packages can be downloaded from within the salt repository, a git repository or from http(s) or ftp urls.
- No dependencies are managed. Dependencies between packages needs to be managed manually.

Requirements:

- GitPython 0.3 or later, or pygit2 0.20.3 with libgit 0.20.0 or later installed on your Salt master. The Windows package definitions are downloaded and updated using Git.

25.1.1 Configuration

Populate the Repository

The SLS files used to install Windows packages are not distributed by default with Salt. Run the following command to initialize the repository on your Salt master:

```
salt-run winrepo.update_git_repos
```

Sync Repo to Windows Minions

Run `pkg.refresh_db` on each of your Windows minions to synchronize the package repository.

```
salt -G 'os:windows' pkg.refresh_db
```

25.1.2 Install Windows Software

After completing the configuration steps, you are ready to manage software on your Windows minions.

Show Installed Packages

```
salt -G 'os:windows' pkg.list_pkgs
```

Install a Package

You can query the available version of a package using the Salt `pkg` module.

```
salt winminion pkg.list_available firefox

winminion:
  - 15.0.1
  - 16.0.2
  - 17.0.1
```

As you can see, there are three versions of Firefox available for installation. You can refer a software package by its name or its `full_name` surround by single quotes.

```
salt winminion pkg.install 'firefox'
```

The above line will install the latest version of Firefox.

```
salt winminion pkg.install 'firefox' version=16.0.2
```

The above line will install version 16.0.2 of Firefox.

If a different version of the package is already installed it will be replaced with the version in the winrepo (only if the package itself supports live updating).

You can also specify the full name:

```
salt winminion pkg.install 'Mozilla Firefox 17.0.1 (x86 en-US)'
```

25.1.3 Uninstall Windows Software

Uninstall software using the `pkg` module:

```
salt winminion pkg.remove firefox
salt winminion pkg.purge firefox
```

Note: `pkg.purge` just executes `pkg.remove` on Windows. At some point in the future `pkg.purge` may direct the installer to remove all configs and settings for software packages that support that option.

25.1.4 Repository Location

Salt maintains a repository of SLS files to install a large number of Windows packages:

- 2015.8.0 and later minions: <https://github.com/saltstack/salt-winrepo-ng>
- Earlier releases: <https://github.com/saltstack/salt-winrepo>

By default, these repositories are mirrored to `/srv/salt/win/repo-ng` and `/srv/salt/win/repo`.

This location can be changed in the master config file by setting the `winrepo_dir_ng` and `winrepo_dir` options.

25.1.5 Maintaining Windows Repo Definitions in Git Repositories

Windows software package definitions can be hosted in one or more Git repositories. The default repositories are hosted on GitHub by SaltStack. These include software definition files for various open source software projects. These software definition files are `.sls` files. There are two default repositories: `salt-winrepo` and `salt-winrepo-ng`. `salt-winrepo` contains software definition files for older minions (older than 2015.8.0). `salt-winrepo-ng` is for newer minions (2015.8.0 and newer).

Each software definition file contains all the information salt needs to install that software on a minion including the HTTP or FTP locations of the installer files, required command-line switches for silent install, etc. Anyone is welcome to send a pull request to this repo to add new package definitions. The repos can be browsed here: [salt-winrepo](#) [salt-winrepo-ng](#)

Note: The newer software definition files are run through the salt's parser which allows for the use of jinja.

Configure which git repositories the master can search for package definitions by modifying or extending the `winrepo_remotes` and `winrepo_remotes_ng` options.

Important: `winrepo_remotes` was called `win_gitrepos` in Salt versions earlier than 2015.8.0

Package definitions are pulled down from the online repository by running the `winrepo.update_git_repos` runner. This command is run on the master:

```
salt-run winrepo.update_git_repos
```

This will pull down the software definition files for older minions (`salt-winrepo`) and new minions (`salt-winrepo-ng`). They are stored in the `file_roots` under `win/repo/salt-winrepo` and `win/repo-ng/salt-winrepo-ng` respectively.

Important: If you have customized software definition files that aren't maintained in a repository, those should be stored under `win/repo` for older minions and `win/repo-ng` for newer minions. The reason for this is that the contents of `win/repo/salt-winrepo` and `win/repo-ng/salt-winrepo-ng` are wiped out every time you run a `winrepo.update_git_repos`.

Additionally, when you run `winrepo.genrepo` and `pkg.refresh_db` the entire contents under `win/repo` and `win/repo-ng`, to include all subdirectories, are used to create the msgpack file.

The next step (if you have older minions) is to create the msgpack file for the repo (`winrepo.p`). This is done by running the `winrepo.genrepo` runner. This is also run on the master:

```
salt-run winrepo.genrepo
```

Note: If you have only 2015.8.0 and newer minions, you no longer need to run `salt-run winrepo.genrepo` on the master.

Finally, you need to refresh the minion database by running the `pkg.refresh_db` command. This is run on the master as well:

```
salt '*' pkg.refresh_db
```

On older minions (older than 2015.8.0) this will copy the `winrepo.p` file down to the minion. On newer minions (2015.8.0 and newer) this will copy all the software definition files (`.sls`) down to the minion and then create the msgpack file (`winrepo.p`) locally. The reason this is done locally is because the jinja needs to be parsed using the minion's grains.

Important: Every time you modify the software definition files on the master, either by running `salt-run winrepo.update_git_repos`, modifying existing files, or by creating your own, you need to refresh the database on your minions. For older minions, that means running `salt-run winrepo.genrepo` and then `salt '*' pkg.refresh_db`. For newer minions (2015.8.0 and newer) it is just `salt '*' pkg.refresh_db`.

Note: If the `winrepo.genrepo` or the `pkg.refresh_db` fails, it is likely a problem with the jinja in one of the software definition files. This will cause the operations to stop. You'll need to fix the syntax in order for the msgpack file to be created successfully.

To disable one of the repos, set it to an empty list `[]` in the master config. For example, to disable `winrepo_remotest` set the following in the master config file:

```
winrepo_remotest: []
```

25.1.6 Creating a Package Definition SLS File

The package definition file is a yaml file that contains all the information needed to install a piece of software using salt. It defines information about the package to include version, full name, flags required for the installer and uninstaller, whether or not to use the windows task scheduler to install the package, where to find the installation package, etc.

Take a look at this example for Firefox:

```
firefox:
  '17.0.1':
    installer: 'salt://win/repo/firefox/English/Firefox Setup 17.0.1.exe'
    full_name: Mozilla Firefox 17.0.1 (x86 en-US)
```

(continues on next page)

(continued from previous page)

```

locale: en_US
reboot: False
install_flags: '-ms'
uninstaller: '%ProgramFiles(x86)%/Mozilla Firefox/uninstall/helper.exe'
uninstall_flags: '/S'
'16.0.2':
  installer: 'salt://win/repo/firefox/English/Firefox Setup 16.0.2.exe'
  full_name: Mozilla Firefox 16.0.2 (x86 en-US)
  locale: en_US
  reboot: False
  install_flags: '-ms'
  uninstaller: '%ProgramFiles(x86)%/Mozilla Firefox/uninstall/helper.exe'
  uninstall_flags: '/S'
'15.0.1':
  installer: 'salt://win/repo/firefox/English/Firefox Setup 15.0.1.exe'
  full_name: Mozilla Firefox 15.0.1 (x86 en-US)
  locale: en_US
  reboot: False
  install_flags: '-ms'
  uninstaller: '%ProgramFiles(x86)%/Mozilla Firefox/uninstall/helper.exe'
  uninstall_flags: '/S'

```

Each software definition file begins with a package name for the software. As in the example above `firefox`. The next line is indented two spaces and contains the version to be defined. As in the example above, a software definition file can define multiple versions for the same piece of software. The lines following the version are indented two more spaces and contain all the information needed to install that package.

Warning: The package name and the `full_name` must be unique to all other packages in the software repository.

The version line is the version for the package to be installed. It is used when you need to install a specific version of a piece of software.

Warning: The version must be enclosed in quotes, otherwise the yaml parser will remove trailing zeros.

Note: There are unique situations where previous versions are unavailable. Take Google Chrome for example. There is only one url provided for a standalone installation of Google Chrome.

(<https://dl.google.com/edgedl/chrome/install/GoogleChromeStandaloneEnterprise.msi>)

When a new version is released, the url just points to the new version. To handle situations such as these, set the version to *latest*. Salt will install the version of Chrome at the URL and report that version. Here's an example:

```

chrome:
  latest:
    full_name: 'Google Chrome'
    installer: 'https://dl.google.com/edgedl/chrome/install/
↪GoogleChromeStandaloneEnterprise.msi'
    install_flags: '/qn /norestart'
    uninstaller: 'https://dl.google.com/edgedl/chrome/install/
↪GoogleChromeStandaloneEnterprise.msi'

```

(continues on next page)

(continued from previous page)

```

uninstall_flags: '/qn /norestart'
msiexec: True
locale: en_US
reboot: False

```

Available parameters are as follows:

param str full_name The Full Name for the software as shown in "Programs and Features" in the control panel. You can also get this information by installing the package manually and then running `pkg.list_pkgs`. Here's an example of the output from `pkg.list_pkgs`:

```

salt 'test-2008' pkg.list_pkgs
test-2008
-----
7-Zip 9.20 (x64 edition):
  9.20.00.0
Microsoft .NET Framework 4 Client Profile:
  4.0.30319,4.0.30319
Microsoft .NET Framework 4 Extended:
  4.0.30319,4.0.30319
Microsoft Visual C++ 2008 Redistributable - x64 9.0.21022:
  9.0.21022
Mozilla Firefox 17.0.1 (x86 en-US):
  17.0.1
Mozilla Maintenance Service:
  17.0.1
NSClient++ (x64):
  0.3.8.76
Notepad++:
  6.4.2
Salt Minion 0.16.0:
  0.16.0

```

Notice the Full Name for Firefox: `Mozilla Firefox 17.0.0 (x86 en-US)`. That's exactly what's in the `full_name` parameter in the software definition file.

If any of the software installed on the machine matches one of the software definition files in the repository, the `full_name` will be automatically renamed to the package name. The example below shows the `pkg.list_pkgs` for a machine that already has Mozilla Firefox 17.0.1 installed.

```

test-2008:
-----
7zip:
  9.20.00.0
Microsoft .NET Framework 4 Client Profile:
  4.0.30319,4.0.30319
Microsoft .NET Framework 4 Extended:
  4.0.30319,4.0.30319
Microsoft Visual C++ 2008 Redistributable - x64 9.0.21022:
  9.0.21022
Mozilla Maintenance Service:
  17.0.1
Notepad++:
  6.4.2
Salt Minion 0.16.0:
  0.16.0
firefox:

```

(continues on next page)

(continued from previous page)

```

17.0.1
nsclient:
0.3.9.328

```

Important: The version number and `full_name` need to match the output from `pkg.list_pkgs` so that the status can be verified when running a highstate.

Note: It is still possible to successfully install packages using `pkg.install`, even if the `full_name` or the version number don't match. However, this can make troubleshooting issues difficult, so be careful.

Tip: To force salt to display the full name when there's already an existing package definition file on the system, you can pass a bogus `saltenv` parameter to the command like so: `pkg.list_pkgs saltenv=NotARealEnv`

param str installer The path to the `.exe` or `.msi` to use to install the package. This can be a path or a URL. If it is a URL or a salt path (`salt://`), the package will be cached locally and then executed. If it is a path to a file on disk or a file share, it will be executed directly.

Note: If storing software in the same location as the winrepo it is best practice to place each installer in its own directory rather than the root of winrepo. Then you can place your package definition file in the same directory. It is best practice to name the file `init.sls`. This will be picked up by `pkg.refresh_db` and processed properly.

param str install_flags Any flags that need to be passed to the installer to make it perform a silent install. These can often be found by adding `/?` or `/h` when running the installer from the command-line. A great resource for finding these silent install flags can be found on the WPKG project's [wiki](#):

Warning: Salt will not return if the installer is waiting for user input so it is imperative that the software package being installed has the ability to install silently.

param str uninstaller The path to the program used to uninstall this software. This can be the path to the same `exe` or `msi` used to install the software. It can also be a GUID. You can find this value in the registry under the following keys:

- Software\Microsoft\Windows\CurrentVersion\Uninstall
- Software\Wow6432None\Microsoft\Windows\CurrentVersion\Uninstall

param str uninstall_flags Any flags that need to be passed to the uninstaller to make it perform a silent uninstall. These can often be found by adding `/?` or `/h` when running the uninstaller from the command-line. A great resource for finding these silent install flags can be found on the WPKG project's [wiki](#):

Warning: Salt will not return if the uninstaller is waiting for user input so it is imperative that the software package being uninstalled has the ability to uninstall silently.

Here are some examples of installer and uninstaller settings:

```

7zip:
  '9.20.00.0':
    installer: salt://win/repo/7zip/7z920-x64.msi
    full_name: 7-Zip 9.20 (x64 edition)
    reboot: False
    install_flags: '/qn /norestart'
    msiexec: True
    uninstaller: '{23170F69-40C1-2702-0920-000001000000}'
    uninstall_flags: '/qn /norestart'

```

Alternatively the uninstaller can also simply repeat the URL of an msi file:

```

7zip:
  '9.20.00.0':
    installer: salt://win/repo/7zip/7z920-x64.msi
    full_name: 7-Zip 9.20 (x64 edition)
    reboot: False
    install_flags: '/qn /norestart'
    msiexec: True
    uninstaller: salt://win/repo/7zip/7z920-x64.msi
    uninstall_flags: '/qn /norestart'

```

param msiexec This tells salt to use `msiexec /i` to install the package and `msiexec /x` to uninstall. This is for `.msi` installations. Possible options are: `True`, `False` or the path to `msiexec.exe` on your system

```

7zip:
  '9.20.00.0':
    installer: salt://win/repo/7zip/7z920-x64.msi
    full_name: 7-Zip 9.20 (x64 edition)
    reboot: False
    install_flags: '/qn /norestart'
    msiexec: 'C:\Windows\System32\msiexec.exe'
    uninstaller: salt://win/repo/7zip/7z920-x64.msi
    uninstall_flags: '/qn /norestart'

```

param bool allusers This parameter is specific to `.msi` installations. It tells `msiexec` to install the software for all users. The default is `True`.

param bool cache_dir If `True` and the installer URL begins with `salt://`, the entire directory where the installer resides will be recursively cached. This is useful for installers that depend on other files in the same directory for installation.

Warning: Be aware that all files and directories in the same location as the installer file will be copied down to the minion. If you place your installer file in the root of winrepo (`/srv/salt/win/repo-ng`) and `cache_dir: True` the entire contents of winrepo will be cached to the minion. Therefore, it is best practice to place your installer files in a subdirectory if they are to be stored in winrepo.

param str cache_file When the installer URL begins with `salt://`, this indicates a single file to copy

down for use with the installer. It is copied to the same location as the installer. Use this over `cache_dir` if there are many files in the directory and you only need a specific file and don't want to cache additional files that may reside in the installer directory.

Here's an example for a software package that has dependent files:

```
sqlxpress:
  '12.0.2000.8':
    installer: 'salt://win/repo/sqlxpress/setup.exe'
    full_name: Microsoft SQL Server 2014 Setup (English)
    reboot: False
    install_flags: '/ACTION=install /IACCEPTSQLSERVERLICENSETERMS /Q'
    cache_dir: True
```

param bool use_scheduler If `True`, Windows will use the task scheduler to run the installation. This is useful for running the Salt installation itself as the installation process kills any currently running instances of Salt.

param str source_hash This tells Salt to compare a hash sum of the installer to the provided hash sum before execution. The value can be formatted as `<hash_algorithm>=<hash_sum>`, or it can be a URI to a file containing the hash sum.

For a list of supported algorithms, see the [hashlib documentation](#).

Here's an example of `source_hash` usage:

```
messageanalyzer:
  '4.0.7551.0':
    full_name: 'Microsoft Message Analyzer'
    installer: 'salt://win/repo/messageanalyzer/MessageAnalyzer64.msi'
    install_flags: '/quiet /norestart'
    uninstaller: '{1CC02C23-8FCD-487E-860C-311EC0A0C933}'
    uninstall_flags: '/quiet /norestart'
    msiexec: True
    source_hash: 'sha1=62875ff451f13b10a8ff988f2943e76a4735d3d4'
```

param bool reboot Not implemented

param str local Not implemented

Examples can be found at <https://github.com/saltstack/salt-winrepo-ng>

25.1.7 Managing Windows Software on a Standalone Windows Minion

The Windows Package Repository functions similar in a standalone environment, with a few differences in the configuration.

To replace the winrepo runner that is used on the Salt master, an *execution module* exists to provide the same functionality to standalone minions. The functions are named the same as the ones in the runner, and are used in the same way; the only difference is that `salt-call` is used instead of `salt-run`:

```
salt-call winrepo.update_git_repos
salt-call winrepo.genrepo
salt-call pkg.refresh_db
```

After executing the previous commands the repository on the standalone system is ready to use.

Custom Location for Repository SLS Files

If *file_roots* has not been modified in the minion configuration, then no additional configuration needs to be added to the minion configuration. The *winrepo.genrepo* function from the *winrepo* execution module will by default look for the filename specified by *winrepo_cache_file* within `C:\salt\srv\salt\win\repo`.

If the *file_roots* parameter has been modified, then *winrepo_dir* must be modified to fall within that path, at the proper relative path. For example, if the base environment in *file_roots* points to `D:\foo`, and *winrepo_source_dir* is `salt://win/repo`, then *winrepo_dir* must be set to `D:\foo\win\repo` to ensure that *winrepo.genrepo* puts the cache file into right location.

25.1.8 Config Options for Minions 2015.8.0 and Later

The *winrepo_source_dir* config parameter (default: `salt://win/repo`) controls where *pkg.refresh_db* looks for the cache file (default: `winrepo.p`). This means that the default location for the winrepo cache file would be `salt://win/repo/winrepo.p`. Both *winrepo_source_dir* and *winrepo_cache_file* can be adjusted to match the actual location of this file on the Salt files server.

25.1.9 Config Options for Minions Before 2015.8.0

If connected to a master, the minion will by default look for the winrepo cache file (the file generated by the *winrepo.genrepo runner*) at `salt://win/repo/winrepo.p`. If the cache file is in a different path on the salt files server, then *win_repo_cache_file* will need to be updated to reflect the proper location.

25.1.10 Changes in Version 2015.8.0

Git repository management for the Windows Software Repository has changed in version 2015.8.0, and several master/minion config parameters have been renamed to make their naming more consistent with each other.

For a list of the winrepo config options, see [here](#) for master config options, and [here](#) for configuration options for masterless Windows minions.

On the master, the *winrepo.update_git_repos* runner has been updated to use either *pygit2* or *GitPython* to checkout the git repositories containing repo data. If *pygit2* or *GitPython* is installed, existing winrepo git checkouts should be removed after upgrading to 2015.8.0, to allow them to be checked out again by running *winrepo.update_git_repos*.

If neither *GitPython* nor *pygit2* are installed, then Salt will fall back to the pre-existing behavior for *winrepo.update_git_repos*, and a warning will be logged in the master log.

Note: Standalone Windows minions do not support the new *GitPython/pygit2* functionality, and will instead use the *git.latest* state to keep repositories up-to-date. More information on how to use the Windows Software Repo on a standalone minion can be found [here](#).

Config Parameters Renamed

Many of the legacy winrepo configuration parameters have changed in version 2015.8.0 to make the naming more consistent. The old parameter names will still work, but a warning will be logged indicating that the old name is deprecated.

Below are the parameters which have changed for version 2015.8.0:

Master Config

| Old Name | New Name |
|--------------------------|--------------------------|
| win_repo | <i>winrepo_dir</i> |
| win_repo_mastercachefile | <i>winrepo_cachefile</i> |
| win_gitrepos | <i>winrepo_remotes</i> |

Note: `winrepo_cachefile` is no longer used by 2015.8.0 and later minions, and the `winrepo_dir` setting is replaced by `winrepo_dir_ng` for 2015.8.0 and later minions.

See [here](#) for detailed information on all master config options for the Windows Repo.

Minion Config

| Old Name | New Name |
|--------------------|--------------------------|
| win_repo | <i>winrepo_dir</i> |
| win_repo_cachefile | <i>winrepo_cachefile</i> |
| win_gitrepos | <i>winrepo_remotes</i> |

See [here](#) for detailed information on all minion config options for the Windows Repo.

pygit2/GitPython Support for Maintaining Git Repos

The `winrepo.update_git_repos` runner (and the corresponding *remote execution function* for standalone minions) now makes use of the same underlying code used by the *Git Fileserver Backend* and *Git External Pillar* to maintain and update its local clones of git repositories. If a compatible version of either `pygit2` (0.20.3 and later) or `GitPython` (0.3.0 or later) is installed, then Salt will use it instead of the old method (which invokes the `git.latest` state).

Note: If compatible versions of both `pygit2` and `GitPython` are installed, then Salt will prefer `pygit2`, to override this behavior use the `winrepo_provider` configuration parameter:

```
winrepo_provider: gitpython
```

The `winrepo execution module` (discussed above in the *Managing Windows Software on a Standalone Windows Minion* section) does not yet officially support the new `pygit2/GitPython` functionality, but if either `pygit2` or `GitPython` is installed into Salt's bundled Python then it *should* work. However, it should be considered experimental at this time.

To minimize potential issues, it is a good idea to remove any winrepo git repositories that were checked out by the old (pre-2015.8.0) winrepo code when upgrading the master to 2015.8.0 or later, and run `winrepo.update_git_repos` to clone them anew after the master is started.

Additional added features include the ability to access authenticated git repositories (**NOTE:** `pygit2` only), and to set per-remote config settings. An example of this would be the following:

```
winrepo_remotes:
- https://github.com/saltstack/salt-winrepo.git
- git@github.com:myuser/myrepo.git:
  - pubkey: /path/to/key.pub
  - privkey: /path/to/key
  - passphrase: myaw3s0m3pa$$phr4$3
- https://github.com/myuser/privaterepo.git:
  - user: mygithubuser
  - password: CorrectHorseBatteryStaple
```

Note: Per-remote configuration settings work in the same fashion as they do in gitfs, with global parameters being overridden by their per-remote counterparts (for instance, setting `winrepo_passphrase` would set a global passphrase for winrepo that would apply to all SSH-based remotes, unless overridden by a `passphrase` per-remote parameter).

See [here](#) for more a more in-depth explanation of how per-remote configuration works in gitfs, the same principles apply to winrepo.

There are a couple other changes in how Salt manages git repos using `pygit2/GitPython`. First of all, a `clean` argument has been added to the `winrepo.update_git_repos` runner, which (if set to `True`) will tell the runner to dispose of directories under the `winrepo_dir` which are not explicitly configured. This prevents the need to manually remove these directories when a repo is removed from the config file. To clean these old directories, just pass `clean=True`, like so:

```
salt-run winrepo.update_git_repos clean=True
```

However, if a mix of git and non-git Windows Repo definition files are being used, then this should *not* be used, as it will remove the directories containing non-git definitions.

The other major change is that collisions between repo names are now detected, and the `winrepo.update_git_repos` runner will not proceed if any are detected. Consider the following configuration:

```
winrepo_remotes:
- https://foo.com/bar/baz.git
- https://mydomain.tld/baz.git
- https://github.com/foobar/baz
```

The `winrepo.update_git_repos` runner will refuse to update repos here, as all three of these repos would be checked out to the same directory. To work around this, a per-remote parameter called `name` can be used to resolve these conflicts:

```
winrepo_remotes:
- https://foo.com/bar/baz.git
- https://mydomain.tld/baz.git:
  - name: baz_junior
- https://github.com/foobar/baz:
  - name: baz_the_third
```

25.1.11 Troubleshooting

Incorrect name/version

If the package seems to install properly, but salt reports a failure then it is likely you have a version or `full_name` mismatch.

Check the exact `full_name` and version used by the package. Use `pkg.list_pkgs` to check that the names and version exactly match what is installed.

Changes to sls files not being picked up

Ensure you have (re)generated the repository cache file (for older minions) and then updated the repository cache on the relevant minions:

```
salt-run winrepo.genrepo
salt winminion pkg.refresh_db
```

Packages management under Windows 2003

On Windows server 2003, you need to install optional Windows component "wmi windows installer provider" to have full list of installed packages. If you don't have this, salt-minion can't report some installed software.

How Success and Failure are Reported

The install state/module function of the Windows package manager works roughly as follows:

1. Execute `pkg.list_pkgs` and store the result
2. Check if any action needs to be taken. (i.e. compare required package and version against `pkg.list_pkgs` results)
3. If so, run the installer command.
4. Execute `pkg.list_pkgs` and compare to the result stored from before installation.
5. Success/Failure/Changes will be reported based on the differences between the original and final `pkg.list_pkgs` results.

If there are any problems in using the package manager it is likely due to the data in your sls files not matching the difference between the pre and post `pkg.list_pkgs` results.

25.2 Windows-specific Behaviour

Salt is capable of managing Windows systems, however due to various differences between the operating systems, there are some things you need to keep in mind.

This document will contain any quirks that apply across Salt or generally across multiple module functions. Any Windows-specific behavior for particular module functions will be documented in the module function documentation. Therefore this document should be read in conjunction with the module function documentation.

25.2.1 Group parameter for files

Salt was originally written for managing Unix-based systems, and therefore the file module functions were designed around that security model. Rather than trying to shoehorn that model on to Windows, Salt ignores these parameters and makes non-applicable module functions unavailable instead.

One of the commonly ignored parameters is the `group` parameter for managing files. Under Windows, while files do have a 'primary group' property, this is rarely used. It generally has no bearing on permissions unless intentionally configured and is most commonly used to provide Unix compatibility (e.g. Services For Unix, NFS services).

Because of this, any file module functions that typically require a group, do not under Windows. Attempts to directly use file module functions that operate on the group (e.g. `file.chgrp`) will return a pseudo-value and cause a log message to appear. No group parameters will be acted on.

If you do want to access and change the 'primary group' property and understand the implications, use the `file.get_pgid` or `file.get_pgroup` functions or the `pgroup` parameter on the `file.chown` module function.

25.2.2 Dealing with case-insensitive but case-preserving names

Windows is case-insensitive, but however preserves the case of names and it is this preserved form that is returned from system functions. This causes some issues with Salt because it assumes case-sensitive names. These issues generally occur in the state functions and can cause bizarre looking errors.

To avoid such issues, always pretend Windows is case-sensitive and use the right case for names, e.g. specify `user=Administrator` instead of `user=administrator`.

Follow [issue #11801](#) for any changes to this behavior.

25.2.3 Dealing with various username forms

Salt does not understand the various forms that Windows usernames can come in, e.g. `username`, `mydomain\username`, `username@mydomain.tld` can all refer to the same user. In fact, Salt generally only considers the raw username value, i.e. the username without the domain or host information.

Using these alternative forms will likely confuse Salt and cause odd errors to happen. Use only the raw username value in the correct case to avoid problems.

Follow [issue #11801](#) for any changes to this behavior.

25.2.4 Specifying the None group

Each Windows system has built-in `_None_` group. This is the default 'primary group' for files for users not on a domain environment.

Unfortunately, the word `_None_` has special meaning in Python - it is a special value indicating 'nothing', similar to `null` or `nil` in other languages.

To specify the None group, it must be specified in quotes, e.g. `./salt '*' file.chgrp C:\path\to\file "None"`.

25.2.5 Symbolic link loops

Under Windows, if any symbolic link loops are detected or if there are too many levels of symlinks (defaults to 64), an error is always raised.

For some functions, this behavior is different to the behavior on Unix platforms. In general, avoid symlink loops on either platform.

DEVELOPING SALT

26.1 Overview

In its most typical use, Salt is a software application in which clients, called "minions" can be commanded and controlled from a central command server called a "master".

Commands are normally issued to the minions (via the master) by calling a client script simply called, 'salt'.

Salt features a pluggable transport system to issue commands from a master to minions. The default transport is ZeroMQ.

26.2 Salt Client

26.2.1 Overview

The salt client is run on the same machine as the Salt Master and communicates with the salt-master to issue commands and to receive the results and display them to the user.

The primary abstraction for the salt client is called 'LocalClient'.

When LocalClient wants to publish a command to minions, it connects to the master by issuing a request to the master's ReqServer (TCP: 4506)

The LocalClient system listens to responses for its requests by listening to the master event bus publisher (master_event_pub.ipc).

26.3 Salt Master

26.3.1 Overview

The salt-master daemon runs on the designated Salt master and performs functions such as authenticating minions, sending, and receiving requests from connected minions and sending and receiving requests and replies to the 'salt' CLI.

26.3.2 Moving Pieces

When a Salt master starts up, a number of processes are started, all of which are called 'salt-master' in a process-list but have various role categories.

Among those categories are:

- Publisher
- EventPublisher
- MWorker

26.3.3 Publisher

The Publisher process is responsible for sending commands over the designated transport to connected minions. The Publisher is bound to the following:

- TCP: port 4505
- IPC: publish_pull.ipc

Each salt minion establishes a connection to the master Publisher.

26.3.4 EventPublisher

The EventPublisher publishes master events out to any event listeners. It is bound to the following:

- IPC: master_event_pull.ipc
- IPC: master_event_pub.ipc

26.3.5 MWorker

Worker processes manage the back-end operations for the Salt Master.

The number of workers is equivalent to the number of 'worker_threads' specified in the master configuration and is always at least one.

Workers are bound to the following:

- IPC: workers.ipc

26.3.6 ReqServer

The Salt request server takes requests and distributes them to available MWorker processes for processing. It also receives replies back from minions.

The ReqServer is bound to the following:

- TCP: 4506
- IPC: workers.ipc

Each salt minion establishes a connection to the master ReqServer.

26.3.7 Job Flow

The Salt master works by always publishing commands to all connected minions and the minions decide if the command is meant for them by checking themselves against the command target.

The typical lifecycle of a salt job from the perspective of the master might be as follows:

- 1) A command is issued on the CLI. For example, 'salt my_minion test.ping'.
- 2) The 'salt' command uses LocalClient to generate a request to the salt master by connecting to the ReqServer on TCP:4506 and issuing the job.
- 3) The salt-master ReqServer sees the request and passes it to an available MWorker over workers.ipc.
- 4) A worker picks up the request and handles it. First, it checks to ensure that the requested user has permissions to issue the command. Then, it sends the publish command to all connected minions. For the curious, this happens in ClearFuncs.publish().
- 5) The worker announces on the master event bus that it is about to publish a job to connected minions. This happens by placing the event on the master event bus (master_event_pull.ipc) where the EventPublisher picks it up and distributes it to all connected event listeners on master_event_pub.ipc.
- 6) The message to the minions is encrypted and sent to the Publisher via IPC on publish_pull.ipc.
- 7) Connected minions have a TCP session established with the Publisher on TCP port 4505 where they await commands. When the Publisher receives the job over publish_pull, it sends the jobs across the wire to the minions for processing.
- 8) After the minions receive the request, they decrypt it and perform any requested work, if they determine that they are targeted to do so.
- 9) When the minion is ready to respond, it publishes the result of its job back to the master by sending the encrypted result back to the master on TCP 4506 where it is again picked up by the ReqServer and forwarded to an available MWorker for processing. (Again, this happens by passing this message across workers.ipc to an available worker.)
- 10) When the MWorker receives the job it decrypts it and fires an event onto the master event bus (master_event_pull.ipc). (Again for the curious, this happens in AESFuncs._return()).
- 11) The EventPublisher sees this event and re-publishes it on the bus to all connected listeners of the master event bus (on master_event_pub.ipc). This is where the LocalClient has been waiting, listening to the event bus for minion replies. It gathers the job and stores the result.
- 12) When all targeted minions have replied or the timeout has been exceeded, the salt client displays the results of the job to the user on the CLI.

26.4 Salt Minion

26.4.1 Overview

The salt-minion is a single process that sits on machines to be managed by Salt. It can either operate as a stand-alone daemon which accepts commands locally via 'salt-call' or it can connect back to a master and receive commands remotely.

When starting up, salt minions connect *back* to a master defined in the minion config file. They connect to two ports on the master:

- **TCP: 4505** This is the connection to the master Publisher. It is on this port that the minion receives jobs from the master.
- **TCP: 4506** This is the connection to the master ReqServer. It is on this port that the minion sends job results back to the master.

26.4.2 Event System

Similar to the master, a salt-minion has its own event system that operates over IPC by default. The minion event system operates on a push/pull system with IPC files at `minion_event_<unique_id>_pub.ipc` and `minion_event_<unique_id>_pull.ipc`.

The astute reader might ask why have an event bus at all with a single-process daemon. The answer is that the salt-minion may fork other processes as required to do the work without blocking the main salt-minion process and this necessitates a mechanism by which those processes can communicate with each other. Secondly, this provides a bus by which any user with sufficient permissions can read or write to the bus as a common interface with the salt minion.

26.4.3 Minion Job Flow

When a salt minion starts up, it attempts to connect to the Publisher and the ReqServer on the salt master. It then attempts to authenticate and once the minion has successfully authenticated, it simply listens for jobs.

Jobs normally come either come from the 'salt-call' script run by a local user on the salt minion or they can come directly from a master.

The job flow on a minion, coming from the master via a 'salt' command is as follows:

- 1) A master publishes a job that is received by a minion as outlined by the master's job flow above.
- 2) The minion is polling its receive socket that's connected to the master Publisher (TCP 4505 on master). When it detects an incoming message, it picks it up from the socket and decrypts it.
- 3) A new minion process or thread is created and provided with the contents of the decrypted message. The `_thread_return()` method is provided with the contents of the received message.
- 4) The new minion thread is created. The `_thread_return()` function starts up and actually calls out to the requested function contained in the job.
- 5) The requested function runs and returns a result. [Still in thread.]
- 6) The result of the function that's run is encrypted and returned to the master's ReqServer (TCP 4506 on master). [Still in thread.]
- 7) Thread exits. Because the main thread was only blocked for the time that it took to initialize the worker thread, many other requests could have been received and processed during this time.

26.5 A Note on ClearFuncs vs. AESFuncs

A common source of confusion is determining when messages are passed in the clear and when they are passed using encryption. There are two rules governing this behaviour:

- 1) ClearFuncs is used for intra-master communication and during the initial authentication handshake between a minion and master during the key exchange.
- 2) AESFuncs is used everywhere else.

26.6 Contributing

There is a great need for contributions to Salt and patches are welcome! The goal here is to make contributions clear, make sure there is a trail for where the code has come from, and most importantly, to give credit where credit is due!

There are a number of ways to contribute to Salt development.

For details on how to contribute documentation improvements please review [Writing Salt Documentation](#).

26.6.1 Salt Coding Style

SaltStack has its own coding style guide that informs contributors on various coding approaches. Please review the [Salt Coding Style](#) documentation for information about Salt’s particular coding patterns.

Within the [Salt Coding Style](#) documentation, there is a section about running Salt’s `.testing.pylintrc` file. SaltStack recommends running the `.testing.pylintrc` file on any files you are changing with your code contribution before submitting a pull request to Salt’s repository. Please see the [Linting](#) documentation for more information.

Note: There are two pylint files in the `salt` directory. One is the `.pylintrc` file and the other is the `.testing.pylintrc` file. The tests that run in Jenkins against GitHub Pull Requests use `.testing.pylintrc`. The `.testing.pylintrc` file is a little less strict than the `.pylintrc` and is used to make it easier for contributors to submit changes. The `.pylintrc` file can be used for linting, but the `.testing.pylintrc` is the source of truth when submitting pull requests.

26.6.2 Sending a GitHub pull request

Sending pull requests on GitHub is the preferred method for receiving contributions. The workflow advice below mirrors [GitHub’s own guide](#) and is well worth reading.

1. Fork [saltstack/salt](#) on GitHub.
2. Make a local clone of your fork.

```
git clone git@github.com:my-account/salt.git
cd salt
```

3. Add [saltstack/salt](#) as a git remote.

```
git remote add upstream https://github.com/saltstack/salt.git
```

4. Create a new branch in your clone.

Note: A branch should have one purpose. For example, "Fix bug X," or "Add feature Y". Multiple unrelated fixes and/or features should be isolated into separate branches.

If you’re working on a bug or documentation fix, create your branch from the oldest **supported** main release branch that contains the bug or requires the documentation update. See [Which Salt Branch?](#)

```
git fetch upstream
git checkout -b fix-broken-thing upstream/2016.11
```

If you’re working on a feature, create your branch from the `develop` branch.

```
git fetch upstream
git checkout -b add-cool-feature upstream/develop
```

5. Edit and commit changes to your branch.

```
vim path/to/file1 path/to/file2
git diff
git add path/to/file1 path/to/file2
git commit
```

Write a short, descriptive commit title and a longer commit message if necessary.

Note: If your change fixes a bug or implements a feature already filed in the [issue tracker](#), be sure to reference the issue number in the commit message body.

```
Fix broken things in file1 and file2

Fixes #31337

# Please enter the commit message for your changes. Lines starting
# with '#' will be ignored, and an empty message aborts the commit.
# On branch fix-broken-thing
# Changes to be committed:
#   modified:   path/to/file1
#   modified:   path/to/file2
```

If you get stuck, there are many introductory Git resources on <http://help.github.com>.

6. Push your locally-committed changes to your GitHub fork.

```
git push -u origin fix-broken-thing
```

or

```
git push -u origin add-cool-feature
```

Note: You may want to rebase before pushing to work out any potential conflicts:

```
git fetch upstream
git rebase upstream/2016.11 fix-broken-thing
git push -u origin fix-broken-thing
```

or

```
git fetch upstream
git rebase upstream/develop add-cool-feature
git push -u origin add-cool-feature
```

If you do rebase, and the push is rejected with a (non-fast-forward) comment, then run `git status`. You will likely see a message about the branches diverging:

```
On branch fix-broken-thing
Your branch and 'origin/fix-broken-thing' have diverged,
and have 1 and 2 different commits each, respectively.
(use "git pull" to merge the remote branch into yours)
nothing to commit, working tree clean
```

Do NOT perform a `git pull` or `git merge` here. Instead, add `--force` to the end of the `git push` command to get the changes pushed to your fork. Pulling or merging, while they will resolve the non-fast-forward issue, will likely add extra commits to the pull request which were not part of your changes.

7. Find the branch on your GitHub salt fork.

<https://github.com/my-account/salt/branches/fix-broken-thing>

8. Open a new pull request.

Click on `Pull Request` on the right near the top of the page,

<https://github.com/my-account/salt/pull/new/fix-broken-thing>

1. If your branch is a fix for a release branch, choose that as the base branch (e.g. `2016.11`),

<https://github.com/my-account/salt/compare/saltstack:2016.11...fix-broken-thing>

If your branch is a feature, choose `develop` as the base branch,

<https://github.com/my-account/salt/compare/saltstack:develop...add-cool-feature>

2. Review that the proposed changes are what you expect.
3. Write a descriptive comment. Include links to related issues (e.g. 'Fixes #31337:') in the comment field.
4. Click `Create pull request`.

9. Salt project members will review your pull request and automated tests will run on it.

If you recognize any test failures as being related to your proposed changes or if a reviewer asks for modifications:

1. Make the new changes in your local clone on the same local branch.
2. Push the branch to GitHub again using the same commands as before.
3. New and updated commits will be added to the pull request automatically.
4. Feel free to add a comment to the discussion.

Note: Jenkins

Pull request against `saltstack/salt` are automatically tested on a variety of operating systems and configurations. On average these tests take 30 minutes. Depending on your GitHub notification settings you may also receive an email message about the test results.

Test progress and results can be found at <http://jenkins.saltstack.com/>.

26.6.3 Salt's Branch Topology

There are three different kinds of branches in use: `develop`, main release branches, and dot release branches.

- All feature work should go into the `develop` branch.
- Bug fixes and documentation changes should go into the oldest **supported main** release branch affected by the the bug or documentation change (you can use the blame button in github to figure out when the bug was introduced). Supported releases are the last 2 releases. For example, if the latest release is 2018.3, the last two release are 2018.3 and 2017.7. Main release branches are named after a year and month, such as `2016.11` and `2017.7`.
- Hot fixes, as determined by SaltStack's release team, should be submitted against **dot** release branches. Dot release branches are named after a year, month, and version. Examples include `2016.11.8` and `2017.7.2`.

Note: GitHub will open pull requests against Salt's main branch, `develop`, by default. Be sure to check which branch is selected when creating the pull request.

The Develop Branch

The `develop` branch is unstable and bleeding-edge. Pull requests containing feature additions or non-bug-fix changes should be made against the `develop` branch.

Note: If you have a bug fix or documentation change and have already forked your working branch from `develop` and do not know how to rebase your commits against another branch, then submit it to `develop` anyway. SaltStack's development team will be happy to back-port it to the correct branch.

Please make sure you let the maintainers know that the pull request needs to be back-ported.

Main Release Branches

The current release branch is the most recent stable release. Pull requests containing bug fixes or documentation changes should be made against the oldest supported main release branch that is affected.

The branch name will be a date-based name such as `2016.11`.

Bug fixes are made on this branch so that dot release branches can be cut from the main release branch without introducing surprises and new features. This approach maximizes stability.

Dot Release Branches

Prior to tagging an official release, a branch will be created when the SaltStack release team is ready to tag. The dot release branch is created from a main release branch. The dot release branch will be the same name as the tag minus the `v`. For example, the `2017.7.1` dot release branch was created from the `2017.7` main release branch. The `v2017.7.1` release was tagged at the HEAD of the `2017.7.1` branch.

This branching strategy will allow for more stability when there is a need for a re-tag during the testing phase of the release process and further increases stability.

Once the dot release branch is created, the fixes required for a given release, as determined by the SaltStack release team, will be added to this branch. All commits in this branch will be merged forward into the main release branch as well.

Merge Forward Process

The Salt repository follows a "Merge Forward" policy. The merge-forward behavior means that changes submitted to older main release branches will automatically be "merged-forward" into the newer branches.

For example, a pull request is merged into `2017.7`. Then, the entire `2017.7` branch is merged-forward into the `2018.3` branch, and the `2018.3` branch is merged-forward into the `develop` branch.

This process makes it easy for contributors to make only one pull-request against an older branch, but allows the change to propagate to all **main** release branches.

The merge-forward work-flow applies to all main release branches and the operation runs continuously.

Merge-Forwards for Dot Release Branches

The merge-forward policy applies to dot release branches as well, but has a slightly different behavior. If a change is submitted to a **dot** release branch, the dot release branch will be merged into its parent **main** release branch.

For example, a pull request is merged into the 2017.7.2 release branch. Then, the entire 2017.7.2 branch is merged-forward into the 2017.7 branch. From there, the merge forward process continues as normal.

The only way in which dot release branches differ from main release branches in regard to merge-forwards, is that once a dot release branch is created from the main release branch, the dot release branch does not receive merge forwards.

Note: The merge forward process for dot release branches is one-way: dot release branch -> main release branch.

Closing GitHub issues from commits

This "merge-forward" strategy requires that the magic keywords to close a GitHub issue appear in the commit message text directly. Only including the text in a pull request will not close the issue.

GitHub will close the referenced issue once the *commit* containing the magic text is merged into the default branch (`develop`). Any magic text input only into the pull request description will not be seen at the Git-level when those commits are merged-forward. In other words, only the commits are merged-forward and not the pull request text.

Backporting Pull Requests

If a bug is fixed on `develop` and the bug is also present on a currently-supported release branch, it will need to be back-ported to an applicable branch.

Note: Most Salt contributors can skip these instructions

These instructions do not need to be read in order to contribute to the Salt project! The SaltStack team will back-port fixes on behalf of contributors in order to keep the contribution process easy.

These instructions are intended for frequent Salt contributors, advanced Git users, SaltStack employees, or independent souls who wish to back-port changes themselves.

It is often easiest to fix a bug on the oldest supported release branch and then merge that branch forward into `develop` (as described earlier in this document). When that is not possible the fix must be back-ported, or copied, into any other affected branches.

These steps assume a pull request #1234 has been merged into `develop`. And `upstream` is the name of the remote pointing to the main Salt repo.

1. Identify the oldest supported release branch that is affected by the bug.
2. Create a new branch for the back-port by reusing the same branch from the original pull request.

Name the branch `bp-<NNNN>` and use the number of the original pull request.

```
git fetch upstream refs/pull/1234/head:bp-1234
git checkout bp-1234
```

3. Find the parent commit of the original pull request.

The parent commit of the original pull request must be known in order to rebase onto a release branch. The easiest way to find this is on GitHub.

Open the original pull request on GitHub and find the first commit in the list of commits. Select and copy the SHA for that commit. The parent of that commit can be specified by appending `~1` to the end.

4. Rebase the new branch on top of the release branch.

- `<release-branch>` is the branch identified in step #1.
- `<orig-base>` is the SHA identified in step #3 – don't forget to add `~1` to the end!

```
git rebase --onto <release-branch> <orig-base> bp-1234
```

Note, release branches prior to 2016.11 will not be able to make use of rebase and must use cherry-picking instead.

5. Push the back-port branch to GitHub and open a new pull request.

Opening a pull request for the back-port allows for the test suite and normal code-review process.

```
git push -u origin bp-1234
```

26.6.4 Keeping Salt Forks in Sync

Salt advances quickly. It is therefore critical to pull upstream changes from upstream into your fork on a regular basis. Nothing is worse than putting hard work into a pull request only to see bunches of merge conflicts because it has diverged too far from upstream.

See also:

[GitHub Fork a Repo Guide](#)

The following assumes `origin` is the name of your fork and `upstream` is the name of the main `saltstack/salt` repository.

1. View existing remotes.

```
git remote -v
```

2. Add the upstream remote.

```
# For ssh github
git remote add upstream git@github.com:saltstack/salt.git

# For https github
git remote add upstream https://github.com/saltstack/salt.git
```

3. Pull upstream changes into your clone.

```
git fetch upstream
```

4. Update your copy of the `develop` branch.

```
git checkout develop
git merge --ff-only upstream/develop
```

If Git complains that a fast-forward merge is not possible, you have local commits.

- Run `git pull --rebase origin develop` to rebase your changes on top of the upstream changes.
- Or, run `git branch <branch-name>` to create a new branch with your commits. You will then need to reset your `develop` branch before updating it with the changes from upstream.

If Git complains that local files will be overwritten, you have changes to files in your working directory. Run `git status` to see the files in question.

5. Update your fork.

```
git push origin develop
```

6. Repeat the previous two steps for any other branches you work with, such as the current release branch.

26.6.5 Posting patches to the mailing list

Patches will also be accepted by email. Format patches using `git format-patch` and send them to the [salt-users](#) mailing list. The contributor will then get credit for the patch, and the Salt community will have an archive of the patch and a place for discussion.

26.6.6 Issue and Pull Request Labeling System

SaltStack uses several labeling schemes to help facilitate code contributions and bug resolution. See the [Labels and Milestones](#) documentation for more information.

26.6.7 Mentionbot

SaltStack runs a mention-bot which notifies contributors who might be able to help review incoming pull-requests based on their past contribution to files which are being changed.

If you do not wish to receive these notifications, please add your GitHub handle to the blacklist line in the `.mention-bot` file located in the root of the Salt repository.

26.6.8 GPG Verification

SaltStack has enabled [GPG Probot](#) to enforce GPG signatures for all commits included in a Pull Request.

In order for the GPG verification status check to pass, *every* contributor in the pull request must:

- Set up a GPG key on local machine
- Sign all commits in the pull request with key
- Link key with GitHub account

This applies to all commits in the pull request.

GitHub hosts a number of [help articles](#) for creating a GPG key, using the GPG key with `git` locally, and linking the GPG key to your GitHub account. Once these steps are completed, the commit signing verification will look like the example in GitHub's [GPG Signature Verification feature announcement](#).

26.6.9 Bootstrap Script Changes

Salt's Bootstrap Script, known as `bootstrap-salt.sh` in the Salt repo, has it's own repository, contributing guidelines, and release cadence.

All changes to the Bootstrap Script should be made to [salt-bootstrap repo](#). Any pull requests made to the `bootstrap-salt.sh` file in the Salt repository will be automatically overwritten upon the next stable release of the Bootstrap Script.

For more information on the release process or how to contribute to the Bootstrap Script, see the Bootstrap Script's [Contributing Guidelines](#).

26.7 Deprecating Code

Salt should remain backwards compatible, though sometimes, this backwards compatibility needs to be broken because a specific feature and/or solution is no longer necessary or required. At first one might think, let me change this code, it seems that it's not used anywhere else so it should be safe to remove. Then, once there's a new release, users complain about functionality which was removed and they were using it, etc. This should, at all costs, be avoided, and, in these cases, *that* specific code should be deprecated.

In order to give users enough time to migrate from the old code behavior to the new behavior, the deprecation time frame should be carefully determined based on the significance and complexity of the changes required by the user.

Salt feature releases are based on the Periodic Table. Any new features going into the develop branch will be named after the next element in the Periodic Table. For example, Beryllium was the feature release name of the develop branch before the 2015.8 branch was tagged. At that point in time, any new features going into the develop branch after 2015.8 was branched were part of the Boron feature release.

A deprecation warning should be in place for at least two major releases before the deprecated code and its accompanying deprecation warning are removed. More time should be given for more complex changes. For example, if the current release under development is Sodium, the deprecated code and associated warnings should remain in place and warn for at least Aluminum.

To help in this deprecation task, salt provides `salt.utils.versions.warn_until`. The idea behind this helper function is to show the deprecation warning to the user until salt reaches the provided version. Once that provided version is equaled `salt.utils.versions.warn_until` will raise a `RuntimeError` making salt stop its execution. This stoppage is unpleasant and will remind the developer that the deprecation limit has been reached and that the code can then be safely removed.

Consider the following example:

```
def some_function(bar=False, foo=None):
    if foo is not None:
        salt.utils.versions.warn_until(
            'Aluminum',
            'The \'foo\' argument has been deprecated and its '
            'functionality removed, as such, its usage is no longer '
            'required.'
        )
```

Development begins on the Aluminum release when the Magnesium branch is forked from the develop branch. Once this occurs, all uses of the `warn_until` function targeting Aluminum, along with the code they are warning about should be removed from the code.

26.8 Installing Salt for development

Clone the repository using:

```
git clone https://github.com/saltstack/salt
```

Note: tags

Just cloning the repository is enough to work with Salt and make contributions. However, fetching additional tags from git is required to have Salt report the correct version for itself. To do this, first add the git repository as an upstream source:

```
git remote add upstream https://github.com/saltstack/salt
```

Fetching tags is done with the git 'fetch' utility:

```
git fetch --tags upstream
```

Create a new `virtualenv`:

```
virtualenv /path/to/your/virtualenv
```

Avoid making your `virtualenv path too long`.

On Arch Linux, where Python 3 is the default installation of Python, use the `virtualenv2` command instead of `virtualenv`.

On Gentoo you must use `--system-site-packages` to enable `pkg` and `portage_config` functionality

Note: Using system Python modules in the `virtualenv`

To use already-installed python modules in `virtualenv` (instead of having pip download and compile new ones), run `virtualenv --system-site-packages` Using this method eliminates the requirement to install the salt dependencies again, although it does assume that the listed modules are all installed in the system `PYTHONPATH` at the time of `virtualenv` creation.

Note: Python development package

Be sure to install python devel package in order to install required Python modules. In Debian/Ubuntu run `sudo apt-get install -y python-dev`. In RedHat based system install `python-devel`

Activate the `virtualenv`:

```
source /path/to/your/virtualenv/bin/activate
```

Install Salt (and dependencies) into the `virtualenv`:

```
pip install pycmq PyYAML pycrypto msgpack-python jinja2 psutil futures tornado
pip install -e ./salt # the path to the salt git clone from above
```

Note: Installing `psutil`

Python header files are required to build this module, otherwise the pip install will fail. If your distribution separates binaries and headers into separate packages, make sure that you have the headers installed. In most Linux distributions which split the headers into their own package, this can be done by installing the `python-dev` or `python-devel` package. For other platforms, the package will likely be similarly named.

Note: Installing dependencies on macOS.

You can install needed dependencies on macOS using homebrew or macports. See [macOS Installation](#)

Warning: Installing on RedHat-based Distros

If installing from pip (or from source using `setup.py install`), be advised that the `yum-utils` package is needed for Salt to manage packages on RedHat-based systems.

26.8.1 Running a self-contained development version

During development it is easiest to be able to run the Salt master and minion that are installed in the virtualenv you created above, and also to have all the configuration, log, and cache files contained in the virtualenv as well.

The `/path/to/your/virtualenv` referenced multiple times below is also available in the variable `$VIRTUAL_ENV` once the virtual environment is activated.

Copy the master and minion config files into your virtualenv:

```
mkdir -p /path/to/your/virtualenv/etc/salt/pki/{master,minion}
cp ./salt/conf/master ./salt/conf/minion /path/to/your/virtualenv/etc/salt/
```

Edit the master config file:

1. Uncomment and change the `user: root` value to your own user.
2. Uncomment and change the `root_dir: /` value to point to `/path/to/your/virtualenv`.
3. Uncomment and change the `pki_dir: /etc/salt/pki/master` value to point to `/path/to/your/virtualenv/etc/salt/pki/master`
4. If you are running version 0.11.1 or older, uncomment, and change the `pidfile: /var/run/salt-master.pid` value to point to `/path/to/your/virtualenv/salt-master.pid`.
5. If you are also running a non-development version of Salt you will have to change the `publish_port` and `ret_port` values as well.

Edit the minion config file:

1. Repeat the edits you made in the master config for the `user` and `root_dir` values as well as any port changes.
2. Uncomment and change the `pki_dir: /etc/salt/pki/minion` value to point to `/path/to/your/virtualenv/etc/salt/pki/minion`
3. If you are running version 0.11.1 or older, uncomment, and change the `pidfile: /var/run/salt-minion.pid` value to point to `/path/to/your/virtualenv/salt-minion.pid`.
4. Uncomment and change the `master: salt` value to point at `localhost`.
5. Uncomment and change the `id:` value to something descriptive like "saltdev". This isn't strictly necessary but it will serve as a reminder of which Salt installation you are working with.
6. If you changed the `ret_port` value in the master config because you are also running a non-development version of Salt, then you will have to change the `master_port` value in the minion config to match.

Note: Using `salt-call` with a *Standalone Minion*

If you plan to run `salt-call` with this self-contained development environment in a masterless setup, you should invoke `salt-call` with `-c /path/to/your/virtualenv/etc/salt` so that salt can find the minion config file. Without the `-c` option, Salt finds its config files in `/etc/salt`.

Start the master and minion, accept the minion's key, and verify your local Salt installation is working:

```
cd /path/to/your/virtualenv
salt-master -c ./etc/salt -d
salt-minion -c ./etc/salt -d
salt-key -c ./etc/salt -L
salt-key -c ./etc/salt -A
salt -c ./etc/salt '*' test.ping
```

Running the master and minion in debug mode can be helpful when developing. To do this, add `-l debug` to the calls to `salt-master` and `salt-minion`. If you would like to log to the console instead of to the log file, remove the `-d`.

Note: Too long socket path?

Once the minion starts, you may see an error like the following:

```
zmq.core.error.ZMQError: ipc path "/path/to/your/virtualenv/
var/run/salt/minion/minion_event_7824dcbcf7a8f6755939af70b96249f_pub.ipc"
is longer than 107 characters (sizeof(sockaddr_un.sun_path)).
```

This means that the path to the socket the minion is using is too long. This is a system limitation, so the only workaround is to reduce the length of this path. This can be done in a couple different ways:

1. Create your virtualenv in a path that is short enough.
2. Edit the `sock_dir` minion config variable and reduce its length. Remember that this path is relative to the value you set in `root_dir`.

NOTE: The socket path is limited to 107 characters on Solaris and Linux, and 103 characters on BSD-based systems.

Note: File descriptor limits

Ensure that the system open file limit is raised to at least 2047:

```
# check your current limit
ulimit -n

# raise the limit. persists only until reboot
# use 'limit descriptors 2047' for c-shell
ulimit -n 2047
```

To set file descriptors on macOS, refer to the [macOS Installation](#) instructions.

Changing Default Paths

Instead of updating your configuration files to point to the new root directory and having to pass the new configuration directory path to all of Salt's CLI tools, you can explicitly tweak the default system paths that Salt expects:

```
GENERATE_SALT_SYSPATHS=1 pip install --global-option='--salt-root-dir=/path/to/your/
virtualenv/' \
-e ./salt # the path to the salt git clone from above
```

You can now call all of Salt's CLI tools without explicitly passing the configuration directory.

Additional Options

If you want to distribute your virtualenv, you probably don't want to include Salt's clone `.git/` directory, and, without it, Salt won't report the accurate version. You can tell `setup.py` to generate the hardcoded version information which is distributable:

```
GENERATE_SALT_SYSPATHS=1 WRITE_SALT_VERSION=1 pip install --global-option='--salt-  
↳root-dir=/path/to/your/virtualenv/' \  
-e ./salt # the path to the salt git clone from above
```

Instead of passing those two environmental variables, you can just pass a single one which will trigger the other two:

```
MIMIC_SALT_INSTALL=1 pip install --global-option='--salt-root-dir=/path/to/your/  
↳virtualenv/' \  
-e ./salt # the path to the salt git clone from above
```

This last one will grant you an editable salt installation with hardcoded system paths and version information.

26.8.2 Installing Salt from the Python Package Index

If you are installing using `easy_install`, you will need to define a `USE_SETUPTOOLS` environment variable, otherwise dependencies will not be installed:

```
USE_SETUPTOOLS=1 easy_install salt
```

26.8.3 Editing and previewing the documentation

You need `sphinx-build` command to build the docs. In Debian/Ubuntu this is provided in the `python-sphinx` package. Sphinx can also be installed to a virtualenv using pip:

```
pip install Sphinx==1.3.1
```

Change to salt documentation directory, then:

```
cd doc; make html
```

- This will build the HTML docs. Run `make` without any arguments to see the available make targets, which include `html`, `man`, and `text`.
- The docs then are built within the `docs/_build/` folder. To update the docs after making changes, run `make` again.
- The docs use `reStructuredText` for markup. See a live demo at <http://rst.ninjs.org/>.
- The help information on each module or state is culled from the python code that runs for that piece. Find them in `salt/modules/` or `salt/states/`.
- To build the docs on Arch Linux, the `python2-sphinx` package is required. Additionally, it is necessary to tell `make` where to find the proper `sphinx-build` binary, like so:

```
make SPHINXBUILD=sphinx-build2 html
```

- To build the docs on RHEL/CentOS 6, the `python-sphinx10` package must be installed from EPEL, and the following make command must be used:

```
make SPHINXBUILD=sphinx-build html
```

Once you've updated the documentation, you can run the following command to launch a simple Python HTTP server to see your changes:

```
cd _build/html; python -m SimpleHTTPServer
```

26.8.4 Running unit and integration tests

Run the test suite with following command:

```
./setup.py test
```

See [here](#) for more information regarding the test suite.

26.8.5 Issue and Pull Request Labeling System

SaltStack uses several labeling schemes to help facilitate code contributions and bug resolution. See the [Labels and Milestones](#) documentation for more information.

26.9 GitHub Labels and Milestones

SaltStack uses several label categories, as well as milestones, to triage incoming issues and pull requests in the GitHub issue tracker. Labels are used to sort issues by type, priority, severity, status, functional area, functional group, and targeted release and pull requests by status, functional area, functional group, type of change, and test status. Milestones are used to indicate whether an issue is fully triaged or is scheduled to be fixed by SaltStack in an upcoming sprint.

26.9.1 Milestones

All issues are assigned to a milestone, whereas pull requests are almost never assigned to a milestone as the mean lifetime of pull requests is short enough that there is no need to track them temporally.

SaltStack uses milestones to indicate which issues are blocked on submitter or upstream actions, are approved, or are scheduled to be fixed or implemented in an upcoming sprint. If an issue is not attached to a sprint milestone, you are welcome to work on it at your own desire and convenience. If it is attached to a sprint milestone and you have already begun working on it or have a solution in mind or have other ideas related to the issue, you are encouraged to coordinate with the assignee via the GitHub issue tracker to create the best possible solution or implementation.

- **Approved** - The issue has been validated and has all necessary information.
- **Blocked** - The issue is waiting on actions by parties outside of SaltStack, such as receiving more information from the submitter or resolution of an upstream issue. This milestone is usually applied in conjunction with the labels Info Needed, Question, Expected Behavior, Won't Fix For Now, or Upstream Bug.

26.9.2 Labels

Labels are used to sort and describe issues and pull requests. Some labels are usually reserved for one or the other, though most labels may be applied to both.

New issues will receive at least one label and a milestone, and new pull requests will receive at least one label. Except for the *functional area* and *functional group* label categories, issues will generally receive only up to one label per category.

Type

Issues are categorized into one of several types. Type labels are almost never used for pull requests. GitHub treats pull requests like issues in many ways, so a pull request could be considered an issue with an implicit `Pull Request` type label applied.

- **Feature** - The issue is a request for new functionality including changes, enhancements, refactors, etc.
- **Bug** - The issue documents broken, incorrect, or confusing behavior. This label is always accompanied by a *severity label*.
- **Duplicate** - The issue is a duplicate of another feature request or bug report.
- **Upstream Bug** - The issue is a result of an upstream issue.
- **Question** - The issue is more of a question than a request for new features or a report of broken features, but can sometimes lead to further discussion or changes of confusing or incongruous behavior or documentation.
- **Expected Behavior** - The issue is a bug report of intended functionality.

Priority

An issue's priority is relative to its *functional area*. If a bug report, for example, about `gitfs` indicates that all users of `gitfs` will encounter this bug, then a **P1** label will be applied, even though users who are not using `gitfs` will not encounter the bug. If a feature is requested by many users, it may be given a high priority.

- **P1** - The issue will be seen by all users.
- **P2** - The issue will be seen by most users.
- **P3** - The issue will be seen by about half of users.
- **P4** - The issue will not be seen by most users. Usually the issue is a very specific use case or corner case.

Severity

Severity labels are almost always only applied to issues labeled **Bug**.

- **Blocker** - The issue is blocking an impending release.
- **Critical** - The issue causes data loss, crashes or hangs salt processes, makes the system unresponsive, etc.
- **High Severity** - The issue reports incorrect functionality, bad functionality, a confusing user experience, etc.
- **Medium Severity** - The issue reports cosmetic items, formatting, spelling, colors, etc.

Functional Area

Many major components of Salt have corresponding GitHub labels. These labels are applied to all issues and pull requests as is reasonably appropriate. They are useful in organizing issues and pull requests according to the source code relevant to issues or the source code changed by pull requests.

- **Execution Module**

- File Servers
- Grains
- Multi-Master
- Packaging Related to packaging of Salt, not Salt's support for package management.
- Pillar
- RAET
- Returners
- Runners
- SPM
- Salt-API
- Salt-Cloud
- Salt-SSH
- Salt-Syndic
- State Module
- Tests
- Transport
- Windows
- ZMQ

Functional Group

These labels sort issues and pull requests according to the internal SaltStack engineering teams.

- **Core** - The issue or pull request relates to code that is central or existential to Salt itself.
- **Platform** - The issue or pull request relates to support and integration with various platforms like traditional operating systems as well as containers, platform-based utilities like filesystems, command schedulers, etc., and system-based applications like webservers, databases, etc.
- **RIoT** - The issue or pull request relates to support and integration with various abstract systems like cloud providers, hypervisors, API-based services, etc.
- **Console** - The issue or pull request relates to the SaltStack enterprise console.
- **Documentation** - The issue or pull request relates to documentation.

Status

Status labels are used to define and track the state of issues and pull requests. Not all potential statuses correspond to a label, but some statuses are common enough that labels have been created for them. If an issue has not been moved beyond the **Blocked** milestone, it is very likely that it will only have a status label.

- **Bugfix - back-port** The pull request needs to be back-ported to an older release branch. This is done by *recreating the pull request* against that branch. Once the back-port is completed, this label is replaced with a **Bugfix - [Done] back-ported** label. Normally, new features should go into the develop and bug fixes into the oldest supported release branch, see [here](#).
- **Bugfix - [Done] back-ported** - The pull request has been back-ported to an older branch.

- **Cannot Reproduce** - The issue is a bug and has been reviewed by a SaltStack engineer, but it cannot be replicated with the provided information and context. Those involved with the bug will need to work through additional ideas until the bug can be isolated and verified.
- **Confirmed** - The issue is a bug and has been confirmed by a SaltStack engineer, who often documents a minimal working example that reproduces the bug.
- **Fixed Pending Verification** - The issue is a bug and has been fixed by one or more pull requests, which should link to the issue. Closure of the issue is contingent upon confirmation of resolution from the submitter. If the submitter reports a negative confirmation, this label is removed. If no response is given after a few weeks, then the issue will be assumed fixed and closed.
- **Info Needed** - The issue needs more information before it can be verified and resolved. For a feature request this may include a description of the use cases. Almost all bug reports need to include at least the versions of salt and its dependencies, the system type and version, commands used, debug logs, error messages, and relevant configs.
- **Pending Changes** - The pull request needs additional changes before it can be merged.
- **Pending Discussion** - The issue or pull request needs more discussion before it can be closed or merged. The status of the issue or pull request is not clear or apparent enough for definite action to be taken, or additional input from SaltStack, the submitter, or another party has been requested.

If the issue is not a pull request, once the discussion has arrived at a cogent conclusion, this label will be removed and the issue will be accepted. If it is a pull request, the results of the discussion may require additional changes and thus, a **Pending Changes** label.

- **Won't Fix for Now** - The issue is legitimate, but it is not something the SaltStack team is currently able or willing to fix or implement. Issues having this label may be revisited in the future.

Type of Change

Every pull request should receive a change label. These labels measure the quantity of change as well as the significance of the change. The amount of change and the importance of the code area changed are considered, but often the depth of secondary code review required and the potential repercussions of the change may also advise the label choice.

Core code areas include: state compiler, crypto engine, master and minion and syndic daemons, transport, pillar rendering, loader, transport layer, event system, salt.utils, client, cli, logging, netapi, runner engine, templating engine, top file compilation, file client, file server, mine, salt-ssh, test runner, etc.

Non-core code usually constitutes the specific set of plugins for each of the several plugin layers of Salt: execution modules, states, runners, returners, clouds, etc.

- **Minor Change**
 - Less than 64 lines changed, or
 - Less than 8 core lines changed
- **Medium Change**
 - Less than 256 lines changed, or
 - Less than 64 core lines changed
- **Master Change**
 - More than 256 lines changed, or
 - More than 64 core lines changed

- Expert Change
 - Needs specialized, in-depth review

Test Status

These labels relate to the status of the automated tests that run on pull requests. If the tests on a pull request fail and are not overridden by one of these labels, the pull request submitter needs to update the code and/or tests so that the tests pass and the pull request can be merged.

- `Lint` - The pull request has passed all tests except for the code lint checker.
- `Tests Passed` - The pull request has passed all tests even though some test results are negative. Sometimes the automated testing infrastructure will encounter internal errors unrelated to the code change in the pull request that cause test runs to fail. These errors can be caused by cloud host and network issues and also Jenkins issues like erroneously accumulating workspace artifacts, resource exhaustion, and bugs that arise from long running Jenkins processes.

Other

These labels indicate miscellaneous issue types or statuses that are common or important enough to be tracked and sorted with labels.

- `Awesome` - The pull request implements an especially well crafted solution, or a very difficult but necessary change.
- `Help Wanted` - The issue appears to have a simple solution. Issues having this label should be a good starting place for new contributors to Salt.
- `Needs Testcase` - The issue or pull request relates to a feature that needs test coverage. The pull request containing the tests should reference the issue or pull request having this label, whereupon the label should be removed.
- `Regression` - The issue is a bug that breaks functionality known to work in previous releases.
- `Story` - The issue is used by a SaltStack engineer to track progress on multiple related issues in a single place.
- `Stretch` - The issue is an optional goal for the current sprint but may not be delivered.
- `ZD` - The issue is related to a Zendesk customer support ticket.
- `<Release>` - The issue is scheduled to be implemented by `<Release>`. See here for a discussion of Salt's release codenames.

26.10 Logging Internals

TODO

26.11 Package Providers

This page contains guidelines for writing package providers.

26.11.1 Package Functions

One of the most important features of Salt is package management. There is no shortage of package managers, so in the interest of providing a consistent experience in *pkg* states, there are certain functions that should be present in a package provider. Note that these are subject to change as new features are added or existing features are enhanced.

list_pkgs

This function should declare an empty dict, and then add packages to it by calling *pkg_resource.add_pkg*, like so:

```
__salt__['pkg_resource.add_pkg'](ret, name, version)
```

The last thing that should be done before returning is to execute *pkg_resource.sort_pkglist*. This function does not presently do anything to the return dict, but will be used in future versions of Salt.

```
__salt__['pkg_resource.sort_pkglist'](ret)
```

`list_pkgs` returns a dictionary of installed packages, with the keys being the package names and the values being the version installed. Example return data:

```
{'foo': '1.2.3-4',  
 'bar': '5.6.7-8'}
```

latest_version

Accepts an arbitrary number of arguments. Each argument is a package name. The return value for a package will be an empty string if the package is not found or if the package is up-to-date. The only case in which a non-empty string is returned is if the package is available for new installation (i.e. not already installed) or if there is an upgrade available.

If only one argument was passed, this function return a string, otherwise a dict of name/version pairs is returned.

This function must also accept `**kwargs`, in order to receive the `fromrepo` and `repo` keyword arguments from `pkg` states. Where supported, these arguments should be used to find the install/upgrade candidate in the specified repository. The `fromrepo` kwarg takes precedence over `repo`, so if both of those kwargs are present, the repository specified in `fromrepo` should be used. However, if `repo` is used instead of `fromrepo`, it should still work, to preserve backwards compatibility with older versions of Salt.

version

Like `latest_version`, accepts an arbitrary number of arguments and returns a string if a single package name was passed, or a dict of name/value pairs if more than one was passed. The only difference is that the return values are the currently-installed versions of whatever packages are passed. If the package is not installed, an empty string is returned for that package.

upgrade_available

Deprecated and destined to be removed. For now, should just do the following:

```
return __salt__['pkg.latest_version'](name) != ''
```

install

The following arguments are required and should default to None:

1. name (for single-package pkg states)
2. pkgs (for multiple-package pkg states)
3. sources (for binary package file installation)

The first thing that this function should do is call `pkg_resource.parse_targets` (see below). This function will convert the SLS input into a more easily parsed data structure. `pkg_resource.parse_targets` may need to be modified to support your new package provider, as it does things like parsing package metadata which cannot be done for every package management system.

```
pkg_params, pkg_type = __salt__['pkg_resource.parse_targets'](name,
                                                            pkgs,
                                                            sources)
```

Two values will be returned to the `install` function. The first of them will be a dictionary. The keys of this dictionary will be package names, though the values will differ depending on what kind of installation is being done:

- If `name` was provided (and `pkgs` was not), then there will be a single key in the dictionary, and its value will be `None`. Once the data has been returned, if the `version` keyword argument was provided, then it should replace the `None` value in the dictionary.
- If `pkgs` was provided, then `name` is ignored, and the dictionary will contain one entry for each package in the `pkgs` list. The values in the dictionary will be `None` if a version was not specified for the package, and the desired version if specified. See the **Multiple Package Installation Options** section of the `pkg.installed` state for more info.
- If `sources` was provided, then `name` is ignored, and the dictionary values will be the path/URI for the package.

The second return value will be a string with two possible values: `repository` or `file`. The `install` function can use this value (if necessary) to build the proper command to install the targeted package(s).

Both before and after the installing the target(s), you should run `list_pkgs` to obtain a list of the installed packages. You should then return the output of `salt.utils.data.compare_dicts()`:

```
return salt.utils.data.compare_dicts(old, new)
```

remove

Removes the passed package and return a list of the packages removed.

26.11.2 Package Repo Functions

There are some functions provided by `pkg` which are specific to package repositories, and not to packages themselves. When writing modules for new package managers, these functions should be made available as stated below, in order to provide compatibility with the `pkgrepo` state.

All repo functions should accept a `basedir` option, which defines which directory repository configuration should be found in. The default for this is dictated by the repo manager that is being used, and rarely needs to be changed.

```
basedir = '/etc/yum.repos.d'
__salt__['pkg.list_repos'](basedir)
```

list_repos

Lists the repositories that are currently configured on this system.

```
__salt__['pkg.list_repos']()
```

Returns a dictionary, in the following format:

```
{'reponame': 'config_key_1': 'config value 1',
  'config_key_2': 'config value 2',
  'config_key_3': ['list item 1 (when appropriate)',
                  'list item 2 (when appropriate)]}
```

get_repo

Displays all local configuration for a specific repository.

```
__salt__['pkg.get_repo'](repo='myrepo')
```

The information is formatted in much the same way as list_repos, but is specific to only one repo.

```
{'config_key_1': 'config value 1',
  'config_key_2': 'config value 2',
  'config_key_3': ['list item 1 (when appropriate)',
                  'list item 2 (when appropriate)]}
```

del_repo

Removes the local configuration for a specific repository. Requires a *repo* argument, which must match the locally configured name. This function returns a string, which informs the user as to whether or not the operation was a success.

```
__salt__['pkg.del_repo'](repo='myrepo')
```

mod_repo

Modify the local configuration for one or more option for a configured repo. This is also the way to create new repository configuration on the local system; if a repo is specified which does not yet exist, it will be created.

The options specified for this function are specific to the system; please refer to the documentation for your specific repo manager for specifics.

```
__salt__['pkg.mod_repo'](repo='myrepo', url='http://myurl.com/repo')
```

26.11.3 Low-Package Functions

In general, the standard package functions as describes above will meet your needs. These functions use the system's native repo manager (for instance, yum or the apt tools). In most cases, the repo manager is actually separate from the package manager. For instance, yum is usually a front-end for rpm, and apt is usually a front-end for dpkg. When possible, the package functions that use those package managers directly should do so through the low package functions.

It is normal and sane for `pkg` to make calls to `lowpkgs`, but `lowpkg` must never make calls to `pkg`. This affects functions which are required by both `pkg` and `lowpkg`, but the technique in `pkg` is more performant than what is available to `lowpkg`. When this is the case, the `lowpkg` function that requires that technique must still use the `lowpkg` version.

list_pkgs

Returns a dict of packages installed, including the package name and version. Can accept a list of packages; if none are specified, then all installed packages will be listed.

```
installed = __salt__['lowpkg.list_pkgs']('foo', 'bar')
```

Example output:

```
{'foo': '1.2.3-4',
 'bar': '5.6.7-8'}
```

verify

Many (but not all) package management systems provide a way to verify that the files installed by the package manager have or have not changed. This function accepts a list of packages; if none are specified, all packages will be included.

```
installed = __salt__['lowpkg.verify']('httpd')
```

Example output:

```
{'/etc/httpd/conf/httpd.conf': {'mismatch': ['size', 'md5sum', 'mtime'],
                                'type': 'config'}}
```

file_list

Lists all of the files installed by all packages specified. If not packages are specified, then all files for all known packages are returned.

```
installed = __salt__['lowpkg.file_list']('httpd', 'apache')
```

This function does not return which files belong to which packages; all files are returned as one giant list (hence the `file_list` function name). However, This information is still returned inside of a dict, so that it can provide any errors to the user in a sane manner.

```
{'errors': ['package apache is not installed'],
 'files': ['/etc/httpd',
           '/etc/httpd/conf',
           '/etc/httpd/conf.d',
           '...SNIP...']}
```

file_dict

Lists all of the files installed by all packages specified. If not packages are specified, then all files for all known packages are returned.

```
installed = __salt__['lowpkg.file_dict']('httpd', 'apache', 'kernel')
```

Unlike *file_list*, this function will break down which files belong to which packages. It will also return errors in the same manner as *file_list*.

```
{'errors': ['package apache is not installed'],
 'packages': {'httpd': ['/etc/httpd',
                       '/etc/httpd/conf',
                       '...SNIP...'],
              'kernel': ['/boot/.vmlinuz-2.6.32-279.el6.x86_64.hmac',
                        '/boot/System.map-2.6.32-279.el6.x86_64',
                        '...SNIP...']}}
```

26.12 Pull Requests

Salt is a large software project with many developers working together. We encourage all Salt users to contribute new features, bug fixes and documentation fixes. For those who haven't contributed to a large software project before we encourage you to consider the following questions when preparing a pull request.

This isn't an exhaustive list and these aren't necessarily hard and fast rules, but these are things we consider when reviewing a pull request.

- Does this change work on all platforms? In cases where it does not, is an appropriate and easy-to-understand reason presented to the user? Is it documented as-such? Have we thought about all the possible ways this code might be used and accounted as best we can for them?
- Will this code work on versions of all Python we support? Will it work on future versions?
- Are Python reserved keywords used? Are variables named in a way that will make it easy for the next person to understand what's going on?
- Does this code present a security risk in any way? What is the worst possible thing that an attacker could do with this code? If dangerous cases are possible, is it appropriate to document them? If so, has this been done? Would this change pass muster with a professional security audit? Is it obvious to a person using this code what the risks are?
- Is it readable? Does it conform to our [style guide](#)? Is the code documented such that the next person who comes along will be able to read and understand it? Most especially, are edge-cases documented to avoid regressions? Will it be immediately evident to the next person who comes along why this change was made?
- If appropriate, has the person who wrote the code which is being modified been notified and included in the process?
- What are the performance implications of this change? Is there a more efficient way to structure the logic and if so, does making the change balance itself against readability in a sensible way? Do the performance characteristics of the code change based on the way it is being invoked (i.e., through an API or various command-line tools.) Will it be easy to profile this change if it might be a problem?
- Are caveats considered and documented in the change?
- Will the code scale? More critically, will it scale in *both* directions? Salt runs in data-centers and on Raspberry Pi installations in the Sahara. It needs to work on big servers and tiny devices.
- Is appropriate documentation written both in public-facing docs and in-line? How will the user know how to use this? What will they do if it doesn't work as expected? Is this something a new user will understand? Can a user know all they need to about this functionality by reading the public docs?

- Is this a change in behavior? If so, is it in the appropriate branch? Are deprecation warnings necessary? Have those changes been fully documented? Have we fully thought through what implications a change in behavior might have?
- How has the code been tested? If appropriate are there automated tests which cover this? Is it likely to regress? If so, how has the potential of that regression been mitigated? What is the plan for ensuring that this code works going forward?
- If it's asynchronous code, what is the potential for a race condition?
- Is this code an original work? If it's borrowed from another project or found online are the appropriate licensing/attribution considerations handled?
- Is the reason for the change fully explained in the PR? If not for review, this is necessary so that somebody in the future can go back and figure out why it was necessary.
- Is the intended behavior of the change clear? How will that behavior be known to future contributors and to users?
- Does this code handle errors in a reasonable way? Have we gone back through the stack as much as possible to make sure that an error cannot be raised that we do not account for? Are errors tested for as well as proper functionality?
- If the code relies on external libraries, do we properly handle old versions of them? Do we require a specific version and if so is this version check implemented? Is the library available on the same platforms that module in question claims to support? If the code was written and tested against a particular library, have we documented that fact?
- Can this code freeze/hang/crash a running daemon? Can it stall a state run? Are there infinite loops? Are appropriate timeouts implemented?
- Is the function interface well documented? If argument types can not be inferred by introspection, are they documented?
- Are resources such as file-handles cleaned-up after they are used?
- Is it possible that a reference-cycle exists between objects that will leak memory?
- Has the code been linted and does it pass all tests?
- Does the change fully address the problem or is it limited to a small surface area? By this, I mean that it should be clear that the submitter has looked for other cases in the function or module where the given case might also be addressed. If additional changes are necessary are they documented in the code as a FIXME or the PR and in Github as an issue to be tracked?
- Will the code throw errors/warnings/stacktraces to the console during normal operation?
- Has all the debugging been removed?
- Does the code log any sensitive data? Does it show sensitive data in process lists? Does it store sensitive data to disk and if so, does it do so in a secure manner? Are there potential race conditions in between writing the data to disk and setting the appropriate permissions?
- Is it clear from the solution that the problem is well-understood? How can somebody who has never seen the problem feel confident that this proposed change is the best one?
- What's hard-coded that might not need to be? Are we making sensible decisions for the user and allowing them to tune and change things where appropriate?
- Are utility functions used where appropriate? Does this change re-implement something we already have code for?

- Is the right thing being fixed? There are cases where it's appropriate to fix a test and cases where it's appropriate to fix the code that's under test. Which is best for the user? Is this change a shortcut or a solution that will be solid in the months and years to come?
- How will this code react to changes elsewhere in the code base? What is it coupled to and have we fully thought through how best to present a coherent interface to consumers of a given function or method?
- Does this PR try to fix too many bugs/problems at once?
- Should this be split into multiple PRs to make them easier to test and reason about?

26.13 Reporting Bugs

Salt uses GitHub to track open issues and feature requests.

To file a bug, please navigate to the [new issue page for the Salt project](#).

In an issue report, please include the following information:

- The output of `salt --versions-report` from the relevant machines. This can also be gathered remotely by using `salt <my_tgt> test.versions_report`.
- A description of the problem including steps taken to cause the issue to occur and the expected behaviour.
- Any steps taken to attempt to remediate the problem.
- Any configuration options set in a configuration file that may be relevant.
- A reproduceable test case. This may be as simple as an SLS file that illustrates a problem or it may be a link to a repository that contains a number of SLS files that can be used together to re-produce a problem. If the problem is transitory, any information that can be used to try and reproduce the problem is helpful.
- [Optional] The output of each salt component (master/minion/CLI) running with the `-ldebug` flag set.

Note: Please be certain to scrub any logs or SLS files for sensitive data!

26.14 Salt Topology

Salt is based on a powerful, asynchronous, network topology using ZeroMQ. Many ZeroMQ systems are in place to enable communication. The central idea is to have the fastest communication possible.

26.14.1 Servers

The Salt Master runs 2 network services. First is the ZeroMQ PUB system. This service by default runs on port 4505 and can be configured via the `publish_port` option in the master configuration.

Second is the ZeroMQ REP system. This is a separate interface used for all bi-directional communication with minions. By default this system binds to port 4506 and can be configured via the `ret_port` option in the master.

26.14.2 PUB/SUB

The commands sent out via the salt client are broadcast out to the minions via ZeroMQ PUB/SUB. This is done by allowing the minions to maintain a connection back to the Salt Master and then all connections are informed to download the command data at once. The command data is kept extremely small (usually less than 1K) so it is not a burden on the network.

26.14.3 Return

The PUB/SUB system is a one way communication, so once a publish is sent out the PUB interface on the master has no further communication with the minion. The minion, after running the command, then sends the command's return data back to the master via the `ret_port`.

26.15 Translating Documentation

If you wish to help translate the Salt documentation to your language, please head over to the [Transifex](#) website and [signup](#) for an account.

Once registered, head over to the [Salt Translation Project](#), and either click on **Request Language** if you can't find yours, or, select the language for which you wish to contribute and click **Join Team**.

[Transifex](#) provides some useful reading resources on their [support domain](#), namely, some useful articles [directed to translators](#).

26.15.1 Building A Localized Version of the Documentation

While you're working on your translation on [Transifex](#), you might want to have a look at how it's rendering.

Install The Transifex Client

To interact with the [Transifex](#) web service you will need to install the `transifex-client`:

```
pip install transifex-client
```

Configure The Transifex Client

Once installed, you will need to set it up on your computer. We created a script to help you with that:

```
./scripts/setup-transifex-config
```

Download Remote Translations

There's a little script which simplifies the download process of the translations(which isn't that complicated in the first place). So, let's assume you're translating `pt_PT`, Portuguese(Portugal). To download the translations, execute from the `doc/` directory of your Salt checkout:

```
make download-translations SPHINXLANG=pt_PT
```

To download `pt_PT`, Portuguese(Portugal), and `nl`, Dutch, you can use the helper script directly:

```
.scripts/download-translation-catalog pt_PT nl
```

Build Localized Documentation

After the download process finishes, which might take a while, the next step is to build a localized version of the documentation. Following the pt_PT example above:

```
make html SPHINXLANG=pt_PT
```

View Localized Documentation

Open your browser, point it to the local documentation path and check the localized output you've just build.

26.16 Developing Salt Tutorial

This tutorial assumes you have:

- a web browser
- a GitHub account (<my_account>)
- a command line (CLI)
- git
- a text editor

26.16.1 Fork

In your browser, navigate to the [saltstack/salt](https://github.com/saltstack/salt) GitHub repository.

Click on Fork (<https://github.com/saltstack/salt/#fork-destination-box>).

Note: If you have more than one GitHub presence, for example if you are a member of a team, GitHub will ask you into which area to clone Salt. If you don't know where, then select your personal GitHub account.

26.16.2 Clone

In your CLI, navigate to the directory into which you want clone the Salt codebase and submit the following command:

```
$ git clone https://github.com/<my_account>/salt.git
```

where <my_account> is the name of your GitHub account. After the clone has completed, add SaltStack as a second remote and fetch any changes from upstream.

```
$ cd salt
$ git remote add upstream https://github.com/saltstack/salt.git
$ git fetch upstream
```

For this tutorial, we will be working off from the `develop` branch, which is the default branch for the SaltStack GitHub project. This branch needs to track `upstream/develop` so that we will get all upstream changes when they happen.

```
$ git checkout develop
$ git branch --set-upstream-to upstream/develop
```

26.16.3 Fetch

Fetch any upstream changes on the `develop` branch and sync them to your local copy of the branch with a single command:

```
$ git pull --rebase
```

Note: For an explanation on `pull` vs `pull --rebase` and other excellent points, see [this article](#) by Mislav Marohnić.

26.16.4 Branch

Now we are ready to get to work. Consult the [sprint beginner bug list](#) and select an execution module whose `__virtual__` function needs to be updated. I'll select the `alternatives` module.

Create a new branch off from `develop`. Be sure to name it something short and descriptive.

```
$ git checkout -b virt_ret
```

26.16.5 Edit

Edit the file you have selected, and verify that the changes are correct.

```
$ vim salt/modules/alternatives.py
$ git diff
```

```
diff --git a/salt/modules/alternatives.py b/salt/modules/alternatives.py
index 1653e5f..30c0a59 100644
--- a/salt/modules/alternatives.py
+++ b/salt/modules/alternatives.py
@@ -30,7 +30,7 @@ def __virtual__():
     """
     if os.path.isdir('/etc/alternatives'):
         return True
-    return False
+    return (False, 'Cannot load alternatives module: /etc/alternatives dir not
↪found')

def _get_cmd():
```

26.16.6 Commit

Stage and commit the changes. Write a descriptive commit summary, but try to keep it less than 50 characters. Review your commit.

```
$ git add salt/modules/alternatives.py
$ git commit -m 'modules.alternatives: __virtual__ return err msg'
$ git show
```

Note: If you need more room to describe the changes in your commit, run `git commit` (without the `-m`, message, option) and you will be presented with an editor. The first line is the commit summary and should still be 50 characters or less. The following paragraphs you create are free form and will be preserved as part of the commit.

26.16.7 Push

Push your branch to your GitHub account. You will likely need to enter your GitHub username and password.

```
$ git push origin virt_ret
Username for 'https://github.com': <my_account>
Password for 'https://<my_account>@github.com':
```

Note: If authentication over https does not work, you can alternatively setup [ssh keys](#). Once you have done this, you may need add the keys to your git repository configuration

```
$ git config ssh.key ~/.ssh/<key_name>
```

where `<key_name>` is the file name of the private key you created.

26.16.8 Merge

In your browser, navigate to the [new pull request](#) page on the `saltstack/salt` GitHub repository and click on `compare across forks`. Select `<my_account>` from the list of head forks and the branch you are wanting to merge into `develop` (`virt_ret` in this case).

When you have finished reviewing the changes, click `Create pull request`.

If your pull request contains only a single commit, the title and comment will be taken from that commit's summary and message, otherwise the branch name is used for the title. Edit these fields as necessary and click `Create pull request`.

Note: Although these instructions seem to be the official pull request procedure on github's website, here are two alternative methods that are simpler.

- If you navigate to your clone of salt, `https://github.com/<my_account>/salt`, depending on how old your branch is or how recently you pushed updates on it, you may be presented with a button to create a pull request with your branch.
- I find it easiest to edit the following URL:

```
https://github.com/saltstack/salt/compare/develop...<my_account>:virt_ret
```

26.16.9 Resources

GitHub offers many great tutorials on various aspects of the git- and GitHub-centric development workflow:

<https://help.github.com/>

There are many topics covered by the Salt Developer documentation:

<https://docs.saltstack.com/en/latest/topics/development/index.html>

The contributing documentation presents more details on specific contributing topics:

<https://docs.saltstack.com/en/latest/topics/development/contributing.html>

26.17 Modular Systems

When first working with Salt, it is not always clear where all of the modular components are and what they do. Salt comes loaded with more modular systems than many users are aware of, making Salt very easy to extend in many places.

The most commonly used modular systems are execution modules and states. But the modular systems extend well beyond the more easily exposed components and are often added to Salt to make the complete system more flexible.

26.17.1 Developing New Modules

Interactive Debugging

Sometimes debugging with `print()` and extra logs sprinkled everywhere is not the best strategy.

IPython is a helpful debug tool that has an interactive python environment which can be embedded in python programs.

First the system will require IPython to be installed.

```
# Debian
apt-get install ipython

# Arch Linux
pacman -Syu ipython2

# RHEL/CentOS (via EPEL)
yum install python-ipython
```

Now, in the troubling python module, add the following line at a location where the debugger should be started:

```
test = 'test123'
import IPython; IPython.embed_kernel()
```

After running a Salt command that hits that line, the following will show up in the log file:

```
[CRITICAL] To connect another client to this kernel, use:
[IPKernelApp] --existing kernel-31271.json
```

Now on the system that invoked `embed_kernel`, run the following command from a shell:

```
# NOTE: use ipython2 instead of ipython for Arch Linux
ipython console --existing
```

This provides a console that has access to all the vars and functions, and even supports tab-completion.

```
print(test)
test123
```

To exit IPython and continue running Salt, press `Ctrl-d` to logout.

Special Module Contents

These are things that may be defined by the module to influence various things.

`__virtual__`

`__virtual_aliases__`

`__virtualname__`

`__init__`

Called before `__virtual__()`

`__proxyenabled__`

grains and proxy modules

`__proxyenabled__` as a list containing the names of the proxy types that the module supports.

`__load__`

`__func_alias__`

`__outputter__`

Dunder Dictionaries

Salt provides several special "dunder" dictionaries as a convenience for Salt development. These include `__opts__`, `__context__`, `__salt__`, and others. This document will describe each dictionary and detail where they exist and what information and/or functionality they provide.

The following dunder dictionaries are always defined, but may be empty

- `__context__`
- `__grains__`
- `__pillar__`
- `__opts__`

`__opts__`

Defined in: All modules

The `__opts__` dictionary contains all of the options passed in the configuration file for the master or minion.

Note: In many places in salt, instead of pulling raw data from the `__opts__` dict, configuration data should be pulled from the salt *get* functions such as `config.get`, aka - `__salt__['config.get']('foo:bar')` The *get* functions also allow for dict traversal via the `:` delimiter. Consider using *get* functions whenever using `__opts__` or `__pillar__` and `__grains__` (when using grains for configuration data)

The configuration file data made available in the `__opts__` dictionary is the configuration data relative to the running daemon. If the modules are loaded and executed by the master, then the master configuration data is available, if the modules are executed by the minion, then the minion configuration is available. Any additional information passed into the respective configuration files is made available

`__salt__`

Defined in: Auth, Beacons, Engines, Execution, Executors, Outputters, Pillars, Proxies, Renderers, Returners, Runners, SDB, SSH Wrappers, State, Thorium

`__salt__` contains the execution module functions. This allows for all functions to be called as they have been set up by the salt loader.

```
__salt__['cmd.run']('fdisk -l')
__salt__['network.ip_addrs']()
```

Note: When used in runners or outputters, `__salt__` references other runner/outputter modules, and not execution modules.

`__grains__`

Filled in for: Execution, Pillar, Renderer, Returner, SSH Wrapper, State.

The `__grains__` dictionary contains the grains data generated by the minion that is currently being worked with. In execution modules, state modules and returners this is the grains of the minion running the calls, when generating the external pillar the `__grains__` is the grains data from the minion that the pillar is being generated for.

While `__grains__` is defined for every module, it's only filled in for some.

`__pillar__`

Filled in for: Execution, Returner, SSH Wrapper, State

The `__pillar__` dictionary contains the pillar for the respective minion.

While `__pillar__` is defined for every module, it's only filled in for some.

`__context__`

During a state run the `__context__` dictionary persists across all states that are run and then is destroyed when the state ends.

When running an execution module `__context__` persists across all module executions until the modules are refreshed; such as when `saltutil.sync_all` or `state.apply` are executed.

A great place to see how to use `__context__` is in the `cp.py` module in `salt/modules/cp.py`. The fileclient authenticates with the master when it is instantiated and then is used to copy files to the minion. Rather than create a new fileclient for each file that is to be copied down, one instance of the fileclient is instantiated in the `__context__` dictionary and is reused for each file. Here is an example from `salt/modules/cp.py`:

```
if not 'cp.fileclient' in __context__:
    __context__['cp.fileclient'] = salt.fileclient.get_file_client(__opts__)
```

Note: Because `__context__` may or may not have been destroyed, always be sure to check for the existence of the key in `__context__` and generate the key before using it.

`__utils__`

Defined in: Cloud, Engine, Execution, File Server, Pillar, Proxy, Runner, SDB.

`__proxy__`

Defined in: Beacon, Engine, Execution, Executor, Proxy, Renderer, Returner, State, Util

`__runners__`

Defined in: Engine, Roster, Thorium

`__ret__`

Defined in: Proxy, Search

`__thorium__`

Defined in: Thorium

`__states__`

Defined in: Renderers, State

`__serializers__`

Defined in: State

`__sdb__`

Defined in: SDB

26.17.2 Configuration Options

A number of configuration options can affect the load process. This is a quick list of them:

- `autoload_dynamic_modules` (*Minion*)
- `cython_enable` (*Minion, Master*)
- `disable_modules` (*Minion*)
- `disable_returners` (*Minion*)
- `enable_zip_modules` (*Minion*)
- `extension_modules` (*Master*)
- `extmod_whitelist` (*Minion, Master*)
- `extmod_blacklist` (*Minion, Master*)
- `whitelist_modules` (*Minion*)
- `grains_dirs` (*Minion*)
- `module_dirs` (*Minion, Master*)
- `outputter_dirs` (*Minion, Master*)
- `providers` (*Minion*)
- `render_dirs` (*Minion*)
- `returner_dirs` (*Minion*)
- `runner_dirs` (*Master*)
- `states_dirs` (*Minion*)
- `utils_dirs` (*Minion*)

26.17.3 Loading Modules

Modules come primarily from several sources:

- The Salt package itself
- The Salt File Server
- The extmods directory
- Secondary packages installed

Using one source to override another is not supported.

The Salt Package

Salt itself ships with a large number of modules. These are part of the Salt package itself and don't require the user to do anything to use them. (Although a number of them have additional dependencies and/or configuration.)

The Salt File Server

The user may add modules by simply placing them in special directories in their *fileserver*.

The name of the directory inside of the file server is the directory name prepended by underscore, such as:

- `_grains`
- `_modules`
- `_states`

Modules must be synced before they can be used. This can happen a few ways, discussed below.

Sync Via States

The minion configuration contains an option `autoload_dynamic_modules` which defaults to `True`. This option makes the state system refresh all dynamic modules when states are run. To disable this behavior set `autoload_dynamic_modules` to `False` in the minion config.

When dynamic modules are autoloaded via states, only the modules defined in the same saltenvs as the states currently being run.

Sync Via the saltutil Module

The `saltutil` module has a number of functions that can be used to sync all or specific dynamic modules. The `saltutil.sync_*` *execution functions* and *runner functions* can be used to sync modules to minions and the master, respectively.

The extmods Directory

Any files placed in the directory set by `extension_modules` settings (`minion`, `master`, default `/var/cache/salt/*/extmods`) can also be loaded as modules. Note that these directories are also used by the `saltutil.sync_*` functions (mentioned above) and files may be overwritten.

Secondary Packages

Third-party packages may also add modules to Salt if they are installed in the same system and Python environment as the Salt Minion or Master.

This is done via `setuptools` entry points:

```
setup(
    # ...
    entry_points={
        'salt.loader': [
            'module_dirs=spirofs.loader:module',
        ],
    },
    # ...
)
```

Note that these are not synced from the Salt Master to the Minions. They must be installed independently on each Minion.

26.17.4 Module Types

The specific names used by each loading method above are as follows. See sections below for a short summary of each of these systems.

| Module Type | Salt Package Name | FS/Directory Name | Entry Point |
|--------------|---|---------------------------------------|--------------------------------|
| Auth | <code>salt.auth</code> (<i>index</i>) | <code>auth</code> ¹ | <code>auth_dirs</code> |
| Beacon | <code>salt.beacons</code> (<i>index</i>) | <code>beacons</code> | <code>beacons_dirs</code> |
| Cache | <code>salt.cache</code> (<i>index</i>) | <code>cache</code> | <code>cache_dirs</code> |
| Cloud | <code>salt.cloud.clouds</code> (<i>index</i>) | <code>clouds</code> | <code>cloud_dirs</code> |
| Engine | <code>salt.engines</code> (<i>index</i>) | <code>engines</code> | <code>engines_dirs</code> |
| Execution | <code>salt.modules</code> (<i>index</i>) | <code>modules</code> | <code>module_dirs</code> |
| Executor | <code>salt.executors</code> (<i>index</i>) | <code>executors</code> ¹ | <code>executor_dirs</code> |
| File Server | <code>salt.fileserver</code> (<i>index</i>) | <code>fileservers</code> ¹ | <code>fileservers_dirs</code> |
| Grain | <code>salt.grains</code> (<i>index</i>) | <code>grains</code> | <code>grains_dirs</code> |
| Log Handler | <code>salt.log.handlers</code> (<i>index</i>) | <code>log_handlers</code> | <code>log_handlers_dirs</code> |
| Net API | <code>salt.netapi</code> (<i>index</i>) | <code>netapi</code> ¹ | <code>netapi_dirs</code> |
| Outputter | <code>salt.output</code> (<i>index</i>) | <code>output</code> | <code>outputter_dirs</code> |
| Pillar | <code>salt.pillar</code> (<i>index</i>) | <code>pillar</code> | <code>pillar_dirs</code> |
| Proxy | <code>salt.proxy</code> (<i>index</i>) | <code>proxy</code> | <code>proxy_dirs</code> |
| Queue | <code>salt.queues</code> (<i>index</i>) | <code>queues</code> | <code>queue_dirs</code> |
| Renderer | <code>salt.renderers</code> (<i>index</i>) | <code>renderers</code> | <code>render_dirs</code> |
| Returner | <code>salt.returners</code> (<i>index</i>) | <code>returners</code> | <code>returner_dirs</code> |
| Roster | <code>salt.roster</code> (<i>index</i>) | <code>roster</code> | <code>roster_dirs</code> |
| Runner | <code>salt.runners</code> (<i>index</i>) | <code>runners</code> | <code>runner_dirs</code> |
| SDB | <code>salt.sdb</code> (<i>index</i>) | <code>sdb</code> | <code>sdb_dirs</code> |
| Search | <code>salt.search</code> | <code>search</code> ¹ | <code>search_dirs</code> |
| Serializer | <code>salt.serializers</code> (<i>index</i>) | <code>serializers</code> ¹ | <code>serializers_dirs</code> |
| SPM pkgdb | <code>salt.spm.pkgdb</code> | <code>pkgdb</code> ¹ | <code>pkgdb_dirs</code> |
| SPM pkgfiles | <code>salt.spm.pkgfiles</code> | <code>pkgfiles</code> ¹ | <code>pkgfiles_dirs</code> |
| SSH Wrapper | <code>salt.client.ssh.wrapper</code> | <code>wrapper</code> ¹ | <code>wrapper_dirs</code> |
| State | <code>salt.states</code> (<i>index</i>) | <code>states</code> | <code>states_dirs</code> |
| Thorium | <code>salt.thorium</code> (<i>index</i>) | <code>thorium</code> ¹ | <code>thorium_dirs</code> |
| Top | <code>salt.tops</code> (<i>index</i>) | <code>tops</code> | <code>top_dirs</code> |
| Util | <code>salt.utils</code> | <code>utils</code> | <code>utils_dirs</code> |
| Wheel | <code>salt.wheels</code> (<i>index</i>) | <code>wheel</code> | <code>wheel_dirs</code> |

Auth

The auth module system allows for external authentication routines to be easily added into Salt. The `auth` function needs to be implemented to satisfy the requirements of an auth module. Use the `pam` module as an example.

¹ These modules cannot be loaded from the Salt File Server.

See *External Authentication System* for more about authentication in Salt.

Beacon

- *Writing Beacons*

Beacons are polled by the Salt event loop to monitor non-salt processes. See *Beacons* for more information about the beacon system.

Cache

The minion cache is used by the master to store various information about minions. See *Minion Data Cache* for more information.

Cloud

Cloud modules are backend implementations used by *Salt Cloud*.

Engine

Engines are open-ended services managed by the Salt daemon (both master and minion). They may interact with event loop, call other modules, or a variety of non-salt tasks. See *Salt Engines* for complete details.

Execution

Execution modules make up the core of the functionality used by Salt to interact with client systems. The execution modules create the core system management library used by all Salt systems, including states, which interact with minion systems.

Execution modules are completely open ended in their execution. They can be used to do anything required on a minion, from installing packages to detecting information about the system. The only restraint in execution modules is that the defined functions always return a JSON serializable object.

Executor

Executors control how execution modules get called. The default is to just call them, but this can be customized.

File Server

The file server module system is used to create file server backends used by the Salt Master. These modules need to implement the functions used in the fileserver subsystem. Use the `gitfs` module as an example.

See *File Server Backends* for more information.

Grains

- *Writing Grains*

Grain modules define extra routines to populate grains data. All defined public functions will be executed and MUST return a Python dict object. The dict keys will be added to the grains made available to the minion.

See *Grains* for more.

Log Handler

Log handlers allows the logs from salt (master or minion) to be sent to log aggregation systems.

Net API

Net API modules are the actual server implementation used by Salt API.

Output

The output modules supply the outputter system with routines to display data in the terminal. These modules are very simple and only require the *output* function to execute. The default system outputter is the *nested* module.

Pillar

External Pillars

Salt provides a mechanism for generating pillar data by calling external pillar interfaces. This document will describe an outline of an *ext_pillar* module.

Location

Salt expects to find your *ext_pillar* module in the same location where it looks for other python modules. If the *extension_modules* option in your Salt master configuration is set, Salt will look for a *pillar* directory under there and load all the modules it finds. Otherwise, it will look in your Python site-packages *salt/pillar* directory.

Configuration

The external pillars that are called when a minion refreshes its pillars is controlled by the *ext_pillar* option in the Salt master configuration. You can pass a single argument, a list of arguments or a dictionary of arguments to your pillar:

```
ext_pillar:
- example_a: some argument
- example_b:
  - argumentA
  - argumentB
- example_c:
  keyA: valueA
  keyB: valueB
```

The Module

Imports and Logging

Import modules your external pillar module needs. You should first include generic modules that come with stock Python:

```
import logging
```

And then start logging. This is an idiomatic way of setting up logging in Salt:

```
log = logging.getLogger(__name__)
```

Finally, load modules that are specific to what you are doing. You should catch import errors and set a flag that the `__virtual__` function can use later.

```
try:
    import weird_thing
    EXAMPLE_A_LOADED = True
except ImportError:
    EXAMPLE_A_LOADED = False
```

Options

If you define an `__opts__` dictionary, it will be merged into the `__opts__` dictionary handed to the `ext_pillar` function later. This is a good place to put default configuration items. The convention is to name things `modulename.option`.

```
__opts__ = { 'example_a.someconfig': 137 }
```

Initialization

If you define an `__init__` function, it will be called with the following signature:

```
def __init__( __opts__ ):
    # Do init work here
```

Note: The `__init__` function is ran every time a particular minion causes the external pillar to be called, so don't put heavy initialization code here. The `__init__` functionality is a side-effect of the Salt loader, so it may not be as useful in pillars as it is in other Salt items.

`__virtual__`

If you define a `__virtual__` function, you can control whether or not this module is visible. If it returns `False` then Salt ignores this module. If it returns a string, then that string will be how Salt identifies this external pillar in its `ext_pillar` configuration. If you're not renaming the module, simply return `True` in the `__virtual__` function, which is the same as if this function did not exist, then, the name Salt's `ext_pillar` will use to identify this module is its conventional name in Python.

This is useful to write modules that can be installed on all Salt masters, but will only be visible if a particular piece of software your module requires is installed.

```
# This external pillar will be known as `example_a`
def __virtual__():
    if EXAMPLE_A_LOADED:
        return True
    return False
```

```
# This external pillar will be known as `something_else`
__virtualname__ = 'something_else'

def __virtual__():
    if EXAMPLE_A_LOADED:
        return __virtualname__
    return False
```

ext_pillar

This is where the real work of an external pillar is done. If this module is active and has a function called `ext_pillar`, whenever a minion updates its pillar this function is called.

How it is called depends on how it is configured in the Salt master configuration. The first argument is always the current pillar dictionary, this contains pillar items that have already been added, starting with the data from `pillar_roots`, and then from any already-ran external pillars.

Using our example above:

```
ext_pillar( id, pillar, 'some argument' )           # example_a
ext_pillar( id, pillar, 'argumentA', 'argumentB' ) # example_b
ext_pillar( id, pillar, keyA='valueA', keyB='valueB' ) # example_c
```

In the `example_a` case, `pillar` will contain the items from the `pillar_roots`, in `example_b` `pillar` will contain that plus the items added by `example_a`, and in `example_c` `pillar` will contain that plus the items added by `example_b`. In all three cases, `id` will contain the ID of the minion making the pillar request.

This function should return a dictionary, the contents of which are merged in with all of the other pillars and returned to the minion. **Note:** this function is called once for each minion that fetches its pillar data.

```
def ext_pillar( minion_id, pillar, *args, **kwargs ):

    my_pillar = {'external_pillar': {}}

    my_pillar['external_pillar'] = get_external_pillar_dictionary()

    return my_pillar
```

You can call `pillar` with the dictionary's top name to retrieve its data. From above example, `'external_pillar'` is the top dictionary name. Therefore:

```
salt-call '*' pillar.get external_pillar
```

You shouldn't just add items to `pillar` and return that, since that will cause Salt to merge data that already exists. Rather, just return the items you are adding or changing. You could, however, use `pillar` in your module to make some decision based on pillar data that already exists.

This function has access to some useful globals:

- `__opts__` A dictionary of mostly Salt configuration options. If you had an `__opts__` dictionary defined in your module, those values will be included.

- `__salt__` A dictionary of Salt module functions, useful so you don't have to duplicate functions that already exist. E.g. `__salt__['cmd.run']('ls -l')` *Note*, runs on the *master*
- `__grains__` A dictionary of the grains of the minion making this pillar call.

Example configuration

As an example, if you wanted to add external pillar via the `cmd_json` external pillar, add something like this to your master config:

```
ext_pillar:
- cmd_json: 'echo {"arg\":\"value\"}'
```

Reminder

Just as with traditional pillars, external pillars must be refreshed in order for minions to see any fresh data:

```
salt '*' saltutil.refresh_pillar
```

Used to define optional external pillar systems. The pillar generated via the filesystem pillar is passed into external pillars. This is commonly used as a bridge to database data for pillar, but is also the backend to the libvirt state used to generate and sign libvirt certificates on the fly.

Proxy

Proxy Minions are a way to manage devices that cannot run a full minion directly.

Renderers

Renderers are the system used to render sls files into salt highdata for the state compiler. They can be as simple as the `py` renderer and as complex as `stateconf` and `pydsl`.

Returners

Returners are used to send data from minions to external sources, commonly databases. A full returner will implement all routines to be supported as an external job cache. Use the `redis` returner as an example.

Roster

The *Roster system* is used by Salt SSH to enumerate devices.

Runners

Runners are purely master-side execution sequences.

SDB

- *Writing SDB Modules*

SDB is a way to store data that's not associated with a minion. See *Storing Data in Other Databases*.

Search

A system for indexing the file server and pillars. Removed in 2018.3.

Serializer

Primarily used with *file.serialize*.

State

State modules are used to define the state interfaces used by Salt States. These modules are restrictive in that they must follow a number of rules to function properly.

Note: State modules define the available routines in sls files. If calling an execution module directly is desired, take a look at the *module* state.

SPM pkgdb

- *SPM Development Guide: Package Database*

pkgdb modules provides storage backends to the package database.

SPM pkgfiles

- *SPM Development Guide: Package Database*

pkgfiles modules handle the actual installation.

SSH Wrapper

Replacement execution modules for *Salt SSH*.

Thorium

Modules for use in the *Thorium* event reactor.

Tops

Tops modules are used to convert external data sources into top file data for the state system.

Util

Just utility modules to use with other modules via `__utils__` (see *Dunder Dictionaries*).

Wheel

The wheel system is used to manage master side management routines. These routines are primarily intended for the API to enable master configuration.

26.18 Salt Extend

`salt-extend` is a templating tool for extending SaltStack. If you're looking to add a module to SaltStack, then the `salt-extend` utility can guide you through the process.

You can use Salt Extend to quickly create templated modules for adding new behaviours to some of the module subsystems within Salt.

Salt Extend takes a template directory and merges it into a SaltStack source code directory.

26.18.1 Command line usage

See *salt-extend*

26.18.2 Choosing a template

The following templates are available:

module

Creates a new execution module within `salt/modules/{{module_name}}.py`

module_unit

Creates a new execution module unit test suite within `tests/unit/modules/test_{{module_name}}.py`

state

Creates a new state module within `salt/states/{{module_name}}.py`

state_unit

Creates a new state module unit test suite within `tests/unit/states/test_{{module_name}}.py`

26.18.3 Adding templates

1. Create a directory under `<src>/templates`
2. Create a file `template.yml` containing properties for
 - `description` - a description of the template
 - `questions` - a collection of additional questions to ask the user, the name of the item will be used as the key in the context dictionary within the jinja template.
 - `question` - The question to ask the user, as a string
 - `default` - (optional) the default value, can contain Jinja2 template syntax and has access to the default context properties

Example template.yml

```
description: "Execution module"
questions:
  depending_libraries:
    question: "What libraries does this module depend upon?"
  virtual_name:
    question: "What module virtual name to use?"
    default: "{{module_name}}"
```

3. Create the files within `<src>/templates/<your template>` to match the target

Note: File names can contain Jinja 2 template syntax, e.g. `'{{module_name}}.py'`

Example file in the template directory

```
print('Hello {{module_name}}')
__virtual__ = '{{__virtual_name__}}'
```

Default context properties

The default context provides the following properties

- `description` - A description of the template
- `short_description` - A short description of the module as entered by the user
- `version` - The version name of the next release
- `module_name` - The module name as entered by the user
- `release_date` - The current date in the format `YYYY-MM-DD`
- `year` - The current year in the format `YYYY`

As well as any additional properties entered from the questions section of `template.yml`

26.18.4 API

salt.utils.extend module

SaltStack Extend

A templating tool for extending SaltStack.

Takes a template directory and merges it into a SaltStack source code directory. This tool uses Jinja2 for templating.

This tool is accessed using *salt-extend*

codeauthor Anthony Shaw <anthonyshaw@apache.org>

`salt.utils.extend.apply_template(template_dir, output_dir, context)`

Apply the template from the template directory to the output using the supplied context dict.

Parameters

- **src** (str) – The source path
- **dst** (str) – The destination path
- **context** (dict) – The dictionary to inject into the Jinja template as context

`salt.utils.extend.run(extension=None, name=None, description=None, salt_dir=None, merge=False, temp_dir=None)`

A template factory for extending the salt ecosystem

Parameters

- **extension** (str) – The extension type, e.g. 'module', 'state', if omitted, user will be prompted
- **name** (str) – Python-friendly name for the module, if omitted, user will be prompted
- **description** (str) – A description of the extension, if omitted, user will be prompted
- **salt_dir** (str) – The targeted Salt source directory
- **merge** (bool) – Merge with salt directory, *False* to keep separate, *True* to merge trees.
- **temp_dir** (str) – The directory for generated code, if omitted, system temp will be used

26.19 Salt's Test Suite

Salt comes with a powerful integration and unit test suite allowing for the fully automated run of integration and/or unit tests from a single interface.

To learn the basics of how Salt's test suite works, be sure to check out the *Salt's Test Suite: An Introduction* tutorial.

26.19.1 Test Directory Structure

Salt's test suite is located in the `tests` directory in the root of Salt's codebase. The test suite is divided into two main groups:

- *Integration Tests*
- *Unit Tests*

Within each of these groups, the directory structure roughly mirrors the structure of Salt's own codebase. Notice that there are directories for states, modules, runners, output, and more in each testing group.

The files that are housed in the `modules` directory of either the unit or the integration testing factions contain respective integration or unit test files for Salt execution modules.

Note: Salt's test framework provides for the option to only run tests which correspond to a given file (or set of files), via the `--from-filenames` argument to `runtests.py`:

```
python /path/to/runtests.py --from-filenames=salt/modules/foo.py
```

Therefore, where possible, test files should be named to match the source files they are testing. For example, when writing tests for `salt/modules/foo.py`, unit tests should go into `tests/unit/modules/test_foo.py`, and integration tests should go into `tests/integration/modules/test_foo.py`.

However, integration tests are organized differently from unit tests, and this may not always be plausible. In these cases, to ensure that the proper tests are run for these files, they must be mapped in `tests/filename_map.yml`.

The filename map is used to supplement the test framework's filename matching logic. This allows one to ensure that states corresponding to an execution module are also tested when `--from-filenames` includes that execution module. It can also be used for those cases where the path to a test file doesn't correspond directly to the file which is being tested (e.g. the `shell`, `spm`, and `ssh` integration tests, among others). Both glob expressions and regular expressions are permitted in the filename map.

Important: Test modules which don't map directly to the source file they are testing (using the naming convention described above), **must** be added to the `ignore` tuple in `tests/unit/test_module_names.py`, in the `test_module_name_source_match` function. This unit test ensures that we maintain the naming convention for test files.

Integration Tests

The Integration section of Salt's test suite start up a number of Salt daemons to test functionality in a live environment. These daemons include two Salt Masters, one Syndic, and two Minions. This allows the Syndic interface to be tested and Master/Minion communication to be verified. All of the integration tests are executed as live Salt commands sent through the started daemons.

Integration tests are particularly good at testing modules, states, and shell commands, among other segments of Salt's ecosystem. By utilizing the integration test daemons, integration tests are easy to write. They are also SaltStack's generally preferred method of adding new tests.

The discussion in the *Integration vs. Unit* section of the *testing tutorial* is beneficial in learning why you might want to write integration tests vs. unit tests. Both testing arenas add value to Salt's test suite and you should consider adding both types of tests if possible and appropriate when contributing to Salt.

- [Integration Test Documentation](#)

Unit Tests

Unit tests do not spin up any Salt daemons, but instead find their value in testing singular implementations of individual functions. Instead of testing against specific interactions, unit tests should be used to test a function's logic as well as any `return` or `raises` statements. Unit tests also rely heavily on mocking external resources.

The discussion in the *Integration vs. Unit* section of the *testing tutorial* is useful in determining when you should consider writing unit tests instead of, or in addition to, integration tests when contributing to Salt.

- [Unit Test Documentation](#)

26.19.2 Running The Tests

There are requirements, in addition to Salt's requirements, which need to be installed in order to run the test suite. Install one of the lines below, depending on the relevant Python version:

```
pip install -r requirements/dev_python27.txt
pip install -r requirements/dev_python34.txt
```

To be able to run integration tests which utilizes ZeroMQ transport, you also need to install additional requirements for it. Make sure you have installed the C/C++ compiler and development libraries and header files needed for your Python version.

This is an example for RedHat-based operating systems:

```
yum install gcc gcc-c++ python-devel
pip install -r requirements/zeromq.txt
```

On Debian, Ubuntu or their derivatives run the following commands:

```
apt-get install build-essential python-dev
pip install -r requirements/zeromq.txt
```

This will install the latest `pycrypto` and `pyzmq` (with bundled `libzmq`) Python modules required for running integration tests suite.

Once all requirements are installed, use `runtests.py` script to run all of the tests included in Salt's test suite:

```
python tests/runtests.py
```

For more information about options you can pass the test runner, see the `--help` option:

```
python tests/runtests.py --help
```

An alternative way of invoking the test suite is available in `setup.py`:

```
./setup.py test
```

Running Test Subsections

Instead of running the entire test suite all at once, which can take a long time, there are several ways to run only specific groups of tests or individual tests:

- Run *unit tests only*: `python tests/runtests.py --unit-tests`
- Run unit and integration tests for states: `python tests/runtests.py --state`
- Run integration tests for an individual module: `python tests/runtests.py -n integration.modules.virt`
- Run unit tests for an individual module: `python tests/runtests.py -n unit.modules.virt_test`
- Run an individual test by using the class and test name (this example is for the `test_default_kvm_profile` test in the `integration.module.virt`): `python tests/runtests.py -n integration.module.virt.VirtTest.test_default_kvm_profile`

For more specific examples of how to run various test subsections or individual tests, please see the [Test Selection Options](#) documentation or the [Running Specific Tests](#) section of the *Salt's Test Suite: An Introduction* tutorial.

Running Unit Tests Without Integration Test Daemons

Since the unit tests do not require a master or minion to execute, it is often useful to be able to run unit tests individually, or as a whole group, without having to start up the integration testing daemons. Starting up the master, minion, and syndic daemons takes a lot of time before the tests can even start running and is unnecessary to run unit tests. To run unit tests without invoking the integration test daemons, simply run the `runtests.py` script with `--unit` argument:

```
python tests/runtests.py --unit
```

All of the other options to run individual tests, entire classes of tests, or entire test modules still apply.

Running Destructive Integration Tests

Salt is used to change the settings and behavior of systems. In order to effectively test Salt's functionality, some integration tests are written to make actual changes to the underlying system. These tests are referred to as "destructive tests". Some examples of destructive tests are changes may be testing the addition of a user or installing packages. By default, destructive tests are disabled and will be skipped.

Generally, destructive tests should clean up after themselves by attempting to restore the system to its original state. For instance, if a new user is created during a test, the user should be deleted after the related test(s) have completed. However, no guarantees are made that test clean-up will complete successfully. Therefore, running destructive tests should be done with caution.

Note: Running destructive tests will change the underlying system. Use caution when running destructive tests.

To run tests marked as destructive, set the `--run-destructive` flag:

```
python tests/runtests.py --run-destructive
```

Running Cloud Provider Tests

Salt's testing suite also includes integration tests to assess the successful creation and deletion of cloud instances using *Salt-Cloud* for providers supported by Salt-Cloud.

The cloud provider tests are off by default and run on sample configuration files provided in `tests/integration/files/conf/cloud.providers.d/`. In order to run the cloud provider tests, valid credentials, which differ per provider, must be supplied. Each credential item that must be supplied is indicated by an empty string value and should be edited by the user before running the tests. For example, DigitalOcean requires a client key and an api key to operate. Therefore, the default cloud provider configuration file for DigitalOcean looks like this:

```
digitalocean-config:
  driver: digitalocean
  client_key: ''
  api_key: ''
  location: New York 1
```

As indicated by the empty string values, the `client_key` and the `api_key` must be provided:

```
digitalocean-config:
  driver: digitalocean
  client_key: wFGEwgregeqw3435gDger
```

(continues on next page)

(continued from previous page)

```
api_key: GDE43t43REGTrki1g43934t34qT43t4dgegerGEgg
location: New York 1
```

Note: When providing credential information in cloud provider configuration files, do not include the single quotes.

Once all of the valid credentials for the cloud provider have been supplied, the cloud provider tests can be run by setting the `--cloud-provider-tests` flag:

```
./tests/runtests.py --cloud-provider-tests
```

Running The Tests In A Docker Container

The test suite can be executed under a `docker` container using the `--docked` option flag. The `docker` container must be properly configured on the system invoking the tests and the container must have access to the internet.

Here's a simple usage example:

```
python tests/runtests.py --docked=ubuntu-12.04 -v
```

The full `docker` container repository can also be provided:

```
python tests/runtests.py --docked=salttest/ubuntu-12.04 -v
```

The SaltStack team is creating some containers which will have the necessary dependencies pre-installed. Running the test suite on a container allows destructive tests to run without making changes to the main system. It also enables the test suite to run under a different distribution than the one the main system is currently using.

The current list of test suite images is on Salt's [docker repository](#).

Custom `docker` containers can be provided by submitting a pull request against Salt's [docker Salt test containers repository](#).

26.19.3 Automated Test Runs

SaltStack maintains a Jenkins server to allow for the execution of tests across supported platforms. The tests executed from Salt's Jenkins server create fresh virtual machines for each test run, then execute destructive tests on the new, clean virtual machine.

SaltStack's Jenkins server continuously runs the entire test suite, including destructive tests, on an array of various supported operating systems throughout the day. Each actively supported branch of Salt's repository runs the tests located in the respective branch's code. Each set of branch tests also includes a pylint run. These branch tests help ensure the viability of Salt code at any given point in time as pull requests are merged into branches throughout the day.

In addition to branch tests, SaltStack's Jenkins server also runs tests on pull requests. These pull request tests include a smaller set of virtual machines that run on the branch tests. The pull request tests, like the branch tests, include a pylint test as well.

When a pull request is submitted to Salt's repository on GitHub, the suite of pull request tests are started by Jenkins. These tests are used to gauge the pull request's viability to merge into Salt's codebase. If these initial tests pass, the pull request can then merged into the Salt branch by one of Salt's core developers, pending their discretion. If the initial tests fail, core developers may request changes to the pull request. If the failure is unrelated to the changes in question, core developers may merge the pull request despite the initial failure.

As soon as the pull request is merged, the changes will be added to the next branch test run on Jenkins.

For a full list of currently running test environments, go to <http://jenkins.saltstack.com>.

Using Salt-Cloud on Jenkins

For testing Salt on Jenkins, SaltStack uses *Salt-Cloud* to spin up virtual machines. The script using Salt-Cloud to accomplish this is open source and can be found here: <https://github.com/saltstack/salt/blob/master/tests/jenkins.py>

26.19.4 Writing Tests

The salt testing infrastructure is divided into two classes of tests, integration tests and unit tests. These terms may be defined differently in other contexts, but for Salt they are defined this way:

- Unit Test: Tests which validate isolated code blocks and do not require external interfaces such as `salt-call` or any of the salt daemons.
- Integration Test: Tests which validate externally accessible features.

Salt testing uses unittest2 from the python standard library and MagicMock.

- *Writing integration tests*
- *Writing unit tests*

Naming Conventions

Any function in either integration test files or unit test files that is doing the actual testing, such as functions containing assertions, must start with `test_`:

```
def test_user_present(self):
```

When functions in test files are not prepended with `test_`, the function acts as a normal, helper function and is not run as a test by the test suite.

Submitting New Tests

Which branch of the Salt codebase should new tests be written against? The location of where new tests should be submitted depends largely on the reason you're writing the tests.

Tests for New Features

If you are adding new functionality to Salt, please write the tests for this new feature in the same pull request as the new feature. New features should always be submitted to the `develop` branch.

If you have already submitted the new feature, but did not write tests in the original pull request that has already been merged, please feel free to submit a new pull request containing tests. If the feature was recently added to Salt's `develop` branch, then the tests should be added there as well. However, if the feature was added to `develop` some time ago and is already present in one or more release branches, please refer to the *Tests for Entire Files or Functions* section below for more details about where to submit tests for functions or files that do not already have tests.

Tests to Accompany a Bugfix

If you are writing tests for code that fixes a bug in Salt, please write the test in the same pull request as the bugfix. If you're unsure of where to submit your bugfix and accompanying test, please review the *Which Salt Branch?* documentation in Salt's *Contributing* guide.

Tests for Entire Files or Functions

Sometimes entire files in Salt are completely untested. If you are writing tests for a file that doesn't have any tests written for it, write your test against the earliest supported release branch that contains the file or function you're testing.

Once your tests are submitted in a pull request and is merged into the branch in question, the tests you wrote will be merged-forward by SaltStack core engineers and the new tests will propagate to the newer release branches. That way the tests you wrote will apply to all current and relevant release branches, and not just the `develop` branch, for example. This methodology will help protect against regressions on older files in Salt's codebase.

There may be times when the tests you write against an older branch fail in the merge-forward process because functionality has changed in newer release branches. In these cases, a Salt core developer may reach out to you for advice on the tests in question if the path forward is unclear.

Note: If tests are written against a file in an older release branch and then merged forward, there may be new functionality in the file that is present in the new release branch that is untested. It would be wise to see if new functionality could use additional testing once the test file has propagated to newer release branches.

Test Helpers

Several Salt-specific helpers are available. A full list is available by inspecting functions exported in *tests.support.helpers*.

@expensiveTest – Designates a test which typically requires a relatively costly external resource, like a cloud virtual machine. This decorator is not normally used by developers outside of the Salt core team.

@destructiveTest – Marks a test as potentially destructive. It will not be run by the test runner unless the `-run-destructive` test is expressly passed.

@requires_network – Requires a network connection for the test to operate successfully. If a network connection is not detected, the test will not run.

@requires_salt_modules – Requires all the modules in a list of modules in order for the test to be executed. Otherwise, the test is skipped.

@requires_system_grains – Loads and passes the grains on the system as an keyword argument to the test function with the name *grains*.

@skip_if_binaries_missing(['list', 'of', 'binaries']) – If called from inside a test, the test will be skipped if the binaries are not all present on the system.

@skip_if_not_root – If the test is not executed as root, it will be skipped.

@with_system_user – Creates and optionally destroys a system user within a test case. See implementation details in *tests.support.helpers* for details.

@with_system_group – Creates and optionally destroys a system group within a test case. See implementation details in *tests.support.helpers* for details.

`@with_system_user_and_group` – Creates and optionally destroys a system user and group within a test case. See implementation details in `tests.support.helpers` for details.

26.20 Integration Tests

The Salt integration tests come with a number of classes and methods which allow for components to be easily tested. These classes are generally inherited from and provide specific methods for hooking into the running integration test environment created by the integration tests.

It is noteworthy that since integration tests validate against a running environment that they are generally the preferred means to write tests.

The integration system is all located under `tests/integration` in the Salt source tree. Each directory within `tests/integration` corresponds to a directory in Salt's tree structure. For example, the integration tests for the `test.py` Salt module that is located in `salt/modules` should also be named `test.py` and reside in `tests/integration/modules`.

26.20.1 Preparing to Write Integration Tests

This guide assumes that your Salt development environment is already configured and that you have a basic understanding of contributing to the Salt codebase. If you're unfamiliar with either of these topics, please refer to the [Installing Salt for Development](#) and the [Contributing](#) pages, respectively.

This documentation also assumes that you have an understanding of how to [run Salt's test suite](#), including running the [test subsections](#), and running a single integration test file, class, or individual test.

26.20.2 Best Practices

Integration tests should be written to the following specifications.

What to Test?

Since integration tests are used to validate against a running Salt environment, integration tests should be written with the Salt components, and their various interactions, in mind.

- Isolate testing functionality. Don't rely on the pass or failure of other, separate tests.
- Individual tests should test against a single behavior.
- Since it occasionally takes some effort to "set up" an individual test, it may be necessary to call several functions within a single test. However, be sure that once the work has been done to set up a test, make sure you are clear about the functionality that is being tested.

Naming Conventions

Test names and docstrings should indicate what functionality is being tested. Test functions are named `test_<fcn>_<test-name>` where `<fcn>` is the function being tested and `<test-name>` describes the behavior being tested.

In order for integration tests to get picked up during a run of the test suite, each individual test must be prepended with the `test_` naming syntax, as described above.

If a function does not start with `test_`, then the function acts as a "normal" function and is not considered a testing function. It will not be included in the test run or testing output.

The setUp and tearDown Functions

There are two special functions that can be utilized in the integration side of Salt's test suite: `setUp` and `tearDown`. While these functions are not required in all test files, there are many examples in Salt's integration test suite illustrating the broad usefulness of each function.

The `setUp` function is used to set up any repetitive or useful tasks that the tests in a test class need before running. For example, any of the `mac_*` integration tests should only run on macOS machines. The `setUp` function can be used to test for the presence of the Darwin kernel. If the Darwin kernel is not present, then the test should be skipped.

```
def setUp(self):
    '''
    Sets up test requirements
    '''
    os_grain = self.run_function('grains.item', ['kernel'])
    if os_grain['kernel'] not in 'Darwin':
        self.skipTest(
            'Test not applicable to \'{kernel}\'' kernel'.format(
                **os_grain
            )
        )
    )
```

The `setUp` function can be used for many things. The above code snippet is only one example. Another example might be to ensure that a particular setting is present before running tests that would require the setting.

The `tearDown` function is used to clean up after any tests. This function is useful for restoring any settings that might have been changed during the test run.

Note: The `setUp` and `tearDown` functions run before and after each test in the test class that the `setUp` and `tearDown` functions are defined.

Be sure to read the *Destructive vs Non-Destructive Tests* section when using any kind of destructive functions that might alter the system running the test suite in either the `setUp` or `tearDown` function definitions.

Testing Order

The test functions within a test class do not run in the order they were defined, but instead run in lexicographical order.

Note that if any `setUp` or `tearDown` functions are defined in the class, those functions will run before (for `setUp`) or after (for `tearDown`) each test case.

26.20.3 Integration Classes

The integration classes are located in `tests/integration/__init__.py` and can be extended therein. There are four classes available to extend:

- *ModuleCase*
- *ShellCase*

- *SSHCase*
- *SyndicCase*

ModuleCase

Used to define executions run via the master to minions and to call single modules and states. The available testing functions are:

run_function

Run a single salt function and condition the return down to match the behavior of the raw function call. This will run the command and only return the results from a single minion to verify.

run_state

Run the state.single command and return the state return structure.

minion_run

Run a single salt function on the 'minion' target and condition the return down to match the behavior of the raw function call.

ShellCase

Shell out to the scripts which ship with Salt. The testing functions are:

run_cp

Execute salt-cp. Pass in the argument string as it would be passed on the command line.

run_call

Execute salt-call, pass in the argument string as it would be passed on the command line.

run_cloud

Execute the salt-cloud command. Pass in the argument string as it would be passed on the command line.

run_key

Execute the salt-key command. Pass in the argument string as it would be passed on the command line.

run_run

Execute the salt-run command. Pass in the argument string as it would be passed on the command line.

run_run_plus

Execute the runner function the and return the return data and output in a dict

run_salt

Execute the salt command. Pass in the argument string as it would be passed on the command line.

run_script

Execute a salt script with the given argument string.

run_ssh

Execute the salt-ssh. Pass in the argument string as it would be passed on the command line.

SSHCase

Used to execute remote commands via salt-ssh. The available methods are as follows:

run_function

Run a single salt function via salt-ssh and condition the return down to match the behavior of the raw function call. This will run the command and only return the results from a single minion to verify.

SyndicCase

Used to execute remote commands via a syndic and is only used to verify the capabilities of the Salt Syndic. The available methods are as follows:

run_function

Run a single salt function and condition the return down to match the behavior of the raw function call. This will run the command and only return the results from a single minion to verify.

26.20.4 Examples

The following sections define simple integration tests present in Salt's integration test suite for each type of testing class.

Module Example via ModuleCase Class

Import the integration module, this module is already added to the python path by the test execution. Inherit from the `integration.ModuleCase` class.

Now the workhorse method `run_function` can be used to test a module:

```
import os
import tests.integration as integration

class TestModuleTest(integration.ModuleCase):
    '''
    Validate the test module
    '''
    def test_ping(self):
        '''
        test.ping
        '''
        self.assertTrue(self.run_function('test.ping'))

    def test_echo(self):
        '''
        test.echo
        '''
        self.assertEqual(self.run_function('test.echo', ['text']), 'text')
```

The first example illustrates the testing master issuing a `test.ping` call to a testing minion. The test asserts that the minion returned with a `True` value to the master from the `test.ping` call.

The second example similarly verifies that the minion executed the `test.echo` command with the `text` argument. The `assertEqual` call maintains that the minion ran the function and returned the data as expected to the master.

Shell Example via ShellCase

Validating the shell commands can be done via shell tests:

```
import sys
import shutil
import tempfile

import tests.integration as integration

class KeyTest(integration.ShellCase):
    '''
    Test salt-key script
    '''

    _call_binary_ = 'salt-key'

    def test_list(self):
        '''
        test salt-key -L
        '''
        data = self.run_key('-L')
        expect = [
            'Unaccepted Keys:',
```

(continues on next page)

(continued from previous page)

```

        'Accepted Keys:',
        'minion',
        'sub_minion',
        'Rejected:', '']
    self.assertEqual(data, expect)

```

This example verifies that the `salt-key` command executes and returns as expected by making use of the `run_key` method.

SSH Example via SSHCase

Testing salt-ssh functionality can be done using the SSHCase test class:

```

import tests.integration as integration

class SSHGrainsTest(integration.SSHCase):
    '''
    Test salt-ssh grains functionality
    Depend on proper environment set by integration.SSHCase class
    '''

    def test_grains_id(self):
        '''
        Test salt-ssh grains id work for localhost.
        '''
        cmd = self.run_function('grains.get', ['id'])
        self.assertEqual(cmd, 'localhost')

```

Testing Event System via SaltMinionEventAssertsMixin

The fundamentally asynchronous nature of Salt makes testing the event system a challenge. The `SaltMinionEventAssertsMixin` provides a facility for testing that events were received on a minion event bus.

```

import tests.integration as integration
import salt.utils.event

class TestEvent(integration.SaltEventAssertsMixin):
    '''
    Example test of firing an event and receiving it
    '''

    def test_event(self):
        e = salt.utils.event.get_event('minion', sock_dir=self.minion_opts['sock_dir']
↪), opts=self.minion_opts)

        e.fire_event({'a': 'b'}, '/test_event')

        self.assertMinionEventReceived({'a': 'b'})

```

Syndic Example via SyndicCase

Testing Salt's Syndic can be done via the `SyndicCase` test class:

```

import tests.integration as integration

class TestSyndic(integration.SyndicCase):
    '''
    Validate the syndic interface by testing the test module
    '''
    def test_ping(self):
        '''
        test.ping
        '''
        self.assertTrue(self.run_function('test.ping'))

```

This example verifies that a `test.ping` command is issued from the testing master, is passed through to the testing syndic, down to the minion, and back up again by using the `run_function` located with in the `SyndicCase` test class.

26.20.5 Integration Test Files

Since using Salt largely involves configuring states, editing files, and changing system data, the integration test suite contains a directory named `files` to aid in testing functions that require files. Various Salt integration tests use these example files to test against instead of altering system files and data.

Each directory within `tests/integration/files` contain files that accomplish different tasks, based on the needs of the integration tests using those files. For example, `tests/integration/files/ssh` is used to bootstrap the test runner for salt-ssh testing, while `tests/integration/files/pillar` contains files storing data needed to test various pillar functions.

The `tests/integration/files` directory also includes an integration state tree. The integration state tree can be found at `tests/integration/files/file/base`.

The following example demonstrates how integration files can be used with `ModuleCase` to test states:

```

# Import python libs
from __future__ import absolute_import
import os
import shutil

# Import Salt Testing libs
from tests.support.case import ModuleCase
from tests.support.paths import FILES, TMP
from tests.support.mixins import SaltReturnAssertsMixin

# Import salt libs
import salt.utils.files

HFILE = os.path.join(TMP, 'hosts')

class HostTest(ModuleCase, SaltReturnAssertsMixin):
    '''
    Validate the host state
    '''

    def setUp(self):
        shutil.copyfile(os.path.join(FILES, 'hosts'), HFILE)
        super(HostTest, self).setUp()

```

(continues on next page)

(continued from previous page)

```

def tearDown(self):
    if os.path.exists(HFILE):
        os.remove(HFILE)
    super(HostTest, self).tearDown()

def test_present(self):
    """
    host.present
    """
    name = 'spam.bacon'
    ip = '10.10.10.10'
    ret = self.run_state('host.present', name=name, ip=ip)
    self.assertSaltTrueReturn(ret)
    with salt.utils.files.fopen(HFILE) as fp_:
        output = fp_.read()
        self.assertIn('{0}\t\t{1}'.format(ip, name), output)

```

To access the integration files, a variable named FILES points to the tests/integration/files directory. This is where the referenced host.present sls file resides.

In addition to the static files in the integration state tree, the location TMP can also be used to store temporary files that the test system will clean up when the execution finishes.

26.20.6 Destructive vs Non-Destructive Tests

Since Salt is used to change the settings and behavior of systems, one testing approach is to run tests that make actual changes to the underlying system. This is where the concept of destructive integration tests comes into play. Tests can be written to alter the system they are running on. This capability is what fills in the gap needed to properly test aspects of system management like package installation.

Any test that changes the underlying system in any way, such as creating or deleting users, installing packages, or changing permissions should include the @destructive decorator to signal system changes and should be written with care. System changes executed within a destructive test should also be restored once the related tests have completed. For example, if a new user is created to test a module, the same user should be removed after the test is completed to maintain system integrity.

To write a destructive test, import, and use the destructiveTest decorator for the test method:

```

import tests.integration as integration
from tests.support.helpers import destructiveTest, skip_if_not_root

class DestructiveExampleModuleTest(integration.ModuleCase):
    """
    Demonstrate a destructive test
    """

    @destructiveTest
    @skip_if_not_root
    def test_user_not_present(self):
        """
        This is a DESTRUCTIVE TEST it creates a new user on the minion.
        And then destroys that user.
        """
        ret = self.run_state('user.present', name='salt_test')

```

(continues on next page)

(continued from previous page)

```
self.assertSaltTrueReturn(ret)
ret = self.run_state('user.absent', name='salt_test')
self.assertSaltTrueReturn(ret)
```

26.20.7 Cloud Provider Tests

Cloud provider integration tests are used to assess *Salt-Cloud*'s ability to create and destroy cloud instances for various supported cloud providers. Cloud provider tests inherit from the ShellCase Integration Class.

Any new cloud provider test files should be added to the `tests/integration/cloud/providers/` directory. Each cloud provider test file also requires a sample cloud profile and cloud provider configuration file in the integration test file directory located at `tests/integration/files/conf/cloud.*.d/`.

The following is an example of the default profile configuration file for Digital Ocean, located at: `tests/integration/files/conf/cloud.profiles.d/digitalocean.conf`:

```
digitalocean-test:
provider: digitalocean-config
image: Ubuntu 14.04 x64
size: 512MB
```

Each cloud provider requires different configuration credentials. Therefore, sensitive information such as API keys or passwords should be omitted from the cloud provider configuration file and replaced with an empty string. The necessary credentials can be provided by the user by editing the provider configuration file before running the tests.

The following is an example of the default provider configuration file for Digital Ocean, located at: `tests/integration/files/conf/cloud.providers.d/digitalocean.conf`:

```
digitalocean-config:
driver: digitalocean
client_key: ''
api_key: ''
location: New York 1
```

In addition to providing the necessary cloud profile and provider files in the integration test suite file structure, appropriate checks for if the configuration files exist and contain valid information are also required in the test class's `setUp` function:

```
from tests.support.case import ShellCase
from tests.support.paths import FILES

class LinodeTest(ShellCase):
    '''
    Integration tests for the Linode cloud provider in Salt-Cloud
    '''

    def setUp(self):
        '''
        Sets up the test requirements
        '''
        super(LinodeTest, self).setUp()

        # check if appropriate cloud provider and profile files are present
        profile_str = 'linode-config:'
        provider = 'linode'
```

(continues on next page)

(continued from previous page)

```

providers = self.run_cloud('--list-providers')
if profile_str not in providers:
    self.skipTest(
        'Configuration file for {0} was not found. Check {0}.conf files '
        'in tests/integration/files/conf/cloud.*.d/ to run these tests.'
        .format(provider)
    )

# check if apikey and password are present
path = os.path.join(FILE_PATHS,
                    'conf',
                    'cloud.providers.d',
                    provider + '.conf')
config = cloud_providers_config(path)
api = config['linode-config']['linode']['apikey']
password = config['linode-config']['linode']['password']
if api == '' or password == '':
    self.skipTest(
        'An api key and password must be provided to run these tests. Check '
        'tests/integration/files/conf/cloud.providers.d/{0}.conf'.format(
            provider
        )
    )
)

```

Repeatedly creating and destroying instances on cloud providers can be costly. Therefore, cloud provider tests are off by default and do not run automatically. To run the cloud provider tests, the `--cloud-provider-tests` flag must be provided:

```
./tests/runtests.py --cloud-provider-tests
```

Since cloud provider tests do not run automatically, all provider tests must be preceded with the `@expensiveTest` decorator. The expensive test decorator is necessary because it signals to the test suite that the `--cloud-provider-tests` flag is required to run the cloud provider tests.

To write a cloud provider test, import, and use the `expensiveTest` decorator for the test function:

```

from tests.support.helpers import expensiveTest

@expensiveTest
def test_instance(self):
    '''
    Test creating an instance on Linode
    '''
    name = 'linode-testing'

    # create the instance
    instance = self.run_cloud('-p linode-test {0}'.format(name))
    str = '          {0}'.format(name)

    # check if instance with salt installed returned as expected
    try:
        self.assertIn(str, instance)
    except AssertionError:
        self.run_cloud('-d {0} --assume-yes'.format(name))
        raise

```

(continues on next page)

(continued from previous page)

```
# delete the instance
delete = self.run_cloud('-d {0} --assume-yes'.format(name))
str = '                                True'
try:
    self.assertIn(str, delete)
except AssertionError:
    raise
```

26.20.8 Adding New Directories

If the corresponding Salt directory does not exist within `tests/integration`, the new directory must be created along with the appropriate test file to maintain Salt's testing directory structure.

In order for Salt's test suite to recognize tests within the newly created directory, options to run the new integration tests must be added to `tests/runtests.py`. Examples of the necessary options that must be added can be found here: <https://github.com/saltstack/salt/blob/master/tests/runtests.py>. The functions that need to be edited are `setup_additional_options`, `validate_options`, and `run_integration_tests`.

26.21 Writing Unit Tests

26.21.1 Introduction

Like many software projects, Salt has two broad-based testing approaches – integration testing and unit testing. While integration testing focuses on the interaction between components in a sandboxed environment, unit testing focuses on the singular implementation of individual functions.

Unit tests should be used specifically to test a function's logic. Unit tests rely on mocking external resources.

While unit tests are good for ensuring consistent results, they are most useful when they do not require more than a few mocks. Effort should be made to mock as many external resources as possible. This effort is encouraged, but not required. Sometimes the isolation provided by completely mocking the external dependencies is not worth the effort of mocking those dependencies.

In these cases, requiring an external library to be installed on the system before running the test file is a useful way to strike this balance. For example, the unit tests for the MySQL execution module require the presence of the MySQL python bindings on the system running the test file before proceeding to run the tests.

Overly detailed mocking can also result in decreased test readability and brittleness as the tests are more likely to fail when the code or its dependencies legitimately change. In these cases, it is better to add dependencies to the test runner dependency state.

26.21.2 Preparing to Write a Unit Test

This guide assumes that your Salt development environment is already configured and that you have a basic understanding of contributing to the Salt codebase. If you're unfamiliar with either of these topics, please refer to the *Installing Salt for Development* and the *Contributing* pages, respectively.

This documentation also assumes that you have an understanding of how to *run Salt's test suite*, including running the *unit test subsection*, running the unit tests *without testing daemons* to speed up development wait times, and running a unit test file, class, or individual test.

26.21.3 Best Practices

Unit tests should be written to the following specifications.

What to Test?

Since unit testing focuses on the singular implementation of individual functions, unit tests should be used specifically to test a function's logic. The following guidelines should be followed when writing unit tests for Salt's test suite:

- Each `raise` and `return` statement needs to be independently tested.
- Isolate testing functionality. Don't rely on the pass or failure of other, separate tests.
- Test functions should contain only one assertion.
- Many Salt execution modules are merely wrappers for distribution-specific functionality. If there isn't any logic present in a simple execution module, consider writing an *integration test* instead of heavily mocking a call to an external dependency.

Mocking Test Data

A reasonable effort needs to be made to mock external resources used in the code being tested, such as APIs, function calls, external data either globally available or passed in through function arguments, file data, etc.

- Test functions should contain only one assertion and all necessary mock code and data for that assertion.
- External resources should be mocked in order to "block all of the exits". If a test function fails because something in an external library wasn't mocked properly (or at all), this test is not addressing all of the "exits" a function may experience. We want the Salt code and logic to be tested, specifically.
- Consider the fragility and longevity of a test. If the test is so tightly coupled to the code being tested, this makes a test unnecessarily fragile.
- Make sure you are not mocking the function to be tested so vigorously that the test return merely tests the mocked output. The test should always be testing a function's logic.

Mocking Loader Modules

Salt loader modules use a series of globally available dunder variables, `__salt__`, `__opts__`, `__pillar__`, etc. To facilitate testing these modules a mixin class was created, `LoaderModuleMockMixin` which can be found in `tests/support/mixins.py`. The reason for the existence of this class is because historically and because it was easier, one would add these dunder variables directly on the imported module. This however, introduces unexpected behavior when running the full test suite since those attributes would not be removed once we were done testing the module and would therefore leak to other modules being tested with unpredictable results. This is the kind of work that should be deferred to mock, and that's exactly what this mixin class does.

As an example, if one needs to specify some options which should be available to the module being tested one should do:

```
import salt.modules.somemodule as somemodule

class SomeModuleTest(TestCase, LoaderModuleMockMixin):

    def setup_loader_modules(self):
        return {
```

(continues on next page)

(continued from previous page)

```

    somemodule: {
        '__opts__': {'test': True}
    }
}

```

Consider this more extensive example from `tests/unit/modules/test_libcloud_dns.py`:

```

# Import Python Libs
from __future__ import absolute_import

# Import Salt Testing Libs
from tests.support.mixins import LoaderModuleMockMixin
from tests.support.unit import TestCase, skipIf
from tests.support.mock import (
    patch,
    MagicMock,
    NO_MOCK,
    NO_MOCK_REASON
)
import salt.modules.libcloud_dns as libcloud_dns

class MockDNSDriver(object):
    def __init__(self):
        pass

def get_mock_driver():
    return MockDNSDriver()

@skipIf(NO_MOCK, NO_MOCK_REASON)
@patch('salt.modules.libcloud_dns._get_driver',
        MagicMock(return_value=MockDNSDriver()))
class LibcloudDnsModuleTestCase(TestCase, LoaderModuleMockMixin):

    def setup_loader_modules(self):
        module_globals = {
            '__salt__': {
                'config.option': MagicMock(return_value={
                    'test': {
                        'driver': 'test',
                        'key': '2orgk34kgk34g'
                    }
                })
        }
        }
        if libcloud_dns.HAS_LIBCLOUD is False:
            module_globals['sys.modules'] = {'libcloud': MagicMock()}

        return {libcloud_dns: module_globals}

```

What happens in the above example is we mock a call to `__salt__['config.option']` to return the configuration needed for the execution of the tests. Additionally, if the `libcloud` library is not available, since that's not actually part of what's being tested, we mocked that import by patching `sys.modules` when tests are running.

Mocking Filehandles

Note: This documentation applies to the 2018.3 release cycle and newer. The extended functionality for `mock_open` described below does not exist in the 2017.7 and older release branches.

Opening files in Salt is done using `salt.utils.files.fopen()`. When testing code that reads from files, the `mock_open` helper can be used to mock filehandles. Note that is not the same `mock_open` as `unittest.mock.mock_open()` from the Python standard library, but rather a separate implementation which has additional functionality.

```
from tests.support.unit import TestCase, skipIf
from tests.support.mock import (
    patch
    mock_open,
    NO MOCK,
    NO MOCK_REASON,
)

import salt.modules.mymod as mymod

@skipIf(NO MOCK, NO MOCK_REASON)
class MyAwesomeTestCase(TestCase):

    def test_something(self):
        fopen_mock = mock_open(read_data='foo\nbar\nbaz\n')
        with patch('salt.utils.files.fopen', fopen_mock):
            result = mymod.myfunc()
            assert result is True
```

This will force any filehandle opened to mimic a filehandle which, when read, produces the specified contents.

Important: String Types

When running tests on Python 2, `mock_open` will convert any `unicode` types to `str` types to more closely reproduce Python 2 behavior (file reads are always `str` types in Python 2, irrespective of mode).

However, when configuring your `read_data`, make sure that you are using bytestrings (e.g. `b'foo\nbar\nbaz\n'`) when the code you are testing is opening a file for binary reading, otherwise the tests will fail on Python 3. The mocked filehandles produced by `mock_open` will raise a `TypeError` if you attempt to read a bytestring when opening for non-binary reading, and similarly will not let you read a string when opening a file for binary reading. They will also not permit bytestrings to be "written" if the mocked filehandle was opened for non-binary writing, and vice-versa when opened for non-binary writing. These enhancements force test writers to write more accurate tests.

More Complex Scenarios

Multiple File Paths

What happens when the code being tested reads from more than one file? For those cases, you can pass `read_data` as a dictionary:

```

import textwrap

from tests.support.unit import TestCase, skipIf
from tests.support.mock import (
    patch
    mock_open,
    NO_MOCK,
    NO_MOCK_REASON,
)

import salt.modules.mymod as mymod

@skipIf(NO_MOCK, NO_MOCK_REASON)
class MyAwesomeTestCase(TestCase):

    def test_something(self):
        contents = {
            '/etc/foo.conf': textwrap.dedent('''\
                foo
                bar
                baz
                '''),
            '/etc/b*.conf': textwrap.dedent('''\
                one
                two
                three
                '''),
        }
        fopen_mock = mock_open(read_data=contents)
        with patch('salt.utils.files.fopen', fopen_mock):
            result = mymod.myfunc()
            assert result is True

```

This would make `salt.utils.files.fopen()` produce filehandles with different contents depending on which file was being opened by the code being tested. `/etc/foo.conf` and any file matching the pattern `/etc/b*.conf` would work, while opening any other path would result in a `FileNotFoundError` being raised (in Python 2, an `IOError`).

Since file patterns are supported, it is possible to use a pattern of `'*'` to define a fallback if no other patterns match the filename being opened. The below two `mock_open` calls would produce identical results:

```

mock_open(read_data='foo\n')
mock_open(read_data={'*': 'foo\n'})

```

Note: Take care when specifying the `read_data` as a dictionary, in cases where the patterns overlap (e.g. when both `/etc/b*.conf` and `/etc/bar.conf` are in the `read_data`). Dictionary iteration order will determine which pattern is attempted first, second, etc., with the exception of `*` which is used when no other pattern matches. If your test case calls for specifying overlapping patterns, and you are not running Python 3.6 or newer, then an `OrderedDict` can be used to ensure matching is handled in the desired way:

```

contents = OrderedDict()
contents['/etc/bar.conf'] = 'foo\nbar\nbaz\n'
contents['/etc/b*.conf'] = IOError(errno.EACCES, 'Permission denied')
contents['*'] = 'This is a fallback for files not beginning with "/etc/b"\n'
fopen_mock = mock_open(read_data=contents)

```

Raising Exceptions

Instead of a string, an exception can also be used as the `read_data`:

```
import errno

from tests.support.unit import TestCase, skipIf
from tests.support.mock import (
    patch
    mock_open,
    NO MOCK,
    NO MOCK_REASON,
)

import salt.modules.mymod as mymod

@skipIf(NO MOCK, NO MOCK_REASON)
class MyAwesomeTestCase(TestCase):

    def test_something(self):
        exc = IOError(errno.EACCES, 'Permission denied')
        fopen_mock = mock_open(read_data=exc)
        with patch('salt.utils.files.fopen', fopen_mock):
            mymod.myfunc()
```

The above example would raise the specified exception when any file is opened. The expectation would be that `mymod.myfunc()` would gracefully handle the `IOError`, so a failure to do that would result in it being raised and causing the test to fail.

Multiple File Contents

For cases in which a file is being read more than once, and it is necessary to test a function's behavior based on what the file looks like the second (or third, etc.) time it is read, just specify the the contents for that file as a list. Each time the file is opened, `mock_open` will cycle through the list and produce a mocked filehandle with the specified contents. For example:

```
import errno
import textwrap

from tests.support.unit import TestCase, skipIf
from tests.support.mock import (
    patch
    mock_open,
    NO MOCK,
    NO MOCK_REASON,
)

import salt.modules.mymod as mymod

@skipIf(NO MOCK, NO MOCK_REASON)
class MyAwesomeTestCase(TestCase):

    def test_something(self):
        contents = {
            '/etc/foo.conf': [
                textwrap.dedent(''\n
```

(continues on next page)

(continued from previous page)

```

        foo
        bar
        '''),
    textwrap.dedent('''\
        foo
        bar
        baz
        '''),
],
'/etc/b*.conf': [
    IOError(errno.ENOENT, 'No such file or directory'),
    textwrap.dedent('''\
        one
        two
        three
        '''),
],
}
fopen_mock = mock_open(read_data=contents)
with patch('salt.utils.files.fopen', fopen_mock):
    result = mymod.myfunc()
    assert result is True

```

Using this example, the first time `/etc/foo.conf` is opened, it will simulate a file with the first string in the list as its contents, while the second time it is opened, the simulated file's contents will be the second string in the list.

If no more items remain in the list, then attempting to open the file will raise a `RuntimeError`. In the example above, if `/etc/foo.conf` were to be opened a third time, a `RuntimeError` would be raised.

Note that exceptions can also be mixed in with strings when using this technique. In the above example, if `/etc/bar.conf` were to be opened twice, the first time would simulate the file not existing, while the second time would simulate a file with string defined in the second element of the list.

Note: Notice that the second path in the `contents` dictionary above (`/etc/b*.conf`) contains an asterisk. The items in the list are cycled through for each match of a given pattern (*not* separately for each individual file path), so this means that only two files matching that pattern could be opened before the next one would raise a `RuntimeError`.

Accessing the Mocked Filehandles in a Test

Note: The code for the `MockOpen`, `MockCall`, and `MockFH` classes (referenced below) can be found in `tests/support/mock.py`. There are extensive unit tests for them located in `tests/unit/test_mock.py`.

The above examples simply show how to mock `salt.utils.files.fopen()` to simulate files with the contents you desire, but you can also access the mocked filehandles (and more), and use them to craft assertions in your tests. To do so, just add an `as` clause to the end of the `patch` statement:

```

fopen_mock = mock_open(read_data='foo\nbar\nbaz\n')
with patch('salt.utils.files.fopen', fopen_mock) as m_open:
    # do testing here
    ...
    ...

```

When doing this, `m_open` will be a `MockOpen` instance. It will contain several useful attributes:

- `read_data` - A dictionary containing the `read_data` passed when `mock_open` was invoked. In the event that *multiple file paths* are not used, then this will be a dictionary mapping `*` to the `read_data` passed to `mock_open`.
- `call_count` - An integer representing how many times `salt.utils.files.fopen()` was called to open a file.
- `calls` - A list of `MockCall` objects. A `MockCall` object is a simple class which stores the arguments passed to it, making the positional arguments available via its `args` attribute, and the keyword arguments available via its `kwargs` attribute.

```

from tests.support.unit import TestCase, skipIf
from tests.support.mock import (
    patch
    mock_open,
    MockCall,
    NO MOCK,
    NO MOCK_REASON,
)

import salt.modules.mymod as mymod

@skipIf(NO MOCK, NO MOCK_REASON)
class MyAwesomeTestCase(TestCase):

    def test_something(self):

        with patch('salt.utils.files.fopen', mock_open(read_data=b'foo\n')) as m_
↪open:
            mymod.myfunc()
            # Assert that only two opens attempted
            assert m_open.call_count == 2
            # Assert that only /etc/foo.conf was opened
            assert all(call.args[0] == '/etc/foo.conf' for call in m_open.calls)
            # Asser that the first open was for binary read, and the
            # second was for binary write.
            assert m_open.calls == [
                MockCall('/etc/foo.conf', 'rb'),
                MockCall('/etc/foo.conf', 'wb'),
            ]

```

Note that `MockCall` is imported from `tests.support.mock` in the above example. Also, the second `assert` above is redundant since it is covered in the final `assert`, but both are included simply as an example.

- `filehandles` - A dictionary mapping the unique file paths opened, to lists of `MockFH` objects. Each open creates a unique `MockFH` object. Each `MockFH` object itself has a number of useful attributes:
 - `filename` - The path to the file which was opened using `salt.utils.files.fopen()`
 - `call` - A `MockCall` object representing the arguments passed to `salt.utils.files.fopen()`. Note that this `MockCall` is also available in the parent `MockOpen` instance's `calls` list.
 - The following methods are mocked using `unittest.mock.Mock` objects, and `Mock`'s built-in asserts (as well as the call data) can be used as you would with any other `Mock` object:
 - * `.read()`
 - * `.readlines()`
 - * `.readline()`

- * `.close()`
 - * `.write()`
 - * `.writelines()`
 - * `.seek()`
- The read functions (`.read()`, `.readlines()`, `.readline()`) all work as expected, as does iterating through the file line by line (i.e. `for line in fh:`).
 - The `.tell()` method is also implemented in such a way that it updates after each time the mocked filehandle is read, and will report the correct position. The one caveat here is that `.seek()` doesn't actually work (it's simply mocked), and will not change the position. Additionally, neither `.write()` or `.writelines()` will modify the mocked filehandle's contents.
 - The attributes `.write_calls` and `.writelines_calls` (no parenthesis) are available as shorthands and correspond to lists containing the contents passed for all calls to `.write()` and `.writelines()`, respectively.

Examples

```
with patch('salt.utils.files.fopen', mock_open(read_data=contents)) as m_open:
    # Run the code you are unit testing
    mymod.myfunc()
    # Check that only the expected file was opened, and that it was opened
    # only once.
    assert m_open.call_count == 1
    assert list(m_open.filehandles) == ['/etc/foo.conf']
    # "opens" will be a list of all the mocked filehandles opened
    opens = m_open.filehandles ['/etc/foo.conf']
    # Check that we wrote the expected lines ("expected" here is assumed to
    # be a list of strings)
    assert opens[0].write_calls == expected
```

```
with patch('salt.utils.files.fopen', mock_open(read_data=contents)) as m_open:
    # Run the code you are unit testing
    mymod.myfunc()
    # Check that .readlines() was called (remember, it's a Mock)
    m_open.filehandles ['/etc/foo.conf'][0].readlines.assert_called()
```

```
with patch('salt.utils.files.fopen', mock_open(read_data=contents)) as m_open:
    # Run the code you are unit testing
    mymod.myfunc()
    # Check that we read the file and also wrote to it
    m_open.filehandles ['/etc/foo.conf'][0].read.assert_called_once()
    m_open.filehandles ['/etc/foo.conf'][1].writelines.assert_called_once()
```

Naming Conventions

Test names and docstrings should indicate what functionality is being tested. Test functions are named `test_<fcn>_<test-name>` where `<fcn>` is the function being tested and `<test-name>` describes the raise or return being tested.

Unit tests for `salt/.../<module>.py` are contained in a file called `tests/unit/.../test_<module>.py`, e.g. the tests for `salt/modules/fib.py` are in `tests/unit/modules/test_fib.py`.

In order for unit tests to get picked up during a run of the unit test suite, each unit test file must be prefixed with `test_` and each individual test must be prepended with the `test_` naming syntax, as described above.

If a function does not start with `test_`, then the function acts as a "normal" function and is not considered a testing function. It will not be included in the test run or testing output. The same principle applies to unit test files that do not have the `test_*.py` naming syntax. This test file naming convention is how the test runner recognizes that a test file contains unit tests.

Imports

Most commonly, the following imports are necessary to create a unit test:

```
from tests.support.unit import TestCase, skipIf
```

If you need mock support to your tests, please also import:

```
from tests.support.mock import NO_MOCK, NO_MOCK_REASON, MagicMock, patch, call
```

26.21.4 Evaluating Truth

A longer discussion on the types of assertions one can make can be found by reading [Python's documentation on unit testing](#).

26.21.5 Tests Using Mock Objects

In many cases, the purpose of a Salt module is to interact with some external system, whether it be to control a database, manipulate files on a filesystem or something else. In these varied cases, it's necessary to design a unit test which can test the function whilst replacing functions which might actually call out to external systems. One might think of this as "blocking the exits" for code under tests and redirecting the calls to external systems with our own code which produces known results during the duration of the test.

To achieve this behavior, Salt makes heavy use of the [MagicMock package](#).

To understand how one might integrate Mock into writing a unit test for Salt, let's imagine a scenario in which we're testing an execution module that's designed to operate on a database. Furthermore, let's imagine two separate methods, here presented in pseudo-code in an imaginary execution module called `'db.py'`.

```
def create_user(username):
    qry = 'CREATE USER {0}'.format(username)
    execute_query(qry)

def execute_query(qry):
    # Connect to a database and actually do the query...
```

Here, let's imagine that we want to create a unit test for the `create_user` function. In doing so, we want to avoid any calls out to an external system and so while we are running our unit tests, we want to replace the actual interaction with a database with a function that can capture the parameters sent to it and return pre-defined values. Therefore, our task is clear – to write a unit test which tests the functionality of `create_user` while also replacing `'execute_query'` with a mocked function.

To begin, we set up the skeleton of our class much like we did before, but with additional imports for `MagicMock`:

```

# Import Salt Testing libs
from tests.support.unit import TestCase

# Import Salt execution module to test
from salt.modules import db

# Import Mock libraries
from tests.support.mock import NO_MOCK, NO_MOCK_REASON, MagicMock, patch, call

# Create test case class and inherit from Salt's customized TestCase
# Skip this test case if we don't have access to mock!
@skipIf(NO_MOCK, NO_MOCK_REASON)
class DbTestCase(TestCase):
    def test_create_user(self):
        # First, we replace 'execute_query' with our own mock function
        with patch.object(db, 'execute_query', MagicMock()) as db_exq:

            # Now that the exits are blocked, we can run the function under test.
            db.create_user('testuser')

            # We could now query our mock object to see which calls were made
            # to it.
            ## print db_exq.mock_calls

            # Construct a call object that simulates the way we expected
            # execute_query to have been called.
            expected_call = call('CREATE USER testuser')

            # Compare the expected call with the list of actual calls. The
            # test will succeed or fail depending on the output of this
            # assertion.
            db_exq.assert_has_calls(expected_call)

```

26.21.6 Modifying `__salt__` In Place

At times, it becomes necessary to make modifications to a module's view of functions in its own `__salt__` dictionary. Luckily, this process is quite easy.

Below is an example that uses `MagicMock`'s `patch` functionality to insert a function into `__salt__` that's actually a `MagicMock` instance.

```

def show_patch(self):
    with patch.dict(my_module.__salt__,
                    {'function.to_replace': MagicMock()}):
        # From this scope, carry on with testing, with a modified __salt__!

```

26.21.7 A Simple Example

Let's assume that we're testing a very basic function in an imaginary Salt execution module. Given a module called `fib.py` that has a function called `calculate(num_of_results)`, which given a `num_of_results`, produces a list of sequential Fibonacci numbers of that length.

A unit test to test this function might be commonly placed in a file called `tests/unit/modules/test_fib.py`. The convention is to place unit tests for Salt execution modules in `test/unit/modules/` and to name the tests module prefixed with `test_*.py`.

Tests are grouped around test cases, which are logically grouped sets of tests against a piece of functionality in the tested software. Test cases are created as Python classes in the unit test module. To return to our example, here's how we might write the skeleton for testing `fib.py`:

```
# Import Salt Testing libs
from tests.support.unit import TestCase

# Import Salt execution module to test
import salt.modules.fib as fib

# Create test case class and inherit from Salt's customized TestCase
class FibTestCase(TestCase):
    """
    This class contains a set of functions that test salt.modules.fib.
    """
    def test_fib(self):
        """
        To create a unit test, we should prefix the name with `test_` so
        that it's recognized by the test runner.
        """
        fib_five = (0, 1, 1, 2, 3)
        self.assertEqual(fib.calculate(5), fib_five)
```

At this point, the test can now be run, either individually or as a part of a full run of the test runner. To ease development, a single test can be executed:

```
tests/runtests.py -v -n unit.modules.test_fib
```

This will report the status of the test: success, failure, or error. The `-v` flag increases output verbosity.

```
tests/runtests.py -n unit.modules.test_fib -v
```

To review the results of a particular run, take a note of the log location given in the output for each test:

```
Logging tests on /var/folders/nl/d809xbq577l3qrbj3ymtpbq80000gn/T/salt-runtests.log
```

26.21.8 A More Complete Example

Consider the following function from `salt/modules/linux_sysctl.py`.

```
def get(name):
    """
    Return a single sysctl parameter for this minion

    CLI Example:

    .. code-block:: bash

        salt '*' sysctl.get net.ipv4.ip_forward
    """
    cmd = 'sysctl -n {0}'.format(name)
    out = __salt__['cmd.run'](cmd)
    return out
```

This function is very simple, comprising only four source lines of code and having only one return statement, so we know only one test is needed. There are also two inputs to the function, the `name` function argument and the call to `__salt__['cmd.run']()`, both of which need to be appropriately mocked.

Mocking a function parameter is straightforward, whereas mocking a function call will require, in this case, the use of MagicMock. For added isolation, we will also redefine the `__salt__` dictionary such that it only contains `'cmd.run'`.

```
# Import Salt Libs
import salt.modules.linux_sysctl as linux_sysctl

# Import Salt Testing Libs
from tests.support.mixins import LoaderModuleMockMixin
from tests.support.unit import skipIf, TestCase
from tests.support.mock import (
    MagicMock,
    patch,
    NO_MOCK,
    NO_MOCK_REASON
)

@skipIf(NO_MOCK, NO_MOCK_REASON)
class LinuxSysctlTestCase(TestCase, LoaderModuleMockMixin):
    """
    TestCase for salt.modules.linux_sysctl module
    """

    def test_get(self):
        """
        Tests the return of get function
        """
        mock_cmd = MagicMock(return_value=1)
        with patch.dict(linux_sysctl.__salt__, {'cmd.run': mock_cmd}):
            self.assertEqual(linux_sysctl.get('net.ipv4.ip_forward'), 1)
```

Since `get()` has only one raise or return statement and that statement is a success condition, the test function is simply named `test_get()`. As described, the single function call parameter, `name` is mocked with `net.ipv4.ip_forward` and `__salt__['cmd.run']` is replaced by a MagicMock function object. We are only interested in the return value of `__salt__['cmd.run']`, which MagicMock allows us by specifying via `return_value=1`. Finally, the test itself tests for equality between the return value of `get()` and the expected return of 1. This assertion is expected to succeed because `get()` will determine its return value from `__salt__['cmd.run']`, which we have mocked to return 1.

26.21.9 A Complex Example

Now consider the `assign()` function from the same `salt/modules/linux_sysctl.py` source file.

```
def assign(name, value):
    """
    Assign a single sysctl parameter for this minion

    CLI Example:

    .. code-block:: bash

        salt '*' sysctl.assign net.ipv4.ip_forward 1
    """
    value = str(value)
    sysctl_file = '/proc/sys/{0}'.format(name.replace('.', '/'))
```

(continues on next page)

(continued from previous page)

```

if not os.path.exists(sysctl_file):
    raise CommandExecutionError('sysctl {0} does not exist'.format(name))

ret = {}
cmd = 'sysctl -w {0}="{1}"'.format(name, value)
data = __salt__['cmd.run_all'](cmd)
out = data['stdout']
err = data['stderr']

# Example:
#   # sysctl -w net.ipv4.tcp_rmem="4096 87380 16777216"
#   net.ipv4.tcp_rmem = 4096 87380 16777216
regex = re.compile(r'^{0}\s+=\s+{1}$'.format(re.escape(name),
                                           re.escape(value)))

if not regex.match(out) or 'Invalid argument' in str(err):
    if data['retcode'] != 0 and err:
        error = err
    else:
        error = out
    raise CommandExecutionError('sysctl -w failed: {0}'.format(error))
new_name, new_value = out.split(' = ', 1)
ret[new_name] = new_value
return ret

```

This function contains two raise statements and one return statement, so we know that we will need (at least) three tests. It has two function arguments and many references to non-builtin functions. In the tests below you will see that MagicMock's patch() method may be used as a context manager or as a decorator. When patching the salt dundered however, please use the context manager approach.

There are three test functions, one for each raise and return statement in the source function. Each function is self-contained and contains all and only the mocks and data needed to test the raise or return statement it is concerned with.

```

# Import Salt Libs
import salt.modules.linux_sysctl as linux_sysctl
from salt.exceptions import CommandExecutionError

# Import Salt Testing Libs
from tests.support.mixins import LoaderModuleMockMixin
from tests.support.unit import skipIf, TestCase
from tests.support.mock import (
    MagicMock,
    patch,
    NO_MOCK,
    NO_MOCK_REASON
)

@skipIf(NO_MOCK, NO_MOCK_REASON)
class LinuxSysctlTestCase(TestCase, LoaderModuleMockMixin):
    '''
    TestCase for salt.modules.linux_sysctl module
    '''

    @patch('os.path.exists', MagicMock(return_value=False))

```

(continues on next page)

(continued from previous page)

```

def test_assign_proc_sys_failed(self):
    """
    Tests if /proc/sys/<kernel-subsystem> exists or not
    """
    cmd = {'pid': 1337, 'retcode': 0, 'stderr': '',
           'stdout': 'net.ipv4.ip_forward = 1'}
    mock_cmd = MagicMock(return_value=cmd)
    with patch.dict(linux_sysctl.__salt__, {'cmd.run_all': mock_cmd}):
        self.assertRaises(CommandExecutionError,
                           linux_sysctl.assign,
                           'net.ipv4.ip_forward', 1)

@patch('os.path.exists', MagicMock(return_value=True))
def test_assign_cmd_failed(self):
    """
    Tests if the assignment was successful or not
    """
    cmd = {'pid': 1337, 'retcode': 0, 'stderr':
           'sysctl: setting key "net.ipv4.ip_forward": Invalid argument',
           'stdout': 'net.ipv4.ip_forward = backward'}
    mock_cmd = MagicMock(return_value=cmd)
    with patch.dict(linux_sysctl.__salt__, {'cmd.run_all': mock_cmd}):
        self.assertRaises(CommandExecutionError,
                           linux_sysctl.assign,
                           'net.ipv4.ip_forward', 'backward')

@patch('os.path.exists', MagicMock(return_value=True))
def test_assign_success(self):
    """
    Tests the return of successful assign function
    """
    cmd = {'pid': 1337, 'retcode': 0, 'stderr': '',
           'stdout': 'net.ipv4.ip_forward = 1'}
    ret = {'net.ipv4.ip_forward': '1'}
    mock_cmd = MagicMock(return_value=cmd)
    with patch.dict(linux_sysctl.__salt__, {'cmd.run_all': mock_cmd}):
        self.assertEqual(linux_sysctl.assign(
            'net.ipv4.ip_forward', 1), ret)

```

26.22 raet

RAET # Reliable Asynchronous Event Transport Protocol

See also:

[RAET Overview](#)

26.22.1 Protocol

Layering:

OSI Layers

7: Application: Format: Data (Stack to Application interface buffering etc) 6: Presentation: Format: Data (Encrypt-Decrypt convert to machine independent format) 5: Session: Format: Data (Interhost communications. Authenti-

ation. Groups) 4: Transport: Format: Segments (Reliable delivery of Message, Transactions, Segmentation, Error checking) 3: Network: Format: Packets/Datagrams (Addressing Routing) 2: Link: Format: Frames (Reliable per frame communications connection, Media access controller) 1: Physical: Bits (Transceiver communication connection not reliable)

Link is hidden from Raet Network is IP host address and Udp Port Transport is Raet transactions, service kind, tail error checking, Could include header signing as part of transport reliable delivery serialization of header Session is session id key exchange for signing. Grouping is Road (like 852 channel) Presentation is Encrypt Decrypt body Serialize Deserialize Body Application is body data dictionary

Header signing spans both the Transport and Session layers.

26.22.2 Header

JSON Header (Tradeoff some processing speed for extensibility, ease of use, readability)

Body initially JSON but support for "packed" binary body

26.22.3 Packet

Header ASCII Safe JSON Header termination: Empty line given by double pair of carriage return linefeed /r/n/r/n
10 13 10 13 ADAD 1010 1101 1010 1101

In json carriage return and newline characters cannot appear in a json encoded string unless they are escaped with backslash, so the 4 byte combination is illegal in valid json that does not have multi-byte unicode characters.

These means the header must be ascii safe so no multibyte utf-8 strings allowed in header.

Following Header Terminator is variable length signature block. This is binary and the length is provided in the header.

Following the signature block is the packet body or data. This may either be JSON or packed binary. The format is given in the json header

Finally is an optional tail block for error checking or encryption details

26.22.4 Header Fields

In UDP header

sh = source host sp = source port dh = destination host dp = destination port

In RAET Header

hk = header kind hl = header length

vn = version number

sd = Source Device ID dd = Destination Device ID cf = Corresponder Flag mf = Multicast Flag

si = Session ID ti = Transaction ID

sk = Service Kind pk = Packet Kind bf = Burst Flag (Send all Segments or Ordered packets without interleaved acks)

oi = Order Index dt = DateTime Stamp

sn = Segment Number sc = Segment Count

pf = Pending Segment Flag af = All Flag (Resent all Segments not just one)

nk = Auth header kind nl = Auth header length

bk = body kind bl = body length

tk = tail kind tl = tail length

fg = flags packed (Flags) Default '00' hex string 2 byte Hex string with bits (0, 0, af, pf, 0, bf, mf, cf) Zeros are TBD flags

26.22.5 Session Bootstrap

Minion sends packet with SID of Zero with public key of minions Public Private Key pair Master acks packet with SID of Zero to let minion know it received the request

Some time later Master sends packet with SID of zero that accepts the Minion

Minion

26.22.6 Session

Session is important for security. Want one session opened and then multiple transactions within session.

Session ID SID sid

GUID hash to guarantee uniqueness since no guarantee of nonvolatile storage or require file storage to keep last session ID used.

26.22.7 Service Types or Modular Services

Four Service Types

- A) One or more maybe (unacknowledged repeat) maybe means no guarantee
- B) **Exactly one at most (ack with retries) (duplicate detection idempotent)** at most means fixed number of retries has finite probability of failing B1) finite retries B2) infinite retries with exponential back-off up to a maximum delay
- C) **Exactly one of sequence at most (sequence numbered)** Receiver requests retry of missing packet with same B1 or B2 retry type
- D) **End to End (Application layer Request Response)** This is two B sub transactions

Initially unicast messaging Eventually support for Multicast

The use case for C) is to fragment large packets as once a UDP packet exceeds the frame size its reliability goes way down So its more reliable to fragment large packets.

Better approach might be to have more modularity. Services Levels

1) Maybe one or more

- A) **Fire and forget** no transaction either side
- B) **Repeat, no ack, no dupdet** repeat counter send side, no transaction on receive side
- C) **Repeat, no Ack, dupdet** repeat counter send side, dup detection transaction receive side

2) More or Less Once

- A) **retry finite, ack no dupdet** retry timer send side, finite number of retries ack receive side no dupdet

3) At most Once

- A) **retry finite, ack, dupdet** retry timer send side, finite number of retries ack receive side dupdet
- 4) **Exactly once**
 - A) **ack retry** retry timer send side, ack and duplicate detection receive side Infinite retries with exponential backoff
- 5) **Sequential sequence number**
 - A) reorder escrow
 - B) Segmented packets
- 6) request response to application layer

Service Features

- 1) repeats
- 2) ack retry transaction id
- 3) sequence number duplicate detection out of order detection sequencing
- 4) rep-req

Always include transaction id since multiple transactions on same port So get duplicate detection for free if keep transaction alive but if use

A) Maybe one or more B1) At Least One B2) Exactly One C) One of sequence D) End to End

A) Sender creates transaction id for number of repeats but receiver does not keep transaction alive

B1) Sender creates transaction id keeps it for retries. Receiver keeps it to send ack then kills so retry could be duplicate not detected

B2) Sender creates transaction id keeps for retries Receiver keeps tid for acks on any retries so no duplicates.

C) Sender creates TID and Sequence Number. Receiver checks for out of order sequence and can request retry.

D) Application layer sends response. So question is do we keep transaction open or have response be new transaction. No because then we need a rep-req ID so might as well use the same transaction id. Just keep alive until get response.

Little advantage to B1 vs B2 not having duplicates.

So 4 service types

- A) Maybe one or more (unacknowledged repeat)
- B) Exactly One (At most one) (ack with retry) (duplicate detection idempotent)
- C) One of Sequence (sequence numbered)
- D) End to End

Also multicast or unicast

Modular Transaction Table

Sender Side: Transaction ID plus transaction source sender or receiver generated transaction id Repeat Counter
Retry Timer Retry Counter (finite retries) Redo Timer (infinite redos with exponential backoff) Sequence number without acks (look for resend requests) Sequence with ack (wait for ack before sending next in sequence)
Segmentation

Receiver Side: Nothing just accept packet Acknowledge (can delete transaction after acknowledge) No duplicate detection
Transaction timeout (keep transaction until timeout) Duplicate detection save transaction id duplicate detection timeout
Request resend of missing packet in sequence Sequence reordering with escrow timeout wait escrow before requesting resend
Unsegmentation (request resends of missing segment)

26.23 SaltStack Git Policy

The SaltStack team follows a git policy to maintain stability and consistency with the repository.

The git policy has been developed to encourage contributions and make contributing to Salt as easy as possible. Code contributors to SaltStack projects DO NOT NEED TO READ THIS DOCUMENT, because all contributions come into SaltStack via a single gateway to make it as easy as possible for contributors to give us code.

The primary rule of git management in SaltStack is to make life easy on contributors and developers to send in code. Simplicity is always a goal!

26.23.1 New Code Entry

All new SaltStack code should be submitted against either the `develop` branch or a point release branch, depending on the nature of the submission. Please see the *Which Salt Branch?* section of Salt's *Contributing* documentation or the Release Branching section below for more information.

26.23.2 Release Branching

SaltStack maintains two types of releases, `Feature Releases` and `Point Releases` (also commonly referred to as `Bugfix Releases`). A feature release is managed by incrementing the first or second release point number, so 2015.5.5 -> 2015.8.0 signifies a feature release and 2015.8.0 -> 2015.8.1 signifies a point release.

Feature Release Branching

Each feature release is maintained in a dedicated git branch derived from the last applicable release commit on `develop`. All file changes relevant to the feature release will be completed in the `develop` branch prior to the creation of the feature release branch. The feature release branch will be named after the relevant numbers to the feature release, which constitute the first two numbers. This means that the release branch for the 2015.8.0 series is named 2015.8.

A feature release branch is created with the following command:

```
# git checkout -b 2015.8 # From the develop branch
# git push origin 2015.8
```

Point Releases

Each point release is derived from its parent release branch. Constructing point releases is a critical aspect of Salt development and is managed by members of the core development team. Point releases comprise bug and security fixes. Bug fixes can be made against a point release branch in one of two ways: the bug fix can be submitted directly against the point release branch, or an attempt can be made to back-port the fix to the point release branch.

Bug fixes should be made against the earliest supported release branch on which the bug is present. The Salt development team regularly merges older point release branches forward into newer point release branches. That way, the bug fixes that are submitted to older release branches can cascade up through all related release branches.

For more information, please see the *Which Salt Branch?* section of Salt's *Contributing* documentation.

Determining when a point release is going to be made is up to the project leader (Thomas Hatch). Generally point releases are made every 2-4 weeks or if there is a security fix they can be made sooner.

The point release is only designated by tagging the commit on the release branch with a release number using the existing convention (version 2015.8.1 is tagged with v2015.8.1). From the tag point a new source tarball is generated and published to PyPI, and a release announcement is made.

26.24 Salt Conventions

26.24.1 Writing Salt Documentation

Salt's documentation is built using the [Sphinx](#) documentation system. It can be built in a large variety of output formats including HTML, PDF, ePub, and manpage.

All the documentation is contained in the main Salt repository. Speaking broadly, most of the narrative documentation is contained within the <https://github.com/saltstack/salt/blob/master/doc> subdirectory and most of the reference and API documentation is written inline with Salt's Python code and extracted using a Sphinx extension.

Style

The Salt project recommends the [IEEE style guide](#) as a general reference for writing guidelines. Those guidelines are not strictly enforced but rather serve as an excellent resource for technical writing questions. The [NCBI style guide](#) is another very approachable resource.

Point-of-view

Use third-person perspective and avoid "I", "we", "you" forms of address. Identify the addressee specifically e.g., "users should", "the compiler does", etc.

Active voice

Use active voice and present-tense. Avoid filler words.

Title capitalization

Document titles and section titles within a page should follow normal sentence capitalization rules. Words that are capitalized as part of a regular sentence should be capitalized in a title and otherwise left as lowercase. Punctuation can be omitted unless it aids the intent of the title (e.g., exclamation points or question marks).

For example:

This is a main heading

=====

Paragraph.

This is an exciting sub-heading!

Paragraph.

Serial Commas

According to Wikipedia: In English punctuation, a serial comma or series comma (also called Oxford comma and Harvard comma) is a comma placed immediately before the coordinating conjunction (usually "and", "or", or "nor") in a series of three or more terms. For example, a list of three countries might be punctuated either as "France, Italy, and Spain" (with the serial comma), or as "France, Italy and Spain" (without the serial comma)."

When writing a list that includes three or more items, the serial comma should always be used.

Documenting modules

Documentation for Salt's various module types is inline in the code. During the documentation build process it is extracted and formatted into the final HTML, PDF, etc format.

Inline documentation

Python has special multi-line strings called docstrings as the first element in a function or class. These strings allow documentation to live alongside the code and can contain special formatting. For example:

```
def my_function(value):
    """
    Upper-case the given value

    Usage:

    .. code-block:: python

        val = 'a string'
        new_val = myfunction(val)
        print(new_val) # 'A STRING'

    :param value: a string
    :return: a copy of ``value`` that has been upper-cased
    """
    return value.upper()
```

Specify a release for additions or changes

New functions or changes to existing functions should include a marker that denotes what Salt release will be affected. For example:

```
def my_function(value):
    """
    Upper-case the given value

    .. versionadded:: 2014.7.0

    <...snip...>
    """
    return value.upper()
```

For changes to a function:

```
def my_function(value, strip=False):
    """
    Upper-case the given value

    .. versionchanged:: 2016.3.0
       Added a flag to also strip whitespace from the string.

    <...snip...>
    """
    if strip:
        return value.upper().strip()
    return value.upper()
```

Adding module documentation to the index

Each module type has an index listing all modules of that type. For example: *execution modules*, *state modules*, *renderer modules*. New modules must be added to the index manually.

1. Edit the file for the module type: *execution modules*, *state modules*, *renderer modules*, etc.
2. Add the new module to the alphabetized list.
3. *Build the documentation* which will generate an `.rst` file for the new module in the same directory as the `index.rst`.
4. Commit the changes to `index.rst` and the new `.rst` file and send a pull request.

Cross-references

The Sphinx documentation system contains a wide variety of cross-referencing capabilities.

Glossary entries

Link to *glossary entries* using the `term` role. A cross-reference should be added the first time a Salt-specific term is used in a document.

```
A common way to encapsulate master-side functionality is by writing a
custom :term:`Runner Function`. Custom Runner Functions are easy to write.
```

Index entries

Sphinx automatically generates many kinds of index entries, but it is occasionally useful to manually add items to the index.

One method is to use the `index directive` above the document or section that should appear in the index.

```
.. index:: ! Event, event bus, event system
   see: Reactor; Event
```

Another method is to use the `index role` inline with the text that should appear in the index. The index entry is created and the target text is left otherwise intact.

Information about the `:index:`Salt Reactor``

Paragraph.

Documents and sections

Each document should contain a unique top-level label of the form:

```
.. _my-page:
```

```
My page
```

```
=====
```

Paragraph.

Unique labels can be linked using the `ref` role. This allows cross-references to survive document renames or movement.

For more information see `:ref:`my-page``.

Note, the `:doc:` role should *not* be used to link documents together.

Modules

Cross-references to Salt modules can be added using Sphinx's Python domain roles. For example, to create a link to the `test.ping` function:

A useful execution module to test active communication with a minion is the `:py:func:`test.ping <salt.modules.test.ping>`` function.

Salt modules can be referenced as well:

The `:py:mod:`test module <salt.modules.test>`` contains many useful functions for inspecting an active Salt connection.

The same syntax works for all modules types:

One of the workhorse state module functions in Salt is the `:py:func:`file.managed <salt.states.file.managed>`` function.

Settings

Individual settings in the Salt Master or Salt Minion configuration files are cross-referenced using two custom roles, `conf_master`, and `conf_minion`.

The `:conf_minion:`minion ID <id>`` setting is a unique identifier for a single minion.

Documentation Changes and Fixes

Documentation changes and fixes should be made against the earliest supported release branch that the update applies to. The practice of updating a release branch instead of making all documentation changes against Salt's main, default branch, `develop`, is necessary in order for the docs to be as up-to-date as possible when the docs are built.

The workflow mentioned above is also in line with the recommendations outlined in Salt's [Contributing](#) page. You can read more about how to choose where to submit documentation fixes by reading the [Salt's Branch Topology](#) section.

For an explanation of how to submit changes against various branches, see the [Sending a GitHub pull request](#) section. Specifically, see the section describing how to `Create a new branch` and the steps that follow.

Building the documentation

1. Install Sphinx using a system package manager or `pip`. The package name is often of the form `python-sphinx`. There are no other dependencies.
2. Build the documentation using the provided Makefile or `.bat` file on Windows.

```
cd /path/to/salt/doc
make html
```

3. The generated documentation will be written to the `doc/_build/<format>` directory.
4. A useful method of viewing the HTML documentation locally is to start Python's built-in HTTP server:

```
cd /path/to/salt/doc/_build/html
python -m SimpleHTTPServer
```

Then pull up the documentation in a web browser at <http://localhost:8000/>.

26.24.2 Salt Formulas

Formulas are pre-written Salt States. They are as open-ended as Salt States themselves and can be used for tasks such as installing a package, configuring, and starting a service, setting up users or permissions, and many other common tasks.

All official Salt Formulas are found as separate Git repositories in the "saltstack-formulas" organization on GitHub: <https://github.com/saltstack-formulas>

As a simple example, to install the popular Apache web server (using the normal defaults for the underlying distro) simply include the `apache-formula` from a top file:

```
base:
  'web*':
    - apache
```

Installation

Each Salt Formula is an individual Git repository designed as a drop-in addition to an existing Salt State tree. Formulas can be installed in the following ways.

Adding a Formula as a GitFS remote

One design goal of Salt's GitFS fileserver backend was to facilitate reusable States. GitFS is a quick and natural way to use Formulas.

1. *Install any necessary dependencies and configure GitFS.*
2. Add one or more Formula repository URLs as remotes in the `gitfs_remotes` list in the Salt Master configuration file:

```
gitfs_remotes:
- https://github.com/saltstack-formulas/apache-formula
- https://github.com/saltstack-formulas/memcached-formula
```

We strongly recommend forking a formula repository into your own GitHub account to avoid unexpected changes to your infrastructure.

Many Salt Formulas are highly active repositories so pull new changes with care. Plus any additions you make to your fork can be easily sent back upstream with a quick pull request!

3. Restart the Salt master.

Beginning with the 2018.3.0 release, using formulas with GitFS is now much more convenient for deployments which use many different fileserver environments (i.e. saltenvs). Using the `all_saltenvs` parameter, files from a single git branch/tag will appear in all environments. See [here](#) for more information on this feature.

Adding a Formula directory manually

Formulas are simply directories that can be copied onto the local file system by using Git to clone the repository or by downloading and expanding a tarball or zip file of the repository. The directory structure is designed to work with `file_roots` in the Salt master configuration.

1. Clone or download the repository into a directory:

```
mkdir -p /srv/formulas
cd /srv/formulas
git clone https://github.com/saltstack-formulas/apache-formula.git

# or

mkdir -p /srv/formulas
cd /srv/formulas
wget https://github.com/saltstack-formulas/apache-formula/archive/master.tar.gz
tar xf apache-formula-master.tar.gz
```

2. Add the new directory to `file_roots`:

```
file_roots:
base:
- /srv/salt
- /srv/formulas/apache-formula
```

3. Restart the Salt Master.

Usage

Each Formula is intended to be immediately usable with sane defaults without any additional configuration. Many formulas are also configurable by including data in Pillar; see the `pillar.example` file in each Formula repository for available options.

Including a Formula in an existing State tree

Formula may be included in an existing `sls` file. This is often useful when a state you are writing needs to `require` or `extend` a state defined in the formula.

Here is an example of a state that uses the `epel-formula` in a `require` declaration which directs Salt to not install the `python26` package until after the EPEL repository has also been installed:

```
include:
  - epel

python26:
  pkg.installed:
    - require:
      - pkg: epel
```

Including a Formula from a Top File

Some Formula perform completely standalone installations that are not referenced from other state files. It is usually cleanest to include these Formula directly from a Top File.

For example the easiest way to set up an OpenStack deployment on a single machine is to include the `openstack-standalone-formula` directly from a `top.sls` file:

```
base:
  'myopenstackmaster':
    - openstack
```

Quickly deploying OpenStack across several dedicated machines could also be done directly from a Top File and may look something like this:

```
base:
  'controller':
    - openstack.horizon
    - openstack.keystone
  'hyper-*':
    - openstack.nova
    - openstack.glance
  'storage-*':
    - openstack.swift
```

Configuring Formula using Pillar

Salt Formulas are designed to work out of the box with no additional configuration. However, many Formula support additional configuration and customization through *Pillar*. Examples of available options can be found in a file named `pillar.example` in the root directory of each Formula repository.

Using Formula with your own states

Remember that Formula are regular Salt States and can be used with all Salt's normal state mechanisms. Formula can be required from other States with *require* declarations, they can be modified using *extend*, they can be made to watch other states with *The _in versions of requisites*.

The following example uses the stock `apache-formula` alongside a custom state to create a vhost on a Debian/Ubuntu system and to reload the Apache service whenever the vhost is changed.

```
# Include the stock, upstream apache formula.
include:
  - apache

# Use the watch_in requisite to cause the apache service state to reload
# apache whenever the my-example-com-vhost state changes.
my-example-com-vhost:
  file:
    - managed
    - name: /etc/apache2/sites-available/my-example-com
    - watch_in:
      - service: apache
```

Don't be shy to read through the source for each Formula!

Reporting problems & making additions

Each Formula is a separate repository on GitHub. If you encounter a bug with a Formula please file an issue in the respective repository! Send fixes and additions as a pull request. Add tips and tricks to the repository wiki.

Writing Formulas

Each Formula is a separate repository in the `saltstack-formulas` organization on GitHub.

Get involved creating new Formulas

The best way to create new Formula repositories for now is to create a repository in your own account on GitHub and notify a SaltStack employee when it is ready. We will add you to the Contributors team on the `saltstack-formulas` organization and help you transfer the repository over. Ping a SaltStack employee on IRC (`#salt` on Freenode), join the `#formulas` channel on the `salt-slack` or send an email to the `salt-users` mailing list.

There are a lot of repositories in that organization! Team members can manage which repositories they are subscribed to on GitHub's watching page: <https://github.com/watching>.

Members of the Contributors team are welcome to participate in reviewing pull requests across the Organization. Some repositories will have regular contributors and some repositories will not. As you get involved in a repository be sure to communicate with any other contributors there on pull requests that are large or have breaking changes.

In general it is best to have another Contributor review and merge any pull requests that you open. Feel free to `at-mention` other regular contributors to a repository and request a review. However, there are a lot of formula repositories so if a repository does not yet have regular contributors or if your pull request has stayed open for more than a couple days feel free to "selfie-merge" your own pull request.

Style

Maintainability, readability, and reusability are all marks of a good Salt sls file. This section contains several suggestions and examples.

```
# Deploy the stable master branch unless version overridden by passing
# Pillar at the CLI or via the Reactor.

deploy_myapp:
  git.latest:
    - name: git@github.com/myco/myapp.git
    - version: {{ salt.pillar.get('myapp:version', 'master') }}
```

Use a descriptive State ID

The ID of a state is used as a unique identifier that may be referenced via other states in *requisites*. It must be unique across the whole state tree (*it is a key in a dictionary*, after all).

In addition a state ID should be descriptive and serve as a high-level hint of what it will do, or manage, or change. For example, `deploy_webapp`, or `apache`, or `reload_firewall`.

Use `module.function` notation

So-called "short-declaration" notation is preferred for referencing state modules and state functions. It provides a consistent pattern of `module.function` shared between Salt States, the Reactor, Salt Mine, the Scheduler, as well as with the CLI.

```
# Do
apache:
  pkg.installed:
    - name: httpd

# Don't
apache:
  pkg:
    - installed
    - name: httpd
```

Salt's state compiler will transform "short-decs" into the longer format *when compiling the human-friendly highstate structure into the machine-friendly lowstate structure*.

Specify the `name` parameter

Use a unique and permanent identifier for the state ID and reserve `name` for data with variability.

The *name declaration* is a required parameter for all state functions. The state ID will implicitly be used as name if it is not explicitly set in the state.

In many state functions the `name` parameter is used for data that varies such as OS-specific package names, OS-specific file system paths, repository addresses, etc. Any time the ID of a state changes all references to that ID must also be changed. Use a permanent ID when writing a state the first time to future-proof that state and allow for easier refactors down the road.

Comment state files

YAML allows comments at varying indentation levels. It is a good practice to comment state files. Use vertical whitespace to visually separate different concepts or actions.

```
# Start with a high-level description of the current sls file.
# Explain the scope of what it will do or manage.

# Comment individual states as necessary.
update_a_config_file:
  # Provide details on why an unusual choice was made. For example:
  #
  # This template is fetched from a third-party and does not fit our
  # company norm of using Jinja. This must be processed using Mako.
  file.managed:
    - name: /path/to/file.cfg
    - source: salt://path/to/file.cfg.template
    - template: mako

  # Provide a description or explanation that did not fit within the state
  # ID. For example:
  #
  # Update the application's last-deployed timestamp.
  # This is a workaround until Bob configures Jenkins to automate RPM
  # builds of the app.
  cmd.run:
    # FIXME: Joe needs this to run on Windows by next quarter. Switch these
    # from shell commands to Salt's file.managed and file.replace state
    # modules.
    - name: |
      touch /path/to/file_last_updated
      sed -e 's/foo/bar/g' /path/to/file_environment
    - onchanges:
      - file: a_config_file
```

Be careful to use Jinja comments for commenting Jinja code and YAML comments for commenting YAML code.

```
# BAD EXAMPLE
# The Jinja in this YAML comment is still executed!
# {% set apache_is_installed = 'apache' in salt.pkg.list_pkgs() %}

# GOOD EXAMPLE
# The Jinja in this Jinja comment will not be executed.
{# {% set apache_is_installed = 'apache' in salt.pkg.list_pkgs() %} #}
```

Easy on the Jinja!

Jinja templating provides vast flexibility and power when building Salt sls files. It can also create an unmaintainable tangle of logic and data. Speaking broadly, Jinja is best used when kept apart from the states (as much as is possible).

Below are guidelines and examples of how Jinja can be used effectively.

Know the evaluation and execution order

High-level knowledge of how Salt states are compiled and run is useful when writing states.

The default *renderer* setting in Salt is Jinja piped to YAML. Each is a separate step. Each step is not aware of the previous or following step. Jinja is not YAML aware, YAML is not Jinja aware; they cannot share variables or interact.

- Whatever the Jinja step produces must be valid YAML.
- Whatever the YAML step produces must be a valid *highstate data structure*. (This is also true of the final step for *any of the alternate renderers* in Salt.)
- Highstate can be thought of as a human-friendly data structure; easy to write and easy to read.
- Salt's state compiler validates the *highstate* and compiles it to low state.
- Low state can be thought of as a machine-friendly data structure. It is a list of dictionaries that each map directly to a function call.
- Salt's state system finally starts and executes on each "chunk" in the low state. Remember that requisites are evaluated at runtime.
- The return for each function call is added to the "running" dictionary which is the final output at the end of the state run.

The full evaluation and execution order:

```
Jinja -> YAML -> Highstate -> low state -> execution
```

Avoid changing the underlying system with Jinja

Avoid calling commands from Jinja that change the underlying system. Commands run via Jinja do not respect Salt's dry-run mode (`test=True`)! This is usually in conflict with the idempotent nature of Salt states unless the command being run is also idempotent.

Inspect the local system

A common use for Jinja in Salt states is to gather information about the underlying system. The `grains` dictionary available in the Jinja context is a great example of common data points that Salt itself has already gathered. Less common values are often found by running commands. For example:

```
{% set is_selinux_enabled = salt.cmd.run('sestatus') == '1' %}
```

This is usually best done with a variable assignment in order to separate the data from the state that will make use of the data.

Gather external data

One of the most common uses for Jinja is to pull external data into the state file. External data can come from anywhere like API calls or database queries, but it most commonly comes from flat files on the file system or Pillar data from the Salt Master. For example:

```
{% set some_data = salt.pillar.get('some_data', {'sane default': True}) %}  
  
{# or #}  
  
{% import_yaml 'path/to/file.yaml' as some_data %}
```

(continues on next page)

(continued from previous page)

```
{# or #}

{% import_json 'path/to/file.json' as some_data %}

{# or #}

{% import_text 'path/to/ssh_key.pub' as ssh_pub_key %}

{# or #}

{% from 'path/to/other_file.jinja' import some_data with context %}
```

This is usually best done with a variable assignment in order to separate the data from the state that will make use of the data.

Light conditionals and looping

Jinja is extremely powerful for programmatically generating Salt states. It is also easy to overuse. As a rule of thumb, if it is hard to read it will be hard to maintain!

Separate Jinja control-flow statements from the states as much as is possible to create readable states. Limit Jinja within states to simple variable lookups.

Below is a simple example of a readable loop:

```
{% for user in salt.pillar.get('list_of_users', []) %}

{# Ensure unique state IDs when looping. #}
{{ user.name }}-{{ loop.index }}:
  user.present:
    - name: {{ user.name }}
    - shell: {{ user.shell }}

{% endfor %}
```

Avoid putting a Jinja conditionals within Salt states where possible. Readability suffers and the correct YAML indentation is difficult to see in the surrounding visual noise. Parametrization (discussed below) and variables are both useful techniques to avoid this. For example:

```
{# ---- Bad example ---- #}

apache:
  pkg.installed:
    {% if grains.os_family == 'RedHat' %}
    - name: httpd
    {% elif grains.os_family == 'Debian' %}
    - name: apache2
    {% endif %}

{# ---- Better example ---- #}

{% if grains.os_family == 'RedHat' %}
{% set name = 'httpd' %}
{% elif grains.os_family == 'Debian' %}
{% set name = 'apache2' %}
```

(continues on next page)

(continued from previous page)

```
{% endif %}

apache:
  pkg.installed:
    - name: {{ name }}

{# ---- Good example ---- #}

{% set name = {
  'RedHat': 'httpd',
  'Debian': 'apache2',
}.get(grains.os_family) %}

apache:
  pkg.installed:
    - name: {{ name }}
```

Dictionaries are useful to effectively "namespace" a collection of variables. This is useful with parametrization (discussed below). Dictionaries are also easily combined and merged. And they can be directly serialized into YAML which is often easier than trying to create valid YAML through templating. For example:

```
{# ---- Bad example ---- #}

haproxy_conf:
  file.managed:
    - name: /etc/haproxy/haproxy.cfg
    - template: jinja
    {% if 'external_loadbalancer' in grains.roles %}
    - source: salt://haproxy/external_haproxy.cfg
    {% elif 'internal_loadbalancer' in grains.roles %}
    - source: salt://haproxy/internal_haproxy.cfg
    {% endif %}
    - context:
      {% if 'external_loadbalancer' in grains.roles %}
      ssl_termination: True
      {% elif 'internal_loadbalancer' in grains.roles %}
      ssl_termination: False
      {% endif %}

{# ---- Better example ---- #}

{% load_yaml as haproxy_defaults %}
common_settings:
  bind_port: 80

internal_loadbalancer:
  source: salt://haproxy/internal_haproxy.cfg
  settings:
    bind_port: 8080
    ssl_termination: False

external_loadbalancer:
  source: salt://haproxy/external_haproxy.cfg
  settings:
    ssl_termination: True
{% endload %}
```

(continues on next page)

(continued from previous page)

```

{% if 'external_loadbalancer' in grains.roles %}
{% set haproxy = haproxy_defaults['external_loadbalancer'] %}
{% elif 'internal_loadbalancer' in grains.roles %}
{% set haproxy = haproxy_defaults['internal_loadbalancer'] %}
{% endif %}

{% do haproxy.settings.update(haproxy_defaults.common_settings) %}

haproxy_conf:
  file.managed:
    - name: /etc/haproxy/haproxy.cfg
    - template: jinja
    - source: {{ haproxy.source }}
    - context: {{ haproxy.settings | yaml() }}

```

There is still room for improvement in the above example. For example, extracting into an external file or replacing the if-elif conditional with a function call to filter the correct data more succinctly. However, the state itself is simple and legible, the data is separate and also simple and legible. And those suggested improvements can be made at some future date without altering the state at all!

Avoid heavy logic and programming

Jinja is not Python. It was made by Python programmers and shares many semantics and some syntax but it does not allow for arbitrary Python function calls or Python imports. Jinja is a fast and efficient templating language but the syntax can be verbose and visually noisy.

Once Jinja use within an sls file becomes slightly complicated – long chains of if-elif-elif-else statements, nested conditionals, complicated dictionary merges, wanting to use sets – instead consider using a different Salt renderer, such as the Python renderer. As a rule of thumb, if it is hard to read it will be hard to maintain – switch to a format that is easier to read.

Using alternate renderers is very simple to do using Salt’s “she-bang” syntax at the top of the file. The Python renderer must simply return the correct *highstate data structure*. The following example is a state tree of two sls files, one simple and one complicated.

/srv/salt/top.sls:

```

base:
  '*':
    - common_configuration
    - roles_configuration

```

/srv/salt/common_configuration.sls:

```

common_users:
  user.present:
    - names:
      - larry
      - curly
      - moe

```

/srv/salt/roles_configuration:

```

#!/py
def run():
    list_of_roles = set()

    # This example has the minion id in the form 'web-03-dev'.
    # Easily access the grains dictionary:
    try:
        app, instance_number, environment = __grains__['id'].split('-')
        instance_number = int(instance_number)
    except ValueError:
        app, instance_number, environment = ['Unknown', 0, 'dev']

    list_of_roles.add(app)

    if app == 'web' and environment == 'dev':
        list_of_roles.add('primary')
        list_of_roles.add('secondary')
    elif app == 'web' and environment == 'staging':
        if instance_number == 0:
            list_of_roles.add('primary')
        else:
            list_of_roles.add('secondary')

    # Easily cross-call Salt execution modules:
    if __salt__['myutils.query_valid_ec2_instance']():
        list_of_roles.add('is_ec2_instance')

    return {
        'set_roles_grains': {
            'grains.present': [
                {'name': 'roles'},
                {'value': list(list_of_roles)},
            ],
        },
    }

```

Jinja Macros

In Salt sls files Jinja macros are useful for one thing and one thing only: creating mini templates that can be reused and rendered on demand. Do not fall into the trap of thinking of macros as functions; Jinja is not Python (see above).

Macros are useful for creating reusable, parameterized states. For example:

```

{% macro user_state(state_id, user_name, shell='/bin/bash', groups=[]) %}
{{ state_id }}:
  user.present:
    - name: {{ user_name }}
    - shell: {{ shell }}
    - groups: {{ groups | json() }}
{% endmacro %}

{% for user_info in salt.pillar.get('my_users', []) %}
{{ user_state('user_number_' ~ loop.index, **user_info) }}
{% endfor %}

```

Macros are also useful for creating one-off "serializers" that can accept a data structure and write that out as a

domain-specific configuration file. For example, the following macro could be used to write a php.ini config file:

/srv/salt/php.sls:

```
php_ini:
  file.managed:
    - name: /etc/php.ini
    - source: salt://php.ini.tpl
    - template: jinja
    - context:
      php_ini_settings: {{ salt.pillar.get('php_ini', {}) | json() }}
```

/srv/pillar/php.sls:

```
php_ini:
  PHP:
    engine: 'On'
    short_open_tag: 'Off'
    error_reporting: 'E_ALL & ~E_DEPRECATED & ~E_STRICT'
```

/srv/salt/php.ini.tpl:

```
{% macro php_ini_serializer(data) %}
{% for section_name, name_val_pairs in data.items() %}
[{{ section_name }}]
{% for name, val in name_val_pairs.items() -%}
{{ name }} = "{{ val }}"
{% endfor %}
{% endfor %}
{% endmacro %}

; File managed by Salt at <{{ source }}>.
; Your changes will be overwritten.

{{ php_ini_serializer(php_ini_settings) }}
```

Abstracting static defaults into a lookup table

Separate data that a state uses from the state itself to increase the flexibility and reusability of a state.

An obvious and common example of this is platform-specific package names and file system paths. Another example is sane defaults for an application, or common settings within a company or organization. Organizing such data as a dictionary (aka hash map, lookup table, associative array) often provides a lightweight namespacing and allows for quick and easy lookups. In addition, using a dictionary allows for easily merging and overriding static values within a lookup table with dynamic values fetched from Pillar.

A strong convention in Salt Formulas is to place platform-specific data, such as package names and file system paths, into a file named `map.jinja` that is placed alongside the state files.

The following is an example from the MySQL Formula. The `grains.filter_by` function performs a lookup on that table using the `os_family` grain (by default).

The result is that the `mysql` variable is assigned to a *subset* of the lookup table for the current platform. This allows states to reference, for example, the name of a package without worrying about the underlying OS. The syntax for referencing a value is a normal dictionary lookup in Jinja, such as `{{ mysql['service'] }}` or the shorthand `{{ mysql.service }}`.

map.jinja:

```
{% set mysql = salt['grains.filter_by']({
    'Debian': {
        'server': 'mysql-server',
        'client': 'mysql-client',
        'service': 'mysql',
        'config': '/etc/mysql/my.cnf',
        'python': 'python-mysqldb',
    },
    'RedHat': {
        'server': 'mysql-server',
        'client': 'mysql',
        'service': 'mysqld',
        'config': '/etc/my.cnf',
        'python': 'MySQL-python',
    },
    'Gentoo': {
        'server': 'dev-db/mysql',
        'client': 'dev-db/mysql',
        'service': 'mysql',
        'config': '/etc/mysql/my.cnf',
        'python': 'dev-python/mysql-python',
    },
}, merge=salt['pillar.get']('mysql:lookup')) %}
```

Values defined in the map file can be fetched for the current platform in any state file using the following syntax:

```
{% from "mysql/map.jinja" import mysql with context %}

mysql-server:
  pkg.installed:
    - name: {{ mysql.server }}
  service.running:
    - name: {{ mysql.service }}
```

Organizing Pillar data

It is considered a best practice to make formulas expect **all** formula-related parameters to be placed under second-level lookup key, within a main namespace designated for holding data for particular service/software/etc, managed by the formula:

```
mysql:
  lookup:
    version: 5.7.11
```

Collecting common values

Common values can be collected into a *base* dictionary. This minimizes repetition of identical values in each of the `lookup_dict` sub-dictionaries. Now only the values that are different from the base must be specified by the alternates:

map.jinja:

```
{% set mysql = salt['grains.filter_by']({
    'default': {
```

(continues on next page)

(continued from previous page)

```

    'server': 'mysql-server',
    'client': 'mysql-client',
    'service': 'mysql',
    'config': '/etc/mysql/my.cnf',
    'python': 'python-mysqldb',
  },
  'Debian': {
  },
  'RedHat': {
    'client': 'mysql',
    'service': 'mysqld',
    'config': '/etc/my.cnf',
    'python': 'MySQL-python',
  },
  'Gentoo': {
    'server': 'dev-db/mysql',
    'client': 'dev-db/mysql',
    'python': 'dev-python/mysql-python',
  },
},
merge=salt['pillar.get']('mysql:lookup', base='default') %}

```

Overriding values in the lookup table

Allow static values within lookup tables to be overridden. This is a simple pattern which once again increases flexibility and reusability for state files.

The `merge` argument in `filter_by` specifies the location of a dictionary in Pillar that can be used to override values returned from the lookup table. If the value exists in Pillar it will take precedence.

This is useful when software or configuration files is installed to non-standard locations or on unsupported platforms. For example, the following Pillar would replace the `config` value from the call above.

```

mysql:
  lookup:
    config: /usr/local/etc/mysql/my.cnf

```

Note: Protecting Expansion of Content with Special Characters

When templating keep in mind that YAML does have special characters for quoting, flows, and other special structure and content. When a Jinja substitution may have special characters that will be incorrectly parsed by YAML care must be taken. It is a good policy to use the `yaml_encode` or the `yaml_dquote` Jinja filters:

```

{%- set foo = 7.7 %}
{%- set bar = none %}
{%- set baz = true %}
{%- set zap = 'The word of the day is "salty".' %}
{%- set zip = '"The quick brown fox . . ."' %}

foo: {{ foo|yaml_encode }}
bar: {{ bar|yaml_encode }}
baz: {{ baz|yaml_encode }}
zap: {{ zap|yaml_encode }}
zip: {{ zip|yaml_dquote }}

```

The above will be rendered as below:

```
foo: 7.7
bar: null
baz: true
zap: "The word of the day is \"salty\"."
zip: "\"The quick brown fox . . .\""
```

The `filter_by` function performs a simple dictionary lookup but also allows for fetching data from Pillar and overriding data stored in the lookup table. That same workflow can be easily performed without using `filter_by`; other dictionaries besides data from Pillar can also be used.

```
{% set lookup_table = {...} %}
{% do lookup_table.update(salt.pillar.get('my:custom:data')) %}
```

When to use lookup tables

The `map.jinja` file is only a convention within Salt Formulas. This greater pattern is useful for a wide variety of data in a wide variety of workflows. This pattern is not limited to pulling data from a single file or data source. This pattern is useful in States, Pillar and the Reactor, for example.

Working with a data structure instead of, say, a config file allows the data to be cobbled together from multiple sources (local files, remote Pillar, database queries, etc), combined, overridden, and searched.

Below are a few examples of what lookup tables may be useful for and how they may be used and represented.

Platform-specific information

An obvious pattern and one used heavily in Salt Formulas is extracting platform-specific information such as package names and file system paths in a file named `map.jinja`. The pattern is explained in detail above.

Sane defaults

Application settings can be a good fit for this pattern. Store default settings along with the states themselves and keep overrides and sensitive settings in Pillar. Combine both into a single dictionary and then write the application config or settings file.

The example below stores most of the Apache Tomcat `server.xml` file alongside the Tomcat states and then allows values to be updated or augmented via Pillar. (This example uses the BadgerFish format for transforming JSON to XML.)

`/srv/salt/tomcat/defaults.yaml:`

```
Server:
  '@port': '8005'
  '@shutdown': SHUTDOWN
GlobalNamingResources:
  Resource:
    '@auth': Container
    '@description': User database that can be updated and saved
    '@factory': org.apache.catalina.users.MemoryUserDatabaseFactory
    '@name': UserDatabase
    '@pathname': conf/tomcat-users.xml
```

(continues on next page)

(continued from previous page)

```
'@type': org.apache.catalina.UserDatabase
# <...snip...>
```

/srv/pillar/tomcat.sls:

```
appX:
  server_xml_overrides:
    Server:
      Service:
        '@name': Catalina
      Connector:
        '@port': '8009'
        '@protocol': AJP/1.3
        '@redirectPort': '8443'
    # <...snip...>
```

/srv/salt/tomcat/server_xml.sls:

```
{% import_yaml 'tomcat/defaults.yaml' as server_xml_defaults %}
{% set server_xml_final_values = salt.pillar.get(
  'appX:server_xml_overrides',
  default=server_xml_defaults,
  merge=True)
%}

appX_server_xml:
  file.serialize:
    - name: /etc/tomcat/server.xml
    - dataset: {{ server_xml_final_values | json() }}
    - formatter: xml_badgerfish
```

The *file.serialize* state can provide a shorthand for creating some files from data structures. There are also many examples within Salt Formulas of creating one-off "serializers" (often as Jinja macros) that reformat a data structure to a specific config file format. For example, look at the 'Nginx vhosts' `_states` or the `php.ini` file template.

Environment specific information

A single state can be reused when it is parameterized as described in the section below, by separating the data the state will use from the state that performs the work. This can be the difference between deploying *Application X* and *Application Y*, or the difference between production and development. For example:

/srv/salt/app/deploy.sls:

```
{# Load the map file. #}
{% import_yaml 'app/defaults.yaml' as app_defaults %}

{# Extract the relevant subset for the app configured on the current
  machine (configured via a grain in this example). #}
{% app = app_defaults.get(salt.grains.get('role')) %}

{# Allow values from Pillar to (optionally) update values from the lookup
  table. #}
{% do app_defaults.update(salt.pillar.get('myapp', {})) %}

deploy_application:
```

(continues on next page)

(continued from previous page)

```

git.latest:
  - name: {{ app.repo_url }}
  - version: {{ app.version }}
  - target: {{ app.deploy_dir }}

myco/myapp/installed:
  event.send:
    - data:
        version: {{ app.version }}
    - onchanges:
        - git: deploy_application

```

/srv/salt/app/defaults.yaml:

```

appX:
  repo_url: git@github.com/myco/appX.git
  target: /var/www/appX
  version: master
appY:
  repo_url: git@github.com/myco/appY.git
  target: /var/www/appY
  version: v1.2.3.4

```

Single-purpose SLS files

Each sls file in a Formula should strive to do a single thing. This increases the reusability of this file by keeping unrelated tasks from getting coupled together.

As an example, the base Apache formula should only install the Apache httpd server and start the httpd service. This is the basic, expected behavior when installing Apache. It should not perform additional changes such as set the Apache configuration file or create vhosts.

If a formula is single-purpose as in the example above, other formulas, and also other states can `include` and use that formula with *Requisites and Other Global State Arguments* without also including undesirable or unintended side-effects.

The following is a best-practice example for a reusable Apache formula. (This skips platform-specific options for brevity. See the full [apache-formula](#) for more.)

```

# apache/init.sls
apache:
  pkg.installed:
    [...]
  service.running:
    [...]

# apache/mod_wsgi.sls
include:
  - apache

mod_wsgi:
  pkg.installed:
    [...]
  - require:
    - pkg: apache

```

(continues on next page)

(continued from previous page)

```
# apache/conf.sls
include:
  - apache

apache_conf:
  file.managed:
    [...]
    - watch_in:
      - service: apache
```

To illustrate a bad example, say the above Apache formula installed Apache and also created a default vhost. The `mod_wsgi` state would not be able to include the Apache formula to create that dependency tree without also installing the unneeded default vhost.

Formulas should be reusable. Avoid coupling unrelated actions together.

Parameterization

Parameterization is a key feature of Salt Formulas and also for Salt States. Parameterization allows a single Formula to be reused across many operating systems; to be reused across production, development, or staging environments; and to be reused by many people all with varying goals.

Writing states, specifying ordering and dependencies is the part that takes the longest to write and to test. Filling those states out with data such as users or package names or file locations is the easy part. How many users, what those users are named, or where the files live are all implementation details that **should be parameterized**. This separation between a state and the data that populates a state creates a reusable formula.

In the example below the data that populates the state can come from anywhere – it can be hard-coded at the top of the state, it can come from an external file, it can come from Pillar, it can come from an execution function call, or it can come from a database query. The state itself doesn't change regardless of where the data comes from. Production data will vary from development data will vary from data from one company to another, however the state itself stays the same.

```
{% set user_list = [
  {'name': 'larry', 'shell': 'bash'},
  {'name': 'curly', 'shell': 'bash'},
  {'name': 'moe', 'shell': 'zsh'},
] %}

{# or #}

{% set user_list = salt['pillar.get']('user_list') %}

{# or #}

{% load_json "default_users.json" as user_list %}

{# or #}

{% set user_list = salt['acme_utils.get_user_list']() %}

{% for user in list_list %}
  {{ user.name }}:
  user.present:
```

(continues on next page)

(continued from previous page)

```

- name: {{ user.name }}
- shell: {{ user.shell }}
{% endfor %}

```

Configuration

Formulas should strive to use the defaults of the underlying platform, followed by defaults from the upstream project, followed by sane defaults for the formula itself.

As an example, a formula to install Apache **should not** change the default Apache configuration file installed by the OS package. However, the Apache formula **should** include a state to change or override the default configuration file.

Pillar overrides

Pillar lookups must use the safe `get()` and must provide a default value. Create local variables using the Jinja `set` construct to increase readability and to avoid potentially hundreds or thousands of function calls across a large state tree.

```

{% from "apache/map.jinja" import apache with context %}
{% set settings = salt['pillar.get']('apache', {}) %}

mod_status:
  file.managed:
    - name: {{ apache.conf_dir }}
    - source: {{ settings.get('mod_status_conf', 'salt://apache/mod_status.conf') }}
    - template: {{ settings.get('template_engine', 'jinja') }}

```

Any default values used in the Formula must also be documented in the `pillar.example` file in the root of the repository. Comments should be used liberally to explain the intent of each configuration value. In addition, users should be able copy-and-paste the contents of this file into their own Pillar to make any desired changes.

Scripting

Remember that both State files and Pillar files can easily call out to Salt *execution modules* and have access to all the system grains as well.

```

{% if '/storage' in salt['mount.active']() %}
/usr/local/etc/myfile.conf:
  file:
    - symlink
    - target: /storage/myfile.conf
{% endif %}

```

Jinja macros to encapsulate logic or conditionals are discouraged in favor of *writing custom execution modules* in Python.

Repository structure

A basic Formula repository should have the following layout:

```

foo-formula
|-- foo/
|   |-- map.jinja
|   |-- init.sls
|   `-- bar.sls
|-- CHANGELOG.rst
|-- LICENSE
|-- pillar.example
|-- README.rst
`-- VERSION

```

See also:

[template-formula](#)

The `template-formula` repository has a pre-built layout that serves as the basic structure for a new formula repository. Just copy the files from there and edit them.

README.rst

The README should detail each available `.sls` file by explaining what it does, whether it has any dependencies on other formulas, whether it has a target platform, and any other installation or usage instructions or tips.

A sample skeleton for the `README.rst` file:

```

===
foo
===

Install and configure the F00 service.

**NOTE**

See the full `Salt Formulas installation and usage instructions
<https://docs.saltstack.com/en/latest/topics/development/conventions/formulas.html>`.

Available states
=====

.. contents::
   :local:

``foo``
-----

Install the ``foo`` package and enable the service.

``foo.bar``
-----

Install the ``bar`` package.

```

CHANGELOG.rst

The `CHANGELOG.rst` file should detail the individual versions, their release date and a set of bullet points for each version highlighting the overall changes in a given version of the formula.

A sample skeleton for the *CHANGELOG.rst* file:

CHANGELOG.rst:

```
foo formula
=====

0.0.2 (2013-01-01)

- Re-organized formula file layout
- Fixed filename used for upstart logger template
- Allow for pillar message to have default if none specified
```

Versioning

Formula are versioned according to Semantic Versioning, <http://semver.org/>.

Note: Given a version number MAJOR.MINOR.PATCH, increment the:

1. MAJOR version when you make incompatible API changes,
2. MINOR version when you add functionality in a backwards-compatible manner, and
3. PATCH version when you make backwards-compatible bug fixes.

Additional labels for pre-release and build metadata are available as extensions to the MAJOR.MINOR.PATCH format.

Formula versions are tracked using Git tags as well as the VERSION file in the formula repository. The VERSION file should contain the currently released version of the particular formula.

Testing Formulas

A smoke-test for invalid Jinja, invalid YAML, or an invalid Salt state structure can be performed by with the *state.show_sls* function:

```
salt '*' state.show_sls apache
```

Salt Formulas can then be tested by running each *.sls* file via *state.apply* and checking the output for the success or failure of each state in the Formula. This should be done for each supported platform.

26.24.3 SaltStack Packaging Guide

Since Salt provides a powerful toolkit for system management and automation, the package can be spit into a number of sub-tools. While packaging Salt as a single package containing all components is perfectly acceptable, the split packages should follow this convention.

Patching Salt For Distributions

The occasion may arise where Salt source and default configurations may need to be patched. It is preferable if Salt is only patched to include platform specific additions or to fix release time bugs. It is preferable that configuration settings and operations remain in the default state, as changes here lowers the user experience for users moving across distributions.

In the event where a packager finds a need to change the default configuration it is advised to add the files to the master.d or minion.d directories.

Source Files

Release packages should always be built from the source tarball distributed via pypi. Release packages should *NEVER* use a git checkout as the source for distribution.

Single Package

Shipping Salt as a single package, where the minion, master, and all tools are together is perfectly acceptable and practiced by distributions such as FreeBSD.

Split Package

Salt Should always be split in a standard way, with standard dependencies, this lowers cross distribution confusion about what components are going to be shipped with specific packages. These packages can be defined from the Salt Source as of Salt 2014.1.0:

Salt Common

The *salt-common* or *salt* package should contain the files provided by the salt python package, or all files distributed from the `salt/` directory in the source distribution packages. The documentation contained under the `doc/` directory can be a part of this package but splitting out a doc package is preferred. Since salt-call is the entry point to utilize the libs and is useful for all salt packages it is included in the salt-common package.

Name

- *salt* OR *salt-common*

Files

- *salt/**
- *man/salt.7*
- *scripts/salt-call*
- *tests/**
- *man/salt-call.1*

Depends

- *Python 2.6-2.7*
- *PyYAML*
- *Jinja2*

Salt Master

The *salt-master* package contains the applicable scripts, related man pages and init information for the given platform.

Name

- *salt-master*

Files

- *scripts/salt-master*
- *scripts/salt*
- *scripts/salt-run*
- *scripts/salt-key*
- *scripts/salt-cp*
- *pkg/<master init data>*
- *man/salt.1*
- *man/salt-master.1*
- *man/salt-run.1*
- *man/salt-key.1*
- *man/salt-cp.1*
- *conf/master*

Depends

- *Salt Common*
- *ZeroMQ* >= 3.2
- *PyZMQ* >= 2.10
- *PyCrypto*
- *M2Crypto*
- *Python MessagePack* (Messagepack C lib, or msgpack-pure)

Salt Syndic

The Salt Syndic package can be rolled completely into the Salt Master package. Platforms which start services as part of the package deployment need to maintain a separate *salt-syndic* package (primarily Debian based platforms).

The Syndic may optionally not depend on anything more than the Salt Master since the master will bring in all needed dependencies, but fall back to the platform specific packaging guidelines.

Name

- *salt-syndic*

Files

- *scripts/salt-syndic*
- *pkg/<syndic init data>*
- *man/salt-syndic.1*

Depends

- *Salt Common*
- *Salt Master*
- *ZeroMQ* >= 3.2
- *PyZMQ* >= 2.10
- *PyCrypto*
- *M2Crypto*
- *Python MessagePack* (Messagepack C lib, or msgpack-pure)

Salt Minion

The Minion is a standalone package and should not be split beyond the *salt-minion* and *salt-common* packages.

Name

- *salt-minion*

Files

- *scripts/salt-minion*
- *pkg/<minion init data>*
- *man/salt-minion.1*
- *conf/minion*

Depends

- *Salt Common*
- *ZeroMQ* >= 3.2
- *PyZMQ* >= 2.10
- *PyCrypto*

- *M2Crypto*
- *Python MessagePack* (Messagepack C lib, or msgpack-pure)

Salt SSH

Since Salt SSH does not require the same dependencies as the minion and master, it should be split out.

Name

- *salt-ssh*

Files

- *scripts/salt-ssh*
- *man/salt-ssh.1*
- *conf/cloud**

Depends

- *Salt Common*
- *Python MessagePack* (Messagepack C lib, or msgpack-pure)

Salt Cloud

As of Salt 2014.1.0 Salt Cloud is included in the same repo as Salt. This can be split out into a separate package or it can be included in the salt-master package.

Name

- *salt-cloud*

Files

- *scripts/salt-cloud*
- *man/salt-cloud.1*

Depends

- *Salt Common*
- *apache libcloud* >= 0.14.0

Salt Doc

The documentation package is very distribution optional. A completely split package will split out the documentation, but some platform conventions do not prefer this. If the documentation is not split out, it should be included with the *Salt Common* package.

Name

- *salt-doc*

Files

- *doc/**

Optional Depends

- *Salt Common*
- *Python Sphinx*
- *Make*

26.24.4 Salt Release Process

The goal for Salt projects is to cut a new feature release every four to six months. This document outlines the process for these releases, and the subsequent bug fix releases which follow.

Feature Release Process

When a new release is ready to be cut, the person responsible for cutting the release will follow the following steps (written using the 0.16 release as an example):

1. All open issues on the release milestone should be moved to the next release milestone. (e.g. from the 0.16 milestone to the 0.17 milestone)
2. Release notes should be created documenting the major new features and bugfixes in the release.
3. Create an annotated tag with only the major and minor version numbers, preceded by the letter v. (e.g. v0.16) This tag will reside on the `develop` branch.
4. Create a branch for the new release, using only the major and minor version numbers. (e.g. 0.16)
5. On this new branch, create an annotated tag for the first revision release, which is generally a release candidate. It should be preceded by the letter v. (e.g. v0.16.0rc1)
6. The release should be packaged from this annotated tag and uploaded to PyPI as well as the GitHub releases page for this tag.
7. The packagers should be notified on the [salt-packagers](#) mailing list so they can create packages for all the major operating systems. (note that release candidates should go in the testing repositories)
8. After the packagers have been given a few days to compile the packages, the release is announced on the [salt-users](#) mailing list.
9. Log into RTD and add the new release there. (Have to do it manually)

Maintenance and Bugfix Releases

Once a feature release branch has been cut from `develop`, the branch moves into a “feature freeze” state. The new release branch enters the `merge-forward` chain and only bugfixes should be applied against the new branch. Once major bugs have been fixed, a bugfix release can be cut:

1. On the release branch (i.e. `0.16`), create an annotated tag for the revision release. It should be preceded by the letter `v`. (e.g. `v0.16.2`) Release candidates are unnecessary for bugfix releases.
2. The release should be packaged from this annotated tag and uploaded to PyPI.
3. The packagers should be notified on the [salt-packagers](#) mailing list so they can create packages for all the major operating systems.
4. After the packagers have been given a few days to compile the packages, the release is announced on the [salt-users](#) mailing list.

For more information about the difference between the `develop` branch and bugfix release branches, please refer to the [Which Salt Branch?](#) section of Salt’s [Contributing](#) documentation.

26.24.5 Salt Coding Style

Salt is developed with a certain coding style, while the style is dominantly PEP 8 it is not completely PEP 8. It is also noteworthy that a few development techniques are also employed which should be adhered to. In the end, the code is made to be “Salty”.

Most importantly though, we will accept code that violates the coding style and **KINDLY** ask the contributor to fix it, or go ahead and fix the code on behalf of the contributor. Coding style is **NEVER** grounds to reject code contributions, and is never grounds to talk down to another member of the community (There are no grounds to treat others without respect, especially people working to improve Salt)!!

Linting

Most Salt style conventions are codified in Salt’s `.testing.pylintrc` file. Salt’s `pylint` file has two dependencies: `pylint` and `saltpylint`. You can install these dependencies with `pip`:

```
pip install pylint
pip install saltpylint
```

The `.testing.pylintrc` file is found in the root of the Salt project and can be passed as an argument to the `pylint` program as follows:

```
pylint --rcfile=/path/to/salt/.testing.pylintrc salt/dir/to/lint
```

Note: There are two `pylint` files in the `salt` directory. One is the `.pylintrc` file and the other is the `.testing.pylintrc` file. The tests that run in Jenkins against GitHub Pull Requests use `.testing.pylintrc`. The `.testing.pylintrc` file is a little less strict than the `.pylintrc` and is used to make it easier for contributors to submit changes. The `.pylintrc` file can be used for linting, but the `.testing.pylintrc` is the source of truth when submitting pull requests.

Variables

Variables should be a minimum of three characters and should provide an easy-to-understand name of the object being represented.

When keys and values are iterated over, descriptive names should be used to represent the temporary variables.

Multi-word variables should be separated by an underscore.

Variables which are two-letter words should have an underscore appended to them to pad them to three characters.

Strings

Salt follows a few rules when formatting strings:

Single Quotes

In Salt, all strings use single quotes unless there is a good reason not to. This means that docstrings use single quotes, standard strings use single quotes etc.:

```
def foo():
    '''
    A function that does things
    '''
    name = 'A name'
    return name
```

Formatting Strings

All strings which require formatting should use the `.format` string method:

```
data = 'some text'
more = '{0} and then some'.format(data)
```

Make sure to use indices or identifiers in the format brackets, since empty brackets are not supported by python 2.6.

Please do NOT use printf formatting.

Docstring Conventions

Docstrings should always add a newline, docutils takes care of the new line and it makes the code cleaner and more vertical:

GOOD:

```
def bar():
    '''
    Here lies a docstring with a newline after the quotes and is the salty
    way to handle it! Vertical code is the way to go!
    '''
    return
```

BAD:

```
def baz():
    '''This is not ok!'''
    return
```

When adding a new function or state, where possible try to use a `versionadded` directive to denote when the function or state was added.

```
def new_func(msg=''):
    """
    .. versionadded:: 0.16.0

    Prints what was passed to the function.

    msg : None
        The string to be printed.
    """
    print msg
```

If you are uncertain what version should be used, either consult a core developer in IRC or bring this up when opening your *pull request* and a core developer will add the proper version once your pull request has been merged. Bugfixes will be available in a bugfix release (i.e. 0.17.1, the first bugfix release for 0.17.0), while new features are held for feature releases, and this will affect what version number should be used in the `versionadded` directive.

Similar to the above, when an existing function or state is modified (for example, when an argument is added), then under the explanation of that new argument a `versionadded` directive should be used to note the version in which the new argument was added. If an argument's function changes significantly, the `versionchanged` directive can be used to clarify this:

```
def new_func(msg='', signature=''):
    """
    .. versionadded:: 0.16.0

    Prints what was passed to the function.

    msg : None
        The string to be printed. Will be prepended with 'Greetings! '.
    .. versionchanged:: 0.17.1

    signature : None
        An optional signature.

    .. versionadded 0.17.0
    """
    print 'Greetings! {0}\n\n{1}'.format(msg, signature)
```

Dictionaries

Dictionaries should be initialized using `{}` instead of `dict()`.

See [here](#) for an in-depth discussion of this topic.

Imports

Salt code prefers importing modules and not explicit functions. This is both a style and functional preference. The functional preference originates around the fact that the module import system used by pluggable modules will include callable objects (functions) that exist in the direct module namespace. This is not only messy, but may unintentionally expose code python libs to the Salt interface and pose a security problem.

To say this more directly with an example, this is *GOOD*:

```
import os

def minion_path():
    path = os.path.join(self.opts['cachedir'], 'minions')
    return path
```

This on the other hand is *DISCOURAGED*:

```
from os.path import join

def minion_path():
    path = join(self.opts['cachedir'], 'minions')
    return path
```

The time when this is changed is for importing exceptions, generally directly importing exceptions is preferred:

This is a good way to import exceptions:

```
from salt.exceptions import CommandExecutionError
```

Absolute Imports

Although `absolute imports` seems like an awesome idea, please do not use it. Extra care would be necessary all over salt's code in order for absolute imports to work as supposed. Believe it, it has been tried before and, as a tried example, by renaming `salt.modules.sysmod` to `salt.modules.sys`, all other salt modules which needed to import `sys` would have to also import `absolute_import`, which should be avoided.

Note: An exception to this rule is the `absolute_import` from `__future__` at the top of each file within the Salt project. This import is necessary for Py3 compatibility. This particular import looks like this:

```
from __future__ import absolute_import
```

This import is required for all new Salt files and is a good idea to add to any custom states or modules. However, the practice of avoiding absolute imports still applies to all other cases as to avoid a name conflict.

Vertical is Better

When writing Salt code, vertical code is generally preferred. This is not a hard rule but more of a guideline. As PEP 8 specifies, Salt code should not exceed 79 characters on a line, but it is preferred to separate code out into more newlines in some cases for better readability:

```
import os

os.chmod(
    os.path.join(self.opts['sock_dir'],
                 'minion_event_pub.ipc'),
    448
)
```

Where there are more line breaks, this is also apparent when constructing a function with many arguments, something very common in state functions for instance:

```
def managed(name,
            source=None,
            source_hash='',
            user=None,
            group=None,
            mode=None,
            template=None,
            makedirs=False,
            context=None,
            replace=True,
            defaults=None,
            saltenv=None,
            backup='',
            **kwargs):
```

Note: Making function and class definitions vertical is only required if the arguments are longer than 80 characters. Otherwise, the formatting is optional and both are acceptable.

Line Length

For function definitions and function calls, Salt adheres to the PEP-8 specification of at most 80 characters per line.

Non function definitions or function calls, please adopt a soft limit of 120 characters per line. If breaking the line reduces the code readability, don't break it. Still, try to avoid passing that 120 characters limit and remember, **vertical is better... unless it isn't**

Indenting

Some confusion exists in the python world about indenting things like function calls, the above examples use 8 spaces when indenting comma-delimited constructs.

The confusion arises because the pep8 program INCORRECTLY flags this as wrong, where PEP 8, the document, cites only using 4 spaces here as wrong, as it doesn't differentiate from a new indent level.

Right:

```
def managed(name,
            source=None,
            source_hash='',
            user=None)
```

WRONG:

```
def managed(name,
            source=None,
            source_hash='',
            user=None)
```

Lining up the indent is also correct:

```
def managed(name,
            source=None,
            source_hash='',
            user=None)
```

This also applies to function calls and other hanging indents.

pep8 and Flake8 (and, by extension, the vim plugin Syntastic) will complain about the double indent for hanging indents. This is a [known conflict](#) between pep8 (the script) and the actual PEP 8 standard. It is recommended that this particular warning be ignored with the following lines in `~/.config/flake8`:

```
[flake8]
ignore = E226,E241,E242,E126
```

Make sure your Flake8/pep8 are up to date. The first three errors are ignored by default and are present here to keep the behavior the same. This will also work for pep8 without the Flake8 wrapper – just replace all instances of 'flake8' with 'pep8', including the filename.

Code Churn

Many pull requests have been submitted that only churn code in the name of PEP 8. Code churn is a leading source of bugs and is strongly discouraged. While style fixes are encouraged they should be isolated to a single file per commit, and the changes should be legitimate, if there are any questions about whether a style change is legitimate please reference this document and the official PEP 8 (<http://legacy.python.org/dev/peps/pep-0008/>) document before changing code. Many claims that a change is PEP 8 have been invalid, please double check before committing fixes.

26.25 Salt code and internals

Reference documentation on Salt's internal code.

26.25.1 Contents

salt.aggregation

salt.utils.aggregation

This library makes it possible to introspect dataset and aggregate nodes when it is instructed.

Note: The following examples will be expressed in YAML for convenience's sake:

- `!aggr-scalar` will refer to Scalar python function
 - `!aggr-map` will refer to Map python object
 - `!aggr-seq` will refer for Sequence python object
-

How to instructs merging

This yaml document has duplicate keys:

```
foo: !aggr-scalar first
foo: !aggr-scalar second
bar: !aggr-map {first: foo}
bar: !aggr-map {second: bar}
baz: !aggr-scalar 42
```

but tagged values instruct Salt that overlapping values they can be merged together:

```
foo: !aggr-seq [first, second]
bar: !aggr-map {first: foo, second: bar}
baz: !aggr-seq [42]
```

Default merge strategy is keep untouched

For example, this yaml document still has duplicate keys, but does not instruct aggregation:

```
foo: first
foo: second
bar: {first: foo}
bar: {second: bar}
baz: 42
```

So the late found values prevail:

```
foo: second
bar: {second: bar}
baz: 42
```

Limitations

Aggregation is permitted between tagged objects that share the same type. If not, the default merge strategy prevails.

For example, these examples:

```
foo: {first: value}
foo: !aggr-map {second: value}

bar: !aggr-map {first: value}
bar: 42

baz: !aggr-seq [42]
baz: [fail]

qux: 42
qux: !aggr-scalar fail
```

are interpreted like this:

```
foo: !aggr-map{second: value}

bar: 42

baz: [fail]

qux: !aggr-seq [fail]
```

Introspection

TODO: write this part

```
salt.utils.aggregation.aggregate(obj_a, obj_b, level=False, map_class=<class
                                'salt.utils.aggregation.Map'>, sequence_class=<class
                                'salt.utils.aggregation.Sequence'>)
```

Merge obj_b into obj_a.

```
>>> aggregate('first', 'second', True) == ['first', 'second']
True
```

class salt.utils.aggregation.**Aggregate**

Aggregation base.

class salt.utils.aggregation.**Map**

Map aggregation.

salt.utils.aggregation.**Scalar**(obj)

Shortcut for Sequence creation

```
>>> Scalar('foo') == Sequence(['foo'])
True
```

class salt.utils.aggregation.**Sequence**

Sequence aggregation.

Exceptions

Salt-specific exceptions should be thrown as often as possible so the various interfaces to Salt (CLI, API, etc) can handle those errors appropriately and display error messages appropriately.

salt.exceptions

This module is a central location for all salt exceptions

salt.exceptions

This module is a central location for all salt exceptions

exception salt.exceptions.**ArgumentValueError**(message="", info=None)

Used when an invalid argument was passed to a command execution

exception salt.exceptions.**AuthenticationError**(message="")

If sha256 signature fails during decryption

exception salt.exceptions.**AuthorizationError**(message="")

Thrown when runner or wheel execution fails due to permissions

exception salt.exceptions.**CheckError**(message="", info=None)

Used when a check fails

exception salt.exceptions.**CommandExecutionError**(message="", info=None)

Used when a module runs a command which returns an error and wants to show the user the output gracefully instead of dying

exception salt.exceptions.**CommandNotFoundError**(message="")

Used in modules or grains when a required binary is not available

exception salt.exceptions.**EauthAuthenticationError**(message="")

Thrown when eauth authentication fails

exception `salt.exceptions.FileLockError` (*message*, *time_start=None*, *args, **kwargs)

Used when an error occurs obtaining a file lock

exception `salt.exceptions.FileserverConfigError` (*message=""*)

Used when invalid fileserver settings are detected

exception `salt.exceptions.GitLockError` (*errno*, *message*, *args, **kwargs)

Raised when an uncaught error occurs in the midst of obtaining an update/checkout lock in `salt.utils.gitfs`.

NOTE: While this uses the `errno` param similar to an `OSError`, this exception class is *not* as subclass of `OSError`. This is done intentionally, so that this exception class can be caught in a `try/except` without being caught as an `OSError`.

exception `salt.exceptions.GitRemoteError` (*message=""*)

Used by GitFS to denote a problem with the existence of the "origin" remote or part of its configuration

exception `salt.exceptions.InvalidConfigError` (*message=""*, *info=None*)

Used when the config is invalid

exception `salt.exceptions.InvalidEntityError` (*message=""*, *info=None*)

Used when an entity fails validation

exception `salt.exceptions.LoaderError` (*message=""*)

Problems loading the right renderer

exception `salt.exceptions.MasterExit`

Rise when the master exits

exception `salt.exceptions.MinionError` (*message=""*)

Minion problems reading uris such as `salt://` or `http://`

exception `salt.exceptions.NotImplemented` (*message=""*)

Used when a module runs a command which returns an error and wants to show the user the output gracefully instead of dying

exception `salt.exceptions.PkgParseError` (*message=""*)

Used when of the `pkg` modules cannot correctly parse the output from the CLI tool (`pacman`, `yum`, `apt`, `aptitude`, etc)

exception `salt.exceptions.PublishError` (*message=""*)

Problems encountered when trying to publish a command

exception `salt.exceptions.SaltCacheError` (*message=""*)

Thrown when a problem was encountered trying to read or write from the salt cache

exception `salt.exceptions.SaltClientError` (*message=""*)

Problem reading the master root key

exception `salt.exceptions.SaltClientTimeout` (*message*, *jid=None*, *args, **kwargs)

Thrown when a job sent through one of the Client interfaces times out

Takes the `jid` as a parameter

exception `salt.exceptions.SaltCloudConfigError` (*message=""*)

Raised when a configuration setting is not found and should exist.

exception `salt.exceptions.SaltCloudException` (*message=""*)

Generic Salt Cloud Exception

exception `salt.exceptions.SaltCloudExecutionFailure` (*message=""*)

Raised when too much failures have occurred while querying/waiting for data.

exception `salt.exceptions.SaltCloudExecutionTimeout` (*message=""*)

Raised when too much time has passed while querying/waiting for data.

- exception** `salt.exceptions.SaltCloudNotFound` (*message=""*)
Raised when some cloud provider function cannot find what's being searched.
- exception** `salt.exceptions.SaltCloudPasswordError` (*message=""*)
Raise when virtual terminal password input failed
- exception** `salt.exceptions.SaltCloudSystemExit` (*message, exit_code=1*)
This exception is raised when the execution should be stopped.
- exception** `salt.exceptions.SaltConfigurationError` (*message=""*)
Configuration error
- exception** `salt.exceptions.SaltDaemonNotRunning` (*message=""*)
Throw when a running master/minion/syndic is not running but is needed to perform the requested operation (e.g., eauth).
- exception** `salt.exceptions.SaltException` (*message=""*)
Base exception class; all Salt-specific exceptions should subclass this
- pack** ()
Pack this exception into a serializable dictionary that is safe for transport via msgpack
- exception** `salt.exceptions.SaltInvocationError` (*message=""*)
Used when the wrong number of arguments are sent to modules or invalid arguments are specified on the command line
- exception** `salt.exceptions.SaltMasterError` (*message=""*)
Problem reading the master root key
- exception** `salt.exceptions.SaltMasterUnresolvableError` (*message=""*)
Problem resolving the name of the Salt master
- exception** `salt.exceptions.SaltNoMinionsFound` (*message=""*)
An attempt to retrieve a list of minions failed
- exception** `salt.exceptions.SaltRenderError` (*message, line_num=None, buf="", marker='<=====, trace=None*)
Used when a renderer needs to raise an explicit error. If a line number and buffer string are passed, `get_context` will be invoked to get the location of the error.
- exception** `salt.exceptions.SaltReqTimeoutError` (*message=""*)
Thrown when a salt master request call fails to return within the timeout
- exception** `salt.exceptions.SaltRunnerError` (*message=""*)
Problem in runner
- exception** `salt.exceptions.SaltSyndicMasterError` (*message=""*)
Problem while proxying a request in the syndication master
- exception** `salt.exceptions.SaltSystemExit` (*code=0, msg=None*)
This exception is raised when an unsolvable problem is found. There's nothing else to do, salt should just exit.
- exception** `salt.exceptions.SaltWheelError` (*message=""*)
Problem in wheel
- exception** `salt.exceptions.TemplateError` (*message=""*)
Used when a custom error is triggered in a template
- exception** `salt.exceptions.TimedProcTimeoutError` (*message=""*)
Thrown when a timed subprocess does not terminate within the timeout, or if the specified timeout is not an int or a float
- exception** `salt.exceptions.TimeoutError` (*message=""*)
Thrown when an operation cannot be completed within a given time limit.

exception `salt.exceptions.TokenAuthenticationError` (*message=""*)

Thrown when token authentication fails

exception `salt.exceptions.VMwareApiError` (*message=""*, *info=None*)

Used when representing a generic VMware API error

exception `salt.exceptions.VMwareConnectionError` (*message=""*, *info=None*)

Used when the client fails to connect to either a VMware vCenter server or to a ESXi host

exception `salt.exceptions.VMwareFileNotFoundError` (*message=""*, *info=None*)

Used when representing a generic VMware error if a file not found

exception `salt.exceptions.VMwareMultipleObjectsError` (*message=""*, *info=None*)

Used when multiple objects were retrieved (and one was expected)

exception `salt.exceptions.VMwareNotFoundError` (*message=""*, *info=None*)

Used when a VMware object was not found

exception `salt.exceptions.VMwareObjectExistsError` (*message=""*, *info=None*)

Used when a VMware object already exists

exception `salt.exceptions.VMwareObjectNotFoundError` (*message=""*, *info=None*)

Used when a VMware object was not found

exception `salt.exceptions.VMwareObjectRetrievalError` (*message=""*, *info=None*)

Used when a VMware object cannot be retrieved

exception `salt.exceptions.VMwarePowerOnError` (*message=""*, *info=None*)

Used when error occurred during power on

exception `salt.exceptions.VMwareRuntimeError` (*message=""*, *info=None*)

Used when a runtime error is encountered when communicating with the vCenter

exception `salt.exceptions.VMwareSaltError` (*message=""*, *info=None*)

Used when a VMware object cannot be retrieved

exception `salt.exceptions.VMwareSystemError` (*message=""*, *info=None*)

Used when representing a generic VMware system error

exception `salt.exceptions.VMwareVmCreationError` (*message=""*, *info=None*)

Used when a configuration parameter is incorrect

exception `salt.exceptions.VMwareVmRegisterError` (*message=""*, *info=None*)

Used when a configuration parameter is incorrect

`salt.exceptions.get_error_message` (*error*)

Get human readable message from Python Exception

The Salt Fileserver and Client

Introduction

Salt has a modular fileserver, and multiple client classes which are used to interact with it. This page serves as a developer's reference, to help explain how the fileserver and clients both work.

Fileserver

The fileserver is not a daemon, so the fileserver and client are not a true server and client in the traditional sense. Instead, the fileserver is simply a class (`salt.fileserver.Fileserver`), located in `salt/fileserver/__init__.py`.

This class has access to the configured fileserver backends via a loader instance, referenced as `self.servers`. When a request comes in from the fileclient, it will ultimately result in a `Fileserver` class function being run.

The functions in this class will run corresponding functions in the configured fileserver backends to perform the requested action. So, in summary:

1. A fileclient class makes a request...
2. which triggers the fileserver to run a function...
3. which runs a named function in each of the configured backends.

Not all of the functions will always execute on every configured backend. For instance, the `find_file` function in the fileserver will stop when it finds a match, so if it finds a match for the desired path in the first configured backend, it won't proceed and try to find the file in the next backend in the list.

Additionally, not all backends implement all functions in the `salt.fileserver.Fileserver` class. For instance, there is a function called `update`, which exists to update remote fileservers such as the `git`, `hg`, and `svn` backends. This action has no use however in the `roots` backend, so it is simply not implemented there, and thus the `roots` backend will be skipped if the `update` function is run on the fileserver.

Backends for the fileserver are located in `salt/fileserver/` (the files not named `__init__.py`).

Fileclient

There are three fileclient classes:

`salt.fileclient.RemoteClient`

This client is used when `file_client` is set to `remote`. This is how minions request files from the master.

Functions in this client will craft a payload and send it to the master via the transport channel. This is the same way that the minion asks the master to do other things, such as updating and requesting data from the mine. The payload will be a dictionary with a key called `cmd`, and other values as needed.

Payloads sent via the transport channel are processed by an `MWorker` instance on the master, and the `MWorker`'s `_handle_aes()` function will execute the command. The command will be a function attribute of the `salt.master.AESFuncs` class. The `AESFuncs` class' `__setup_fileserver()` function instantiates a `salt.fileserver.Fileserver` instance and maps its member functions to `AESFuncs` attributes. This is what makes the fileserver functions available remotely. The result of the function is returned back through the transport channel to the minion.

Transporting files is done in chunks, the size of which is decided by the `file_buffer_size` config option. If you look at the `serve_file()` function in any of the fileserver backends, you can see how the `loc` value in the payload determines the offset so that an intermediate chunk of the file can be served. The `RemoteClient`'s `get_file()` function will loop until the end of the file is reached, retrieving one chunk at a time.

`salt.fileclient.FSClient`

This client is used when `file_client` is set to `local`. This is how masterless minions request files.

This class inherits from the `RemoteClient`, but instead of using a transport channel (`zmq`, `tcp`, etc.), it uses a "fake" transport channel (`salt.fileserver.FSChan`), which implements its own `send()` function. Thus, when a function that the `FSClient` inherits from the `RemoteClient` runs `self.channel.send()`, it's actually calling `salt.fileserver.FSChan.send()`, which calls corresponding functions in the `salt.fileserver.Fileserver()` class. The result is that local file requests use the same code as remote file requests, they just bypass sending them through an actual transport channel and instead call them on the `FSChan`'s `Fileserver` instance.

salt.fileclient.LocalClient

This client is now used exclusively by Pillar. This used to be used when `file_client` was set to `local`, but the `FSChan` class was written to allow minions with `file_client: local` to access the full set of backends. This class will probably be renamed at some point as it is often confused with `salt.client.LocalClient`.

The cp Module

Most of the user-facing interaction with the fileclient happens via the `cp` module. The functions in this module instantiate a fileclient instance (if one is not already saved to the `__context__` dunder) and run fileclient functions.

Updating the Fileserver

The master daemon spawns a process dedicated to routine maintenance tasks upon startup. This process runs an instance of `salt.master.Maintenance`, which loops forever, running a series of functions and then sleeping for a length of time determined by the `loop_interval` config option. One of the maintenance tasks is to update the fileserver, and it essentially runs `salt.fileserver.Fileserver.update()`, which as we know from above will run all configured backends' `update()` functions, if present. This is now remote filesevers like `git`, `hg`, and `svn` stay up-to-date.

For the local `file_client` (`FSClient`), since it does not interact with the master, upon spawning of its `FSChan` it will update the fileserver.

Salt opts dictionary

It is very common in the Salt codebase to see `opts` referred to in a number of contexts.

For example, it can be seen as `__opts__` in certain cases, or simply as `opts` as an argument to a function in others.

Simply put, this data structure is a dictionary of Salt's runtime configuration information that's passed around in order for functions to know how Salt is configured.

When writing Python code to use specific parts of Salt, it may become necessary to initialize a copy of `opts` from scratch in order to have it available for a given function.

To do so, use the utility functions available in `salt.config`.

As an example, here is how one might generate and print an options dictionary for a minion instance:

```
import salt.config
opts = salt.config.minion_config('/etc/salt/minion')
print(opts)
```

To generate and display `opts` for a master, the process is similar:

```
import salt.config
opts = salt.config.master_config('/etc/salt/master')
print(opts)
```

Unicode in Salt

Though Unicode handling in large projects can often be complex, Salt adheres to several basic rules to help developers handle Unicode correctly.

(For a basic introduction to this problem, see Ned Batchelder's *excellent introduction to the topic* <<http://nedbatchelder.com/text/unipain/unipain.html>>.

Salt's basic workflow for Unicode handling is as follows:

- 1) Salt should convert whatever data is passed on CLI/API to Unicode. Internally, everything that Salt does should be Unicode unless it is printing to the screen or writing to storage.
- 2) Modules and various Salt pluggable systems use incoming data assuming Unicode.
 - 2.1) For Salt modules that query an API; the module should convert the data received from the API into Unicode.
 - 2.2) For Salt modules that shell out to get output; the module should convert data received into Unicode. (This does not apply if using the `cmd` execution module, which should handle this for you.
 - 2.3) For Salt modules which print directly to the console (not via an outputter) or which write directly to disk, a string should be encoded when appropriate. To handle this conversion, the global variable `__salt_system_encoding__` is available, which declares the locale of the system that Salt is running on.
- 3) When a function in a Salt module returns a string, it should return a `unicode` type in Python 2.
- 4) When Salt delivers the data to an outputter or a returner, it is the job of the outputter or returner to encode the Unicode before displaying it on the console or writing it to storage.

26.26 Salt Community Projects

This page contains links to Salt-related projects created by community members. If you come across a useful project please add it to the list!

26.26.1 Hubblestack

Hubble is a modular, open-source security compliance framework built on top of SaltStack. The project provides on-demand profile-based auditing, real-time security event notifications, automated remediation, alerting and reporting.

<http://hubblestack.io/>

26.26.2 alkali

alkali is a collections of SaltStack states and pillar data that provide just the basics for provisioning Linux instances that may be built upon. alkali is a starter kit of sorts, to help new users to SaltStack get up-and-running quickly with the most commonly used, core packages.

<https://github.com/zulily/alkali>

26.26.3 buoyant

buoyant leverages docker to provide an alternative to VM-centric SaltStack development environments. buoyant containers may be spun up nearly instantly, once an initial docker image has been built.

<https://github.com/zulily/buoyant>

26.26.4 Salt Sandbox

Salt Sandbox is a multi-VM Vagrant-based Salt development environment used for creating and testing new Salt state modules outside of your production environment. It's also a great way to learn firsthand about Salt and its remote execution capabilities.

<https://github.com/elasticdog/salt-sandbox>

26.26.5 Salt Vagrant Demo

A Salt Demo using Vagrant.

<https://github.com/UtahDave/salt-vagrant-demo>

RELEASE NOTES

See the version numbers page for more information about the version numbering scheme.

27.1 Latest Branch Release

Release Candidate

27.2 Previous Releases

27.2.1 Salt 2018.3.0 Release Notes - Codename Oxygen

Warning: If you are using Jinja to dump lists or dictionaries in your SLS files, this will now cause errors in Python 2 since Jinja does not produce YAML-compatible output when strings in the data structures contain unicode types. The dictionary must be passed through a Jinja filter to produce YAML-compatible strings.

The below is an example of invalid SLS:

```
/etc/foo.conf:
file.mangeded:
- source: salt://foo.conf
- template: jinja
- defaults: {{ mydict }}
```

To make it valid, use either one of Salt's own `json` or `yaml` filters:

```
/etc/foo.conf:
file.mangeded:
- source: salt://foo.conf
- template: jinja
- defaults: {{ mydict | json }}
```

Unicode/Python 3 Compatibility Improvements

This release fixes a number of nagging issues with Unicode strings in Salt under Python 2 (ex. 'ascii' codec can't decode byte 0xd0). For best results, use a UTF-8 locale (such as by setting the LANG environment variable to one which supports UTF-8. For example `en_US.UTF-8`, `de_DE.UTF-8`, `ru_RU.UTF-8`, `C.UTF-8`).

Additionally, a number of Python 3 compatibility fixes have been made, many of them having to do with file I/O and str/bytes mismatches.

We continue to work toward improving both Unicode and Python 3 compatibility and welcome any feedback.

Lots of Docker Improvements

Much Improved Support for Docker Networking

The `docker_network.present` state has undergone a full rewrite, which includes the following improvements:

Full API Support for Network Management

The improvements made to input handling in the `docker_container.running` state for 2017.7.0 have now been expanded to `docker_network.present`. This brings with it full support for all tunable configuration arguments.

Custom Subnets

Custom subnets can now be configured. Both IPv4 and mixed IPv4/IPv6 networks are supported. See [here](#) for more information.

Network Configuration in `docker_container.running` States

A long-requested feature has finally been added! It is now possible to configure static IPv4/IPv6 addresses, as well as links and labels. See [here](#) for more information.

Note: While the `containers` argument to `docker_network.present` will continue to be supported, it will no longer be the recommended way of ensuring that a container is attached to a network.

Improved Handling of Images from Custom Registries

Rather than attempting to parse the tag from the passed image name, Salt will now resolve that tag down to an image ID and use that ID instead.

Important: Due to this change, there are some backward-incompatible changes to image management. See below for a full list of these changes.

Backward-incompatible Changes to Docker Image Management

Passing image names to the following functions must now be done using separate `repository` and `tag` arguments:

- `docker.build`
- `docker.commit`

- `docker.import`
- `docker.load`
- `docker.tag`
- `docker.sls_build`

Additionally, the `tag` argument must now be explicitly passed to the `docker_image.present` state, unless the image is being pulled from a docker registry.

State and Execution Module Support for `docker run` Functionality

The `docker_container.running` state is good for containers which run services, but it is not as useful for cases in which the container only needs to run once. The `start` argument to `docker_container.running` can be set to `False` to prevent the container from being started again on a subsequent run, but for many use cases this is not sufficient. Therefore, the `docker.run_container` remote-execution function was added. When used on the Salt CLI, it will return information about the container, such as its name, ID, exit code, and any output it produces.

State support has also been added via the `docker_container.run` state. This state is modeled after the `cmd.run` state, and includes arguments like `onlyif`, `unless`, and `creates` to control whether or not the container is run.

Full API Support for `docker.logs`

This function now supports all of the functions that its Docker API counterpart does, allowing you to do things like include timestamps, and also suppress stdout/stderr, etc. in the return.

`start` Argument Added to `docker.create` Function

This removes the need to run `docker.start` separately when creating containers on the Salt CLI.

```
salt myminion docker.create image=foo/bar:baz command=/path/to/command start=True
```

Use SaltSSH Minions like regular Master-Minions

The Master process can now also call SSH minions as if they were connected to the master using ZeroMQ. By setting `enable_ssh_minions: True` in the master config file, the master will create a Salt SSH client process which connects to the minion and returns the output for the salt CLI to use like a regular minion. This can be used anywhere the LocalClient is used.

Exceptions Raised for Authentication/Authorization Errors

When sending `publish` commands via `master.py` and `masterapi.py` and an authorization or authentication problem is encountered, Salt will now raise the appropriate exceptions instead of returning an empty string: `''`.

The reasoning behind this change is to make it easier to debug various scenarios surrounding authentication and authorization issues more effectively.

Comparison Operators in Package Installation

Salt now supports using comparison operators (e.g. `>=1.2.3`) when installing packages on minions which use `yum/dnf` or `apt`. This is supported both in the `pkg.installed` state and in the `pkg.install` remote execution function.

Master Tops Changes

When both *Master Tops* and a *Top File* produce SLS matches for a given minion, the matches were being merged in an unpredictable manner which did not preserve ordering. This has been changed. The top file matches now execute in the expected order, followed by any master tops matches that are not matched via a top file.

To make master tops matches execute first, followed by top file matches, set the new `master_tops_first` minion config option to `True`.

Several Jinja Filters Renamed

The following Jinja filters (originally added in 2017.7.0) have been renamed due to the fact that they were inaccurately named when initially added. The original names will be supported until the Neon release of Salt.

- `rand_str` renamed to `random_hash`
- `jinja_decode_dict` renamed to `jinja_encode_dict`
- `jinja_decode_list` renamed to `jinja_encode_list`

Return Codes for Runner/Wheel Functions

When using *orchestration*, runner and wheel functions used to report a `True` result if the function ran to completion without raising an exception. It is now possible to set a return code in the `__context__` dictionary, allowing runner and wheel functions to report that they failed. Here's some example pseudocode:

```
def myrunner():
    ...
    do stuff
    ...
    if some_error_condition:
        __context__['retcode'] = 1
    return result
```

Variable Update Intervals for Fileserver Backends

Prior to this release, fileservers would be updated as part of a dedicated "maintenance" process, in which various routine maintenance tasks were performed. This tied the update interval to the `loop_interval` config option, and also forced all fileservers to update at the same interval.

2018.3.0 adds the following configuration options for the various fileserver backends:

- `roots_update_interval`
- `azurefs_update_interval`
- `gitfs_update_interval`
- `hgfs_update_interval`

- *minionfs_update_interval*
- *s3fs_update_interval*
- *svnfs_update_interval*

These allow for update intervals to be set for each individual backend. The default value for each of these is 60 seconds.

In addition, for *GitFS* it is also possible to apply intervals to individual remotes. See [here](#) for examples.

Note: *git_pillar* does not yet support variable update intervals, this is targeted for the next feature release (Fluorine).

LDAP via External Authentication Changes

In this release of Salt, if LDAP Bind Credentials are supplied, then these credentials will be used for all LDAP access except the first authentication when a job is submitted. The first authentication will use the user's credentials as passed on the CLI. This behavior is to accommodate certain two-factor authentication schemes where the authentication token can only be used once.

In previous releases the bind credentials would only be used to determine the LDAP user's existence and group membership. The user's LDAP credentials were used from then on.

Stormpath External Authentication Removed

Per Stormpath's announcement, their API will be shutting down on 8/17/2017 at noon PST so the Stormpath external authentication module has been removed.

<https://stormpath.com/oktaplusstormpath>

New (Proxy) Minion Configuration Options

To be able to connect the Minion to the Master using a certain source IP address or port, the following options have been added:

- *source_interface_name*
- *source_address*
- *source_ret_port*
- *source_publish_port*

environment config option renamed to saltenv

The *environment* config option predates referring to a salt fileserver environment as a **saltenv**. To pin a minion to a single environment for running states, one would use *environment*, but overriding that environment would be done with the **saltenv** argument. For consistency, *environment* is now simply referred to as *saltenv*. There are no plans to deprecate or remove *environment*, if used it will log a warning and its value will be used as *saltenv*.

lock_saltenv config option added

If set to `True`, this option will prevent a minion from allowing the `saltenv` argument to override the value set in `saltenv` when running states.

Failed Minions for State/Function Orchestration Jobs Added to Changes Dictionary

For orchestration jobs which run states (or run remote execution functions and also use a *fail function* to indicate success or failure), minions which have `False` results were previously included as a formatted string in the comment field of the return for that orchestration job. This made the failed returns difficult to *parse programatically*. The failed returns in these cases are now included in the changes dictionary, making for much easier parsing.

Grains

- `fc_wwn` - Show all fibre channel world wide port names for a host, must be enabled with `fibre_channel_grains`
- `iscsi_iqn` - Show the iSCSI IQN name for a host
- `swap_total` - Show the configured `swap_total` for Linux, *BSD, OS X and Solaris/SunOS
- `virtual`:
 - identifies reports KVM and VMM hypervisors when running an OpenBSD guest
 - for detecting Solaris Logical Domains (LDMs) running on T-Series SPARC hardware. The `virtual_subtype` grain is populated as a list of domain roles.

Salt Minion Auto-discovery

Using auto-discovery, the Salt Minion now no longer needs to be configured against a specific DNS name or IP address of a Master.

For this feature Salt Master now requires port 4520 for UDP broadcast packets to be opened and the Salt Minion be able to send UDP packets to the same port.

Configuration

By default, automatic discovery is disabled.

Warning: Due to the current limitations that will be changing in a future release, before you turn on auto-discovery, make sure your network is secured and trusted.

Auto-discovery is configured on Master and Minion. Both of them are configured via the `discovery` option as follows:

Master configuration

To use the default configuration, which accepts any minion, simply set `discovery` to `True`:

```
discovery: true
```

A sub-option called *mapping* allows auto-discovery to help find the proper Master. The mapping contains an arbitrary set of key/value pairs, which the Minion configuration can target. By default, no mappings are set.

Example:

```

discovery:
  mapping:
    description: SES 5.0
    node: 1

```

It is also possible to change the port used from the default of 4520, by setting a `port` option under the Master's discovery configuration:

```

discovery:
  port: 4567

```

Note: When using a port number other than the default, the Minion's `discovery` configuration must *also* have a port specified, otherwise the Minion will still attempt to contact the Master on port 4520.

Minion configuration

In addition to the `mapping` and `port` options, the following additional options are available to Minions:

- `attempts` - This option specifies how many broadcast requests should be sent to the network, waiting for any Master response. Each attempt takes a couple of seconds, so raising this value may result in a slower Minion startup. Note that, on a properly-configured network, autodiscovery should succeed on the first attempt. By default, this value is set to 3.
- `match` - This option can be set to either `all` or `any`, and it determines how the values configured in `mapping` are matched. If set to `all`, then all of the key/value pairs in the Minion's `mapping` must match a given Master. If set to `any` (the default), then any match to a key/value mapping will constitute a match.
- `pause` - The interval in seconds between attempts (default: 5).
- `fibre_channel_grains` - Enables the `fc_wwn` grain. (Default: False)
- `iscsi_grains` - Enables the `iscsi_iqn` grain. (Default: False)

Connection to a type instead of DNS

By now each Minion was connecting to a Master by DNS or IP address. From now on it is possible also to connect to a `_type_` of a Master. For example, in a network there are three different Masters, each corresponds for a particular niche or environment or specific role etc. The Minion is supposed to connect only to one of those Masters that is described appropriately.

To achieve such an effect, each `/etc/salt/master` configuration should have a `discovery` option, which should have a `mapping` element with arbitrary key/value pairs. The same configuration should be on the Minion, so then when mapping matches, Minion recognises Master as its connection target.

Example for Master configuration (`/etc/salt/master`):

```

discovery:
  mapping:
    description: SES 5.0
    node: 1

```

The example above describes a system that is running a particular product, where `description` is an arbitrary key and `SES 5.0` is just a string. In order to match exactly this Master, the following configuration at Minion should be present:

```
discovery:
  match: all # Can be "all" or "any"
  mapping:
    description: SES 5.0
    node: 1
```

Notice `match` criteria is set to `all`. This would mean that from all found Masters select only that, which `description` is set to `SES 5.0` and `node` is set to `1`. All other Masters will be ignored.

Limitations

This feature has a couple of `temporary` limitations that are subject to change in the future:

- Only one Master on the network is supported. Currently the Minion cannot select which Master out of few the same to choose. This will change to choosing the Master that is least loaded.
- Minions will accept `any` master that matches connection criteria without any particular security applied (priv/pub key check, signature, fingerprint etc). That implies that administrator is expected to know his network and make sure it is clean.

New Modules

- `salt.modules.purefa`

New NaCl Renderer

A new renderer has been added for encrypted data.

New support for Cisco UCS Chassis

The salt proxy minion now allows for control of Cisco USC chassis. See the `cimc` modules for details.

New support for Cassandra v3

The `cassandra_cql` module now supports Cassandra v3 which has changed its internal schema to define keyspaces and columns.

New salt-ssh roster

A new roster has been added that allows users to pull in a list of hosts for salt-ssh targeting from a `~/ .ssh` configuration. For full details, please see the `sshconfig` roster.

New GitFS Features

Two new features which affect how GitFS maps branches/tags to fileserver environments (i.e. `saltenvs`) have been added:

1. It is now possible to completely turn off Salt's default mapping logic (aside from the mapping of the base saltenv). This can be triggered using the new `gitfs_disable_saltenv_mapping` config option.

Note: When this is disabled, only the base saltenv and any configured using *per-saltenv configuration parameters* will be available.

2. The types of refs which Salt will use as saltenvs can now be controlled. In previous releases, branches and tags were both mapped as environments, and individual commit SHAs could be specified as saltenvs in states (and when caching files using `cp.cache_file`). Using the new `gitfs_ref_types` config option, the types of refs which are used as saltenvs can be restricted. This makes it possible to ignore all tags and use branches only, and also to keep SHAs from being made available as saltenvs.

Additional output modes

The `state_output` parameter now supports `full_id`, `changes_id` and `terse_id`. Just like `mixed_id`, these use the state ID as name in the highstate output. For more information on these output modes, see the docs for the *Highstate Outputter*.

Windows

Python Version

Python 2 Windows API was design when Windows did not support Unicode. Windows now supports Unicode however to keep backwards compatibility Python 2 Windows API has not been changed. Python 3 Windows API supports Unicode. Salt Python 3 installer is the recommend choice for users who need characters other than Non-ASCII (7bit) characters.

pkg Execution module changes

Significant changes have been made to the `win_pkg` execution module. Users should test this release against their existing package sls definition files. These changes are also in 2016.11.9 & 2017.7.3.

- `pkg.list_available` no longer defaults to refreshing the winrepo meta database.
- `pkg.install` without a `version` parameter no longer upgrades software if the software is already installed. Use `pkg.install version=latest` or in a state use `pkg.latest` to get the old behavior.
- `pkg.list_pkgs` now returns multiple versions if software installed more than once.
- `pkg.list_pkgs` now returns 'Not Found' when the version is not found instead of '(value not set)' which matches the contents of the sls definitions.
- `pkg.remove()` will wait up to 3 seconds (normally about a second) to detect changes in the registry after removing software, improving reporting of version changes.
- `pkg.remove()` can remove `latest` software, if `latest` is defined in sls definition.
- Documentation was update for the execution module to match the style in new versions, some corrections as well.
- All install/remove commands are prefix with `cmd.exe shell` and `cmdmod` is called with a command line string instead of a list. Some sls files in saltstack/salt-winrepo-ng expected the commands to be prefixed with `cmd.exe` (i.e. the use of `&`).
- Some execution module functions results, now behaviour more like their Unix/Linux versions.

Installer

Changes to config handling

Behavior with existing configuration has changed. With previous windows installers the existing config was used and the master and minion id could be modified via the installer. It was problematic in that it didn't account for configuration that may be defined in the `minion.d` directory. This change gives you the option via a drop-down list to use one of the following:

- Default Config: Use the config that comes with the installer
- Existing Config: Use the current config without changes
- Custom Config: Select a custom config using the file picker

The existing config option will only be available if the installer detects an existing config. If there is an existing config, and you choose `Default` or `Custom`, the existing config will be deleted, including the `minion.d` directory, and replaced by your selection.

The `Default Config` and `Custom Config` options will allow you to modify the Master and the Minion ID. `Existing Config` will leave the existing configuration unchanged.

These settings can be defined on the command line using the following switches:

- `/default-config`
- `/custom-config=C:\Path\To\Custom\Config\minion`

If neither option is passed and there is an existing config, the default is to use the existing config. If there is no existing config (new install) the default config will be used.

Multi-master configuration

The installer now has the ability to apply a multi-master configuration either from the GUI or the command line. The `master` field in the GUI can accept either a single master or a comma-separated list of masters. The command-line switch (`/master=`) can accept the same.

Command-line help

The Windows installer will now display command-line help when a help switch (`/?`) is passed.

New utils module `salt.utils.pkg.win`

A new utils module has been added, which gathers information about windows installed software. This is currently not used by any salt execution module or state at this time. Users are encouraged to run this and report any issues. Running the command with the `detail` option will be useful for anyone developing windows package definitions. With salt installed in the default location the following command will print the help message.

```
chcp 65001
c:\salt\bin\python.exe c:\salt\bin\lib\site-packages\salt\utils\pkg\win.py
c:\salt\bin\python.exe c:\salt\bin\lib\site-packages\salt\utils\pkg\win.py detail
↪system
```

Salt Cloud Features

OpenStack Revamp

The OpenStack Driver has been rewritten mostly from scratch. Salt is now using the *shade driver* <<https://docs.openstack.org/shade/latest/>>.

With this, the nova driver is being deprecated.

openstack driver

There have also been several new modules and states added for managing OpenStack setups using shade as well.

keystone keystone role grant keystone group keystone role keystone service keystone user keystone domain keystone project keystone endpoint glance glance_image neutron neutron subnet neutron secgroup neutron secgroup rule neutron network

Pre-Flight Commands

Support has been added for specified "preflight commands" to run on a VM before the deploy script is run. These must be defined as a list in a cloud configuration file. For example:

```
my-cloud-profile:
  provider: linode-config
  image: Ubuntu 16.04 LTS
  size: Linode 2048
  preflight_cmds:
    - whoami
    - echo 'hello world!'
```

These commands will run in sequence **before** the bootstrap script is executed.

New salt-cloud Grains

When salt-cloud creates a new minion, it will now add grain information to the minion configuration file, identifying the resources originally used to create it.

The generated grain information will appear similar to:

```
grains:
  salt-cloud:
    driver: ec2
    provider: my_ec2:ec2
    profile: ec2-web
```

The generation of salt-cloud grains can be suppressed by the option `enable_cloud_grains: 'False'` in the cloud configuration file.

Upgraded Saltify Driver

The salt-cloud Saltify driver is used to provision machines which are not controlled by a dedicated cloud supervisor (such as typical hardware machines) by pushing a salt-bootstrap command to them and accepting them on the salt master. Creation of a node has been its only function and no other salt-cloud commands were implemented.

With this upgrade, it can use the salt-api to provide advanced control, such as rebooting a machine, querying it along with conventional cloud minions, and, ultimately, disconnecting it from its master.

After disconnection from ("destroying" on) one master, a machine can be re-purposed by connecting to ("creating" on) a subsequent master.

New Vagrant Driver

The salt-cloud Vagrant driver brings virtual machines running in a limited environment, such as a programmer's workstation, under salt-cloud control. This can be useful for experimentation, instruction, or testing salt configurations.

Using salt-api on the master, and a salt-minion running on the host computer, the Vagrant driver can create (`vagrant up`), restart (`vagrant reload`), and destroy (`vagrant destroy`) VMs, as controlled by salt-cloud profiles which designate a `Vagrantfile` on the host machine.

The master can be a very limited machine, such as a Raspberry Pi, or a small VagrantBox VM.

Python PyWinRM Module

Versions of `pywinrm`>=0.2.1 are finally able to disable validation of self signed certificates. [Here](#) for more information.

DigitalOcean

The DigitalOcean driver has been renamed to conform to the company name. The new driver name is `digitalocean`. The old name `digital_ocean` and a short one `do` will still be supported through virtual aliases, this is mostly cosmetic.

Azure Cloud

The azure sdk used for the `azurearm` cloud driver now depends on `azure-cli`>=2.0.12

New `saltclass` pillar/master_tops modules

This module clones the behaviour of `reclass` (<http://reclass.pantsfullofunix.net/>), without the need of an external app, and add several features to improve flexibility. `Saltclass` lets you define your nodes from simple `yaml` files (`.yaml`) through hierarchical class inheritance with the possibility to override pillars down the tree.

Features

- Define your nodes through hierarchical class inheritance
- Reuse your `reclass` data with minimal modifications
 - `applications => states`
 - `parameters => pillars`
- Use Jinja templating in your `yaml` definitions
- Access to the following Salt objects in Jinja
 - `__opts__`

```

- __salt__
- __grains__
- __pillars__
- minion_id

```

- Chose how to merge or override your lists using ^ character (see examples)
- Expand variables \${} with possibility to escape them if needed \${} (see examples)
- Ignores missing node/class and will simply return empty without breaking the pillar module completely - will be logged

An example subset of data is available here: <http://git.mauras.ch/salt/saltclass/src/master/examples>

| Terms usable in yaml files | Description |
|----------------------------|--|
| classes | A list of classes that will be processed in order |
| states | A list of states that will be returned by master_tops function |
| pillars | A yaml dictionary that will be returned by the ext_pillar function |
| environment | Node saltenv that will be used by master_tops |

A class consists of:

- zero or more parent classes
- zero or more states
- any number of pillars

A child class can override pillars from a parent class. A node definition is a class in itself with an added `environment` parameter for `saltenv` definition.

Class Names

Class names mimic salt way of defining states and pillar files. This means that `default.users` class name will correspond to one of these:

- `<saltclass_path>/classes/default/users.yml`
- `<saltclass_path>/classes/default/users/init.yml`

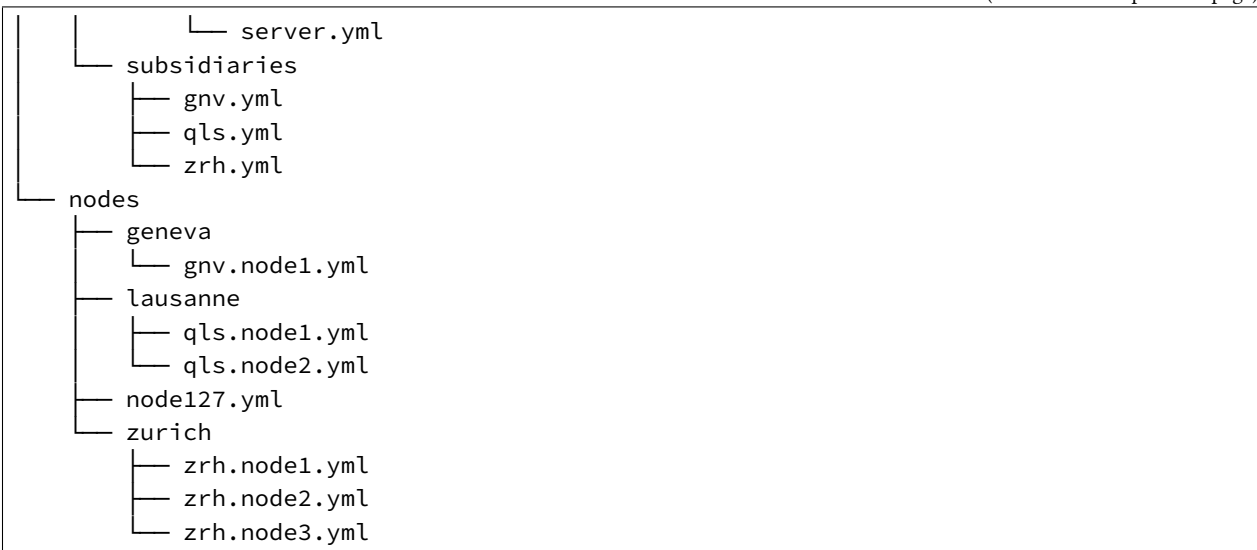

Saltclass Tree

A saltclass tree would look like this:

(continues on next page)

(continued from previous page)

**Examples**

```
<saltclass_path>/nodes/lausanne/qls.node1.yml
```

```
environment: base

classes:
{% for class in ['default'] %}
- {{ class }}
{% endfor %}
- subsidiaries.{{ __grains__['id'].split('.')[0] }}
```

```
<saltclass_path>/classes/default/init.yml
```

```
classes:
- default.users
- default.motd

states:
- openssh

pillars:
  default:
    network:
      dns:
        srv1: 192.168.0.1
        srv2: 192.168.0.2
        domain: example.com
      ntp:
        srv1: 192.168.10.10
        srv2: 192.168.10.20
```

```
<saltclass_path>/classes/subsidiaries/gnv.yml
```

```
pillars:
  default:
    network:
      sub: Geneva
```

(continues on next page)

(continued from previous page)

```

dns:
  srv1: 10.20.0.1
  srv2: 10.20.0.2
  srv3: 192.168.1.1
  domain: gnv.example.com
users:
  adm1:
    uid: 1210
    gid: 1210
    gecos: 'Super user admin1'
    homedir: /srv/app/adm1
  adm3:
    uid: 1203
    gid: 1203
    gecos: 'Super user adm

```

Variable expansions:

Escaped variables are rendered as is - `-${test}`

Missing variables are rendered as is - `-${net:dns:srv2}`

```

pillars:
  app:
  config:
    dns:
      srv1: ${default:network:dns:srv1}
      srv2: ${net:dns:srv2}
    uri: https://application.domain/call?\${test}
    prod_parameters:
      - p1
      - p2
      - p3
  pkg:
    - app-core
    - app-backend

```

List override:

Not using `^` as the first entry will simply merge the lists

```

pillars:
  app:
    pkg:
      - ^
      - app-frontend

```

Known limitation

Currently you can't have both a variable and an escaped variable in the same string as the escaped one will not be correctly rendered - `'${xx}'` will stay as is instead of being rendered as `'${xx}'`

Lists of comments in state returns

State functions can now return a list of strings for the comment field, as opposed to only a single string. This is meant to ease writing states with multiple or multi-part comments.

Beacon configuration changes

In order to remain consistent and to align with other Salt components such as states, support for configuring beacons using dictionary based configuration has been deprecated in favor of list based configuration. All beacons have a validation function which will check the configuration for the correct format and only load if the validation passes.

avahi_announce

Old behavior:

```
beacons:
  avahi_announce:
    run_once: True
    servicetype: _demo._tcp
    port: 1234
    txt:
      ProdName: grains.productname
      SerialNo: grains.serialnumber
      Comments: 'this is a test'
```

New behavior:

```
beacons:
  avahi_announce:
    - run_once: True
    - servicetype: _demo._tcp
    - port: 1234
    - txt:
      ProdName: grains.productname
      SerialNo: grains.serialnumber
      Comments: 'this is a test'
```

bonjour_announce

Old behavior:

```
beacons:
  bonjour_announce:
    run_once: True
    servicetype: _demo._tcp
    port: 1234
    txt:
      ProdName: grains.productname
      SerialNo: grains.serialnumber
      Comments: 'this is a test'
```

New behavior:

```
beacons:
  bonjour_announce:
    - run_once: True
    - servicetype: _demo._tcp
    - port: 1234
    - txt:
```

(continues on next page)

(continued from previous page)

```

ProdName: grains.productname
SerialNo: grains.serialnumber
Comments: 'this is a test'

```

btmp

Old behavior:

```

beacons:
  btmp: {}

```

New behavior:

```

beacons:
  btmp: []

```

glxinfo

Old behavior:

```

beacons:
  glxinfo:
    user: frank
    screen_event: True

```

New behavior:

```

beacons:
  glxinfo:
    - user: frank
    - screen_event: True

```

haproxy

Old behavior:

```

beacons:
  haproxy:
    - www-backend:
      threshold: 45
      servers:
        - web1
        - web2
    - interval: 120

```

New behavior:

```

beacons:
  haproxy:
    - backends:
      www-backend:

```

(continues on next page)

(continued from previous page)

```

threshold: 45
servers:
  - web1
  - web2
- interval: 120

```

inotify

Old behavior:

```

beacons:
  inotify:
    /path/to/file/or/dir:
      mask:
        - open
        - create
        - close_write
      recurse: True
      auto_add: True
      exclude:
        - /path/to/file/or/dir/exclude1
        - /path/to/file/or/dir/exclude2
        - /path/to/file/or/dir/regex[a-m]*$
      regex: True
      coalesce: True

```

New behavior:

```

beacons:
  inotify:
    - files:
      /path/to/file/or/dir:
        mask:
          - open
          - create
          - close_write
        recurse: True
        auto_add: True
        exclude:
          - /path/to/file/or/dir/exclude1
          - /path/to/file/or/dir/exclude2
          - /path/to/file/or/dir/regex[a-m]*$
        regex: True
    - coalesce: True

```

journald

Old behavior:

```

beacons:
  journald:
  sshd:

```

(continues on next page)

(continued from previous page)

```
SYSLOG_IDENTIFIER: sshd
PRIORITY: 6
```

New behavior:

```
beacons:
  journald:
    - services:
      sshd:
        SYSLOG_IDENTIFIER: sshd
        PRIORITY: 6
```

load

Old behavior:

```
beacons:
  load:
    1m:
      - 0.0
      - 2.0
    5m:
      - 0.0
      - 1.5
    15m:
      - 0.1
      - 1.0
    emitatstartup: True
    onchangeonly: False
```

New behavior:

```
beacons:
  load:
    - averages:
      1m:
        - 0.0
        - 2.0
      5m:
        - 0.0
        - 1.5
      15m:
        - 0.1
        - 1.0
    - emitatstartup: True
    - onchangeonly: False
```

log

Old behavior:

```
beacons:
  log:
```

(continues on next page)

(continued from previous page)

```

New requisites available in state compiler

require_any

The use of `require_any` demands that one of the required states executes before the dependent state. The state containing the `require_any` requisite is defined as the dependent state. The states specified in the `require_any` statement are defined as the required states. If at least one of the required state's execution succeeds, the dependent state will then execute. If all of the executions by the required states fail, the dependent state will not execute.

watch_any

The state containing the `watch_any` requisite is defined as the watching state. The states specified in the `watch_any` statement are defined as the watched states. When the watched states execute, they will return a dictionary containing a key named "changes".

If the "result" of any of the watched states is `True`, the watching state *will execute normally*, and if all of them are `False`, the watching state will never run. This part of `watch` mirrors the functionality of the `require` requisite.

If the "result" of any of the watched states is `True` *and* the "changes" key contains a populated dictionary (changes occurred in the watched state), then the `watch` requisite can add additional behavior. This additional behavior is defined by the `mod_watch` function within the watching state module. If the `mod_watch` function exists in the watching state module, it will be called *in addition to* the normal watching state. The return data from the `mod_watch` function is what will be returned to the master in this case; the return data from the main watching function is discarded.

If the "changes" key contains an empty dictionary, the `watch` requisite acts exactly like the `require` requisite (the watching state will execute if "result" is `True`, and fail if "result" is `False` in the watched state).

onchanges_any

The `onchanges_any` requisite makes a state only apply one of the required states generates changes, and if one of the watched state's "result" is `True`. This can be a useful way to execute a post hook after changing aspects of a system.

onfail_any

The `onfail_any` requisite allows for reactions to happen strictly as a response to the failure of at least one other state. This can be used in a number of ways, such as executing a second attempt to set up a service or begin to execute a separate thread of states because of a failure.

The `onfail_any` requisite is applied in the same way as `require_any` and `watch_any`.

Basic Slots support in state compiler

Slots extend the state syntax and allows you to do things right before the state function is executed. So you can make a decision in the last moment right before a state is executed.

Slot syntax looks close to the simple python function call. Here is a simple example:

```
copy-some-file:
  file.copy:
    - name: __slot__:salt:test.echo(text=/tmp/some_file)
    - source: __slot__:salt:test.echo(/etc/hosts)
```

Read more [here](#).

Cryptographic layer changes

M2Crypto is coming back. We are making the crypto backend modular but in this release M2Crypto is enabled if it's importable by Python. If not Cryptodome or PyCrypto is used as it was in the previous releases. M2Crypto is used in the same way as PyCrypto so there would be no compatibility issues, different nodes could use different backends.

NaCL Module and Runner changes

In addition to argument changes in both the NaCL module and runner for future removal in the Neon release, the default "box_type" has changed from `secretbox` to `sealedbox`. `SecretBox` is data encrypted using private key `sk` and `Sealedbox` is encrypted using public key `pk`.

utils functions reorganized into separate modules

The Salt utility functions from `salt.utils` (typically used by those developing extension modules for Salt) have been moved into different modules, grouped logically based on their functionality. The old function names will continue to work until the Neon release of Salt (due around Q1 2019).

The renamed functions are:

- `salt.utils.appendproctitle`: use `salt.utils.process.appendproctitle` instead.
- `salt.utils.daemonize`: use `salt.utils.process.daemonize` instead.
- `salt.utils.daemonize_if`: use `salt.utils.process.daemonize_if` instead.

- `salt.utils.reinit_crypto`: use `salt.utils.crypt.reinit_crypto` instead.
- `salt.utils.pem_finger`: use `salt.utils.crypt.pem_finger` instead.
- `salt.utils.to_bytes`: use `salt.utils.stringutils.to_bytes` instead.
- `salt.utils.to_str`: use `salt.utils.stringutils.to_str` instead.
- `salt.utils.to_unicode`: use `salt.utils.stringutils.to_unicode` instead.
- `salt.utils.str_to_num`: use `salt.utils.stringutils.to_num` instead.
- `salt.utils.is_quoted`: use `salt.utils.stringutils.is_quoted` instead.
- `salt.utils.dequote`: use `salt.utils.stringutils.dequote` instead.
- `salt.utils.is_hex`: use `salt.utils.stringutils.is_hex` instead.
- `salt.utils.is_bin_str`: use `salt.utils.stringutils.is_bin_str` instead.
- `salt.utils.rand_string`: use `salt.utils.stringutils.random` instead.
- `salt.utils.contains_whitespace`: use `salt.utils.stringutils.contains_whitespace` instead.
- `salt.utils.build_whitespace_split_regex`: use `salt.utils.stringutils.build_whitespace_split_regex` instead.
- `salt.utils.expr_match`: use `salt.utils.stringutils.expr_match` instead.
- `salt.utils.check_whitelist_blacklist`: use `salt.utils.stringutils.check_whitelist_blacklist` instead.
- `salt.utils.check_include_exclude`: use `salt.utils.stringutils.check_include_exclude` instead.
- `salt.utils.print_cli`: use `salt.utils.stringutils.print_cli` instead.
- `salt.utils.clean_kwargs`: use `salt.utils.args.clean_kwargs` instead.
- `salt.utils.invalid_kwargs`: use `salt.utils.args.invalid_kwargs` instead.
- `salt.utils.shlex_split`: use `salt.utils.args.shlex_split` instead.
- `salt.utils.arg_lookup`: use `salt.utils.args.arg_lookup` instead.
- `salt.utils.argspec_report`: use `salt.utils.args.argspec_report` instead.
- `salt.utils.split_input`: use `salt.utils.args.split_input` instead.
- `salt.utils.test_mode`: use `salt.utils.args.test_mode` instead.
- `salt.utils.format_call`: use `salt.utils.args.format_call` instead.
- `salt.utils.which`: use `salt.utils.path.which` instead.
- `salt.utils.which_bin`: use `salt.utils.path.which_bin` instead.
- `salt.utils.path_join`: use `salt.utils.path.join` instead.
- `salt.utils.check_or_die`: use `salt.utils.path.check_or_die` instead.
- `salt.utils.sanitize_win_path_string`: use `salt.utils.path.sanitize_win_path` instead.
- `salt.utils.rand_str`: use `salt.utils.hashutils.random_hash` instead.
- `salt.utils.get_hash`: use `salt.utils.hashutils.get_hash` instead.
- `salt.utils.is_windows`: use `salt.utils.platform.is_windows` instead.

- `salt.utils.is_proxy`: use `salt.utils.platform.is_proxy` instead.
- `salt.utils.is_linux`: use `salt.utils.platform.is_linux` instead.
- `salt.utils.is_darwin`: use `salt.utils.platform.is_darwin` instead.
- `salt.utils.is_sunos`: use `salt.utils.platform.is_sunos` instead.
- `salt.utils.is_smartos`: use `salt.utils.platform.is_smartos` instead.
- `salt.utils.is_smartos_globalzone`: use `salt.utils.platform.is_smartos_globalzone` instead.
- `salt.utils.is_smartos_zone`: use `salt.utils.platform.is_smartos_zone` instead.
- `salt.utils.is_freebsd`: use `salt.utils.platform.is_freebsd` instead.
- `salt.utils.is_netbsd`: use `salt.utils.platform.is_netbsd` instead.
- `salt.utils.is_openbsd`: use `salt.utils.platform.is_openbsd` instead.
- `salt.utils.is_aix`: use `salt.utils.platform.is_aix` instead.
- `salt.utils.safe_rm`: use `salt.utils.files.safe_rm` instead.
- `salt.utils.is_empty`: use `salt.utils.files.is_empty` instead.
- `salt.utils.fopen`: use `salt.utils.files.fopen` instead.
- `salt.utils.flopen`: use `salt.utils.files.flopen` instead.
- `salt.utils.fpopen`: use `salt.utils.files.fpopen` instead.
- `salt.utils.rm_rf`: use `salt.utils.files.rm_rf` instead.
- `salt.utils.mkstemp`: use `salt.utils.files.mkstemp` instead.
- `salt.utils.istextfile`: use `salt.utils.files.is_text_file` instead.
- `salt.utils.is_bin_file`: use `salt.utils.files.is_binary` instead.
- `salt.utils.list_files`: use `salt.utils.files.list_files` instead.
- `salt.utils.safe_walk`: use `salt.utils.files.safe_walk` instead.
- `salt.utils.st_mode_to_octal`: use `salt.utils.files.st_mode_to_octal` instead.
- `salt.utils.normalize_mode`: use `salt.utils.files.normalize_mode` instead.
- `salt.utils.human_size_to_bytes`: use `salt.utils.files.human_size_to_bytes` instead.
- `salt.utils.backup_minion`: use `salt.utils.files.backup_minion` instead.
- `salt.utils.str_version_to_evr`: use `salt.utils.pkg.rpm.version_to_evr` instead.
- `salt.utils.parse_docstring`: use `salt.utils.doc.parse_docstring` instead.
- `salt.utils.compare_versions`: use `salt.utils.versions.compare` instead.
- `salt.utils.version_cmp`: use `salt.utils.versions.version_cmp` instead.
- `salt.utils.warn_until`: use `salt.utils.versions.warn_until` instead.
- `salt.utils.kwargs_warn_until`: use `salt.utils.versions.kwargs_warn_until` instead.
- `salt.utils.get_color_theme`: use `salt.utils.color.get_color_theme` instead.
- `salt.utils.get_colors`: use `salt.utils.color.get_colors` instead.
- `salt.utils.gen_state_tag`: use `salt.utils.state.gen_tag` instead.

- `salt.utils.search_onfail_requisites:` use `salt.utils.state.search_onfail_requisites` instead.
- `salt.utils.check_state_result:` use `salt.utils.state.check_result` instead.
- `salt.utils.get_user:` use `salt.utils.user.get_user` instead.
- `salt.utils.get_uid:` use `salt.utils.user.get_uid` instead.
- `salt.utils.get_specific_user:` use `salt.utils.user.get_specific_user` instead.
- `salt.utils.chugid:` use `salt.utils.user.chugid` instead.
- `salt.utils.chugid_and_umask:` use `salt.utils.user.chugid_and_umask` instead.
- `salt.utils.get_default_group:` use `salt.utils.user.get_default_group` instead.
- `salt.utils.get_group_list:` use `salt.utils.user.get_group_list` instead.
- `salt.utils.get_group_dict:` use `salt.utils.user.get_group_dict` instead.
- `salt.utils.get_gid_list:` use `salt.utils.user.get_gid_list` instead.
- `salt.utils.get_gid:` use `salt.utils.user.get_gid` instead.
- `salt.utils.enable_ctrl_logoff_handler:` use `salt.utils.win_functions.enable_ctrl_logoff_handler` instead.
- `salt.utils.traverse_dict:` use `salt.utils.data.traverse_dict` instead.
- `salt.utils.traverse_dict_and_list:` use `salt.utils.data.traverse_dict_and_list` instead.
- `salt.utils.filter_by:` use `salt.utils.data.filter_by` instead.
- `salt.utils.subdict_match:` use `salt.utils.data.subdict_match` instead.
- `salt.utils.substr_in_list:` use `salt.utils.data.substr_in_list` instead.
- `salt.utils.is_dictlist:` use `salt.utils.data.is_dictlist`.
- `salt.utils.repack_dictlist:` use `salt.utils.data.repack_dictlist` instead.
- `salt.utils.compare_dicts:` use `salt.utils.data.compare_dicts` instead.
- `salt.utils.compare_lists:` use `salt.utils.data.compare_lists` instead.
- `salt.utils.decode_dict:` use `salt.utils.data.encode_dict` instead.
- `salt.utils.decode_list:` use `salt.utils.data.encode_list` instead.
- `salt.utils.exactly_n:` use `salt.utils.data.exactly_n` instead.
- `salt.utils.exactly_one:` use `salt.utils.data.exactly_one` instead.
- `salt.utils.is_list:` use `salt.utils.data.is_list` instead.
- `salt.utils.is_iter:` use `salt.utils.data.is_iter` instead.
- `salt.utils.isorted:` use `salt.utils.data.sorted_ignorecase` instead.
- `salt.utils.is_true:` use `salt.utils.data.is_true` instead.
- `salt.utils.mysql_to_dict:` use `salt.utils.data.mysql_to_dict` instead.
- `salt.utils.simple_types_filter:` use `salt.utils.data.simple_types_filter` instead.
- `salt.utils.ip_bracket:` use `salt.utils.zeromq.ip_bracket` instead.
- `salt.utils.gen_mac:` use `salt.utils.network.gen_mac` instead.

- `salt.utils.mac_str_to_bytes`: use `salt.utils.network.mac_str_to_bytes` instead.
- `salt.utils.refresh_dns`: use `salt.utils.network.refresh_dns` instead.
- `salt.utils.dns_check`: use `salt.utils.network.dns_check` instead.
- `salt.utils.get_context`: use `salt.utils.stringutils.get_context` instead.
- `salt.utils.get_master_key`: use `salt.utils.master.get_master_key` instead.
- `salt.utils.get_values_of_matching_keys`: use `salt.utils.master.get_values_of_matching_keys` instead.
- `salt.utils.date_cast`: use `salt.utils.dateutils.date_cast` instead.
- `salt.utils.date_format`: use `salt.utils.dateutils.strptime` instead.
- `salt.utils.total_seconds`: use `salt.utils.dateutils.total_seconds` instead.
- `salt.utils.find_json`: use `salt.utils.json.find_json` instead.
- `salt.utils.import_json`: use `salt.utils.json.import_json` instead.
- `salt.utils.namespaced_function`: use `salt.utils.functools.namespaced_function` instead.
- `salt.utils.alias_function`: use `salt.utils.functools.alias_function` instead.
- `salt.utils.profile_func`: use `salt.utils.profile.profile_func` instead.
- `salt.utils.activate_profile`: use `salt.utils.profile.activate_profile` instead.
- `salt.utils.output_profile`: use `salt.utils.profile.output_profile` instead.

Deprecations

Configuration Option Deprecations

- The `requests_lib` configuration option has been removed. Please use `backend` instead.

Profitbricks Cloud Updated Dependency

The minimum version of the `profitbrick` python package for the `profitbricks` cloud driver has changed from 3.0.0 to 3.1.0.

Execution Module Deprecations

- The `blockdev` execution module has been removed. Its functions were merged with the `disk` module.
- The `lxc` execution module has been changed as follows:
 - The `dnsservers` option to `lxc.cloud_init_interface` no longer defaults to 4.4.4.4 and 8.8.8.8.
 - The `dns_via_dhcp` option to `lxc.cloud_init_interface` now defaults to `True` instead of `False`.
- The `win_psget` module has been changed as follows:
 - The `psget.psversion` function was removed. Please use `cmd.shell_info` instead.

- The *win_service* module (which provides the *service* module on Windows platforms) has been changed as follows:
 - The *config* function was removed. Please use *service.modify* instead.
 - The following arguments to the *service.create* function have been renamed:
 - * *binpath* has been renamed to *bin_path*
 - * *depend* has been renamed to *dependencies*
 - * *DisplayName* has been renamed to *display_name*
 - * *error* has been renamed to *error_control*
 - * *group* has been renamed to *load_order_group*
 - * *obj* has been renamed to *account_name*
 - * *password* has been renamed to *account_password*
 - * *start* has been renamed to *start_type*
 - * *type* has been renamed to *service_type*
- The *nacl* module has been changed as follows:
 - The following arguments have been renamed in the *nacl.keygen*, *nacl.enc*, and *nacl.dec*:
 - * *key_file* has been renamed to *sk_file*
 - * *key* has been renamed to *sk*

Runner Deprecations

- The *manage* runner has been changed as follows:
 - *root_user* argument was removed from the *manage.bootstrap* function. Please use *salt-ssh* roster entries for the host instead.
- The *nacl* runner has been changed as follows:
 - The following arguments have been renamed in the *nacl.keygen*, *nacl.enc*, and *nacl.dec*:
 - * *key_file* has been renamed to *sk_file*
 - * *key* has been renamed to *sk*

State Deprecations

- In the *archive* state, the *tar_options* and *zip_options* options were removed. Please use *options* instead.
- The *cmd* state had the following changes:
 - The *user* and *group* options were removed from the following functions (please use *runas* instead):
 - * *cmd.run*
 - * *cmd.script*
 - * *cmd.wait*
 - * *cmd.wait_script*

- In the *file* states, the `show_diff` option was removed in all states where it was previously supported. Please use `show_changes` instead.

Grain Deprecations

- For `smartos`, some grains have been deprecated. These grains will be removed in Neon:
 - The `hypervisor_uuid` grain has been replaced with `mdata:sdcc:server_uuid`
 - The `datacenter` grain has been replaced with `mdata:sdcc:datacenter_name`

Pillar Deprecations

The legacy configuration for `git_pillar` has been removed. Please use the new configuration for `git_pillar` which was added in 2015.8.0, which is documented [here](#).

Utils Deprecations

- In `salt.utils.cloud`, the `fire_event` function now requires a `sock_dir` argument. It was previously optional.

Other Miscellaneous Deprecations

- In `version.py`, the `rc_info` function was removed. Please use `pre_info` instead.
- Warnings for moving away from the `env` option were removed. `saltenv` should be used instead. The removal of these warnings does not have a behavior change. Only the warning text was removed.

Minion Blackout

During a blackout, minions will not execute any remote execution commands, except for `saltutil.refresh_pillar`. Previously, support was added so that blackouts are enabled using a special pillar key, `minion_blackout` set to `True` and an optional pillar key `minion_blackout_whitelist` to specify additional functions that are permitted during blackout. This release adds support for using this feature in the grains as well, by using special grains keys `minion_blackout` and `minion_blackout_whitelist`.

Sentry Log Handler

Configuring sentry raven python client via `project`, `servers`, `public_key` and `secret_key` is deprecated and won't work with sentry clients > 3.0. Instead, the `dsn` config param must be used.

RAET transport

We haven't been doing development on RAET for quite some time and decided that 2018.3.0 is the time to announce the deprecation. RAET support will be removed in Neon. Please consider to move to `zeromq` or `tcp` transport instead of `raet`.

27.2.2 Salt 2018.3.1 Release Notes

Version 2018.3.1 is a bugfix release for *2018.3.0*.

Statistics

- Total Merges: 525
- Total Issue References: 74
- Total PR References: 255
- Contributors: 55 (Ch3LL, DmitryKuzmenko, Giandom, Kimol, L4rS6, LukeCarrier, OrlandoArcapix, TamCore, The-Loeki, UtahDave, aesposito91, bbinet, bdrung, boltronics, bosatsu, clan, corywright, damon-atkins, din-camihai, dmurphy18, dnABic, douglasjreynolds, dwoz, edgan, ejparker12, esell, ezh, femnad, folti, gareth-greenaway, gtmanfred, isbm, jasperla, johnj, mateiw, mcalmer, mirceaulinic, morganwillcock, opdude, pcn, pruiiz, psagers, psyer, rallytime, robinro, s0undt3ch, samodid, shengis, skjaro, tankywoo, terminalmage, twang-boy, vutny, yannj-fr, zmedico)

Warning: If you are using Jinja to dump lists or dictionaries in your SLS files, this will now cause errors in Python 2 since Jinja does not produce YAML-compatible output when strings in the data structures contain unicode types. The dictionary must be passed through a Jinja filter to produce YAML-compatible strings.

The below is an example of invalid SLS:

```
/etc/foo.conf:  
file.manged:  
- source: salt://foo.conf  
- template: jinja  
- defaults: {{ mydict }}
```

To make it valid, use either one of Salt's own `json` or `yaml` filters:

```
/etc/foo.conf:  
file.manged:  
- source: salt://foo.conf  
- template: jinja  
- defaults: {{ mydict | json }}
```

Tornado 5.0 Support for Python 2 Only

Tornado 5.0 moves to using asyncio for all python3 versions. Because of this and changes in asyncio between python 3.4 and 3.5 to only be able to use one ioloop, which requires some rearchitecting, support for tornado 5.0 and python3 versions of salt has been delayed to a later release.

For now, to use tornado 5.0, the python 2 version of salt must be used.

Changes to Slack Engine pillars

When using `groups_pillar_name` for the slack engine, the engine should be used as part of a salt-minion process running on the master. This will allow the minion to have pillars assigned to it, and will still allow the engine to create a LocalClient connection to the master ipc sockets to control environments.

Changes to Automatically Updating the Roster File

In 2018.3.0 salt-ssh was configured to automatically update the flat roster file if a minion was not found for salt-ssh. This was decided to be undesirable as a default. The `--skip-roster` flag has been removed and replaced with `--update-roster`, which will enable salt-ssh to add minions to the flat roster file. This behavior can also be enabled by setting `ssh_update_roster: True` in the master config file.

Changes to `file.blockreplace` State

The `append_newline` argument was added to this state. Additionally, to improve idempotence, if the string represented by `marker_end` is found in the middle of the line, the content preceding the marker will be removed when the block is replaced. This allows one to remove `append_newline: False` from the SLS and have the block properly replaced if the end of the content block is immediately followed by the `marker_end` (i.e. no newline before the marker).

Note: This will require changes to your SLS if your `marker_end` does not include the very beginning of the content you want to keep.

See the `file.blockreplace` state documentation for further information.

Changelog for v2018.3.0..v2018.3.1

Generated at: 2018-06-06 17:43:01 UTC

- **ISSUE #47955:** (frogunder) 2018.3.1 Creating Windows machine in Amazon using salt-cloud fails. (refs: #47989)
- **PR #47998:** (rallytime) Back-port #47989 to 2018.3.1 @ 2018-06-06 17:08:04 UTC
 - **PR #47989:** (dwoz) Properly decode password from aws using m2crypto (refs: #47998)
 - 605463ca0d Merge pull request #47998 from rallytime/bp-47989
 - 1b7e9ac2d3 Lint fixes
 - 0545152ddd Properly decode password from aws using m2crypto
- **PR #47965:** (Ch3LL) Add PR 47924 from 2018.3 branch @ 2018-06-06 13:54:09 UTC
 - dbc798ac68 Merge pull request #47965 from Ch3LL/gitpy_mac_3.1
 - bf608abd44 Catch all exceptions in git import for salt.utils.gitfs
- **PR #47973:** (terminalmage) salt.modules.testinframod: fix TypeError invoking types.FunctionType @ 2018-06-06 13:53:46 UTC
 - 864d640633 Merge pull request #47973 from terminalmage/fix-testinfra
 - 4518c89484 Lint: Remove unused six import
 - c6816b2149 salt.modules.testinframod: fix TypeError invoking types.FunctionType
- **ISSUE #47236:** (MorphBonehunter) x509.private_key_managed broken after upgrade to 2018.3.0 (refs: #47957)
- **PR #47967:** (rallytime) Back-port #47957 to 2018.3.1 @ 2018-06-06 13:53:28 UTC
 - **PR #47957:** (garethgreenaway) [2018.8] Ensure x509 passphrase is a string (refs: #47967)
 - 5ddcff420 Merge pull request #47967 from rallytime/bp-47957
 - 9a55579af1 removing unnecessary change

- 329b2e5956 Ensuring that when a passphrase is passed in, it is returned as a string from the passphrase callback.
- **PR #47902:** (Ch3LL) Remove In Progress for 2018.3.1 Release Notes @ 2018-05-30 18:26:49 UTC
 - 9c964fdbce Merge pull request #47902 from Ch3LL/rn_in_progress
 - f560a151cd Remove In Progress for 2018.3.1 Release Notes
- **PR #47897:** (Ch3LL) Add changelog to 2018.3.1 release notes @ 2018-05-30 15:04:42 UTC
 - ea7b4fdc08 Merge pull request #47897 from Ch3LL/rn_2018
 - e27ee273a7 Add == line to changelog line for release notes
 - 61e56d275d Add changelog to 2018.3.1 release notes
- **ISSUE #47784:** (jpsv) win_lgpo.py line 5368; AttributeError: 'OrderedDict' object has no attribute 'lower' (refs: #47848)
- **PR #47848:** (twangboy) Fix some major issues with the LGPO module @ 2018-05-30 13:37:32 UTC
 - f15e636d5e Merge pull request #47848 from twangboy/fix_47784
 - 98facf8dc8 Remove log.debug statement in __virtual__
 - f037fa4064 Fix some major issues with the LGPO module
- **PR #47881:** (gtmanfred) quote python_version in requirements.txt @ 2018-05-29 21:12:05 UTC
 - 92b8c4c08e Merge pull request #47881 from gtmanfred/2018.3.1
 - 3d874b5529 quote python_version in requirements.txt
- **PR #47874:** (gtmanfred) Tornado 5.0 is only supported on python 2 for now @ 2018-05-29 19:45:44 UTC
 - 705bf8172d Merge pull request #47874 from gtmanfred/2018.3.1
 - 13f920415a add tornado5 note to 2018.3.1
 - aeacd2b749 allow tornado 5.0 to be installed only for python2
- **PR #47820:** (Ch3LL) Remove output_loglevel in mac_system module @ 2018-05-25 13:10:36 UTC
 - 09e8c5f0cd Merge pull request #47820 from Ch3LL/mac_system
 - 362414e53b Remove output_loglevel in mac_system module
- **PR #47798:** (rallytime) Back-port #47776 to 2018.3.1 @ 2018-05-23 15:10:43 UTC
 - **PR #47776:** (garethgreenaway) [2018.3] Fixes to failing _before_connect tests (refs: #47798)
 - 7e314c26c8 Merge pull request #47798 from rallytime/bp-47776
 - ae881547d2 Fixing unit.test_minion.MinionTestCase.test_beacons_before_connect and unit.test_minion.MinionTestCase.test_scheduler_before_connect.
- **PR #47782:** (rallytime) Back-port #47775 to 2018.3.1 @ 2018-05-22 20:56:37 UTC
 - **PR #47775:** (gtmanfred) catch UnsupportedOperation with AssertionError (refs: #47782)
 - 9c610da0bc Merge pull request #47782 from rallytime/bp-47775
 - bab9c966c5 catch UnsupportedOperation with AssertionError
- **PR #47770:** (rallytime) Back-port #47769 to 2018.3.1 @ 2018-05-22 17:27:20 UTC
 - **PR #47769:** (gtmanfred) skip test that breaks test suite (refs: #47770)
 - 4adf10b20b Merge pull request #47770 from rallytime/bp-47769

- 3cfb95c7bc skip test that breaks test suite
- PR #47724: (terminalmage) 2 master_tops/ext_nodes fixes @ 2018-05-21 15:59:04 UTC
 - bbe8e62a98 Merge pull request #47724 from terminalmage/master_tops_fixes
 - 48b8c5acd1 Merge branch '2018.3.1' into master_tops_fixes
 - 89b3070d4c Change deprecation warning to debug logging
 - ceb6e10f87 Fix spurious "Malformed request" error
- ISSUE #47484: (whytewolf) Windows: pkg.latest state not updating packages. (refs: #47702)
- PR #47739: (rallytime) Back-port #47702 to 2018.3.1 @ 2018-05-21 15:37:03 UTC
 - PR #47702: (damon-atkins) State pkg.latest called win pkg.install with list of pkgs and the required versions (refs: #47739)
 - 97d6fe7434 Merge pull request #47739 from rallytime/bp-47702
 - f79da64bb0 Update is_windows path to use *platform*
 - f04b19b5b6 Ensure targeted_pkgs always contains value for non-windows.
 - 14659f9cad Adjusted based on feed back.
 - 9f18f7cdf5 Whitespace lint issues
 - 2a29b28ee6 pkg.install execution module on windows ensures the software package is installed when no version is specified, it does not upgrade the software to the latest. This is per the design. pkg.latest must provide the versions to install to pkg.install
- PR #47730: (rallytime) Back-port #47700 to 2018.3.1 @ 2018-05-21 15:36:16 UTC
 - PR #47700: (yannj-fr) fix roots modification time check (refs: #47730)
 - cfbe0ba73e Merge pull request #47730 from rallytime/bp-47700
 - 9bc35b88ea fix roots modification time check
- PR #47727: (Ch3LL) Fix salt.utils.versions.warn_until spelling @ 2018-05-21 13:41:00 UTC
 - 3614d3d83a Merge pull request #47727 from Ch3LL/spelling
 - 47a8de5b73 Fix salt.utils.versions.warn_until spelling
- PR #47736: (Ch3LL) mac_utils test: patch __salt__['cmd.run*'] @ 2018-05-21 13:38:59 UTC
 - bb45cdaefe Merge pull request #47736 from Ch3LL/fix_util_mac_test
 - ee90c779a8 mac_utils test: patch __salt__['cmd.run*']
- PR #47641: (gtmanfred) fix _create_stream and tornado 5.0 @ 2018-05-18 14:25:36 UTC
 - 43930f8bac Merge pull request #47641 from gtmanfred/2018.3.1
 - 037fd92f59 fix pylint
 - 75d42d8963 Fix last test for tornado
 - a046512287 allow using tornado 5.0
 - 05e651f038 fix _create_stream and tornado 5.0
- ISSUE #47532: (edgan) roster auto-add feature in salt-ssh-2018.3.0 (refs: #47541)
- PR #47541: (gtmanfred) switch skip-roster to update-roster @ 2018-05-18 13:29:50 UTC
 - 9f926bcd1a Merge pull request #47541 from gtmanfred/2018.3

- 8c5c780292 switch skip-roster to update-roster
- **PR #47719:** (rallytime) Back-port #47692 to 2018.3.1 @ 2018-05-18 13:22:02 UTC
 - **PR #47692:** (dwoz) Default windows to m1.small for ec2-classic (refs: #47719)
 - a963f1b558 Merge pull request #47719 from rallytime/bp-47692
 - 1d9f247fb7 Default windows to m1.small for ec2-classic
- **PR #47706:** (Ch3LL) Add cmd._run_all_quiet to mac_utils and __utils__ in mac_service @ 2018-05-18 01:11:46 UTC
 - c9108893ab Merge pull request #47706 from Ch3LL/mac_service_util
 - 3611af699f remove added space
 - 9921caa143 fix pylint
 - 317e41d3c0 use cmd._run_quiet and cmd._run_all_quiet instead of importing minion_mods in __salt__
 - a78652515a Add __salt__ to mac_utils and __utils__ in mac_service
- **PR #47664:** (rallytime) Back-port #47645 to 2018.3.1 @ 2018-05-15 18:25:27 UTC
 - **PR #47645:** (Ch3LL) query the pip path for test test_issue_2087_missing_pip (refs: #47664)
 - fb3bf1ff3e Merge pull request #47664 from rallytime/bp-47645
 - 0a732d8e66 query the pip path for test test_issue_2087_missing_pip
- **PR #47647:** (rallytime) Back-port #47601 and #47643 to 2018.3.1 @ 2018-05-15 14:07:54 UTC
 - **PR #47643:** (dwoz) Remove unwanted file (refs: #47647)
 - **PR #47601:** (dwoz) Skip tests when we can not use runas (refs: #47647)
 - 9039fee104 Merge pull request #47647 from rallytime/bp-47601-and-47643-2018.3.1
 - 7214fe17c8 Fix typo
 - 506dceed17 Remove unwanted file
 - b6a21dfda3 use ignore-undefined-variable
 - 2429f9fe8a Ignore pylint WindowsError
 - 2d63682fea Better doc string
 - ec2adff699 Skip tests when we can not use runas
- **PR #47596:** (rallytime) Back-port #47568 to 2018.3.1 @ 2018-05-10 22:09:09 UTC
 - **PR #47568:** (terminalmage) salt.serializers.yaml/yamlex: remove invalid multi_constructor (refs: #47596)
 - 17b5265d95 Merge pull request #47596 from rallytime/bp-47568
 - ecf5dc8b9f Add exception logging on serialize/deserialize exceptions
 - 9659b19819 salt.serializers.yaml/yamlex: remove invalid multi_constructor
- **PR #47595:** (rallytime) Back-port #47569 to 2018.3.1 @ 2018-05-10 22:08:53 UTC
 - **PR #47569:** (Ch3LL) Update salt.utils.path mock in virtual core test (refs: #47595)
 - c4c400f3e9 Merge pull request #47595 from rallytime/bp-47569
 - 0763f96458 update salt.utils.platform path for virt core test
 - 718252c1ef Update salt.utils.path mock in virtual core test

- **PR #47599:** (rallytime) Back-port #47570 to 2018.3.1 @ 2018-05-10 22:06:44 UTC
 - **PR #47570:** (gtmanfred) Update dependency to msgpack (refs: #47599)
 - ec7de14be0 Merge pull request #47599 from rallytime/bp-47570
 - 9334c03da9 Update dependency to msgpack
- **PR #47571:** (rallytime) [2018.3.1] Update man pages @ 2018-05-10 16:21:57 UTC
 - 2a10d92669 Merge pull request #47571 from rallytime/man-pages
 - ade5e9f664 [2018.3.1] Update man pages
- **PR #47550:** (pcn) Fixes a bad deletion I did that only surfaced in 2018.3 @ 2018-05-09 13:36:33 UTC

- 3940667bb9 Remove old ZMQ import handling
- f34a53e029 Use ZMQ utility for version check
- cbb26dcb28 Use ZMQ installer for master
- 453e83210a Add ZMQ version build
- af9601e21d Use ZMQ importer utility in async
- d50b2b2023 Incorporate tornado-5 fixes
- 1fd9af0655 Add ZMQ backward-compatibility tornado installer for older versions
- ad4b40415c Add one place for handling various ZMQ versions and IOLoop classes
- * b14e974b5f Merge pull request #47343 from Ch3LL/win_srv_test
 - 2173b6f549 ensure we are enabling/disabling before test
 - d58be06751 Add additional service module integration tests and enable for windows
- * b0f3fb577f Merge pull request #47375 from terminalmage/issue47310
 - fa2bea52bb Remove extra blank line to appease linter
 - f8ab2be81c Add debug logging if we fail to detect virtual packages
 - 67c4fc56ac Warn on use of virtual packages in pkg.installed state
- * 56235032f4 Merge pull request #47415 from kstreee/fix-local-client-tgt-bug

- b8d37e0a1e To add a test case for the syndic environment, copies the test case which was written by @mattp- that was already merged into develop branch, related pr is #46692.
- 4627bad1fd Realizes 'tgt' field into actual minions using ckminions to subscribe results of the minions before publishing a payload.
- * d65ceae03 Merge pull request #47286 from baniobloom/vpc_peering_connection_name_fix
 - a968965087 Merge branch '2017.7' into vpc_peering_connection_name_fix
- * 8a5d4437bb Merge pull request #47270 from meaksh/2017.7-fix-retcode-on-schedule-utils
 - d299cf3385 Merge branch '2017.7' into 2017.7-fix-retcode-on-schedule-utils
 - b6da600fff Initialize __context__ retcode for functions handled via schedule util module
- * 5b51075384 Merge pull request #47371 from rallytime/fix-47264
 - a43485b49c Fix "of pass" typo in grains.delval docs: change to "or pass"
- * a86e53be66 Merge pull request #47389 from dwoz/moregittestfix
 - 67745c1362 Older GitPython versions will not have close
- * a5367eaf63 Merge pull request #47388 from dwoz/test_pip_fix
 - eb26321e8b Fix missing import
- * 9b59b991c2 Merge pull request #47380 from gtmanfred/2017.7
 - 93d1445ec1 add io_loop handling to runtests engine
- * 37822c0cbb Merge pull request #47384 from dwoz/test_pip_fix
 - a37a9da1fb Fix py2 version of pip test
- * eefd96732e Merge pull request #47382 from dwoz/gitfs_tests
 - 1570708fac Close the repo and fix multiple tests
- * 57c75ff660 Merge pull request #47369 from terminalmage/ldap_pillar
 - 085883ae2d Return an empty dict if no search_order in ldap ext_pillar config file
- * bcc66dd9bf Merge pull request #47363 from DSRCorporation/bugs/replace_exc_info_with_exception
 - 3f7b93a23c Tornado5.0: Future.exc_info is dropped
- * bcef34f7e1 Merge pull request #47334 from terminalmage/ldap_pillar
 - 0175a8687c pillar_ldap: Fix cryptic errors when config file fails to load
 - 65c3ba7ff1 Remove useless documentation
 - 5d67cb27de Remove unnecessary commented line
 - 8de3d41adb fixed vpc_peering_connection_name option
- **PR #47464:** (dwoz) Skip tests not applicable to windows @ 2018-05-04 13:04:38 UTC
 - 51d21afd4f Merge pull request #47464 from dwoz/skiP_syslog_tests
 - ca9393b7fb Skip tests not applicable to windows
- **PR #47456:** (dwoz) Sysname returns text type @ 2018-05-04 02:57:50 UTC
 - 3219430dcc Merge pull request #47456 from dwoz/sysname
 - 559ee1961f Sysname returns text type

- **PR #47458:** (Ch3LL) Add In Progress Warning for 2018.3.1 Release Notes @ 2018-05-03 20:40:46 UTC
 - f3918514a7 Merge pull request #47458 from Ch3LL/unreleased_rn_2018
 - 6a261e5e3a Add In Progress Warning for 2018.3.1 Release Notes
- **PR #47448:** (dwoz) Fix missing import in test suite @ 2018-05-03 14:30:23 UTC
 - 9fbdcb994 Merge pull request #47448 from dwoz/transport_import
 - 7e04eb82e1 Fix missing import in test suite
- **ISSUE #47260:** (mew1033) disable_saltenv_mapping not working as expected (refs: #47410)
- **PR #47410:** (terminalmage) gitfs: Fix identification of base env when saltenv mapping is disabled @ 2018-05-03 14:12:27 UTC
 - 157a32af7f Merge pull request #47410 from terminalmage/issue47260
 - 3ab332ad0e Update tests to reflect bugfix
 - 7b8127f336 gitfs: Fix identification of base env when saltenv mapping is disabled
- **PR #47413:** (dmurphy18) Repobuild improvements for Ubuntu 18.04 lack of gpg2 and better error checking @ 2018-05-02 16:21:31 UTC
 - 091e4cf9a6 Merge pull request #47413 from saltstack/repobuild_improv
 - c064032110 Removed extra spaces for pylint
 - 20c50b3331 Minor cleanup due to review comments
 - c143b359e9 Update for Ubuntu 18.04 lack of gpg2 and enhanced error checking
- **PR #47216:** (twangboy) Reg docs @ 2018-05-02 13:33:27 UTC
 - 5e5774fd37 Merge pull request #47216 from twangboy/reg_docs
 - 0beeb58b16 Fix lint, add bytes
 - bad441f8dc Fix some lint‘
 - af5139c2ff Add additional examples
 - 24df6ec1b7 Additional docs formatting
 - ff46b27a60 Update reg docs, fix formatting issues
- **PR #47417:** (gtmanfred) revert instantiating a Caller Client in the engine @ 2018-05-01 18:58:06 UTC
 - 63baf4c4f8 Merge pull request #47417 from gtmanfred/slack
 - 5c8ea7f506 Update slack.py
 - ee8a5eeb10 revert instantiating a Caller Client in the engine
- **ISSUE #45790:** (bdarnell) Test with Tornado 5.0b1 (refs: #46066, #47106, #47433)
- **PR #47368:** (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-05-01 18:56:20 UTC
 - **PR #47106:** (DmitryKuzmenko) Tornado50 compatibility fixes (refs: #47374, #47368, #47433)
 - **PR #46002:** (isbm) Pyzmq 17.0.0 proper handling (refs: #47374, #47368)
 - 0bdfaa5ffe Merge pull request #47368 from rallytime/merge-2018.3
 - 46806e595b Update test assertion comment for pip pkgs
 - d9d24de49e Lint: Add missing import
 - c7b73d132e Merge branch '2017.7' into '2018.3'

- * 31db8ca7ad Merge pull request #47347 from dwoz/test_mysql_fix_again
 - add78fb618 Fix linter warnings
 - 2644cc7553 Fix linter nits
 - 799c601184 Proper fix for mysql tests
- fefc0cc3ca Update old utils paths to use new utils paths
- 13e8124031 Merge branch '2017.7' into '2018.3'
 - * e573236848 Merge pull request #47359 from gtmanfred/2017.7
 - 6214ed8133 add mention of the formulas channel to the formulas docs
 - * 629503b2a8 Merge pull request #47317 from dwoz/threadshutdown
 - 6db2a0e4d3 Log exceptions at exception level
 - d4ae787595 Do not join a thread that is stopped
 - * aacd5cefe3 Merge pull request #47304 from cachedout/test_cli_timeout_arg
 - 85025af83c Pass timeout to salt CLI for tests
 - * 55534fb659 Merge pull request #47311 from Ch3LL/firewall_windows
 - 4e16c18c16 Add firewall module windows tests to whitelist
 - 4b2fc4ec66 Add windows firewall execution modules integration tests
 - * 1667375a80 Merge pull request #47348 from dwoz/no_symlinks
 - 94a70e847a Ignore gitfs tests when symlinks not enabled
 - * dac04261b5 Merge pull request #47342 from dwoz/test_mysql_fix
 - 7496f4c5a8 Fix mysql test cases
 - * 34e78ef564 Merge pull request #47341 from dwoz/inet_pton_fix
 - 85451f48d4 Fix python 3 support for inet_pton function
 - * e4779f3246 Merge pull request #47339 from dwoz/ssh_key_test_fix
 - e37a93a1ca Remove redundant close call
 - b2ae5889b7 Close the temporary file handle
 - 9f7f83a975 Use salt.utils.fopen for line ending consistency
 - * b221860151 Merge pull request #47335 from dwoz/pip_test_fix
 - dcb6a22c00 Remove un-needed string-escape
 - * 1c527bfd3a Merge pull request #47331 from dwoz/py3_wingroup_fix
 - cc154ef857 Do not encode usernames
 - * 708078b152 Merge pull request #47329 from cachedout/frank_credit
 - 33c0644ac4 Credit Frank Spierings
 - * a545e55543 Merge pull request #47281 from Ch3LL/system_test
 - c9181a75a6 Add destructivetest decorator on tests
 - 0d0c8987fc Add win_system integration module tests
 - * b64d930df0 Merge pull request #47283 from Ch3LL/ntp_test

- ced7f86546 Add windows ntp integration module tests
- * 910aff910f Merge pull request [#47314](#) from Ch3LL/net_mac_test
 - 67beb1451c Skip netstat test on macosx as its not supported
- * 0549ef7c16 Merge pull request [#47307](#) from rallytime/bp-47257
 - 6c5b2f92bc Role is not a list but a dictionary
- * d6ff4689f6 Merge pull request [#47312](#) from rallytime/update-bootstrap-release
 - 765cce06a2 Update bootstrap script to latest release: 2018.04.25
- * e0765f5719 Merge pull request [#47279](#) from dwoz/py3_build_fix
 - 21dc1bab91 Pep-8 line endings
 - 717abedaf7 Fix comman wart
 - 4100dcd64c Close might get called more than once
 - db671f943 Stop socket before queue on delete
 - 9587f5c69e Silence pylint import-error for six.moves
 - 4b0c7d3b34 Fix typo
 - 05adf7c2b1 Use six.moves for queue import
 - fe340778fa Gracefully shutdown worker threads
- * 44f19b2f94 Merge pull request [#47113](#) from jfindlay/iptables_state
 - 8bd08012ee modules,states.iptables support proto for policy ext
- * b7a6206330 Merge pull request [#47302](#) from Ch3LL/dead_code
 - daa68b4877 Add virtual grains test for core grains
 - a59dd2785d Remove dead code in core grains file for virt-what
- * e29362acfc Merge pull request [#47303](#) from baniobloom/bug_fix_doc
 - b97c9df5f3 added clarity on how to figure out what is the oldest supported main release branch
- * 0d9d55e013 Merge pull request [#47106](#) from DSRCorporation/bugs/tornado50
 - 39e403b18d Merge branch '2017.7' into bugs/tornado50
 - 6706b3a2d1 Run off of a temporary config
 - d6873800d5 Allow running pytest>=3.5.0
 - 2da3983740 Tornado 5.0 compatibility fixes
- * 2e014f4746 Merge pull request [#47271](#) from gtmanfred/amazon
 - 8a53908908 Do not load rh_service module when booted with systemd
 - e4d1d5bf11 Revert "support amazon linux 2 for service module"
- * 599b0ed1e9 Merge pull request [#47246](#) from cloudflare/fix-44847-2017.7
 - ad80028104 This way, we can pass flags such as debug into the state, but also test.
- * 4e2e1f0719 Merge pull request [#47220](#) from benediktwerner/fix-pip-2017.7
 - 0197c3e973 Fix pip test

- 34bf66c09f Fix pip.installed with pip>=10.0.0
- * 92e606251f Merge pull request #47272 from rallytime/reg-windows-codeowners
 - 9445af0185 Add windows tests and reg module/state to CODEOWNERS file for team-windows
- * 9dca5c0221 Merge pull request #47252 from rallytime/codeowners-fixes
 - 204b6af92b Fix the matching patterns in the CODEOWNERS file to use fnmatch patterns
- * 3de1bb49c8 Merge pull request #47177 from fpicot/fix_47173_pkg_normalize
 - 149f846f34 fix normalize parameter in pkg.installed
- * 10e30515dc Merge pull request #47251 from Ch3LL/pub_fix_rn
 - fa4c2e6575 Update Docs to remove unnecessary + sign
- * bb7850a431 Merge pull request #47249 from Ch3LL/pub_fix_rn
 - 24dea24b7e Add CVE number to 2016.3.6 Release
- * 56933eb0b2 Merge pull request #47227 from pruiiz/pruiiz/zfs-dataset-present-slow-2017.7
 - fded61f19b Fix issue #47225: avoid zfs.filesystem_present slowdown when dataset has lots of snapshots
- * 9825065048 Merge pull request #47167 from smitty42/vbox-sk-d-fix
 - 5de53139cd Merge branch '2017.7' into vbox-sk-d-fix
- * 976f031170 Merge pull request #47213 from dwoz/py3win
 - ad9c7f63f0 Fix coverate on py3 windows builds
 - 91252bac95 Adding updates for python3 compatibility and new virtualbox SDK version support.
- * cebcd6d069 Merge pull request #47197 from dwoz/testfix
 - 25803c9176 Move process target to top level module namespace
- * d4269c2b70 Merge pull request #47193 from Ch3LL/network_test
 - bbf9987c19 Add network module integration tests
- * c777248a78 Merge pull request #47189 from Ch3LL/autoruns
 - 6a88bedb7a Add autoruns to windows whitelist
 - e9e4d4af70 Add autoruns.list integration test for Windows
- **PR #47403: (rallytime)** Back-port #47356 to 2018.3 @ 2018-05-01 15:19:06 UTC
 - **PR #47356: (robinro)** Fix sysctl translate (refs: #47403)
 - 4e6870305c Merge pull request #47403 from rallytime/bp-47356
 - 9b682bc48e Fix sysctl translate
- **PR #47407: (terminalmage)** Reduce severity of missing X_update_interval key @ 2018-05-01 15:18:46 UTC
 - 7e0cdd6145 Merge pull request #47407 from terminalmage/update-interval-log
 - abc592bfff Reduce severity of missing X_update_interval key
- **ISSUE #47042: (valentin2105)** [ERROR] Unable to manage file: 'utf8' codec can't decode byte (refs: #47061)
- **PR #47405: (terminalmage)** Fix file.get_diff regression in 2018.3 branch @ 2018-05-01 15:16:46 UTC

- PR #47061: (terminalmage) Fix diffing binary files in file.get_diff (refs: #47405)
- 1377942bcc Merge pull request #47405 from terminalmage/binary-diff
- 89ddb08026 Use a lambda instead of defining a one-line function
- b79ff04fda Remove no-longer-used enumerate
- e03b865359 Add unit test for file.get_diff
- 5bdc9e9bd5 Fix UnboundLocalError in file.get_diff
- ISSUE #47325: (robertodocampo) docker_container.running creates containers using the image ID as the image name (refs: #47367)
- PR #47367: (terminalmage) Start docker containers with image name instead of ID @ 2018-04-30 18:46:13 UTC
 - c267e6083e Merge pull request #47367 from terminalmage/issue47325
 - 798134caa3 Add regression test for creating images with image name instead of ID
 - 4ed47e839c Start docker containers with image name instead of ID
- ISSUE #47006: (cedwards) marathon & fx2 grain modules cause master and minion failure (refs: #47401)
- PR #47401: (gtmanfred) fix proxy virtual checks for marathon and fx2 @ 2018-04-30 18:44:46 UTC
 - 3bb00cbb55 Merge pull request #47401 from gtmanfred/proxy
 - 99f9231759 fix proxy virtual checks for marathon and fx2
- PR #47397: (rallytime) Add 2018.3.1 Release Notes @ 2018-04-30 14:44:38 UTC
 - c160fe36ce Merge pull request #47397 from rallytime/2018.3.1-release-notes
 - 3b40cdad2a Add 2018.3.1 Release Notes
- ISSUE #45790: (bdarnell) Test with Tornado 5.0b1 (refs: #46066, #47106, #47433)
- PR #47374: (DmitryKuzmenko) tornado50 merge forward for 2018.3 @ 2018-04-29 16:29:12 UTC
 - PR #47106: (DmitryKuzmenko) Tornado50 compatibility fixes (refs: #47374, #47368, #47433)
 - PR #46002: (isbm) Pyzmq 17.0.0 proper handling (refs: #47374, #47368)
 - 3400f829c4 Merge pull request #47374 from DSRCorporation/bugs/tornado50-2018.3
 - 400999c54f fix pylint
 - 47b6d409d1 add io_loop handling to runtests engine
 - fd074fdb7d use salt.utils.zeromq
 - 4ae33c5d9a Run off of a temporary config
 - 7938b4906e Allow running pytest>=3.5.0
 - 34058c181e Tornado 5.0 compatibility fixes
- ISSUE #47124: (mchugh19) Vault module problem in 2018.3.0 (refs: #47379)
- PR #47379: (dwoz) Properly encode messages when creating/validating signatures with m2crypto @ 2018-04-28 08:38:23 UTC
 - 2afe4bee95 Merge pull request #47379 from dwoz/m2crypto_regression
 - 068f2d430d Always sign and verify bytes
 - 7810ebaba9 Add sign regression tests
 - f4441c3a1c Adding regression test for 47124

- **PR #47277:** (morganwillcock) Fix minion crash on NetBSD @ 2018-04-27 15:02:21 UTC
 - 7390b72808 Merge pull request #47277 from morganwillcock/netbsdswap
 - 0bcb1a079a Merge branch '2018.3' into netbsdswap
 - 30478e8c9c Use swapctl for NetBSD
- **PR #47320:** (twangboy) Change from NSSM to SSM @ 2018-04-27 14:37:50 UTC
 - 2b7c7ef704 Merge pull request #47320 from twangboy/win_ssm
 - 5549d83aae Use ssm instead of nssm
- **PR #47308:** (rallytime) Back-port #47287 to 2018.3 @ 2018-04-27 13:50:49 UTC
 - **PR #47287:** (esell) convert unicode ssh pass to str for azure (refs: #47308)
 - b6df5facce Merge pull request #47308 from rallytime/bp-47287
 - 5f392a23fe convert unicode ssh pass to str for azure
- **ISSUE #47324:** (rlschilperoort) archive.extracted keep and/or keep_source not working (refs: #47332)
- **PR #47332:** (garethgreenaway) [2018.3] Removing duplicate code from state/archive.py @ 2018-04-27 13:12:51 UTC
 - efa3aab800 Merge pull request #47332 from garethgreenaway/47324_archive_extracted_keep_keep_source
 - cc10bfec6b Removing redundant code which is preventing keep & keep_source from being set.
- **PR #47326:** (The-Loeki) Some Redis fixes @ 2018-04-26 17:12:47 UTC
 - 245d62ca16 Merge pull request #47326 from The-Loeki/redis-cache-sockets
 - d86fbe5bdd redis_return: add unix_socket_path to docs
 - ee9f533765 redis_cache: document UNIX socket access
 - 5337558a5a redis_return: Let redis handle pool creation, add UNIX socket support
 - c90f83b0f9 redis_return: cluster_mode default to False in __virtual__ to prevent KeyError stacktraces
 - 71e3286829 redis_return: Fix code blocks in docs
 - e6605f1c78 redis_cache fix code blox in docs
 - 40e67747ee redis_cache: add socket to options
- **PR #47319:** (dwoz) Skip unix group tests on windows. @ 2018-04-26 15:59:35 UTC
 - 27a438f0ff Merge pull request #47319 from dwoz/skip_tests
 - d9442d043e Skip tests not applicable to windows
- **PR #47293:** (dwoz) The grp module is not available on windows @ 2018-04-25 20:22:34 UTC
 - 057f668788 Merge pull request #47293 from dwoz/win_build_fix
 - 0386216005 Fix sneaky indention
 - 082b8d0b3d Use salt.utils.platform
 - cc2538e08f The grp modules is not available on windows
- **ISSUE #46862:** (kivoli) Setting locale.system fails in 2018.3 (refs: #47280, #46869)
- **PR #47280:** (gtmanfred) make sure not to send invalid information @ 2018-04-25 17:46:45 UTC
 - fff4f8c1a5 Merge pull request #47280 from gtmanfred/localectl

- 7c212cbb2d fix pylint
- 6754787e8e update localemod tests
- 9075070573 make sure not to send invalid information
- **ISSUE #46977:** (gtmanfred) [2018.3.0] Backwards compatibility breaking change in 2018.3.0 (refs: #47038)
- **PR #47038:** (garethgreenaway) [2018.3] fix to fileclient.py @ 2018-04-25 14:57:04 UTC
 - 205701dcbe Merge pull request #47038 from garethgreenaway/46977_fixing_fileclient_forward_compatibility
 - ba01d2133a Updating version.py to include Magnesium.
 - 10c823dd79 The `_ext_nodes` master function has been renamed to `_master_tops`. To ensure compatibility when using older Salt masters we continue to pass the function as `_ext_nodes` until the Magnesium release.
- **ISSUE #47059:** (OrlandoArcapix) Some states incorrectly return None instead of an empty dict when there are no changes (refs: #47060)
- **ISSUE #46985:** (OrlandoArcapix) grafana4_user.present and grafana4_org.present states not working in 2018.3.0 (refs: #47048)
- **PR #47060:** (OrlandoArcapix) Return an empty dict for 'changes' instead of 'None' @ 2018-04-25 14:55:24 UTC
 - **PR #47048:** (OrlandoArcapix) Issue46985 fix grafana4 state (refs: #47060)
 - 89daf4fdc7 Merge pull request #47060 from OrlandoArcapix/Issue47059-return_dict_from_state
 - 5378e4fd07 Update grafana_datasource test to check for empty dict being returned on no changes, rather than None
 - f115452653 Return an empty dict for 'changes' instead of 'None'
- **ISSUE #47089:** (syphernl) UnicodeDecodeError: 'ascii' codec can't decode byte 0xc3 in position 404: ordinal not in range(128) (refs: #47153)
- **PR #47153:** (terminalmage) salt.modules.ssh: properly encode/decode I/O @ 2018-04-25 14:53:51 UTC
 - 10cc0d312b Merge pull request #47153 from terminalmage/issue47089
 - bdb52797f8 salt.modules.ssh: properly encode/decode I/O
- **ISSUE #47199:** (tkaehn) Targeting by list (-L) broken for minions behind syndic? (refs: #47275)
- **PR #47275:** (terminalmage) Fix false failure events sent when using syndic @ 2018-04-25 13:56:47 UTC
 - b5d64f1a70 Merge pull request #47275 from terminalmage/issue47199
 - 8012ad12f8 Fix false failure events sent when using syndic
- **ISSUE #47267:** (skjaro) Problem with beacon diskusage on windows platform in 2018.3 (refs: #47284)
- **PR #47284:** (skjaro) Fix beacon diskusage documentation for the new behavior mentioned in issue #47267 @ 2018-04-25 13:52:30 UTC
 - 6215a995d8 Merge pull request #47284 from skjaro/beacon_diskusage_doc_fix
 - fcc042aa5f Fix beacon documentation for the new behavior mentioned in issue #47267
- **PR #47291:** (bosatsu) Fix proxy minion beacon doc @ 2018-04-25 13:42:36 UTC
 - 3ef4fe6ed2 Merge pull request #47291 from bosatsu/fix-proxy-minion-beacon-doc
 - 01980b4c43 Fix topics/releases/2018.3.0.rst to include correct example of proxy_example beacon yaml configuration.

- 9682e26eec Fix topics/proxyminion/beacon.rst to include correct example of salt_proxy beacon yaml configuration.
- ISSUE #47239: (bosatsu) Unable to load salt_proxy beacon on minion in 2018.3.0 (refs: #47255)
- PR #47255: (garethgreenaway) [2018.3] Fixes to salt_proxy beacon and beacon tests @ 2018-04-25 13:41:51 UTC
 - ea2d68b865 Merge pull request #47255 from garethgreenaway/47239_fixes_to_salt_proxy_beacon
 - a2a8d78cb0 Fixing status beacon tests.
 - c87d6cae23 Ensure the salt_proxy is returning the correct tuple when the configuration is valid. Update various beacon unit tests to ensure they are testing the results of the validate function for a True result.
- PR #47292: (dwoz) Fix decorator wart @ 2018-04-25 04:25:23 UTC
 - PR #47290: (dwoz) Run cache_master test in tmp dir (refs: #47292)
 - 19f9e8258f Merge pull request #47292 from dwoz/cp_fix_again
 - 7d045eb235 Fix decorator wart
- PR #47285: (dwoz) Fix reg grains test @ 2018-04-25 00:16:56 UTC
 - da532aa1ac Merge pull request #47285 from dwoz/core_test_fix
 - 884f4c1829 Fix extra space
 - 8a9027c0c9 Fix reg grains test
- PR #47290: (dwoz) Run cache_master test in tmp dir (refs: #47292) @ 2018-04-24 23:37:21 UTC
 - f591cff643 Merge pull request #47290 from dwoz/test_cp_fix
 - 5ff51affbd Run cache_master test in tmp dir
- ISSUE #47092: (syphernl) [2018.3.0] pkg.installed breaks with virtual packages (refs: #47250)
- ISSUE #38838: (Zorlin) Failing to remove nginx (refs: #44455)
- PR #47250: (terminalmage) Fix virtual package detection @ 2018-04-24 19:22:24 UTC
 - PR #44455: (samodid) Fix for #38838 (refs: #47250)
 - 6d323aa8f0 Merge pull request #47250 from terminalmage/issue47092
 - b8630a70be Fix virtual package detection
- ISSUE #47225: (pruiz) zfs.filesystem_present takes forever on a dataset with lots (10k+) of snapshots (refs: #47228, #47227, #47226)
- PR #47228: (pruiz) Fix issue #47225: avoid zfs.filesystem_present slowdown when dataset has lots of snapshots (2018.3 branch) @ 2018-04-24 13:35:21 UTC
 - PR #47226: (pruiz) Fix issue #47225: avoid zfs.filesystem_present slowdown when dataset has lots of snapshots (refs: #47228, #47227)
 - 428e915d6a Merge pull request #47228 from pruiz/pruiz/zfs-dataset-present-slow-2018.3
 - cbf136ab2 Fix issue #47225: avoid zfs.filesystem_present slowdown when dataset has lots of snapshots
- ISSUE #46943: (Auha) Slack.Engine could not start (refs: #47262, #47109)
- PR #47262: (garethgreenaway) [2018.3] Fixes to targeting in Slack engine @ 2018-04-24 13:18:36 UTC
 - 0b836106b9 Merge pull request #47262 from garethgreenaway/slack_engine_target_fix

- bcdef641e8 Removing target and tgt_type from the cmdline that is passed along to Salt, the target is used else where and including it in the cmdline causes problem when it is passed along. Adding an additional test to ensure we are getting the right target.
- **ISSUE #47047:** (Giandom) Pillars aren't evaluated when alias is passed in Slack Engine (refs: #47142)
- **PR #47142:** (garethgreenaway) [2018.3] pillar and output formatting fixes to Slack engine @ 2018-04-23 19:55:07 UTC
 - 2ed4b38b02 Merge pull request #47142 from garethgreenaway/47047_passing_pillar_to_slack_aliases
 - 6f183e1d80 Initial commit for unit/engines/test_slack_engine
 - a2840fc230 Only include the rest of the cmdline if the cmd is an alias.
 - e846df7409 Fixing a bug when passing pillar values to aliases for the Slack engine. Cleaned up the formatting of the results, color codes don't translate well into Slack output. For any state runs, eg. highstate. apply, sls, we run the output through the highstate formater. For anything else run it though the yaml outputer. Running it though highstate causes errors when the output does match what the highstate output is expecting.
- **PR #47245:** (terminalmage) Ensure we pass hexid as bytes when zmq_filtering enabled @ 2018-04-23 16:54:57 UTC
 - 42a0e655dc Merge pull request #47245 from terminalmage/zeromq-bytes
 - a7acc0548 Ensure we pass hexid as bytes when zmq_filtering enabled
- **PR #47242:** (aesposito91) PY3 fix for zeromq setsockopt @ 2018-04-23 16:38:09 UTC
 - 73525d1460 Merge pull request #47242 from aesposito91/2018.3
 - b225351e6d Update napalm_syslog.py
- **ISSUE #47117:** (prashanthtuttu) Napalm / Capirca Issue (refs: #47241)
- **PR #47241:** (mirceaulinic) Fix the imports into the netacl execution and state modules @ 2018-04-23 14:56:32 UTC
 - b78295aee9 Merge pull request #47241 from cloudflare/fix-47117
 - 26c5583264 #47117: fix the napalm imports in the netacl state module
 - 48396467c1 #47117: fix the napalm imports in the netacl execution module
- **PR #47219:** (garethgreenaway) [2018.3] Fixing a backward compatibility issue with vault module & runner @ 2018-04-23 14:10:19 UTC
 - 88557ea991 Merge pull request #47219 from garethgreenaway/vault_backward_compatibility
 - 1758081ffe When using the vault module on a 2018.3 minion against a 2017.7 master, the 2018.3 minion is expecting a verify element in the results from the Salt runner on the master. The runner in 2017.7 did not include a verify element, which results in an error. This change accounts for this by using the default in 2018.3 which is not to verify if not configured.
- **PR #47186:** (dmurphy18) backport of issue 46933, updated ZFS handling to Salt 2018.3.x @ 2018-04-23 14:07:06 UTC
 - 370feadb2 Merge pull request #47186 from dmurphy18/zfs_backport_46933
 - 283359d315 Corrected typo in comma-seprated and 2018.3.0 -> 2018.3.1
 - b7f8d5a22f Replace use of Fluorine with 2018.3.0 for comma-separated warnings
 - 3f30ab2ed6 ZFS backport of 46933 to 2018.3.1
- **PR #47217:** (twangboy) Remove installation of pywin32 from setup.py @ 2018-04-23 13:32:54 UTC

- bf3a67d11b Merge pull request #47217 from twangboy/fix_setup
- eb3d45bb08 Remove installation of pywin32 from setup.py
- PR #47195: (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-04-20 19:25:30 UTC
 - 8e21703f13 Merge pull request #47195 from rallytime/merge-2018.3
 - f90fd8c663 Test fix: file strings must be unicode in master config
 - bee4948df1 Lint: use full path for event utils function
 - 120c5446b7 Update old utils paths to new utils paths
 - 4718d31e53 Merge branch '2017.7' into '2018.3'
 - * 65f344e371 Merge pull request #47184 from Ch3LL/status_test
 - 25a84428b8 Add status module integration modules tests for Windows
 - * 965600ad6c Merge pull request #47163 from rallytime/jenkins-autodoc
 - 0039395017 Updage jenkins module autodocs to use jenkinsmod name instead
 - * 0a43dde5fc Merge pull request #47185 from twangboy/add_tests
 - 345daa0423 Add additional integration tests to whitelist
 - * 1a600bb9a4 Merge pull request #47172 from dwoz/cover_without_admin
 - cadd759727 Use warnings to warn user
 - 144c68e214 Allow non admin name based runs on windows
 - * d5997d2301 Merge pull request #47110 from kstreee/fix-misusing-of-timeout
 - 0624aee0ed Fixes misusing of the timeout option.
 - * 87ca2b4003 Merge pull request #40961 from terminalmage/issue40948
 - 6ba66cca41 Fix incorrect logic in exception check
 - fed5041c5f Make error more specific to aid in troubleshooting
 - 8c67ab53b4 Fix path in log message
 - 3198ca8b19 Make error more explicit when PKI dir not present for salt-call
 - * f5e63584d4 Merge pull request #47134 from Ch3LL/user_win_test
 - e7c9bc4038 Add user integration tests for windows OS
 - * da2f6a3fac Merge pull request #47131 from gtmanfred/cli
 - 1b1c29bf62 add __cli for master processes
 - * 9b8e6ffb8c Merge pull request #47129 from rallytime/bp-47121
 - 11da526b21 add ImportError
 - bd0c23396c fix pip.req import error in pip 10.0.0
 - * eb5ac51a48 Merge pull request #47102 from gtmanfred/2017.7
 - 3dc93b310b fix tests
 - 8497e08f8e fix pip module for 10.0.0
 - 4c07a3d1e9 fix other tests
 - b71e3d8a04 dont allow using no_use_wheel for pip 10.0.0 or newer

- * c1dc42e67e Merge pull request #47037 from twangboy/fix_dev_scripts
 - 990a24d7ed Fix build_env scripts
- ISSUE #46906: (whytewolf) Windows failure with PR 46541 (refs: #47168)
- PR #47168: (gtmanfred) fix metadata grain for py3 and windows @ 2018-04-20 19:07:50 UTC
 - a56eb7e05d Merge pull request #47168 from gtmanfred/metadata
 - 396f7906e3 fix metadata grain for py3 and windows
- ISSUE #46918: (AmbicaY) napalm/capirca issue (refs: #47202)

 - 46fa2c04de Fix py3 os.linesep wart
 - 3c565d7e54 Use salt.utils.fopen
 - aa965310f1 Clean up cruft
 - efc9866580 Jinja test fixes
- **PR #47162:** (terminalmage) Partial backport of #47161 to 2018.3 branch @ 2018-04-19 19:28:47 UTC
 - **PR #47161:** (terminalmage) Fix failing pillar unit test (refs: #47162)
 - 291cca7ed8 Merge pull request #47162 from terminalmage/bp-47161
 - d185f97a47 mocked file_roots and pillar_roots should be dicts
- **ISSUE #47081:** (sjorge) file.directory with recursion fails if there are non-ascii characters in the path (refs: #47165)
- **PR #47165:** (terminalmage) Make sure a str type is passed to os.walk @ 2018-04-19 14:59:16 UTC
 - 2ee8006da3 Merge pull request #47165 from terminalmage/issue47081
 - 9e29acb477 Make sure a str type is passed to os.walk
- **PR #47070:** (terminalmage) Use decorators for temp files/dirs in test suite @ 2018-04-19 14:01:48 UTC
 - 6257862bbb Merge pull request #47070 from terminalmage/with_tempdir
 - 048728d2b7 Remove unused imports
 - 879c557264 Use decorators for temp files/dirs in test suite
- **PR #47155:** (mcalmer) Fix patchinstall for yumpkg @ 2018-04-18 19:24:17 UTC
 - b46365614b Merge pull request #47155 from mcalmer/fix-patchinstall
 - 382afba457 fix invalid string compare
 - 8c19368938 provide kwargs to pkg_resource.parse_targets required to detect advisory type
- **ISSUE #47042:** (valentin2105) [ERROR] Unable to manage file: 'utf8' codec can't decode byte (refs: #47061)
- **PR #47061:** (terminalmage) Fix diffing binary files in file.get_diff (refs: #47405) @ 2018-04-18 18:52:10 UTC
 - 13ae1a2413 Merge pull request #47061 from terminalmage/issue47042
 - 87f6cefea3 Rewrite flaky utf8 state to make it easier to troubleshoot
 - df6e535f05 Fix diffing binary files in file.get_diff
- **PR #47058:** (terminalmage) Fix calls to file.lsattr when lsattr is not installed @ 2018-04-18 16:30:12 UTC
 - cba0f13cd9 Merge pull request #47058 from terminalmage/lsattr

- eeb067e910 Fix calls to file.lsattr when lsattr is not installed
- **ISSUE #46929:** (noelmcloughlin) 2018.3 regression file.managed.context parsing (refs: #47104)
- **PR #47104:** (terminalmage) yamlloader: Properly handle colons in inline dicts @ 2018-04-18 16:22:47 UTC
 - b96ce23b3f Merge pull request #47104 from terminalmage/issue46929
 - 33bf6643cd Add additional test for plain scalars
 - 508659b682 yamlloader: Properly handle colons in inline dicts
- **ISSUE #46887:** (julientravelaer) ldap.managed broken with 2018.3.0 (refs: #47029)
- **ISSUE #46859:** (cheribral) pillar_ldap causing TypeError exceptions in python-ldap with unicode objects (refs: #47029)
- **PR #47076:** (terminalmage) pillar_ldap: Load config options as str types @ 2018-04-18 16:16:22 UTC
 - **PR #47029:** (terminalmage) ldapmod.py/ldap3.py: Force modlist for search/modify/etc. to be str types (refs: #47076)
 - c12697b173 Merge pull request #47076 from terminalmage/issue46859
 - c06c859caf pillar_ldap: Load config options as str types
- **PR #47107:** (twangboy) Fix issues with reg state, add tests @ 2018-04-18 15:53:02 UTC
 - 50bd885ec7 Merge pull request #47107 from twangboy/fix_46932
 - ae8ab2ab1a Fix tests for py3, enable tearDown
 - 3cf4ac1475 Add integration tests for reg state
 - cc259b146f Cast vdata to appropriate type in reg state
- **ISSUE #46909:** (epelc) Binary *contents_pillar* with file.managed raises UnicodeDecodeError (refs: #47041)
- **PR #47041:** (terminalmage) Force null bytes to be str types @ 2018-04-18 14:08:25 UTC
 - d6c59696be Merge pull request #47041 from terminalmage/issue46909
 - e4182715be Special check specifically for bytes types
 - ee90dd5d95 Merge branch '2018.3' into issue46909
 - 0e99343a7f Use the same way of defining contents in both file.managed states
 - 5741d287b5 Move back to using null byte check for contents
 - 8e214c9fa9 file.managed: Add test to ensure binary contents work
 - 7b7dc94610 Use salt.utils.stringutils.is_binary to check if contents are binary
 - e3c969da81 PY3: Ensure binary contents work with file.managed
 - 5d98a8bedd Make salt.utils.stringutils.to_binary work for bytestrings
 - 1024000369 Force null bytes to be str types
- **PR #47007:** (twangboy) Fix some issues with the win_servermanager module @ 2018-04-17 20:57:04 UTC
 - 9a9f6524f8 Merge pull request #47007 from twangboy/fix_46968
 - 432db7c6ec Lint: Remove unused import
 - 10341e8f8b Remove erroneous pop statement
 - 56582f293a Remove redundant try/except block from state'
 - 6ad2427279 Remove unnecessary try/except blocks

- 92eaa51bd Put some error checking in the shell command
- **ISSUE #46943:** (Auha) Slack.Engine could not start (refs: #47262, #47109)
- **PR #47109:** (garethgreenaway) [2018.3] fixes to Slack engine @ 2018-04-17 13:56:27 UTC
 - a52137ee36 Merge pull request #47109 from garethgreenaway/46943_slack_engine_fixes
 - 02baa76595 Fixing a bug that occurred when a comment was added to a message sent to Slack by Salt. Also making `slack_engine:groups_pillar` optional.
- **PR #47045:** (tankywoo) Fix ba7d00f5 for gentoo pkg.installed method @ 2018-04-17 13:55:45 UTC
 - 6c16a34c44 Merge pull request #47045 from tankywoo/fix-gentoo-pkg-installed
 - 551f4e10cf Fix ba7d00f5 for gentoo pkg.installed
- **PR #47053:** (clan) handle jinja error in <module> level @ 2018-04-16 22:47:54 UTC
 - 86c7cfef56 Merge pull request #47053 from clan/jinja-error
 - a847466946 handle jinja error in <module> level
- **PR #47062:** (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-04-16 19:58:32 UTC
 - 7bfa608e9f Merge pull request #47062 from rallytime/merge-2018.3
 - 59f5880e72 lint fix
 - 1ddf8c584b Update old utils files to new new utils files path
 - 28a79ebba4 Merge branch '2017.7' into '2018.3'
 - * 1700a10ebe Merge pull request #46326 from kstreee/fix-client-local
 - 0f358a9c9e Fixes a timing bug of saltnado's client local.
 - * c3c00316c5 Merge pull request #46913 from lomeroy/2017_7-fix46877
 - 369a0645ed move exception for clarity
 - 32ce5bfda5 Use configparser serializer object to read psscript.ini and script.ini startup/shutdown script files.
 - * 9e37cfc9d6 Merge pull request #47025 from terminalmage/fix-server_id-windows
 - cb0cf89ed3 Fix server_id grain in PY3 on Windows
 - * 2e193cfb45 Merge pull request #47027 from rallytime/bp-44508
 - 8e72f362f4 Add priority field to support the latest capirca.
 - 112f92baab Add priority field to support the latest capirca.
 - * 385fe2bc1e Merge pull request #47020 from rallytime/bp-46970
 - 9373dff52b Update test_pkgrepo.py
 - 13cf9eb5b1 Removing debugging.
 - a61a8593e5 Removing suse from pkgrepo comments tests. the pkgrepo functions in SUSE pkg module do not support comments.
- **PR #47066:** (terminalmage) Fix regression in handling of environment/saltenv @ 2018-04-16 19:57:12 UTC
 - fa27e64a33 Merge pull request #47066 from terminalmage/issue46979
 - 5c4c0468ad Fix regression in handling of environment/saltenv

- **PR #47051:** (rallytime) Simplify LooseVersion check in `__virtual__` check in `mac_assistive` module @ 2018-04-13 19:43:33 UTC
 - 8761b81a69 Merge pull request #47051 from rallytime/fix-lint
 - d52b3689d9 Simplify LooseVersion check in `__virtual__` check in `mac_assistive` module
- **PR #47057:** (corywright) Fix copy/paste typo in minionfs tutorial @ 2018-04-13 19:43:01 UTC
 - bbb8018b55 Merge pull request #47057 from corywright/fix-minionfs-whitelist-docs
 - 9b7ee97d12 Fix copy/paste typo in minionfs tutorial
- **ISSUE #46931:** (anlutro) file.managed diff is switched when using template in salt-ssh 2018.3 (refs: #47046)
- **PR #47046:** (clan) switch order of file to be diffed @ 2018-04-13 13:40:13 UTC
 - d5afa4a2c5 Merge pull request #47046 from clan/file_diff
 - bb58605c54 switch order of file to be diffed
- **ISSUE #46985:** (OrlandoArcapix) grafana4_user.present and grafana4_org.present states not working in 2018.3.0 (refs: #47048)
- **PR #47048:** (OrlandoArcapix) Issue46985 fix grafana4 state (refs: #47060) @ 2018-04-13 13:34:29 UTC
 - ec9251ecd3 Merge pull request #47048 from OrlandoArcapix/Issue46985-fix-grafana4-state
 - 259d747414 Remove accidentally added copy of a file
 - 6c8c3da74d Return an empty dict instead of 'None' from grafana4 states
- **PR #47017:** (opdude) Don't encode a unicode string @ 2018-04-13 13:31:33 UTC
 - d8c4c221cf Merge pull request #47017 from Unity-Technologies/hotfix/pip_windows
 - 838670f626 Don't encode a unicode string
- **ISSUE #46917:** (boltonics) mysql_grants.present broken with `database: somedatabase.*` (refs: #46919)
- **PR #47019:** (rallytime) Back-port #46919 to 2018.3 @ 2018-04-12 19:43:01 UTC
 - **PR #46919:** (boltonics) Replace failing is and is not tests with == and != (refs: #47019)
 - 5b7544eaa0 Merge pull request #47019 from rallytime/bp-46919
 - 6837d6c138 Replace failing is and is not tests with == and !=
- **ISSUE #46887:** (julientravelaer) ldap.managed broken with 2018.3.0 (refs: #47029)
- **ISSUE #46859:** (cheribral) pillar_ldap causing TypeError exceptions in python-ldap with unicode objects (refs: #47029)
- **PR #47029:** (terminalmage) ldapmod.py/ldap3.py: Force modlist for search/modify/etc. to be str types (refs: #47076) @ 2018-04-12 19:41:29 UTC
 - ac2d54d78a Merge pull request #47029 from terminalmage/issue46859
 - ab6314247b ldapmod.py/ldap3.py: Force modlist for search/modify/etc. to be str types
 - 7691dee4ed Add to_str option to decode funcs
- **ISSUE #46868:** (tjyang) 2017.7.4 to 2018.3.0 upgrade issue: Salt request timed out. The master is not responding (refs: #46930)
- **PR #46930:** (dwoz) Clean up bad public key headers @ 2018-04-12 18:57:37 UTC
 - e6e07720fa Merge pull request #46930 from dwoz/crptodomekeyfix
 - f2e484ed54 Merge branch '2018.3' into crptodomekeyfix

- e1995a92ee Fix verify signature test
- 0ba32118d9 Add test for bad public key without m2crypto
- a44c356233 Clean up bad public key headers
- **ISSUE #46951:** ([Giandom](#)) Slack engine error using aliases: TypeError unhashable type (refs: [#47008](#))
- **PR #47008:** ([garethgreenaway](#)) [2018.3] Fixing aliases in slack engine @ 2018-04-12 15:24:40 UTC
 - 0e43becc12 Merge pull request [#47008](#) from garethgreenaway/46951_fixing_slack_engine_aliases
 - dc2a72d44f Fixing aliases in slack engine
- **ISSUE #46947:** ([Giandom](#)) Slack engine groups error (refs: [#47009](#))
- **PR #47009:** ([garethgreenaway](#)) [2018.3] fixes to slack engine documentation @ 2018-04-12 15:20:54 UTC
 - c33de7c82d Merge pull request [#47009](#) from garethgreenaway/46947_slack_documentation_update_catch_non_dicts
 - f0fadbb4ce Fixing indention for slack documentation. Updating try..except to ensure we catch when groups aren't dicts.
- **PR #47023:** ([rallytime](#)) Back-port [#46997](#) to 2018.3 @ 2018-04-12 15:05:24 UTC
 - **PR #46997:** ([LukeCarrier](#)) Fix respository (=> repository) typo in sls_build (refs: [#47023](#))
 - **PR #44638:** ([terminalmage](#)) Many improvements to docker network and container states (refs: [#46997](#))
 - 68d17c71f1 Merge pull request [#47023](#) from rallytime/bp-46997
 - c2c60f4ffc Fix respository (=> repository) typo in sls_build
- **PR #47026:** ([rallytime](#)) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-04-12 14:39:41 UTC
 - 9cf3c6406a Merge pull request [#47026](#) from rallytime/merge-2018.3
 - ba70df9d62 Use msgpack utils for loads call, import msgpack for UnpackValueError
 - 34a478dfe5 Update old fopen path with new utils files path
 - 590c7fc13f Merge branch '2017.7' into '2018.3'
 - * 8f994e7cf9 Merge pull request [#46539](#) from jfoboss/patch-1
 - 6890122e41 Merge pull request [#1](#) from twangboy/pull_46539
 - 19c3fadbe5 Fix unit test for win_ntp
 - 826a8d3099 Fixing [#46504](#)
 - * 74d70e95a5 Merge pull request [#46999](#) from gtmanfred/2017.7
 - 791af8f6ce switch pip test package
 - * 8adaf7f526 Merge pull request [#46023](#) from bloomberg/parallel-orch
 - 0ac0b3ca29 Merge branch '2017.7' into parallel-orch
 - * 39d65a39cf Merge pull request [#46613](#) from myinitialsarepm/fix_puppet.fact_and_puppet.facts
 - 44ecd13abc Update tests to use cmd.run_all
 - 7d7d40f541 Merge branch '2017.7' into fix_puppet.fact_and_puppet.facts
 - 0ce1520bd0 Merge branch '2017.7' into fix_puppet.fact_and_puppet.facts
 - 69e1f6f681 Fix puppet.fact and puppet.facts to use stdout.
 - 3d5e69600b address lint issues raised by @isbm

- a9866c7a03 fix parallel mode py3 compatibility
- 6d7730864a removing prereq from test orch
- 6c8a25778f add integration test to runners/test_state to exercise parallel
- 2c86f16b39 cherry-pick cdata KeyError prevention from #39832
- 26a96e8933 record start/stop duration for parallel processes separately
- e4844bdf2b revisit previous join() behavior in check_requisites
- f00a359cdf join() parallel process instead of a recursive sleep
- 6e7007a4dc add parallel support for orchestrations
- **PR #47021:** (garethgreenaway) [2018.3] Fixing integration.modules.test_state_jinja_filters.StateModuleJinjaFiltersTest.test_path_which @ 2018-04-12 13:12:39 UTC
 - d3be828696 Merge pull request #47021 from garethgreenaway/920_state_module_jinja_filters_test_test_path_which
 - 2ccf2c5fe0 Fixing test_path_which to check that the filter is available rather than results.
- **PR #47022:** (corywright) Add auth.file module to auth documentation page @ 2018-04-11 21:11:10 UTC
 - 66e8445b82 Merge pull request #47022 from corywright/add-auth-file-module-to-docs
 - bd0918fc40 Add auth.file module to auth documentation page
- **PR #45774:** (twangboy) Fix __virtual__ issue in mac_system.py @ 2018-04-11 14:26:13 UTC
 - 12ecfdee93 Merge pull request #45774 from twangboy/mac_add_service_util
 - 5796696617 Fix tests for Py3
 - 7b40218790 Fix lint, remove sentence from docstring
 - 781880f0fc Add _available_services function for testing
 - 6080633613 Add assert_called_with
 - 1bf70b2033 Add more tests for available_services
 - b429fc3e74 Add tests for mac_utils
 - b5f67130cc Used *args and **kwargs
 - ed061617a2 Fix unicode_literal issue in mac_assistive
 - 82e17e5fc8 Fix args/kwargs
 - 455146500a Move some functions into mac_utils
 - 125586264b Add utilsmac_service.py
- **ISSUE #46953:** (cskowronnek) salt-cloud azurearm [ERROR] There was a profile error: Parameter 'subscription_id' must be str. (refs: #47012)
- **PR #47012:** (terminalmage) Azure: ensure subscription_id is a str type @ 2018-04-11 13:57:08 UTC
 - 79347f108a Merge pull request #47012 from terminalmage/issue46953
 - 5192622a32 Azure: ensure subscription_id is a str type
- **PR #46526:** (Ch3LL) Add tests for new source_* minion options @ 2018-04-10 19:56:45 UTC
 - 6503bf8dfa Merge pull request #46526 from Ch3LL/ip_conf
 - c01180ff47 Patch ZMQ versions for master_uri test
 - da38f332a5 Change comment and salt.utils.network import

- e972ebdf1a Add for new source_* minion options
- **PR #46993:** (L4rS6) Fix: tuple instead of string @ 2018-04-10 17:07:59 UTC
 - 03907d3fce Merge pull request #46993 from L4rS6/fix-broken-keystone-auth/2018.3
 - e33ba1b3d5 Fix: tuple instead of string
- **PR #46990:** (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-04-10 17:07:33 UTC
 - ffaee26540 Merge pull request #46990 from rallytime/merge-2018.3
 - ccc5bad2df Merge branch '2017.7' into merge-2018.3
 - * ba5421d988 Merge pull request #46991 from gtmanfred/windows
 - 98588c1dc5 use saltstack salt-jenkins
 - 2f1cf3e511 Merge branch '2017.7' into '2018.3'
 - * 00c4067585 Merge pull request #46975 from gtmanfred/windows
 - 1f69c0d7f8 make sure windows outputs xml junit files
 - 4a2ec1bbb3 support new versions of winrm-fs
 - b9efec8526 remove libnacl on windows
 - 2edd5eaf9e fix path
 - b03e272e44 windows work
 - * 3cf2353e41 Merge pull request #46945 from vutny/doc-faq-fix-jinja
 - bdfd54e61d [DOC] Fix Jinja block in FAQ page
 - * fc2f728665 Merge pull request #46925 from terminalmage/fix-file.patch-docstring
 - 97695657f0 Remove reference to directory support in file.patch state
 - * eef6c518e1 Merge pull request #46900 from rallytime/bp-46801
 - 6a41e8b457 rename jenkins to jenkinsmod
 - * 71839b0303 Merge pull request #46899 from rallytime/bp-45116
 - b92f908da4 fix adding parameters to http.query from sdb yaml
 - **PR #46339:** (DmitryKuzmenko) SSH State test failures @ 2018-04-10 17:06:51 UTC
 - a34b92ae82 Merge pull request #46339 from DSRCorporation/bugs/ssh_state_test_failures
 - bd98c49dc7 Merge branch '2018.3' into bugs/ssh_state_test_failures
 - 6fdc458a7f Increase timeout for run_run in ShellCase
 - 8e60cccdfb Give background task more chance to start.
 - e0b6878fac One more useful assert for better test results.
 - 92a6c43c73 More logging and assertion fixes. Extended ssh ops timeout.
 - 6ebdd17ac4 Advanced logging in the failing SSH State tests.
 - **PR #46989:** (Ch3LL) Fix redis cache log debug line @ 2018-04-10 16:35:12 UTC
 - 9924100c44 Merge pull request #46989 from Ch3LL/redis_log
 - 6160bc06c6 Fix redis cache log debug line
 - **ISSUE #46834:** (oeuftete) strftime filter not found in 2018.3.0 (refs: #46848)

- **ISSUE #46668:** (anlutro) Jinja2 filter strftime stopped working in salt-ssh 2018.3 (refs: #46848, #46744)
- **PR #46848:** (garethgreenaway) [2018.8] salt-ssh jinja filters tests @ 2018-04-10 16:19:51 UTC
 - c6431936cb Merge pull request #46848 from garethgreenaway/testing_jinja_filters_avaiable_via_salt_ssh
 - 5fcd3eff8 Merge branch '2018.3' into testing_jinja_filters_avaiable_via_salt_ssh
 - 0adfee9b11 Updating a couple tests. Fixing check_whitelist_blacklist to work with PY3 when non-iterables are passed. Adding warning about lst_avg results being wrong and future updates in Neon.
 - f3f42146ca Removing expected from strftime and hashsum tests since the results are always different and we are only concerned about the filter being available.
 - 860234c045 Fixing lint.
 - 0891c6b580 fixing docstring
 - c8945e4b2e cleaning up some imports.
 - 0599759e5b cleaning up some test doc strings.
 - dceda5eb88 Moving all jinja filter tests into support/jinja_filters.py. Updaitng integration/ssh/test_jinja_filters.py to use those tests. Adding integration/modules/test_state_jinja_filters.py to also use the common jinja filter tests.
 - 07d7e3ca01 Adding a new integration test and corresponding state files to test availabilty of jinja filters when using salt-ssh.
- **ISSUE #46880:** (liquidgecka) rabbitmq_policy broken in 2018.3.0 (refs: #46973)
- **PR #46973:** (rallytime) New "apply_to" kwarg in rabbitmq module should be added at the end @ 2018-04-10 14:42:32 UTC
 - **PR #41233:** (dnABic) added parameter apply_to for rabbitmq policy (refs: #46973)
 - fbbcb7584c Merge pull request #46973 from rallytime/fix-46880
 - 8ce21f982c New "apply_to" kwarg in rabbitmq module should be added at the end
- **ISSUE #46934:** (d601) GPG encrypted binary data in pillars breaks in 2018.3.0 (refs: #46966)
- **PR #46966:** (terminalmage) Fix traceback when attempting to decode binary data to unicode @ 2018-04-10 14:08:35 UTC
 - 58f59cfbff Merge pull request #46966 from terminalmage/issue46934
 - df43ffdb8f salt.payload.Serial: fix traceback when unpacking binary blob
 - 40a49358c9 gpg renderer: fix tranceback when decrypted ciphertext contains binary data
 - 17a88f6a71 Include exc_info in pillar render errors to aid in troubleshooting
- **ISSUE #46881:** (SynPrime) Cron.file - source file not found (refs: #46944)
- **PR #46944:** (garethgreenaway) [2018.3] cron.file with salt source URL @ 2018-04-10 13:34:03 UTC
 - e33e792e2a Merge pull request #46944 from garethgreenaway/46881_Cron_file_source_file_not_found
 - 438aafef03 Adding kwargs to calls into file module functions
 - 14d12b1d6b Remove unused imports. Gating tests so they do not run on Windows
 - 623d96f21a Adding dummy cron file for integration/states/test_cron
 - c8e01871d6 Adding an integration test to test cron.file.
 - ddc55d8f9b Fixing bug that made cron.file unable to use a file via a Salt URL.

- PR #46937: (gtmanfred) enable_ssh_minions does not work with subset yet @ 2018-04-07 02:54:56 UTC
 - 08e8782f76 Merge pull request #46937 from gtmanfred/2018.3
 - 3fb75e903c enable_ssh_minions does not work with subset yet
- PR #46936: (gtmanfred) don't copy __pycache__ or .pyc files for kitchen @ 2018-04-06 19:15:46 UTC
 - ac4e7cd73f Merge pull request #46936 from gtmanfred/2018.3
 - 91474878fa don't copy __pycache__ or .pyc files for kitchen
- ISSUE #46659: (stamak) [salt-cloud] [new oxygen openstack driver] no public_ips and floating_ips in salt-cloud output (refs: #46912)

 - 0b5729e58a Remove hacky workaround to get git state/exec module to work properly on Windows
 - 22ff48518f Attempt UTF-8 first when decoding/encoding
- **ISSUE #43499:** ([tyeapple](#)) zmq setsockopt need to adapt python3 (refs: #46874)
- **PR #46878:** ([terminalmage](#)) Backport #46874 to 2018.3 @ 2018-04-05 13:26:04 UTC
 - **PR #46874:** ([johnj](#)) Use bytestrings for PY3 compatibility when running setsockopt for zmq.SUBSCRIBE (refs: #46878)
 - 1518762465 Merge pull request #46878 from terminalmage/bp-46874
 - d9511d04d4 #43499, zmq setsockopt need to adapt python3
- **ISSUE #46862:** ([kivoli](#)) Setting locale.system fails in 2018.3 (refs: #47280, #46869)
- **PR #46869:** ([gtmanfred](#)) Always return dictionary for _localectl_status @ 2018-04-05 13:25:14 UTC
 - 67894e3ee9 Merge pull request #46869 from gtmanfred/2018.3
 - 1496e985f7 fix pylint
 - 75425dfd20 fix tests for localemod
 - 2d7c7b5e33 Always return dictionary for _localectl_status
- **PR #46870:** ([mirceaulinic](#)) Correct the documentation for two new proxy modules @ 2018-04-04 21:48:41 UTC
 - 58c8ff18e2 Merge pull request #46870 from cloudflare/proxy-doc
 - f4b6184476 Correct and add the cimc proxy module to autodoc
 - a99bc202b9 Correct & add Panos to autodoc
- **PR #46729:** ([terminalmage](#)) Performance improvement/error catching in expr_match @ 2018-04-04 20:25:57 UTC
 - d7e4b9d755 Merge pull request #46729 from terminalmage/expr_match
 - 70cfafe299 Add test case
 - 250039b11f Restore original variable name
 - ae0f112a49 Log an exception when non-string val/expr passed to expr_match
 - dac42a672b Performance improvement/error catching in expr_match
- **PR #46872:** ([terminalmage](#)) Backport #46863 to 2018.3 @ 2018-04-04 19:04:40 UTC
 - **PR #46863:** ([TamCore](#)) fixed top function which was broken since commit 002aa88a97e (refs: #46872)
 - e0b383afb5 Merge pull request #46872 from terminalmage/bp-46863
 - be284e5b99 Add skipIf when older mock present
 - db8faaee56 Add unit tests for ext_nodes master_tops module

- ee437f7cbf fixed top function which was broken since commit 002aa88a97e
- **PR #46850: (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-04-04 18:07:44 UTC**
 - 5c76d98d1a Merge pull request #46850 from rallytime/merge-2018.3
 - a0fcd5c053 Fix test_cp failure: forgot to add tgt to test when @with_tempfile is present
 - d0202cab72 Resolve bad merge: there should only be one test_get_file_from_env_in_url test
 - e28f71b418 Lint: use full salt utils path
 - 4ad50bbdee Update old utils paths to new paths
 - 893196d3e6 Merge branch '2017.7' into '2018.3'
 - * 1941426218 Merge pull request #46838 from gtmanfred/npm
 - bff61dd291 use http registry for npm
 - * e544254e7b Merge pull request #46823 from rallytime/fix-42312
 - dafa820f93 Improve __virtual__ checks in sensehat module
 - * 37f6d2de35 Merge pull request #46641 from skizunov/develop3
 - c624aa4827 Make LazyLoader thread safe
 - * 989508b100 Merge pull request #46837 from rallytime/merge-2017.7
 - 8522c1d634 Merge branch '2016.11' into '2017.7'
 - 3e844ed1df Merge pull request #46739 from rallytime/2016.11_update_version_doc
 - 4d9fc5cc0f Update release versions for the 2016.11 branch
 - * 307e7f35f9 Merge pull request #46740 from rallytime/2017.7_update_version_doc
 - 7edf98d224 Update 2018.3.0 information and move branch from "latest" to "previous"
 - 5336e866ac Update release versions for the 2017.7 branch
 - * ebf5dd276f Merge pull request #46783 from twangboy/fix_46680
 - da5ce25ef3 Fix unit tests on Linux
 - b7f4f377cd Add space I removed
 - f1c68a09b5 Fix network.managed test=True on Windows

- * f776040e25 Merge pull request #46679 from vutny/doc-state-pkg
 - 4a730383bf [DOC] Correct examples in *pkg* state module
- * 47409eaa6e Merge pull request #46646 from twangboy/win_fix_test_local_cache
 - 8d93156604 Fix *unit.returners.test_local_cache* for Windows
- * 0c2dce0416 Merge pull request #46649 from terminalmage/issue46595
 - e82a1aa1ec Make *server_id* consistent on Python 3
- * 4e7466a21c Merge pull request #46588 from UtahDave/no_crash_winshell
 - b7842a1777 Update error message.
 - 95dfdb91ca Don't stacktrace when salt-ssh w/o saltwinshell
- * 33af3cfc7c Merge pull request #46631 from rallytime/update-pillar-unit-tests
 - 0f728186aa Fix pillar unit test failures: *file_roots* and *pillar_roots* environments should be lists
- * d329e7af78 Merge pull request #46640 from terminalmage/file.copy-docs
 - 480c5f8faa Clarify the docs for the *file.copy* state
- * ff40590c06 Merge pull request #46642 from vutny/doc-cloud-index
 - 51e6aa54a1 [DOC] Unify cloud modules index header
- * 83ed40c06a Merge pull request #46619 from rallytime/merge-2017.7
 - bcbddf5d07 Merge branch '2017.7.5' into '2017.7'
 - 19bb725698 Merge pull request #46612 from Ch3LL/7.5_rn
 - 6076bfa2ee Add changelog to 2017.7.5 release
 - 31c78aef11 Merge pull request #46572 from dmurphy18/update_xxxbuild
 - c87511570d Merge branch '2017.7.5' into update_xxxbuild
 - cdd768fa4d Merge pull request #46577 from gtmanfred/2017.7.5
 - 78cbf7b5cd Fix npm issue
 - c76f7eb028 enable debug logging on the minionlog
 - e6682c660c Merge pull request #46551 from terminalmage/salt-jenkins-885
 - 703b5e7e65 Change *versionadded* to show that 2018.3.0 will not have this function
 - 010d260d06 Rewrite failing Suse pkg integration test
 - f3f5dec239 *zypper.py*: fix version argument being ignored
 - 214f2d6ad3 Add *pkg.list_repo_pkgs* to *zypper.py*
 - 0a541613f2 Additon of *-sa* flag to allow for revision numbers other than -0 or -1
 - bd62699ccb Merge pull request #46563 from gtmanfred/2017.7.5
 - 8d5ab72983 *virtualenv* version too old for python3.6

- 2916708124 Merge pull request #46561 from gtmanfred/2017.7.5
- 2c39ac6dfb disable verbose
- ee3bff6e32 Merge pull request #46537 from rallytime/bp-46529
- 289c7a228f retry if there is a segfault
- 1271536a89 Merge pull request #46519 from rallytime/man-pages-2017.7.5
- 782a5584f5 Update man pages for 2017.7.5
- * df12135439 Merge pull request #46584 from twangboy/lgpo-46568
 - 661017104b Detect disabled reg_multi_sz elements properly
- * 2fd3aa487c Merge pull request #46624 from twangboy/win_fix_installer
 - fa0b0efe46 Fix some installer script inconsistencies
- * f038e3c452 Merge pull request #46571 from garethgreenaway/46552_onfail_and_require
 - 152c43c843 Accounting for a case when multiple onfails are used along with requires. Previously if you have multiple states using 'onfail' and two of those states using a 'require' against the first one state, the last two will run even if the 'onfail' isn't met because the 'require' is met because the first state returns true even though it didn't excute. This change adds an additional hidden variable that is used when checking requisities to determine if the state actually ran.
- * 2677330e19 Merge pull request #46520 from gtmanfred/2017.7
 - caefedc095 make sure utils is empty for pickling for windows
 - 2883548e6b pass utils to the scheduler for reloading in modules
- * 7bc3c2e588 Merge pull request #46531 from terminalmage/issue44299
 - b70c3389da Fix case where no comments specified
 - ce391c53f4 Add regression test for #44299
 - c3e36a6c94 Fix regression in yumpkg._parse_repo_file()
 - f0c79e3da3 Slight modification to salt.utils.pkg.rpm.combine_comments()
- * b80edb5d26 Merge pull request #46567 from dwoz/runtest-n-wart
 - 3b6901e19d Honor named tests when running integration suites
- * 1dcd22e767 Merge pull request #46580 from twangboy/win_update_docs_dism
 - d52b99d7a3 Clarify some issues with msu files in win_dism.py
- * 0a68c22332 Merge pull request #46541 from gtmanfred/metadata
 - 19bd1d9db5 handle user-data for metadata grains
- **ISSUE #46668:** (anlutro) Jinja2 filter strftime stopped working in salt-ssh 2018.3 (refs: #46848, #46744)
- **PR #46744:** (garethgreenaway) [2018.3] Ensure salt.utils.dateutils is available for templates via salt-ssh @ 2018-03-28 21:09:46 UTC
 - ef68df7f3a Merge pull request #46744 from garethgreenaway/46668_jinja2_filter_strftime_unavailable
 - 0b30955c00 Including salt.utils.dateutils so various jinja_filters are available when using salt-ssh.

 - f11d58a8e9 Mirror libnacl imports in test from the nacl module
- PR #46645: (terminalmage) Add Unicode / Python 3 update to 2018.3.0 release notes @ 2018-03-26 14:43:53 UTC
 - 03b58a01cf Merge pull request #46645 from terminalmage/release-notes
 - 986c7bcdae Rewrite unicode/py3 section
 - 064bc83276 Add Unicode / Python 3 update to 2018.3.0 release notes

- **ISSUE #46150:** ([whytewolf](#)) With chocolately.version some packages don't work with check_remote=True (refs: [#46661](#))
- **PR #46661:** ([Kimol](#)) Chocolatey - Lowered name of local and remote packages before comparing versions. @ 2018-03-26 14:35:39 UTC
 - 308c9ddfc3 Merge pull request [#46661](#) from Kimol/2018.3-fix_chocolatey_check_remote_packages
 - 52581e7918 Removed trailing whitespace
 - 123a86947c Chocolatey - Added lowering local packages for unifying both local and remote names to lowercase for comparison.
 - 4be1a991c2 Lowered name of available packages before comparing with local packages
- **PR #46569:** ([rallytime](#)) [2018.3] Merge forward from 2017.7 to 2018.3 (refs: [#46631](#)) @ 2018-03-21 20:57:04 UTC
 - 2e1f7c37f7 Merge pull request [#46569](#) from rallytime/merge-2018.3
 - 46ba72fb1c Fix pillar unit test failures: file_roots and pillar_roots environments should be lists
 - fe2d46dd0c Better merge conflict resolution for setup.py windows changes
 - 8886b61576 Update old utils paths to new paths
 - 8d1e1e7f94 Merge branch '2017.7' into '2018.3'
 - * 048b2ba3f6 Merge pull request [#46547](#) from garethgreenaway/46427_service_module_cumulus
 - edd0b11447 Merge branch '2017.7' into 46427_service_module_cumulus
 - ea3c16080e Disable the *service* module on Cumulus since it is using systemd.
 - * 98e3260b9a Merge pull request [#46548](#) from Ch3LL/profit_test
 - db96c4e72e check for foo,bar username,password set in profitbrick config
 - * 79f2a76609 Merge pull request [#46549](#) from Ch3LL/dimension_test
 - bb338c464c Fix dimensionsdata test random_name call
 - * 083846fe0e Merge pull request [#46529](#) from gtmanfred/kitchen
 - 50d6e2c7be retry if there is a segfault
 - * 5cc11129f1 Merge pull request [#46511](#) from rallytime/bp-45769
 - a8ffceda53 Suppress boto WARNING during decode, reference: <https://github.com/boto/boto/issues/2965>
 - * 0e90c8ca6f Merge pull request [#46493](#) from terminalmage/issue46207
 - f06ff68f10 salt-call: don't re-use initial pillar if CLI overrides passed
 - * b11a8fc8e0 Merge pull request [#46450](#) from gtmanfred/salt_runner
 - 7974ff7264 load grains for salt.cmd runner
 - * 22d753364b Merge pull request [#46337](#) from gtmanfred/2017.7
 - d6d9e36359 add tests for names and listen/listen_in
 - 3f8e0db572 let listen_in work with names
 - 7161f4d4df fix listen to be able to handle names
 - * b7191b8782 Merge pull request [#46413](#) from meaksh/2017.7-explore-result-in-depth
 - 885751634e Add new unit test to check state.apply within module.run

- 9f19ad5264 Rename and fix recursive method
- 1476ace558 Fix Python3 and pylint issue
- 726ca3044d Explore 'module.run' response to catch the 'result' in depth
- * 02a79a2014 Merge pull request #46496 from gtmanfred/kitchen
 - da002f78d0 include virtualenv path for py3 windows
 - fe2efe03ea remove duplicate setup
- * 5c4c182d75 Merge pull request #46330 from bdrung/fix_kubernetes_test_create_deployments
 - 5008c53c44 Fix ValueError for template in AppsV1beta1DeploymentSpec
- * c7e05d3ff4 Merge pull request #46482 from rongshengfang/fix-keyerror-in-instance_present
 - ed8c83e89a Fix KeyError in salt/states/boto_ec2.py when an EIP is being associated to an existing instance with the instance_present state.
- * 573d51afec Merge pull request #46463 from terminalmage/mock-2.0
 - b958b4699c Update requirements files to depend on mock>=2.0.0
- * a154d35fc7 Merge pull request #46422 from rallytime/bp-46300
 - 829dfde8e8 Change stringutils path to old utils path for 2017.7
 - 91db2e0782 Python 3 support
- * 2afaca17a1 Merge pull request #46320 from mcalker/warn-kubernetes
 - c493ced415 add warning about future config option change
- * c7f95581e3 Merge pull request #46449 from bdrung/make-doc-theme-configurable
 - 4a5da2d144 Make documentation theme configurable
- * 10ce0e9e20 Merge pull request #46162 from rallytime/team-suse-zypper-owner
 - 13a295a3b7 Add *pkg* and *snapper* to team-suse
 - 35c7b7b0d3 Add btrfs, xfs, yumpkg, and kubernetes file to team-suse
 - 485d777ac0 Add team-suse to CODEOWNERS file for zypper files
- * cac096b311 Merge pull request #46434 from gtmanfred/highstate_return
 - d18f1a55a7 fix pylint
 - 9e2c3f7991 split return key value correctly
- * 7dd71101ce Merge pull request #46455 from whyte wolf/Issue_44452_unicode_cloud
 - 5fe474b1a8 .format remove fix for #44452
- * 4c8d9026d3 Merge pull request #46428 from twangboy/win_fix_reqs
 - e7ab97cc17 Remove six as a hard dep for Salt
 - cc67e5c2ef Set six to 1.11.0
- * e834d9a63b Merge pull request #46454 from gtmanfred/kitchen
 - b8ab8434a5 fix windows for kitchen
- * 2886dca88f Merge pull request #46452 from gtmanfred/spm_cache_dir
 - 169cf7a4e2 make spm cache_dir instead of all cachedirs

- * a188984cd9 Merge pull request #46446 from bdrung/fix-typos
 - 7e6e80be87 heat: Fix spelling mistake of environment
 - a3c54b50f6 Fix various spelling mistakes
- * e35fc5263c Merge pull request #46309 from bdrung/dynamic-pillarenv
 - 584b451fd1 Support dynamic pillar_root environment
- * 35fe9827fe Merge pull request #46430 from terminalmage/issue44032
 - f9f187e915 Improve reliability/idempotence of file.blockreplace state
- * 2bad0a21c0 Merge pull request #46429 from twangboy/win_fix_snmp
 - 8995a9b8de Fix problem with __virtual__ in win_snmp
- * 93a572f229 Merge pull request #46100 from jfindlay/resolv_scope
 - d5561bedaf tests.unit.grains.core add scoped IPv6 nameserver
 - 4e2e62d508 salt.utils.dns parse scope param for ipv6 servers
- * 5acc1d5c54 Merge pull request #46420 from bdrung/2017.7
 - e48c13d9e0 Fix SSH client exception if SSH is not found
- * ca6a76e317 Merge pull request #46379 from angeloudy/2017.7
 - 3acb59c74c Merge branch '2017.7' into 2017.7
 - d971e0c08b Fix indent
 - 269514683f Update http.py
 - 908c040ac3 Update http.py
 - 51ba3c135b Update http.py
 - 14aba24111 fix bytes-object required error in python 3
- * 73f9233557 Merge pull request #46404 from gtmanfred/kitchen
 - c56baa95a8 clone .git for the version tests
 - 3620611b5b fix unhold package for debian
 - 5219f7d2ba fix minion log path
- * ca28cfd4e4 Merge pull request #46310 from twangboy/win_update_installer_build
 - bcf8b19566 Update the installer build
- * decccbe3 Merge pull request #46316 from twangboy/win_fix_dsc
 - 2042d33d59 Fix issues with the DSC module
- **PR #46620:** (rallytime) [2018.3] Merge 2018.3.0rc1 into 2018.3 @ 2018-03-20 22:45:00 UTC
 - 8cdd56b9dc Merge pull request #46620 from rallytime/merge-2018.3.0rc1-into-2018.3
 - b03cda3cea Merge branch '2018.3.0rc1' into '2018.3'
- **PR #46606:** (Ch3LL) add autodoc topics for infoblox state modules @ 2018-03-19 21:35:46 UTC
 - 2d2fe22ae2 Merge pull request #46606 from Ch3LL/infoblox_docs
 - 6eab6a7dc4 add autodoc topics for infoblox state modules
- **PR #46540:** (s0undt3ch) Some missing *isinstance* checks. @ 2018-03-15 16:17:19 UTC

- 1191d5b379 Merge pull request #46540 from s0undt3ch/2018.3
- fa1d668774 Some missing *isinstance* checks. Committed again through a PR.
- PR #46513: (rallytime) [2018.3] Merge forward from 2018.3.0rc1 to 2018.3 @ 2018-03-15 15:58:59 UTC
 - 5429438e4b Merge pull request #46513 from rallytime/merge-2018.3
 - aa760334a1 Merge branch '2018.3.0rc1' into '2018.3'
- ISSUE #43208: (mitar) Prevent user.present to change uid and gid of existing user (refs: #46502)
- PR #46502: (terminalmage) user.present: don't change uid/gid unless explicitly told to @ 2018-03-13 14:25:20 UTC
 - 3e073c7e8a Merge pull request #46502 from terminalmage/issue43208
 - 4106840deb user.present: don't change uid/gid unless explicitly told to
- PR #46398: (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-03-12 20:25:19 UTC
 - 7cdb00ca9c Merge pull request #46398 from rallytime/merge-2018.3
 - d22e5ba442 Merge fix: return back *wb+* mode in *crypt.gen_keys*.
 - c7dddaf8ce Lint: Use log variable, not logger.
 - ca1860cd91 Use new *get_umask* function in mask calls in *virt.py*
 - 19ec7b6de1 Update old *utils* paths with new *utils* paths
 - d83727fdf9 Merge branch '2017.7' into '2018.3'
 - * 95586678c3 Merge pull request #46394 from Ch3LL/mac_doc
 - 158add6661 change *oxdownload* to *oxdownload-{python_version}*
 - 21aa848c89 Add mac py2 and py3 packages to mac installation docs
 - * 07b5d09ac1 Merge pull request #46338 from rallytime/fix-44831
 - 90771da999 Remove *cmd.wait* deprecation reference in docs
 - * 3849e7a085 Merge pull request #46333 from danlsgiga/issue-42438
 - 3b13f37b44 Revert changes in the code and change docs instead
 - 38114a65d8 Fixes color parameter mismatch and handles 204 responses correctly
 - * a8f2f1b063 Merge pull request #46322 from terminalmage/issue44935
 - 85ac6a9893 *yamlify_arg*: don't treat leading dashes as lists
 - * da5c282cb2 Merge pull request #46327 from samilaine/fix-vmware-cloud-fqdn
 - 4b8dfb326f Modify the way a FQDN is handled in the vmware cloud provider.
 - * 78c45d3786 Merge pull request #46318 from terminalmage/squelch-warnings
 - 5889b36646 Skip type-checking for several *gitfs/git_pillar/winrepo* params
 - * bb0d6fc263 Merge pull request #46312 from gtmanfred/2017.7
 - 749ae580ed add *module_dirs* to salt *ssh thin tarball*
 - * 88b5f7383d Merge pull request #46242 from redbaron4/fix-46127
 - 06dba51617 Make changes from review
 - 727ebe1056 Merge branch '2017.7' into *fix-46127*

- 08d1ee8baf Fix Python3 test errors
- aa9d709015 Pass env_vars to pip.freeze
- * a0716643e4 Merge pull request #46265 from Ch3LL/profit_cloud
 - d4893eab4c Add username/password to profitbricks conf for cloud tests
- * ed7bffa7e0 Merge pull request #46306 from rallytime/bp-46256
 - 6439bce4a8 Don't install msgpack 0.5.5
- * 8c2c4e3316 Merge pull request #46208 from terminalmage/audit-umask-usage
 - 9c92aadce8 Disable blacklisted-function check for legitimate uses
 - 58a11aaa26 Disable pylint check in salt-ssh shim
 - ecadf67659 Blacklist os.umask
 - 31b1d98fcb Replace direct use of os.umask with use of existing context manager
 - 82ce546e18 Prevent failed os.makedirs from leaving modified umask in place
- * 978e869490 Merge pull request #46293 from eliasp/2017.7-44624-py3-compat
 - 2e08b0d9c8 Fix Python3 comparison *TypeError* in *salt.modules.upstart*
- * bee4a66d0c Merge pull request #46264 from terminalmage/issue46128
 - 68000b7211 Fix incorrect merge conflict resolution
- * 1e0b3aa348 Merge pull request #46296 from vutny/doc-pillar-get
 - 1faa8331e1 [DOC] Add missing params to *pillar.get* docstring
- * c490a50452 Merge pull request #45874 from GwiYeong/2017.7-local-client-hotfix
 - 949aefc82b Merge branch '2017.7' into 2017.7-local-client-hotfix
 - 45d663f435 fix for local client timeout bug
- * 8e8a3a2897 Merge pull request #46261 from rallytime/merge-2017.7
 - 8256ae5ee5 Merge branch '2016.11' into '2017.7'
 - 140ef4d6b9 Merge pull request #46253 from rallytime/doc-banners
 - 07ed8c7db3 Update docbanner for SaltConf18
 - 9fe86ee520 Merge pull request #46179 from wedge-jarrad/cifs-remount-fix
 - 9ca25c4313 Add credentials and secretfile to mount.mounted mount_invisible_keys
- **PR #46421:** (bdrung) Skip SSHPasswordTests if ssh binary is not found @ 2018-03-09 16:21:02 UTC

 - 32f3d00e44 Merge pull request #46066 from rallytime/pin-tornado
 - 6dc1a3b9dc Pin tornado version in requirements file
 - 85761ee650 Merge pull request #46036 from terminalmage/issue43769
 - e2140d9a84 Mock the `ssh.key_is_encrypted` utils func
 - 169924b3fe Move `ssh.key_is_encrypted` to a utils module temporarily
 - 54f4d78f7a Only keep `ssh.py` in the Windows installer
 - 5f04531e1b Keep ssh state and execution modules in the installer
 - f2b69f703d `git.latest`: Fix regression with identity file usage
- * 10a47dcbc4 Merge pull request #46137 from damon-atkins/2017.7_fix_ec2_pillar2
 - 99e7f6a7d3 update ec2 pillar arguments with better names
- * d74cb14557 Merge pull request #46145 from terminalmage/issue46004
 - 467ff841cd `pillarenv` argument should default to None and not the value from `opts`
 - 2a185855ea Better solution for fixing the `opts` munging in `pillar.show_pillar` runner
 - e2c4702e0c Update tests to reflect changes to the `SaltCacheLoader`
 - f9301fcc34 Document behavior when orchestration runner invoked with non-orch states
 - 9644579cd0 Instantiate the `SaltCacheLoader`'s `fileclient` in the `__init__`
 - f9a6c86e21 `salt.runners.pillar.show_pillar`: don't modify master `opts`
 - e0940a9fc4 Properly detect use of the `state.orch` alias and add `orch_jid` to `kwargs`
- ISSUE #42932: (bobrik) `cmd.run` with `bg: true` doesn't fail properly (refs: #46172, #45932)
- PR #46172: (The-Loeki) `cmdmod`: reimplement of #45932 for Oxygen @ 2018-02-28 19:14:26 UTC
 - PR #45932: (The-Loeki) Fix `cmd run_all bg` error (refs: #46172)
 - PR #39980: (vutny) [2016.3] Allow to use `bg` kwarg for `cmd.run` state function (refs: #46172, #45932)
 - 20d869c228 Merge pull request #46172 from The-Loeki/fix_cmd_run_all_bg_oxygen
 - 3ecf5018d0 Merge branch '2018.3' into `fix_cmd_run_all_bg_oxygen`
 - b5315e817b Merge branch '2018.3' into `fix_cmd_run_all_bg_oxygen`

- beabf4f06b cmdmod: reimplementation of #45932 for Oxygen
- **PR #46238:** ([terminalmage](#)) Don't allow salt.utils.files.fopen() to open stdin/stdout/stderr @ 2018-02-28 19:08:23 UTC
 - 687575b582 Merge pull request #46238 from terminalmage/fds-in-fopen
 - fe1527a3c4 Don't allow salt.utils.files.fopen() to open stdin/stdout/stderr
- **PR #46219:** ([twangboy](#)) Fix `unit.modules.test_network` for Windows @ 2018-02-28 15:45:02 UTC
 - 3da5dcb313 Merge pull request #46219 from twangboy/win_fix_inet_pton
 - 46f1d2cc09 Use `six.text_type` instead of `six.u`
- **PR #46228:** ([twangboy](#)) Fix `unit.modules.test_pip` for Windows @ 2018-02-28 15:37:49 UTC
 - 44343f8063 Merge pull request #46228 from twangboy/win_fix_test_pip
 - 415821eee9 Fix encoding issue
- **PR #46198:** ([rallytime](#)) [2018.3] Merge forward from 2018.3.0rc1 to 2018.3 @ 2018-02-27 15:17:51 UTC
 - adc8950bbe Merge pull request #46198 from rallytime/merge-2018.3
 - 1b4dc71930 Lint fix
 - 776f2ea5d7 Merge branch '2018.3.0rc1' into '2018.3'
- **ISSUE #45849:** ([Epiclemonaid](#)) XenServer Provisioning errors out on this line. removing it succeeds. (refs: #46168)
- **PR #46168:** ([gtmanfred](#)) driver and provider should be specified @ 2018-02-26 16:17:13 UTC
 - 06d2dff3ac Merge pull request #46168 from gtmanfred/2018.3
 - ac99bd26db driver and provider should be specified
- **PR #46161:** ([rallytime](#)) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-02-26 15:29:39 UTC
 - 605e5eff73 Merge pull request #46161 from rallytime/merge-2018.3
 - 69ac94baca Update utils paths
 - cffbf52c10 Lint fix: remove extra line
 - 79bed6cff1 Merge branch '2017.7' into '2018.3'
 - * 0398ce0482 Merge pull request #46135 from rallytime/bp-46088
 - 57a60f62a3 fix kernel subpackages install bug
 - * 1fcbdd1e02 Merge pull request #46136 from rallytime/bp-46115
 - 0a481d707f update digitalocean salt-cloud driver

 - * 07e5735471 Merge pull request #46016 from rallytime/bp-45826
 - 1916e5c4a4 Fix selinux.fcontext_policy_present for Centos 6
 - * a1f4092811 Merge pull request #46015 from rallytime/bp-45785
 - ef6ffb1492 Resolve linting errors
 - 8047066c46 Remove unused import
 - 8f7c45935a Add tests for salt.modules.selinux.fcontext_get_policy
 - bafb7b4e6e Ensure parsed fields are stripped
 - a830a6e819 m/selinux.fcontext_get_policy allow long filespecs
 - * 96097c037e Merge pull request #46012 from rallytime/bp-45462
 - 9f76836a6c emit port cli version, variants as separate args
 - * 1279924f5f Merge pull request #45991 from terminalmage/fix-duplicate-extra-opts
 - 916766f651 yumpkg: Fix a couple issues with _get_extra_opts
 - * 8b9adc258e Merge pull request #46017 from rallytime/merge-2017.7
 - a06645ce71 Merge branch '2017.7.3' into '2017.7'
 - 6d534c6e7e Merge pull request #46009 from Ch3LL/rn_7.4
 - ac0baf4b34 Add 2017.7.4 Release Notes with PRs
 - ca76a0b328 Merge pull request #45981 from gtmanfred/2017.7.3
 - 0d448457dc apparently local is not set by default
 - 2a92f4bc16 use local config for vault when masterless

- 6530649dbc Merge pull request #45953 from rallytime/bp-45928-2017.7.3
- 85363189d1 Fixing vault when used with pillar over salt-ssh
- fb378cebb0 Merge pull request #45934 from rallytime/bp-45902
- bb83e8b345 Add regression test for issue 45893
- cdda66d759 Remove duplicated section in docstring and fix example
- 4b6351cda6 Check the effective saltenv for cached archive
- 0d74151c71 Merge pull request #45935 from rallytime/bp-45742
- 6a0b5f7af3 Removed the chained copy
- ad1150fad4 list.copy() is not compatible with python 2.7
- * d20ff89414 Merge pull request #45988 from rallytime/bp-45797
 - 953a400d79 follow symlinks
- * b18087cee0 Merge pull request #45711 from bdrung/fix-unicode-tests
 - b6181b5ed6 Fix Unicode tests when run with LC_ALL=POSIX
- * 5271fb1d40 Merge pull request #45878 from damon-atkins/2017.7_fix_ec2_pillar
 - 0e74025714 Merge branch '2017.7' into 2017.7_fix_ec2_pillar
 - b4d0b23891 py3 fix
 - 75d9e20d8a Add ignoring 'terminated', 'stopped' instances, to improve changes of a single match
 - 0093472a37 added tag_key_list and tag_key_sep to create ec2_tags_list
 - afb3968aa7 ec2_pillar could not find instance-id, resolved. add support to use any tag to compare minion id against.
- * cf367dbd04 Merge pull request #45942 from terminalmage/issue45679-2017.7
 - 89cbd72a0d Don't try to sort ports when translating docker input
 - 9cd47b39dd Fix incorrect translation of docker port_bindings -> ports
- * dae41de7a8 Merge pull request #45959 from rallytime/state-doc-update
 - 6f781cb95d A couple of grammar updates for the state compiler docs
- * 007214f7bf Merge pull request #45908 from DimensionDataResearch/fix/issue/45884
 - 1a75786b5a Fix linter warnings.
 - 82ec0b589c Revert to using salt.utils.cloud.is_public_ip.
 - 9b6b01873b Fix violations reported by flake8.
 - a2bc155c73 Use __utils__['cloud.']. instead of salt.cloud.utils.
 - 98907a32cb Ensure 'auth' parameter is correctly passed to dimensiondata driver.
 - de26b03e2c Fix copy/paste bug in dimensiondata provider integration test.
 - 6b1b6be427 Add integration tests for dimensiondata cloud provider.
 - f6ea9fed7d Ensure that event data provided by the dimensiondata driver is serialisable.

27.2.3 Salt 2018.3.2 Release Notes

Version 2018.3.2 is a bugfix release for *2018.3.0*.

The 2018.3.2 release contains only a small number of fixes, which are detailed below.

This release fixes two critical issues.

The first is Issue #48038, which is a critical bug that occurs in a multi-syndic setup where the same job is run multiple times on a minion.

The second issue is #48130. This bug appears in certain setups where the Master reports a Minion time-out, even though the job is still running on the Minion.

Both of these issues have been fixed with this release.

Warning: If you are using Jinja to dump lists or dictionaries in your SLS files, this will now cause errors in Python 2 since Jinja does not produce YAML-compatible output when strings in the data structures contain unicode types. The dictionary must be passed through a Jinja filter to produce YAML-compatible strings.

The below is an example of invalid SLS:

```
/etc/foo.conf:
file.mangaged:
  - source: salt://foo.conf
  - template: jinja
  - defaults: {{ mydict }}
```

To make it valid, use either one of Salt's own `json` or `yaml` filters:

```
/etc/foo.conf:
file.mangaged:
  - source: salt://foo.conf
  - template: jinja
  - defaults: {{ mydict | json }}
```

Changelog for v2018.3.1..v2018.3.2

Generated at: 2018-06-17 19:17:16 UTC

- **ISSUE #48130:** ([rmarchei](#)) Minion timeouts with 2018.3.1 (refs: #48158)
- **PR #48158:** ([gtmanfred](#)) always listen when gathering job info @ 2018-06-17 19:04:03 UTC
 - 521e926458 Merge pull request #48158 from gtmanfred/2018.3.2
 - cecf564433 always listen when gathering job info
- **PR #48138:** ([rallytime](#)) Update man pages for 2018.3.2 @ 2018-06-14 21:22:34 UTC

- f154545aff Merge pull request #48138 from rallytime/man-pages-2018.3.2
- 8c340134f5 Update man pages for 2018.3.2
- **PR #48137:** (gtmanfred) [2018.3.2] bootstrap kitchen branch tests with 2017.7.6 @ 2018-06-14 21:20:28 UTC
 - b49271b76d Merge pull request #48137 from gtmanfred/2018.3.2
 - 6128519e8b bootstrap kitchen branch tests with 2017.7.6
- **PR #48129:** (rallytime) Add release notes for 2018.3.2 @ 2018-06-14 15:48:36 UTC
 - 21aaf1cbc4 Merge pull request #48129 from rallytime/release-notes-2018.3.2
 - 0b13be0111 Add release notes for 2018.3.2
- **PR #48100:** (rallytime) Back-port #48014 to 2018.3.2 @ 2018-06-14 12:54:52 UTC
 - **PR #48014:** (cro) Find job pause (refs: #48100)
 - 36b99ae80a Merge pull request #48100 from rallytime/bp-48014
 - 77feccc5c4 Lint: Add blank line
 - 159b052962 One more case where returner doesn't respond
 - 91b45b4cc4 Catch two cases when a returner is not able to be contacted—these would throw a stacktrace.
- **PR #48099:** (rallytime) Back-port #47915 to 2018.3.2 @ 2018-06-14 12:54:23 UTC
 - **PR #47915:** (garethgreenaway) [2018.3] state runner pause resume kill (refs: #48099)
 - 40c1bfdec9 Merge pull request #48099 from rallytime/bp-47915
 - 3556850058 fixing typo in alias_function call.
 - 4b0ff496fa Some fixes to the set_pause and rm_pause function in the state runner, renaming to in line with the functions in the state module. Including aliases to previous names for back-ward compatibility. Including a soft_kill function to kill running orchestration states. A new test to test soft_kill functionality.
- **ISSUE #48038:** (austinpapp) jobs are not dedup'ing minion side (refs: #48075)
- **PR #48097:** (rallytime) Back-port #48075 to 2018.3.2 @ 2018-06-14 12:52:44 UTC
 - **PR #48075:** (garethgreenaway) [2017.7] Ensure that the shared list of jids is passed (refs: #48097)
 - 074a97dcfa Merge pull request #48097 from rallytime/bp-48075
 - e4c719b55f Ensure that the shared list of jids is passed when creating the Minion. Fixes an issue when minions are pointed at multiple syndics.

27.2.4 Salt 2018.3.3 Release Notes

Version 2018.3.3 is a security and bugfix release for *2018.3.0*.

Statistics

- Total Merges: 548
- Total Issue References: 69
- Total PR References: 341

- Contributors: 55 (Ch3LL, FedericoCeratto, KaiSforza, L4rS6, Lutseslav, The-Loeki, Vaelatern, admd, aesposito91, asenci, astorath, azelezni, babs, bbczeuz, bbinet, brejoc, cro, daa, dmurphy18, dubb-b, dwoz, eliasp, ezh, garethgreenaway, gtmanfred, isbm, jeduardo, kt97679, kuetrzi, linoplt, lomeroc, lusche, mateiw, maxarnold, maxim-sermin, meaksh, mmulqueen, morganwillcock, mtorromeo, nullify005, paulcollinsiii, pritambaral, rallytime, rares-pop, rmarchei, rosscdh, sizgiyaev, sjorge, t0fik, terminalmage, travispaul, twangboy, vinian, weswhet, zerthimon)

Warning: If you are using Jinja to dump lists or dictionaries in your SLS files, this will now cause errors in Python 2 since Jinja does not produce YAML-compatible output when strings in the data structures contain unicode types. The dictionary must be passed through a Jinja filter to produce YAML-compatible strings.

The below is an example of invalid SLS:

```
/etc/foo.conf:
file.manged:
- source: salt://foo.conf
- template: jinja
- defaults: {{ mydict }}
```

To make it valid, use either one of Salt's own `json` or `yaml` filters. Another option would be to use Jinja's `tojson` filter.

```
/etc/foo.conf:
file.manged:
- source: salt://foo.conf
- template: jinja
- defaults: {{ mydict | tojson }}
```

Security Fix

CVE-2018-15751 Remote command execution and incorrect access control when using salt-api.

CVE-2018-15750 Directory traversal vulnerability when using salt-api. Allows an attacker to determine what files exist on a server when querying `/run` or `/events`.

Credit and thanks for discovery and responsible disclosure: nullbr4in, xcuter, koredge, loupos, blackcon, Naver Business Platform

Changes to win_timezone

Improves timezone detection by using the `pytz` module.

`timezone.get_offset` and `timezone.get_timezone` now work properly.

Adds `timezone.list` to list supported timezones in either Windows or Unix format.

New Jinja Filter

The `tojson` filter (from Jinja 2.9 and later) has been ported to Salt, and will be used when this filter is not available. This allows older LTS releases such as CentOS 7 and Ubuntu 14.04 to use this filter.

You can use this filter any time you wish to dump a list or dictionary into an SLS file, to ensure that the result is able to be loaded by the YAML renderer. For example:

```
foo:
  bar.baz:
    - some_arg: {{ mydict | tojson }}
```

MacOSX escape characters with runas

You are now required to escape quotes when using the runas argument with the cmd module on macosx.

Example:

```
cmd.run 'echo \'\'h=\"baz\\\"\'\' runas=macuser'
```

- PR #49294: (Ch3LL) Move run_function call from __init__ to setup @ 2018-08-24 12:41:35 UTC
 - 7bb356f11e Merge pull request #49294 from Ch3LL/fed_28_tests
 - 0a5d44a3db Move run_function call from __init__ to setup
- PR #49302: (twangboy) Fix installer 2018.3.3 @ 2018-08-24 12:41:14 UTC
 - a607f9332f Merge pull request #49302 from twangboy/fix_installer_2018.3.3
 - 68fd37575e Fix erroneous NSSM reference
 - 103f2c289e Remove delete vcredist line

- 007a16638e Bring installer updates from 2017.7.8 to 2018.3.3
- PR #49241: (terminalmage) Don't silently catch SystemExit @ 2018-08-22 12:57:58 UTC
 - bc0b4ac513 Merge pull request #49241 from terminalmage/salt-jenkins-1078
 - 08d144f2c7 Don't silently catch SystemExit
 - c0fdb818f7 Don't use a bare except!
- PR #49239: (Ch3LL) Use yaml's safe_dump in windows ec2 tests @ 2018-08-22 08:48:13 UTC
 - 0fb9ccf60a Merge pull request #49239 from Ch3LL/win_yaml_test
 - f5b42dbb24 import salt.utils.yaml
 - 67290eaff7 Use yaml's safe_dump in windows ec2 tests
- PR #49182: (terminalmage) Fix hanging syndic test @ 2018-08-18 12:10:32 UTC
 - 134f125b96 Merge pull request #49182 from terminalmage/salt-jenkins-1078
 - a2d2cd317b Fix hanging syndic test
- PR #49172: (Ch3LL) [2018.3.3] cherry pick #49118 @ 2018-08-17 20:54:05 UTC
 - PR #49118: (dwoz) Multiple fixes for integration.states.test_file (refs: #49172)
 - PR #49088: (dwoz) Multiple file state test fixes (refs: #49118)
 - PR #49087: (dwoz) Filter out scheme's that are not valid (refs: #49118)
 - b3a247bfb Merge pull request #49172 from Ch3LL/bp-49118
 - ce5e17bdb update is_windows salt.utils to correct path
 - 3fef112409 Multiple fixes for integration.states.test_file
- PR #49173: (Ch3LL) [2018.3.3] cherry pick #49167 @ 2018-08-17 20:30:27 UTC
 - PR #49167: (dwoz) Fix remaining file state integration tests (py3) (refs: #49173, #49442)
 - 85ffc8db87 Merge pull request #49173 from Ch3LL/bp-49167
 - a1a298a13c Simplify dict keys lookup
 - 3d26affa10 Fix remaining file state integration tests (py3)
- PR #49171: (Ch3LL) [2018.3.3] cherry pick #49103 @ 2018-08-17 20:23:32 UTC
 - PR #49103: (dwoz) Install the launcher so we can execute py files (refs: #49171)
 - ee54ea5f73 Merge pull request #49171 from Ch3LL/bp-49103
 - 05a2b91fb2 Install the launcher so we can execute py files
- PR #49132: (Ch3LL) [2018.3.3] backport PR #49062 @ 2018-08-17 14:51:50 UTC
 - PR #49062: (weswhet) fix memoize on available macOS services (refs: #49132)
 - 58034c9dc3 Merge pull request #49132 from Ch3LL/bp-49062
 - 990fdb6a52 decorator link fix, updating context names, as well as updating macutils tests for latest changes
 - 3ab5d282be fixing an issue with memoize on macOS services, switching to using __context__ instead
- PR #49142: (Ch3LL) Remove -Z script_arg for cloud tests @ 2018-08-16 16:12:59 UTC
 - 01f8f83cf0 Merge pull request #49142 from Ch3LL/rm_z_arg

- a1ef6a88a6 Remove -Z script_arg for cloud tests
- PR #49137: (Ch3LL) [2018.3.3] Update bootstrap script to latest release (2018.08.15) @ 2018-08-15 19:49:22 UTC
 - a03828884b Merge pull request #49137 from Ch3LL/bootstrap_2018.3.3
 - eb9a612096 [2018.3.3] Update bootstrap script to latest release (2018.08.15)
- PR #49110: (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-08-14 17:11:25 UTC
 - b412bff534 Merge pull request #49110 from rallytime/merge-2018.3
 - 4649f60209 Update old utils paths with new paths
 - 49c2a784bb Merge branch '2017.7' into '2018.3'
 - * d46e23f4c2 Merge pull request #49109 from rallytime/merge-2017.7
 - 3c5527f300 Merge branch '2017.7.8' into '2017.7'
 - 01cf2c71ff Merge pull request #49051 from rallytime/bp-49046
 - fc0817cb35 The osfullname grain differs when using Python2 vs Python3, swapping this out for the "OS" grain which is consistent.
 - * 8954dd269f Merge pull request #49090 from dwoz/file_line_fix
 - 0dca634e3c Search for (but do not include) CRLF line ending
 - * b99edc3dce Merge pull request #49088 from dwoz/file_hash_diffs
 - 054afb8197 Multiple file state test fixes
 - * 274977b6c4 Merge pull request #49087 from dwoz/url_file_test_fixes
 - 632b65f975 Filter out scheme's that are not valid
 - * db5fb3232a Merge pull request #49086 from rallytime/new-doc-img
 - 90954203cb Update the DOCBANNER image for saltconf
 - * af6ec1dce2 Merge pull request #49045 from twangboy/fix_43164
 - 589456d08f Fix lint errors
 - e79243566d Add rallytime's suggestions
 - d1ae6b3d6d Fix docs for the registry module and state
 - * a840fea1a1 Merge pull request #49083 from rallytime/bootstrap-2017.7
 - 358e14cdac [2017.7] Update bootstrap script to latest release
 - * 9db6cd5654 Merge pull request #49059 from twangboy/fix_37984
 - 7ed45b5b00 Remove import
 - 7fb1edb469 Fix docs to clarify uptime output on Windows
 - * f9db72f00c Merge pull request #49061 from saltstack/revert-48982-new_logo_2017.7
 - 98a8da728b Revert "New logo 2017.7 (WIP)"
 - * bbcd1869ec Merge pull request #48982 from newwebash/new_logo_2017.7
 - 5c1c311f77 Update Salt Conf ad
 - 72dc63c426 Merge branch '2017.7' of <https://github.com/saltstack/salt> into new_logo_2017.7
 - 9f4e78a7b9 Revert "Update saltconf ad"

- 3ab8cdb882 Update saltconf ad
- **ISSUE #48665:** (dgengtek) salt-api auth ldap generates a valid token when using bindpw and an invalid request (refs: #48901)
- **PR #48901:** (garethgreenaway) [2018.3] fix to auth/ldap.py @ 2018-08-14 16:10:19 UTC
 - e78fc0e0eb Merge pull request #48901 from garethgreenaway/48665_auth_ldap_valid_token_failed_auth
 - d4e4f2e803 Fixing a typo in a comment.
 - 2eb167ea42 Fixing issue when a valid token is generated even when invalid user credentials are passed. This change verifies that the binddn credentials are valid, then verifies that the username & password (if not None) are also valid.
- **ISSUE #49081:** (frogunder) Fluorine - I see error/traceback when running minion in debug mode (refs: #49085)
- **PR #49099:** (rallytime) Back-port #49085 to 2018.3 @ 2018-08-14 12:42:51 UTC
 - **PR #49085:** (gtmanfred) fix async call to process manager (refs: #49099)
 - 484c1e0123 Merge pull request #49099 from rallytime/bp-49085
 - 024d9cb843 fix async call to process manager
- **ISSUE #49018:** (Ch3LL) add MasterPillarUtil tests (refs: #49034)
- **PR #49071:** (rallytime) Back-port #49034 to 2018.3 @ 2018-08-13 20:15:31 UTC
 - **PR #49034:** (garethgreenaway) [fluorine] Adding tests for MasterPillarUtil (refs: #49071)
 - bc033da677 Merge pull request #49071 from rallytime/bp-49034
 - 8108a4d31a Adding some tests for the grains, pillar and mine functions in the cache runner. These will also ensure that the relevant functions in salt.utils.master.MasterPillarUtil are functioning properly.
- **PR #49077:** (rallytime) Back-port #49075 to 2018.3 @ 2018-08-13 20:00:00 UTC
 - **PR #49075:** (gtmanfred) fix last async issue (refs: #49077)
 - 90c2f026b3 Merge pull request #49077 from rallytime/bp-49075
 - 5e07b8306b fix last async issue
- **PR #49096:** (rallytime) Update the DOCBANNER image for saltconf @ 2018-08-13 19:59:39 UTC
 - 6942ef1102 Merge pull request #49096 from rallytime/new-doc-img-2018.3
 - 75080705ce Update the DOCBANNER image for saltconf
- **PR #49055:** (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-08-13 19:20:11 UTC
 - 0e1ed7b923 Merge pull request #49055 from rallytime/merge-2018.3
 - 83a15cb623 Add optimization_order config to mocked opts
 - ea6883ee55 Update old utils paths to new utils paths
 - 201031fa8a Merge branch '2017.7' into '2018.3'
 - * 0d2a495378 Merge pull request #49050 from rallytime/merge-2017.7
 - ed6fb8b739 Merge branch '2017.7.8' into '2017.7'
 - 189e28691f Merge pull request #49044 from Ch3LL/vultr_test
 - 0dedfae4d1 increase timeout on vultr cloud integration test
 - c606a32cf2 Merge pull request #49042 from rallytime/flaky-jinja-test

- a43d9b4ba6 Mark a jinja template test as flaky
- 6415b6f73b Merge pull request #49041 from Ch3LL/ec2_fix
- cf7f2459b8 [2017.7.8] backport PR #48212
- 1db036406b Merge pull request #49030 from rallytime/update-client-tests
- f08ee6c6ae Update netapi client tests
- * 70be9ac9b1 Merge pull request #49046 from garethgreen-away/1022_fixing_test_failing_py3_Debian_test
 - fa2339bb91 The osfullname grain differs when using Python2 vs Python3, swapping this out for the "OS" grain which is consistent.
- * 69c9b0afb1 Merge pull request #49036 from cspeidel/doc-fix-netyang
 - f7ac085eb5 minor doc fix in netyang.py
- * c5f3fd6b2b Merge pull request #48997 from AVeenstra/patch-1
 - 0e535f2c8c Unpacking dict with the six iterator
 - 5e82685b89 Python 3 related fix in highstate_return.py
- * c06a3cf531 Merge pull request #49021 from rallytime/merge-2017.7
 - ca82b3d57a Merge branch '2017.7.8' into merge-2017.7
 - f73ba21bc7 Merge pull request #49024 from rallytime/fix-deb-test
 - a9c16d9137 Fix test error in test_compiler jinja check
 - c6f8429e41 Merge branch '2017.7.8' into '2017.7'
 - 6b6d68c615 Merge pull request #49020 from rallytime/fix-grains-test
 - f72a3ac6be Make grains integration test more robust
 - 92d6c25c7f Merge pull request #49002 from rallytime/skip-jinja-deep-error-test
 - 23b66ef8bb Skip test_jinja_deep_error on Debian 8
 - 41d9f11eb3 Merge pull request #48999 from rallytime/fix-boto-test
 - d0136b1be5 Update expected return value in boto test
- * 2ddb6391a Merge pull request #49010 from Ch3LL/univenton
 - c09bce9afe Add univenton OS to debian os_family mapping
- * 41bd36842e Merge pull request #48636 from terminalmage/loader-fixes
 - 0441cd56ef Add optimization_order to mocking
 - 2256fad320 Process pycache files after .py files
 - a78663a301 Lint
 - 0728b5f8b6 Add note about Python 3.5+ only support for optimization_order
 - 764969ce08 Add a test to confirm that .py files are still loaded correctly
 - 0f60beb6b6 Fix bad copy pasta
 - fbcd142ea2 Add configuration docs for optimization_order config option
 - 8af2d580f3 Only compile the suffix_order/map once per LazyLoader instance
 - 4b95e5f313 Don't put __pycache__ dir in the file list

- e7c10196da Quiet the byte compiling for PY2
- 9338370477 Add unit tests for loader optimization levels
- c3622933c1 PY3: Support different optimization levels
- 6fc8da5bab Add optimization_order config option with default value
- dfe423a1e0 Remove commented-out log message
- **PR #49084: (rallytime)** [2018.3] Update bootstrap script to latest release @ 2018-08-13 18:14:42 UTC
 - db7ec46875 Merge pull request #49084 from rallytime/bootstrap-2018.3
 - 28dc8ce954 [2017.7] Update bootstrap script to latest release
- **PR #49052: (isbm)** Python 3.7 support (backport 2018.3) @ 2018-08-13 13:06:51 UTC
 - b0d5acbe0d Merge pull request #49052 from isbm/isbm-python37-support-2018.3
 - 4386a9ca1f Merge branch '2018.3' into isbm-python37-support-2018.3
 - bc85a5fa98 Fix configuration setting
 - 47078a300f Remove async keyword, moving it into the kwargs.
 - 31dccc4fdf fix unicode literals
 - 990936992c Keep runner API unchanged
 - 46bafcafef Fix nag-message
 - 5c887ac2ae Support original API
 - 2c22e794d4 Use kwargs instead of directly named parameters
 - 7d095491d9 Update docstring
 - 9807e8dbb7 Add 'async' backward compatibility
 - e8608aa9be Revert api call: it is about "functionname_async" suffix.
 - 0543578336 Deprecate 'async' parameter in Mandrill API
 - 1107de0dec Lintfix: PEP8 requires two empty lines
 - 2a18e335af Fix function signatures in Cassandra module
 - 603f94e2a3 Cleanup docstrings at module level
 - b9718d3a09 Fix log error/info/warning and exception messages
 - 6e77aff69a Fix local opts from CLI
 - 493e48ddb5 Remove internal variables/properties with the reserved words
 - be07f64bc4 Change internal function signatures to avoid reserved word
 - 7d095e0b26 Rename async function to asynchronous
 - 35eae8bb8a4 Fix docstrings
 - 7a597f19b5 Fix comments
 - 69920366ae Fix CLI config
 - 173f3d7aa8 Fix docstring typo
 - b7da571624 Fix imports
 - 7ec3954bef Rename module to full wording

- **ISSUE #48557:** ([whytewolf](#)) file.line in python3 on windows 2012 r2 is adding extra CR line endings. (refs: [#49026](#))
- **PR #49026:** ([dwoz](#)) Fix file.line line endings @ 2018-08-13 13:05:43 UTC
 - 338ecb70ef Merge pull request [#49026](#) from dwoz/issue_48557
 - a4d22fda2f Merge remote-tracking branch 'origin/issue_48557' into issue_48557
 - * 702e76cfc9 Merge branch '2018.3' into issue_48557
 - 6cf93e8fc4 Skip newline in binary mode
 - 2cf80c1595 Fix linter errors
 - baf291b4c8 Fix file.line line endings
- **PR #49038:** ([gtmanfred](#)) disable enable_ssh_minions to see if it is slowing down 2018.3 tests @ 2018-08-10 18:07:59 UTC
 - 602fed7806 Merge pull request [#49038](#) from gtmanfred/slowtest
 - 6bc44c91c4 remove localhost from tests
 - 7b168a5aac disable enable_ssh_minions to see if it is slowing down 2018.3 tests
- **ISSUE #48996:** ([jils2013](#)) file.get_diff not work on version:2018.3.2 (refs: [#49033](#))
- **PR #49033:** ([terminalmage](#)) Fix file.get_diff for remote files @ 2018-08-09 21:06:53 UTC
 - 4eeb75f028 Merge pull request [#49033](#) from terminalmage/issue48996
 - 163aea71c8 Lint
 - d6e5038022 Fix file.get_diff for remote files
- **ISSUE #48856:** ([travispaul](#)) Salt fails to start on NetBSD 8 (refs: [#48926](#))
- **PR #48926:** ([travispaul](#)) Handle ifconfig output differently for NetBSD >= 8.0 @ 2018-08-09 20:07:44 UTC
 - b24c96a292 Merge pull request [#48926](#) from travispaul/fix-netbsd-8-new-ifconfig
 - d59b6d8269 Add unit test for NetBSD 8 ifconfig changes
 - 80f8a667d1 Handle ifconfig output differently for NetBSD >= 8.0
- **PR #48803:** ([dmurphy18](#)) Support for execution modules and states mount on AIX @ 2018-08-09 17:51:55 UTC
 - 7d6b9ed0a5 Merge pull request [#48803](#) from dmurphy18/aix_filesystems
 - 92818f816b Fixes for testing
 - 77dd7a1743 Adjust unit tests
 - ead033cde Updated for review comments and adjusted locking when writing files
 - 5bf9e6085b Update due to review comments
 - 9fb5641dc7 Mount unit tests for modules and states for AIX
 - b28f427432 Save off work after laptop issue
 - e5c2741fe7 module and states mount support for AIX
 - b701e16ad0 Further updates to support for mount on AIX
 - 210076276f Initial support for handling /etc/filesystems on AIX
- **ISSUE #48496:** ([icy](#)) Salt-key unable to delete the certificate Test=True (refs: [#48929](#))
- **PR #48929:** ([terminalmage](#)) 2 salt-key fixes @ 2018-08-09 17:50:07 UTC

- 2a38905a8a Merge pull request #48929 from terminalmage/issue48496
- 7ac10f9eac 2 salt-key fixes
- **ISSUE #47481:** (whytewolf) Oxygen: task.add_trigger with start_date stating strptime needs a string not int. (refs: #49022)
- **PR #49022:** (dwoz) Document time format idiosyncrasies @ 2018-08-09 17:47:12 UTC
 - bb9d23bfa1 Merge pull request #49022 from dwoz/47481_docs
 - 313a3d93d6 Document time format idiosyncrasies
- **PR #48932:** (twangboy) Fix pkg.install when pkg already installed @ 2018-08-09 17:45:51 UTC
 - 9b6a9ff4f1 Merge pull request #48932 from twangboy/fix_win_repo
 - 075ea29d29 remove .lower(), fix debug messages
 - d7c2f476ac Remove current: version for latest as well
 - 522ac26459 Fix typo in code comment
 - 47b2898a85 return empty dict on no changes
 - 6532706d2f Make the tests run on Linux
 - cfe55a391a Add tests for pkg.install output
 - 8ec058f498 Clarify code comment
 - 8af2cfd54a Fix issues where current is not returned
- **PR #49011:** (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-08-09 17:34:18 UTC
 - d7b7a92ef6 Merge pull request #49011 from rallytime/merge-2018.3
 - 02670969d0 Apply fix to ssh init file that was there before merge
 - 7e1f7915e4 Revert "Allow for not being prompted to supply a password to deploy keys to a minion with salt-ssh"
 - 00416d54d1 Revert "add key-deploy test"
 - c26fa0d6c4 Mark orchestration test as expensive
 - fceb6d8d6f Update old utils paths to use new paths
 - 3e6445a9d6 Merge branch '2017.7' into '2018.3'
 - * b49eeca6e9 Merge pull request #49003 from rallytime/boto-test-2017.7
 - 1a23bb233f Update expected return value in boto test
 - * 51eed1fdfb Merge pull request #48988 from rallytime/merge-2017.7
 - df8699e2e7 Merge branch '2017.7.8' into '2017.7'
 - a1e54634dc Merge pull request #48976 from rallytime/tornado
 - 0bd838ab6c Skip unreliable tornado tests
 - 22713be9c1 Merge pull request #48979 from rallytime/bp-48959
 - 03aa0e49b0 Merge pull request #48970 from Ch3LL/back_48962
 - 3ce1b8a3c9 Update the elif block to only be true for versions below Debian 9.
 - e6cea5e3c7 Merge pull request #48968 from rallytime/man-pages
 - 64fe3be41a Update man pages for 2017.7.8 release

- * 10fd4661ff Merge pull request [#48978](#) from gtmanfred/2017.7
 - 6108363f82 clean up gemfile
- * 5b2423e527 Merge pull request [#48959](#) from rallytime/flaky-tests
 - aaf986d728 Mark one grains test as flaky & convert to pytest notation
 - e7e5abcf48 Mark 2 matcher tests as flaky
- * 79994ecab4 Merge pull request [#48962](#) from garethgreenaway/1022_test_service_disable_debian_part_deux
 - 9e71551b36 Update the elif block to only be true for versions below Debian 9.
- * 1a1bda00cb Merge pull request [#48960](#) from dwoz/block_replace_tests
 - 94ac2b4fc7 Multiple block replace test fixes
- * 93b862f350 Merge pull request [#48957](#) from whyte wolf/beacons_log_doc_change
 - a77fd16869 Update salt.beacons.log to reflect that re module is used for matching.
- * 0245cffb07 Merge pull request [#48955](#) from terminalmage/service-systemd
 - 23f87bd536 Don't load service.py if minion is running a non-sysvinit init system
- * 848d583438 Merge pull request [#48950](#) from KaiSforza/kitchenfix-2017.7
 - 5242cb143a Added a quote to kitchen Jenkinsfiles
- * 928d688d65 Merge pull request [#48943](#) from rallytime/flaky-tests
 - 668da57ab9 Mark some shell and runner integration tests as flaky
- * cd42510d3a Merge pull request [#48940](#) from rallytime/bp-48852
 - fa4ef92e79 Record all the artifacts from the build
- * 43649a68be Merge pull request [#48935](#) from garethgreenaway/1045_test_pkg_015_installed_held_centos
 - 0bb10107b6 Merge branch '2017.7' into 1045_test_pkg_015_installed_held_centos
 - 24d5e6a22f Fixing the test_pkg_015_installed_held test to be able to successfully run on CentOS
- * 2421e2a570 Merge pull request [#47100](#) from gtmanfred/ssh
 - 5b443af7ae add key-deploy test
 - a131c9beeb Allow for not being prompted to supply a password to deploy keys to a minion with salt-ssh
- * d541bd6446 Merge pull request [#48891](#) from damon-atkins/2017.7_win_pkg.list_pkgs_not_found
 - a4af1dbfb1 Fix win_pkg issues introduced Jan 2018. If DisplayVersion does not exist it should return version as "Not Found"
- * 5f6a56f5dc Merge pull request [#48896](#) from rallytime/bp-48730
 - 57aa204c9d Merge branch '2017.7' into bp-48730
 - 4995922584 Forgot variable in signature
 - 0503bc18b6 Fix batch install using pkgng
- * 0c64bba865 Merge pull request [#48933](#) from garethgreenaway/1022_debian_8_failing_service-test

- 280d1d2ad2 Fixing failing test, integration.modules.test_service.ServiceModuleTest.test_service_disable_does on Debian 8 and higher.
- * 0c3d2c6a09 Merge pull request #48922 from rallytime/cache-doc-error
 - 8ca89df7e8 Update backticks on job_cache docs
- * 8d1fc4f8e5 Merge pull request #48866 from Ch3LL/cmd_win_tests
 - 905da13653 Merge branch '2017.7' into cmd_win_tests
- * 57d58e7541 Merge pull request #48920 from rallytime/bp-48904-2017.7
 - a55f92954a No rehashing in parallel
 - 3be11e06fe Add docs for new escape kwarg
 - 391bb8a411 use a specific path for just the cmd._run call
 - 62c66ba489 make sure we lower the check on shell
 - 9312a993a5 Add cmd module integration tests for windows and fix space in path issue
- **ISSUE #48123:** (c-wicklein) file.directory with recurse fails when it encounters a broken symbolic link (refs: #48985)
- **PR #48985:** (garethgreenaway) [2018.3] Fix to salt/modules/file.py @ 2018-08-09 15:03:09 UTC
 - 3325b7d4c0 Merge pull request #48985 from garethgreenaway/48123_file_directory_recurse_fails_broken_symlink
 - 10c4eca206 Merge branch '2018.3' into 48123_file_directory_recurse_fails_broken_symlink
 - a404cc030f Fixing the issue when using the file.directory state with recurse if the directory contains a broken symbolic link. This fix adds an additional conditional, is_link, before running lsattr since lsattr does not work on symlinks and causes issues when that symlink is broken.
- **ISSUE #47695:** (AmbicaY) Continuous error in the proxy minion logs (refs: #49019)
- **PR #49019:** (garethgreenaway) [2018.3] Fix to scheduler when global enabled key is present @ 2018-08-09 13:06:26 UTC
 - d353c02a8c Merge pull request #49019 from garethgreenaway/47695_fixing_scheduler_bug_when_enabled_is_present
 - aff1b8f6d4 Lint.
 - 8935c08141 Fixing a bug that occurs if the "enabled" key is present in the scheduler items dictionary. Adding a test to ensure scheduler runs as expected when that key is present.
- **PR #49023:** (The-Loeki) Salt SSH appends IdentityFile=agent-forwarding @ 2018-08-09 12:55:59 UTC
 - a56bc7ffb9 Merge pull request #49023 from The-Loeki/patch-1
 - 8b53571c70 Salt SSH appends IdentityFile=agent-forwarding
- **PR #48981:** (Ch3LL) Add warning to mac runas docs about escaping characters @ 2018-08-08 19:43:43 UTC
 - 4590494b50 Merge pull request #48981 from Ch3LL/mac_runas_quote
 - 8269b55b84 remove unnecessary spaces in cmdmod.py docs
 - 757daf7d7e add runas macosx warning in 2018.3.3 release notes
 - 4e9e985b14 Add warning to mac runas docs about escaping characters
- **PR #49004:** (rallytime) Port #48999 to 2018.3 @ 2018-08-08 15:32:46 UTC
 - **PR #48999:** (rallytime) Update expected return value in boto test (refs: #49004, #49003)
 - b87bf905c2 Merge pull request #49004 from rallytime/boto-test-2018.3

- 9f0b9a1073 Update expected return value in boto test
- **PR #48987:** (twangboy) Fix issue with win_iis.create_cert_binding @ 2018-08-08 13:29:06 UTC
 - 630f61e625 Merge pull request #48987 from twangboy/fix_48786
 - 86d0836f90 Fix issue with iterating over None
- **ISSUE #48777:** (jonasgit) file.recurse fails on file contents encoding not utf-8 (refs: #48934)
- **PR #48934:** (terminalmage) Properly handle latin-1 encoding in file diffs @ 2018-08-07 21:02:24 UTC
 - ab1a713bc3 Merge pull request #48934 from terminalmage/issue48777
 - 52c64e4d51 Fix to_unicode test
 - e2d19f40b6 Only try latin-1 from get_diff instead of by default
 - d39fa889f3 Add stringutils.get_diff to mocks
 - 5b191c9120 Fix incorrect use of __salt__ when __utils__ is needed
 - 53ba10ad5f Skip pylint false-positives
 - f14f4dae22 Add unit test for latin-1 fallback, multi-encoding
 - 906644a80f PY3 scoping fix
 - 726dd4331f Add integration test for latin-1 file diffs
 - 2dd1f31d23 Use BASE_FILES instead of redundant STATE_DIR
 - 612ffb5fe8 Use new get_diff helper in file module
 - c632265802 Make to_unicode/to_str/to_bytes helpers attempt latin-1
 - 2a0cb49b01 Add get_diff to salt.utils.stringutils
- **ISSUE #47766:** (zerthimon) salt-cloud: openstack driver: crash on instance creation (refs: #48956)
- **PR #48956:** (gtmanfred) if booted from volume, use string from image @ 2018-08-07 16:39:45 UTC
 - bad995462c Merge pull request #48956 from gtmanfred/openstack
 - 4cb1636c4b if booted from volume, use string from image
- **ISSUE #48306:** (davidscholberg) Documentation update for custom returners used for master job cache (refs: #48319)
- **PR #48319:** (gtmanfred) don't break older returners right now @ 2018-08-06 13:19:43 UTC
 - 71f587edd7 Merge pull request #48319 from gtmanfred/jid
 - 084e7f0ef4 Merge branch '2018.3' into jid
 - 60661b4cd0 document minions required on save_load
 - a8c243071d document passing in minions
 - d49381c0b6 don't break save_load backwards compat
 - cfcacf953a don't break older returners right now
- **PR #48941:** (rallytime) Back-port #48912 to 2018.3 @ 2018-08-06 13:09:38 UTC
 - **PR #48912:** (maxim-sermin) make jboss7.py compatible with 2018.3.0 and later (refs: #48941)
 - 1623e53ef4 Merge pull request #48941 from rallytime/bp-48912
 - 3f55b2f89e make jboss7.py compatible with 2018.3.0 and later

- **PR #48897:** (rallytime) Back-port #48863 to 2018.3 @ 2018-08-05 19:15:51 UTC
 - **PR #48863:** (admd) Decode file contents for python2 as well (refs: #48897)
 - 070af9d925 Merge pull request #48897 from rallytime/bp-48863
 - 0ee1940232 Merge branch '2018.3' into bp-48863
 - f40b966d99 decode file contents for python2 as well
- **PR #48928:** (Ch3LL) fix test_runas integration test for macosx @ 2018-08-05 14:24:13 UTC
 - abd7f1312d Merge pull request #48928 from Ch3LL/mac_runas
 - 3d6455dbcd remove unnecessary comment in setup
 - 8e30db0217 move destructivetest to testname
 - 708dec8740 add destructivetest to setup and teardown for runas test
 - c0730ff968 fix test_runas integration test for macosx
- **PR #48899:** (Ch3LL) remove base_top_file file in teardown and add sleep @ 2018-08-05 14:23:42 UTC
 - dbd300ff70 Merge pull request #48899 from Ch3LL/unit_state
 - 0272cadff8 Merge branch '2018.3' into unit_state
 - 5896c7fc36 remove base_top_file file in teardown and add sleep
- **PR #48898:** (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-08-05 14:23:19 UTC
 - ffa1fcc682 Merge pull request #48898 from rallytime/merge-2018.3
 - 1f093cef4a Merge branch '2018.3' into merge-2018.3
 - b3a5aa49d7 Merge branch '2017.7' into '2018.3'
 - * e79ccb35b1 Merge pull request #48876 from Vaelatern/make-network-learning-optional
 - a4905b0e5d Make IP_LEARNING optional
 - * f8bfab4f9f Merge pull request #48890 from Ch3LL/cmd_test
 - acda4ed9ab add sleep in test_cmd integration test
 - * 52722f6ded Merge pull request #48885 from rallytime/flaky-tests-shadow
 - da871a2d57 Mark shadow module integration test as flaky
 - * bf0895656e Merge pull request #48884 from rallytime/flaky-tests-matchers
 - 38d9eae537 Merge branch '2017.7' into flaky-tests-matchers
 - * a567666938 Merge pull request #48868 from terminalmage/fix-loader-race
 - 5f1169b9a2 Fix race when SIGTERM/SIGINT received while lazyloading a module
 - * 0ca0b6f2f2 Merge pull request #48883 from terminalmage/salt-jenkins-1023
 - c61f75cb50 Fix failing git worktree tests
 - 3660dff13c Separate compound matcher tests into individual tests
 - * a84f5155a1 Merge pull request #48869 from Ch3LL/mac_shell_tests
 - 3734b1ec89 Catch socket.error exception in testprogram
 - * 7f56b8bf44 Merge pull request #48867 from rallytime/skip-tornado-test
 - 7320aa9104 Skip unreliable tornado test.

- **PR #48893:** (Ch3LL) handle when ca_certs is None in utils.http @ 2018-08-03 20:30:48 UTC
 - 848e26ed0b Merge pull request #48893 from Ch3LL/http_tests
 - 16d251f7ff Merge branch '2018.3' into http_tests
 - 5674d4db2a handle when ca_certs is None in utils.http
- **PR #48903:** (Vaelatern) Wrap ElementTree.tostring to make strs, not bytes @ 2018-08-03 19:12:34 UTC
 - **PR #48877:** (Vaelatern) Wrap ElementTree.tostring to make strs, not bytes (refs: #48903)
 - f1adf56017 Merge pull request #48903 from Vaelatern/improve-salt-cloud-python3-virt
 - c45447fe0b Wrap ElementTree.tostring to make strs, not bytes
- **PR #48900:** (Ch3LL) skip getpwnam check on mac in unit test_cmdmod @ 2018-08-03 16:38:51 UTC
 - d23471262d Merge pull request #48900 from Ch3LL/cmd_unit
 - b82dd708be skip getpwnam check on mac in unit test_cmdmod
- **PR #48921:** (rallytime) Back-port #48904 to 2018.3 @ 2018-08-03 15:17:15 UTC
 - **PR #48904:** (KaiSforza) No rehashing in parallel (refs: #48921, #48920)
 - d622a49b58 Merge pull request #48921 from rallytime/bp-48904
 - b504625f61 No rehashing in parallel
- **PR #48877:** (Vaelatern) Wrap ElementTree.tostring to make strs, not bytes (refs: #48903) @ 2018-08-02 19:28:56 UTC
 - 1e150923aa Merge pull request #48877 from Vaelatern/improve-salt-cloud-libvirt-python3-libvirt
 - fb7885315c Wrap ElementTree.tostring to make strs, not bytes
- **PR #48824:** (rallytime) Bump deprecation in win_servermanager state to Neon @ 2018-08-02 18:01:34 UTC
 - 1fb7d9431b Merge pull request #48824 from rallytime/win_servermanager_deprecations
 - 6ef5412528 Bump deprecation in win_servermanager state to Neon
- **ISSUE #37512:** (ChristianBeer) What's the precedence if multiple master configurations are specified? (refs: #48888)
- **PR #48888:** (terminalmage) Explicitly document the configuration override priority @ 2018-08-02 16:57:18 UTC
 - ec8e07e8ce Merge pull request #48888 from terminalmage/issue37512
 - 7dce7cde14 Explicitly document the configuration override priority
- **PR #48871:** (dwoz) Remove unicode key pairs from environ after test @ 2018-08-01 22:33:41 UTC
 - d4bb3a0963 Merge pull request #48871 from dwoz/test_cleanup
 - f2e15e7f1d Do not re-define tearDown
 - 4f8a191a69 Remove unicode key pairs from environ after test
- **PR #48843:** (isbm) Prevent u'something' to appear in help info. @ 2018-08-01 20:38:58 UTC
 - bec79e83a3 Merge pull request #48843 from isbm/isbm-log-level-names-fix-2
 - a63686180d Merge branch '2018.3' into isbm-log-level-names-fix-2
 - 783c96ac72 Prevent u'something' to appear in help info.
- **PR #48855:** (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-08-01 17:44:59 UTC
 - a8376b537a Merge pull request #48855 from rallytime/merge-2018.3

- 44998c208e Lint: Fix undefined logger variable
- 92c9317a25 Update old utils paths to use new paths
- 15bfba7143 Merge branch '2017.7' into '2018.3'
 - * 05f2d65de3 Merge pull request #48853 from rallytime/bp-48850
 - 3c33ee554a Skip tests in integration.shell.test_master
 - * 8a1285239a Merge pull request #48426 from garethgreen-away/46689_fixing_pkg_held_when_package_is_installed
 - 9b0f5dd212 Fixing indentation, removing some unnecessary conditionals.
 - 727964ab55 One last cleanup.
 - 11cb86e6eb General cleanup in pkg state, reducing duplicate code. Fixing the requires_salt_modules decorator, sys.doc was returning too much information for the event to handle. This change specifically calls sys.doc with the module name.
 - 16fb6ae635 Make sure pkg.hold and pkg.unhold are available before running the test.
 - 998651102d Fixing a situation when a package is already installed via salt or manually and a state attempts to set that package to be held. Previously the holding/unholding logic was only being run against packages that were being installed. This change moves the holding logic outside and runs it against all desired packages. Adding a new test to test holding logic.
 - * c8e69431ff Merge pull request #47734 from OrlandoArcapix/Issue47689-pip-state-performance
 - 662bd1f780 Merge branch '2017.7' into Issue47689-pip-state-performance
 - 66936b4f41 Changed string comparison in pip test to match new confirmation string - ref PR #47734.
 - bb5939d6ef Merge branch '2017.7' into Issue47689-pip-state-performance
 - d6a49ae41c Merge branch '2017.7' into Issue47689-pip-state-performance
 - d4083fc9d1 Merge branch 'Issue47689-pip-state-performance' of github.com:OrlandoArcapix/salt into Issue47689-pip-state-performance
 - 779b5fa785 Merge branch '2017.7' into Issue47689-pip-state-performance
 - f3653349ab Removed whitespaces at end of added comments lines
 - db11f2ff4b Merge branch '2017.7' into Issue47689-pip-state-performance
 - eac0178de2 Ref: #47689 - document additional kwarg passed to pip._check_if_installed function
 - 0d19803106 Merge branch '2017.7' into Issue47689-pip-state-performance
 - d3678bf2f3 #47689 fix lint errors
 - 4fec8f6bcc #47698 improve run-speed of pip package state checks by only loading the current package list once when checking multiple packages
 - * 83a5b3cc47 Merge pull request #48844 from AVeenstra/fix-python3-incompatibility
 - f238779a62 Merge branch '2017.7' into fix-python3-incompatibility
 - 6b1805afc6 Fixed Python 3 incompatibility in methods in nilrt_ip and debian_ip.
 - * 136ff6735a Merge pull request #48662 from slaws/fix-retention-schedule-48637
 - 3c8f5f5b3d pylint fix

- 5539eff39e Excluding relative dirs in state.file.retention_schedule
- * 1fc04f281b Merge pull request #48840 from gtmanfred/docs
 - 8d2d268c4a fix links in pkg doc.
- * 0a19f845ea Merge pull request #48834 from gtmanfred/slsutil
 - f9441d2bef read output of stringio if it is readable
- * 2e00939a6e Merge pull request #48788 from Ch3LL/timezone_windows
 - de95a6a215 add unused import to timezone test file
 - 22e424859e add unused import to import
 - 0840fc3117 disable pylint import error
 - f09d1a2c7e Add timzeon windows integration tests and fix get_zone
- ISSUE #48659: (dstoliker) file.grep with glob (*) in path produces file not found error (refs: #48830)
- PR #48830: (garethgreenaway) [2018.3] Fixes to file.grep @ 2018-07-31 21:30:04 UTC
 - e23ba01cd2 Merge pull request #48830 from garethgreenaway/48659_file_grep_glob_fix
 - 0791b0a03c FileGrepTestCase tests back to 2018.3
 - 2e01c55e7e Fixing a bug that prevents specifying wildcards for filenames.
- PR #48814: (isbm) dmidecode race conditions check @ 2018-07-31 20:48:29 UTC
 - 9fda70b3d0 Merge pull request #48814 from isbm/isbm-2018.3-smbios-bugfix
 - 5f1141dc05 Merge branch '2018.3' into isbm-2018.3-smbios-bugfix
 - b00ee5feef Update clean clause
 - b1b2e9c222 Remove multiple returns and combine logic to just one clause
 - fd77f760ee Rephrase explanatory comment
 - 1031e06443 Remove unnecessary code
 - c379b7e4ed Get rid of global variable
- PR #48804: (Ch3LL) Use brew path from which cmd in mac_brew module @ 2018-07-31 20:24:33 UTC
 - 3d16a63ff2 Merge pull request #48804 from Ch3LL/mac_brew
 - e818c752b3 Merge branch '2018.3' into mac_brew
 - 41e3d17f29 Use brew path from which cmd in mac_brew module
- PR #48836: (dwoz) Fix unicode directory listing on py2 @ 2018-07-31 20:22:53 UTC
 - 950c1014aa Merge pull request #48836 from dwoz/unicode_names_py2
 - 47e158b9f0 Optomize if statement
 - 9b462394b2 Fix unicode directory listing on py2
- PR #48847: (terminalmage) Update file.blockreplace docs to reflect changed functionality @ 2018-07-31 18:11:30 UTC
 - baf8c5784a Merge pull request #48847 from terminalmage/issue48695
 - e2bdf7fb92 Update file.blockreplace docs to reflect changed functionality
- PR #48587: (twangboy) Fix lgpo issue on Py3 @ 2018-07-31 18:05:58 UTC

- 644a1f4ff8 Merge pull request #48587 from twangboy/fix_lgpo
- a42621c817 Write file in normal mode
- bfcbedeca3b Fix lgpo issue on Py3
- **PR #48796:** (Ch3LL) Remove fake su used in integration tests @ 2018-07-31 17:08:54 UTC
 - 2bacc23481 Merge pull request #48796 from Ch3LL/remove_su
 - d3b7f2cb18 Remove fake su used in integration tests
- **ISSUE #38310:** (ghost) Unable to checkout external pillar git repo using its git tag (refs: #48689)
- **PR #48689:** (linoplt) Fix ext_pillar remote checkout using tag (pygit2) @ 2018-07-31 16:15:58 UTC
 - 00d06bda76 Merge pull request #48689 from linoplt/fix_38310_pygit2_checkout_ext_pillar_remote_using_tag
 - eb4361dcc2 Merge branch '2018.3' into fix_38310_pygit2_checkout_ext_pillar_remote_using_tag
 - c20977e3bc Merge branch '2018.3' into fix_38310_pygit2_checkout_ext_pillar_remote_using_tag
 - b0157c215b Fix ext_pillar remote checkout using tag (pygit2)
- **PR #48838:** (sizgiyaev) Fixed: added additional return code 200 for succeeded vault api request @ 2018-07-31 16:14:22 UTC
 - 5e14e36195 Merge pull request #48838 from sizgiyaev/fix-vault-policy-state
 - 02d09c6281 Fixed: added additional return code 200 for succeeded api request
- **PR #48714:** (dwoz) Always transfer bytes from fileserver roots @ 2018-07-30 22:37:13 UTC
 - 69f81214d1 Merge pull request #48714 from dwoz/state_echo_fix
 - ce3ed43dab Always use unix line endings
 - d5e60090bc Merge pull request #2 from terminalmage/state_echo_fix
 - * 52fc1c955d Simplify file contents in roots fileserver test
 - * b6f73e8e57 Remove trailing whitespace on what should be a blank line
 - 95329acb1e Fileserver transfers bytes
 - aa34a80997 Always transfer bytes from fileserver roots
- **PR #48822:** (Ch3LL) Fix salt-ssh state.sls_id TypeError key must be a string @ 2018-07-30 20:29:29 UTC
 - 16ca4ec2eb Merge pull request #48822 from Ch3LL/ssh_2018_id
 - 01f6a15da0 Fix salt-ssh state.sls_id TypeError key must be a string
- **ISSUE #47999:** (arthurlogilab) Carbon returner failing when run through scheduler on log.trace (refs: #48757)
- **PR #48791:** (rallytime) Back-port #48757 to 2018.3 @ 2018-07-27 21:30:44 UTC
 - **PR #48757:** (kuetrzi) Update carbon_return.py (refs: #48791)
 - 488f6716d4 Merge pull request #48791 from rallytime/bp-48757
 - f440ebe91f Update carbon_return.py
- **PR #48799:** (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-07-27 21:30:13 UTC
 - fae29f4257 Merge pull request #48799 from rallytime/merge-2018.3
 - 487458ad4b Update old utils paths to use new utils paths
 - 436510796f Merge branch '2017.7' into '2018.3'

- * 8e61f3dce0 Merge pull request #48742 from frogunder/45014
 - f08058b043 Merge branch '45014' of <https://github.com/frogunder/salt> into 45014
 - 757fde70c6 Merge branch '2017.7' into 45014
 - 33c20c1ec0 fix tests
 - a7a914060d add windows integration tests for states.file
- * d74f47b340 Merge pull request #48795 from rallytime/fix-48417
 - 5123b17ffd Update linting docs to contain .testing.pylintrc use
- * bbea9ae936 Merge pull request #48789 from rallytime/bp-48783
 - 682a05bebe Threshold was wrong
 - d4ca0e3a97 test: except for OSError only
 - 4547231909 Only run lint checks against changed files
- * 41464d4b39 Merge pull request #48731 from zer0def/virt-runner-init-args
 - a1fa081ad0 Documentation to missing parameters in virt.init runner.
 - 365ebdf539 Fixed `enable_vnc` runner arg being passed into `seed_cmd` module arg in `virt.init`.
- * 169afea16a Merge pull request #48749 from Ch3LL/logo_docs
 - 73b1fc29f0 Update Saltstack Logo banner on docs.saltstack.com
- ISSUE #48020: (calvinhp) mine.get not returning data in a state.orchestrate sls (refs: #48765)
- PR #48765: (FedericoCeratto) [2018.3] Fix mine.get not returning data @ 2018-07-27 18:01:06 UTC
 - bd67d2a805 Merge pull request #48765 from FedericoCeratto/fix_mine.get_not_returning_data
 - 7183a6e0e8 Workaround for #48020
- PR #48747: (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-07-26 18:14:34 UTC
 - 6978ce5d1d Merge pull request #48747 from rallytime/merge-2018.3
 - 4122da40b5 Merge branch '2017.7' into '2018.3'
 - * 781c6a6c36 Merge pull request #48743 from rallytime/saltconf-ad-2017.7
 - 6df8fd8652 Update DOCBANNER with new SaltConf18 image
 - * ce4e22224e Merge pull request #48720 from Ch3LL/mac_file_path
 - 01d25fae19 Fix test_managed_source_hash_indifferent_case on macosx to correct tmp path
 - * 4b9f037d43 Merge pull request #48719 from Ch3LL/service_mac_state
 - f44a2fc349 Enable service if disabled before running state service tests
 - * b2431eab10 Merge pull request #48715 from rallytime/flaky-tests
 - 7332cce567 [2017.7] Mark some tornado tests as flaky
 - * 801eae3b8d Merge pull request #48672 from frogunder/45012
 - 0747f2e58a add service enabled test
- ISSUE #48676: (djneades) salt-ssh should not target wrong minion from roster file as a result of reverse-DNS lookups (refs: #48771)
- PR #48771: (gtmanfred) only do reverse dns lookup on ips for salt-ssh @ 2018-07-26 15:41:40 UTC

- 5ea43817ab Merge pull request #48771 from gtmanfred/2018.3
- 535fb8f8e7 only do reverse dns lookup on ips for salt-ssh
- **PR #48752:** (garethgreenaway) [2018.3] Fix when state file is integers @ 2018-07-25 15:03:02 UTC
 - f2ef2d3ef6 Merge pull request #48752 from garethgreenaway/fix_state_file_all_integers
 - 790801c67e Fixing a case where the state module would fail if the state file being passed was all integers. Added a new tests for this edge case.
- **ISSUE #46896:** (Poil) Proxy + file.managed => Comment: Failed to cache xxx invalid arguments to setopt (refs: #48754)
- **PR #48754:** (lomerio) send proxy/ca_cert parameters as strings (not unicode) to tornado httpclient @ 2018-07-25 14:55:42 UTC
 - 030c921914 Merge pull request #48754 from lomerio/fix-tornado-proxy
 - d33056704b pass proxy_user, proxy_password, proxy_host, and ca_certs through salt.utils.stringutils.to_str()
- **PR #48769:** (Ch3LL) Update Saltstack Logo banner on docs.saltstack.com @ 2018-07-25 14:47:19 UTC
 - 1eee4b136b Merge pull request #48769 from Ch3LL/update_doc_2018.3
 - 0cb4bac798 Update Saltstack Logo banner on docs.saltstack.com
- **PR #48760:** (dwoz) Multiple windows test fixes @ 2018-07-25 11:55:27 UTC
 - 19afa3b023 Merge pull request #48760 from dwoz/test_file_fixes
 - a89019e956 Multiple windows test fixes
- **PR #48753:** (dwoz) Finally fix prepend for real @ 2018-07-25 00:07:15 UTC
 - e6dace3959 Merge pull request #48753 from dwoz/fix_prepend
 - 0d1e8ab3f8 Merge branch '2018.3' into fix_prepend
- **PR #48756:** (dwoz) os.uname is not available on py2 windows @ 2018-07-24 23:38:32 UTC
 - 8aef6d9960 Merge pull request #48756 from dwoz/core_grains_fix
 - b7a37ecf11 os.uname is not available on py2 windows
- **ISSUE #48536:** (whytewolf) diskusage beacon does not recognize tmpfs disks in linux. (refs: #48718)
- **PR #48718:** (garethgreenaway) [2018.3] beacon diskusage fixes @ 2018-07-24 17:45:26 UTC
 - 062fe7cccf Merge pull request #48718 from garethgreenaway/48536_beacon_diskusage_fixes
 - 38a65e8fb3 Fixing test_diskusage_nomatch and test_diskusage_match_regex
 - 6ecca166ff Updating psutil.disk_partitions to pull in all mounts not just the physical ones. Check to see if the mount point from the configuration ends with a \$ (regular expression end of line) if not we add one in to ensure that a simple / does not end up matching all mount points. Updating tests accordingly.
- **PR #48711:** (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-07-24 17:38:58 UTC
 - e873621009 Merge pull request #48711 from rallytime/merge-2018.3
 - ea5c063237 Update old utils paths to use new paths
 - e740d3b208 Merge branch '2017.7' into '2018.3'
 - * 689c231d2b Merge pull request #48691 from Ch3LL/win_repo_pkg_test
 - 4b7d6d80c5 Remove unnecessary jinja in curl.sls file

- 2bedadfadb Add windows pkg module integration tests
- * 83e4bba916 Merge pull request #48635 from nbraud/acme
 - 3673bae9de modules/acme: explicitly ignore the *perms* return value
 - 1800a231e8 Fixup some schema expectations
 - 8c718cb417 acme: Make the private key mode configurable
 - 917dea6761 modules/acme: Use file.check_perms ret-morphing powers
 - d2241ceb2d module/acme: Do not exit early when the certificate already exists
 - 98af0db826 modules/acme: Set the private key filemode to 0640
- * 85991680c8 Merge pull request #48345 from twangboy/fix_48169
 - ead19725b6 Merge branch '2017.7' into fix_48169
 - 653fbc383 Fix some docs errata
 - 8898e5ff11 Add warn_until Fluorine
 - 707906ac15 Fix unit.state.test_powercfg
 - 32c5014eb6 Fix unit tests
 - 0d9c56e540 Add some more logging
 - b20453de9f Use minutes to set
 - 7dc7eb11c2 Fix documentation to denote seconds when setting
- * 96447ce541 Merge pull request #48656 from Ch3LL/windows_ip_mod
 - 90c3f568b1 Add windows ip module integration tests
- * 0c5fff3dc8 Merge pull request #48638 from twangboy/fix_vcredist
 - e30d17099d Use goto instead of if statement
 - e1042fa084 Remove vcredist for Py3
- * 1ebd96d909 Merge pull request #48664 from Ch3LL/srv_disable_mac
 - f1bfad387 move the disable call up in try block
 - f60d21bda4 reverse assertion order for service disable test
 - 3727d1b3b9 switch try/except to match 2018.3
 - fb953c2369 [2017.7] Fix service.disabled test for macosx
- * 3da3cf2f3f Merge pull request #48625 from Ch3LL/ssh_state
 - f590eb2b02 Update state.py
 - 9790ee3d0d Follow up to PR #48555
- * 33812f78f1 Merge pull request #48673 from Ch3LL/mac_port
 - 87dd85a220 Use different pub and ret ports for testprogram integration tests
- * 5f6a7c4d89 Merge pull request #48675 from Ch3LL/mac_disable
 - c78efab828 Fix mac service.disable tests
- * 93d2f51d2b Merge pull request #48658 from wyardley/wyardley-npm-json-output-2017
 - 7ff3c9c5ff Improve handling of npm json output (#43138)

- * 3e293b0513 Merge pull request [#48678](#) from OrlandoArcapix/fix-npm-dryrun-test
 - 851a404f6b Fix for issue [#48677](#) - return True when no changes are to be made with npm.bootstrap with test=true
- * 07a1f6520f Merge pull request [#48580](#) from rallytime/fix-46884
 - 736b382e91 Don't error on retcode 0 in libcrypto.OPENSsl_init_crypto call
- * 9874429741 Merge pull request [#48628](#) from terminalmage/testinfra
 - 5ace9f01ec Fix NameError in testinfra module
- * 0d4c80205f Merge pull request [#48651](#) from gtmanfred/pylint-2017.7
 - b6ee52f859 handle pyzmq for python3.4
- * 160ae29cf2 Merge pull request [#48647](#) from gtmanfred/pylint-2017.7
 - ff818c4ca2 disable checks on pylint
- * 47b1032efa Merge pull request [#48593](#) from pritambaral/fix/2017.7-importlib-pyc-loading-order
 - add7894dee loader: Fix suffix order when importlib is used
- * 9da7b2ec8d Merge pull request [#48630](#) from dubb-b/pipeline-updates
 - 8594a8dd05 Adding PY_COLORS=1 as PY_COLORS = 1 instead
 - 314b0e3599 Adding PY_COLORS=1 for python programs to use ANSI Colors
 - b705e8f7a5 Adding correct spacing to options section
 - 9d8a7e07db Adding options to Jenkins pipeline builds
- * a8ae2adf64 Merge pull request [#48633](#) from saltstack/revert-48610-2017.7
 - bab4a769d4 Revert "only run pylint on files that change"
- * 6e32bb7f74 Merge pull request [#48614](#) from rallytime/bp-48562
 - cb654bbf2c Add timeouts to all s3 queries
- * 1b6e6388f8 Merge pull request [#48588](#) from garethgreenaway/48415_event_send_multi_master
 - fab25af1a9 Adding some quick documentation about why we are setting ret=True following the channel.send.
 - bf78f4b188 If the channel send is successful and does not raise an exception, we set ret to True, in case a previous exception from a previous channel send to another master has sent it to False.
 - 8d1551c5fb When using Salt multi-master, if we encounter a salt master that has not accepted the minion key yet we should not exit right away, rather continue on and try the next salt master available in the list.
- * 24ffda49ba Merge pull request [#48610](#) from gtmanfred/2017.7
 - 779d1a3dcb only run pylint on files that change
- * 5391dd0a8d Merge pull request [#48584](#) from Ch3LL/mac_user_grp
 - 585ee9db90 Fix grp import for mac in test_user integration test
- * 61572b6780 Merge pull request [#48555](#) from Ch3LL/ssh_id
 - f69932f506 fix pylint
 - 70e36764ee Add more tests for salt-ssh state.sls_id

- dab80e805c Fix state.sls_id to run on ssh minion and not master
- * aa6dcf39e8 Merge pull request #48583 from Ch3LL/mac_flaky_tests
 - 4ba2299a87 import flaky decorator on mac tests
 - 811220b41e Add flaky decorator to mac_system and mac_timezone tests
- * 6973152057 Merge pull request #48534 from xetix/fix-zypper-latest_version
 - 9985f0b4c1 Lint: remove extra blank line
 - 5fbeat8a36 Merge branch '2017.7' into fix-zypper-latest_version
 - 56ac449271 Merge branch 'fix-zypper-latest_version' of <https://github.com/xetix/salt> into fix-zypper-latest_version
 - 44e87f5a0f Adding testcase for this fix.
 - b354c6863c Fix behaviour of function latest_version in zypper module when multiple packages are passed to function. Function now properly return dict with empty string as version if latest packages is already installed, and multiple packages are passed to function
 - db35d0c1e1 Adding testcase for this fix.
 - d2513757ed Fix behaviour of function latest_version in zypper module when multiple packages are passed to function. Function now properly return dict with empty string as version if latest packages is already installed, and multiple packages are passed to function
- * 10124034cb Merge pull request #48582 from dwoz/test_prepend_fix
 - f37571e0bd Merge branch '2017.7' into test_prepend_fix
- * 13f67335f3 Merge pull request #48564 from dwoz/test_prepend_fix
 - 136ddf5f54 Finally fix prepend for real
 - 66b25e65bf Fix failing prepend test
- * b8ce27729f Merge pull request #48558 from dwoz/test_file_fix
 - c858bf477f Remove which mock to get the test passing
- * a15c65202d Merge pull request #48552 from KaiSforza/jenkins-junit-2017
 - 72b1830974 Set up junit in jenkins
- * f73108026e Merge pull request #48550 from gtmanfred/2017.7
 - d5c603d9b6 add posargs to tox pylint
- * 113b0426f8 Merge pull request #48535 from asnell/asnell-patch-2
 - d328f6e43d Update manage_file helptext
- **PR #48744: (rallytime)** [2018.3] Update DOCBANNER with new SaltConf18 image @ 2018-07-24 17:15:40 UTC
 - 6c7f1c549d Merge pull request #48744 from rallytime/saltconf-ad-2018.3
 - dbc1f8b772 Update DOCBANNER with new SaltConf18 image
- **PR #48726: (dwoz)** Skip test when syslog not available @ 2018-07-24 16:12:44 UTC
 - 04ab17a4d6 Merge pull request #48726 from dwoz/syslogtest
 - 00f04cfd59 Skip test when syslog not available
- **PR #48727: (dwoz)** Windows compatible cp test @ 2018-07-24 14:41:34 UTC
 - af837424aa Merge pull request #48727 from dwoz/file_cp_test_fix

- 6e7824266b Windows compatible cp test
- **ISSUE #40004:** (te-af-github) svn changes report (refs: #47510)
- **ISSUE #21025:** (RobertFach) svn.export reports invalid change data (2014.7.x) (refs: #47510)
- **PR #48710:** (rallytime) Back-port #47510 to 2018.3 @ 2018-07-23 21:11:18 UTC
 - **PR #47510:** (daa) Fix svn export invalid changes data (refs: #48710)
 - 04125b077d Merge pull request #48710 from rallytime/bp-47510
 - ebcd3b1c6b fixed test for svn.export
 - e79f4aa5cc put name under "new" key in changes dictionary to be in line with svn.latest
 - 163f99089c made svn.export changes data dictionary, fixes #21025, #40004
 - * 3a941055c1 Use `salt.utils.platform.is_windows`
 - * 33e48f7ad7 Finally fix prepend for real
- **PR #48699:** (terminalmage) Add missing release notes mention of file.blockreplace changes @ 2018-07-23 13:34:32 UTC
 - e1dd10be70 Merge pull request #48699 from terminalmage/issue48695
 - 7ad832c901 Add missing release notes mention of file.blockreplace changes
- **PR #48700:** (dwoz) Call `sync_modules` to fix Windows test case @ 2018-07-22 22:23:48 UTC
 - ab44a05fe4 Merge pull request #48700 from dwoz/ext_mod_test
 - d731e6bf8e Call `sync_all` to fix Windows test case
- **PR #48653:** (terminalmage) `docker_container.running`: Fix regression in test mode @ 2018-07-20 19:15:47 UTC
 - 6a494205f2 Merge pull request #48653 from terminalmage/docker-unboundlocal
 - b0440871a0 Merge branch '2018.3' into docker-unboundlocal
 - 9515dd17ff `docker_container.running`: Fix regression in test mode
- **ISSUE #47059:** (OrlandoArcapix) Some states incorrectly return None instead of an empty dict when there are no changes (refs: #48685)
- **ISSUE #46985:** (OrlandoArcapix) `grafana4_user.present` and `grafana4_org.present` states not working in 2018.3.0 (refs: #48685)
- **PR #48685:** (bbinet) Use empty dict for 'changes' instead of None @ 2018-07-20 17:12:43 UTC
 - **PR #48671:** (bbinet) Few fixes to the grafana module and states (refs: #48685)
 - 266c6f250e Merge pull request #48685 from bbinet/none-changes
 - 842eb3da24 Use empty dict for 'changes' instead of None
- **PR #48670:** (bbinet) Add the "traverse" jinja filter @ 2018-07-20 16:36:21 UTC
 - 5a6f7a085c Merge pull request #48670 from bbinet/traverse
 - 32b6d22cf2 Fix RST syntax issue in doc
 - 37a41226d5 Add the "traverse" jinja filter
- **PR #48594:** (pritambaral) Backport 48418 @ 2018-07-20 14:57:19 UTC
 - **PR #48418:** (pritambaral) Fix multi-sls `salt.state` orchestration in masterless systems (refs: #48594)
 - ff11763fd3 Merge pull request #48594 from pritambaral/bp-48418

- adcee28b84 Fix multi-sls *salt.state* orchestration in masterless systems
- **ISSUE #48184:** (mmulqueen) Invalid DMI prevents salt-minion from running (refs: #48440)
- **PR #48440:** (mmulqueen) Make core.py tolerant of invalid chars in DMI data @ 2018-07-20 14:48:07 UTC
 - **PR #48216:** (Ch3LL) Fix UnicodeDecodeError when reading file to determine virtual grain (refs: #48440)
 - 111908f519 Merge pull request #48440 from mmulqueen/patch-1
 - 5bbbdc74cd Make core.py tolerant of invalid chars in DMI data
- **PR #48663:** (Ch3LL) [2018.3] Fix service.disabled test for macosx @ 2018-07-20 14:32:22 UTC
 - 4e77b242f2 Merge pull request #48663 from Ch3LL/srv_disable_mac_2018
 - bddfbd75d2 reverse assertion order for service disable test
 - 2bfaf7fe89 Fix service.disabled test for macosx
- **PR #48304:** (Ch3LL) Fix macosx grains when swapusage returns comma @ 2018-07-20 14:30:59 UTC
 - dfc1582475 Merge pull request #48304 from Ch3LL/swap_mac
 - 5d6135e1e2 Fix macosx grains when swapusage returns comma
- **PR #48671:** (bbinet) Few fixes to the grafana module and states (refs: #48685) @ 2018-07-20 13:58:02 UTC
 - 9d7eabd24e Merge pull request #48671 from bbinet/grafana-fixes
 - 3c5083f550 Add support for dry run (test=True) of grafana states
 - 7e7ae8ace7 influxdb: fix conflicts in function arg names with client_args
 - 73a24b774a Ignore readOnly option when diffing
 - 81f0cf8a3f Add missing profile argument to grafana4.get_user_data
- **PR #48650:** (gtmanfred) [2018.3] handle pyzmq for python3.4 @ 2018-07-18 17:34:37 UTC
 - e828167114 Merge pull request #48650 from gtmanfred/pylint-2018.3
 - 3c1882077e handle pyzmq for python3.4
- **PR #48648:** (gtmanfred) [2018.3] disable checks on pylint @ 2018-07-18 16:21:37 UTC
 - a6f8acf4dc Merge pull request #48648 from gtmanfred/pylint-2018.3
 - 7c34c2965e disable checks on pylint
- **PR #48634:** (dwoz) Sync modules for state tests @ 2018-07-17 20:33:06 UTC
 - 01c9c59a97 Merge pull request #48634 from dwoz/state-module-test-fix
 - 9dfd2ae392 Sync modules for state tests
- **PR #48585:** (astorath) replaced meta tag @ 2018-07-16 14:11:02 UTC
 - fb7bfc757c Merge pull request #48585 from astorath/fix-vault-meta
 - 42fd3d5f67 replaced meta tag
- **PR #48579:** (Ch3LL) Fix python2 syslog returner expecting string bytes not unicode @ 2018-07-13 19:50:16 UTC
 - 4b16537a29 Merge pull request #48579 from Ch3LL/fix_syslog
 - d8288a0ffc add unicode type for syslog test for tag
 - 17e69382d5 Fix python2 syslog returner expecting string bytes not unicode
- **ISSUE #48542:** (calvinhp) Missing state git.cloned is listed in the docs as new for 2018.3.2 (refs: #48547)

- **PR #48547:** (gtmanfred) fix git.cloned doc versionadded @ 2018-07-13 18:46:25 UTC
 - 3549ce408d Merge pull request #48547 from gtmanfred/git.cloned
 - b596a945ea Merge branch '2018.3' into git.cloned
 - e41f4922a0 fix git.cloned doc versionadded
- **ISSUE #48110:** (whytewolf) file.line on windows not treating unix line endings correctly. (refs: #48503)
- **PR #48503:** (rallytime) Back-port #46291 to 2018.3 @ 2018-07-13 17:14:47 UTC
 - **PR #48380:** (twangboy) Detect and preserve line endings (refs: #48503)
 - **PR #46291:** (t0fik) Line mixed line ends (refs: #48503)
 - **PR #45498:** (t0fik) Added support for mixed line ending in file (refs: #46291)
 - ee257a1f91 Merge pull request #48503 from rallytime/bp-46291
 - 8bc71688ea Remove /sr.* pattern from test
 - 5e2e2a63fa Update file unit tests to handle "writelines" change
 - 5d38aa8b33 Update file.line to use writelines instead of joining
 - d0b6e82ecb Add 'name' as the passed in filepath for test_line_insert_ensure_before_first_line test
 - d8920cb61f Update test_line_insert_ensure_before_first_line to use new mock_open methodologies
 - 475f075d8e Handle list of lines instead of strings in file.line func
 - b9ddd53b04 Added comments
 - f3517a1852 List comprehension replaced
 - adfa3aed0d Empty match on delete or replace not causing IndexError exception
 - 5169b1f7fd Comprehensions converting to unicode replaced by salt.utils.data.decode_list
 - d3e8679e05 Removed regex compilation
 - f29815b49b Fixed file permissions
 - d2af81e9c7 Make integration green. Added test for mode ensure insert before first line
 - 9b7df671a5 file.line function refactored
 - 3af551ebe1 /sr.* pattern should raise exception
 - 935a9b9d56 test_line_insert_end fixed
 - 7d6e3ad2e2 Make tests green
 - 75a7e368a6 Setting end of line
 - 489e381100 Added _set_line_eol and _get_eol functions
 - aacbb8c0e2 line function refactored to work on list
 - de668166f9 _regex_to_static refactored to work on lists
 - 464eef6fe1 _get_line_indent renamed to _set_line_indent
- **ISSUE #48507:** (emersonveenstra) mysql_grants.present escape option incorrectly reports failure (refs: #48561)
- **PR #48561:** (garethgreenaway) [2018.3] fixes to grants in mysql module @ 2018-07-13 14:24:58 UTC
 - 2d923f2943 Merge pull request #48561 from garethgreenaway/48507_mysql_grants_incorrect_failure

- 14c59da72c Following a successful grant application in the MySQL module, the new grant and the desired grant are mismatched because the new grant from Mysql included hashmarks. This change adds the replace which is included for other items such as database name and username.
- **PR #48529:** (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-07-12 17:59:35 UTC
 - 5b5a930449 Merge pull request #48529 from rallytime/merge-2018.3
 - f9b8c4b257 Use () when using with_tempfile decorator in tests
 - d3190ca0c0 Update old utils paths to new utils paths
 - 29b05ffdd1 Merge branch '2017.7' into '2018.3'
 - * 0c0c05c2bc Merge pull request #48527 from saltstack/revert-48525-2017.7
 - 18d06c1a93 Revert "add kazoo for testing zookeeper."
 - * 05bad3e71c Merge pull request #48526 from twangboy/rollback_certifi-win32
 - 361b3cdc2f Rollback python-certifi-win32
 - * db066effe4 Merge pull request #48521 from Martin819/2017.7
 - d5d01f6698 Fix for GlusterFS 4.0 and above
 - * ed0bd2bbec Merge pull request #48525 from gtmanfred/2017.7
 - d7a6bff2b2 add kazoo for testing zookeeper.
 - * ad5a959ab9 Merge pull request #48388 from garethgreenaway/48277_2017_7_file_roots_wrong
 - 6f11da35a7 Fixing a few things in the new test.
 - cf747b14ec Fixing lint issue
 - 16d36c79c8 When pillar items are compiled a new render is instantiated but the file_roots is the pillar_roots. This change forces the __opts__['file_roots'] to be set to what is set in actual_file_roots for all renderers once compile_pillar has finished. Adding a test when this situation is run via a orchestration runner.
 - * 38df812257 Merge pull request #48512 from gtmanfred/npm
 - 9ba0f6b3a0 pin pm and grunt packages for npm tests
 - * 04ba31147f Merge pull request #48513 from rallytime/merge-2017.7
 - a466a4880f Merge branch '2017.7.7' into '2017.7'
 - cfd21ed22c Merge pull request #48172 from rallytime/2017.7.7-release-notes
 - a0ad794132 Update release notes for 2017.7.7
 - 8af4452134 Merge pull request #48157 from gtmanfred/2017.7.7
 - d8209e8a40 always listen when gathering job info
 - b98c52ee51 Merge pull request #48140 from rallytime/man-pages-2017.7.7
 - 8893bf0d4c Update man pages for 2017.7.7
 - baa0363336 Merge pull request #48136 from gtmanfred/2017.7.7
 - fce1c31146 bootstrap kitchen branch tests with 2017.7.6
 - b0ba08f4d9 Merge pull request #48134 from rallytime/release-notes-2017.7.7
 - 217005b8f1 Add missing v for tag reference
 - d53569d1e3 Add release notes file for 2017.7.7

- 084de927fe Merge pull request #48098 from rallytime/bp-48075-2017.7.7
 - e4e62e8b3a Ensure that the shared list of jids is passed when creating the Minion. Fixes an issue when minions are pointed at multiple syndics.
- * f0352ea95a Merge pull request #48514 from gtmanfred/2017.7
 - 739bf92599 upgrade dependencies for pytest tests
- * 5372b60137 Merge pull request #48491 from grokrecursion/group-fix-v2
 - 1556b37221 fixed pylint errors
 - f6d9177dab fixed indentation for pep8
 - b9556bf923 v2 try of gid converted to integer
- * 16d3daab3c Merge pull request #48375 from Ch3LL/file_copy
 - d16a790775 Add mode to _makedirs call in file.copy
 - 2cbcb4fd26 Add user and group to mkdirs cmd in file.copy
- * d38951b1b3 Merge pull request #48490 from KaiSforza/cifikes
 - 9fe7199af5 Mark failed if anything is found
 - 6749a6bf19 Stop archiving the docs
- **PR #48553:** (KaiSforza) Set up junit in jenkins @ 2018-07-12 16:24:01 UTC
 - a95b8efd8a Merge pull request #48553 from KaiSforza/jenkins-junit-2018
 - 412ffcc956 Set up junit in jenkins
- **PR #48551:** (gtmanfred) add posargs to tox pylint @ 2018-07-12 14:35:25 UTC
 - c4aed02740 Merge pull request #48551 from gtmanfred/2018.3
 - a6a286af28 add posargs to tox pylint
- **PR #48533:** (terminalmage) Fix UnicodeDecodeError in sh beacon @ 2018-07-12 13:38:43 UTC
 - 260da0d545 Merge pull request #48533 from terminalmage/sh-beacon
 - 7ac5ac06c9 Fix UnicodeDecodeError in sh beacon
- **ISSUE #48519:** (Lutseslav) Mysql module alter_db quotation missing (refs: #48520)
- **PR #48520:** (Lutseslav) Add quotes to schema name in ALTER DATABASE. @ 2018-07-11 19:15:08 UTC
 - 8761ac2589 Merge pull request #48520 from Lutseslav/fix-alter-databases-with-special-symbols
 - d088b00ff2 Merge branch '2018.3' into fix-alter-databases-with-special-symbols
 - 59629e9757 Merge branch '2018.3' into fix-alter-databases-with-special-symbols
 - da8336712e Add quotes to schema name in ALTER DATABASE.
- **PR #48528:** (gtmanfred) add 2018.3 requirements for tox/pytest tests @ 2018-07-11 18:13:40 UTC
 - ad4f7efafd Merge pull request #48528 from gtmanfred/2018.3
 - 221559358a add 2018.3 requirements for tox/pytest tests
- **ISSUE #48336:** (JuanManuelVizcainoAbad) file.directory (refs: #48399, #48398)
- **PR #48508:** (rallytime) [2018.3] Fix 2 bugs found in the file.check_perms function @ 2018-07-11 15:03:32 UTC
 - **PR #48399:** (garethgreenaway) [2017.7] fixes to module/file.py (refs: #48508)

- PR #48398: (garethgreenaway) [2018.3] fixes to module/file.py (refs: #48508)
- 70e5fcb8a5 Merge pull request #48508 from rallytime/fix-file-bug
- 0747eb5476 Move comment string join and test/changes check to bottom of file.check_perms
- aefa1dbe21 Fix up bad merge - remove extra section of "mode" changes
- ISSUE #48277: (dvenckus) init.sls with included states fails with more than one, 'Template was specified incorrectly: False' (refs: #48388, #48389)
- ISSUE #46986: (github-abcde) opts file_roots gets overwritten with pillar_roots in orchestration run (refs: #48388, #48389)
- PR #48389: (garethgreenaway) [2018.3] reset file_roots for renderers after compile_pillar @ 2018-07-11 13:13:33 UTC
 - 5a0b274bf1 Merge pull request #48389 from garethgreenaway/48277_2018_3_file_roots_wrong
 - 4b492fa633 Removing unused start_time variable from test_orchestration_with_pillar_dot_items test.
 - 30c5855d20 Fixing a few things in the new test.
 - 36b7253418 Fixing lint issue
 - ab6abfad31 When pillar items are compiled a new render is instantiated but the file_roots is the pillar_roots. This change forces the __opts__['file_roots'] to be set to what is set in actual_file_roots for all renderers once compile_pillar has finished. Adding a test when this situation is run via a orchestration runner.
- ISSUE #48342: (jeffclay) UnicodeDecodeError when using cache mysql (refs: #48495)
- PR #48495: (garethgreenaway) [2018.3] Fix to mysql cache module @ 2018-07-10 12:54:10 UTC
 - f9fd1a889a Merge pull request #48495 from garethgreenaway/48342_mysql_cache_unicode
 - 0029f19033 Ensure the query_string is a bytestring, otherwise an attempt will be made to convert the msgpack data to unicode which will result in a UnicodeDecodeError error.
- PR #48487: (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-07-09 18:38:00 UTC
 - fc3eeef6b3 Merge pull request #48487 from rallytime/merge-2018.3
 - 54341d1a8d Update old utils paths to use new utils paths
 - 68aabff0cf Merge branch '2017.7' into '2018.3'
 - 22cd4206c4 Merge pull request #48472 from gtmanfred/2017.7
 - * c7a3a7d8bd update jenkins tests to use tox for lint
 - * 44aaac1d33 use tox to run pylint
 - 27ea8f35ea Merge pull request #48476 from twangboy/fix_dependencies
 - * b0087d425c Add license info
 - * 935f9b560c Fix dependencies
 - acf42864aa Merge pull request #48399 from garethgreenaway/48336_2017_7_ensure_chmod_setuid_with_chown
 - * 8efd33320f Normalize the mode before we compare it.
 - * f894f0ecb8 Setting the mode with setuid or setgid bits in addition to setting the owner and group will force the setuid & setgid bits to reset. This change ensures that we set the mode after setting the owner & group.
 - 6166ff6b78 Merge pull request #48471 from gtmanfred/2017.7

- * 392ab4e51f Add some configurations to tox
- 6234d9b15d Merge pull request #48433 from discogestalt/fix-redis.hmset
 - * 65817ac74d Use clean_kwargs method instead
 - * f7fa7f57c6 Found another issue with redismod.hmset
 - * 5624865f86 Fix issue with redismod.hmset method
- aacee0fe2c Merge pull request #48428 from terminalmage/fix-jobs.lookup_jid
 - * 6509aa9089 Fix outputter detection in jobs.lookup_jid runner
- a7e52f0de2 Merge pull request #48429 from rallytime/bp-46824
 - * 8b4486248d Added ignore_retcode to mock unit tests
 - * f8beab71dd Regression to ignore retcodes on crontab calls
- 4576ef20bc Merge pull request #48432 from dwoz/file-prepend-again
 - * 349a2b279e Prepend test needs file.touch method
- **PR #48481:** (terminalmage) Improve the slack engine docs @ 2018-07-09 13:41:15 UTC
 - 4d4d2eacce Merge pull request #48481 from terminalmage/slack-engine
 - 56e8a1eb93 Improve the slack engine docs
 - dde9c0640d Add information on creating bot users
 - 513c6af975 Fix inaccurate docs
- **PR #48348:** (dwoz) Fix multiple git module tests @ 2018-07-06 20:35:58 UTC
 - 491b5b077c Merge pull request #48348 from dwoz/test_git
 - 5ca5e060b3 Merge branch '2018.3' into test_git
- **PR #48454:** (terminalmage) Improve error message when ext_pillar is incorrectly formatted @ 2018-07-06 18:03:44 UTC
 - dd6a6a97c5 Merge pull request #48454 from terminalmage/issue48107
 - 269dbab7f6 Improve error message when ext_pillar is incorrectly formatted
- **ISSUE #48336:** (JuanManuelVizcainoAbad) file.directory (refs: #48399, #48398)

 - a9dc758e73 Merge pull request #48398 from garethgreenaway/48336_ensure_chmodd_setuid_with_chown
 - 2454652914 Normalize the mode before we compare it.
 - 08ad5665de Fixing test to ensure it works under py3
 - 2b25d8c95b Setting the mode with setuid or setgid bits in addition to setting the owner and group will force the setuid & setgid bits to reset. This change ensures that we set the mode after setting the owner & group.
- **PR #48431:** (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-07-05 17:23:00 UTC
 - 2baa7f189f Merge pull request #48431 from rallytime/merge-2018.3
 - 3e59dda0b1 Merge branch '2017.7' into '2018.3'
 - * 422441505d Merge pull request #48422 from rallytime/fix-48230
 - a6abf85621 Allow file.managed to work with uppercase source_hash in test=true mode

- 4c691ac57a Add regression test for Issue #48230
- * 83e387c951 Merge pull request #48410 from dwoz/service_dead_test_fix
 - 5c0923448d Fix service dead test on windows
- * d3ba345da5 Merge pull request #48413 from twangboy/fix_47811
 - c5aad04140 handle unc paths
- * 827ef2aac4 Merge pull request #48416 from dwoz/service_integration_fix
 - c43f150dcd Fix service integration test (py3)
- * 10fe7d2b9b Merge pull request #48385 from Ch3LL/1update_version_doc_2017.7
 - 3cf335b0b9 Update release versions for the 2017.7 branch
- * f8a9a037e6 Merge pull request #48405 from Ch3LL/rm_inprog_2017.7
 - 03ed5167fa [2017.7] Remove In Progress Warning on 2017.7.7
- * 8ac867c168 Merge pull request #48409 from dwoz/test_prepend_fix
 - 9c7085b70f Fix file state prepend test
- * 10e93bff7f Merge pull request #48396 from dwoz/symlink_test_fix
 - d3456d31e6 Fix file.symlink state test for windows
- **PR #48310:** (mtorromeo) Backport ini_manage fixes to 2018.3 @ 2018-07-05 16:27:19 UTC
 - 432cbbb5ee Merge pull request #48310 from mtorromeo/ini-manage-backports
 - 88f80fdf77 Fixed pylint useless-super-delegation warning.
 - e20f4cadd4 Uniformed reports between ini.options_absent and ini.options_present
 - 2c3ae0b6c9 pylint cosmetics.
 - 0c0d10d18f Fixes dry run false positive when option value is a number.
 - 70144bccbb Fixes dry run in ini_manage + Fixes related bug - when working with options which are not in section. + Fixes related tests + Fixes pylint warnings
- **ISSUE #48402:** (elsmorian) Running SaltStack master with no init system repeatedly logs "could not determine init system" (refs: #48441)
- **PR #48441:** (terminalmage) Switch init system log message to debug @ 2018-07-05 14:43:25 UTC
 - 84fd3d2784 Merge pull request #48441 from terminalmage/issue48402
 - d758995763 Switch init system log message to debug
- **PR #48386:** (Ch3LL) Update release versions for the 2018.3 branch @ 2018-07-03 13:37:32 UTC
 - 871c9e3b98 Merge pull request #48386 from Ch3LL/1update_version_doc_2018.3
 - 84a1994110 Update release versions for the 2018.3 branch
- **PR #48404:** (Ch3LL) [2018.3] Remove In Progress Warning on 2017.7.7 @ 2018-07-03 13:33:18 UTC
 - ddb83ad4ce Merge pull request #48404 from Ch3LL/rm_inprog_2018.3
 - ef288f2a74 [2018.3] Remove In Progress Warning on 2017.7.7
- **PR #48339:** (terminalmage) Backport tojson filter from #48309 to 2018.3 @ 2018-07-02 17:52:53 UTC
 - **PR #48309:** (terminalmage) Drop support for Python 2 unicode string literals in YAML renderer (refs: #48339)

- 5b38019ca0 Merge pull request #48339 from terminalmage/backport-tojson-filter
- 4433bec891 Add release notes for tojson jinja filter
- ac36998801 Tweak docs to reflect backported filter
- c636b18cf0 Add unit test for tojson filter
- e34e39f0e2 Document filter deprecation
- b9a4f288b2 Deprecate json_encode_dict and json_encode_list jinja filters
- 3896e3468c Use upstream tojson filter, if present
- 1499c6abcf Implement tojson jinja filter for those using Jinja < 2.9
- **ISSUE #48274:** (ipmb) s3.get signature failure with + in the object name (refs: #48328)
- **PR #48328:** (garethgreenaway) [2018.3] Fixes to utils/s3.py @ 2018-07-02 13:22:31 UTC
 - 222c1d65db Merge pull request #48328 from garethgreenaway/48274_s3_get_signature_fail
 - 22cafc8334 fixing lint issue
 - 131486203e Need to pass the URL path through quote to ensure any special characters are being quoted properly. if we include local_file for a PUT, read the file into data before passing it along to requests.requests.
- **PR #48358:** (Ch3LL) Fix corrupt public key with m2crypto python3 @ 2018-07-02 13:10:32 UTC
 - d3c658bdcf Merge pull request #48358 from Ch3LL/m2crypto_fix
 - 8fdd34d430 m2crypto open file in rb mode for pub key
 - a964db4663 Fix corrupt public key with m2crypto python3
- **ISSUE #48367:** (asenci) salt.proxy.fx2: dictionary changed size during iteration (refs: #48368)
- **ISSUE #46765:** (roskens) pkg.mod_repo fails with a python error when removing a dictionary key (refs: #46776)
- **PR #48384:** (rallytime) Back-port #48368 to 2018.3 @ 2018-07-01 04:19:10 UTC
 - **PR #48368:** (asenci) Fix issue #48367 using the same approach as PR #46776 (refs: #48384)
 - **PR #46776:** (gtmanfred) fix shrinking list in for loop bug (refs: #48368)
 - 2fd63d66dc Merge pull request #48384 from rallytime/bp-48368
 - 430c462f34 Fix issue #48367 using the same approach as PR #46776
- **PR #48394:** (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-07-01 04:13:03 UTC
 - 3b53e2d206 Merge pull request #48394 from rallytime/merge-2018.3
 - 047f5b5f39 Update old utils paths to new utils paths
 - c4fd2a0930 Merge branch '2017.7' into '2018.3'
 - 7e25f26837 Merge pull request #48362 from twangboy/fix_48276
 - * 77629f640a Fix module unit tests
 - * b5ca560b73 Fix lint error
 - * 210e280ecf Use explicit parameter names
 - * 776db98a5c Handle missing registry entries
 - 80222b6b7c Merge pull request #48383 from rallytime/bp-48379
 - * 9fc7815594 Clean up the workspaces at the end for every job

- aa68aa774a Merge pull request #48382 from rallytime/bp-48346
 - * 6a70ba222e Use the right ssh key to destroy kitchen
- 9519f640e7 Merge pull request #48381 from rallytime/bp-48330
 - * 6857bedcc2 Add warnings plugin to replace violations
- 14db0aa35d Merge pull request #48363 from dubb-b/2017.7
 - * c0b962e28d Changing debug to info for logging
- 5b29cd326f Merge pull request #48352 from Ch3LL/wheel_doc
 - * 89ada68165 Add missing key to accept_dict function in wheel docs
- 02cf19ee3b Merge pull request #48329 from rallytime/codeowners-roster-files
 - * 5e56615e00 Trigger review requests for team-ssh for roster files
- 53cf1794be Merge pull request #48349 from ralex/fix-manjaro-service-behaviour
 - * 6cafce547e Disable the *service* module on Manjaro since it is using systemd
- 89dfcf3a4e Merge pull request #48324 from Ch3LL/update_version_doc_2017.7
 - * 47845ba810 Update release versions for the 2017.7 branch
- ece4c30aac Merge pull request #48331 from rallytime/bp-48215
 - * 9d6ba3e247 Set jobs to pending when they come in
 - * 727d2b4ffe Use proper creds with githubNotify
 - * d355861c5c Test using different credentials
- ab05e00d8c Merge pull request #48332 from rallytime/bp-48321
 - * d72af6ab4e Jenkins needs the / to get the directory
- 21ed5b97ce Merge pull request #48295 from rallytime/bp-48193
 - * 352fe33fd6 Separate set_result() to a new line apart from Future() call
 - * c0180ff33d Properly configure syndic in test case
 - * d0a98534a9 Properly wait on returns in saltnado
- 9aa4687ab9 Merge pull request #48117 from twangboy/fix_48026
 - * dd37f8fbc2 Disable services that are set to manual
- caf630487c Merge pull request #48207 from rallytime/bp-48189
 - * e9d09e0375 Use old is_windows utils path on 2017.7
 - * b965d6c9b3 If pip binary is passed to bin_env, use that pip binary
- 06a927b2aa Merge pull request #48293 from rallytime/bp-47453
 - * e96ab6778e dont reset system locale when running rabbitmqctl commands
- **ISSUE #45939:** ([andygabby](#)) `user.present` with `hash_password: True` detects change on every `state.apply/highstate` (refs: [#47147](#))
- **PR #47147:** ([eliasp](#)) `states.user.present`: Make usage of `hash_password` idempotent @ 2018-06-30 13:29:27 UTC
 - 9b364e25cf Merge pull request #47147 from eliasp/2018.3-issue-45939-shadow-hash-salt
 - dd3be1d76e Add warning log message when using MD5 for hashing shadow passwords

- 5451ab6b7a states.user.present: Make usage of *hash_password* idempotent
- **PR #48297:** (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-06-30 12:57:35 UTC
 - 89857ea8b9 Merge pull request #48297 from rallytime/merge-2018.3
 - 9498618418 Use *saltenv* opts instead of *environment*
 - 1c8bd35f28 Update old utils paths to use new utils paths
 - c7bb8a50b0 Merge branch '2017.7' into '2018.3'
 - * 95ef006e00 Merge pull request #48219 from zer0def/lxc-bootstrap-fixes
 - c77058560b Merge branch '2017.7' into lxc-bootstrap-fixes
 - d63cf3f072 Fixes another case of legacy configuration key usage warning getting in the way of changing container's state.
 - * 3327181507 Merge pull request #48234 from dwoz/thin_dir
 - 70c603451b Fix py2 thin dir issues
 - * 83d7d286c4 Merge pull request #48080 from lusche/2017.7
 - 917dc985fc #47984 remove the line completely
 - ba12ee947b Merge branch '2017.7' of <https://github.com/saltstack/salt> into 2017.7

 - 052ae83c4b Update versionchanged
 - 8b1bd0eda2 Update test to reflect changed argument name
 - 5e75936198 Change 2018.3.2 to 2018.3.3
 - c53ad603fc Rename sync -> sync_mods per review suggestion
 - e4d67c5fd8 Update docs to include references to new "sync" argument
 - cb8e6f9fb8 Remove redundant mocking
 - bc3ad795e9 Add test for sync argument to state.sls
 - f81ccd1fdd Add sync option to state.apply/state.sls
 - 8289b07e24 Fix documentation on when custom types are synced
 - * 0bae927048 Merge pull request #48249 from rallytime/2017.7.7-release-notes-update
 - 36032c8ee7 Update release notes for 2017.7.7
 - * 8e06471817 Merge pull request #48242 from asnell/asnell-patch-1
 - f66bf60073 Add sample list data via command line pillar
- **PR #48364:** (dubb-b) Changing debug to info for logging @ 2018-06-28 20:48:24 UTC
 - c5746deb5f Merge pull request #48364 from dubb-b/2018.3

- d8260b6628 Changing debug to info for logging
- **PR #48354:** (rallytime) [2018.3] Merge forward from 2018.3.2 to 2018.3 @ 2018-06-28 20:26:31 UTC
 - 0202493b60 Merge pull request #48354 from rallytime/merge-2018.3.2-to-2018.3
 - fface7cc74 Merge branch '2018.3.2' into '2018.3'
- **PR #48347:** (dwoz) Fixes fileserver maintenance process on Windows @ 2018-06-28 13:17:42 UTC
 - bbabbbf76b Merge pull request #48347 from dwoz/sigfix
 - ccdff5029f Remove unneeded attribute
 - * e8362adf71 fopen does not support encoding
 - * 487161ba8f Fix file encoding on windows
 - * fc760685ee Fix multiple git module tests
- **PR #47975:** (terminalmage) Add a new git.cloned state @ 2018-06-27 20:53:42 UTC
 - 67303d7901 Merge pull request #47975 from terminalmage/issue47937
 - 34b24bb7fa Merge branch '2018.3' into issue47937
- **PR #48323:** (Ch3LL) Update release versions for the 2018.3 branch @ 2018-06-27 13:44:58 UTC
 - 5b8d55428e Merge pull request #48323 from Ch3LL/update_version_doc_2018.3
 - b4548aca56 Update release versions for the 2018.3 branch
- **PR #48326:** (Ch3LL) Remove In Progress Warning for 2018.3.2 Release @ 2018-06-27 13:43:16 UTC
 - 7cf403e313 Merge pull request #48326 from Ch3LL/rn_remove_in_prog
 - dfce1ad5ed Remove In Progress Warning for 2018.3.2 Release
- **PR #48301:** (terminalmage) Fix typos in new mock_open docs @ 2018-06-25 19:08:14 UTC
 - 60ffad5126 Merge pull request #48301 from terminalmage/docs
 - 6c33345f05 Fix typos in new mock_open docs
- **PR #48292:** (rallytime) Back-port #48288 to 2018.3 @ 2018-06-25 19:07:11 UTC
 - **PR #48288:** (rmarchei) fix lsattr.get in file.check_perms (refs: #48292)
 - 4760f87153 Merge pull request #48292 from rallytime/bp-48288
 - d6620573bb fix lsattr.get in file.check_perms
- **PR #48296:** (rallytime) Back-port #48258 to 2018.3 @ 2018-06-25 19:04:41 UTC
 - **PR #48258:** (nullify005) preserve tuples for ldap modification operations (refs: #48296)
 - 27207fc510 Merge pull request #48296 from rallytime/bp-48258
 - 8b7f36f264 preserve tuples for ldap modification operations
- **ISSUE #48204:** (zerthimon) State mysql_user.present Exception with mysql 8.0.11 (refs: #48275, #48228)
- **PR #48275:** (garethgreenaway) [2018.3] Follow up fix to MySQL user for password management @ 2018-06-25 13:23:35 UTC
 - d5265da945 Merge pull request #48275 from garethgreenaway/mysql_fix_followup
 - bb024b9115 Removing unnecessary code.
 - 8b542e1745 With MySQL versions 8.0.11 and beyond, since the PASSWORD function has been removed we need to hash the password string before comparing when checking if the user exists.

- **PR #48286:** ([terminalmage](#)) Don't load the grains again when printing them via salt-call -g @ 2018-06-25 13:19:18 UTC
 - 1f306525a7 Merge pull request #48286 from terminalmage/caller-print_grains
 - caa62c051f Don't load the grains again when printing them via salt-call -g
- **PR #48279:** ([terminalmage](#)) Add documentation/further enhancements to rewritten mock_open @ 2018-06-25 13:12:30 UTC
 - 27a0e95174 Merge pull request #48279 from terminalmage/mock_open-docs
 - 65c575ae9c Fix spelling error
 - 830a624ce8 Ignore IOError when tearing down filehandles not opened for reading
 - 3b6356f4b0 Raise TypeError when trying to read from filehandles not opened for reading
 - 09aae0c82b Add more examples and information on strict string types
 - 8c069d105d Add some mock_open docs
 - a13d1fe1a0 Update mock_open usage to reflect read_data type enforcement
 - 374a8ce31f Add more mock_open tests
 - 0f06adb008 Improve code-reuse in mock_open tests
 - 0e8c83bac6 2 MockFH enhancements:
- **ISSUE #48141:** ([zerthimon](#)) salt-api request causes exception (refs: #48236)
- **PR #48236:** ([garethgreenaway](#)) [2018.3] Fix to cmd_batch @ 2018-06-25 12:58:49 UTC
 - 6ee856631b Merge pull request #48236 from garethgreenaway/48141_salt_api_local_batch
 - aea4f7ae14 Fixing test_local_batch
 - ce3e1eaf2c Removing sort.
 - 83accf3b20 Fixing test_local_batch
 - ff14b99752 Fixing a typo in the comment.
 - 85cef126e0 Adding note about why salt.utils.versions is being re-imported. Adding a test for local_batch.
 - 808805fd3d Fixing cmd_batch to work correctly when called via salt-api.
- **ISSUE #48204:** ([zerthimon](#)) State mysql_user.present Exception with mysql 8.0.11 (refs: #48275, #48228)
- **PR #48228:** ([garethgreenaway](#)) [2018.3] Fixes to mysql module @ 2018-06-22 15:44:00 UTC
 - 09b036c26e Merge pull request #48228 from garethgreenaway/48204_mysql_user_password_exception
 - 1b2ffcef1d Updating the mysql module to not use the PASSWORD when MySQL is version 8.0.11 or higher, where the PASSWORD function has been removed.
- **PR #48252:** ([rallytime](#)) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-06-22 15:13:42 UTC
 - 67cb5563ef Merge pull request #48252 from rallytime/merge-2018.3
 - 84ec655c24 Merge branch '2017.7' into '2018.3'
 - * a172f9de84 Merge pull request #48226 from terminalmage/fix-alias-docstring
 - fb237272f5 Don't display "None" in SaltInvocationError when Salt installed using -OO
 - 90c90f5d5c Fix docstring construction in alias_function when Salt installed using -OO
 - * c6a0207cae Merge pull request #48227 from Ch3LL/fix_win_tests

- 236773e3e9 Skip new sha256 files on repo.saltstack.com/windows
- * 6929423528 Merge pull request #48131 from bowmanjd-lms/fix-apk-python3
 - f5d2835299 Merge branch '2017.7' into fix-apk-python3
 - 022f9cba50 Fix py3-incompatible dict.keys()[x] call in apk.py
- * 868c17377f Merge pull request #48185 from DSRCorporation/bugs/47901_future_done_exception
 - 5f63316311 Merge branch '2017.7' into bugs/47901_future_done_exception
 - 9f2dbf94cb Don't call .exception() on future unless it's done.
- * 80a3e37c2e Merge pull request #48192 from twangboy/fix_pip_version_2017.7
 - 59ae2cc5fc Use --disable-pip-version-check for build_env_#.ps1
- * 12e2b8882a Merge pull request #48201 from zer0def/lxc-bootstrap-fixes
 - 6f6d3d40d4 Take lxcpath into account when bootstrapping new containers. Version comparison fixes.
- * e079fce38d Merge pull request #48190 from terminalmage/fix-vfstab-test
 - 8d70d14362 Fix mount.vfstab unit test
- * c8b9cec986 Merge pull request #48115 from KaiSforza/pr-lint-2017
 - 494727ab39 Add docs, kitchen tests
 - 317023bb20 Move .jenkins to .ci for future
 - dedc313cee Make it parallel so we don't fail right away
 - cd13426726 Add a .jenkins file to run pylint
- * fc1752b721 Merge pull request #48174 from terminalmage/docker-update-mine
 - 9af09e0127 Mock config.get due to changes in _refresh_mine_cache
 - c5802ad465 Fix the version number in versionadded
 - d403ae58d7 Add unit test for docker.update_mine
 - 44c275698a Actually it's more than just add/remove that updates the mine
 - 0cb6996b07 Add release notes mention of docker.update_mine config option
 - de05097b20 Add docs for new config option
 - 04c55a9178 Add note in mine.get_docker docstring about new config item
 - 4e456255c0 Allow mine update to be disabled using new config option
- **ISSUE #48029:** (vinian) syndic failed to auth when restart salt-master on syndic master (refs: #48034)
- **PR #48034:** (vinian) restart salt-syndic when salt-master restart @ 2018-06-21 20:12:37 UTC
 - 9f0bd90c5b Merge pull request #48034 from vinian/restart-salt-syndic-when-salt-master-restart
 - f7652d8c8b restart salt-syndic when salt-master restart
- **PR #48250:** (rallytime) Update release notes for 2018.3.2 @ 2018-06-21 18:30:21 UTC
 - ab2ba942ad Merge pull request #48250 from rallytime/2018.3.2-release-notes-update
 - 19c104b6cd Update release notes for 2018.3.2
- **PR #48166:** (terminalmage) Add trace logging and optimize file handling in grains.core.os_data @ 2018-06-21 18:02:33 UTC

- 51928ff050 Merge pull request #48166 from terminalmage/salt-jenkins-1000
- b73df0ab00 Change call_args to call.args to reflect changes to MockFH
- 0c2cc07704 remove unused import
- b8c0a55cf3 Add test for tell()
- 1cbe89fee Implement tell() for filehandle iteration
- efb8f49d42 Add tests for read_data being a list, and containing unicode or bytestrings
- 38df912fa6 Operate on a copy of the read_data
- 71eeae1240 Update mount module unit tests to reflect changes in mock_open
- 16c414e120 Update nfs3 module tests to reflect changes in mock_open
- b7eab25d6c Update grub_legacy module tests to reflect changes in mock_open
- cc002b8fd7 Update new network unit test to reflect changes in mock_open
- a8f11594f1 Update new core grains tests to reflect changes in mock_open
- 84ce18d956 Update crypt unit tests to reflect changes in mock_open
- 67c036dc2d Add MockCall to tests.support.mock to track calls
- 2556a1e13d Remove unused import
- fd9d700157 Add additional docs to MockOpen class
- 6acb4c83ec Update newly added test to reflect renaming of handles attribute
- 77e5288d42 Update fibre_channel grains tests to reflect changes in mock_open
- ed40371a06 Update timezone module tests to reflect changes in mock_open
- fc0aa9934f Track call_count in MockOpen
- 2598d2453a Update snapper module tests to reflect changes in mock_open
- 51b3faa7b4 Add support for passing multiple strings for a given match in read_data
- 55487c175c Fix mock_open call to use new multifile syntax
- 7f516ef73a Update puppet module tests to reflect changes in mock_open
- 33a97c4ecc Update bttmp beacon tests to reflect changes in mock_open
- bc027cfa94 Update wttmp beacon tests to reflect changes in mock_open
- f5823252bb Track call args/kwargs in MockFH
- 335591ca90 Mock the seek function in MockFH
- 7eb4b1ae1c Update cp.push test to reflect changes to mock_open
- 2be19cfa89 Report correct location when reading using explicit size and EOF reached
- 5ec95ba5ca On second thought, actually implement tell()
- 19022eb9e5 Add tell mock to MockFH
- 4b5a393445 Update junos tests to reflect changes to mock_open
- 278a222b09 Update dnstutil tests to reflect changes to mock_open
- 4e67955572 Replace the rest of mock_open with a class
- 75307a47c5 Update linux_sysctl tests to reflect changes to mock_open

- 05c68fd5d9 Use explicit config file and fix remaining mac_sysctl tests
- 836fde9a30 Allow Python 2 to accept an exception as read_data
- 543385fd02 Add writelines_calls property
- 42fa842456 Make read funcs mocks so their calls can be tracked
- 675f03c58f Update mac_sysctl tests to reflect new mock_open behavior
- 3d2c41d395 Update file module tests to reflect new mock_open behavior
- b9200dbc3e add a dict containing the handles to the mock_open return object
- 852ba4b982 Add mocked close() function to MockFH
- f6b46bc608 Remove unused import
- 20f60a769b Add blank lines to appease linter
- 48d7cfa6d3 Add multifile tests for mock_open
- 1861e9b944 mock_open: rewrite multi-file support
- 5e6b539770 Use function for empty string
- cb2620ad2b Update core grains tests to reflect EAFFP changes
- 5d09b178d7 Separate mocked file contents per filename, not glob
- 875102f538 Modify mock_open to support multiple file paths
- 096ace74df Move lsb_release parsing into its own function
- 6a0828beed Add unit tests for mock_open
- 8ba6cadac7 More mock_open bugfixes
- 329dea218e Add a bunch of logging for linux os_data core grains
- 2c64b270df Add timestamp to the minion's log_fmt_console
- **PR #48216:** (Ch3LL) Fix UnicodeDecodeError when reading file to determine virtual grain (refs: #48440) @ 2018-06-20 16:53:41 UTC
 - 6072d1ef9c Merge pull request #48216 from Ch3LL/grains_unicode
 - c4334f3f14 Fix UnicodeDecodeError when reading file to determine virtual grain
- **PR #48212:** (Ch3LL) Fix python3 ec2 salt-cloud TypeError when installing salt (refs: #49041) @ 2018-06-20 16:00:21 UTC
 - 77a75ebdcf Merge pull request #48212 from Ch3LL/py3_ec2
 - b0d75f459a Fix python3 ec2 salt-cloud TypeError when installing salt
- **ISSUE #47984:** (jeduardo) x509 module/state writing wrong certificate serial number to CRL (refs: #47986, #48080)
- **PR #48209:** (rallytime) Back-port #47986 to 2018.3 @ 2018-06-20 13:44:17 UTC
 - **PR #48080:** (lusche) Bugfix #47984 messed up cert serial (refs: #48209)
 - **PR #47986:** (jeduardo) Fix serial number writing into CRL files with the x509 module (refs: #48209)
 - de614d31f5 Merge pull request #48209 from rallytime/bp-47986
 - f4b3bd5d2c Changed salt.utils.fopen to salt.utils.files.fopen
 - 8686872909 Fixed typos, removed repeated unit tests, and applied code fixes suggested by linter.

- 382df48a72 Removed useless new line
- 5aa99d14c4 Added unit tests for CRL creation and certificate revocation with CRL
- cc12844922 Fixed a problem where the OpenSSL bindings refuse to consume unicode strings.
- 399cf08860 Stopped converting the certificate hexadecimal serial number to an integer in order to avoid breaking CRLs.
- **PR #48210:** (rallytime) [2018.3] Merge forward from 2018.3.1 to 2018.3 @ 2018-06-20 13:43:19 UTC
 - 1f88df6e89 Merge pull request #48210 from rallytime/merge-2018.3
 - dae65da256 Merge branch '2018.3.1' into '2018.3'
- **PR #48186:** (rallytime) Add autodoc module for saltcheck.py @ 2018-06-19 19:03:55 UTC
 - 5b4897f050 Merge pull request #48186 from rallytime/saltcheck-docs
 - 314fc2d889 Clean up some doc references
 - da7603d879 Add autodoc module for saltcheck.py
- **PR #48191:** (twangboy) Use the `--disable-pip-version-check` option @ 2018-06-19 18:13:44 UTC
 - 7274a33c80 Merge pull request #48191 from twangboy/fix_pip_check
 - 5c00fce6bf Use the `--disable-pip-version-check` option
- **ISSUE #48122:** (pasmon) Salt minion 2017.7.6 disregards "bin_env" in pip state (refs: #48189)
- **PR #48189:** (gtmanfred) If pip binary is passed to bin_env, use that pip binary (refs: #48207) @ 2018-06-19 18:08:13 UTC
 - 96f79b0674 Merge pull request #48189 from gtmanfred/pip
 - 96c59f3d93 If pip binary is passed to bin_env, use that pip binary
- **PR #48165:** (terminalmage) Fix regression with top_file_merging_strategy=same @ 2018-06-19 18:03:07 UTC
 - 71e385501b Merge pull request #48165 from terminalmage/issue48144
 - 92ac2a2d6a Remove unused imports
 - 15a44d5dd4 Remove redundant top file merging tests
 - 12100d9bd3 Add more top file merging tests
 - 0ed686cb3f Add unit test for show_top with "same" merging strategy
 - 35e5492fb7 Revert 7058f10 / 3df6fa7
- **ISSUE #46806:** (ezh) Lack of debug messages on authentication fail. (refs: #46807, #48179)
- **PR #48179:** (ezh) 2018.3 auth @ 2018-06-19 14:16:40 UTC
 - **PR #46807:** (ezh) Reduce initial authentication setup complexity (refs: #48179)
 - 2a8e1c6539 Merge pull request #48179 from ezh/2018.3-auth
 - 9ed2d2ec55 Fix integration.shell.test_key and integration.shell.test_runner
 - 26a6f79730 Fix integration tests test_list_acc_wrong_eauth, test_salt_run_with_wrong_eauth
 - b84c4321c4 Add more verbose debug messages for auth subsystem
- **PR #48188:** (gtmanfred) allow virtual aliases to be used for the driver name @ 2018-06-18 21:49:16 UTC
 - 0231008cf8 Merge pull request #48188 from gtmanfred/2018.3
 - 45249d3e10 allow virtual aliases to be used for the driver name

- **PR #48116:** (KaiSforza) Add jenkinsfiles to define tests in 2018 @ 2018-06-18 21:27:10 UTC
 - 0f95238dca Merge pull request #48116 from KaiSforza/pr-lint-2018
 - f158bed5bd Add docs, kitchen tests
 - 904a70c187 Move .jenkins to .ci for future
 - 365fa0e51f Make it parallel so we don't fail right away
 - e594979745 Add a .jenkins file to run pylint
- **ISSUE #48146:** (rmarchei) mysql_query.run: exception on 2018.3 (refs: #48164)
- **PR #48164:** (garethgreenaway) [2018.3] Fixes to mysql state @ 2018-06-18 13:10:20 UTC
 - 60c9490bdc Merge pull request #48164 from garethgreenaway/48146_mysql_output_to_file
 - a040643a82 Accounting for certain situations when the query result is not a string, but actually a dictionary.
- **ISSUE #48113:** (gaetanquentin) state file.line has error and erase file content completely, while with mode test=true it is ok (refs: #48156)
- **PR #48156:** (garethgreenaway) [2018.3] Unicode fixes for file.line @ 2018-06-17 19:34:08 UTC
 - 85ebcbd3f2 Merge pull request #48156 from garethgreenaway/48113_ensure_writing_strings_with_file_dot_line
 - 5a9ef0d1ae Unless we're using py2 and Windows, ensure we're writing out a string when using file.line.
- **PR #48161:** (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-06-17 19:33:29 UTC
 - 33400e72db Merge pull request #48161 from rallytime/merge-2018.3
 - 0733fa1b02 Update utils path for which function to new path
 - 398cc78224 Merge branch '2017.7' into '2018.3'
 - df2a156338 Merge pull request #48061 from garethgreenaway/port_47049_2017_7
 - * 7c472fed51 Fixing failing test_set_hwclock_aix test.
 - * ccb0acc958 Porting #47049 to 2017.7.
 - 5ec3cf2dd4 Merge pull request #48143 from Ch3LL/fix_long_job
 - * 48b5d2e9d3 Add timeout argument to run_salt for ShellCase
 - e1e566d1f8 Merge pull request #48135 from rallytime/release-notes-2017.7
 - * 7a97f157b3 Add missing v for tag reference
 - * 2f2b69ed37 Add "in progress" notation to 2017.7.7 release notes
 - * 06a1151a63 Add release notes file for 2017.7.7
 - * 885b2862ce Move 2017.7.7 release notes to 2017.7.8
 - ac9dabbfaa Merge pull request #48105 from rallytime/merge-2017.7
 - * cdb45874de Merge branch '2017.7.6' into '2017.7'
 - 16916d6bd2 Merge pull request #47880 from gtmanfred/2017.7.6
 - 987ae6358b quote python_version in requirements.txt
 - 27670168ea Merge pull request #47875 from rallytime/release-notes-dot-six
 - 58dee4c829 Remove sentence about the release being in progress
 - b3dcb7330e Remove "in progress" too

- 99e1df7823 Update 2017.7.6 release notes: remove "unreleased" text
- 1f0bada07c Merge pull request #47873 from gtmanfred/2017.7.6
- a1c1b5b5cf allow tornado 5.0 to be installed only for python2
- 2da56a69d9 Merge pull request #48101 from rallytime/update-doc-refs-2017.7
 - * 7ba6f5fb36 Update 2017.7.7 reference to 2017.7.8
- 5a0e3d46e7 Merge pull request #48091 from terminalmage/fix-file_roots-monkeypatching
 - * 6fe711ad76 Reverse monkeypatching after test_symlink_list finishes
- 053b019a8f Merge pull request #48088 from rallytime/update_version_doc_2017.7
 - * 1b8d1c936b Remove "in progress" info for 2017.7.6 release notes
 - * 9a0f4d190a Update release versions for the 2017.7 branch
- d6d2c5ee18 Merge pull request #48075 from garethgreenaway/48038_jobs_are_not_deduping_minion_side
 - * c537b3275b Ensure that the shared list of jids is passed when creating the Minion. Fixes an issue when minions are pointed at multiple syndics.
- aa33cc0b0c Merge pull request #48071 from terminalmage/gitfs-docs
 - * 24545204b3 Fix inaccurate gitfs_saltenv example in GitFS Walkthrough
- fb4ceacb88 Merge pull request #48053 from rallytime/bp-48040
 - * 265b22b194 states/github.py fix for incorrect positional argument
- f37dcaac6d Merge pull request #48024 from gtmanfred/2017.7
 - * 56b074ab27 allow specifying a different state to run on converge
 - * cc9c4b4d5a add pytest coverage and xml junits
- **ISSUE #48145:** (max-arnold) Failed to load ext_pillar saltclass: can only assign an iterable (refs: #48155)
- **PR #48155:** (max-arnold) Do not fail on empty saltclass classes (fix for #48145) @ 2018-06-15 20:21:28 UTC
 - 9aa9a83b10 Merge pull request #48155 from max-arnold/2018.3
 - 63ab02c648 Do not fail on empty saltclass classes declaration #48145
 - 3d4fcbe3aa Add test for issue #48145
- **PR #48104:** (twangboy) Fix *unit.modules.test_win_status* @ 2018-06-15 17:05:34 UTC
 - 152c09cc0c Merge pull request #48104 from twangboy/fix_test_win_status
 - 1ec3f436ee Fix test_error_logged_if_process_get_owner_fails
- **PR #48147:** (brejoc) Fix for sorting of multi-version packages @ 2018-06-15 17:03:18 UTC
 - 8cf03110d4 Merge pull request #48147 from brejoc/2018.3-multi-version-fix
 - 90ed25447d Switching to salt.utils.versions like linter suggested
 - ed09574073 Fix for sorting of multi-version packages (bsc#1097174 and bsc#1097413)
- **PR #47956:** (dmurphy18) Improved support for mount on AIX @ 2018-06-15 13:40:01 UTC
 - 2edc5f5442 Merge pull request #47956 from dmurphy18/aix_mount_support
 - f2a3e321db Improved support for mount on AIX
- **ISSUE #48012:** (Timandes) Found UnicodeDecodeError when trying to start Salt Master (refs: #48081)

- **PR #48081:** ([terminalmage](#)) Fix UnicodeDecodeError when parsing hosts file with non-ascii @ 2018-06-15 12:41:13 UTC
 - c05c176782 Merge pull request #48081 from terminalmage/issue48012
 - 8d2fb0bf25 Fix cp.push test
 - e230a7223f Fix definition of test data for wtmp/btmp beacon tests
 - 82874a8c10 Import six like we do everywhere else
 - 54f9a2ab54 Remove unused import
 - 767cc7e87f fix tabs
 - db19636f56 Get rid of additional newline append
 - 7427e192ba Fix more crappy mocking
 - 4eaa5789ce Fix crappy mocking
 - 248467edac Add regression test for `_generate_minion_id()`
 - 5e62d6d45f Fix UnicodeDecodeError when parsing hosts file with non-ascii
 - e6a4744f85 Use `errno` instead of hard-coding error 2
 - ff63f36932 Fixes / enhancements for `mock_open`
- **PR #48133:** ([rallytime](#)) Updates the 2018.3.2 and 2018.3.3 release notes files @ 2018-06-14 21:21:15 UTC
 - **PR #48129:** ([rallytime](#)) Add release notes for 2018.3.2 (refs: #48133)
 - 5d92e2763a Merge pull request #48133 from rallytime/release-notes-2018.3
 - afe1e91972 Add "in progress" notation to 2018.3.2 release notes
 - 3e4272ac09 Add release notes for 2018.3.2
 - 88c584cb0d Move 2018.3.2 release notes to 2018.3.3
- **PR #48103:** ([terminalmage](#)) Fix for `gitfs` base env being pinned to commit ID @ 2018-06-14 16:29:24 UTC
 - 0e3f846836 Merge pull request #48103 from terminalmage/gitfs-base-pinned-to-commit
 - 31ab2fe8de Fix for `gitfs` base env being pinned to commit ID
- **PR #48077:** ([twangboy](#)) Fix issue with `salt.utils.parsers` on Windows @ 2018-06-14 16:22:57 UTC
 - 4b6f1c7f75 Merge pull request #48077 from twangboy/fix_parsers
 - 0f7d7691a2 Call logger in each case
 - 0e99dd741c Fix logic for non-root
 - 2d2534a688 Fix parsers for Windows, fix tests
- **PR #48096:** ([twangboy](#)) Fix `unit.utils.test_which` on Windows @ 2018-06-14 13:15:14 UTC
 - 80332b32a7 Merge pull request #48096 from twangboy/fix_test_which
 - d26fc56f13 Use `os.sep` for paths
- **PR #48102:** ([rallytime](#)) [2018.3] Update 2018.3.2 references to 2018.3.3 @ 2018-06-14 13:14:26 UTC
 - 66b2200913 Merge pull request #48102 from rallytime/update-doc-refs-2018.3
 - 1c9bcce3d8 Update 2018.3.2 references to 2018.3.3
- **PR #48109:** ([rallytime](#)) Back-port #47851 to 2018.3 @ 2018-06-14 13:09:04 UTC

- PR #47851: (rares-pop) Fixup! add master.py:FileserverUpdate **kwargs (refs: #48109)
- 2902ee0b14 Merge pull request #48109 from rallytime/bp-47851
- e9dc30bf8e Fixup! add master.py:FileserverUpdate **kwargs
- ISSUE #47925: (JonGriggs) GitFS looking for files in the master branch only (refs: #47943)
- PR #47943: (terminalmage) Make sure we set the effective environment when lock_saltenv is True @ 2018-06-13 20:02:00 UTC
 - 2529292568 Merge pull request #47943 from terminalmage/issue47925
 - 534e1a7100 Merge branch '2018.3' into issue47925
- PR #48089: (rallytime) Update release versions for the 2018.3 branch @ 2018-06-13 14:03:44 UTC
 - 9e1d0040e4 Merge pull request #48089 from rallytime/update_version_doc_2018.3
 - fad6a0991e Remove "in progress" info for 2018.3.1 release notes
 - a3b3b0a0e1 Remove "in progress" info for 2017.7.6 release notes
 - f9be1b9125 Update release versions for the 2018.3 branch
- PR #48054: (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-06-13 12:58:46 UTC
 - b10b7355a0 Merge pull request #48054 from rallytime/merge-2018.3
 - 508d70fabf Update old utils paths to use new paths
 - 3d2ea16c3a Merge branch '2017.7' into '2018.3'
 - * ffee3576ec Merge pull request #48044 from twangboy/wua_add_fail_code
 - d41d0c25eb Add fail code for WinHTTP send/receive error
 - * 871a910fcb Merge pull request #48009 from dwoz/winswarmfix
 - 5027c7bb84 minionswarm runs on windows
 - * 0dcaead36d Merge pull request #47968 from gtmanfred/2017.7
 - ae1b0d28bb pass LANG and HOME into tox commands
 - 8d15b93d00 remove tox virtualenvs from doc tests
 - e1872e2036 simplify tox.ini
 - 81bd01f5af add tests.txt for running tests with tox requirements
 - 556a2067fc fix masterapi test to use testing directory for configs
 - 5a41f484ef add EXPENSIVE_TESTS
 - 055cd5a6ba set DESTRUCTIVE_TESTS environment variable for pytest
 - * 42dd6b83eb Merge pull request #47978 from twangboy/fix_test_pkg
 - 8bb36b3a4b Add try/finally, fix typo in 7zip def file
 - * a67b21ef3d Merge pull request #47959 from twangboy/fix_test_service
 - 0cd47aa81e Remove unused import
 - d4b42540e3 Fix failing test when service doesn't exist
 - * b81d482067 Merge pull request #47983 from garethgreenaway/backport_47843_2017_7
 - 7b7fb1f5d5 Adding missing test sls file.

- 54e51bc627 Backporting #47843 to 2017.7, updating test for 2017.7.
- * d56ddad22c Merge pull request #47533 from twangboy/fix_47178
 - 24717cbc21 Change version added to 2017.7.7
 - 0592f1bac2 Fix issues with functions that user makedirs on Windows
- * 5c56b8c755 Merge pull request #47827 from twangboy/fix_47791
 - fbbd91f09e Add more descriptive debug message
 - 365f81651b Fix deprecated exception handling
 - 8dd6710b93 Use local instead of network
 - 980d99d74b Fix issue when archive is on mapped drive
- **PR #48060:** (gtmanfred) mark test as expensive @ 2018-06-13 12:58:21 UTC
 - c83818e4f9 Merge pull request #48060 from gtmanfred/2018.3
 - 914935c4d4 Merge branch '2018.3' into 2018.3
- **PR #48057:** (terminalmage) Fix link without target in 2018.3.0 release notes @ 2018-06-11 18:50:17 UTC
 - a4eb41623d Merge pull request #48057 from terminalmage/docs-2018.3
 - 20f71ff6f6 Fix link without target in 2018.3.0 release notes
 - d8c035e5e5 mark test as expensive
- **PR #48042:** (terminalmage) Switch to trace level logging for further test failure troubleshooting @ 2018-06-11 14:03:48 UTC
 - 0f9a3122df Merge pull request #48042 from terminalmage/salt-jenkins-1000
 - b33a0b5eaa Switch to trace level logging for further test failure troubleshooting
- **PR #48041:** (terminalmage) salt.utils.hashutils: Only decode to utf-8 on Windows @ 2018-06-11 13:31:41 UTC
 - 6c5389189a Merge pull request #48041 from terminalmage/hashutils-fix-windows
 - 58c7cd33d7 salt.utils.hashutils: Only decode to utf-8 on Windows
- **PR #48014:** (cro) Find job pause @ 2018-06-08 13:48:45 UTC
 - dcae209951 Merge pull request #48014 from cro/find_job_pause
 - 440aa67c4f Lint: Add blank line
 - 7b0e99a511 One more case where returner doesn't respond
 - 5abeedf882 Catch two cases when a returner is not able to be contacted—these would throw a stacktrace.
- **PR #47915:** (garethgreenaway) [2018.3] state runner pause resume kill @ 2018-06-07 16:08:30 UTC
 - ea85f882bc Merge pull request #47915 from garethgreenaway/state_runner_pause_resume_kill
 - 2ecbe9c034 fixing typo in alias_function call.
 - 4377e0cc08 Some fixes to the set_pause and rm_pause function in the state runner, renaming to in line with the functions in the state module. Including aliases to previous names for back-ward compatibility. Including a soft_kill function to kill running orchestration states. A new test to test soft_kill functionality.
- **PR #48002:** (rallytime) Back-port #47923 to 2018.3 @ 2018-06-07 15:25:39 UTC
 - **PR #47923:** (isbm) Prevent crash if files in file.recurse (refs: #48002)

- 5c11fcde60 Merge pull request #48002 from rallytime/bp-47923
- 9465e5f1e9 Use to_unicode from stringutils avoid deprecation warning
- 73d33cbfc3 Prevent crash if files in file.recurse
- **PR #48003:** (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-06-07 15:25:19 UTC
 - 3d0a087c71 Merge pull request #48003 from rallytime/merge-2018.3
 - a6533a9332 Merge branch '2017.7' into '2018.3'
 - * 998a1c13d5 Merge pull request #47966 from mbunkus/fix-postfix-prefix-free-key-names-assumption
 - 0ae402d1b5 Fix postfix.set_main's assumption of prefix-free key names
 - * df50ce7b1b Merge pull request #47824 from twangboy/fix_setup.py
 - 4538b3abb3 Remove 'len-as-condition' disablement
 - d4efcc3c8b Skip lint errors
 - 1b3977f8d4 Remove m2crypto download for Windows
 - * 3e91a31134 Merge pull request #47922 from damon-atkins/2017.7_win_pkg_keys_fix
 - 7129203b1b Merge branch '2017.7' into 2017.7_win_pkg_keys_fix
 - * 8008fca2f6 Merge pull request #47933 from terminalmage/add-pillar.get-docs
 - 4eb022b675 Clarify pillar.get docs
 - * ab565bfaa3 Merge pull request #47944 from terminalmage/fix-git.detached-docs
 - 1d082b4389 Replace use of deprecated argument name in git.detached docstring
 - 6253793cb6 Merge branch '2017.7' into 2017.7_win_pkg_keys_fix
 - 4ce0fe6546 win_pkg under py3 keys returns a view instead of a list, wrap keys in list()
- **PR #48022:** (morganwillcock) win_wua state: fix function name in examples @ 2018-06-07 15:03:52 UTC
 - 0a05212f60 Merge pull request #48022 from morganwillcock/patch-1
 - 443f4d6f21 win_wua state: fix function name in examples
- **ISSUE #47546:** (ender8282) archive.extracted fails when archive includes files with non-ascii names with 2018.3.0 (refs: #48015, #47572)
- **PR #48015:** (garethgreenaway) [2018.3] more unicode nonsense in archive module @ 2018-06-07 14:44:55 UTC
 - 406efb161e Merge pull request #48015 from garethgreenaway/47546_more_unicode_nonsense
 - f457f9cb84 Adding a test to ensure archive.list returns the right results when a tar file contains a file with unicode in it's name.
 - 9af49bc595 Ensure member names are decoded before adding to various lists.
- **ISSUE #47955:** (frogunder) 2018.3.1 Creating Windows machine in Amazon using salt-cloud fails. (refs: #47989)
- **PR #47989:** (dwoz) Properly decode password from aws using m2crypto @ 2018-06-06 20:44:28 UTC
 - 1ce7d6c38a Merge pull request #47989 from dwoz/awscld
 - 23ab2727be Fix linter errors
 - 6c8daa2b85 Properly decode password from aws using m2crypto

- **PR #47976:** ([terminalmage](#)) Capture and log output of processes that timed out and were killed @ 2018-06-06 19:17:08 UTC
 - 76068c83f5 Merge pull request #47976 from terminalmage/salt-jenkins-1000
 - 41e5a75027 Add catch_timeout to run_script
 - 551ada8e4d Capture and log output of processes that timed out and were killed
- **PR #47990:** ([terminalmage](#)) Docs fixes in 2018.3 release branch @ 2018-06-06 17:15:17 UTC
 - f12a52736e Merge pull request #47990 from terminalmage/2018.3-docs
 - f89d2ccd30 Clean up Sphinx warnings
 - f5fc936865 Add clarifying comment so that we don't break this
 - 94849780ac fix docs build error due to IndexError
- **PR #47982:** ([twangboy](#)) Fix `unit.modules.test_win_dns_client` tests @ 2018-06-06 15:02:10 UTC
 - 9d56af3cad Merge pull request #47982 from twangboy/fix_test_win_dns_client
 - 2dcdf6788c Force string to ModuleType
- **PR #47985:** ([twangboy](#)) Fix `unit.states.test_reg` test failure @ 2018-06-06 14:56:03 UTC
 - 1b4c72345b Merge pull request #47985 from twangboy/fix_test_reg
 - 4ce551811f Remove the unnecessary `to_unicode` stuff
 - 863ded39fa Mock `reg.cast_vdata`
- **ISSUE #47236:** ([MorphBonehunter](#)) `x509.private_key_managed` broken after upgrade to 2018.3.0 (refs: #47957)
- **PR #47957:** ([garethgreenaway](#)) [2018.8] Ensure x509 passphrase is a string @ 2018-06-05 13:27:33 UTC
 - 84100570f7 Merge pull request #47957 from garethgreenaway/47236_ensure_passphrase_is_a_string
 - 99bad3cca6 removing unnecessary change
 - e22df8473d Ensuring that when a passphrase is passed in, it is returned as a string from the passphrase callback.
 - * d0cf06a24d Make sure we set the effective environment when `lock_saltenv` is True
 - 8da6ce45dc Finish the docstring for `git.cloned` state
 - 4a8260a5e5 Add tests for `git.cloned` state
 - 311179da05 Add `git.cloned` state
- **PR #47926:** ([dmurphy18](#)) Backport of PR 47808 to 2018.3, improved grains support for AIX @ 2018-06-04 19:31:24 UTC
 - **PR #47808:** ([dmurphy18](#)) Updated AIX support for grains reported (refs: #47926)
 - c355da9e0d Merge pull request #47926 from dmurphy18/backport_pr47808
 - ac15d2093a Backport of PR 47808 to 2018.3, improved grains support for AIX
- **PR #47927:** ([rallytime](#)) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-06-04 18:55:12 UTC
 - a46e42ab11 Merge pull request #47927 from rallytime/merge-2018.3
 - 5baab66f4b Lint: Whitespace fix
 - 7e1d278d19 Update old utils paths to use new utils paths
 - 3273bbdab7 Merge branch '2017.7' into '2018.3'

- * a2b588299b Merge pull request #47860 from terminalmage/state-writing-docs
 - 8cb33d3dec Quiet the linter
 - af51e16f23 Use more elegant RST syntax
 - 91cd57d1e0 Update mocking to reflect changes in service module
 - b9ace5a859 Fix crappy mocking
 - bc9e3acef3 Lint fixes
 - d37f7e4f04 Add 2017.7.6 release notes
 - 9dddeefab Improve documentation on syncing states
 - f465fa3ca7 Add best practices docs for writing states
 - 93ee5ee2b0 Fix all Sphinx warnings
 - 64b9b4d0b8 Clarify that name would override the id declaration
- * d2f3377b5b Merge pull request #47877 from dwoz/sleep_audit
 - ebc7cde9cb Revert job chunk wait time change
- * 735e92093e Merge pull request #47917 from dwoz/winsuite
 - 118601ebd6 Fix windows tests suite breakage
- * 63efb76d51 Merge pull request #47822 from Ch3LL/win_user_test
 - 3a691b405f add user_home path for both windows and linux
 - 788abf771e Add user state integration tests to windows
- * b9da4f1221 Merge pull request #47876 from doesitblend/add-file-read-windows
 - 3f7e7ec327 Add file.read function to Windows module
- * cbe2ecfae8 Merge pull request #47882 from frogunder/45013
 - 38d114a2d2 add whoami test
- **PR #47931: (rallytime) Back-port #47913 to 2018.3 @ 2018-06-04 14:39:16 UTC**
 - **PR #47913: (rares-pop) Fixup! beacons/avahi_announce.py finding grains (refs: #47931)**
 - 4db1f8c603 Merge pull request #47931 from rallytime/bp-47913
 - c51e732f4d Fixup! beacons/avahi_announce.py finding grains
- **PR #47930: (rallytime) Back-port #47725 to 2018.3 @ 2018-06-04 14:38:58 UTC**
 - **PR #47725: (bbczeuz) network_settings beacon: Update example to follow new cfg convention (refs: #47930)**
 - d05a6c70d3 Merge pull request #47930 from rallytime/bp-47725
 - 5c666409f3 Spelling fix
 - cfe0a5bb42 network_settings: Fix doc using new list/dict syntax
- **PR #47557: (L4rS6) fix broken rabbitmq list policies in rabbitmq version 3.7 @ 2018-06-04 13:25:07 UTC**
 - 484d83014b Merge pull request #47557 from L4rS6/fix-broken-rabbitmq-list-policies
 - 6d7ef27557 Merge branch '2018.3' into fix-broken-rabbitmq-list-policies
 - e043ea2833 refactored list_policies code and added more tests

- eea81feb7b fix broken rabbitmq list policies in rabbitmq version 3.7
- **PR #47949:** (terminalmage) Continued troubleshooting on salt-jenkins 1000 @ 2018-06-04 13:17:14 UTC
 - 866a2fbf5e Merge pull request #47949 from terminalmage/salt-jenkins-1000
 - 9c369c6aa8 Remove temp logging from test
 - af02d5ba7b Add result logging to run_script, make returns DRY
- **PR #47941:** (terminalmage) Update test logging for salt-jenkins @ 2018-06-03 02:40:56 UTC
 - 0b85d1273f Merge pull request #47941 from terminalmage/salt-jenkins-1000
 - fb66368af9 Update test logging for salt-jenkins 1000
- **PR #47924:** (Ch3LL) Catch all exceptions in git import for salt.utils.gitfs @ 2018-06-01 21:06:58 UTC
 - 58b5f2b4dd Merge pull request #47924 from Ch3LL/mac_gitpy
 - 75c51ad69b Catch all exceptions in git import for salt.utils.gitfs
- **ISSUE #47269:** (isdig) Reopen Windows Minion That Has IAM Role Cannot Access to S3 (refs: #47879)
- **PR #47879:** (dwoz) Fix ami role usage warts #47269 @ 2018-06-01 14:11:55 UTC
 - b88ec5258d Merge pull request #47879 from dwoz/ami_role_fix
 - 3884c2cf5f Fix ami role usage warts #47269
- **PR #47788:** (twangboy) Use pytz to calculate timezones @ 2018-05-31 18:33:20 UTC
 - b09596982b Merge pull request #47788 from twangboy/fix_47559
 - 0d229c6182 Merge branch '2018.3' into fix_47559
 - 9e612ec9e7 Fix markup in release notes
 - 60499d18f0 Skip test if pytz not present
 - 72cc361c7b Move pytz to 3rd party import, add to __virtual__
 - b8a6488688 Update __virtual__ function
 - 9923176b68 Use __utils__, fix unit tests
 - 73e033f555 Return offset in the same format as Unix
 - 5656183c5e Add timezone.list, add 2018.3.2 release notes
 - 986f6c9b2a Use pytz to calculate timezones
- **PR #47899:** (terminalmage) salt-jenkins issue 1000 @ 2018-05-31 18:24:49 UTC
 - ae73cb3947 Merge pull request #47899 from terminalmage/salt-jenkins-1000
 - 25afc932f7 WIP salt-jenkins issue 1000
- **PR #47753:** (Ch3LL) Add stderr launchctl helper class and fix service mac tests @ 2018-05-31 18:16:57 UTC
 - 8f78e3aef6 Merge pull request #47753 from Ch3LL/service_mac
 - 185c9e9ae2 only stop service if its running
 - e15e674955 Add stderr launchctl helper class and fix service mac tests
- **PR #47908:** (meaksh) Align SUSE salt-master.service 'LimitNOFILES' limit with upstream Salt @ 2018-05-31 18:13:27 UTC
 - 828bf39695 Merge pull request #47908 from meaksh/2018.3-align-suse-salt-master-service

- efe308013a Align SUSE salt-master.service 'LimitNOFILES' limit with upstream Salt
- **PR #47868:** (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-05-30 21:20:38 UTC
 - b4bac9b41b Merge pull request #47868 from rallytime/merge-2018.3
 - e5d386e91c Update solaris core grains test
 - 267f09c1a0 Lint: Remove unused import
 - 120ee16b70 Replace old utils paths with new utils paths
 - dc32b67c03 Merge branch '2017.7' into '2018.3'
 - * 4b28e510f1 Merge pull request #47853 from dwoz/py3-cloud-test
 - c2f8aef7c5 Fix for py3 ec2 cloud tests
 - * 215efa6b73 Merge pull request #47847 from garethgreen-away/47833_reactor_runner_documentation
 - 03676712de Adding some addition documentation to the reactor runner indicating that the reactor system must be active prior to using it.
 - * 0bf651b470 Merge pull request #47846 from Ch3LL/p_refresh_test
 - 019edad8e4 Fix flaky refresh pillar integration test
 - * 799fce979d Merge pull request #47552 from twangboy/fix_46981
 - cffc9b7806 Merge branch '2017.7' into fix_46981
 - 81308a4a44 Add release notes for 2017.7.7
 - 008af0ac6b Fix unit tests
 - 87097eefb6 Add comments about how get is returning data
 - f1f1bfc5c1 Show GPO settings, raise error if trying to set gpo managed settings
 - * ffc2ebc373 Merge pull request #47691 from lomeroy/solaris_product_grains
 - 6889befc6b Merge branch '2017.7' into solaris_product_grains
 - 49053bc106 lint fix
 - 6f185c9179 another lint fix
 - dbffba6876 fix tons of errors in my tests
 - 8c9355d34c Lint fix
 - b29ec75da7 Update regexes in core grains for detecting the 'product' grain on Solaris Sparc systems. Additionally, copy the 'product' grain to 'productname' to be consistent with other OSes.
 - * 96b7c0cc76 Merge pull request #47778 from Ch3LL/win_state_pkg
 - e1786de6b0 Merge branch '2017.7' into win_state_pkg
 - f8c467d3e6 Fix text editor error
 - 872e162137 Add test_pkg integration state tests to windows
 - * 6f934c2259 Merge pull request #47823 from Ch3LL/win_dns_test
 - 7848114d6a Add win_dns module integration tests for windows
 - * e63e04602d Merge pull request #47838 from rallytime/bp-47810

- bd2b62fa66 better debug message
- 83565c55df Address PR feedback
- 50bce3a2f3 make decode_linode_plan_label a private function
- 2ba4fc4cea fix raising when a 'GB' format invalid plan is supplied
- 3afb50d5a2 slight cleanup
- 319fbd3406 match quotation mark types properly
- 95e0202223 more consistent use of parens in logged warning
- f52926ca87 log a warning when the user supplied a label we could decode but was not in the proper format
- 121303d827 reduce complexity of get_plan_id by moving decoding of the user-supplied label to its own function
- cf534c7314 Fix Linode plan selection
- * 9ef6e60617 Merge pull request #47805 from twangboy/add_sign.bat
 - 66d8b0331a Add sign.bat script for signing packages
- * 93420950d3 Merge pull request #47500 from dwoz/winuser
 - 0ca5224cbf Merge branch '2017.7' into winuser
 - e5948902af Use salt utils method for this_user
 - a056a293f1 Centralize test username lookup
 - 6a6ab69722 Get the current username on windows
- * 552526f309 Merge pull request #47802 from rallytime/bp-40892
 - bb357da084 add minion function to reload beacon #35960
- * c9cccf53b9 Merge pull request #47816 from Ch3LL/disable_windows
 - 2509d36888 Add windows to service disable ERROR check in tests
- * 2cb6634c6b Merge pull request #47773 from frogunder/45011
 - 7c9b0bda33 add win_servermanager.list_available test
- * e65dece202 Merge pull request #47807 from dwoz/winrmtests
 - 1f1cc1357a Increase instance size for cloud tests
 - be8dcd21f1 Try an even bigger timeout
- **PR #47900:** (rallytime) [2018.3] Merge forward from 2018.3.1 to 2018.3 @ 2018-05-30 18:09:41 UTC
 - 21550dbd2d Merge pull request #47900 from rallytime/merge-2018.3.1-to-2018.3
 - 2801eeeb26 Merge branch '2018.3.1' into '2018.3'
- **ISSUE #30367:** (paulfanelli) salt-run orchestration via state.sls always successful; it is ignoring state return value (refs: #47843)
- **PR #47843:** (garethgreenaway) [2018.3] orchestration results False when function is False (refs: #47983) @ 2018-05-30 17:21:54 UTC
 - a0bf565741 Merge pull request #47843 from garethgreenaway/30367_orch_return_false_when_function_fails
 - 09242697b8 Merge branch '2018.3' into 30367_orch_return_false_when_function_fails

- **PR #47866:** (rallytime) Back-port #47814 to 2018.3 @ 2018-05-29 19:55:24 UTC
 - **PR #47814:** (travispaul) Bugfixes and unit tests for pkgin module (refs: #47866)
 - da6f7a5538 Merge pull request #47866 from rallytime/bp-47814
 - d50c0ab96b Lint test_pkgin.py
 - 4dac0b4a31 pkgin latest_version bugfix
 - 4ae0313797 Bugfixes and unit tests for pkgin module
- **PR #47865:** (rallytime) Back-port #47600 to 2018.3 @ 2018-05-29 19:54:44 UTC
 - **PR #47600:** (travispaul) Prevent crash on NetBSD and OpenBSD when no swap is configured. (refs: #47865)
 - d9e7f2b5b1 Merge pull request #47865 from rallytime/bp-47600
 - f9f464fa51 Prevent crash on NetBSD and OpenBSD when no swap is configured.
- **PR #47221:** (azelezni) Fix boto_ec2 unused parameter "network_interfaces" @ 2018-05-29 14:41:35 UTC
 - 61561a8279 Merge pull request #47221 from azelezni/fix-boto_ec2-network_interfaces
 - 03ee0023eb Fix unused network_interfaces parameter
 - 1ece61ddfa Fix unused network_interfaces parameter
 - 3e074be9c3 Fixing lint
 - 02609b6e61 Adding state files for new test.
 - 377e34c689 Updating function in saltmod to ensure that the result is a failure if the function being run returns as False.
- **PR #47850:** (rallytime) Fix autodoc for new swarm module @ 2018-05-26 01:53:16 UTC
 - c4d828c986 Merge pull request #47850 from rallytime/swarm-autodoc
 - 467c8fa45c Fix autodoc for new swarm module
- **PR #47800:** (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-05-26 01:17:40 UTC
 - 30b31c5db5 Merge pull request #47800 from rallytime/merge-2018.3
 - 9e3ce39e8c Typo: test_type -> text_type
 - 8877489386 Fix bad merge caught by test in zpool state
 - c328450be2 Update old utils paths to new paths
 - 4abfd26e86 Merge branch '2017.7' into '2018.3'
 - * 46618d2ce7 Merge pull request #47765 from meaksh/2017.7-fix-zypper-error-reading-repo
 - 4475ba19b8 Prevent zypper from parsing repo configuration from not .repo files
 - * 0e87559ee3 Merge pull request #47781 from rallytime/update-linode-sizes
 - a90c1b760e Update cloud test profile and docs to use new Linode size lables
 - * 3ddc56cb9b Merge pull request #47748 from rallytime/merge-2017.7
 - b75f5ae38e Merge branch '2017.7.6' into '2017.7'
 - edf94c915e Merge pull request #47775 from gtmanfred/2017.7.6
 - 548f65d056 catch UnsupportedOperation with AssertionError
 - 17596f3025 Merge branch '2017.7.6' into '2017.7'

- 8c38ecd75f Merge pull request #47769 from gtmanfred/2017.7.6
- 3fdcf0fa82 skip test that breaks test suite
- e458f4a031 Merge branch '2017.7.6' into '2017.7'
- 0d5b473ce2 Merge pull request #47747 from Ch3LL/rn_2017.7.6
- d4aa83b92d Add changelog to 2017.7.6 release notes
- 8a5b34f7d9 Merge pull request #47702 from damon-atkins/2017.7.6_fix_pkg.latest_state
- adcc094e08 Merge branch '2017.7.6' into 2017.7.6_fix_pkg.latest_state
- d610c192d9 Merge pull request #47700 from yannj-fr/2017.7.6
- 961c1ef61e fix roots modification time check
- 2a73e905df Merge branch '2017.7.6' into 2017.7.6
- 266749420f Merge pull request #47632 from gtmanfred/2017.7.6
- 2c50c0d2f5 fix pylint
- 4a29057b16 Fix last test for tornado
- 550ef2e272 allow using tornado 5.0
- 62e468448b handle new _create_stream in tornado 5.0
- 2643c356af Merge pull request #47720 from rallytime/bp-47692-2017.7.6
- 6e5cb36839 Default windows to m1.small for ec2-classic
- 20d9785244 fix roots modification time check
- aef37dd1ce fix roots modification time check
- d51662e053 Ensure targeted_pkgs always contains value for non-windows.
- 83b4224cf8 Adjusted based on feed back.
- 12f983ce9f Whitespace lint issues
- 075d3d3c49 pkg.install execution module on windows ensures the software package is installed when no version is specified, it does not upgrade the software to the latest. This is per the design. pkg.latest must provide the versions to install to pkg.install
- * 0ddc864f90 Merge pull request #47779 from dwoz/winrmtests
 - d5eafe9d53 Use common timeout variable
 - 7e948eb540 Increase ec2 cloud timeouts to 1000
- * 17c4c8443c Merge pull request #47430 from baniobloom/vpc_association_not_found
 - 0f1d007f91 added catch for VPCAssociationNotFound
- * 9c5dde1449 Merge pull request #47525 from baniobloom/duplicate_sec_group_rule
 - dcc35df489 if we are trying to add the same rule then we are already in the desired state, return true
- * 536ce2fa42 Merge pull request #47772 from gtmanfred/2017.7
 - 67756a50fd lock down dependencies for kitchen-salt
- * 12b330f049 Merge pull request #47749 from terminalmage/issue47717
 - cd484bef69 Fix "dnf list upgrades" parsing

- * 5cd18b9e70 Merge pull request [#47755](#) from dwoz/winrmtests
 - 57dd89e6c3 Default to ec2 classic compatible images
 - f89668920a Be explicit about winrm setting
- * f45a96ba1d Merge pull request [#47668](#) from Ch3LL/win_pkg_test
 - a8981024de Add pkg.latest_version windows test
- * 7b12444dfa Merge pull request [#47750](#) from dwoz/cloudtest
 - 63b722ba21 Allow ssh_interface to default to public_ips
- * 27fbb42210 Merge pull request [#47737](#) from dwoz/win_timeout
 - e88833a07d Cloud test fixup
- * 1a93f060fb Merge pull request [#47729](#) from UtahDave/fix_get_info_doc
 - 443a2d72a2 fix cli example to match function name
- * 00a13761c7 Merge pull request [#47682](#) from terminalmage/issue47182
 - d0243e8f23 Suppress spurious lint failure
 - 3b449f11fc Add regression test for excludes issue
 - 28a7d2b81c Skip `__exclude__` in `find_sls_ids`
- * 518f7bcc62 Merge pull request [#47708](#) from darkpixel/47696-do-not-enumerate-none
 - 54e9bf9ec9 Merge branch '2017.7' into 47696-do-not-enumerate-none
- * cad062eaa7 Merge pull request [#47681](#) from rallytime/merge-2017.7
 - 6c06cb3ae3 Merge branch '2017.7.6' into '2017.7'
- * fd2d45d9c2 Merge pull request [#47683](#) from Ch3LL/mac_user_test
 - 5a1b25b9c7 Remove unnecessary setUp in states.test_user test for mac
- * f323799c42 Merge pull request [#47692](#) from dwoz/win_instance_type
 - 20b6070d54 Default windows to m1.small for ec2-classic
- * 990ece5cd5 Merge pull request [#47665](#) from gtmanfred/cloud
 - fd8a02decb use dictupdate to update the providers dictionary and merge lists
- * a2ed8cbb7f Merge pull request [#47151](#) from zer0def/configparser-defaultsect
 - a8f2ad977e Merge branch '2017.7' into configparser-defaultsect
 - cca2a806c9 Made interaction with [DEFAULT] section in ConfigParser as sane as upstream permits.
- * e6fb8342ef Merge pull request [#47673](#) from terminalmage/bp-45808
 - 454291ad62 Fix errors when attempting to cache files with long names or URLs
- * b0446aab07 Merge pull request [#47670](#) from gtmanfred/2017.7
 - dfd5a8715f add a pytest.ini and update a dependency for kitchen
- * 0d06da6944 Merge pull request [#47626](#) from gtmanfred/2017.7
 - 418364a533 make dev_python27.txt have the same message as dev_python34.txt
 - d53b44d10f remove lock file

- 493ed7f93d use the toml dict format
- e0f7cc1447 add proxy tests decorator to pytest confest
- 0a621dd0ec add Pipfile for managing dependencies in salt
- f78b81db94 simplify dev and base.txt to single files
- * a07a8906a0 Merge pull request [#47578](#) from Ch3LL/mac_service_disabled
 - 6032a01f55 change disable check for upstart service on ubuntu14
 - 33b4cfbc5b Change service assertion check for systemd platforms
 - 14896f9743 change codeauthor and class name
 - 502c5bdff5 Ensure mac_service.disabled is correctly querying services

- 95d4488f01 Merge branch '2017.7.6' into 47696-do-not-enumerate-none
- 16c2153385 Merge pull request [#47667](#) from Ch3LL/mac_user_enable
- ba40d3d1a1 Update test_mac_user_enable_auto_login to test both py2 and py3
- a4921e86c9 Merge pull request [#47645](#) from Ch3LL/py3_rm_pip
- 225d90ad4c query the pip path for test test_issue_2087_missing_pip
- e441733ac1 Merge pull request [#47646](#) from rallytime/bp-47601-and-47643
- 9e1d1a5ef8 Fix typo
- 4e94609136 Remove unwanted file
- 0109249c78 use ignore-undefined-variable
- 37caecb7f4 Ignore pylint WindowsError
- c1135d90c7 Better doc string
- e53d6b9ed9 Skip tests when we can not use runas
- 041e4c6ddb Wrap properties loop with a check for None. Closes GH-47696
- **PR [#47581](#): (twangboy)** Add get_encoding salt util @ 2018-05-25 20:40:07 UTC
 - da9eaa1825 Merge pull request [#47581](#) from twangboy/fix_47274
 - ff6600f25e Merge branch '2018.3' into fix_47274
 - 6eff2f847b Add suggested changes
 - e27e9fd1e7 Fix tests on Py3
 - f398cbbdda Use os.linesep.join instead of textwrap.dedent
 - 771392e299 Fix unit tests, add newline=" to io.open
 - c0f735dde3 Remove comment
 - 6d877bb48b Add comment
 - 9f369d3f22 Remove to_encoding, create get_encoding
 - 68be0f9ed2 Add is_encoding salt util
- **ISSUE [#47694](#): (thuhak)** utils/boto and utils/boto3 load error (refs: [#47726](#))
- **PR [#47726](#): (gtmanfred)** rename boto to botomod @ 2018-05-25 20:37:37 UTC

- b860d95b2c Merge pull request #47726 from gtmanfred/2018.3
- 43997a466e fix tests
- 59180e09a8 switch all salt.utils.boto* calls to __utils__ calls
- 7e30f459c9 rename boto to botomod
- **ISSUE #47701:** (babs) elasticsearch.index_template_present state with check_definition: True fails. (refs: #47703)
- **PR #47803:** (rallytime) Back-port #47703 to 2018.3 @ 2018-05-23 20:12:30 UTC
 - **PR #47703:** (babs) Fix elasticsearch.index_template_present with check_definition (refs: #47803)
 - 2a270162d0 Merge pull request #47803 from rallytime/bp-47703
 - 8fce0c562d Fix elasticsearch with check_definition
- **PR #47804:** (rallytime) Back-port #47761 to 2018.3 @ 2018-05-23 20:11:55 UTC
 - **PR #47761:** (zerthimon) Fix userdata in openstack instances (refs: #47804)
 - 780043e6fd Merge pull request #47804 from rallytime/bp-47761
 - b7bc306333 Fix userdata in openstack instances
- **PR #47776:** (garethgreenaway) [2018.3] Fixes to failing _before_connect tests @ 2018-05-23 15:10:35 UTC
 - 1efe891c42 Merge pull request #47776 from garethgreenaway/970_two_minion_unit_tests_failing
 - a5011b49ab Merge branch '2018.3' into 970_two_minion_unit_tests_failing
 - ef24f72169 Fixing unit.test_minion.MinionTestCase.test_beacons_before_connect and unit.test_minion.MinionTestCase.test_scheduler_before_connect.
- **PR #47783:** (rallytime) [2018.3] Merge forward from 2018.3.1 to 2018.3 @ 2018-05-23 14:51:56 UTC
 - 4a6ca67883 Merge pull request #47783 from rallytime/merge-2018.3
 - 1adb8ea27f Merge branch '2018.3.1' into '2018.3'
- **PR #47149:** (meaksh) [2018.3] Strip trailing commas on Linux user's GECOS fields @ 2018-05-22 21:18:49 UTC
 - f8a6a85d28 Merge pull request #47149 from meaksh/2018.3-remove-trailing-commas-on-linux-user-gecos-fields
 - 60ec3230db Merge branch '2018.3' into 2018.3-remove-trailing-commas-on-linux-user-gecos-fields
- **ISSUE #46938:** (racooper) Beacons documentation update for 2018.3 (refs: #47740)
- **PR #47740:** (garethgreenaway) [2018.3] Updating Beacon topic to include list based configuration for Beacons @ 2018-05-21 13:58:01 UTC
 - 19f4137b63 Merge pull request #47740 from garethgreenaway/46938_beacons_documentation
 - 5d23ef4dd8 Updating Beacon topic to include list based configuration for Beacons
- **PR #47710:** (terminalmage) salt.loader: add error logging when whitelist lookup fails @ 2018-05-18 16:56:18 UTC
 - 22807ac756 Merge pull request #47710 from terminalmage/fix-loader-whitelist
 - 6192391b7b Add additional missing modules to whitelist
 - 7192c38f66 Change key -> function to make log message more clear
 - 91f9fd38fd Fix loader whitelists in unit tests
 - d4f2662e5b Add error logging when whitelist lookup fails

- **PR #47680:** (rallytime) [2018.3] Merge forward from 2018.3.1 to 2018.3 @ 2018-05-17 21:30:27 UTC
 - b91c0f5647 Merge pull request #47680 from rallytime/merge-2018.3
 - 9b1773a763 Merge branch '2018.3.1' into '2018.3'
- **PR #47545:** (dmurphy18) Fix non-root build and signing for rpm packages @ 2018-05-17 21:20:10 UTC
 - dbf12f9be2 Merge pull request #47545 from dmurphy18/fix_nonroot_build
 - 220f887fa6 Fixed review comment, changed file.chown to file.makedirs_perms
 - b15a1652b5 Changed versionadded from 2018.3.1 to 2018.3.2, to reflect when change should be accepted
 - 90eb03e375 Additional error checking and minor cleanup
 - 40d77e03d2 Correct building rpms with non-root user
- **ISSUE #47546:** (ender8282) archive.extracted fails when archive includes files with non-ascii names with 2018.3.0 (refs: #48015, #47572)
- **PR #47572:** (garethgreenaway) [2018.3] archive module, filenames with Unicode characters @ 2018-05-17 20:41:11 UTC
 - 69056e5b67 Merge pull request #47572 from garethgreenaway/47546_archive_non_ascii_filenames
 - 5e97b8b44a Updating with requested changes.
 - cc1aa75a2f only convert to bytes when using Python2
 - 0fe32f4066 Updating integration/modules/test_archive to include filenames with unicode characters.
 - 5a9cadd125 Accounting for when files in an archive contain non-ascii characters
- **PR #47661:** (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-05-16 15:53:36 UTC
 - cb04d9c37e Merge pull request #47661 from rallytime/merge-2018.3
 - dd3e6f3f0a Merge branch '2017.7' into '2018.3'
 - * f63d801858 Merge pull request #47639 from rallytime/merge-2017.7
 - 1503f1020f Merge branch '2017.7.6' into '2017.7'
 - 6f178ca908 Merge pull request #47570 from gtmanfred/2017.7.6
 - 84aa034e03 Update dependency to msgpack
 - 98bd598701 Merge pull request #47523 from rallytime/man-pages
 - 48ecb78dec [2017.7.6] Update man pages
 - e608ea9617 Merge pull request #47517 from rallytime/bp-47505-2017.7.6
 - 0734578533 Raise proper invocation errors
 - * db0eef3e8b Merge pull request #47643 from dwoz/runas_detect
 - 8c5e54b8b3 Fix typo
 - 69bc88f1c6 Remove unwanted file
 - * 6dd3ab9f06 Merge pull request #47601 from dwoz/runas_detect
 - 3235ac08cb use ignore-undefined-variable
 - 58911d510a Ignore pylint WindowsError
 - 17987d3c5a Better doc string
 - a48ac26573 Skip tests when we can not use runas

- * f61ccae627 Merge pull request #47611 from Ch3LL/deb_doc
 - 6d2ddd050f One more grammar fixup
 - 2d5ff01261 Grammar fix
 - 138847c9c4 Update debian install docs to reflect new latest debian releases
- * 9e2fe284e4 Merge pull request #47598 from rallytime/bp-47568-2017.7
 - 09458c65cf Add exception logging on serialize/deserialize exceptions
 - c62c855f9c salt.serializers.yaml/yamlex: remove invalid multi_constructor
- * 8a7913ccc3 Merge pull request #47548 from Ch3LL/syslog
 - 31f13a4197 sysloghandler: check for 3.5.4 python version
 - a020352a03 Catch Sysloghandler errors when log file does not exist
- * 82fb6ba366 Merge pull request #47508 from gtmanfred/2017.7
 - 1a87e7455f allow pulling the mysql_query.run_file to pull from the fileserver
- * be29b58a09 Merge pull request #47562 from rallytime/bp-47513
 - 357bc084b3 fix #46546
- * d3121fcfa4 Merge pull request #47471 from meaksh/2017.7-fix-inconsistent-scheduled-jid-with-returns
 - f079939500 Do not override jid on returners, only sending back to master
- * 662f6086db Merge pull request #47313 from Circuitsoft/2017.7
 - 237560b745 Merge branch '2017.7' into 2017.7
 - cb674fb1cb Enable opkg as pkgrepo handler on Poky
 - 7a58fd157e Enable opkg on non-NILinuxRT systems
 - 139360c55f Add Poky to OS Information Grains
 - d74057224d Un-normalize os_family in pkgrepo state
- **PR #47672:** (terminalmage) Backport #47487 to 2018.3 @ 2018-05-16 13:55:40 UTC
 - PR #47487: (rosscdh) bad ref to error fix (refs: #47672)
 - d17a16b648 Merge pull request #47672 from terminalmage/bp-47487
 - 12abbfdcf7 bad ref to error fix
- **ISSUE #47501:** (mateiw) salt-ssh doesn't propagate pillar when overriding pillar in module.run + state.apply (refs: #47504)
- **PR #47504:** (mateiw) Fix pillar propagation in salt-ssh when overriding pillar in module.run + state.apply @ 2018-05-16 13:55:05 UTC
 - 9d4f5203a7 Merge pull request #47504 from mateiw/2018.3-salt-ssh-pillar-propagation-issue-47501
 - 3ffa412ee5 Merge branch '2018.3' into 2018.3-salt-ssh-pillar-propagation-issue-47501
 - 2f1485e067 Option to merge current pillar with opts['pillar'] during pillar compile
- **PR #47212:** (weswhet) fix macOS running as user. @ 2018-05-16 13:54:23 UTC
 - 4fe78bbb9b Merge pull request #47212 from weswhet/fix-macos-runas
 - 8ee11d74af Merge branch '2018.3' into fix-macos-runas

- e78fa45927 adding in requested changes
- 33c1492099 Merge branch '2018.3' into fix-macos-runas
- 0ecabcae78 adding in a fix for running commands as a user on macos
- **ISSUE #47587:** (FedericoOlivieri) -out=table broken in 2018.3.0 'str' object but received a 'unicode' (refs: #47674)
- **PR #47674:** (terminalmage) Fix regression in table outputter due to unicode types @ 2018-05-16 13:41:04 UTC
 - 0c7439a955 Merge pull request #47674 from terminalmage/issue47587
 - 43e3dcd398 Fix Python 3 incompatibility in table outputter
 - d729656703 Add unit tests for table outputter
 - 907d182dea Fix regression in table outputter due to unicode strings
- **PR #47617:** (aesposito91) Update napalm.py @ 2018-05-15 15:44:35 UTC
 - d1a1a594e9 Merge pull request #47617 from aesposito91/2018.3
 - 9f5d201dd7 Update napalm.py
- **ISSUE #46871:** (guettli) Sentry Logging Handler (refs: #47649)
- **PR #47649:** (paulcollinsiii) Some additional details about Sentry for the docs @ 2018-05-15 15:41:36 UTC
 - 049abe2850 Merge pull request #47649 from paulcollinsiii/sentry_docs
 - 2a8dfd65d7 Some additional details about Sentry for the docs
- **PR #47642:** (garethgreenaway) [2018.3] Updating templates used by salt-extend for unicode goodness @ 2018-05-15 15:38:26 UTC
 - 8a21b864df Merge pull request #47642 from garethgreenaway/unicode_update_salt_extend_templates
 - 68d73f7afc Updating the templates that the salt-extend utility uses to include unicode_literals & print_function
 - * 0232a6e1ad Add 'other' as valid kwargs for 'user.add' method
 - * ff861d9089 Merge branch '2018.3' into 2018.3-remove-trailing-commas-on-linux-user-gecos-fields
- **PR #47603:** (terminalmage) Move/merge more test modules @ 2018-05-14 20:48:43 UTC
 - 99f53c0a9f Merge pull request #47603 from terminalmage/more-test-renaming
 - d612bd27e4 Move/merge more test modules
- **PR #47640:** (rallytime) [2018.3] Merge forward from 2018.3.1 to 2018.3 @ 2018-05-14 17:59:06 UTC
 - cc3daa88f3 Merge pull request #47640 from rallytime/merge-2018.3
 - 2827c56399 Merge branch '2018.3.1' into '2018.3'
 - * f1680f1d9b Do make comparisons in a single line
 - * 7dea455c12 Add unit test for new method 'user.chother'
 - * 694882632c Add 'other' attribute to GECOS fields to avoid inconsistencies with chfn
 - * 6c089c9de1 Fix unsupported chars checking on GECOS fields
 - * d5c9ca0fbc Add unit tests for GECOS fields
 - * ed940c4f58 Strip trailing commas on Linux user GECOS fields
- **PR #47589:** (Ch3LL) Remove duplicate file id in watch_any doc example @ 2018-05-10 22:06:00 UTC

- 4ec63dd041 Merge pull request #47589 from Ch3LL/watch_any_doc
- 8cb97a48f5 Add additional state to watch_any doc example
- f7223a3bbf Remove duplicate file id in watch_any doc example
- **PR #47564:** (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-05-10 19:13:36 UTC
 - 9836a7e62b Merge pull request #47564 from rallytime/merge-2018.3
 - 295e302fcf Lint: Fix syntax error from bad merge-conflict resolution
 - 25f03ae425 Merge branch '2017.7' into '2018.3'
 - 291d3d3bd8 Merge pull request #47540 from terminalmage/cmdmod-home-fix
 - * e4b277f82e Fix corner case where runas user's HOME env value is incorrect
 - 49af577b3e Merge pull request #47547 from terminalmage/gitfs-tutorial
 - * 806ffb298a Add masterless mode docs to gitfs tutorial
 - 476ba053d1 Merge pull request #47538 from terminalmage/pip-docs
 - * 98e8ffeba4 Fix/clarify some of the pip module documentation
 - 7cc8d9d30a Merge pull request #47524 from dwoz/whitelistlines
 - * 2605ff8712 Gracefully handle blank lines in whitelist.txt
 - f1a5b13072 Merge pull request #47527 from dwoz/test_file_name
 - * 4aea7ca571 Update doc string
 - * b3289e5a1c Fix test file name
 - e9c1723175 Merge pull request #47408 from Ch3LL/skip_diskusage
 - * 068da8ad7d Merge branch '2017.7' into skip_diskusage
 - * 1a7ffb4e0d return error if diskusage not available
 - * 10bd63a976 Skip status.diskusage integration tests on macsox
 - 2f50ff7bc8 Merge pull request #47480 from baniobloom/ConflictingDomainExists
 - * d22ed7dffa added handling for the aws error ConflictingDomainExists
 - 7f53be6e92 Merge pull request #47444 from terminalmage/render_state-spurious-error
 - * a1e9fe00fd Skip trying to render a template for a nonexistant SLS file
 - 50b9c4d79d Merge pull request #47478 from terminalmage/rename-pip-state-test
 - * 9f7a9ebeb9d Rename pip state test modules to match naming convention
 - e78ac0f9b7 Merge pull request #47505 from dwoz/win_dsc_fixes
 - * d1fcb40d1c Raise proper invocation errors
 - 0d4d5047d8 Merge pull request #47499 from dwoz/win_run_timeout_again
 - * c6697b9f16 Move kill process tree and re-use it
 - 6a4d0380b1 Merge pull request #47493 from dwoz/win_run_timeout
 - fec1233dc4 Add support for windows timeout to run_salt
- **PR #47565:** (rallytime) Back-port #47440 to 2018.3 @ 2018-05-10 18:15:50 UTC
 - **PR #47440:** (kt97679) fix for the race condition, details are here: <https://github.com/salt...> (refs: #47565)

- b22657ff9e Merge pull request #47565 from rallytime/bp-47440
- 7c43417d46 addressed feedback
- 1abe05207c fix for the race condition, details are here: <https://github.com/saltstack/salt/issues/33223#issuecomment-386117236>
- PR #47590: (Ch3LL) Fix firewall prune_services deprecation warning @ 2018-05-10 17:01:48 UTC
 - 17e0fdca6c Merge pull request #47590 from Ch3LL/firewall_warn
 - d29b8e0ae2 Fix firewall prune_services deprecation warning
- PR #47568: (terminalmage) salt.serializers.yaml/yamlex: remove invalid multi_constructor (refs: #47598) @ 2018-05-10 16:21:09 UTC
 - 2fcb108d71 Merge pull request #47568 from terminalmage/salt-jenkins-971
- ISSUE #38671: (MikeSpaceG) zpool.get error (refs: #47224)
- PR #47563: (rallytime) Back-port #47224 to 2018.3 @ 2018-05-10 16:18:07 UTC
 - PR #47224: (sjorge) Zpool zol fixes (refs: #47563)
 - e3ee7053fb Merge pull request #47563 from rallytime/bp-47224
 - 1d191445a7 FIX #38671 - zpool.get should support older zfs version
 - 23705b12cb zpool.scub docs should mention pause is not always available
 - d73885aa5c Make sure the docs mention that createboot is only available on illumos
- PR #47569: (Ch3LL) Update salt.utils.path mock in virtual core test @ 2018-05-10 15:18:31 UTC
 - 8e26624db3 Merge pull request #47569 from Ch3LL/core_virt
- PR #47576: (rallytime) [2018.3] Small Documentation Fixes @ 2018-05-10 14:08:11 UTC
 - fc93715eea Merge pull request #47576 from rallytime/doc-updates
 - ca927fc14b Add extra lines that are needed for proper code-block formatting
 - b330d763a4 Remove infoblox state autodoc file

27.2.5 Salt 2018.3.4 Release Notes

Version 2018.3.4 is a bugfix release for *2018.3.0*.

State Changes

- The *host.present* state can now remove the specified hostname from IPs not specified in the state. This can be done by setting the newly-added `clean` argument to `True`.

Statistics

Changelog for v2018.3.3..v2018.3.4

Generated at: 2019-02-06 20:56:17 UTC

- **PR #51525:** (twangboy) Backport 51095 to 2018.3.4 @ 2019-02-06 20:20:37 UTC
 - a37fb7d Merge pull request #51525 from twangboy/backport_51095_2018.3.4
 - b6acc92 Backport 51095
- **PR #51520:** (frogunder) Update man pages for 2018.3.4 @ 2019-02-06 18:42:13 UTC
 - 602ddc8 Merge pull request #51520 from frogunder/man_pages
 - 0cbe3f8 Update man pages for 2018.3.4
- **ISSUE #51428:** (yosnoop) salt.utils.dns.lookup fails with dig method on EL7 (refs: #51429)
- **PR #51429:** (yosnoop) The +nocl is supported much wider than +noclass @ 2019-02-06 17:48:48 UTC
 - 1f981c6 Merge pull request #51429 from yosnoop/replace-noclass-with-nocl-for-dig
 - 5231e73 Merge branch '2018.3.4' into replace-noclass-with-nocl-for-dig
 - 14e6fb7 In case the test machine can't resolve
 - 95e8a2f The +nocl is supported much wider than +noclass
 - a00d708 Test dig options for salt.utils.dns.lookup
- **ISSUE #49226:** (defanator) salt-cloud grains inheritance from provider to profile (2018 vs 2016) (refs: #51366)
- **PR #51441:** (Ch3LL) Backport #51366 into 2018.3.4 @ 2019-02-06 17:42:19 UTC
 - **PR #51366:** (dwoz) Cloud provider and profile configs are merged [2018.3] (refs: #51441)
 - 209ef32 Merge pull request #51441 from Ch3LL/bp-51366
 - 5bc466e Fix python 3 path for shell test cases
 - 5351e5c Add testing path to run_script commands
 - 2d8a364 Fix linter issues
 - 9b8718a Cloud provider and profile configs are merged
- **PR #51458:** (twangboy) Add Py2 Warning for Py2 Installer @ 2019-02-06 17:33:02 UTC
 - 90a8682 Merge pull request #51458 from twangboy/add_py2_warning
 - 05522c0 Merge branch '2018.3.4' into add_py2_warning
- **PR #51460:** (twangboy) Update installer mac 2018.3.4 @ 2019-02-06 17:31:18 UTC
 - b492021 Merge pull request #51460 from twangboy/update_installer_mac_2018.3.4
 - 3c92688 Merge branch '2018.3.4' into update_installer_mac_2018.3.4

- **PR #51471:** (twangboy) Fix the failing dns test on Windows @ 2019-02-03 22:03:34 UTC
 - 892d98c Merge pull request #51471 from twangboy/fix_test_win_dns_client
 - c9f6b01 Merge branch '2018.3.4' into fix_test_win_dns_client
- **PR #51462:** (ShantonRU) Fix insecure SQL queries in MySQL module @ 2019-02-01 21:19:20 UTC
 - a05305d Merge pull request #51462 from ShantonRU/fix-insecure-sql-queries-in-mysql-module-1
 - d3ef2cb Merge branch '2018.3.4' into fix-insecure-sql-queries-in-mysql-module-1
 - f47dda6 Fix improper use of socket authentication in mysql.user_chpass
 - ed62a2f Fix insecure SQL queries in mysql.user_chpass
 - * 33922c9 Fix the failing dns test on Windows
- **PR #51445:** (terminalmage) Remove custom grains module from 2018.3 branch @ 2019-02-01 16:48:13 UTC
 - 48936c2 Merge pull request #51445 from terminalmage/fix-custom-grains-rollback
 - 191235d Remove custom grains module from 2018.3 branch
 - 72fd1a2 Roll back icon change
 - 7dd1704 Add welcome_py2.rtf
 - c93e9e3 Add Py2 Warning to installer package
 - b658900 Add Py2 Warning for Py2 Installer
- **PR #51438:** (twangboy) Add missing raise statement @ 2019-01-30 20:04:05 UTC
 - a880e42 Merge pull request #51438 from twangboy/fix_raise_2018.3.4
 - 5830fad Add missing raise statement
- **PR #51432:** (Ch3LL) Backport #51324 into 2018.3.4 @ 2019-01-30 17:51:50 UTC
 - **PR #51324:** (garethgreenaway) [2018.3] Fixes to x509 module and test (refs: #51432)
 - 28b898c Merge pull request #51432 from Ch3LL/bp-51324
 - bd41ff0 Fixing various bits in x509 module and unit test to ensure tests are passing on python2 & python3
- **PR #51377:** (twangboy) Fix issue when directory doesn't exist in LGPO module (2018.3.4) @ 2019-01-29 17:33:25 UTC
 - 01717d2 Merge pull request #51377 from twangboy/fix_auditpol_2018.3.4
 - 19e5181 Fix issue when directory doesn't exist
- **PR #51338:** (Ch3LL) Backport #51207 into 2018.3.4 @ 2019-01-27 23:44:59 UTC
 - **PR #51207:** (twangboy) Backport 50771 to 2018.3 (refs: #51338)
 - **PR #50771:** (terminalmage) Fix failing opensuse tests (refs: #51207)
 - 43a9d2f Merge pull request #51338 from Ch3LL/bp-51207
 - 345ae67 Backport PR# 50771 to 2018.3 branch
- **ISSUE #51158:** (AndreiPashkin) saltmod.state doesn't respect "roster" argument (refs: #51170)
- **PR #51337:** (Ch3LL) Backport #51170 into 2018.3.4 @ 2019-01-27 23:44:24 UTC
 - **PR #51170:** (dwoz) Honor roster system for ssh orchestrations (refs: #51337)
 - 3dcd11d Merge pull request #51337 from Ch3LL/bp-51170

- 4e85505 Merge branch '2018.3.4' into bp-51170
- **ISSUE #50221:** (tkaehn) file.managed: contents_pillar and pillar.file_tree with keep_newline is broken in 2018.3.3 (refs: #51252)
- **PR #51340:** (Ch3LL) Backport #51252 into 2018.3.4 @ 2019-01-27 23:42:49 UTC
 - **PR #51252:** (dwoz) Preserve newlines from pillar data for file.managed [2018.3] (refs: #51340)
 - 7656aa5 Merge pull request #51340 from Ch3LL/bp-51252
 - e74a6c6 Fix py3 managed.file test failure
 - 6f2c7cf Remove un-needed log statement
 - 824950c Fix 50221 regression test on Windows
 - 1840af9 preserve newlines from pillar data for file.managed
- **PR #51290:** (s0undt3ch) [2018.3.4] Fix minion start @ 2019-01-25 15:14:47 UTC
 - e90ca1d Merge pull request #51290 from s0undt3ch/hotfix/fix-network
 - da3aace Merge branch '2018.3.4' into hotfix/fix-network
 - 04f16b8 Fix tests. We no longer get *ipaddress* instances back.
 - c3fa82a Fix minion start issue
 - * c893dc4 Fix saltmod roster test
 - * b61854f Roster defines the roster system not a file
 - * 484bab4 Fix linter
 - * 5e2db2f Honor roster file for ssh orchestrations
- **PR #51317:** (terminalmage) Fix regression in dynamic pillarenv @ 2019-01-25 09:29:44 UTC
 - c8db7e3 Merge pull request #51317 from terminalmage/fix-pr-50417
 - 4be2891 Merge branch '2018.3.4' into fix-pr-50417
- **PR #51311:** (twangboy) Fix failing test *unit.states.test_file.TestFileState.test_managed* on Windows @ 2019-01-24 21:09:35 UTC
 - e246fdb Merge pull request #51311 from twangboy/fix_test_file.test_managed
 - f4177e0 Remove mode parameter on Windows
 - 4c4ded3 Fix regression in dynamic pillarenv
- **ISSUE #51195:** (littleski) fstab improperly escaped when spaces are used in options (refs: #51226)
- **ISSUE #27160:** (martinadolfi) salt.states.mount persistence error using spaces in route (refs: #39593)
- **PR #51292:** (Ch3LL) Backport #51226 into 2018.3.4 @ 2019-01-24 11:11:34 UTC
 - **PR #51226:** (garethgreenaway) [2018.3] Handle spaces in fstab opts, similar fix to #39593 (refs: #51292)
 - **PR #39593:** (zwo-bot) Fix issue #27160 - escape whitespaces in fstab entry in module mount when persist=True (refs: #51226)
 - 40b20126 Merge pull request #51292 from Ch3LL/bp-51226
 - aba114e Merge branch '2018.3.4' into bp-51226
- **PR #51295:** (Ch3LL) Backport #51279 into 2018.3.4 @ 2019-01-24 11:10:19 UTC
 - **PR #51279:** (twangboy) Backport `__context__` support from develop (refs: #51295)

- fc0bec5 Merge pull request #51295 from Ch3LL/bp-51279
- 5c4a7a4 Merge branch '2018.3.4' into bp-51279
- PR #51293: (Ch3LL) Backport #51233 into 2018.3.4 @ 2019-01-24 09:17:49 UTC
 - PR #51233: (Ch3LL) Backport #51105 to 2018.3 (refs: #51293)
 - PR #51105: (garethgreenaway) [develop] Report permission changes in test mode (refs: #51233)
 - dacd1ea Merge pull request #51293 from Ch3LL/bp-51233-2
 - a155fd7 Accounting for when permissions are not returned from file.check_perms, eg. windows systems.
 - 53ba068 When test=True and there are permissions changes, report it.
 - d2eba77 Remove network.py patch
 - d431c71 Add __context__ support
 - * de6c13d Handle spaces in fstab opts, similar fix to #39593
- ISSUE #51248: (johnnybubonic) "[WARNING] The file_roots parameter is not properly formatted, using defaults" (refs: #51278)
- PR #51278: (dwoz) Warn about proper validation option @ 2019-01-22 22:13:13 UTC
 - 1abffb2 Merge pull request #51278 from dwoz/issue51248
 - c614198 Use pillar roots validation method
 - 0d2b0c6 Fix linter warnings
 - 5b98895 Fix wart in pillar_roots validation
- PR #51230: (Ch3LL) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2019-01-18 19:50:10 UTC
 - e53e9b1 Merge pull request #51230 from Ch3LL/merge-2018.3
 - 0ef7675 Merge branch '2017.7' into '2018.3'
 - 4a12c5f Merge pull request #50852 from mirceaulinic/fix-capirca
 - * fa91267 Merge branch '2017.7' into fix-capirca
 - * 71913ff Merge branch '2017.7' into fix-capirca
 - * 6fc3484 Lint?
 - * 3d56750 Extra newline for lint
 - * 5176cd8 Improve the Capirca and related modules for ACL config generation
 - 3f4759b Merge pull request #50923 from astronouth7303/patch-2
 - * 4f631a6 Document {% include %}
 - 210e817 Merge pull request #51111 from s0undt3ch/2017.7
 - * 08e0ae7 Update to salt-bootstrap v2019.01.08
- ISSUE #51211: (sathieu) file_roots envs with slash leads to "No such file or directory: '/var/cache/salt/master/file_lists/roots/.foo/bar.w'" (refs: #51212)
- ISSUE #48132: (BenjaminSchiborr) Dynamic File Roots (refs: #51212)
- PR #51212: (sathieu) Allow slashes in file_roots envs. @ 2019-01-17 17:29:18 UTC
 - 26008ef Merge pull request #51212 from sathieu/file_roots_slash
 - b769f18 Allow slash in file_roots envs

- f9437e2 Test for file_roots envs with slash leads to "No such file or directory"
- **PR #51209:** (garethgreenaway) [2018.3] Back-port PR #51124 to 2018.3 @ 2019-01-17 13:28:32 UTC
 - **PR #51124:** (Ch3LL) Handle encoding when opening file for both py2/py3 (refs: #51209)
 - 5916282 Merge pull request #51209 from garethgreenaway/bp-51124
 - 82acce4 Handle encoding when opening file for both py2/py3
- **PR #51184:** (twangboy) Fix win_lgpo_auditpol salt util on Windows @ 2019-01-16 18:08:01 UTC
 - 094bd33 Merge pull request #51184 from twangboy/fix_auditpol
 - 2e68d35 directly call cmd.run_all
- **PR #51191:** (Ch3LL) Backport #50918 into 2018.3 @ 2019-01-16 18:02:19 UTC
 - **PR #50918:** (twangboy) Fix test_debian_ip on Windows (refs: #51191)
 - ac71922 Merge pull request #51191 from Ch3LL/bp-50918
 - 7300d84 Skip debian tests on Windows
 - 4622433 Fix test_debian_ip on Windows
- **ISSUE #49883:** (kiemlicz) salt-cloud azurearm is not working (refs: #51144)
- **PR #51144:** (jgleissner) 2018.3 azurearm py3 @ 2019-01-15 16:46:35 UTC
 - e7f53a3 Merge pull request #51144 from jgleissner/2018.3-azurearm-py3
 - 3178f1a msazure.py: remove unused imports
 - 99a4b9d azurearm: fix list_locations
 - aebe34b azurearm: fix show_instance function
 - d80669f msazure: fix object_to_dict for python 3
- **PR #51171:** (twangboy) Add random sleep time to avoid overloading Windows @ 2019-01-15 16:45:33 UTC
 - 1206f92 Merge pull request #51171 from twangboy/fix_crypt
 - 6caa93b Add random sleep time to avoid overloading Windows
- **PR #51174:** (jpsv) Update OpsGenie to use their V2 API (2018.3) @ 2019-01-15 16:44:54 UTC
 - a96deed Merge pull request #51174 from jpsv/2018.3
 - 055823e Update opsgenie.py
 - 501c8df Merge branch '2018.3' into 2018.3
 - 220aa8a Update opsgenie.py
 - 5dc21cc Update to from V1 API to V2
 - f93ce7c Update to V2 API
- **ISSUE #42280:** (michaelgibson) make ldap eauth 2 factor compatible (refs: #42426, #45347)
- **PR #51010:** (amendlik) Allow unauthenticated bind for listing LDAP groups @ 2019-01-15 16:43:42 UTC
 - **PR #45811:** (gtmanfred) Fix ldap eauth (refs: #51010)
 - **PR #45347:** (amendlik) LDAP group membership (refs: #51010)
 - **PR #42426:** (michaelgibson) adding 2-factor auth capability to ldap eauth module - #42280 (refs: #45347)
 - 563d487 Merge pull request #51010 from amendlik/ldap-groups

- cd336ed Merge branch '2018.3' into ldap-groups
- 94f8ee4 Update unit tests for auth.ldap
- 08e36d0 Allow unauthenticated bind for listing LDAP groups
- **PR #51112:** (s0undt3ch) [2018.3] Update to salt-bootstrap v2019.01.08 @ 2019-01-15 16:42:09 UTC
 - 6dc3752 Merge pull request #51112 from s0undt3ch/2018.3
 - 4f1d846 Update to salt-bootstrap v2019.01.08
- **PR #51097:** (terminalmage) Fix improper exception raises (2018.3) @ 2019-01-15 16:38:25 UTC
 - b19c990 Merge pull request #51097 from terminalmage/fix-keyerror-raise
 - a3c0b49 Fix poorly-written test
 - c0ff7b1 Fix more incorrect exception raises
 - f11dbcc Fix improper KeyError raise
- **PR #51169:** (twangboy) More descriptive error when missing GitPython or PyGit2 @ 2019-01-15 16:37:44 UTC
 - 8920a86 Merge pull request #51169 from twangboy/fix_git_state
 - f2d1180 More descriptive error when missing GitPython or PyGit2
- **ISSUE #51160:** (amendlik) Minion crashes with long hostname under Python 3 (refs: #51173, #51161)
- **PR #51173:** (dwoz) Avoid exceptions by passing bytes to idna @ 2019-01-15 16:32:31 UTC
 - **PR #51161:** (amendlik) Ignore exceptions when generating the minion ID (refs: #51173)
 - 58eede6 Merge pull request #51173 from dwoz/issue51160
 - 11cc7b3 Remove un-needed test
 - 0f87812 Merge develop, Revert exception handling
 - 7365a1a Pass bytes to idna
- **PR #51147:** (Ch3LL) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2019-01-15 02:05:51 UTC
 - 06854cf Merge pull request #51147 from Ch3LL/merge-2018.3
 - d39d8b7 Merge branch '2018.3' into merge-2018.3
- **ISSUE #51160:** (amendlik) Minion crashes with long hostname under Python 3 (refs: #51173, #51161)
- **PR #51161:** (amendlik) Ignore exceptions when generating the minion ID (refs: #51173) @ 2019-01-14 22:47:54 UTC
 - b79c09e Merge pull request #51161 from amendlik/long-hostname
 - 6fcc4ad Merge branch '2018.3' into long-hostname
- **ISSUE #51067:** (rkrieger) KeyError u'manufacturer' causes salt-minion crash on start with OpenBSD arm64 system (refs: #51159)
- **ISSUE #3:** (thatch45) libvirt module (refs: #51159)
- **PR #51159:** (rkrieger) Prevent crash by testing for 'manufacturer' in osdata on OpenBSD @ 2019-01-14 18:08:22 UTC
 - 1424734 Merge pull request #51159 from rkrieger/fix-issue-51067
 - 1440ccf Prevent crash by testing for 'manufacturer' in osdata on OpenBSD
 - 1a4e307 Ignore exceptions when generating the minion ID

- **PR #51146:** ([terminalmage](#)) Fix invalid assignment in vsphere module @ 2019-01-12 21:44:33 UTC
 - 5e37326 Merge pull request #51146 from terminalmage/fix-vsphere-tuple-issue
 - 5d60022 Fix invalid assignment in vsphere module
- **PR #51154:** ([twangboy](#)) Add support for Advanced Audit policies @ 2019-01-12 21:43:27 UTC
 - fad8621 Merge pull request #51154 from twangboy/auditpol
 - 9064376 Add support for Advanced Audit policies
- **PR #51151:** ([Ch3LL](#)) Backport #51061 to 2018.3 @ 2019-01-12 03:18:44 UTC
 - **PR #51061:** ([garethgreenaway](#)) [fluorine] fix to salt.utils.vt.Terminal (refs: #51151)
 - f7a100c Merge pull request #51151 from Ch3LL/bp_51061
 - ffd4e27 When writing output to stdout we want to ensure that the data is a string not bytes. Under py2 the salt.utils.data.encode function results in a string but under py3 the result is a bytestring. Swapping out salt.utils.data.encode for salt.utils.stringutils.to_str.
- **PR #51150:** ([Ch3LL](#)) Back-port #49508 to 2018.3 @ 2019-01-12 03:18:19 UTC
 - **PR #49508:** ([bergmannf](#)) Fix X509 remote signing on python3 (refs: #51150)
 - 3a50a57 Merge pull request #51150 from Ch3LL/bp-49508
 - 7ae53ad Do not silently ignore errors.
 - deb0134 Convert to string before sending via 'publish'.
 - 651c551 Use to_str salt.utils when writing to a file.
- **ISSUE #50433:** ([zerthimon](#)) Wildcard grant fails in mysql_grants.present in mysql 8.x (refs: #51152)
- **PR #51152:** ([garethgreenaway](#)) [2018.3] Fixes to mysql module to handle ALL PRIVILEGES grant @ 2019-01-12 03:17:15 UTC
 - 8bb589d Merge pull request #51152 from garethgreenaway/50433_handle_grants_better
 - f7caa4d Fixing lint
 - e8c8c0f Adding some tests to ensure "ALL PRIVILEGES" is handled correctly in 8.0 and 5.6
 - b4bfd9f Add additional grants. Adding logic to handle when ALL or ALL PRIVILEGES is passed for the grant, including some logic to handle the fact that the grants are split when show grants is run for a particular user.
 - * 74edfd9 Fix pylint
 - * 81a3d47 Merge branch '2017.7' into '2018.3'
 - * 8a76a19 Merge pull request #50858 from jasonarewhy/bugfix-2017.7/ubuntu-networking-searchdomain
 - 3395a3d Merge branch '2017.7' into bugfix-2017.7/ubuntu-networking-searchdomain
 - 69d25aa update debian_ip test
 - a6b896c get searchdomain in Ubuntu 12+
- **ISSUE #50849:** ([Super5hoot](#)) MySQL version needs to be decoded (refs: #51133)
- **PR #51133:** ([Super5hoot](#)) Fixes mysql server version comparison. @ 2019-01-10 16:45:38 UTC
 - dda1ebb Merge pull request #51133 from Super5hoot/issue-#50849
 - ec14e13 Fixes mysql server version comparison.

- **PR #50878:** (max-arnold) Fix profile outputter docs @ 2019-01-08 18:32:40 UTC
 - 9d4321d Merge pull request #50878 from max-arnold/output-docs
 - d7403da Fix profile outputter docs
- **PR #51076:** (OrangeDog) Typos in index_template_present documentation @ 2019-01-08 18:25:20 UTC
 - ce87504 Merge pull request #51076 from OrangeDog/patch-1
 - 568e4fb Revert add -> check
 - 4d7ebe7 Typos in index_template_present documentation
- **PR #51081:** (garethgreenaway) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2019-01-07 20:34:16 UTC
 - d08abf4 Merge pull request #51081 from garethgreenaway/merge-2018.3
 - 027804a Merge branch '2018.3' into merge-2018.3
- **ISSUE #50966:** (klafkoff) 2018.3.3 missing a patch to salt/modules/nxos.py (refs: #51080)
- **PR #51080:** (garethgreenaway) [2018.3] Fix to nxos module @ 2019-01-07 18:07:25 UTC
 - 335088b Merge pull request #51080 from garethgreenaway/50966_nxos_ensure_kwargs_list
 - 230a66b Merge branch '2018.3' into 50966_nxos_ensure_kwargs_list
 - 629dc25 Ensure kwargs is a list before we attempt to loop through. Similar fix to <https://github.com/rallytime/salt/commit/430c462f34eb4eedf2384e06fbee8dc19b8026f6> in the proxy module.
 - * a20791b Merge branch '2018.3' into merge-2018.3
- **PR #51079:** (terminalmage) Fix shadow.set_date/shadow.set_expire on F28 @ 2019-01-07 16:28:36 UTC
 - c47b646 Merge pull request #51079 from terminalmage/salt-jenkins-1238
 - ccd5c15 Fix shadow.set_date/shadow.set_expire on F28
- **ISSUE #47043:** (xBytez) lsattr slowing down archive.extracted (refs: #51044)
- **PR #51044:** (terminalmage) archive.extracted: Don't run lsattr when enforcing user/group ownership @ 2019-01-03 19:26:03 UTC
 - aeeb047 Merge pull request #51044 from terminalmage/issue47043
 - 787b79a archive.extracted: Don't run lsattr when enforcing user/group ownership
- **ISSUE #50964:** (gtmanfred) Add a long description to setup.py for the new pypi.org (refs: #51031)
- **PR #51034:** (garethgreenaway) Back-port PR #51031 to 2018.3 @ 2019-01-03 15:42:22 UTC
 - **PR #51031:** (waynew) Set long_description (refs: #51034)
 - 04fdae5 Merge pull request #51034 from garethgreenaway/bp-51031
 - cd310c2 Set long_description
- **ISSUE #50634:** (marek-obuchowicz) Debian pkg.managed gpg/tty issue (refs: #50972)
- **PR #50972:** (pirogoeth) Use gpg's -batch in apt-key adv during repo key add @ 2019-01-03 02:34:13 UTC
 - 4685e0e Merge pull request #50972 from pirogoeth/sjohn/2018.3-apt-key-batch
 - cd3d755 Merge branch '2018.3' into sjohn/2018.3-apt-key-batch
- **PR #51028:** (whytewolf) AIX lsattr fix for file module. @ 2019-01-03 01:52:33 UTC
 - 44bc862 Merge pull request #51028 from whytewolf/aix_lsattr_fix
 - 1b733c6 Set lsattr functions to return None if `salt.utils.platform.is_aix` returns true.

- 7410008 Merge branch '2018.3' into sjohn/2018.3-apt-key-batch
- **PR #51018:** (garethgreenaway) [fluorine] Merge forward from 2017.7 to 2018.3 @ 2019-01-01 23:11:02 UTC
 - b4774a8 Merge pull request #51018 from garethgreenaway/merge-2018.3
 - * 773bf31 Use gpg's -batch in apt-key adv during repo key add
 - 9386aab Merge branch '2017.7' into merge-2018.3
 - 998feca Merge pull request #51030 from terminalmage/issue38502
 - 6dbd81f Add unit test to ensure we don't diff bare repos
 - 12f7583 Merge branch '2017.7' into merge-2018.3
 - 4529150 Merge pull request #50977 from rallytime/config-docs
 - * 43c39e7 Add documentation to master config docs for job_cache_store_endtime
 - * 887cd07 Add some salt-api options to the master config docs
 - * 0d49746 Fix some formatting in master config docs
 - 409594b Merge pull request #50991 from twangboy/requests_2017.7
 - * 32b9d2a Update requests for osx
 - * 413dc72 Merge branch '2017.7' of <https://github.com/saltstack/salt> into requests_2017.7
 - e053074 Merge pull request #50983 from garethgreenaway/bp-50885
 - * 09a8e6e fix a del in cloud vmware that crash when the key isn't there
 - * 4196690 Update requests to 2.21.0
 - * 23f78b0 Upgrade requests to 2.20.1
- **PR #50990:** (twangboy) Requests 2018.3 @ 2018-12-31 20:19:01 UTC
 - c53723a Merge pull request #50990 from twangboy/requests_2018.3
 - e8b9233 Update requests on osx
 - b22856f Update requests to 2.21.0
 - 242389b Merge branch '2018.3' of <https://github.com/saltstack/salt> into requests_2018.3
 - 0d4b799 Upgrade requests to 2.20.1
- **PR #51004:** (twangboy) Add tests for the win_wusa state and module @ 2018-12-31 20:03:30 UTC
 - cecd108 Merge pull request #51004 from twangboy/win_wusa
 - 0e92528 Merge branch '2018.3' into win_wusa
 - c0d2495 Fix lint, add test docs
 - 1750270 Add state tests for win_wusa
 - 6285b64 Update win_wusa and add tests
- **PR #51014:** (madrison) ssh module: missing space in error message @ 2018-12-31 19:59:19 UTC
 - 3e0515b Merge pull request #51014 from madrison/patch-1
 - ab980fb ssh module: missing space in error message
- **PR #50883:** (terminalmage) Backport #49622 to 2018.3 branch @ 2018-12-31 19:58:11 UTC
 - **PR #49622:** (angeloudy) fix command line options (refs: #50883)

- 582d6b4 Merge pull request #50883 from terminalmage/bp-49622
- c93dbfa Update archive.py
- 925a9c9 Update archive.py
- ed2bed3 fix command line options
- **PR #50945:** (garethgreenaway) [2018.3] Merge forward from 2017.7 to 2018.8 @ 2018-12-30 00:05:47 UTC
 - fd9711b Merge pull request #50945 from garethgreenaway/merge-2017.7
 - 43b3fa4 Merge branch '2018.3' into merge-2017.7
- **ISSUE #50854:** (Ch3LL) [fluorine] windows stops when cannot connect to master (refs: #50855)
- **PR #51006:** (dwoz) Let minions try to connect to master indefinitely @ 2018-12-28 21:10:39 UTC
 - **PR #50855:** (dwoz) Let minions try to connect to master indefinitely (refs: #51006)
 - b8615e1 Merge pull request #51006 from dwoz/backport_50855
 - 5563631 Let minions try to connect to master indefinitely
- **ISSUE #50989:** (mpx8701) SLS error (An exception occurred in this state: Traceback) (refs: #51005)
- **PR #51005:** (garethgreenaway) [2018.3] Fixes to junos state module @ 2018-12-28 20:51:31 UTC
 - cfed697 Merge pull request #51005 from garethgreenaway/50989_fixing_junos_state_arguments
 - d4ac180 Fixing the arguments accepted by cli function in the junos state module which are passed along to the cli function in junos module, so they align.
 - 3cfa8e Merge branch '2018.3' into merge-2017.7
- **PR #50982:** (twangboy) Fix issue with LGPO when returning empty dict (2018.3) @ 2018-12-26 19:58:12 UTC
 - daa591b Merge pull request #50982 from twangboy/fix_lgpo_2018.3
 - d942934 Get rid of requests import (CaseInsensitiveDict)
 - * 6170fa5 Merge branch '2018.3' into merge-2017.7
- **ISSUE #46886:** (bbh-kmd) Unable to get salt-minion to call salt-call with alternate configuration (refs: #50959)
- **PR #50984:** (garethgreenaway) Back-port PR #50959 to 2018.3 @ 2018-12-26 19:29:54 UTC
 - **PR #50959:** (bbh-kmd) #46886: Use correct path to config_dir when running salt from alternate placement. (refs: #50984)
 - 110bc66 Merge pull request #50984 from garethgreenaway/bp-50959
 - 20fa5c9 Update sudo.py
- **PR #50958:** (bdrung) Fix twilio version checking @ 2018-12-25 10:46:15 UTC
 - 8fc89a0 Merge pull request #50958 from bdrung/fix-twilio
 - df8d7b9 Fix twilio version checking
 - * d89c9b5 Merge branch '2018.3' into merge-2017.7
- **ISSUE #50947:** (cachedout) Log full of IPv6 warnings (refs: #50962)
- **PR #50962:** (terminalmage) Remove redundant overrides for ip_address/ip_interface @ 2018-12-21 22:04:34 UTC
 - bb87822 Merge pull request #50962 from terminalmage/ipv6-warnings
 - 773b983 Merge branch '2018.3' into ipv6-warnings

- f3b1254 Remove redundant overrides for ip_address/ip_interface
 - * cea01e7 Updating valigdate_tgt to ensure tests pass.
 - * cdc7825 yet another lint fix.
 - * f44a87e One last lint fix.
 - * 45f363b Fixing various lint errors.
 - * 6a65bf9 Merge branch '2017.7' into merge-2017.7
 - * 747dd69 Merge pull request #50876 from terminalmage/issue50153
 - 676a12a Fix compound matching in eauth
 - * 07fca64 Merge pull request #50909 from damon-atkins/jenkins_pylint
 - da1fc32 change params.CHANGE_BRANCH to env.CHANGE_BRANCH
 - * e7f0ab6 Merge pull request #50873 from Ch3LL/bp-50740
 - 5fd9ed9 Merge branch '2017.7' into bp-50740
 - * 2f77b2d Merge pull request #50869 from garethgreenaway/50848_mysql_exception_test
 - 3767d4f Merge branch '2017.7' into 50848_mysql_exception_test
 - af3e145 Cleanup.
 - b85c5bf Adding a test to ensure exception handling is correct.
 - 4242e64 Merge branch '2017.7' into bp-50740
 - * a5caab7 Merge pull request #50872 from Ch3LL/bp-50864
 - fc9c64b fix typo in file.managed documentation
 - fd73f86 Catch UnicodeDecodeErrors in id verification
- **PR #50937:** (Ch3LL) Fix external_pillars documentation @ 2018-12-20 19:15:20 UTC
 - 49f2a35 Merge pull request #50937 from Ch3LL/pillar_doc
 - 1f01489 Fix external_pillars documentation
- **ISSUE #50919:** (dpkirchner) state.apply test documentation unclear (refs: #50940)
- **PR #50940:** (terminalmage) Fix confusing state module documentation @ 2018-12-20 18:29:26 UTC
 - 4213527 Merge pull request #50940 from terminalmage/issue50919
 - 3318927 Fix confusing state module documentation
- **PR #50929:** (twangboy) Fix `unit.utils.test_lgpo_netsh` on Windows for Py3 (2018.3) @ 2018-12-20 17:50:37 UTC
 - 421e4f4 Merge pull request #50929 from twangboy/fix_test_lgpo_netsh_2018.3
 - 01f9beb Fix failing lgpo netsh tests
- **PR #50917:** (dwoz) Cherry pick test fixes from fluorine @ 2018-12-19 17:56:19 UTC
 - b08b7e1 Merge pull request #50917 from dwoz/test_fixes
 - 16d10fb Fix linter warnings
 - b22f827 Increase and standardize ShellCase timeouts
 - a5c8c18 Do not pass unicode in environment
- **PR #50913:** (bdrung) Fix documentation build @ 2018-12-19 16:03:55 UTC

- 59df6b4 Merge pull request #50913 from bdrung/fix-doc-build
- ecdb452 doc: Introduce MOCK_MODULES_MAPPING
- cf64824 doc: Move mock_decorator_with_params up
- 08ef669 doc: Address pylint issues in conf.py
- 67a3e37 doc: Mark preamble variable as raw string
- b1e6080 doc: Fix reference to salt executors
- e48b324 doc: Replace xa0 (non-breaking space) by spaces
- b973e7a doc: Fix iterating over the Mock object in Python 3
- bb29948 doc: Do not mock non-existing __mro_entries__ attribute
- e6cf3c4 Do not mock json when building the documentation
- 4acaf45 Fix sphynx error about tornado.version_info
- **ISSUE #50892:** (cruscio) archive.extracted source_hash is case sensitive (refs: #50906)
- **PR #50906:** (garethgreenaway) [2018.3] Ensure source_hash returned from get_source_sum is lowercase. @ 2018-12-19 04:22:23 UTC
 - f4e6b88 Merge pull request #50906 from garethgreenaway/50892_archive_extracted_source_hash_case_sensitive
 - bcf8f06 fixing lint
 - 543ec7b Ensure source_hash returned from get_source_sum is lowercase.
- **PR #50867:** (Ch3LL) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-12-14 21:32:23 UTC
 - b95b44f Merge pull request #50867 from Ch3LL/merge-2018.3
 - 512293f Remove dunder_dictionaries.rst. Was added to modules/developing.rst
 - 89b4e09 Merge branch '2017.7' into '2018.3'
 - 858cfac Merge pull request #50863 from 5uper5hoot/fix-issue-50848
 - * c90d201 Unpack exception args in python3 compatible way.
 - e28b2ba Merge pull request #50752 from kstreee/fix-memory-leak
 - * 98cc63a Fixes a memory leak un-cleared stream connections.
 - 1f57602 Merge pull request #50837 from Ch3LL/pyren_doc
 - * a873019 Clarify py render docs when data context is available
 - fdff675 Merge pull request #50844 from twangboy/fix_grains
 - * 473f4d7 Fix some unrelated lint
 - * fd1a072 Fix grains for future windows releases
 - 32dfaba Merge pull request #50816 from dubb-b/2017.7
 - * dc7ff48 Pinning bootstrap to the tagged version of salt.
 - b1e5f3f Merge pull request #50709 from mattLLVW/service_unmask
 - * b199255 Merge branch '2017.7' into service_unmask
 - * 38addd1 salt style guideline
 - * 823c4ad Implement unmask in states.services

- * 91a6bf5 Functional unmask, must add tests
- e4e9563 Merge pull request #50633 from astronouth7303/loader-docs
 - * 03e3168 whitelist_modules is linked via enable_whitelist_modules for some reason? idk
 - * 5ca1f8e Typos
 - * 7cb1a87 Add a quick index of loader-related settings
 - * 318ca48 Make a note to not import modules
 - * 6294658 Merge remote-tracking branch 'origin/2017.7' into loader-docs
 - * 678958e Editing
 - * 9d59629 Merge branch '2017.7' into loader-docs
 - * 374d0e9 Finish the last sections
 - * 98da110 Migrate Dynamic Module Distribution to Modular Systems.
 - * 1bdd49d Add more links and write some system summaries
 - * bd3796a Update TOC
 - * 3a9ab1b Merge dunderers into developing, expand to cover all dunderers.
 - * d06739a Add short writeups for a bunch of systems.
 - * 705e7e4 Add a bunch of cross linking
 - * 40f9b16 Add missing module type sections
 - * 172d8c2 Refactor headings
 - * 53154a0 Oops, missed that
 - * 0dcd341 Possible horrific use of toctrees? maybe
 - * bed3509 Refactor, add a TOC
 - * f647c1d Fill in some missing modules
 - * 9d4b596 Merge branch '2017.7' into loader-docs
 - * 26468df Add missing blank line
 - * 205fea9 Some more revising
 - * d4a8f7e Remove some code from some links
 - * 65e4199 I feel like it should be up there
 - * d44f5ce Rephrase footnote
 - * 125e46e Add section on how modules get loaded, including giant table of names
 - * 5bfc6c6 Update reference to modules/index
 - * 4b096c1 Move all the module-development documentation into a single folder
- dcdb9b2 Merge pull request #50750 from bewing/pepa12
 - * 9931a41 Fix last key detection in pepa key_value_to_tree
- cb85d5d Merge pull request #50733 from marmarek/patch-3
 - * 1011421 Report salt-call exit code from ssh_py_shim.py
- b086ff3 Merge pull request #50756 from GwiYeong/local-client-fix

- * c488092 fix local client missing minion return
- **ISSUE #50850:** (akrus) key_cache: sched prints error messages in logs (refs: #50859)
- **PR #50859:** (garethgreenaway) [2018.3] Fixes for key_cache and python3 @ 2018-12-13 23:57:07 UTC
 - 216fa14 Merge pull request #50859 from garethgreenaway/50850_python_key_cache_file_binary
 - ebc9a01 When reading and writing the key cache file, when using Python3, ensuring the file is read & written in binary mode.
- **PR #50828:** (twangboy) Fix issues with lgpo state and util @ 2018-12-13 16:37:33 UTC
 - 6b45aad Merge pull request #50828 from twangboy/fix_lgpo
 - 05baa95 Merge branch '2018.3' into fix_lgpo
- **PR #50843:** (bdrung) Fix RemoveCapacityFromDiskgroupTestCase require pyvmomi @ 2018-12-12 20:36:32 UTC
 - 6ea059d Merge pull request #50843 from bdrung/fix-tests
 - 0d00ae4 Fix RemoveCapacityFromDiskgroupTestCase require pyvmomi
- **ISSUE #50829:** (ghost) process.absent UnicodeDecodeError (refs: #50839)
- **PR #50839:** (terminalmage) Fix UnicodeDecodeError in ps module @ 2018-12-12 19:59:12 UTC
 - 14d7d1d Merge pull request #50839 from terminalmage/issue50829
 - 3a3d9b7 Ensure that unicode types returned from compatibility funcs
 - 1a00abc Add unit test for _get_proc_cmdline
 - 9eaa2ed Remove extraneous comments
- **ISSUE saltstack/salt#49393:** (Poil) file.directory recurse not always changing perms (refs: #50653)
- **PR #50653:** (lexvella) Check file_mode in file.directory and _check_directory @ 2018-12-12 16:30:52 UTC
 - 264a042 Merge pull request #50653 from lexvella/2018.3
 - 4ea9386 Merge branch '2018.3' into 2018.3
 - 42e4ab3 Merge branch '2018.3' into 2018.3
 - 79f6b42 Check file_mode in file.directory and _check_directory
 - * 1233e2b Fix some lint
 - * 56c0e55 Fix issues with lgpo state and util
- **ISSUE #45026:** (angeloudy) bytes error in mysql module (refs: #50823)
- **PR #50823:** (terminalmage) salt.modules.mysql: Decode fetch results before making string comparisons @ 2018-12-11 21:04:41 UTC
 - a8ad17a Merge pull request #50823 from terminalmage/issue45026
 - ec8e116 Decode fetch results before making string comparisons
- **PR #50817:** (dubb-b) Adding git 'v' to the bootstrap options @ 2018-12-11 17:28:10 UTC
 - e31e731 Merge pull request #50817 from dubb-b/2018.3
 - 48fc01f Adding git 'v' to the bootstrap options
- **PR #50780:** (twangboy) Add netsh mechanism in the LGPO module @ 2018-12-10 22:09:20 UTC
 - 9b6b39c Merge pull request #50780 from twangboy/lgpo_netsh

- 5eea728 Fix some lint
- f077783 Add some tests
- 2dde12a Fix one more lint item
- c55b7b4 Fix some lint
- 1247598 Add more policies
- b2b9795 Fix overly long lines
- f18d1aa Add additional policies that use netsh
- cb50648 Add versionadded tags
- 00cbf26 Add the netsh mechanism to the lgpo module
- **PR #50783:** (sathieu) gitfs/git_pillar: Fix UnicodeDecodeError while cleaning stale refs @ 2018-12-10 20:34:53 UTC
 - 0351296 Merge pull request #50783 from sathieu/gitfs_stalerefs_unicode
 - ef160a6 gitfs/git_pillar: Fix UnicodeDecodeError while cleaning stale refs
- **ISSUE #45867:** (Nick2253) Icinga2 Module uses incorrect paths (refs: #50615)
- **PR #50765:** (ClaudiuPID) Fix icinga2 cert path @ 2018-12-10 18:10:24 UTC
 - **PR #50615:** (ClaudiuPID) Fixes icinga2 certs path for newer versions 2.8+ (refs: #50765)
 - deadf9c Merge pull request #50765 from ClaudiuPID/fix-icinga2-cert-path
 - ce1842e Merge branch '2018.3' into fix-icinga2-cert-path
 - 31878d5 Pylint fixes
 - 47bfba1 Migrated to cmd.run_all and tested on working srv
 - a1dddce Fixes icinga2 certs path for newer versions 2.8+
- **PR #50692:** (terminalmage) Update a couple test modules to use with_tmpdir/with_tempfile decorators @ 2018-12-10 17:24:02 UTC
 - 9f8289b Merge pull request #50692 from terminalmage/update-tests
 - 36a4a1a Merge branch '2018.3' into update-tests
 - be14517 Make x509 tests use tempfiles instead of hard-coding them
 - a394cd7 Update file integration tests to use decorator for tempdirs
- **ISSUE #32245:** (tkwilliams) git_pillar should permit automatic mapping of environment to branch a-la gitfs (refs: #50768)
- **PR #50768:** (sathieu) git_pillar: Add support for all_saltenvs parameter @ 2018-12-10 16:39:37 UTC
 - 3a71567 Merge pull request #50768 from sathieu/git_pillar_all_saltenvs
 - e971412 git_pillar: Add support for all_saltenvs parameter
- **ISSUE #48801:** (dstoliker) salt.states.user.present - mindays, warndays, and inactdays won't return to salt's default values (refs: #50796)
- **PR #50796:** (dwoz) Fix #48801 min, max, inact, and warn changes @ 2018-12-10 16:30:14 UTC
 - 12a8447 Merge pull request #50796 from dwoz/issue48801
 - 6b95223 fix linter errors

- 87a04df Fix #48801 min, max, inact, and warn changes
- ISSUE #46388: (dynek) IPv4 & v6 network configuration on Debian (refs: #49355)
- ISSUE #40262: (pjediny) Salt enforces configuration from /etc/network/interfaces.d/* to /etc/network/interface (refs: #49355)
- ISSUE #38672: (valentin2105) IPv6 Network states is incomplete (refs: #49355)
- PR #50804: (Ch3LL) Back-port #49355 to 2018.3 @ 2018-12-10 16:21:31 UTC
 - PR #49355: (MTecknology) Improve management of interfaces in debian-based distributions (refs: #50804)
 - PR #46980: (MTecknology) Fix broken rendering debian_eth.jinja. (refs: #49355)
 - b266e8b Merge pull request #50804 from Ch3LL/bp-49355
 - d34eade Use a temp file instead of /etc/network/interfaces for unit tests.
 - 622c354 Support reading multiple addresses from interface files.
 - 15c34fe Support unicode in space-delimited list; fixes unit tests in py2.
 - 0b59561 Added documentation about debian interfaces.d/*. (Fixes: #40262)
 - 1b096fb Removed python lint.
 - 6e41225 Finished adding support for multiple IP addresses.
 - 4c7df5f Cleaned up documentation/examples in states.network:
 - 601f434 Added support for -ipaddrs and -ipv6ipaddrs to modules.debian_ip().
 - 638f899 Added support for loopback devices to modules.debian_ip(). (Fixes: #38672)
 - cf61c8d Added a bunch of unit tests for modules.debian_ip.build_interface().
 - b905cf6 Added support for dns_{nameservers,search} being a list or string.
- PR #50767: (dwoz) Make sure ldap passwords are honored @ 2018-12-05 22:59:17 UTC
 - dc9414c Merge pull request #50767 from dwoz/ldap_no_pass
 - 67aa591 Fix linter errors
 - be3945a Remove crufty import
 - 91f50a4 Add more ldap auth tests for ZD-2993
 - 055a8d5 Make sure ldap passwords are honored
- ISSUE #50364: (sathieu) git_pillar mountpoint ignores the root parameter (refs: #50626)
- PR #50626: (sathieu) git_pillar: Allow root and mountpoint parameters together @ 2018-12-05 17:46:59 UTC
 - 60aa0d5 Merge pull request #50626 from sathieu/git_pillar_mountpoint_and_root
 - 5423c27 git_pillar: Allow root and mountpoint parameters together
- PR #50745: (bbinet) Fix grafana dashboard updating when nothing has changed @ 2018-12-04 19:26:32 UTC
 - c02387e Merge pull request #50745 from bbinet/fix-grafana-dashboard-update
 - 7019d47 Fix grafana dashboard updating when nothing has changed
- PR #50737: (garethgreenaway) [develop] Merge forward from 2017.7 to 2018.8 @ 2018-12-04 16:02:13 UTC
 - ae81498 Merge pull request #50737 from garethgreenaway/merge-2017.7
 - fde8db5 Merge branch '2017.7' into merge-2017.7

- 246c055 Merge pull request [#50718](#) from dwoz/run_run_timeout
 - * ecd8486 Honor run_run timeout for shell tests
- 979b3aa Merge pull request [#50702](#) from damon-atkins/jenkins_pylint
 - * 5936066 ensure archiveArtifacts are always collected. Use CHANGE_BRANCH to detect merge-forward
- 22acaaa Merge pull request [#50632](#) from astronouth7303/loader-exception-handler
 - * 0f72815 Merge branch '2017.7' into loader-exception-handler
- d9e7be1 Merge pull request [#50670](#) from damon-atkins/jenkins_pylint
 - * b6d1605 ci/lint corrected filenames and test condition on full lint Also fix CODEOWNER team name
 - 194801a Merge branch 'loader-exception-handler' of github.com:astronouth7303/salt into loader-exception-handler
 - dadeb0d Merge branch '2017.7' into loader-exception-handler
 - 8697744 Use single quotes per style guide
 - 07868f1 Improve logging output
 - fb05bd5 Eat an exception from an entry point instead of letting it kill the system.
- **PR #50685:** (Ch3LL) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-11-30 18:46:07 UTC
 - edaa9fe Merge pull request [#50685](#) from Ch3LL/merge_2018.3
 - d46aff0 Merge branch 2017.7 into 2018.3
 - * 6dc3afc Merge pull request [#50672](#) from garethgreenaway/49691_file_replace_search_only_return_false
 - 7e7df06 lint
 - 6b73c76 When using file.replace, with the search_only option, if the pattern does not exist in the file then we should return False.
 - * 1236b51 Merge pull request [#50659](#) from garethgreenaway/49954_gem_installed_less_than_greater_than_support
 - 0ec8bcf When using the gem installed state, when passing a version that includes greater than or less than symbols, ensure that the installed versions meets that requirement.
 - * 6317f3a Merge pull request [#50583](#) from damon-atkins/jenkins_pylint
 - 2d1f51c Fix lint only changes, full lint on merge forwards - lint only changes previous diff picked up out of data files, when the branch was out of date. - full limit on merge forward to pick up changes in the lint checks between versions. - update CODEOWNERS for .ci/*
 - * 15bf09a Merge pull request [#50605](#) from Oloremo/fix-supervisord-dead-state-idempotency
 - ba3f281 Merge branch '2017.7' into fix-supervisord-dead-state-idempotency
 - cf9ab84 Merge branch '2017.7' into fix-supervisord-dead-state-idempotency
 - af386a2 Fixed the supervisord.dead state idempotency
- **ISSUE #50016:** (abednarik) State augeas.change do not update config file (refs: [#50690](#))
- **PR #50690:** (garethgreenaway) [2018.3] fixes to augeas_cfg module @ 2018-11-30 18:44:42 UTC
 - 7cb2405 Merge pull request [#50690](#) from garethgreenaway/50016_ensure_path_is_str
 - cec7cb4 Older versions of python-augeas need the path passed to aug.match to be a string.

- **ISSUE #49392:** (Poil) hosts not replacing existing entry (refs: #50657)
- **PR #50657:** (terminalmage) Rewrite host.present state to allow for removal of entries not matching IP @ 2018-11-29 17:58:40 UTC
 - a5c7639 Merge pull request #50657 from terminalmage/issue49392
 - 2ddb587 Add release notes for new "clean" option
 - e4946f9 Rename "remove" argument to "clean"
 - 7fd3bce Add remove parameter to host.present state
 - 2671a30 Add unit tests for host.present state
 - 30f1b85 Remove non-matching IPs from hosts file
 - ec297a0 Performance improvements in hosts module
 - d1c2038 Add generic ip address validation function
 - 9f54720 Add ignore ability to process_read_exception
- **ISSUE #48759:** (MyIgel) acme.cert: Fail to update certificate after adding aliases / missing `-expand` (refs: #50683)
- **PR #50683:** (garethgreenaway) [2018.3] Fixes to acme module when adding aliases to existing certificate @ 2018-11-29 17:46:54 UTC
 - b604785 Merge pull request #50683 from garethgreenaway/48759_adding_aliases_include_expand
 - 3940a0f When adding alises to an existing Certbot certificate, if we see a message about expanding in the stderr returned from `cmd.run_all` we should rerun the cmd with `-expand` included.
- **ISSUE #50406:** (glkappe) salt-ssh can't use Mongo returner (refs: #50664)
- **PR #50664:** (garethgreenaway) [2018.3] Fix to logic for configuring returners @ 2018-11-28 05:24:30 UTC
 - 15f9ae4 Merge pull request #50664 from garethgreenaway/50406_salt_ssh_returner_configuration
 - 3525411 When pulling values out of the available configuration for returners we should always default to using keys for those returners, eg. `mongo.user` for the username. Otherwise in certain situations, eg. when using salt-ssh we will end up with the wrong value for the user.
- **PR #50652:** (twangboy) Fix `unit.utils.test_mac_utils` on Windows @ 2018-11-27 20:45:41 UTC
 - afbcf03 Merge pull request #50652 from twangboy/fix_test_mac_utils
 - c4cb729 Fix path issues with the tests
- **PR #50640:** (garethgreenaway) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-11-26 22:33:22 UTC
 - 61a824f Merge pull request #50640 from garethgreenaway/merge-2017
 - 409c98f Merge branch '2018.3' into merge-2017
- **ISSUE #50403:** (prometheanfire) tornado 5.1.1 is not co-installable with salt on python2.7 (refs: #50639)
- **PR #50639:** (dwoz) Handle pipenv like version restrictions @ 2018-11-26 19:42:11 UTC
 - 20a2de3 Merge pull request #50639 from dwoz/pipfix
 - 9c6f653 Handle pipenv like version restrictions
 - * fced78b lint

 - * b2cf134 Merge pull request #50463 from dwoz/zmqpubserv

- a289e3c Merge branch '2017.7' into zmqpubserv
- * 6679242 Merge pull request #50590 from garethgreenaway/bp-50333
 - 1f5aa4b pkg.installed currently fails when sources is used along with hold: True. This was due to a change in #48426 that swapped out sending the pkgs variable for the desired variable instead. This caused problems with pkg.hold because desired and sources are always populated, and pkg.hold can only include one or the other. This change just includes desired in the call to pkg.hold since desired has the same value for sources.
 - 39e811b Add issue url to tests
 - c4d7a43 Add debug log when connecting
 - 4f81432 Set subscribe via sockopt for better compatibility

 - 7dd3438 Merge pull request #50456 from terminalmage/issue50218
 - 6143408 Add unit test for TimedProc regression
 - e234abd Add support for list of commands in git states' onlyif/unless
 - cbf05c8 TimedProc: Don't assume args is a string
 - 87de250 Exit gracefully when mod_run_check raises exception
- **PR #50455: (dubb-b)** Adding the released version as the bootstrap minion. @ 2018-11-12 22:52:53 UTC
 - d8514e6 Merge pull request #50455 from dubb-b/2018.3
 - fb61482 adding git
 - 181b8a4 removing stable
 - fc93ad6 Adding the released version as the bootstrap minion.
- **PR #50483: (rallytime)** Back-port #50272 to 2018.3 @ 2018-11-12 22:45:05 UTC
 - **PR #50272: (jyurdal)** Fix out of order docker Env comparison (refs: #50483)
 - cfb3351 Merge pull request #50483 from rallytime/bp-50272
 - 0f02da7 Remove unnecessary u prefix from string literals
 - fc26ae8 Add unit test for comparing containers with the same env vars
 - cf7cb4b extra blank line after function definition(pylint)
 - 1de9ce3 Compare sorted docker environment
- **PR #50481: (rallytime)** [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-11-12 22:44:15 UTC
 - 360ae6a Merge pull request #50481 from rallytime/merge-2018.3
 - 1517bb3 Update old utils paths to use new paths
 - d8e7c47 Merge branch '2017.7' into '2018.3'
 - e5f97cd Merge pull request #50467 from dwoz/test_kitchen_up
 - * 8c5e93e Use patched version of test-kitchen until next release
 - b16ff9c Merge pull request #50469 from dwoz/minion_timeout_test
 - * 57f702d Fix linter warning

- * 686153a Fix up integration.minion.test_timeout
- 45b438e Merge pull request #50470 from dwoz/set_time_flaky
 - * 794ba17 Reset date and time after changing
- c85561e Merge pull request #50442 from rallytime/replace-docbanner
 - * 193325d Update docbanner hyperlink
- 7200568 Merge pull request #50439 from rallytime/bootstrap-contributing-docs
 - * d2158aa Add bootstrap section to contributing docs
- cca7a36 Merge pull request #50441 from rallytime/replace-docbanner
 - * 2af92bd Update SaltConf doc banner
- 1e72d20 Merge pull request #50414 from flassman/backmerge-for-typeerror-windows-python3
 - * 20fff15 use exc.winerror not exc[0] to avoid python3 TypeError
- 93095cb Merge pull request #50415 from flassman/pass-cwd-to-runas_system
 - * 0113137 cwd needs to be passed from runas() to runas_system()
- ISSUE #50461: (absolutejam) elementaryOS 'pkg' __virtual__ returned false (refs: #50468)
- PR #50468: (garethgreenaway) [2018.3] Adding elementary override to grains/core.py @ 2018-11-12 16:41:57 UTC
 - 3aaad17 Merge pull request #50468 from garethgreenaway/50461_fix_elementary_os_family_grain
 - 77e8dcc On later versions of elementary, the os_family is being populated as elementary. In order for the aptpkg module to function, we need to override is to be Debian.
- ISSUE #50311: (marek-obuchowicz) pkg.installed state fails even though it succeeded (refs: #50590, #50333)
- ISSUE #46689: (mxork) pkg.installed: hold: True not applied to a package which is already installed. (refs: #48426)
- PR #50333: (garethgreenaway) [2018.3] Fix to pkg.installed for sources and hold: True (refs: #50590) @ 2018-11-08 18:02:33 UTC
 - PR #48426: (garethgreenaway) [2017.7] fixes to states/pkg.py (refs: #50333)
 - d9179fb Merge pull request #50333 from garethgreenaway/50311_pkg_installed_fails_sources_hold
 - 7bc9b3d Merge branch '2018.3' into 50311_pkg_installed_fails_sources_hold
 - 6e96728 pkg.installed currently fails when sources is used along with hold: True. This was due to a change in #48426 that swapped out sending the pkgs variable for the desired variable instead. This caused problems with pkg.hold because desired and sources are always populated, and pkg.hold can only include one or the other. This change just includes desired in the call to pkg.hold since desired has the same value for sources.
- PR #50434: (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-11-08 17:40:39 UTC
 - 193c80a Merge pull request #50434 from rallytime/merge-2018.3
 - 83dfbb2 Merge branch '2017.7' into '2018.3'
 - * ef4509e Merge pull request #50370 from dwoz/pubd_msg_logs
 - 58ced12 log jid to payload size
 - 3c537b5 Log message flow to publish daemon

- **PR #50417:** (meaksh) Get the right target when using `__env__` on git ext_pillar to avoid merging problems @ 2018-11-08 17:07:03 UTC
 - 73ce80f Merge pull request #50417 from meaksh/2018.3-fix-git_pillar-__env__-solving-for-merging
 - 71af32d Remove unicode references
 - b7af5e5 Test git ext_pillar across multiple repos using `__env__`
 - 59894e2 Resolve target branch when using `__env__`
- **ISSUE #50292:** (dstoliker) sysctl in test=True mode results in [ERROR] Could not open sysctl file (refs: #50423)
- **PR #50423:** (garethgreenaway) [2018.3] Fixes to sysctl modules and state @ 2018-11-08 14:13:00 UTC
 - e9464c9 Merge pull request #50423 from garethgreenaway/50292_no_error_log_test_true
 - 95a7f12 Adding file check and empty list return to freebsd_sysctl.py
 - 469c090 Adding a check to see if the config file exists, if not then return an empty list so we get the would be changes. Adding a test for this functionality.
- **ISSUE #50420:** (weswhet) mac_system virtual function fails to load on 2018.3.3 (refs: #50421)
- **PR #50421:** (weswhet) fixing an issue on mac_system where the virtual function wouldnt load @ 2018-11-07 21:57:44 UTC
 - fccf875 Merge pull request #50421 from weswhet/fix-mac_system-loader
 - 042445d fixing an issue on mac_system where the virtual function wouldnt load
- **PR #50409:** (casselt) Fix test mode for mount state if device_name_regex is used. @ 2018-11-07 16:04:45 UTC
 - d2fc910 Merge pull request #50409 from casselt/mount-device_name_regex-test-mode-fix
 - 56d5a32 Fix test mode for mount state if device_name_regex is used.
- **PR #50383:** (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-11-06 15:51:53 UTC
 - c2fda9d Merge pull request #50383 from rallytime/merge-2018.3
 - e993692 Merge branch '2017.7' into '2018.3'
 - * cd7c95f Merge pull request #50128 from mgomersbach/fix-py3-reload-compat
 - e453e82 Satisfy pylint, use naming instead of W or E classification
 - d20581c Merge branch 'fix-py3-reload-compat' of github.com:mgomersbach/salt into fix-py3-reload-compat
 - 48c6a4f Merge branch '2017.7' into fix-py3-reload-compat
 - 5cd9741 Satisfy pylint
 - a2838db Satisfy pylint checks
 - 05c598c Fix import error by utilizing six and strict version spec
 - 95174e6 Merge branch '2017.7' into fix-py3-reload-compat
 - ab8b5b4 Update workaround to root of file
 - 37ab1f8 Update workaround to root of file
 - 253ab11 Workaround for py2 builtin, =<3.3 imp and >=3.4 libimport quirks, solves #50127
 - * aa6b149 Merge pull request #50354 from rallytime/version_num_docs
 - 0621f7d Add a few more feature release codenames to the version_numbers doc

- * 6472100 Merge pull request #50359 from dwoz/clitest
 - 18b5d43 Increase cli batch test timeout for increased reliability
- * 99c8f35 Merge pull request #50345 from dwoz/pub_d_logging
 - fd58523 Fix linter warnings
 - 5e1db3c Fix ZMQ PubServer daemon logging works on windows
 - 8899832 Configure logging for ZMQ PubServer daemon
- * 44f7af4 Merge pull request #50350 from dubb-b/2017.7
 - 346a831 Updating the AMI's and sizes for the test run.
- * b947a18 Merge pull request #50274 from rallytime/bp-41472
 - 0a1e607 When the minion key is denied by the master then exit status 77 (permission denied)
- * 4725acd Merge pull request #50195 from damon-atkins/jenkins_pylint
 - eb13407 capture some extra info
- * ab8e845 Merge pull request #50329 from twangboy/fix_cloud_winrm
 - cf5fb04 Check WinRM port before initiating connection
- * e535b38 Merge pull request #50252 from dwoz/backport_fs_fix
 - 59ac284 Do not allow age to be a negative number
- **ISSUE #49523:** (MTecknology) [salt-cloud] Non-ascii chars cause an exception in salt-cloud (refs: #50146, #50236)
 - PR saltstack/salt#50174: (rallytime) Back-port #50146 to 2018.3 (refs: #50231)
- **PR #50236:** (rallytime) Fix salt-cloud UnicodeEncodeError when writing to stdout @ 2018-11-05 22:04:18 UTC
 - PR #50235: (rallytime) Don't encode the return values in utils/vt.py (refs: #50236)
 - PR #50231: (rallytime) Revert "Back-port #50146 to 2018.3" (refs: #50236)
 - PR #50230: (rallytime) Add various ssh tests to the filemap for salt/utils/vt.py changes (refs: #50291, #50235)
 - PR #50174: (rallytime) Back-port #50146 to 2018.3 (refs: #50236)
 - PR #50146: (MTecknology) Improve handling of non-ascii characters in terminal output. (Fixes: #49523) (refs: #50235, #saltstack/salt#50174: '_', #50174, #50231, #50236)
 - 46c7dc2d Merge pull request #50236 from rallytime/fix-cloud-vt
 - c1984c9 Fix salt-cloud UnicodeEncodeError when writing to stdout
- **ISSUE #50062:** (whytewolf) max_event_size does not always trim large events. (refs: #50382)
- **PR #50382:** (garethgreenaway) [2018.3] Fix to utils/dicttrim.py to honor max_event_size with nested dictionaries @ 2018-11-05 20:04:06 UTC
 - ed4fa87 Merge pull request #50382 from garethgreenaway/50062_max_event_size_does_not_always_trim_large_events
 - 039f3d1 Increase limit for trimming.
 - 7f77bfe Adding test for utils/dicttrim.py
 - 9b55ac7 Adding _trim_dict_in_dict to utils/dicttrim.py to be called from trim_dict when data contains a nested dictionary. This will ensure that values will still be trimmed correctly.
- **PR #50387:** (rallytime) Back-port #50339 to 2018.3 @ 2018-11-05 20:03:15 UTC

- PR #50339: (bartlaarhoven) The driver requires dependency, not the other way around. (refs: #50387)
- 493d653 Merge pull request #50387 from rallytime/bp-50339
- a3f264d Lint: Add extra blank line
- bd18412 The driver requires dependency, not the other way around.
- ISSUE #41342: (githubcdr) beacons.state does not save as list (refs: #50347)
- PR #50347: (garethgreenaway) [2018.3] Fixes to beacon state module @ 2018-11-05 14:19:41 UTC
 - 3022b7d Merge pull request #50347 from garethgreenaway/41342_beacon_state_module_fixes
 - 8885d1f Merge branch '2018.3' into 41342_beacon_state_module_fixes
 - c2354a9 Fixing beacon state test. Adding a reset function to beacon module to clear out beacon configuration. Useful for tests runs to ensure bits are left over between runs.
 - 2390f47 Adding SaltReturnAssertsMixin back in
 - 677d090 Remove zookeeper reference.
 - f3dee43 Updating the beacon state module to ensure that the format of the beacon data that is being sent along to the beacon execution module is in the right format.
- ISSUE #41583: (seanjnkns) mount.swap for swap file test=True results wrong (refs: #50358)
- PR #50358: (garethgreenaway) [2018.3] fixes to function mount.swap in mount state @ 2018-11-05 14:16:50 UTC
 - 929525a Merge pull request #50358 from garethgreenaway/41583_mount_swap_test_true_wrong_results
 - b8ded8b Updating the swap function in the mount.swap function also check the device name when checking the fstab data. Updating tests to reflect new behavior.
 - * d07c84d reordering ret dictionary in load test to ascending order
 - * f704128 fixing type in load beacon module and adding option validators to config check function along with mock default values in test, fixes #48343
 - * 4114a4f fixing type in load beacon module and adding option validators to config check function along with mock default values in test
- ISSUE #49225: (onnodb) [win_lgpo] lgpo_set always reports failure; Registry.pol corruption (refs: #50006)
- ISSUE #48782: (mike2523) [win_lgpo] Causes corrupt Registry.pol file (refs: #50006)
- PR #50006: (lomerio) Correct more issues in lgpo @ 2018-11-02 16:32:29 UTC
 - 3ffa392 Merge pull request #50006 from lomerio/issue48782_2018.3
 - dc58252 update to use a single line if statement when dealing with prepended text
 - 0e011ad add runTest method to class for PY2
 - 377ec09 add a test for #47784
 - 0a14505 change backslashes in comment string to fix lint error
 - 02181d3 add fix/test for #50079
 - 05f2951 more lint fixes
 - 94b3335 lint fixes in test
 - 2a79626 update test to actually work
 - 42840ec add missing comma in function call

- c283f50 Log a warning message instead of an exception when a SID cannot be converted to a username (for user rights assignments)
- 271bd70 capture and print exception information
- bc94b8e update method for creating size field of `**delvals` items for py3 compatibility
- d9fe28a fix clobbering of `admx_search_results` which was keeping some policies from being properly detected
- PR #50340: (garethgreenaway) [2018.3] Backporting #48087 to 2018.3 @ 2018-11-01 18:15:37 UTC
 - PR #48087: (mat813) Fix patching `sysctl.conf` on FreeBSD. (refs: #50340)
 - 12de4b9 Merge pull request #50340 from garethgreenaway/backport_48087_to_2018_3
 - 56c87ff Backporting #48087 to 2018.3
- PR #50275: (rallytime) Back-port #49752 to 2018.3 @ 2018-11-01 16:50:17 UTC
 - PR #49752: (jodok) add support for `clonenum` parameter (refs: #50275)
 - 5e46434 Merge pull request #50275 from rallytime/bp-49752
 - e463d99 Merge branch '2018.3' into bp-49752
 - 1e10c6e add support for `clonenum` parameter
- ISSUE #47425: (raddessi) `states/netyang.managed` ignores models when passed as a kwarg (refs: #50301)
- PR #50316: (rallytime) Back-port #50301 to 2018.3 @ 2018-11-01 16:32:04 UTC
 - PR #50301: (tonybaloney) Fixes issues raised in #47425 for `states.netyang` (refs: #50316)
 - 51e333a Merge pull request #50316 from rallytime/bp-50301
 - 367b689 Merge pull request #32 from tonybaloney/bp50301
 - * 529687a update test assertions
 - ba526ad remove unused import
 - 220e57f create 2 simple unit tests for the `netyang` state module and fix issue in #47425
 - 20bf306 reproduce bug in 47425
- PR #50290: (twangboy) Fix `test_state` for Windows @ 2018-10-31 19:28:34 UTC
 - af1075b Merge pull request #50290 from twangboy/fix_test_state
 - 69c02fc Fix some lint and some typos
 - d184013 Fix typo
 - 92b5ea0 Create salt util that copies file security info
- ISSUE #50050: (terminalmage) Backport `runtests.py`'s `-from-filenames` functionality to 2018.3 branch (refs: #50308, #50291)
- PR #50291: (rallytime) Back-port #50230 to 2018.3 @ 2018-10-31 19:22:25 UTC
 - PR #50230: (rallytime) Add various ssh tests to the filemap for salt/utills/vt.py changes (refs: #50291, #50235)
 - 045d81c Merge pull request #50291 from rallytime/bp-50230
 - 1aae681 Merge branch '2018.3' into bp-50230
 - 1ef712a Add various ssh tests to the filemap for salt/utills/vt.py changes

- **PR #50315:** (rallytime) [2018.3] Merge forward from 2018.3.3 to 2018.3 @ 2018-10-31 14:16:34 UTC
 - 00437aa Merge pull request #50315 from rallytime/merge-2018.3
 - 422465e Merge branch '2018.3.3' into '2018.3'
 - 4d9e2a0 Merge pull request #50088 from vulnbe/fix-incorrect-id-handling-2018-3-3
 - 619f2f2 Fix incorrect id handling in file state
- **PR #50309:** (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-10-30 16:07:25 UTC
 - 84ee7a3 Merge pull request #50309 from rallytime/merge-2018.3
 - 381a59d Merge branch '2017.7' into '2018.3'
 - 11fa33e Merge pull request #50295 from dubb-b/remove-cloud-change
 - * 80982ad Removing an un needed change and maybe fixing the lint error
 - e00c507 Merge pull request #50287 from whytewolf/boto_vpc
 - * 5a39644 minor correction to boto_vpc.route_table_present example, subnet_names was on wrong indent level
 - 37ae06c Merge pull request #50280 from gtmanfred/2017.7
 - * 5808074 fix InstallRequirement.from_line for pip 18.1
- **ISSUE #50050:** (terminalmage) Backport runtests.py's `--from-filenames` functionality to 2018.3 branch (refs: #50308, #50291)
- **PR #50308:** (rallytime) Fix matcher grain file @ 2018-10-30 15:27:47 UTC
 - **PR #50182:** (terminalmage) Backport runtests.py modifications from develop to 2018.3 (refs: #50308)
 - b805bab Merge pull request #50308 from rallytime/test-fixes
 - f238522 Fix matcher grain file
- **PR #50270:** (terrible-broom) apt: speedup installing packages with `'>='` or `'<='` and reduced memory... @ 2018-10-30 13:24:36 UTC
 - 57fe6cd Merge pull request #50270 from terrible-broom/feature/apt-cache-show-instead-of-dump
 - 6c1b05a Lint: add extra blank line
 - a4df706 fix review notes
 - d059edd apt: speedup installing packages with `'>='` or `'<='` and reduced memory consumption
- **PR #50293:** (gtmanfred) update jenkins version for 2018.3 @ 2018-10-29 23:39:34 UTC
 - 6a65402 Merge pull request #50293 from saltstack/jenkins
 - fe6fbc4 update jenkins version for 2018.3
 - **PR saltstack/salt-jenkins#1182:** (gtmanfred) clean up salt.utils for using 2018.3.3 (refs: #50289)
- **PR #50289:** (gtmanfred) ignore empty line in localectl status output @ 2018-10-29 21:39:07 UTC
 - 935f181 Merge pull request #50289 from gtmanfred/2018.3
 - fb43061 fix test
 - 5eb0e37 add extra space to localemod test
 - e8dc8ba if line in output of localectl is empty, ignore it
- **PR #50276:** (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-10-29 19:05:15 UTC

- 10ba8b4 Merge pull request #50276 from rallytime/merge-2018.3
- f05abb0 Merge branch '2017.7' into '2018.3'
 - * 6ae8a33 Merge pull request #50281 from dubb-b/add_subnet
 - 4fdcf7c Lint: Add extra blank line
 - cebfd8a Fixing lint error
 - 0da6301 Merge branch '2017.7' of <https://github.com/saltstack/salt> into add_subnet
 - 2df6115 Adding subnetID so it knows the right VPC to build the node in.
- a0cfbdc Merge branch '2017.7' into '2018.3'
 - * b94a43b Merge pull request #50184 from ethanculler/fix-minion-return-exception-with-return
 - 283d41c Merge branch '2017.7' into fix-minion-return-exception-with-return
 - a4e54d7 Added handling for minion return exceptions containing the word "return"
 - * 6b009b4 Merge pull request #50258 from dubb-b/fix_cloud_ec2
 - 6a1e9f0 Adding securitygroupname as the config instead of securitygroup
 - * 3e1aac9 Merge pull request #50251 from gtmanfred/2017.7
 - 061e599 bump salt version to 2017.7.8
 - * fe9bc81 Merge pull request #50233 from Ch3LL/bp-50232
 - f83460d change order of search engine ids
 - bf3f217 Update search engine IDs for releases
- **PR #50282: (twangboy)** Fix *unit.beacons.test_diskusage* on Windows @ 2018-10-29 18:37:13 UTC
 - 0f1dc08 Merge pull request #50282 from twangboy/fix_test_diskusage
 - fd369dd Mock is_windows = False
- **PR #50182: (terminalmage)** Backport *runtests.py* modifications from develop to 2018.3 (refs: #50308) @ 2018-10-29 16:25:07 UTC
 - f7c2f04 Merge pull request #50182 from terminalmage/issue50050
 - 113d76e Revert "Move jinja templating tests alongside salt/utills/jinja.py's tests"
 - 3057ca4 Lint fix: add extra blank line in core.py
 - 8968f9d Revert "Rename test_map_conf test file to respect naming convention"
 - 85a9395 Remove saltclass pillar unit test for list expansion
 - 3d95673 Use get_config_dir() instead of self.config_dir
 - e8b3a62 Add init file back in for unit/client pkg
 - d527dd2 Rename states/test_libvirt.py into states/test_virt.py
 - ab4a670 Remove pgjsonb returner unit tests
 - 68ab3ee Remove "test_custom" from grains section of filename_map
 - 6814698 Remove test_error from scheduler tests
 - c55dcf0 Add init file back in for integration/cloud/clouds pkg
 - f485b4a enable testing only filemaps

- dfa05b9 Remove test files for beacons that don't exist in 2018.3
- 85612cf runtests.py: Fix IndexError in `-from-filenames`
- 25097f9 Make sure `from-filenames` intersect with `names-file`
- ed864ce runtests.py: Accept modified file list from a text file
- 059754c Add some doc tests to the filemap that should run on every PR
- b1ee2e5 Set a default value for the filename map path
- 5ea1024 Add documentation explaining naming convention for test files
- 8f790c0 Fix conflicting dict key in filename map
- f2e5512 Evan Moar Lint
- 65fef9a Moar Lint
- 39c2455 Lint
- dd20f12 Make sure we always run the module names test
- 2ac939e Add test to check test module names and make sure they match the naming convention
- 785d298 Add `integration.netapi.rest_tornado.test_app` to filename map
- 662ca0d Rename files to match naming convention
- 186d333 Add back changes lost in cherry-pick
- a236531 Add back test accidentally deleted when cherry-picking
- eaa4da3 Rename providers to clouds to respect naming convention
- 85b96de Rename some files to avoid them being identified as test modules
- bfb6015 Rename/consolidate `salt.utils` unit tests to conform to naming convention
- 84749dd Consolidate and move `salt-ssh` unit tests to proper location
- 71825a5 Consolidate and move loader tests to `test/unit/test_loader.py`
- 8326a09 Rename `test_map_conf` test file to respect naming convention
- 6d9c2eb Move jinja templating tests alongside `salt/utils/jinja.py`'s tests
- 1ef43a3 Add additional paths to the filename map
- 75e6731 Use the new helper to get the test mods
- c3dc8ec Add function to get all of the test modules
- c5593bc Rename `custom_grains.py` so it's not identified as a test module
- 330c211 Consolidate `saltclass` pillar unit tests into single module
- a642619 Rename test `pgjsonb` returner test file to match naming convention
- 6433c48 Don't import old module name
- a97e032 Move helper outside of for loop
- 3f1b6fd Add more unit test mapping
- ac3406d Fill out the filename map a bit
- 07d6f2a Enhancements to `-from-filenames`, `-filename-map` options
- b851a41 Don't run unit or integration tests unnecessarily

- 569276b Add an initial filename_map
- 44199b1 Add `-from-filenames` and `-filename-map` options to parser
- **PR #50267:** (m03) Fix missing aptly config paths @ 2018-10-29 13:27:23 UTC
 - 1e8b092 Merge pull request #50267 from m03/fix-aptly-config-paths-20183
 - 319bb31 Fix missing aptly config paths
- **PR #50232:** (Ch3LL) Update search engine IDs for releases (refs: #50233) @ 2018-10-25 20:15:08 UTC
 - ab0b022 Merge pull request #50232 from Ch3LL/search_latest
 - 3452d9b change order of search engine ids
 - c9546df Update search engine IDs for releases
- **ISSUE #49523:** (MTecknology) [salt-cloud] Non-ascii chars cause an exception in salt-cloud (refs: #50146, #50236)
 - **PR saltstack/salt#50174:** (rallytime) Back-port #50146 to 2018.3 (refs: #50231)
- **PR #50231:** (rallytime) Revert "Back-port #50146 to 2018.3" (refs: #50236) @ 2018-10-25 20:12:15 UTC
 - **PR #50146:** (MTecknology) Improve handling of non-ascii characters in terminal output. (Fixes: #49523) (refs: #50235, #'saltstack/salt#50174' '_', #50174, #50231, #50236)
 - 1c8cdf9 Merge pull request #50231 from saltstack/revert-50174-bp-50146
 - c76ac1b Revert "Back-port #50146 to 2018.3"
- **ISSUE #50132:** (ManicoW) XCP-ng packages and services management (refs: #50140)
- **PR #50172:** (rallytime) Back-port #50140 to 2018.3 @ 2018-10-25 14:00:32 UTC
 - **PR #50140:** (ManicoW) Adding XCP-ng support (refs: #50172)
 - 8dd4f43 Merge pull request #50172 from rallytime/bp-50140
 - 02e0ea0 lint fix
 - 819c46c fix lint errors and code factorization
 - 8aa3598 Fix lint error
 - 9092c4e Adding support for XCP-ng
 - c516bc5 Adding XCP-ng to os family map
- **PR #50063:** (twangboy) Use long when setting REG_QWORD @ 2018-10-25 13:45:03 UTC
 - 9ad43f2 Merge pull request #50063 from twangboy/fix_50039
 - 5fdb7d Disable lint error
 - 84b8dd6 Add tests
 - 4644bb6 Use long when setting REG_QWORD
- **ISSUE #49965:** (nkrishnakishor) Beacon: Usage in windows (refs: #50188)
- **PR #50188:** (garethgreenaway) [2018.3] fixes to diskusage beacon @ 2018-10-25 13:41:19 UTC
 - 01b083e Merge pull request #50188 from garethgreenaway/49965_beacon_diskusage_windows
 - 1f0ab27 Merge branch '2018.3' into 49965_beacon_diskusage_windows
 - 42b3203 Fixing lint

- f65fa57 Fixing a bug in the diskusage beacon that prevented it from working on Windows. Adding a couple tests to test functionality on Windows.
- **PR #50214:** (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-10-25 13:38:40 UTC
 - 9ea51c0 Merge pull request #50214 from rallytime/merge-2018.3
 - 897145c Merge branch '2017.7' into '2018.3'
 - * 017d394 Merge pull request #50202 from Ch3LL/_2017.7.8
 - d520f9a Add tests with filename in token data
 - d45f6c7 Add empty token salt-api integration tests
 - 652dbf6 Ensure that tokens are hex to avoid hanging/errors in cherrypy
 - * f28a4fa Merge pull request #50211 from channias/fix-spm-modules-install
 - 9b203d5 Fix broken install of additional modules in SPM packages
 - * 6b4e07b Merge pull request #50212 from dwoz/test_no_fail
 - 7f613ac Do not fail if process already ended
 - * 85e22d2 Merge pull request #50207 from Ch3LL/2update_version_doc_2017.7
 - 198d25c Add 2017.7.8 previous release
 - d4e26ac Update release versions for the 2017.7 branch
 - * d035695 Merge pull request #50205 from Ch3LL/rn_2017.7.8
 - 71ee68b [2017.7.8] remove in progress and add security details
 - * ce341f2 Merge pull request #50180 from max-arnold/2017.7
 - 881a521 Revert curly braces example for nested dictionaries
 - * 622bb51 Merge pull request #50026 from damon-atkins/jenkins_pylint
 - aebce88 Merge branch '2017.7' into jenkins_pylint
 - 5f708fa use awk to create the other files, so git does not need to search again
 - 6b96a24 Adjust jenkins linting process, only run stage if required, use git diff to find files, instead of find, report on status, changed and deleted files, lint only changed files.
 - * aa66d1b Merge pull request #50158 from vutny/doc/2017.7/fix-http-tutorial
 - fe2d70d [DOC] Fix JSON payload example in HTTP tutorial
- **ISSUE #50162:** (rbthomp) Scheduled job runs in endless loop when using when: and splay: together. (refs: #50216)
- **PR #50216:** (garethgreenaway) [2018.3] Fixes to scheduler, list of whens plus splay @ 2018-10-25 13:31:26 UTC
 - 51b3fa4 Merge pull request #50216 from garethgreenaway/50162_when_plus_splay_endless_loop
 - 685509f Fixing an issue when a combination of the when parameter as a list plus using the splay parameter would cause the schedule to continuously run jobs in an endless loop, regardless of if their scheduled time had been reached. Also fixing a related issue where scheduled jobs that rely on `_next_fire_time` were not being run as the corrected splayed time but rather running at the original scheduled time. Adding new tests.
- **PR #50190:** (dwoz) Fix test_managed_file_with_grains_data on Windows @ 2018-10-24 22:43:35 UTC
 - 43303fb Merge pull request #50190 from dwoz/grains_template_test

- b77db48 Fix test_managed_file_with_grains_data on Windows
- **PR #50187:** (garethgreenaway) [2018.3] Adding fixes to scheduler tests to 2018.3 @ 2018-10-24 19:45:32 UTC
 - **PR #49871:** (garethgreenaway) [fluorine] Updating scheduler tests for OS X (refs: #50187)
 - 462314b Merge pull request #50187 from garethgreenaway/port_49871_to_2018_3
 - 25e7cb6 Merge branch '2018.3' into port_49871_to_2018_3
 - d232dfb Update test_eval.py
 - d8d8559 Fixing lint
 - 76e6232 Removing unnecessary debugging lines
 - d2d0622 Back porting #49871 to 2018.3. Adding some additional changes to ensure they are passing on OS X.
- **PR #50201:** (Ch3LL) [2018.3] Ensure that tokens are hex to avoid hanging/errors in cherrypy @ 2018-10-24 19:44:23 UTC
 - 8ad9a1b Merge pull request #50201 from Ch3LL/_2018.3.3
- **PR #50208:** (Ch3LL) Update release versions for the 2018.3 branch @ 2018-10-24 15:52:19 UTC
 - 88673ad Merge pull request #50208 from Ch3LL/2update_version_doc_2018.3
 - cdbf493 Add 2017.7.8 previous release
 - 6f775e7 Update release versions for the 2018.3 branch
- **PR #50206:** (Ch3LL) [2018.3.3] remove in progress and add security details @ 2018-10-24 15:50:50 UTC
 - db8ef1e Merge pull request #50206 from Ch3LL/rn_2018.3.3
 - 896caa1 Add 2016.11.10 release notes to 2018.3 branch
 - 1e34158 [2018.3.3] remove in progress and add security details
- **PR #50200:** (rallytime) Back-port #50181 to 2018.3 @ 2018-10-24 15:49:59 UTC
 - **PR #50181:** (cro) Testinfra has a python packaging issue that is making version 1.17.0 fail to install some places (refs: #50200)
 - 3d3db70 Merge pull request #50200 from rallytime/bp-50181
 - f3e5399 Ignore testinfra 1.17.0
- **ISSUE #49523:** (MTecknology) [salt-cloud] Non-ascii chars cause an exception in salt-cloud (refs: #50146, #50236)
- **PR #50174:** (rallytime) Back-port #50146 to 2018.3 (refs: #50236) @ 2018-10-23 18:16:45 UTC
 - **PR #50146:** (MTecknology) Improve handling of non-ascii characters in terminal output. (Fixes: #49523) (refs: #50235, #'saltstack/salt'#50174'_'_, #50174, #50231, #50236)
 - 5f904dd Merge pull request #50174 from rallytime/bp-50146
 - 601a5b8 Improve handling of non-ascii characters in terminal output. (Fixes: #49523)
- **ISSUE #50142:** (m03) stringutils.to_none AttributeError: 'module' object has no attribute 'tex_type' (refs: #50143)
- **PR #50173:** (rallytime) Back-port #50143 to 2018.3 @ 2018-10-23 17:13:55 UTC
 - **PR #50143:** (m03) Fix #50142, stringutils.to_none (refs: #50173)
 - **PR #45429:** (terminalmage) [PY3] Add unicode_literals to salt.utils modules (R-S) (refs: #50143)

- 1cd0339 Merge pull request #50173 from rallytime/bp-50143
- f5d6080 Add test_to_none
- c0ce36b Fix #50142, stringutils.to_none
- PR #50171: (terminalmage) Fix invalid RST link in docker_network docs @ 2018-10-23 13:40:36 UTC
 - 9331f1e Merge pull request #50171 from terminalmage/docs
 - 7ea1d6c Fix invalid RST link in docker_network docs
- PR #50161: (rmarcinik) Add a missing result for task.info @ 2018-10-23 13:31:43 UTC
 - 16eece3 Merge pull request #50161 from rmarcinik/patch-1
 - 9848f06 Add a missing result for task.info
- PR #50136: (terminalmage) Add some debug logging before and after states gather pillar data @ 2018-10-22 14:40:38 UTC
 - 28bc5e3 Merge pull request #50136 from terminalmage/debug-logging
 - 8592a0b Add some debug logging before and after states gather pillar data
- ISSUE #50129: (kmatsoukas) Call to network.get_route fails when interface name contains a dash (refs: #50147)
- PR #50147: (garethgreenaway) [2018.3] Fix to modules/network.py @ 2018-10-22 14:31:03 UTC
 - 593c7ff Merge pull request #50147 from garethgreenaway/50129_network_get_route_fails_dash_in_name
 - 8fa87e3 Update test_network.py
 - 3117969 Fixing scenario where the interface for the default route has a dash in it, regular expression used in get_route currently doesn't not account for this.. Adding some additional tests for network.get_route.
- PR #50156: (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-10-22 14:24:39 UTC
 - 5c7a7d9 Merge pull request #50156 from rallytime/merge-2018.3
 - 87e20fd Merge branch '2017.7' into '2018.3'
 - 1a90c4f Merge pull request #50144 from dwoz/winrm_fs_release
 - * 0951d85 Use newest winrm-fs release
 - e096560 Merge pull request #50113 from rallytime/bp-49989
 - * 27c7ac9 Increase centos7-py2 kitchen pr timeout to 8 hours
- PR #50148: (MTecknology) Proxmox fixups @ 2018-10-22 11:55:10 UTC
 - ce375f4 Merge pull request #50148 from MTecknology/proxmox-fixups
 - 4959947 Race condition still exists at one second timeout.
 - 3a62f74 Add support for setting root ssh pubkey to proxmox containers.
- PR #50085: (dwoz) Fix test_win_pkg yet again @ 2018-10-19 18:16:16 UTC
 - 0ece06e Merge pull request #50085 from dwoz/win_pkg_redux
 - f22630e Merge branch '2018.3' into win_pkg_redux
 - 0b033a6 Do not allow age to be a negative number
 - a24d8b8 Debug file list cache
 - 9f5722a The test is not a flush problem
 - 071f8a0 Add cache file name to list cache log

- 128c2c5 Flush and sync file contents
- 7d361d8 Add debug log when file list is returned from cache
- **PR #49980:** (twangboy) Add support for AddPrinterDrivers @ 2018-10-19 13:19:41 UTC
 - 0069247 Merge pull request #49980 from twangboy/lgpo_add_printer_drivers
 - 76c9301 Add support for AddPrinterDrivers
- **PR #50114:** (rallytime) Back-port #50061 to 2018.3 @ 2018-10-19 11:46:03 UTC
 - **PR #50061:** (rongzeng54) pkg.install bugfix (refs: #50114)
 - de23c83 Merge pull request #50114 from rallytime/bp-50061
 - 1f09104 Add unit test for pkg.install with epoch
 - af253c6 pkg.install bugfix
- **ISSUE #50074:** (bigpick) Arista EOS Salt Minion - Debug Log Flooded with Repeated Message (refs: #50115)
- **PR #50115:** (garethgreenaway) [2018.3] Apply scheduler fixes and tests from #49104 to 2018.3 @ 2018-10-19 11:45:31 UTC
 - **PR #49104:** (garethgreenaway) [fluorine] Fixes to scheduler for jobs with seconds, minutes, etc. (refs: #50115)
 - 9188bec Merge pull request #50115 from garethgreenaway/apply_49104_to_2018_3
 - adb1e79 Apply scheduler fixes and tests from #49104 to 2018.3
- **PR #50119:** (terminalmage) Squelch spurious errors logged in unit tests @ 2018-10-19 11:42:31 UTC
 - e892042 Merge pull request #50119 from terminalmage/boto-tests
 - 91812ff Squelch spurious errors logged in unit tests
- **PR #50120:** (terminalmage) Fix bad merge conflict resolution @ 2018-10-19 11:38:35 UTC
 - 35449b4 Merge pull request #50120 from terminalmage/salt-jenkins-1137
 - 1ddfd26 Fix bad merge conflict resolution
- **PR #50013:** (Giandom) Passed kwargs to db_exists in db_remove method @ 2018-10-18 11:28:30 UTC
 - 5123488 Merge pull request #50013 from Giandom/2018.3
 - 9c91df3 Merge branch '2018.3' into 2018.3
 - 06bb245 Merge branch '2018.3' into 2018.3
 - 04a99e0 Passed kwargs to db_remove
- **PR #50092:** (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-10-17 19:57:07 UTC
 - aa94f60 Merge pull request #50092 from rallytime/merge-2018.3
 - 8609064 Update old utils paths to use new paths
 - a984ad8 Merge branch '2017.7' into '2018.3'
 - * 7ec3840 Merge pull request #49794 from twangboy/fix_groupadd_test
 - 3d3b67d Gate for Windows
 - decfa52 Check value of result instead of entire dict
 - * e562838 Merge pull request #50028 from basseed/fix-windows-virtual-grain
 - 8129ac6 removed whitespaces

- 82fa866 Fix #50015, Windows grain defaults to physical as unix grain
- ISSUE #50073: (jorotenev) boto_cloudfront update distribution fails (refs: #50082)
- PR #50082: (garethgreenaway) [2018.3] Fixing a typo in the boto_cloudfront @ 2018-10-17 19:35:00 UTC
 - d1f2c5d Merge pull request #50082 from garethgreenaway/50073_fixing_typo_boto_cloudfront
 - b5b90a1 Fixing a typo in the boto_cloudfront.
- PR #50090: (garethgreenaway) [2018.3] Fix to utils/vault.py @ 2018-10-17 13:57:30 UTC
 - 05bd2a0 Merge pull request #50090 from garethgreenaway/fix_vault_sdb_runner_test
 - 444a4e5 Merge branch '2018.3' into fix_vault_sdb_runner_test
- ISSUE #49275: (dgenstek) execution module cp.cache_file fails with error 'invalid arguments to setopt' (refs: #50080)
- PR #50080: (terminalmage) Ensure all string kwargs passed to Tornado's httplib are str types @ 2018-10-16 21:01:41 UTC
 - 7092879 Merge pull request #50080 from terminalmage/issue49275
 - 4a6c327 Ensure all string kwargs passed to Tornado's httplib are str types
- ISSUE #44979: (hunkeelin) Firewall state cause horrid performance during saltrun. (refs: #49811)
- PR #49811: (nhavens) Optimize firewall state @ 2018-10-16 11:26:46 UTC
 - 45b6da3 Merge pull request #49811 from nhavens/optimize-firewall-state
 - 7d6e628 Merge branch '2018.3' into optimize-firewall-state
 - a718b0c Merge branch '2018.3' into optimize-firewall-state
 - f7299b9 Merge branch '2018.3' into optimize-firewall-state
 - f289618 Merge branch '2018.3' into optimize-firewall-state
 - 41af513 Merge branch '2018.3' into optimize-firewall-state
 - 7cebab4 Merge branch '2018.3' into optimize-firewall-state
 - c38bb7d Merge branch '2018.3' into optimize-firewall-state
 - abed058 Merge branch '2018.3' into optimize-firewall-state
 - 0ec1f82 Merge branch '2018.3' into optimize-firewall-state
 - db6b23b Merge branch '2018.3' into optimize-firewall-state
 - 4ca7e12 Merge branch '2018.3' into optimize-firewall-state
 - 4f7c914 fix invalid icmp type handling in firewall state
 - 2d2e2eb resolve lint error in firewall state
 - 081424d resolve indentation issues in updates to firewall state
 - c92c4fe optimize firewall.present rich rule handling
 - 25d1daf optimize firewall.present source handling
 - 5f62c14 optimize firewall.present interface handling
 - 69f2c6c optimize firewall.present service handling
 - 71ec8e7 optimize firewall.present port forward handling
 - f18e09e optimize firewall.present open port handling

- 35193dc clean up firewalld.present masquerade code (DRY)
- 8c88784 optimize firewalld.present icmp block handling
- **PR #50055:** (rallytime) Back-port #50024 to 2018.3 @ 2018-10-16 09:14:06 UTC
 - **PR #50024:** (rwaweber) docs: Correct napalm topic spelling mistake and smooth out sentence (refs: #50055)
 - b94e0a0 Merge pull request #50055 from rallytime/bp-50024
 - 1ea72a0 docs: Correct spelling mistake and smooth out sentence
- **PR #50056:** (rallytime) Back-port #50029 to 2018.3 @ 2018-10-16 09:12:59 UTC
 - **PR #50029:** (thebluesnevrdie) Expose docs for Ansible modules (refs: #50056)
 - 14f3fac Merge pull request #50056 from rallytime/bp-50029
 - 2e46a78 Expose docs for Ansible modules
- **PR #50064:** (rallytime) Back-port #50022 to 2018.3 @ 2018-10-16 09:09:47 UTC
 - **PR #50022:** (bluesliverx) Make test check_pillar more lenient (refs: #50064)
 - f3fe4b6 Merge pull request #50064 from rallytime/bp-50022
 - 40da3ce Make test check_pillar more lenient
- **ISSUE #49988:** (whytewolf) currently http error logging of urls contains full URL including passwords. (refs: #50066)
- **PR #50066:** (garethgreenaway) [2018.3] Redact any passwords from source paths @ 2018-10-16 09:08:25 UTC
 - c2a46ce Merge pull request #50066 from garethgreenaway/49988_redact_passwords_in_source
 - 27ef1e0 Redact any passwords that are in http/https based source paths.
- **PR #50068:** (garethgreenaway) [2018.3] Updating salt.utils.mac_utils @ 2018-10-16 09:07:10 UTC
 - ab2cb51 Merge pull request #50068 from garethgreenaway/1140_mac_system_tests_2018_3_failing
 - eedeacb Updating another reference to salt.utils.mac_utils to use __utils__
 - * 6ef5ce4 Due to a previous PR the test_sdb_runner in sdb.test_vault was failing because of an exception that was being swallowed in the test_run_run function. The cause was that when vault related functions were being run, if they were being run on the master then they were being forced to run through the _get_token_and_url_from_master() function, which is pull the id element out of the grains dictionary. When the call was taking place from a runner, the exception was popping up since there is no id when called from a runner. This fix checks to see if the id exists in the dictionary first, if it is there then _get_token_and_url_from_master() is called, otherwise _use_local_config is called.
- **PR #49987:** (terminalmage) Make Pillar no longer munge file_roots @ 2018-10-15 21:58:08 UTC
 - 4c4bb5a Merge pull request #49987 from terminalmage/pillar_roots
 - f59506d Update tests to reflect behavior changes
 - 58f5fde Make Pillar no longer munge file_roots
- **PR #50065:** (rallytime) Back-port #50044 to 2018.3 @ 2018-10-15 21:32:37 UTC
 - **PR #50044:** (mchugh19) add saltclass info from release notes to docs (refs: #50065)
 - 1e377ac Merge pull request #50065 from rallytime/bp-50044
 - 1eaaab7 Doc title formatting must match doc name length

- 6ac26b6 add saltclass docs from release notes
- **PR #50038:** (s0undt3ch) Don't squash the traceback @ 2018-10-15 20:36:55 UTC
 - 8a6b435 Merge pull request #50038 from s0undt3ch/2018.3
 - 852257a Don't squash the traceback
- **PR #50054:** (rallytime) Back-port #50004 to 2018.3 @ 2018-10-15 20:36:03 UTC
 - **PR #50004:** (kiemlicz) <https://github.com/saltstack/salt/issues/49883> (refs: #50054)
 - dbfd7ee Merge pull request #50054 from rallytime/bp-50004
 - 88e3202 <https://github.com/saltstack/salt/issues/49883>
- **PR #50057:** (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-10-15 20:35:46 UTC
 - a9e9974 Merge pull request #50057 from rallytime/merge-2018.3
 - 1b5b018 Merge branch '2017.7' into '2018.3'
 - * 9eb17ea Merge pull request #50047 from rallytime/bp-49605
 - e3a0f7b Add gce fix to 2017.7.9 release notes
 - e6d86fc document GCE instance credentials configuration
 - c3a0d1b allow empty service_account_private_key in GCE driver
 - * 6cdd390 Merge pull request #50017 from gtmanfred/iptables
 - e552e4f Use parse_known_args when checking iptables rules
 - * a6a66b9 Merge pull request #50012 from dwoz/norm_log
 - f96b29d Use normal log formatting and add jid
 - * 15f86b2 Merge pull request #50001 from kyentei/doc-fix-gpg
 - 3d6ee3e Fix gpg state Documentation
 - * 7a235d7 Merge pull request #50000 from kyentei/doc-fix-lvm
 - c2f3d87 Fix LVM state documentation
 - * 4edd094 Merge pull request #49999 from kyentei/doc-fix-proxy
 - a180ed7 Fix proxy documentation
 - * 58d2302 Merge pull request #49998 from kyentei/doc-fix-process
 - edd4f40 Fix documentation on process.py
 - * 411635b Merge pull request #49997 from kyentei/doc-fix-mysql
 - 01059cc Fix documentation for mysql processlist
- **PR #50060:** (rallytime) [2018.3] Fix some pylint issues that have popped up recently @ 2018-10-15 20:35:22 UTC
 - f1bcb1f Merge pull request #50060 from rallytime/fix-lint
 - a8f4f39 Merge branch '2018.3' into fix-lint
- **ISSUE #49927:** (thetaurean) File Tree external pillar fails to render templates in python 3 (refs: #49943)
- **PR #50052:** (rallytime) Back-port #49943 to 2018.3 @ 2018-10-15 20:06:20 UTC
 - **PR #49943:** (thetaurean) Coerce string when calling compile_template_str (refs: #50052)
 - b26b21c Merge pull request #50052 from rallytime/bp-49943

- d336dec Handle non-ASCII chars during template data decode
- 435afb7 Adjusted import to expose stringutils namespace
- 958c630 Coerce string when calling compile_template_str
- e73f13d [2018.3] Fix some pylint issues that have popped up recently
- **PR #49809: (Ch3LL)** Add additional asserts to help investigate test_win_pkg failure @ 2018-10-13 18:00:09 UTC
 - fef7669 Merge pull request #49809 from Ch3LL/win_pkg_flaky
 - f795b60 Merge pull request #7 from dwoz/win_pkg_flaky
 - * beaab2a Fix win_pkg test
 - 75809b4 Merge pull request #6 from dwoz/win_pkg_flaky
 - * e5ea3f1 Try running fsync to avoid fs caching race condition
 - fd5e842 Merge pull request #5 from dwoz/win_pkg_flaky
 - * c386826 Log results of cache_dir for now
 - 2cd4058 Merge pull request #4 from dwoz/win_pkg_flaky
 - * 1005b91 Debug win_pkg
 - 9dce5cc Fix the assertion message order
 - 18e9a28 Add additional asserts to help investigate test_win_pkg failure
- **PR #49983: (rallytime)** [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-10-11 13:27:34 UTC
 - 8949873 Merge pull request #49983 from rallytime/merge-2018.3
 - f8e73e8 Merge branch '2017.7' into '2018.3'
 - * a8a3811 Merge pull request #49972 from rallytime/release-notes-2017.7.9
 - 6c00003 Add 2017.7.9 release notes file
 - * 8de58d6 Merge pull request #49974 from rallytime/bp-49940
 - a70358a Update mod_watch() description for all states.
 - bf3d064 Another attempt to clean up service.mod_watch description.
 - 165b799 Clean up documentation/language in service state. (Fixes #40819)
 - * d68e5d3 Merge pull request #49978 from whytewolf/inotify_doc_change
 - b4d9523 using an exclude list that does not list every operating system leaves open the possibility that it would work on those not listed
 - * 89cbbb6 Merge pull request #49934 from rallytime/fix-49925
 - 216fd64 Remove event_publisher_pub_hwm and salt_event_pub_hwm from documentation
- **PR #49979: (cachedout)** Update license date and include NOTICE @ 2018-10-11 12:57:21 UTC
 - c7d2482 Merge pull request #49979 from cachedout/license_update
 - b4f148e Break out support and contributing docs into separate files
 - 1dd0e34 Update license date and include NOTICE
- **PR #49973: (rallytime)** Add 2018.3.4 release notes file @ 2018-10-10 17:46:04 UTC
 - ef61fc6 Merge pull request #49973 from rallytime/release-notes-2018.3.4

- 32e7d90 Add 2018.3.4 release notes file
- **PR #49975:** (rallytime) Back-port #49958 to 2018.3 @ 2018-10-10 17:44:56 UTC
 - **PR #49958:** (garethgreenaway) [fluorine] Fixes to mac_system.py (refs: #49975)
 - 7d8f10c Merge pull request #49975 from rallytime/bp-49958
 - a229a50 Swap the call for mac_utils.available_services to use __utils__ so mac_utils.available_services has access to __context__
- **PR #49946:** (isbm) osversion/osversion_info/osmajorrelease grains fixes @ 2018-10-10 14:01:05 UTC
 - c912d3a Merge pull request #49946 from isbm/isbm-osversion_info-fixes
 - a17ba35 Fix proper part name in the string-bound CPE
 - 9d49607 Expand unit test to verify part name
 - a6b7d01 Remove linebreak
 - 5376886 Keep CPE_NAME only for opensuse series
 - 8af3904 Add part parsing
 - e202b41 Prevent possible crash if CPE_NAME is wrongly written in the distro
 - 712083d Add unit test for broken CPE_NAME
 - 1306ddb Add unit test for v2.3 of CPE format
 - 04b61d3 Add unit test for WFN format of CPE_NAME
 - 035690f Override VERSION_ID from os-release, if CPE_NAME is given
 - 08e235b Remove unnecessary linebreak
 - 853e163 Add CPE_NAME parsing
- **ISSUE #48204:** (zerthimon) State mysql_user.present Exception with mysql 8.0.11 (refs: #49918)
- **PR #49918:** (garethgreenaway) [2018.3] Fixes to MySQL module @ 2018-10-10 14:00:11 UTC
 - 18fb5df Merge pull request #49918 from garethgreenaway/48204_mysql_user_password_exception_part_deux
 - 92c0680 Merge branch '2018.3' into 48204_mysql_user_password_exception_part_deux
 - 71e53a3 Cleanup of debugging.
 - dd96c13 Fixing lint.
 - ac7da89 Tweaking a couple tests to account for new scenarios with later versions.
 - 4320c43 Removing __mysql_hash_password, no longer needed.
 - 0475acf Removing unnecessary empty line.
 - 9265195 Updating the mysql update to handle changes in version 8.0.11 where PASSWORD was removed. Updating unit tests.
- **PR #49961:** (dmurphy18) Fix aix grains test for prtconf present @ 2018-10-10 13:38:02 UTC
 - 1c2e5be Merge pull request #49961 from dmurphy18/fix_aix_grains
 - f38d543 Correct test for AIX grains prtconf
- **ISSUE #49205:** (ereslibre) Compound targeting includes unexpected targets in the result (refs: #49897, #49907)
- **PR #49907:** (brejoc) 2018.3 fix for list compound targeting @ 2018-10-10 13:33:40 UTC
 - **PR #49897:** (brejoc) 2017.7 fix for list compound targeting (refs: #49907)

- PR #49435: (brejoc) No longer passes missing in list compound engine (refs: #49897, #49907)
- e427306 Merge pull request #49907 from brejoc/2018.3-fix-for-list-compound-targeting
- 1bcadb9 Merge branch '2018.3' into 2018.3-fix-for-list-compound-targeting
- 649c46c Adds check for engine before adding the additional engine argument
- 7d0b20c Minor fix for def test_batch_run_grains_targeting
- 0d64716 Ignore missing minions only when excluding them with 'not'
- 6a5f3cd No longer passes missing in list compound engine
- ISSUE #48599: (angeloudy) module ldap3 'TypeError: ('expected a byte string in the list" (refs: #48666)
- PR #49947: (rallytime) Back-port #48666 to 2018.3 @ 2018-10-09 17:48:20 UTC
 - PR #48666: (angeloudy) values need to be bytes when writing back to ldap (refs: #49947)
 - 143c723 Merge pull request #49947 from rallytime/bp-48666
 - 5166917 Update ldap3.py
 - 05e55bd values need to be bytes when writing to ldap
 - 0d749e6 values need to be bytes when writing back to ldap
- PR #49948: (rallytime) Skip pillar refresh test @ 2018-10-09 15:20:52 UTC
 - dbf994e Merge pull request #49948 from rallytime/skip-flaky-test
 - df11c39 Skip pillar refresh test
- PR #49938: (s0undt3ch) Handle missing pkg_resources package @ 2018-10-09 13:41:09 UTC
 - 614d172 Merge pull request #49938 from s0undt3ch/2018.3
 - b1c2928 Handle missing pkg_resources package
- PR #49942: (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-10-09 13:38:04 UTC
 - bce12c3 Merge pull request #49942 from rallytime/merge-2018.3
 - 91534ee Merge branch '2017.7' into '2018.3'
 - * 327796e Merge pull request #49911 from dubb-b/slack-pr
 - 57e630c Adding failure messages for PR.
 - * cf1df79 Merge pull request #49900 from dwoz/presence_wart
 - 7bd34f6 Connect before processing presence
 - * 8c4707d Merge pull request #49899 from twangboy/fix_49892
 - a66765f Remove arrInstalled artifact
- PR #49930: (isbm) Get os_family for RPM distros from the RPM macros @ 2018-10-09 13:31:52 UTC
 - a30c053 Merge pull request #49930 from isbm/isbm-osarch-bugfix
 - f8a75f1 Fix imports
 - 70d3de0 Strip and stringify the return for the osarch
 - a248371 Get os_family for RPM distros from the RPM macros.
- PR #49868: (dwoz) windows shell tests @ 2018-10-08 17:32:20 UTC
 - 99c5dba Merge pull request #49868 from dwoz/shelltests

- 9997f45 Merge branch '2018.3' into shelltests
- **PR #49875:** (dwoz) Add spm tests to Windows suite @ 2018-10-05 18:13:07 UTC
 - eee82d3 Merge pull request #49875 from dwoz/win_spm_tests
 - e76a751 Use os.path.split for more consistency
 - bc54d15 Fix wart in spm on windows
 - df5e271 Add spm tests for windows
- **PR #49872:** (twangboy) Fix issues with windows file permissions when using reset=True @ 2018-10-05 13:52:07 UTC
 - c0e2404 Merge pull request #49872 from twangboy/fix_49861
 - 01bd847 Gate the win_function a little better
 - bcd366 Skip on non-windows systems
 - 02f6335 Fix some lint
 - 8ecbe0e Add tests for check_perms
 - d6e7512 Fix issues with file permissions
- **ISSUE #49582:** (UtahDave) lgpo doesn't seem to allow for unsetting a gpo setting (refs: #49902)
- **ISSUE #48661:** (mike2523) win_lgpo: User Rights Assignment policies (refs: #49902)
- **PR #49902:** (lomeroy) lgpo better comments on user right assignments @ 2018-10-05 13:41:16 UTC
 - d3a909f Merge pull request #49902 from lomeroy/issue48661_2018.3
 - 760d8f4 Merge branch '2018.3' into issue48661_2018.3
 - f72ca81 add comments on user right assignment policies when they are already set and note if cumulative_rights_assignment is True that the particular user is already granted the right
 - * 75dd5ab Merge branch '2018.3' into shelltests
- **PR #49896:** (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-10-04 21:00:24 UTC
 - 4eb43af Merge pull request #49896 from rallytime/merge-2018.3
 - 41c8b31 Merge branch '2017.7' into '2018.3'
 - b959033 Merge pull request #49739 from twangboy/fix_49660
 - * f3400ad Merge branch '2017.7' into fix_49660
 - * 0a4f5fc Merge branch '2017.7' into fix_49660
 - * 1f9bbc8 Populate changes dictionary
 - 71669bd Merge pull request #49885 from dwoz/gemfile
 - * 791e3ff Use dwoz/winrm-fs for chunked downloads
 - * f3999e1 Move vagrant to it's own group
 - 0662e37 Merge pull request #49870 from KaiSforza/ci_actually_fail
 - * 9ef9206 Actually catch the exception when we fail
 - 19072f0 Use os.path.split for more consistency
 - 6c22459 Merge remote-tracking branch 'origin/shelltests' into shelltests
 - 43b292f Merge branch '2018.3' into shelltests

- 876c040 Fix wart in test_cp module
- 9e6ff11 Add syndic tests to whitelist.txt for Windows
- 9cab293 Fix wart in spm on windows
- 58e9d1b Add spm tests to whitelist.txt for Windows
- 7393610 Add more shell integration tests to whitelist
- ce85d60 Add shell.test_key to whitelist and fix wart
- 6fbadd7 Skip tests not valid on windows
- 9debf29 Add shell cp tests and fix them
- 8bfa634 Fix warts in integration.shell.test_matcher
- 45d2142 Fix wart in test_cp module
- 0e4fbc5 Add syndic tests to whitelist.txt for Windows
- f72ad01 Fix wart in spm on windows
- 4141cc8 Add spm tests to whitelist.txt for Windows
- 02ad722 Add more shell integration tests to whitelist
- 48275c0 Add shell.test_key to whitelist and fix wart
- e5edff4 Skip tests not valid on windows
- a389729 Add shell cp tests and fix them
- **ISSUE #49744:** (MTecknology) Group state cannot force empty group membership (refs: #49745)
- **PR #49745:** (MTecknology) Remove all users from group when members list is empty. @ 2018-10-03 13:48:40 UTC
 - 85478cd Merge pull request #49745 from MTecknology/fix-49744
 - 61afb5d Merge branch '2018.3' into fix-49744
 - 269bde2 Merge branch '2018.3' into fix-49744
 - 0b5d916 Modify if structure, as requested.
 - f57ce67 Remove all users from group when members list is empty. (Fixes #49744)
- **PR #49867:** (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-10-03 13:23:35 UTC
 - 05cd56b Merge pull request #49867 from rallytime/merge-2018.3
 - b53c3e6 Update old utils paths to use new utils paths
 - a65c60d Merge branch '2017.7' into '2018.3'
 - * 7fa2043 Merge pull request #49858 from Paulo-Nunes/fix-requisite-doc
 - fb6f818 Edit requisite documentation
 - * 0587fbc Merge pull request #49828 from dwoz/testsllogencoding
 - 2b323df Merge branch '2017.7' into testsllogencoding
 - 7ce1b64 Use utf-8 encoding for salt-runtests.log
 - * 15ccffd Merge pull request #49848 from terminalmage/fix-version-rst-2017.7
 - af2dddb Fix badly formatted versionadded directive

- * 297031b Merge pull request #49777 from terminalmage/issue49738
 - 8a9945e Update test docstring to reflect switch to using SHA1
 - 7ddfd72 Switch from base64 encoding to sha1 digest for unique cache filename
 - 0e26dc6 Explicitly import salt.utils.hashutils
 - dca90d7 Skip parallel states test on Windows until we can get it to work
 - 5a11067 Add additional info to the assert to aid in troubleshooting
 - cb19086 Remove/replace unnecessary setUp/tearDown
 - b3e9678 Fix parallel states with long ID dec or name
- * 98c9372 Merge pull request #49763 from twangboy/fix_49730
 - 99bc8f1 Merge branch '2017.7' into fix_49730
 - 7a9278b Fix broken tests, add new tests
 - 2cd1509 Merge branch '2017.7' into fix_49730
 - defba1c Merge branch '2017.7' into fix_49730
 - af1ed1c Add/fix tests
 - 5005a4d Only clear dns entries if you pass []
 - 048561e Add ability to clear DNS entries on static DNS
- **PR #49876:** (KaiSforza) Actually catch the exception when we fail @ 2018-10-03 12:26:58 UTC
 - 42b540b Merge pull request #49876 from KaiSforza/ci_actually_fail_2018
 - c88a81d Actually catch the exception when we fail
- **PR #49852:** (terminalmage) Rename logstash engine filename to make it work with the loader @ 2018-10-02 17:42:10 UTC
 - 1c8def9 Merge pull request #49852 from terminalmage/issue49627
 - 559cf1b Rename logstash engine filename to make it work with the loader
- **PR #49850:** (rallytime) Back-port #49798 to 2018.3 @ 2018-10-02 17:40:29 UTC
 - **PR #49798:** (mattp-) saltnado: teach runner about full_return (refs: #49850)
 - 675df25 Merge pull request #49850 from rallytime/bp-49798
 - 4b6dcd7 saltnado: teach runner about full_return
- **ISSUE #49204:** (mchugh19) file.directory state fails if directory contains an invalid symlink (refs: #49209, #49827)
- **PR #49846:** (rallytime) Back-port #49650 and #49827 to 2018.3 @ 2018-10-01 20:05:24 UTC
 - **PR #49827:** (dgmorrisjr) fixing mis-spelling of lattr in file.py, referncing #49204 (refs: #49846)
 - **PR #49650:** (Yxnt) fix aliyun cloud typeerror (refs: #49846)
 - 93d064a Merge pull request #49846 from rallytime/bp-49650
 - fb7fed7 referncing #49204, fixing mis-spelling of lattr on line 4514 per request from @gtmanfred
 - ec9fa92 use stringutils instead of hard code
 - a307ae0 fix aliyun cloud typeerror
- **ISSUE #49520:** (doesitblend) Multi-master DNS Issue - minion connect fail (refs: #49764)

- **PR #49764:** ([garethgreenaway](#)) [2018.3] Adding `retry_dns_count` to minion @ 2018-10-01 14:20:03 UTC
 - [ec97806](#) Merge pull request [#49764](#) from [garethgreenaway/49520_multimaster_dns_issue_fix](#)
 - [30ccc5e](#) Merge branch '2018.3' into [49520_multimaster_dns_issue_fix](#)
 - [741928b](#) Fixes per request from [@rallytime](#).
 - [04c5983](#) Moving the check for an empty `self.minions` into a `io_loop.call_later` call.
 - [44ee2ec](#) Updating default for `retry_dns_count`
 - [75f64a6](#) Removing unnecessary code.
 - [e66dc18](#) Updating the `resolve_dns` function in `minion.py` to include a new minion configuration option which will control how many attempts will be made when the master hostname is unable to be resolved before giving up.
- **PR #49847:** ([terminalmage](#)) Fix badly formatted versionadded directive (2018.3 branch) @ 2018-10-01 14:04:27 UTC
 - [abdab68](#) Merge pull request [#49847](#) from [terminalmage/fix-version-rst-2018.3](#)
 - [a127548](#) Fix badly formatted versionadded directive
- **ISSUE #49043:** ([awerner](#)) Unicode broken with `file.blockreplace` on Python2 (refs: [#49782](#))
- **PR #49782:** ([dwoz](#)) Fix issue 49043 @ 2018-10-01 13:43:02 UTC
 - [aca87ab](#) Merge pull request [#49782](#) from [dwoz/issue-49043](#)
 - [b7d904f](#) Merge branch '2018.3' into [issue-49043](#)
 - [ed35633](#) Revert diff newline change
 - [2a901e9](#) Fix issue 49043
- **ISSUE #49671:** ([mchugh19](#)) Vault execution module broken in pillar lookups (refs: [#49820](#))
- **PR #49820:** ([garethgreenaway](#)) [2018.3] Fixing vault when being used from Pillar @ 2018-10-01 13:40:25 UTC
 - [1a41d1b](#) Merge pull request [#49820](#) from [garethgreenaway/49671_fixing_vault_pillar](#)
 - [a57872f](#) Merge branch '2018.3' into [49671_fixing_vault_pillar](#)
 - [5f13219](#) Merge branch '2018.3' into [49671_fixing_vault_pillar](#)
 - [b0ba2ec](#) Fixing the scenario when vault values are used in Pillar, but due to a previous change the minion was not being granted token based access.
- **PR #49842:** ([rallytime](#)) [2018.3] Merge forward from 2018.3.3 to 2018.3 @ 2018-10-01 13:21:42 UTC
 - [bf9c175](#) Merge pull request [#49842](#) from [rallytime/merge-2018.3](#)
 - [81b0aa7](#) Add "in progress" notation back to the 2018.3.3 release notes
 - [0e76103](#) Merge branch '2018.3.3' into '2018.3'
- **PR #49839:** ([rallytime](#)) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-09-30 16:32:53 UTC
 - [e6382cb](#) Merge pull request [#49839](#) from [rallytime/merge-2018.3](#)
 - [179e4b1](#) Merge branch '2017.7' into '2018.3'
 - [fd46d35](#) Merge pull request [#49823](#) from [dubb-b/timeout_addition](#)
 - * [b25ac9f](#) Adding some changes for the status
 - * [f6d9679](#) Updating syntax to be better and with new lines

- * 855ffe6 Adding timeout to all pipelines so that the build aborts
- **PR #49815:** (isbm) Bugfix/rework: IPv6 scope errors (bp) @ 2018-09-28 19:44:59 UTC
 - fccc08c Merge pull request #49815 from isbm/isbm-ipv6-scope-errors-2018.3
 - c14f26f Reverse skipping tests: if no ipaddress
 - bb37ba0 Add IPv6 scoped test
 - facb34a Add additional check
 - 615b09a Lintfix: W0611
 - 3ce265e Remove unnecessary manipulation with IPv6 scope outside of the IPv6Address object instance
 - c314e1c Revert method remapping with pylint updates
 - 0a86112 Lintfix refactor: remove duplicate returns as not needed
 - 5932a0d Lintfix
 - f52ea0b Add Py3.4 old implementation's fix
 - 1c02a31 Fix wrong type swap
 - 54233ca Do not use introspection for method swap
 - 12038ea Simplify checking clause
 - 7f2208b Fix py2 case where the same class cannot initialise itself on Python2 via super.
 - cefb16b Add extra detection for hexadecimal packed bytes on Python2. This cannot be detected with type comparison, because bytes == str and at the same time bytes != str if compatibility is not around
 - 379ead4 Lintfix: mute not called constructors
 - 66ec29c Add scope on str
 - f5644bf Add logging to the ip_interface
 - 8bb5438 Add real exception message
 - 693e4d4 Move docstrings to their native places
 - 77f1c44 Remove duplicated code
 - 40d0e6b Use ternary operator instead
 - d05999e Remove multiple returns
 - 3fde850 Remove unnecessary operator
 - deb0b4e Remove duplicated code
 - 8e62633 Remove unnecessary variable for import detection
 - 7a6ea3b Remove multiple returns and add check for address syntax
 - b40e1e1 Add debugging to the ip_address method (py2 and py3)
 - cab5f62 Add logging
 - eeab9f2 Isolate Py2 and Py3 mode
 - 49b32b7 Check version via object
 - 1ae94f1 Override standard IPv6Address class
 - 5e970ea Fix unicode imports in compat

- bbeec4d Fix ipaddress import
- 561c99e Remove unused import
- 0498e94 Fix ipaddress imports
- b4f1a72 Add missing docstrings
- **PR #49784:** (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-09-28 17:29:30 UTC
 - 804d52c Merge pull request #49784 from rallytime/merge-2018.3
 - c6b9d18 Merge branch '2018.3' into merge-2018.3
 - 26461f9 Add helper import comments
 - 22f055c Merge branch '2017.7' into '2018.3'
 - * d2a193b Merge pull request #49792 from KaiSforza/fixscriptedpipes
 - 5b16996 Fix the new pipelines
 - dd27d80 Merge branch '2017.7' into '2018.3'
 - * 8a71a43 Merge pull request #49774 from KaiSforza/declarativeToScripted
 - cae88f2 Move all pipelines to be fully scripted
 - * 8fe8aac Merge pull request #49736 from mattLLVW/fix-file-touch
 - 1da9f34 Fix test opts in append, prepend states/file.py
- **PR #49790:** (weswhet) fixing an issue where sentry logger would fail to get tags from grain... @ 2018-09-28 13:39:04 UTC
 - d191b08 Merge pull request #49790 from weswhet/fixing-sentry-logger-2018.3
 - 201697d fixing an issue where sentry logger would fail to get tags from grains and some other lint fixes for this file
- **ISSUE #49626:** (PabloLemos) target grains ip_interface no return received (refs: #49791)
- **PR #49791:** (terminalmage) Fix 3 bugs in subdict matching @ 2018-09-28 13:38:34 UTC
 - 4d9fc7c Merge pull request #49791 from terminalmage/issue49626
 - 6795472 Add clarifying comment
 - ac0f800 Fix 3 bugs in subdict matching
- **PR #49806:** (isbm) Bugfix: zypper ZYPPEXIT_NO_REPOS exit code @ 2018-09-28 13:20:36 UTC
 - 52b0472 Merge pull request #49806 from isbm/isbm-zypper-errcode-6-bp
 - 756ef77 Update error list for zypper
 - 5b02548 Add error logging
- **ISSUE saltstack/salt-jenkins#1121:** (rallytime) [2018.3] 4 related tests failing on 2018.3 Python 3 (refs: #49795)
- **PR #49795:** (gtmanfred) fix test_managed_file_with_grains_data @ 2018-09-26 22:48:36 UTC
 - fee6701 Merge pull request #49795 from gtmanfred/tests
 - cf5c179 fix test_managed_file_with_grains_data
- **PR #49786:** (rallytime) Back-port #49759 to 2018.3 @ 2018-09-26 18:22:01 UTC
 - **PR #49759:** (mattp-) runners.state.orch: generate jid if missing (refs: #49786)
 - 04e5869 Merge pull request #49786 from rallytime/bp-49759

- df3791c state.orch: generate jid if missing
- **PR #49770:** (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-09-25 19:03:25 UTC
 - 4138683 Merge pull request #49770 from rallytime/merge-2018.3
 - d9ed59b Merge branch '2017.7' into '2018.3'
 - f664515 Merge pull request #49760 from Ch3LL/raid_docs
 - * 0eb90c1 Add mdadm as dependency in mdadm state docs
 - d5a75bf Merge pull request #49749 from erwindon/docufix
 - * bae6678 fixed link in documentation
 - 5ef2def Merge pull request #49703 from twangboy/fix_49675_2017.7
 - * 9127222 Merge branch '2017.7' into fix_49675_2017.7
 - * 4f54422 Fix reboot needed detection
 - b5726d2 Merge pull request #49718 from vutny/doc/2017.7/add-missing-mock-kwarg
 - * 3e19176 [DOC] Add missing *mock* argument for *state.apply*
- **PR #49757:** (bbinet) Fix influxdb_user state when test=True @ 2018-09-24 19:14:22 UTC
 - db6f68a Merge pull request #49757 from bbinet/fix-influxdb_user-test
 - 0d9ef4b Fix influxdb_user state when test=True
- **PR #49679:** (dwoz) Add more tests to whitelist @ 2018-09-22 17:46:50 UTC
 - ec2386e Merge pull request #49679 from dwoz/whitelist
 - 0a3d95f Fix linter issues
 - 4c457c9 Close handles only if they exist
 - a44b37a Merge remote-tracking branch 'saltstack/2018.3' into whitelist
- **PR #49722:** (meaksh) Fixes some issues on the Zypper module @ 2018-09-21 13:38:03 UTC
 - 6a3e127 Merge pull request #49722 from meaksh/2018.3-fix-zypper-issue-on-python3
 - bb9cb6e Fix wrong queryformat for zypper list_provides
 - d40c034 Fix index error when running on Python 3
- **PR #49720:** (cstarke) Separate prlctl and prlsrvctl checks into each requiring function @ 2018-09-21 13:32:46 UTC
 - e7bbb83 Merge pull request #49720 from cstarke/2018.3
 - b0be6aa Add documentation for prlctl and prlsrvctl binary requirement
 - 4f8476b Fix tests; add test for CommandExecutionError
 - 3c96dd2 Fix tests for parallels module
 - 9034c4e Add import for CommandExecutionError
 - 752b6f8 Separate prlctl and prlsrvctl checks into each requiring function
- **PR #49615:** (terminalmage) ping_interval: use service.restart instead of signaling @ 2018-09-21 13:26:41 UTC
 - f745e43 Merge pull request #49615 from terminalmage/ping-interval
 - b49b018 Move service name logic to a separate function

- 2fddb3 ping_interval: use service.restart instead of signaling
- **PR #49731:** ([terminalmage](#)) Add warning about using jinja filters to dump dicts in Jinja @ 2018-09-21 13:16:04 UTC
 - 0a530d2 Merge pull request #49731 from terminalmage/jinja-filter-warning
 - 8393560 Add warning about using jinja filters to dump dicts in Jinja
- **PR #49696:** ([jgleissner](#)) loosen azure sdk dependencies in azurearm cloud driver @ 2018-09-20 19:17:15 UTC
 - 91acb82 Merge pull request #49696 from jgleissner/2018.3-azurearm-deps
 - 467e017 remove unused import from azurearm driver
 - bad28b6 loosen azure sdk dependencies in azurearm cloud driver
- **PR #49684:** ([twangboy](#)) Detect when system needs reboot after domain join @ 2018-09-20 16:17:50 UTC
 - d434e36 Merge pull request #49684 from twangboy/fix_49675
 - 3600467 Fix some try/except blocks, mark a lazy test
 - 871c11a Fix other functions in the same manner
 - 1b5bc66 Merge branch '2018.3' into fix_49675
 - 95e6f54 Detect when system needs reboot after domain join
 - * 9048970 Add some debug info to assert
 - * 536fce6 Increase function timeout
 - * ed4de63 Fix file serialize test
 - * 5ac3738 Merge remote-tracking branch 'saltstack/2018.3' into whitelist
- **PR #49710:** ([rallytime](#)) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-09-19 18:05:50 UTC
 - 936cae5 Merge pull request #49710 from rallytime/merge-2018.3
 - d19c67f Merge branch '2017.7' into '2018.3'
 - 6bd85b5 Merge pull request #49706 from garethgreenaway/1120_remove_mock_os_path_join
 - * f4ccc75 Removing mocking of os.path.join from two tests, one of which was failing when used with coverage argument. No reason we should be mocking os.path.join.
 - c38dc61 Merge pull request #49692 from rallytime/bp-49688
 - * fde7575 Order the runtests suites
 - 1f60753 Do not use close_fds on Windows OS
 - 4a54c7c Fix file serialize test
 - 0ec1e1e Increase timeout on flaky test
 - 6ae924b Skip test that is not applicable on windows
 - 5980200 Increase timeout on flaky test
 - 1757edd Increase ModuleTest.run_function timeout
 - 7c7353c Add more tests to whitelist
- **PR #49708:** ([rallytime](#)) Back-port #49555 to 2018.3 @ 2018-09-19 13:12:12 UTC
 - **PR #49555:** ([bergmannf](#)) Change StringIO and BytesIO imports (refs: #49708)
 - b082f79 Merge pull request #49708 from rallytime/bp-49555

- ed25416 Change StringIO import in python2 to import the class.
- **PR #49707: (rallytime)** Back-port #49702 to 2018.3 @ 2018-09-19 13:09:10 UTC
 - **PR #49702: (rallytime)** Mark orchestration test as expensive (refs: #49707)
 - 0e97d9e Merge pull request #49707 from rallytime/bp-49702
 - 7ff24e5 Mark orchestration test as expensive
- **PR #49693: (rallytime)** [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-09-18 20:05:28 UTC
 - 0c4005d Merge pull request #49693 from rallytime/merge-2018.3
 - b39dacf Merge branch '2017.7' into '2018.3'
 - 37cbd27 Merge pull request #49685 from rallytime/pillar-headings
 - * 02b2d54 Split intro docs for cmd_yamlex pillar into shorter lines.
 - * c4cbe5b Fix heading line-lengths
 - 9bad295 Merge pull request #49689 from terminalmage/2017.7-docs
 - * 7e5bab7 Fix docs build errors (2017.7 branch)
- **PR #49674: (rallytime)** [2018.3] Merge forward from 2018.3.3 to 2018.3 @ 2018-09-18 13:37:00 UTC
 - a12176d Merge pull request #49674 from rallytime/merge-2018.3
 - 7bcb809 Merge pull request #31 from dwoz/merge-2018.3
 - * cb35ebb Account for filename changes
 - f3b122f Merge branch '2018.3.3' into '2018.3'
- **PR #49593: (dwoz)** Add more tests to whitelist for Windows @ 2018-09-17 14:57:44 UTC
 - e636dac Merge pull request #49593 from dwoz/add_whitelist
 - 2e1bf13 Merge branch '2018.3' into add_whitelist
 - 2340a58 Fix runner returns test on Windows
 - f908cde Merge branch '2018.3' into add_whitelist
 - be5fccf Fix linter - blank lines
 - e51b0f8 Fix binary file manage test
 - 9e3b44d Fix linter issues
 - ca1b05e Fix multiple issues in x509 module and state
 - e603e7a Fix encoding issues in file and x509 states
 - 7f93c7f Fix map file loading on windows
 - 2959da0 Add some runners test files to whitelist
 - bee2902 Make windows file remove return like others
 - 5770b05 Fix hitelist file order
 - 10ec8be Fix linter issues
 - ccbcb55 Add more tests to whitelist for Windows
- **PR #49639: (isbm)** Retire MD5 checksum for pkg mgmt plugins @ 2018-09-17 14:51:54 UTC
 - 7823839 Merge pull request #49639 from isbm/isbm-yumnotify-md5

- 11a94ca Remove an empty line
- adb8324 Use SHA256 algorithm for zyppnotify plugin
- 27001cf Use SHA256 algorithm for yumnotify plugin
- **PR #49652: (rallytime)** [2018.3] Merge forward from 2018.3.3 to 2018.3 @ 2018-09-14 21:20:39 UTC
 - aecbe12 Merge pull request #49652 from rallytime/merge-2018.3
 - a8a3820 Merge branch '2018.3.3' into '2018.3'
- **PR #49646: (rallytime)** [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-09-14 13:30:22 UTC
 - 530e281 Merge pull request #49646 from rallytime/merge-2018.3
 - 186f57e Merge branch '2017.7' into '2018.3'
 - 3c8ec8a Merge pull request #49644 from rallytime/mark-flaky-test
 - * be8a187 Mark grains test as flaky
 - 8ac66f1 Merge pull request #49643 from rallytime/bp-49642
 - * accef8c Skip some unreliable tests
 - 7a75d5e Merge pull request #49597 from rallytime/bp-47232
 - * c477b70 Fixed usage of ipaddress
 - 2f6cdd9 Merge pull request #49614 from rallytime/bp-49546
 - * 0f3881a Skip flaky test on Python 3
- **PR #49642: (rallytime)** Skip some unreliable tests (refs: #49643) @ 2018-09-13 18:24:43 UTC
 - bb1dcdf Merge pull request #49642 from rallytime/flaky-tests
 - 8e74d1c Skip some unreliable tests
- **PR #49629: (rallytime)** [2018.3] Merge forward from 2018.3.3 to 2018.3 @ 2018-09-13 14:00:08 UTC
 - e319ecc Merge pull request #49629 from rallytime/merge-2018.3
 - b628ad7 Merge branch '2018.3.3' into '2018.3'
- **PR #49632: (garethgreenaway)** [2018.3] Fixing integration.states.test_file.FileTest.test_directory_max_depth @ 2018-09-13 13:51:56 UTC
 - 93d43fa Merge pull request #49632 from garethgreenaway/fixing_failing_test_python_3_7
 - 588f744 Fixing failing test under python 3.7 caused by changes to how os.makedirs sets initial permissions.
- **PR #49580: (garethgreenaway)** [2018.3] Fixing tests for Python 3.7 @ 2018-09-12 16:33:35 UTC
 - 7042fc0 Merge pull request #49580 from garethgreenaway/fixing_failing_test_python_3_7
 - b6afdae Fixing lint.
 - d2fb68c Fixes various tests that were failing under python 3.7.
- **PR #49606: (rallytime)** [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-09-12 14:26:33 UTC
 - ab19082 Merge pull request #49606 from rallytime/merge-2018.3
 - c168268 Update old utils paths to use new paths
 - 19598d8 Merge branch '2017.7' into '2018.3'
 - * aa560c5 Merge pull request #49595 from rallytime/merge-2017.7

- 09247a3 Merge branch '2017.7.8' into '2017.7'
- 4d865b4 Merge pull request #49560 from rallytime/pkgng-fix
- f3e1534 [2017.7.8] Use correct path for is_true function
- 92369f0 Merge pull request #49541 from twangboy/fix_osx_build_2
- 750d3fa Remove trusted host switches
- 397296f Merge pull request #49539 from twangboy/fix_osx_build_2
- 6b42e73 Fix issues with build script on OSX
- * e8171de Merge pull request #49596 from terminalmage/kill-bare-excepts-with-fire
 - 729dc08 Kill bare excepts with fire
- * 63b6643 Merge pull request #49578 from twangboy/fix_49566
 - 6a5a69c Merge branch '2017.7' into fix_49566
- * f9a01b7 Merge pull request #49584 from terminalmage/squelch-varstack-error
 - c79a823 Squelch error logging when varstack is not installed
- * d4d2b36 Merge pull request #49579 from dwoz/flaky_test
 - db40df Increase timeout for flaky git test
- * 5cbe60b Merge pull request #49570 from rallytime/doc-fixes
 - de80bda Fix docstring + import order, move pylint disable to own line
 - 393bc0f Fix doc build errors in saltnado documentation
 - 6105ebb Use setup.py clean -all
- **PR #49620:** (dwoz) Adding passing windows nacl runner tests to whitelist @ 2018-09-12 14:19:11 UTC
 - 0ce91d6 Merge pull request #49620 from dwoz/nacltest
 - 51500ac Adding passing windows nacl runner tests to whitelist
- **PR #49532:** (meaksh) Fix wrong 'recurse' behavior on for linux_acl.present/absent states @ 2018-09-12 14:16:15 UTC
 - c1f97c4 Merge pull request #49532 from meaksh/2018.3-fix-linux_acl-recursive-problems
 - cf27069 Fix some pylint issues
 - a0ed59d Fix recursive cases on linux_acl.absent state
 - 4a01849 Add unit tests to cover recursive cases of linux_acl states
 - f739b6f Fix typo on variable name
 - dc6d1d7 Fix wrong recurse behavior on for linux_acl.present state
- **ISSUE #49027:** (lachlanmunro) x509.certificate_managed certificate is mangled on process under py3 m2crypto (refs: #49561)
- **ISSUE #49008:** (lachlanmunro) x509.certificate_managed state fails under py3 m2crypto with "int too large" (refs: #49561)
- **PR #49561:** (dwoz) x509 module and state bug fixes @ 2018-09-11 14:01:43 UTC
 - 283e7d7 Merge pull request #49561 from dwoz/m2crypto_test
 - 5e591ea Merge branch '2018.3' into m2crypto_test

- **PR #49592:** (dwoz) Fix binary file manage test @ 2018-09-10 23:03:18 UTC
 - 4478a44 Merge pull request #49592 from dwoz/bin_file_fix
 - 8556c3d Fix binary file manage test
- **PR #49571:** (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-09-10 12:58:15 UTC
 - 9004422 Merge pull request #49571 from rallytime/merge-2018.3
 - a00aba9 Merge branch '2017.7' into '2018.3'
 - * 5d267a2 Merge pull request #49547 from rallytime/bp-49518
 - 4bb09f7 Skip service module integration tests on CentOS 7
 - * 4948071 Merge pull request #49549 from rallytime/codeowners-duplicate
 - 4b257d2 Remove duplicate comment in CODEOWNERS file
 - faafe74 Merge branch '2018.3' into m2crypto_test
- **PR #49577:** (dwoz) Multiple unittest fixes for 2018.3 Python 3 Windows @ 2018-09-08 05:53:38 UTC
 - 4669a9a Merge pull request #49577 from dwoz/unit_test_fixes
 - aa07b3f Multiple unittest fixes for 2018.3 Python 3 Windows
- **PR #49533:** (silenius) [cherry-pick] Optimize postgres groups management @ 2018-09-07 18:58:57 UTC
 - 8b971e5 Merge pull request #49533 from silenius/2018.3.3
 - 7eb8d6c Postgress module unit test fix.
 - b56aedc Optimize postgres groups management
- **PR #49543:** (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-09-07 18:19:32 UTC
 - 1a41b47 Merge pull request #49543 from rallytime/merge-2018.3
 - cf508a4 Merge branch '2017.7' into '2018.3'
 - * 75a3b52 Merge pull request #49527 from terminalmage/remove-special-envs-handling
 - 1478a76 Remove special handling for file_envs fileserver func
 - * 13f1d26 Merge pull request #49512 from rallytime/merge-2017.7
 - de7ef3d Add "in progress" notation back to 2017.7.8 release notes
 - edad2dc Merge branch '2017.7.8' into '2017.7'
 - d24c96f Merge pull request #49505 from Ch3LL/rn_7.8_2
 - d40b644 Update 2017.7.8 ChangeLog with new fixes
 - 0d7b173 Merge pull request #49498 from rallytime/pin-cherrypy-2017.7.8
 - 81a6155 Pin CherryPy version to < 18.0.0 in requirements files for PY2
 - 52ab2c0 Merge pull request #49466 from rallytime/bp-49461
 - 5842800 Revert "Allow for not being prompted to supply a password to deploy keys to a..."
 - 1bbe7df Merge pull request #49284 from twangboy/fix_installer_osx
 - a112eaa Fix path to libsodium tarball
 - e0e8779 Merge pull request #49272 from twangboy/fix_installer_more
 - a8f054b Add 64bit binaries for KB2999226 to the x86 installer

- 0eb6ddf Merge pull request #49218 from twangboy/fix_installer
- e8a1d2f Add more descriptive error when KB not found
- 71737ea Suppress all ui on vcredist installation
- 7dae9bb Fix Windows and OSX installers
- e484f26 Merge pull request #49116 from twangboy/fix_installer
- 1227095 Add nonfatal switch to VCRedist
- 0b9f2f8 Merge pull request #49113 from Ch3LL/rn_7.8
- f6b70bb Add changelog to 2017.7.8 release notes
- * 208cfe6 Merge pull request #49515 from rallytime/update-codeowners
 - 1faab8b Add some files to the CODEOWNERS files for team-core to own
- * 34e5174 Merge pull request #49327 from twangboy/fix_win_service
 - 74e944b Mark test_service_status_running as flaky
 - c69560c Merge branch '2017.7' into fix_win_service
 - 53e2e05 Merge branch '2017.7' into fix_win_service
 - cf3d287 Merge branch '2017.7' into fix_win_service
 - 1641851 Fix the name of the _cmd_quote test
 - 97567af Skip tests on Linux systems
 - 0ca9cd1 Fix some lint
 - 3800966 Add tests
 - b0d646d Add more details to the functioning of _cmd_quote
 - a9856e2 Fix issues with win_service
- **ISSUE #49452:** (gtmanfred) [python3.7] remove usage of collections.abc stuff from the collections shim (refs: #49487)
- **PR #49487:** (garethgreenaway) [2018.3] Swapping out collections imports @ 2018-09-07 15:36:04 UTC
 - baafd6e Merge pull request #49487 from garethgreenaway/49452_collections_abc
 - 2fb3ef7 Merge branch '2018.3' into 49452_collections_abc
 - ebfd7f9 Merge branch '2018.3' into 49452_collections_abc
 - b27e86b Swapping out the version check for a try...except on the import from collections.abc with a fallback to importing from collections.
 - d118a9f Updating various imports that have been moved from collections to collections.abc, and will be deprecated in collections beginning in 3.8.
 - * abc9c1a Fix linter issues
 - * 8e42384 Fix multiple issues in x509 module and state
 - * 2a52158 Fix encoding issues in file and x509 states
 - * 49a6da7 Fix map file loading on windows
- **PR #49528:** (dwoz) Fix merge wart @ 2018-09-06 23:12:39 UTC
 - 06935e9 Merge pull request #49528 from dwoz/mergetests

- 6a4f823 Fix merge wart
- **PR #49548:** (garethgreenaway) [2018.3] Disabling State boto tests for Python 3.7+ @ 2018-09-06 21:50:10 UTC
 - 3298e70 Merge pull request #49548 from garethgreenaway/1075_disable_boto_tests_part_deux
 - 0f5191e Disable various boto tests when run under python 3.7 because of //github.com/spulec/moto/issues/1706. which was causing the test suite to hang on unit tests. This PR is disabling the tests in the test_boto_vpc state tests.
- **PR #49521:** (terminalmage) Fix _get_hash in splay executor @ 2018-09-06 14:06:54 UTC
 - c346825 Merge pull request #49521 from terminalmage/fix-splay-executor
 - bbb8fe8 Fix _get_hash in splay executor
- **PR #49526:** (terminalmage) Prevent lookup error when trying to lookup fileserver function from LazyDict @ 2018-09-06 14:01:30 UTC
 - 3f7c89c Merge pull request #49526 from terminalmage/fix-backends-error-logging
 - 1f0288e Prevent lookup error when trying to lookup fileserver function from LazyDict
- **PR #49524:** (garethgreenaway) [2018.3] Disable boto tests under 3.7 @ 2018-09-06 13:35:18 UTC
 - bf939f9 Merge pull request #49524 from garethgreenaway/1075_disable_boto_tests
 - 5ec5578 Disable various boto tests when run under python 3.7 because of //github.com/spulec/moto/issues/1706. which was causing the test suite to hang on unit tests.
- **PR #49511:** (rallytime) [2018.3] Merge forward from 2018.3.3 to 2018.3 @ 2018-09-05 19:52:25 UTC
 - f73f2e5 Merge pull request #49511 from rallytime/merge-2018.3
 - 3ffc6c2 Merge branch '2018.3.3' into '2018.3'
- **PR #49500:** (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-09-04 19:02:31 UTC
 - 81a49a8 Merge pull request #49500 from rallytime/merge-2018.3
 - 2317b5e Merge branch '2017.7' into '2018.3'
 - * 1cdaea2 Merge pull request #49475 from dwoz/flaky_tests
 - f214929 Fix a flaky test and mark another as flaky
 - * 4ac4305 Merge pull request #49457 from rallytime/labels-docs
 - d1e51db Remove references to unused milestones in docs
 - * 41dcc3f Merge pull request #49461 from saltstack/revert-47100-ssh
 - 0d7180a Revert "Allow for not being prompted to supply a password to deploy keys to a..."
- **PR #49497:** (rallytime) Back-port #49473 to 2018.3 @ 2018-09-04 18:44:25 UTC
 - **PR #49473:** (rallytime) Use correct and explicit paths for salt utils libs (refs: #49497)
 - 16ca360 Merge pull request #49497 from rallytime/bp-49473
 - 1aa3935 Lint: Add range import from six
 - d06f6a5 Use correct and explicit paths for salt utils libs
- **PR #49474:** (dwoz) Work around git-python resource leaks @ 2018-09-02 19:42:32 UTC
 - 93df5c4 Merge pull request #49474 from dwoz/gitfs_unit
 - 56068e9 Merge branch '2018.3' into gitfs_unit

- e697ddc Work around git-python resource leaks
- PR #49471: (Ch3LL) Remove string conversion on frame object in sigusr1 handler @ 2018-09-02 18:05:13 UTC
 - 43ead5d Merge pull request #49471 from Ch3LL/debug_sigusr1
 - 1631b2f Remove string conversion on frame object in sigusr1 handler
- PR #49454: (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-08-31 21:36:34 UTC
 - 764b816 Merge pull request #49454 from rallytime/merge-2018.3
 - a97a7b0 Fix lint and test failures caused by bad merge
 - f7226f4 Merge branch '2017.7' into '2018.3'
 - * 7a166bc Merge pull request #49376 from twangboy/fix_48608
 - bf32e0c Merge branch 'fix_48608' of <https://github.com/twangboy/salt> into fix_48608
 - 9766f0d Merge branch '2017.7' into fix_48608
 - fb97b00 Fix broken path to libsodium tarball
 - 535d83e Fix test for list_users
 - 40d3f2e Use dscl to get list of users
 - e426459 Use a set to avoid duplicates
 - * 03d9750 Merge pull request #49434 from dwoz/cleanup_exception_handling
 - 9daa992 Fix group remove test logic
 - d74fab7 Clean up exception handling on py3
 - * 7099164 Merge pull request #49389 from gtmanfred/2017.7
 - 6c01662 remove cmd key from load
 - bdf3df3 add cli example
 - 251f321 pass load on
 - be7c041 add test
 - 0ace5c1 make file envs compatible with transport format
 - * 24faa5e Merge pull request #49408 from terminalmage/issue49269
 - d02ec34 Allow our custom yaml dumper to NamespacedDictWrapper objects
 - * 5746fc8 Merge pull request #49402 from rallytime/bp-49321
 - 7dec9fc Add flaky decorator to serializer test
 - * 5c723b0 Merge pull request #49375 from terminalmage/revert-49185
 - aaea274 Merge branch '2017.7' into revert-49185
 - 7372e9d Add minion documentation for enable_gpu_grains
 - ea1b53c Fix incorrect master docs for enable_gpu_grains
 - 638210a Add validation type and default minion value for enable_gpu_grains
 - 49ed156 Add enable_gpu_grains to the minion config stub
 - d1b7fb4 Revert "Update documentation to correctly state enable_gpu_grains default"
 - * 11d87e4 Merge pull request #49387 from twangboy/fix_win_repo

- 2bf7eda Import GLOBAL_ONLY
- * 651631d Merge pull request #49390 from dwoz/archive_module
 - b332beb Fix archive tests for py3
- * c591d2b Merge pull request #49385 from dwoz/sonofa
 - f9d7dbd The autoruns module has not been renamed
- * 5d2c9b6 Merge pull request #49371 from rallytime/bp-49064
 - bc52f7c Stop running lint on all files when no changes

- **PR [#49356](#): (dwoz) Fix tests that use timed_subprocess for py3 @ 2018-08-28 13:30:08 UTC**
 - 1faf6a7 Merge pull request [#49356](#) from dwoz/cmdmod

- 6ffeaae Fix tests that use `timed_subprocess` for py3
- ISSUE #48299: (dosercz) `git.latest` reports deleted tags in remote repo as `new_tags` in changes (refs: #49305)
- PR #49336: (terminalmage) Fix half-baked comment @ 2018-08-27 00:07:55 UTC
 - PR #49305: (terminalmage) Allow `git.latest` to remove local tags which have been removed remotely (refs: #49336)
 - 2d8055e Merge pull request #49336 from terminalmage/issue48299
 - 175e161 Fix half-baked comment
- PR #49331: (dwoz) Use `salt.utils` to ensure string type @ 2018-08-26 01:42:08 UTC
 - a2e7033 Merge pull request #49331 from dwoz/strfix
 - 7513474 Use `salt.utils` to ensure string type
- PR #49312: (Ch3LL) Fix keyerror in `manage.bootstrap` @ 2018-08-25 19:55:44 UTC
 - d70eda8 Merge pull request #49312 from Ch3LL/ssh_list_hosts
 - da71c97 Fix keyerror in `manage.bootstrap`
- PR #49316: (rallytime) [2018.3] Merge forward from 2018.3.3 to 2018.3 @ 2018-08-25 19:53:04 UTC
 - 6b2eba7 Merge pull request #49316 from rallytime/merge-2018.3
 - 39c442c Merge branch '2018.3.3' into '2018.3'
- ISSUE #48880: (damntoken) Can't run `cmd.run` with UTF-8 chars as arguments / parameters. With custom module. (refs: #49322)
- PR #49322: (dwoz) Encode shell commands explicitly. @ 2018-08-25 04:43:26 UTC
 - 5766e98 Merge pull request #49322 from dwoz/state_module_test_fix
 - 1f7d50d Encode shell commands explicitly.
- PR #49299: (dwoz) Work around `cmd.run` unicode issues in test for now @ 2018-08-25 04:43:03 UTC
 - b47da0a Merge pull request #49299 from dwoz/test_fix
 - f4bd644 Fix string formatting wart in file state tests
 - e84e608 Fix wart in file state test
 - 71d4465 Work around `cmd.run` unicode issues in test for now
- ISSUE #48299: (dosercz) `git.latest` reports deleted tags in remote repo as `new_tags` in changes (refs: #49305)
- PR #49305: (terminalmage) Allow `git.latest` to remove local tags which have been removed remotely (refs: #49336) @ 2018-08-24 17:29:03 UTC
 - b65890c Merge pull request #49305 from terminalmage/issue48299
 - 4a093d9 lint
 - ed7b994 Gate tag manipulation behind a `sync_tags` argument
 - 29de855 Add test for a removed tag
 - eb9a459 Properly handle tags deleted from remote repository
 - 916c15a Add `git.tag` function
- ISSUE #49009: (msciciel) `file_ignore_regex` / `file_ignore_glob` not working properly (refs: #49308)
- PR #49308: (terminalmage) Don't include ignored paths in `mtime` map @ 2018-08-24 17:28:41 UTC

- 459354a Merge pull request [#49308](#) from terminalmage/issue49009
- 2badd7f Don't include ignored paths in mtime map
- **PR [#49282](#): (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 @ 2018-08-24 16:45:50 UTC**
 - 914bb09 Merge pull request [#49282](#) from rallytime/merge-2018.3
 - 21a51c9 Add 'minion_data_cache: True' to mocked opts for minions unit tests
 - 196ce3f Call the `with_tempfile` decorator correctly for 2018.3
 - 37f24fd Fix unit test for file state
 - 6f9a158 Update old utils paths with new paths
 - c3eefc Merge branch '2017.7' into '2018.3'
 - * 879c3ad Merge pull request [#49262](#) from bloomberg/short-circuit
 - a3594db extend [#488588](#) to cover SyncAuth class
 - * 1900aff Merge pull request [#49144](#) from twangboy/fix_48163
 - ff5ec86 Work with seconds
 - 7264008 Fix some lint (remove whitespace)
 - 4f9973d Improve timeout in delete
 - a6ecb75 Remove testing debug stuff
 - 7dd7953 Fix start/stop functions
 - fade0a6 Merge pull request [#10](#) from damon-atkins/patch-1
 - 57c4b9f 2017_win_service_damon
 - d44eae Add timeout support to the state
 - d579b3e Add timeout parameter
 - * 395bae6 Merge pull request [#49259](#) from gtmanfred/flaky-2017.7
 - 93a576e flaky tests are flaky yo
 - f518bd3 mark orchestration state tests as flaky
 - * 62cc0df Merge pull request [#49231](#) from minusf/mount-check-name
 - eb5cab3 fix some underhanging indent while here...
 - ec2a091 check for mandatory parameters to avoid false positives
 - * d55d484 Merge pull request [#49242](#) from dwoz/blockreplace_better_fix
 - 72c3727 Use six to make sure content is unicode
 - 1bf0b18 Better blockfix replace
 - dd4fcd3 Revert "Multiple block replace test fixes"
 - d335842 Use os.linesep.join instead of textwrap.dedent
 - * 85f6d36 Merge pull request [#49236](#) from terminalmage/issue32737
 - 233bbae Allow compound matching in eauth config expressions
 - * 5ba7f60 Merge pull request [#49187](#) from erwindon/py27fixnumberformat
 - 12261a5 trailing whitespace removal

- 2149e22 Fix for #45620: "Salt CLI is rounding floats to 2 decimal places" (actually: Salt CLI is using only 12 digits for precision)
- * f8c55b8 Merge pull request #49184 from ralish/external_nodes_docs
 - 4fe38dc Merge branch '2017.7' into external_nodes_docs
 - 2e29b29 Remove obsolete documentation on external_nodes setting
- * 65205a4 Merge pull request #49185 from ralish/enable_gpu_grains_doc
 - 2fe675c Update documentation to correctly state enable_gpu_grains default
- * 5aa282e Merge pull request #48032 from zer0def/parted-naming
 - 563ad25 Merge branch '2017.7' into parted-naming
 - 07f8631 Fixed partition names with spaces effectively containing only the first word.
- * 0157eac Merge pull request #49164 from terminalmage/issue49154
 - c2aba7a Merge branch '2017.7' into issue49154
 - b4544d7 Add keep_source integration tests
 - 82638c6 Fix bug in keep_source for non-templated salt:// file sources
- * b510441 Merge pull request #49179 from dwoz/test_unit_states_file
 - 913ea5e Fix directory unit test
 - 3363238 Account for normalized dirs in unit tests
- * 7486fd5 Merge pull request #49162 from erwindon/wheel_error_error
 - ca5df04 Merge branch '2017.7' into wheel_error_error
 - 4335c5c Must have 2 lines between imports and code
 - ec1f013 Improved solution as per @dwoz's suggestion
 - 20f134e Fixed unknown 'exceptions' under Python3 (#49152)
- * 7043286 Merge pull request #49143 from Ch3LL/bp-49142
 - d2e73cc Remove -Z script_arg for cloud tests
- * 8ab55f5 Merge pull request #49167 from dwoz/filefix
 - b5ba073 Simplify dict keys lookup
 - 6844251 Fix remaining file state integration tests (py3)
- * 90bd560 Merge pull request #49163 from dwoz/tmp_dir
 - 3384864 add Exception type
 - 9da79dd0 Allow test suite to finish if tmp_dir removal fails
- * aa01a67 Merge pull request #49136 from Ch3LL/bootstrap_2017.7
 - de40dfb [2017.7] Update bootstrap script to latest release (2018.08.15)
- * 29fccbf Merge pull request #49118 from dwoz/test_file_fixes
 - c6b781e Multiple fixes for integration.states.test_file
- * 133e400 Merge pull request #49103 from dwoz/cmd_test_fix
- * 566a4ea Install the launcher so we can execute py files

- **ISSUE** saltstack/salt-jenkins#1075: (Ch3LL) [2018.3.3] arch python3 tests do not finish (refs: #49303)
- **PR** #49303: (gtmanfred) use os._exit instead of sys.exit when daemonizing @ 2018-08-24 14:15:54 UTC
 - 4c81c2e Merge pull request #49303 from gtmanfred/forking
 - e06ce49 use os._exit instead of sys.exit when daemonizing
- **PR** #49276: (terminalmage) Fix paths to moved functions @ 2018-08-23 16:38:55 UTC
 - 158c1ca Merge pull request #49276 from terminalmage/fix-moved-funcs
 - 322a988 Fix paths to moved functions
- **PR** #49270: (dwoz) Add async helper to test_sock_path_len @ 2018-08-23 16:17:54 UTC
 - ef39f85 Merge pull request #49270 from dwoz/test_event_fix
 - 51bf79a Add async helper to test_sock_path_len
- **PR** #49199: (jacobweinstock) Fix typeerror unicode @ 2018-08-23 14:38:17 UTC
 - 5da743a Merge pull request #49199 from jacobweinstock/fix-typeerror-unicode
 - 25608ef Merge branch '2018.3' into fix-typeerror-unicode
 - 11ad11c add unicode_literals back to handle logging and other things.
 - 6944baf add salt.utils.stringutils.to_bytes. add comment on unicode_literals.
- **ISSUE** #49174: (rbthomp) Beacon diskusage reporting incorrect diskusage value. (refs: #49264)
- **PR** #49264: (gtmanfred) fix diskusage beacon @ 2018-08-23 14:36:07 UTC
 - e28f8f1 Merge pull request #49264 from gtmanfred/diskusage
 - 15857c2c fix diskusage
- **PR** #49253: (gtmanfred) skip ID 7 for vmware hard drives (refs: #49278) @ 2018-08-23 14:35:31 UTC
 - f6b2b93 Merge pull request #49253 from gtmanfred/vmware
 - 6e776ca skip ID 7 for vmware hard drives
- **ISSUE** #49159: (wenxin-wang) incorrect default value of minion's 'ipv6' option (refs: #49263)
- **PR** #49263: (terminalmage) Revert default value for ipv6 to None @ 2018-08-23 13:02:13 UTC
 - 2a2bd48 Merge pull request #49263 from terminalmage/issue49159
 - bf5d907 Revert default value for ipv6 to None
- **PR** #49244: (dwoz) Test fixes: unit.fileserver.test_gitfs @ 2018-08-22 20:19:42 UTC
 - ec32428 Merge pull request #49244 from dwoz/gitfs_fixes
 - b533fa1 Simplify by using to_unicode helper
 - 5a0cda5 Older GitPython version do not have a close method
 - 7452715 Fix up fileserver.test_gitfs tests on windows
 - 800aa25 Remove unicode filenames on windows python 2
- **PR** #49265: (terminalmage) Fix failing unit file module unit tests @ 2018-08-22 19:35:07 UTC
 - 2d7f846 Merge pull request #49265 from terminalmage/fix-failing-file-tests
 - 6b51f71 Fix failing unit file module unit tests
- **PR** #49240: (dwoz) file state test fixes @ 2018-08-22 18:16:42 UTC

- 4634752 Merge pull request #49240 from dwoz/state_tests
- 1679a19 Work around listdir encoding issues on py2 windows
- 07ed841 file state test fixes
- PR #49260: (gtmanfred) [2018.3] flaky tests @ 2018-08-22 16:40:39 UTC
 - 55ded9f Merge pull request #49260 from gtmanfred/flaky-2018.3
 - 41973ff flaky tests are flaky yo
 - c927f1b mark orchestration state tests as flaky
- PR #49245: (dwoz) Skip grep unit tests on windows @ 2018-08-22 15:18:08 UTC
 - 6d023ca Merge pull request #49245 from dwoz/skip_grep_windows
 - e305891 Skip grep unit tests on windows
- PR #49243: (dwoz) Revert newline translation change @ 2018-08-22 15:12:26 UTC
 - 75beede Merge pull request #49243 from dwoz/filesserver_tests
 - 86e3c46 Revert newline translation change
- PR #48545: (bbinet) Fix unreachable ssh-id-wrapper template when root_dir is relative @ 2018-08-21 15:12:01 UTC
 - 60605f0 Merge pull request #48545 from bbinet/fix-unreacheable-ssh-id-wrapper
 - 284dcf7 Fix unreachable ssh-id-wrapper template when root_dir is relative
- ISSUE #49204: (mchugh19) file.directory state fails if directory contains an invalid symlink (refs: #49209, #49827)
- PR #49209: (gtmanfred) don't blow up check_perms if lsattr file doesn't exist @ 2018-08-20 19:02:42 UTC
 - a4c51a9 Merge pull request #49209 from gtmanfred/lsattr
 - ab918ca don't blow up check_perms if lsattr file doesn't exist
- ISSUE #49060: (The-Loeki) On Py3, redis job cache throws TypeError bytes / str (refs: #49190)
- PR #49190: (The-Loeki) decode_reponses=True on all Redis API interfaces @ 2018-08-20 18:57:26 UTC
 - d29af00 Merge pull request #49190 from The-Loeki/redis-fix
 - d126318 Merge branch '2018.3' into redis-fix

27.2.6 Salt 2018.3.5 Release Notes

Version 2018.3.5 is a CVE-fix release for [2018.3.0](#).

Security Fix

CVE-2019-17361

With the Salt NetAPI enabled in addition to having a SSH roster defined, unauthenticated access is possible when specifying the client as SSH. Additionally, when the `raw_shell` option is specified any arbitrary command may be run on the Salt master when specifying SSH options.

27.2.7 Salt 2017.7.0 Release Notes - Codename Nitrogen

27.2.8 Python 3

The 2017.7 Salt Release adds initial Python 3 support.

The default Python version of Salt will remain Python 2, although Python 3 packages will be supplied for users who want to help test this new feature.

27.2.9 Python 2.6 Deprecation

Salt will no longer support Python 2.6. We will provide `python2.7` packages on our [repo](#) for RedHat and CentOS 6 to ensure users can still run Salt on these platforms.

As this will impact the installation of additional dependencies for salt modules please use pip packages if there is not a package available in a repository. You will need to install the `python27-pip` package to get access to the correct pip27 executable: `yum install python27-pip`

27.2.10 Known Issues

The following salt-cloud drivers have known issues running with Python 3. These drivers will not work with Python 3, and Python 2.7 should be used instead:

- Joyent
- When running under Python 3, users who require Unicode support should ensure that a locale is set on their machines. Users using the `C` locale are advised to switch to a UTF-aware locale to ensure proper functionality with Salt with Python 3.

Remember to update the Salt Master first

Salt's policy has always been that when upgrading, the minion should never be on a newer version than the master. Specifically with this update, because of changes in the fileclient, the 2017.7 minion requires a 2017.7 master.

Backwards compatibility is still maintained, so older minions can still be used.

More information can be found in the [Salt FAQ](#)

States Added for Management of systemd Unit Masking

The `service.masked` and `service.unmasked` states have been added to allow Salt to manage masking of systemd units.

Additionally, the following functions in the `systemd` execution module have changed to accommodate the fact that indefinite and runtime masks can co-exist for the same unit:

- `service.masked` - The return from this function has changed from previous releases. Before, `False` would be returned if the unit was not masked, and the output of `systemctl is-enabled <unit name>` would be returned if the unit was masked. However, since indefinite and runtime masks can exist for the same unit at the same time, this function has been altered to accept a `runtime` argument. If `True`, the minion will be checked for a runtime mask assigned to the named unit. If `False`, then the minion will be checked for an indefinite mask. If one is found, `True` will be returned. If not, then `False` will be returned.
- `service.unmasked` - This function used to just run `systemctl is-enabled <unit name>` and based on the return from this function the corresponding mask type would be removed. However, if both runtime and indefinite masks are set for the same unit, then `systemctl is-enabled <unit name>` would show just the indefinite mask. The indefinite mask would be removed, but the runtime mask would remain. The function has been modified to accept a `runtime` argument, and will attempt to remove a runtime mask if that argument is set to `True`. If set to `False`, it will attempt to remove an indefinite mask.

These new `runtime` arguments default to `False`.

Pillar Encryption

Beginning in 2016.3.0 the CLI pillar data passed to several functions could conditionally be passed through a renderer to be decrypted. This functionality has now been extended to pillar SLS files as well. See [here](#) for detailed documentation on this feature.

Grains Changes

- The `osmajorrelease` grain has been changed from a string to an integer. State files, especially those using a templating language like Jinja, may need to be adjusted to account for this change.
- Add ability to specify disk backing mode in the VMWare salt cloud profile.

State Module Changes

- The `service.running` and `service.dead` states now support a `no_block` argument which, when set to `True` on systemd minions, will start/stop the service using the `--no-block` flag in the `systemctl` command. On non-systemd minions, a warning will be issued.
- The `module.run` state has dropped its previous syntax with `m_` prefix for reserved keywords. Additionally, it allows running several functions in a batch.

Note: It is necessary to explicitly turn on the new behavior (see below)

```
# Before
run_something:
  module.run:
    - name: mymodule.something
    - m_name: 'some name'
    - kwargs: {
      first_arg: 'one',
      second_arg: 'two',
      do_stuff: 'True'
    }

# After
run_something:
  module.run:
    - mymodule.something:
      - name: some name
      - first_arg: one
      - second_arg: two
      - do_stuff: True
```

Since a lot of users are already using `module.run` states, this new behavior must currently be explicitly turned on, to allow users to take their time updating their SLS files. However, please keep in mind that the new syntax will take effect in the next feature release of Salt (Oxygen) and the old usage will no longer be supported at that time.

Another feature of the new `module.run` is that it allows calling many functions in a single batch, such as:

```
run_something:
  module.run:
    - mymodule.function_without_parameters:
    - mymodule.another_function:
      - myparam
      - my_other_param
```

In a rare case that you have a function that needs to be called several times but with the different parameters, an additional feature of "tagging" is to the rescue. In order to tag a function, use a colon delimiter. For example:

```
run_something:
  module.run:
    - mymodule.same_function:1:
    - mymodule.same_function:2:
      - myparam
      - my_other_param
    - mymodule.same_function:3:
      - foo: bar
```

The example above will run `mymodule.same_function` three times with the different parameters.

To enable the new behavior for `module.run`, add the following to the minion config file:

```
use_superseded:
  - module.run
```

- The default for the `fingerprint_hash_type` option used in the present function in the `ssh` state changed from `md5` to `sha256`.

Execution Module Changes

- Several functions in the *systemd* execution module have gained a `no_block` argument, which when set to `True` will use `--no-block` in the `systemctl` command.
- In the *solarisips* pkg module, the default value for the `refresh` argument to the `list_upgrades` function has been changed from `False` to `True`. This makes the function more consistent with all of the other pkg modules (The other `pkg.list_upgrades` functions all defaulted to `True`).
- The functions which handle masking in the *systemd* module have changed. These changes are described above alongside the information on the new states which have been added to manage masking of systemd units.
- The `pkg.list_repo_pkgs` function for yum/dnf-based distros has had its default output format changed. In prior releases, results would be organized by repository. Now, the default for each package will be a simple list of versions. To get the old behavior, pass `byrepo=True` to the function.
- A `pkg.list_repo_pkgs` function has been added for both *Debian/Ubuntu* and *Arch Linux*-based distros.
- The *system* module changed its return format from "HH:MM AM/PM" to "HH:MM:SS AM/PM" for `get_system_time`.
- The default for the `fingerprint_hash_type` option used in the *ssh* execution module changed from `md5` to `sha256`.

Proxy Module Changes

The `proxy_merge_grains_in_module` configuration variable introduced in 2016.3, has been changed, defaulting to `True`.

The connection with the remote device is kept alive by default, when the module implements the `alive` function and `proxy_keep_alive` is set to `True`. The polling interval is set using the `proxy_keep_alive_interval` option which defaults to 1 minute.

The developers are also able to use the `proxy_always_alive`, when designing a proxy module flexible enough to open the connection with the remote device only when required.

Wildcard Versions in `pkg.installed` States

- The `pkg.installed` state now supports wildcards in package versions, for the following platforms:
 - SUSE/openSUSE Leap/Thumbleweed
 - Debian/Ubuntu
 - RHEL/CentOS
 - Arch Linux

This support also extends to any derivatives of these distros, which use the *aptpkg*, *yumpkg*, or *pacman* providers for the `pkg` virtual module.

Using wildcards can be useful for packages where the release name is built into the version in some way, such as for RHEL/CentOS which typically has version numbers like `1.2.34-5.el7`. An example of the usage for this would be:

```
mypkg:
  pkg.installed:
    - version: '1.2.34*'
```

Master Configuration Additions

- `syndic_forward_all_events` - Option on multi-syndic or single when connected to multiple masters to be able to send events to all connected masters.
- `eauth_acl_module` - In case external auth is enabled master can get authenticate and get the authorization list from different auth modules.
- `keep_acl_in_token` - Option that allows master to build ACL once for each user being authenticated and keep it in the token.

Minion Configuration Additions

- `pillarenv_from_saltenv` - When set to `True` (default is `False`), the `pillarenv` option will take the same value as the effective `saltenv` when running states. This would allow a user to run `salt '*' state.apply mysls saltenv=dev`, and the SLS for both the state and pillar data would be sourced from the `dev` environment, essentially the equivalent of running `salt '*' state.apply mysls saltenv=dev pillarenv=dev`. Note that if `pillarenv` is set in the minion config file, or if `pillarenv` is provided on the CLI, it will override this option.

salt-api Changes

The `rest_cherryypy` `netapi` module has received a few minor improvements:

- A CORS bugfix.
- A new `/token` convenience endpoint to generate Salt `eauth` tokens.
- A proof-of-concept JavaScript single-page application intended to demonstrate how to use the Server-Sent Events stream in an application. It is available in a default install by visiting the `/app` URL in a browser.

Python API Changes

`expr_form` Deprecation

The `LocalClient`'s `expr_form` argument has been deprecated and renamed to `tgt_type`. This change was made due to numerous reports of confusion among community members, since the targeting method is published to minions as `tgt_type`, and appears as `tgt_type` in the job cache as well.

While `expr_form` will continue to be supported until the **Fluorine** release cycle (two major releases after this one), those who are using the `LocalClient` (either directly, or implicitly via a `netapi module`) are encouraged to update their code to use `tgt_type`.

`full_return` Argument in `LocalClient` and `RunnerClient`

An `full_return` argument has been added to the `cmd` and `cmd_sync` methods in `LocalClient` and `RunnerClient` which causes the return data structure to include job meta data such as `retcode`.

This is useful at the Python API:

```
>>> import salt.client
>>> client = salt.client.LocalClient()
>>> client.cmd('*', 'cmd.run', ['return 1'], full_return=True)
{'jerry': {'jid': '20170520151213898053', 'ret': '', 'retcode': 1}}
```

As well as from salt-api:

```
% curl -b /tmp/cookies.txt -sS http://localhost:8000 \  
-H 'Content-type: application/json' \  
-d '[{  
  "client": "local",  
  "tgt": "*",  
  "fun": "cmd.run",  
  "arg": ["return 1"],  
  "full_return": true  
}]'  
  
{"return": [{"jerry": {"jid": "20170520151531477653", "retcode": 1, "ret": ""}]}}
```

Jinja

Filters

New filters in 2017.7.0:

- *to_bool*
- *exactly_n_true*
- *exactly_one_true*
- *quote*
- *regex_search*
- *regex_match*
- *uuid*
- *is_list*
- *is_iter*
- *min*
- *max*
- *avg*
- *union*
- *intersect*
- *difference*
- *symmetric_difference*
- *is_sorted*
- *compare_lists*
- *compare_dicts*
- *is_hex*
- *contains_whitespace*
- *substring_in_list*
- *check_whitelist_blacklist*

- *date_format*
- *str_to_num*
- *to_bytes*
- *json_decode_list*
- *json_decode_dict*
- *rand_str*
- *md5*
- *sha256*
- *sha512*
- *base64_encode*
- *base64_decode*
- *hmac*
- *http_query*
- *is_ip*
- *is_ipv4*
- *is_ipv6*
- *ipaddr*
- *ipv4*
- *ipv6*
- *network_hosts*
- *network_size*
- *gen_mac*
- *mac_str_to_bytes*
- *dns_check*
- *is_text_file*
- *is_binary_file*
- *is_empty_file*
- *file_hashsum*
- *list_files*
- *path_join*
- *which*

Logs

Another new feature - although not limited to Jinja only - is being able to log debug messages directly from the template:

```
{%- do salt.log.error('logging from jinja') -%}
```

See the *logs* paragraph.

Network Automation

NAPALM

Introduced in 2016.11, the modules for cross-vendor network automation have been improved, enhanced and widened in scope:

- Manage network devices like servers: the NAPALM modules have been transformed so they can run in both proxy and regular minions. That means, if the operating system allows, the salt-minion package can be installed directly on the network gear. Examples of such devices (also covered by NAPALM) include: Arista, Cumulus, Cisco IOS-XR or Cisco Nexus.
- Not always alive: in certain less dynamic environments, maintaining the remote connection permanently open with the network device is not always beneficial. In those particular cases, the user can select to initialize the connection only when needed, by specifying the field `always_alive: false` in the *proxy configuration* or using the *proxy_always_alive* option.
- Proxy keepalive: due to external factors, the connection with the remote device can be dropped, e.g.: packet loss, idle time (no commands issued within a couple of minutes or seconds), or simply the device decides to kill the process. In 2017.7.0 we have introduced the functionality to re-establish the connection. One can disable this feature through the *proxy_keep_alive* option and adjust the polling frequency specifying a custom value for *proxy_keep_alive_interval*, in minutes.

New modules:

- *Netconfig state module* - Manage the configuration of network devices using arbitrary templates and the Salt-specific advanced templating methodologies.
- *Network ACL execution module* - Generate and load ACL (firewall) configuration on network devices.
- *Network ACL state* - Manage the firewall configuration. It only requires writing the pillar structure correctly!
- *NAPALM YANG execution module* - Parse, generate and load native device configuration in a standard way, using the OpenConfig/IETF models. This module contains also helpers for the states.
- *NAPALM YANG state module* - Manage the network device configuration according to the YANG models (OpenConfig or IETF).
- *NET finder* - Runner to find details easily and fast. It's smart enough to know what you are looking for. It will search in the details of the network interfaces, IP addresses, MAC address tables, ARP tables and LLDP neighbors.
- *BGP finder* - Runner to search BGP neighbors details.
- *NAPALM syslog* - Engine to import events from the napalm-logs library into the Salt event bus. The events are based on the syslog messages from the network devices and structured following the OpenConfig/IETF YANG models.
- *NAPALM Helpers* - Generic helpers for NAPALM-related operations. For example, the *Compliance report* function can be used inside the state modules to compare the expected and the existing configuration.

New functions:

- *Configuration getter* - Return the whole configuration of the network device.
- *Optics getter* - Fetches the power usage on the various transceivers installed on the network device (in dBm).

New grains: *Host*, *Host DNS*, *Username* and *Optional args*.

Custom Refspecs in GitFS / git_pillar / winrepo

It is now possible to specify the refspeccs to use when fetching from remote repositories for GitFS, git_pillar, and winrepo. More information on how this feature works can be found [here](#) in the GitFS Walkthrough. The git_pillar and winrepo versions of this feature work the same as their GitFS counterpart.

git_pillar "mountpoints" Feature Added

See [here](#) for detailed documentation.

Big Improvements to Docker Support

The old `docker` state and execution modules have been moved to `salt-contrib`. The `dockerng` execution module has been renamed to `docker` and now serves as Salt's official Docker execution module.

The old `dockerng` state module has been split into 4 state modules:

- *docker_container* - States to manage Docker containers
- *docker_image* - States to manage Docker images
- *docker_volume* - States to manage Docker volumes
- *docker_network* - States to manage Docker networks

The reason for this change was to make states and requisites more clear. For example, imagine this SLS:

```
myuser/appimage:
  docker.image.present:
    - sls: docker.images.appimage

myapp:
  docker.running:
    - image: myuser/appimage
    - require:
      - docker: myuser/appimage
```

The new syntax would be:

```
myuser/appimage:
  docker_image.present:
    - sls: docker.images.appimage

myapp:
  docker_container.running:
    - image: myuser/appimage
    - require:
      - docker_image: myuser/appimage
```

This is similar to how Salt handles MySQL, MongoDB, Zabbix, and other cases where the same execution module is used to manage several different kinds of objects (users, databases, roles, etc.).

Note: With the [Moby announcement](#) coming at this year's [DockerCon](#), Salt's `docker` execution module (as well as the state modules) work interchangeably when `docker` is replaced with `moby` (e.g. `moby_container.running`, `moby_image.present`, `moby_inspect_container`, etc.)

The old syntax will continue to work until the **Fluorine** release of Salt. The old `dockerng` naming will also continue to work until that release, so no immediate changes need to be made to your SLS files (unless you were still using the old `docker` states that have been moved to `salt-contrib`).

The `docker_container.running` state has undergone a significant change in how it determines whether or not a container needs to be replaced. Rather than comparing individual arguments to their corresponding values in the named container, a temporary container is created (but not started) using the passed arguments. The two containers are then compared to each other to determine whether or not there are changes, and if so, the old container is stopped and destroyed, and the temporary container is renamed and started.

Salt still needs to translate arguments into the format which `docker-py` expects, but if it does not properly do so, the `skip_translate` argument can be used to skip input translation on an argument-by-argument basis, and you can then format your SLS file to pass the data in the format that the `docker-py` expects. This allows you to work around any changes in Docker's API or issues with the input translation, and continue to manage your Docker containers using Salt. Read the documentation for `skip_translate` for more information.

Note: When running the `docker_container.running` state for the first time after upgrading to 2017.7.0, your container(s) may be replaced. The changes may show diffs for certain parameters which say that the old value was an empty string, and the new value is `None`. This is due to the fact that in prior releases Salt was passing empty strings for these values when creating the container if they were undefined in the SLS file, where now Salt simply does not pass any arguments not explicitly defined in the SLS file. Subsequent runs of the state should not replace the container if the configuration remains unchanged.

New SSH Cache Roster

The `SSH cache Roster` has been rewritten from scratch to increase its usefulness. The new roster supports all minion matchers, so it is now possible to target minions identically through `salt` and `salt-ssh`.

Using the new `roster_order` configuration syntax it's now possible to compose a roster out of any combination of grains, pillar and mine data and even Salt SDB URLs. The new release is also fully IPv4 and IPv6 enabled and even has support for CIDR ranges.

Salt-SSH Default Options

Defaults for rosters can now be set, so that they don't have to be set on every entry in a roster or specified from the commandline.

The new option is `roster_defaults` and is specified in the master config file:

```
roster_defaults:
  user: daniel
  sudo: True
  priv: /root/.ssh/id_rsa
  tty: True
```

Blacklist or Whitelist Extmod Sync

The modules that are synced to minions can now be limited.

The following configuration options have been added for the master:

- `extmod_whitelist`
- `extmod_blacklist`

and for the minion:

- `extmod_whitelist`
- `extmod_blacklist`

Additional Features

- The `mine.update` function has a new optional argument `mine_functions` that can be used to refresh mine functions at a more specific interval than scheduled using the `mine_interval` option. However, this argument can be used by explicit schedule. For example, if we need the mines for `net.lldp` to be refreshed every 12 hours:

```
schedule:
  lldp_mine_update:
    function: mine.update
    kwargs:
      mine_functions:
        net.lldp: []
    hours: 12
```

- The `salt` runner has a new function: `salt.execute`. It is mainly a shortcut to facilitate the execution of various functions from other runners, e.g.:

```
ret1 = __salt__['salt.execute']('*', 'mod.fun')
```

New Modules

Beacons

- `salt.beacons.log`

Cache

- `salt.cache.redis_cache`

Engines

- `salt.engines.stalekey`
- `salt.engines.junos_syslog`
- `salt.engines.napalm_syslog`

Execution modules

- `salt.modules.apk`
- `salt.modules.at_solaris`
- `salt.modules.boto_kinesis`
- `salt.modules.boto3_elasticache`
- `salt.modules.boto3_route53`
- `salt.modules.capiroca_acl`
- `salt.modules.freebsd_update`
- `salt.modules.grafana4`
- `salt.modules.heat`
- `salt.modules.icinga2`
- `salt.modules.kubernetes`
- `salt.modules.logmod`
- `salt.modules.mattermost`
- `salt.modules.namecheap_dns`
- `salt.modules.namecheap_domains`
- `salt.modules.namecheap_ns`
- `salt.modules.namecheap_users`
- `salt.modules.namecheap_ssl`
- `salt.modules.napalm`
- `salt.modules.napalm_acl`
- `salt.modules.napalm_yang_mod`
- `salt.modules.pdbedit`
- `salt.modules.solrcloud`
- `salt.modules.statuspage`
- `salt.modules.zonecfg`
- `salt.modules.zoneadm`

Grains

- `salt.grains.metadata`
- `salt.grains.mdata`

Outputters

- `salt.output.table_out`

Pillar

- `salt.pillar.postgres`
- `salt.pillar.vmware_pillar`

Returners

- `salt.returners.mattermost_returner`
- `salt.returners.highstate_return`

Roster

- `salt.roster.cache`

Runners

- `salt.runners.bgp`
- `salt.runners.mattermost`
- `salt.runners.net`

SDB

- `salt.sdb.yaml`
- `salt.sdb.tism`
- `salt.sdb.cache`

States

- `salt.states.boto_kinesis`
- `salt.states.boto_efs`
- `salt.states.boto3_elasticache`
- `salt.states.boto3_route53`
- `salt.states.docker_container`
- `salt.states.docker_image`
- `salt.states.docker_network`
- `salt.states.docker_volume`
- `salt.states.elasticsearch`
- `salt.states.grafana4_dashboard`
- `salt.states.grafana4_datasource`
- `salt.states.grafana4_org`

- `salt.states.grafana4_user`
- `salt.states.heat`
- `salt.states.icinga2`
- `salt.states.influxdb_continuous_query`
- `salt.states.influxdb_retention_policy`
- `salt.states.kubernetes`
- `salt.states.logadm`
- `salt.states.logrotate`
- `salt.states.msteams`
- `salt.states.netacl`
- `salt.states.netconfig`
- `salt.states.netyang`
- `salt.states.nix`
- `salt.states.pdbedit`
- `salt.states.solrcloud`
- `salt.states.statuspage`
- `salt.states.vault`
- `salt.states.win_wua`
- `salt.states.zone`

Deprecations

General Deprecations

- Removed support for aliasing `cmd.run` to `cmd.shell`.
- Removed support for Dulwich from *GitFS*.
- Beacon configurations should be lists instead of dictionaries.
- The `PidfileMixin` has been removed. Please use `DaemonMixIn` instead.
- The `use_pending` argument was removed from the `salt.utils.event.get_event` function.
- The `pending_tags` argument was removed from the `salt.utils.event.get_event` function.

Configuration Option Deprecations

- The `client_acl` configuration option has been removed. Please use `publisher_acl` instead.
- The `client_acl_blacklist` configuration option has been removed. Please use `publisher_acl_blacklist` instead.
- The `win_gitrepos` configuration option has been removed. Please use the `winrepo_remotes` option instead.
- The `win_repo` configuration option has been removed. Please use `winrepo_dir` instead.

- The `win_repo_mastercachefile` configuration option has been removed. Please use the `winrepo_cachefile` option instead.

Module Deprecations

The `git` execution module had the following changes:

- The `fmt` argument was removed from the `archive` function. Please use `format` instead.
- The `repository` argument was removed from the `clone` function. Please use `url` instead.
- The `is_global` argument was removed from the `config_set` function. Please use `global` instead.
- The `branch` argument was removed from the `merge` function. Please use `rev` instead.
- The `branch` argument was removed from the `push` function. Please use `rev` instead.

The `glusterfs` execution module had the following functions removed:

- `create`: Please use `create_volume` instead.
- `delete`: Please use `delete_volume` instead.
- `list_peers`: Please use `peer_status` instead.

The `htpasswd` execution module had the following function removed:

- `useradd_all`: Please use `useradd` instead.

The `img` execution module has been removed. All of its associated functions were marked for removal in the 2017.7.0 release. The functions removed in this module are mapped as follows:

- `mount_image/mnt_image`: Please use `mount.mount` instead.
- `umount_image`: Please use `mount.umount` instead.
- `bootstrap`: Please use `genesis.bootstrap` instead.

The `smartos_virt` execution module had the following functions removed:

- `create`: Please use `start` instead.
- `destroy`: Please use `stop` instead.
- `list_vms`: Please use `list_domains` instead.

The `virt` execution module had the following functions removed:

- `create`: Please use `start` instead.
- `destroy`: Please use `stop` instead.
- `list_vms`: Please use `list_domains` instead.

The `virtualenv_mod` execution module had the following changes:

- The `package_or_requirement` argument was removed from both the `get_resource_path` and the `get_resource_content` functions. Please use `package` instead.
- The `resource_name` argument was removed from both the `get_resource_path` and `get_resource_content` functions. Please use `resource` instead.

The `win_repo` execution module had the following changes:

- The `win_repo_source_dir` option was removed from the `win_repo` module. Please use `winrepo_source_dir` instead.

The `xapi` execution module had the following functions removed:

- `create`: Please use `start` instead.
- `destroy`: Please use `stop` instead.
- `list_vms`: Please use `list_domains` instead.

The `zypper` execution module had the following function removed:

- `info`: Please use `info_available` instead.

Pillar Deprecations

- Support for the `raw_data` argument for the `file_tree` `ext_pillar` has been removed. Please use `keep_newline` instead.
- SQLite3 database connection configuration previously had keys under `pillar`. This legacy compatibility has been removed.

Proxy Minion Deprecations

- The `proxy_merge_grains_in_module` default has been switched from `False` to `True`.

Salt-API Deprecations

- The `SaltAPI.run()` function has been removed. Please use the `SaltAPI.start()` function instead.

Salt-Cloud Deprecations

- Support for using the keyword `provider` in salt-cloud provider config files has been removed. Please use `driver` instead. The `provider` keyword should now only be used in cloud profile config files.

Salt-SSH Deprecations

- The `wipe_ssh` option for `salt-ssh` has been removed. Please use the `ssh_wipe` option instead.

State Deprecations

The `apache_conf` state had the following functions removed:

- `disable`: Please use `disabled` instead.
- `enable`: Please use `enabled` instead.

The `apache_module` state had the following functions removed:

- `disable`: Please use `disabled` instead.
- `enable`: Please use `enabled` instead.

The `apache_site` state had the following functions removed:

- `disable`: Please use `disabled` instead.

- `enable`: Please use `enabled` instead.

The `chocolatey` state had the following functions removed:

- `install`: Please use `installed` instead.
- `uninstall`: Please use `uninstalled` instead.

The `git` state had the following changes:

- The `config` function was removed. Please use `config_set` instead.
- The `is_global` option was removed from the `config_set` function. Please use `global` instead.
- The `always_fetch` option was removed from the `latest` function, as it no longer has any effect. Please see the [2015.8.0](#) release notes for more information.
- The `force` option was removed from the `latest` function. Please use `force_clone` instead.
- The `remote_name` option was removed from the `latest` function. Please use `remote` instead.

The `glusterfs` state had the following function removed:

- `created`: Please use `volume_present` instead.

The `openvswitch_port` state had the following change:

- The `type` option was removed from the `present` function. Please use `tunnel_type` instead.

Security Fix

CVE-2017-12791 Maliciously crafted minion IDs can cause unwanted directory traversals on the Salt-master

Correct a flaw in minion id validation which could allow certain minions to authenticate to a master despite not having the correct credentials. To exploit the vulnerability, an attacker must create a salt-minion with an ID containing characters that will cause a directory traversal. Credit for discovering the security flaw goes to: Vernhk@qq.com

Changelog for v2017.7.0..v2017.7.1

Generated at: 2018-05-26 20:28:44 UTC

- ISSUE saltstack/salt-jenkins#460: (Ch3LL) decorator tests failing on python3 (refs: #42548)
- PR #42595: (gtmanfred) make sure to pass arg as well @ 2017-07-28 16:21:58 UTC
 - PR #42548: (gtmanfred) pass in empty kwarg for reactor (refs: #42595)
 - a50fe5433a Merge pull request #42595 from gtmanfred/2017.7.1
 - 8f73804b24 make sure to pass arg as well
- PR #42597: (rallytime) Back-port #42590 to 2017.7.1 @ 2017-07-28 00:20:01 UTC
 - PR #42590: (TiteiKo) Fix missing tornado import (refs: #42597)
 - 3b583330de Merge pull request #42597 from rallytime/bp-42590
 - 8818b06f22 Fix missing tornado import
- ISSUE #42404: (gabekahen) [2017.7] file.managed with cmd_check "No such file or directory" (refs: #42411)
- ISSUE #33708: (pepinje) visudo check command leaves cache file in /tmp (refs: #38063, #42411)
- PR #42598: (rallytime) Back-port #42411 to 2017.7.1 @ 2017-07-28 00:19:13 UTC
 - PR #42411: (seedickcode) Fix file.managed check_cmd file not found - Issue #42404 (refs: #42598)
 - PR #38063: (lua) tmp file clean up in file.manage - fix for #33708 (refs: #42411)
 - 76f1e53e10 Merge pull request #42598 from rallytime/bp-42411
 - 190cdb8693 Fix file.managed check_cmd file not found - Issue #42404
- PR #42564: (rallytime) Back-port #42555 to 2017.7.1 @ 2017-07-26 17:32:02 UTC
 - PR #42555: (Ch3LL) add changelog to 2017.7.1 release notes (refs: #42564)
 - 5c7def9a43 Merge pull request #42564 from rallytime/bp-42555
 - 7bcaa5a4cc small markup fix for title
 - d066b599ca add changelog to 2017.7.1 release notes
- ISSUE saltstack/salt-jenkins#460: (Ch3LL) decorator tests failing on python3 (refs: #42548)
- PR #42548: (gtmanfred) pass in empty kwarg for reactor (refs: #42595) @ 2017-07-26 00:41:20 UTC
 - 711b742c54 Merge pull request #42548 from gtmanfred/2017.7.1
 - 0257c1dc32 pass in empty kwarg for reactor
 - b948e980d2 update chunk, not kwarg in chunk
- ISSUE #42519: (xuhcc) Error when installing package from file under Arch Linux (refs: #42522)
- PR #42522: (gtmanfred) pacman wildcard is only for repository installs @ 2017-07-24 20:51:05 UTC
 - 50c1635dcc Merge pull request #42522 from gtmanfred/2017.7.1
 - 7787fb9e1b pacman wildcard is only for repository installs
- PR #42508: (rallytime) Back-port #42474 to 2017.7.1 @ 2017-07-24 20:49:51 UTC
 - PR #42474: (whiteinge) Cmd arg kwarg parsing test (refs: #42508)
 - PR #39646: (terminalmage) Handle deprecation of passing string args to load_args_and_kwarg (refs: #42474)

- 05c07ac049 Merge pull request #42508 from rallytime/bp-42474
- 76fb074433 Add a test.arg variant that cleans the pub kwargs by default
- 624f63648e Lint fixes
- d246a5fc61 Add back support for string kwargs
- 854e098aa0 Add LocalClient.cmd test for arg/kwarg parsing
- **ISSUE #42427:** (grichmond-salt) Issue Passing Variables created from load_json as Inline Pillar Between States (refs: #42435)
- **PR #42472:** (rallytime) Back-port #42435 to 2017.7.1 @ 2017-07-24 15:11:13 UTC
 - **PR #42435:** (terminalmage) Modify our custom YAML loader to treat unicode literals as unicode strings (refs: #42472)
 - 95fe2558e4 Merge pull request #42472 from rallytime/bp-42435
 - 5c47af5b98 Modify our custom YAML loader to treat unicode literals as unicode strings
- **ISSUE #42374:** (tyhunt99) [2017.7.0] salt-run manage.versions throws exception if minion is offline or unresponsive (refs: #42436)
- **PR #42473:** (rallytime) Back-port #42436 to 2017.7.1 @ 2017-07-24 15:10:29 UTC
 - **PR #42436:** (garethgreenaway) Fixes to versions function in manage runner (refs: #42473)
 - 5b99d45f54 Merge pull request #42473 from rallytime/bp-42436
 - 82ed919803 Updating the versions function inside the manage runner to account for when a minion is offline and we are unable to determine it's version.
- **ISSUE #42381:** (zebooka) Git.detached broken in 2017.7.0 (refs: #42399)
- **ISSUE #38878:** (tomlaredo) [Naming consistency] git.latest "rev" option VS git.detached "ref" option (refs: #38898)
- **PR #42471:** (rallytime) Back-port #42399 to 2017.7.1 @ 2017-07-24 15:09:50 UTC
 - **PR #42399:** (rallytime) Update old "ref" references to "rev" in git.detached state (refs: #42471)
 - **PR #38898:** (terminalmage) git.detached: rename ref to rev for consistency (refs: #42399)
 - 3d1a2d3f9f Merge pull request #42471 from rallytime/bp-42399
 - b9a4669e5a Update old "ref" references to "rev" in git.detached state
- **ISSUE #42400:** (Enquier) Conflict in execution of passing pillar data to orch/reactor event executions 2017.7.0 (refs: #42031)
- **PR #42470:** (rallytime) Back-port #42031 to 2017.7.1 @ 2017-07-24 15:09:30 UTC
 - **PR #42031:** (skizunov) Fix: Reactor emits critical error (refs: #42470)
 - 09766bccbc Merge pull request #42470 from rallytime/bp-42031
 - 0a0c6287a4 Fix: Reactor emits critical error
- **ISSUE #41949:** (jrporcaro) Event returner doesn't work with Windows Master (refs: #42027)
- **PR #42469:** (rallytime) Back-port #42027 to 2017.7.1 @ 2017-07-21 22:41:02 UTC
 - **PR #42027:** (gtmanfred) import salt.minion for EventReturn for Windows (refs: #42469)
 - d7b172a15b Merge pull request #42469 from rallytime/bp-42027
 - ed612b4ee7 import salt.minion for EventReturn for Windows

- **PR #42466:** (rallytime) Back-port #42452 to 2017.7.1 @ 2017-07-21 19:41:24 UTC
 - **PR #42452:** (Ch3LL) update windows urls to new py2/py3 naming scheme (refs: #42466)
 - 8777b1a825 Merge pull request #42466 from rallytime/bp-42452
 - c10196f68c update windows urls to new py2/py3 naming scheme
- **PR #42439:** (rallytime) Back-port #42409 to 2017.7.1 @ 2017-07-21 17:38:10 UTC
 - **PR #42409:** (twangboy) Add Scripts to build Py3 on Mac (refs: #42439)
 - fceaaf41d0 Merge pull request #42439 from rallytime/bp-42409
 - 8176964b41 Remove build and dist, sign pkgs
 - 2c14d92a07 Fix hard coded pip path
 - 82fdd7c2e1 Add support for Py3
 - 2478447246 Update Python and other reqs
- **ISSUE #42403:** (astronouth7303) [2017.7] Pillar empty when state is applied from orchestrate (refs: #42433)
- **PR #42441:** (rallytime) Back-port #42433 to 2017.7.1 @ 2017-07-21 17:37:01 UTC
 - **PR #42433:** (terminalmage) Only force saltenv/pillarenv to be a string when not None (refs: #42441)
 - 660400560b Merge pull request #42441 from rallytime/bp-42433
 - 17f347123a Only force saltenv/pillarenv to be a string when not None

27.2.12 Salt 2017.7.2 Release Notes

Version 2017.7.2 is a bugfix release for 2017.7.0.

Statistics

- Total Merges: 329
- Total Issue References: 73
- Total PR References: 236
- Contributors: 47 (Ch3LL, CorvinM, DmitryKuzmenko, Giandom, Mapel88, Mareo, SuperPommeDeTerre, The-Loeki, abulford, amendlik, blarghmatey, brejoc, cachedout, carsonoid, cro, damon-atkins, darcoli, dmurphy18, frankiexyz, garethgreenaway, gtmanfred, hibbert, isbm, ix, jettero, jmarinaro, justincbeard, kkoppel, llua, lomeroe, m03, mcalmer, mirceaulinic, morganwillcock, nhavens, pabloh007, rallytime, seedickcode, shengis, skizunov, terminalmage, the-glu, thusoy, twangboy, vitaliyf, vutny, whiteinge)

Security Fix

CVE-2017-14695 Directory traversal vulnerability in minion id validation in SaltStack. Allows remote minions with incorrect credentials to authenticate to a master via a crafted minion ID. Credit for discovering the security flaw goes to: Julian Brost (julian@0x4a42.net)

CVE-2017-14696 Remote Denial of Service with a specially crafted authentication request. Credit for discovering the security flaw goes to: Julian Brost (julian@0x4a42.net)

Changelog for v2017.7.1..v2017.7.2

Generated at: 2018-05-26 21:06:12 UTC

- **PR #43868:** (rallytime) Back-port #43847 to 2017.7.2 @ 2017-10-03 12:00:52 UTC
 - **PR #43847:** (cachedout) Fix to module.run (refs: #43868)
 - dd0b3388cf Merge pull request #43868 from rallytime/bp-43847
 - e21d8e9583 Use six.iterkeys() instead of dict.keys()
 - c297ae5557 Improve failures for module.run states
 - 782e67c199 Lint
 - a6c2d78518 Fix typo found by @s0undt3ch
 - 0cac15e502 Fix to module.run [WIP]
- **PR #43871:** (rallytime) Add updated release notes to 2017.7.2 branch @ 2017-10-03 11:59:29 UTC
 - 47af4ae38a Merge pull request #43871 from rallytime/update-release-notes
 - 2337904656 Add updated release notes to 2017.7.2 branch
- **PR #43756:** (gtmanfred) split build and install for pkg osx @ 2017-09-26 20:51:28 UTC
 - 88414d5f73 Merge pull request #43756 from gtmanfred/2017.7.2
 - f7df41fa94 split build and install for pkg osx
- **ISSUE #43077:** (Manoj2087) Issue with deleting key via wheel (refs: #43330)
- **PR #43585:** (rallytime) Back-port #43330 to 2017.7.2 @ 2017-09-19 17:33:34 UTC
 - **PR #43330:** (terminalmage) Fix reactor regression + unify reactor config schema (refs: #43585)
 - 89f629233f Merge pull request #43585 from rallytime/bp-43330
 - c4f693bae8 Merge branch '2017.7.2' into bp-43330
- **ISSUE #43447:** (UtahDave) When using Syndic with Multi Master the top level master doesn't reliably get returns from lower minion. (refs: #43526)
- **PR #43586:** (rallytime) Back-port #43526 to 2017.7.2 @ 2017-09-19 15:36:27 UTC
 - **PR #43526:** (DmitryKuzmenko) Forward events to all masters syndic connected to (refs: #43586)
 - abb7fe4422 Merge pull request #43586 from rallytime/bp-43526
 - e076e9b634 Forward events to all masters syndic connected to.
 - 7abd07fa07 Simplify client logic
 - b5f10696c2 Improve the reactor documentation
 - 7a2f12b96a Include a better example for reactor in master conf file
 - 531cac610e Rewrite the reactor unit tests
 - 2a35ab7f39 Unify reactor configuration, fix caller reactors
 - 4afb179bad Un-deprecate passing kwargs outside of 'kwarg' param
- **PR #43551:** (twangboy) Fix preinstall script on OSX for 2017.7.2 @ 2017-09-18 18:35:35 UTC
 - 3d3b09302d Merge pull request #43551 from twangboy/osx_fix_preinstall_2017.7.2
 - c3d9fb63f0 Merge branch '2017.7.2' into osx_fix_preinstall_2017.7.2

- **PR #43509:** (rallytime) Back-port #43333 to 2017.7.2 @ 2017-09-15 21:21:40 UTC
 - **PR #43333:** (damon-atkins) Docs are wrong cache_dir (bool) and cache_file (str) cannot be passed as params + 1 bug (refs: #43509)
 - 24691da888 Merge pull request #43509 from rallytime/bp-43333-2017.7.2
 - b3dbafb035 Update doco
 - 5cdcdbf428 Update win_pkg.py
 - c3e16661c3 Docs are wrong cache_dir (bool) and cache_file (str) cannot be passed on the cli (#2)
 - f33395f1ee Fix logic in /etc/paths.d/salt detection
- **PR #43440:** (rallytime) Back-port #43421 to 2017.7.2 @ 2017-09-11 20:59:53 UTC
 - **PR #43421:** (gtmanfred) Revert "Reduce fileclient.get_file latency by merging _file_find and ..." (refs: #43440)
 - 8964cacbf8 Merge pull request #43440 from rallytime/bp-43421
 - ea6e661755 Revert "Reduce fileclient.get_file latency by merging _file_find and _file_hash"
- **PR #43377:** (rallytime) Back-port #43193 to 2017.7.2 @ 2017-09-11 15:32:23 UTC
 - **PR #43193:** (jettero) Prevent spurious "Template does not exist" error (refs: #43377)
 - **PR #39516:** (jettero) Prevent spurious "Template does not exist" error (refs: #43193)
 - 7fda186b18 Merge pull request #43377 from rallytime/bp-43193
 - 842b07fd25 Prevent spurious "Template does not exist" error
- **ISSUE #42459:** (iavael) Broken ldap groups retrieval in salt.auth.ldap after upgrade to 2017.7 (refs: #43283)
- **PR #43315:** (rallytime) Back-port #43283 to 2017.7.2 @ 2017-09-05 20:04:25 UTC
 - **PR #43283:** (DmitryKuzmenko) Fix ldap token groups auth. (refs: #43315)
 - 85dba1e898 Merge pull request #43315 from rallytime/bp-43283
 - f29f5b0cce Fix for tests: don't require 'groups' in the eauth token.
 - 56938d5bf2 Fix ldap token groups auth.
- **ISSUE #43259:** (mahesh21) NameError: global name '__opts__' is not defined (refs: #43266)
- **PR #43266:** (gtmanfred) switch virtualbox cloud driver to use __utils__ @ 2017-08-30 18:36:20 UTC
 - 26ff8088cb Merge pull request #43266 from gtmanfred/virtualbox
 - 382bf92de7 switch virtualbox cloud driver to use __utils__
- **ISSUE #42936:** (Mapel88) bug in win_iis module & state - container_setting (refs: #43073)
- **PR #43073:** (Mapel88) Fix bug #42936 - win_iis module container settings @ 2017-08-30 18:34:37 UTC
 - ee209b144c Merge pull request #43073 from Mapel88/patch-2
 - b1a3d15b28 Remove trailing whitespace for linter
 - 25c8190e48 Fix pylint errors
 - 1eba8c4b8e Fix pylint errors
 - 290d7b54af Fix plint errors
 - f4f32421ab Fix plint errors
 - ec20e9a19a Fix bug #43110 - win_iis module

- 009ef6686b Fix dictionary keys from string to int
- dc793f9a05 Fix bug #42936 - win_iis state
- 13404a47b5 Fix bug #42936 - win_iis module
- PR #43254: (twangboy) Fix *unit.modules.test_inspect_collector* on Windows @ 2017-08-30 15:46:07 UTC
 - ec1bedc646 Merge pull request #43254 from twangboy/win_fix_test_inspect_collector
 - b401340e6c Fix *unit.modules.test_inspect_collector* on Windows
- ISSUE #43241: (mirceaulinic) Error whilst collecting napalm grains (refs: #43255)
- PR #43255: (gtmanfred) always return a dict object @ 2017-08-30 14:47:15 UTC
 - 1fc7307735 Merge pull request #43255 from gtmanfred/2017.7
 - 83b0bab34b *opt_args* needs to be a dict
- PR #43229: (twangboy) Bring changes from #43228 to 2017.7 @ 2017-08-30 14:26:55 UTC
 - PR #43228: (twangboy) Win fix *pkg.install* (refs: #43229)
 - fa904ee225 Merge pull request #43229 from twangboy/win_fix_pkg.install-2017.7
 - e007a1c26e Fix regex, add .
 - 23ec47c74c Add _ to regex search
 - b1788b1e5f Bring changes from #43228 to 2017.7
- PR #43251: (twangboy) Skips *unit.modules.test_groupadd* on Windows @ 2017-08-30 13:56:36 UTC
 - 25666f88f7 Merge pull request #43251 from twangboy/win_skip_test_groupadd
 - 5185071d5a Skips *unit.modules.test_groupadd* on Windows
- PR #43256: (twangboy) Skip mac tests for user and group @ 2017-08-30 13:18:13 UTC
 - a8e09629b2 Merge pull request #43256 from twangboy/win_skip_mac_tests
 - cec627a60b Skip mac tests for user and group
- ISSUE #42279: (dafyddj) *win_lgpo* matches multiple policies due to *startswith()* (refs: #43116, #43156, #43166, #43226)
- PR #43226: (lomerio) Fixes for issues in PR #43166 @ 2017-08-29 19:05:39 UTC
 - PR #43166: (lomerio) Backport #43116 to 2017.7 (refs: #43226)
 - PR #43156: (lomerio) Backport #43116 to 2017.7 (refs: #43166)
 - PR #43116: (lomerio) Fix 42279 in develop (refs: #43166, #43156)
 - PR #39773: (twangboy) Make *win_file* use the *win_dacl* salt util (refs: #43226)
 - ac2189c870 Merge pull request #43226 from lomerio/fix_43166
 - 0c424dc4a3 Merge branch '2017.7' into fix_43166
 - 324cfd8d1e correcting bad format statement in search for policy to be disabled (fix for #43166) verify that file exists before attempting to remove (fix for commits from #39773)
- PR #43227: (twangboy) Fix *unit.fileserver.test_gitfs* for Windows @ 2017-08-29 19:03:36 UTC
 - 6199fb46dc Merge pull request #43227 from twangboy/win_fix_unit_test_gitfs
 - c956d24283 Fix *is_windows* detection when USERNAME missing
 - 869e8cc603 Fix *unit.fileserver.test_gitfs* for Windows

- **PR #43217:** (rallytime) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2017-08-28 16:36:28 UTC
 - 6adc03e4b4 Merge pull request #43217 from rallytime/merge-2017.7
 - 3911df2f4b Merge branch '2016.11' into '2017.7'
 - 5308c27f9f Merge pull request #43202 from garethgreenaway/42642_2016_11_augeas_module_revert_fix
 - * ef7e93eb3f Reverting this change due to it breaking other uses.
 - f16b7246e4 Merge pull request #43103 from aogier/43101-genesis-bootstrap
 - * db94f3bb1c better formatting
 - * e5cc667762 tests: fix a leftover and simplify some parts
 - * 13e5997457 lint
 - * 216ced69e5 allow comma-separated pkgs lists, quote args, test deb behaviour
 - * d8612ae006 fix debootstrap and enhance packages selection/deletion via cmdline
 - 4863771428 Merge pull request #42663 from StreetHawkInc/fix_git_tag_check
 - * 2b5af5b59d Remove refs/tags prefix from remote tags
 - * 3f2e96e561 Convert set to list for serializer
 - * 2728e5d977 Only include new tags in changes
 - * 4b1df2f223 Exclude annotated tags from checks
 - * 389c037285 Check remote tags before deciding to do a fetch #42329
- **PR #43201:** (rallytime) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2017-08-25 22:56:46 UTC
 - a563a9422a Merge pull request #43201 from rallytime/merge-2017.7
 - d40eba6b37 Merge branch '2016.11' into '2017.7'
 - * 4193e7f0a2 Merge pull request #43199 from corywright/disk-format-alias
 - f00d3a9ddc Add *disk.format* alias for *disk.format_*
 - * 5471f9fe0c Merge pull request #43196 from gtmanfred/2016.11
 - ccd2241777 Pin request install to version
 - * ace2715c60 Merge pull request #43178 from terminalmage/issue43143
 - 2640833400 git.detached: Fix traceback when rev is a SHA and is not present locally
 - * 12e9507b9e Merge pull request #43179 from terminalmage/old-deprecation
 - 3adf8ad04b Fix missed deprecation
 - * b595440d90 Merge pull request #43171 from terminalmage/salt-utils-warning
 - 7b5943a31a Add warning about adding new functions to salt/utils/__init__.py
 - * 4f273cac4f Merge pull request #43173 from Ch3LL/add_branch_docs
 - 1b24244bd3 Add New Release Branch Strategy to Contribution Docs
- **PR #42997:** (twangboy) Fix *unit.test_test_module_names* for Windows @ 2017-08-25 21:19:11 UTC
 - ce04ab4286 Merge pull request #42997 from twangboy/win_fix_test_module_names
 - 2722e9521d Use *os.path.join* to create paths
- **ISSUE #26995:** (jbouse) Issue with *artifactory.downloaded* and *snapshot* artifacts (refs: #43006)

- **PR #43006:** (SuperPommeDeTerre) Try to fix #26995 @ 2017-08-25 21:16:07 UTC
 - c0279e491e Merge pull request #43006 from SuperPommeDeTerre/SuperPommeDeTerre-patch-#26995
 - 30dd6f5d12 Merge remote-tracking branch 'upstream/2017.7' into SuperPommeDeTerre-patch-#26995
 - f42ae9b8cd Merge branch 'SuperPommeDeTerre-patch-#26995' of <https://github.com/SuperPommeDeTerre/salt> into SuperPommeDeTerre-patch-#26995
 - * 50ee3d5682 Merge remote-tracking branch 'remotes/origin/2017.7' into SuperPommeDeTerre-patch-#26995
 - * 0b666e100b Fix typo.
 - * 1b8729b3e7 Fix for #26995
 - e314102978 Fix typo.
 - db11e1985b Fix for #26995
- **ISSUE #43162:** (MorphBonehunter) docker_container.running interference with restart_policy (refs: #43184)
- **PR #43184:** (terminalmage) docker.compare_container: Perform boolean comparison when one side's value is null/None @ 2017-08-25 18:42:11 UTC
 - b6c5314fe9 Merge pull request #43184 from terminalmage/issue43162
 - 081f42ad71 docker.compare_container: Perform boolean comparison when one side's value is null/None
- **PR #43165:** (mirceaulinic) Improve napalm state output in debug mode @ 2017-08-24 23:05:37 UTC
 - 688125bb4f Merge pull request #43165 from cloudflare/fix-napalm-ret
 - c10717dc89 Lint and fix
 - 1cd33cbaa9 Simplify the loaded_ret logic
 - 0bbea6b04c Document the new compliance_report arg
 - 3a906109bd Include compliance reports
 - 3634055e34 Improve napalm state output in debug mode
- **PR #43155:** (terminalmage) Resolve image ID during container comparison @ 2017-08-24 22:09:47 UTC
 - a6a327b1e5 Merge pull request #43155 from terminalmage/issue43001
 - 0186835ebf Fix docstring in test
 - a0bb654e46 Fixing lint issues
 - d5b2a0be68 Resolve image ID during container comparison
- **PR #43170:** (rallytime) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2017-08-24 19:22:26 UTC
 - c071fd44c8 Merge pull request #43170 from rallytime/merge-2017.7
 - 3daad5a3a2 Merge branch '2016.11' into '2017.7'
 - * 669b376abf Merge pull request #43151 from ushmodin/2016.11
 - c5841e2ade state.sls hangs on file.recurse with clean: True on windows
- **ISSUE #43040:** (darcoli) gitFS ext_pillar with branch name __env__ results in empty pillars (refs: #43041)
- **PR #43168:** (rallytime) Back-port #43041 to 2017.7 @ 2017-08-24 19:07:23 UTC
 - **PR #43041:** (darcoli) Do not try to match pillarenv with __env__ (refs: #43168)
 - 034c325a09 Merge pull request #43168 from rallytime/bp-43041

- d010b74b87 Do not try to match pillarenv with `__env__`
- **PR #43172:** (rallytime) Move new `utils/__init__.py` funcs to `utils.files.py` @ 2017-08-24 19:05:30 UTC
 - **PR #43056:** (damon-atkins) `safe_filename_leaf(file_basename)` and `safe_filepath(file_path_name)` (refs: #43172)
 - d48938e6b4 Merge pull request #43172 from rallytime/move-utils-funcs
 - 5385c7901e Move new `utils/__init__.py` funcs to `utils.files.py`
- **ISSUE #43043:** (pabloh007) `docker.save` and `docker.load` problem (refs: #43061)
- **PR #43061:** (pabloh007) Have `docker.save` use the image name when valid if not use image id, i... @ 2017-08-24 16:32:02 UTC
 - e60f586442 Merge pull request #43061 from pabloh007/fix-save-image-name-id
 - 0ffc57d1df Have `docker.save` use the image name when valid if not use image id, issue when loading and image is saved with id issue #43043
- **ISSUE #42279:** (dafyddj) `win_lgpo` matches multiple policies due to `startswith()` (refs: #43116, #43156, #43166, #43226)
- **PR #43166:** (lomeroy) Backport #43116 to 2017.7 (refs: #43226) @ 2017-08-24 15:01:23 UTC
 - **PR #43156:** (lomeroy) Backport #43116 to 2017.7 (refs: #43166)
 - **PR #43116:** (lomeroy) Fix 42279 in develop (refs: #43166, #43156)
 - 9da57543f8 Merge pull request #43166 from lomeroy/bp-43116-2017.7
 - af181b3257 correct `fopen` calls from `salt.utils` for 2017.7
 - f74480f11e lint fix
 - ecd446fd55 track `xml` namespace to ensure policies w/duplicate IDs or Names do not conflict
 - 9f3047c420 add additional checks for ADM policies that have the same ADMX policy ID (#42279)
- **PR #43056:** (damon-atkins) `safe_filename_leaf(file_basename)` and `safe_filepath(file_path_name)` (refs: #43172) @ 2017-08-23 17:35:02 UTC
 - 44b3caead1 Merge pull request #43056 from damon-atkins/2017.7
 - 08ded1546e more lint
 - 6e9c0957fb fix typo
 - ee41171c9f lint fixes
 - 8c864f02c7 fix missing imports
 - 964cebd954 `safe_filename_leaf(file_basename)` and `safe_filepath(file_path_name)`
- **PR #43146:** (rallytime) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2017-08-23 16:56:10 UTC
 - 6ca9131a23 Merge pull request #43146 from rallytime/merge-2017.7
 - bcbe180fbc Merge branch '2016.11' into '2017.7'
 - * ae9d2b7985 Merge pull request #42986 from renner/systemd-notify
 - 79c53f3f81 Fallback to `systemd_notify_call()` in case of `socket.error`
 - f1765472dd Notify `systemd` synchronously (via `NOTIFY_SOCKET`)
 - * b420fbe618 Merge pull request #43037 from mcarlton00/fix-bhyve-grains
 - 73315f0cf0 Issue #43036 Bhyve virtual grain in Linux VMs

- * 0a86f2d884 Merge pull request #43100 from vutny/doc-add-missing-utils-ext
 - af743ff6c3 [DOCS] Add missing *utils* sub-dir listed for *extension_modules*
- PR #43123: (twangboy) Fix *unit.utils.test_which* for Windows @ 2017-08-23 16:01:39 UTC
 - 03f652159f Merge pull request #43123 from twangboy/win_fix_test_which
 - ed97cff5f6 Fix *unit.utils.test_which* for Windows
- ISSUE #42505: (ikogan) *selinux.fcontext_policy_present* exception looking for *selinux.filetype_id_to_string* (refs: #43068)
- PR #43142: (rallytime) Back-port #43068 to 2017.7 @ 2017-08-23 15:56:48 UTC
 - PR #43068: (ixs) Mark *selinux._filetype_id_to_string* as public function (refs: #43142)
 - 5a4fc07863 Merge pull request #43142 from rallytime/bp-43068
 - efc1c8c506 Mark *selinux._filetype_id_to_string* as public function
- PR #43038: (twangboy) Fix *unit.utils.test_url* for Windows @ 2017-08-23 13:35:25 UTC

 - 99046b441f cloud driver isn't a provider
- **PR #42860:** ([skizunov](#)) hash_and_stat_file should return a 2-tuple @ 2017-08-14 15:44:54 UTC
 - 4456f7383d Merge pull request #42860 from skizunov/develop7
 - 5f85a03636 hash_and_stat_file should return a 2-tuple
- **PR #42889:** ([rallytime](#)) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2017-08-14 14:16:20 UTC
 - c6ca7d639f Merge pull request #42889 from rallytime/merge-2017.7
 - fb7117f2ac Use salt.utils.versions.LooseVersion instead of distutils
 - 29ff19c587 Merge branch '2016.11' into '2017.7'
 - * c15d0034fe Merge pull request #41977 from redmatter/fix-dockerng-network-ignores-test
 - 1cc2aa503a Fix dockerng.network_* ignoring of tests=True
 - * 3b9c3c5671 Merge pull request #42886 from sarcasticadmin/adding_docs_salt_outputs
 - 744bf954ff Adding missing output flags to salt cli
 - * e5b98c8a88 Merge pull request #42882 from gtmanfred/2016.11
 - da3402a53d make sure cmd is not run when npm isn't installed
 - * 5962c9588b Merge pull request #42788 from amendlik/saltify-timeout
 - 928b523797 Remove waits and retries from Saltify deployment
 - * 227ecddd13 Merge pull request #42877 from terminalmage/add-cron-state-virtual
 - f1de196740 Add virtual func for cron state module
 - * ab9f6cef33 Merge pull request #42859 from terminalmage/gitpython-git-cli-note
 - 35e05c9515 Add note about git CLI requirement for GitPython to GitFS tutorial
 - * 682b4a8d14 Merge pull request #42856 from gtmanfred/2016.11
 - b458b89fb8 skip cache_clean test if npm version is >= 5.0.0
 - * 01ea854029 Merge pull request #42864 from whiteinge/syndic-log-root_dir

- 4b1f55da9c Make `syndic_log_file` respect `root_dir` setting
- **PR #42898:** (mirceaulinic) Minor eos doc correction @ 2017-08-14 13:42:21 UTC
 - 4b6fe2ee59 Merge pull request #42898 from mirceaulinic/patch-11
 - 93be79a135 Index eos under the installation instructions list
 - f903e7bc39 Minor eos doc correction
- **PR #42883:** (rallytime) Fix failing boto tests (refs: #42959) @ 2017-08-11 20:29:12 UTC
 - 1764878754 Merge pull request #42883 from rallytime/fix-boto-tests
 - 6a7bf99848 Lint fix: add missing space
 - 43643227c6 Skip 2 failing tests in Python 3 due to upstream bugs
 - 7f46603e9c Update account id value in boto_secgroup module unit test
 - 7c1d493fdd @mock_elb needs to be changed to @mock_elb_deprecated as well
 - 3055e17ed5 Replace @mock_ec2 calls with @mock_ec2_deprecated calls
- **PR #42885:** (terminalmage) Move weird `tearDown` test to an actual `tearDown` @ 2017-08-11 19:14:42 UTC
 - b21778efac Merge pull request #42885 from terminalmage/fix-f26-tests
 - 462d653082 Move weird `tearDown` test to an actual `tearDown`
- **ISSUE #42870:** (boltronics) `webutil.useradd` marked as deprecated: 2016.3.0 by mistake? (refs: #42887)
- **PR #42887:** (rallytime) Remove extraneous "deprecated" notation @ 2017-08-11 18:34:25 UTC
 - 9868ab6f3b Merge pull request #42887 from rallytime/fix-42870
 - 71e7581a2d Remove extraneous "deprecated" notation
- **PR #42881:** (gtmanfred) fix vmware for python 3.4.2 in `salt.utils.vmware` @ 2017-08-11 17:52:29 UTC
 - da71f2a11b Merge pull request #42881 from gtmanfred/vmware
 - 05ecc6ac8d fix vmware for python 3.4.2 in `salt.utils.vmware`
- **ISSUE #42843:** (brejoc) Kubernetes module won't work with Kubernetes Python client > 1.0.2 (refs: #42845)
- **PR #42845:** (brejoc) API changes for Kubernetes version 2.0.0 (refs: #43039) @ 2017-08-11 14:04:30 UTC
 - c7750d5717 Merge pull request #42845 from brejoc/updates-for-kubernetes-2.0.0
 - 81674aa88a Version info in `:optdepends`: not needed anymore
 - 71995505bc Not depending on specific K8s version anymore
 - d8f7d7a7c0 API changes for Kubernetes version 2.0.0
- **PR #42678:** (frankixyz) Add `eos.rst` in the installation guide @ 2017-08-11 13:58:37 UTC
 - 459fdedc67 Merge pull request #42678 from frankixyz/2017.7
 - 1598571f52 Add `eos.rst` in the installation guide
- **ISSUE #42646:** (gmacon) SPM fails to install multiple packages (refs: #42778)
- **PR #42778:** (gtmanfred) make sure to use the correct `out_file` @ 2017-08-11 13:44:48 UTC
 - 4ce96eb1a1 Merge pull request #42778 from gtmanfred/spm
 - 7ef691e8da make sure to use the correct `out_file`

- **ISSUE** saltstack/salt-jenkins#480: (rallytime) [2017.7] PY3 Debian 8 has several vmware unit tests failing (refs: #42857)
- **PR #42857:** (gtmanfred) use older name if `_create_unverified_context` is unavailable @ 2017-08-11 13:37:59 UTC
 - 3d05d89e09 Merge pull request #42857 from gtmanfred/vmware
 - c1f673eca4 use older name if `_create_unverified_context` is unavailable
- **PR #42866:** (twangboy) Change to GitPython version 2.1.1 @ 2017-08-11 13:23:52 UTC
 - 7e8cfff21c Merge pull request #42866 from twangboy/osx_downgrade_gitpython
 - 28053a84a6 Change GitPython version to 2.1.1
- **PR #42855:** (rallytime) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2017-08-10 21:40:39 UTC
 - 3ce18637be Merge pull request #42855 from rallytime/merge-2017.7
 - 08bbcf5790 Merge branch '2016.11' into '2017.7'
 - 2dde1f77e9 Merge pull request #42851 from terminalmage/bp-42651
 - * a3da86eea8 fix syntax
 - * 6ecdbcec1d make sure names are correct
 - * f83b553d6e add py3 for versionlock
 - * 21934f61bb python2- prefix for fedora 26 packages
 - c746f79a3a Merge pull request #42806 from rallytime/fix-42683
 - * 8c8640d6b8 Update doc references in `glusterfs.volume_present`
 - 27a8a2695a Merge pull request #42829 from twangboy/win_pkg_fix_install
 - * 83b9b230cd Add winrepo to docs about supporting versions in pkgs
 - * 81fefa6e67 Add ability to pass version in pkgs list
 - 3c3ac6aeb2 Merge pull request #42838 from twangboy/win_doc_pki
 - * f0a1d06b46 Standardize PKI Client
 - * 7de687aa57 Document requirements for `win_pki`
 - b3e2ae3c58 Merge pull request #42805 from rallytime/bp-42552
 - * 5a91c1f2d1 update consul module following this documentation <https://www.consul.io/api/acl.html>
 - d2ee7934ed Merge pull request #42804 from rallytime/bp-42784
 - * dbd29e4aaa only read file if it is not a string
 - 4cbf8057b3 Merge pull request #42826 from terminalmage/fix-spelling
 - * 00f93142e4 Fix misspelling of "versions"
 - de997edd90 Merge pull request #42786 from Ch3LL/fix_typo
 - * 90a2fb66a2 Fix typo for `template_dict` in http docs
 - bf6153ebe5 Merge pull request #42795 from lomeroc/bp-42744_201611
 - * 695f8c1ae4 fix #42600 in develop
 - 61fad97286 Merge pull request #42748 from whiteinge/save-before-output
 - * de60b77c82 Workaround Orchestrate problem that highstate outputter mutates data

- a4e3e7e786 Merge pull request #42764 from amendlik/cloud-win-loop
 - * f3dcfca4e0 Fix infinite loops on failed Windows deployments
- da85326ad4 Merge pull request #42694 from gtmanfred/2016.11
 - * 1a0457af51 allow adding extra remotes to a repository
- ISSUE #42774: (rossengeorgiev) pkg.installed succeeds, but fails when you specify package version (refs: #42808)
- PR #42808: (terminalmage) Fix regression in yum/dnf version specification @ 2017-08-10 15:59:22 UTC
 - f954f4f33a Merge pull request #42808 from terminalmage/issue42774
 - c69f17dd18 Add integration test for #42774
 - 78d826dd14 Fix regression in yum/dnf version specification
- ISSUE #42639: (amnonbc) k8s module needs a way to manage configmaps (refs: #42807)
- PR #42807: (rallytime) Update modules -> states in kubernetes doc module @ 2017-08-10 14:10:40 UTC
 - d9b0f44885 Merge pull request #42807 from rallytime/fix-42639
 - 152eb88d9f Update modules -> states in kubernetes doc module
- ISSUE #42818: (Mapel88) Bug in win_iis module - "create_cert_binding" (refs: #42841)
- PR #42841: (Mapel88) Fix bug #42818 in win_iis module @ 2017-08-10 13:44:21 UTC
 - b8c7bda68d Merge pull request #42841 from Mapel88/patch-1
 - 497241fbcf Fix bug #42818 in win_iis module
- ISSUE #42697: (Ch3LL) [Python3] NameError when running salt-run manage.versions (refs: #42782)
- PR #42782: (rallytime) Add a cmp compatibility function utility @ 2017-08-09 22:37:29 UTC
 - 135f9522d0 Merge pull request #42782 from rallytime/fix-42697
 - d707f94863 Update all other calls to "cmp" function
 - 5605104285 Add a cmp compatibility function utility
- PR #42784: (gtmanfred) only read file if ret is not a string in http.query (refs: #42804) @ 2017-08-08 17:20:13 UTC
 - ac752223ad Merge pull request #42784 from gtmanfred/http
 - d397c90e92 only read file if it is not a string
- ISSUE #42600: (twangboy) Unable to set 'Not Configured' using win_lgpo execution module (refs: #42744, #42794, #42795)
- PR #42794: (lomerio) Backport #42744 to 2017.7 @ 2017-08-08 17:16:31 UTC
 - PR #42744: (lomerio) fix #42600 in develop (refs: #42794, #42795)
 - 44995b1abf Merge pull request #42794 from lomerio/bp-42744
 - 0acffc6df5 fix #42600 in develop
- ISSUE #42707: (cro) Service module and state fails on FreeBSD (refs: #42708)
- PR #42708: (cro) Do not change the arguments of the function when memoizing @ 2017-08-08 13:47:01 UTC
 - dcf474c47c Merge pull request #42708 from cro/dont_change_args_during_memoize
 - a260e913b5 Do not change the arguments of the function when memoizing

- **PR #42783:** (rallytime) Sort lists before comparing them in python 3 unit test @ 2017-08-08 13:25:15 UTC
 - **PR #42206:** (rallytime) [PY3] Fix test that is flaky in Python 3 (refs: #42783)
 - ddb671b8fe Merge pull request #42783 from rallytime/fix-flaky-py3-test
 - 998834fbac Sort lists before comparing them in python 3 unit test
- **PR #42721:** (hibbert) Allow no ip sg @ 2017-08-07 22:07:18 UTC
 - d69822fe93 Merge pull request #42721 from hibbert/allow_no_ip_sg
 - f58256802a allow_no_ip_sg: Allow user to not supply ipaddress or securitygroups when running boto_efs.create_mount_target
- **ISSUE #42538:** (marnovdm) docker_container.running issue since 2017.7.0: passing domainname gives Error 500: json: cannot unmarshal array into Go value of type string (refs: #42769)
- **PR #42769:** (terminalmage) Fix domainname parameter input translation @ 2017-08-07 20:46:07 UTC
 - bf7938fbe0 Merge pull request #42769 from terminalmage/issue42538
 - 665de2d1f9 Fix domainname parameter input translation
- **PR #42388:** (The-Loeki) pillar.items pillar_env & pillar_override are never used @ 2017-08-07 17:51:48 UTC
 - 7bf2cdb363 Merge pull request #42388 from The-Loeki/patch-1
 - 664f4b577b pillar.items pillar_env & pillar_override are never used
- **PR #42770:** (rallytime) [2017.7] Merge forward from 2017.7.1 to 2017.7 @ 2017-08-07 16:21:45 UTC
 - 9a8c9ebffc Merge pull request #42770 from rallytime/merge-2017.7.1-into-2017.7
 - 6d17c9d227 Merge branch '2017.7.1' into '2017.7'
- **PR #42768:** (rallytime) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2017-08-07 16:21:17 UTC
 - c765e528d0 Merge pull request #42768 from rallytime/merge-2017.7
 - 0f75482c37 Merge branch '2016.11' into '2017.7'
 - * 7b2119fee Merge pull request #42669 from garethgreenaway/42642_2016_11_augeas_module_fix
 - 24413084e2 Updating the call to shlex_split to pass the posix=False argument so that quotes are preserved.
 - * 30725769ed Merge pull request #42629 from xiaoanyunfei/tornadoapi
 - 1e13383b95 tornado api
 - * f0f00fcee1 Merge pull request #42655 from whiteinge/rest_cherrypy-reenable-stats
 - deb6316d67 Fix lint errors
 - 6bd91c8b03 Reenable cpstats for rest_cherrypy
 - * 21cf15f9c3 Merge pull request #42693 from gilbsgilbs/fix-rabbitmq-tags
 - 78fccdc7e2 Cast to list in case tags is a tuple.
 - 287b57b5c5 Fix RabbitMQ tags not properly set.
 - * f2b0c9b4fa Merge pull request #42574 from sbojarski/boto-cfn-error-reporting
 - 5c945f10c2 Fix debug message in "boto_cfn._validate" function.
 - 181a1becc Fixed error reporting in "boto_cfn.present" function.
 - * bc1effc4f2 Merge pull request #42623 from terminalmage/fix-unicode-constructor

- fcf45889dd Fix unicode constructor in custom YAML loader
- **PR #42651:** (gtmanfred) python2- prefix for fedora 26 packages (refs: #42851) @ 2017-08-07 14:35:04 UTC
 - 3f5827f61e Merge pull request #42651 from gtmanfred/2017.7
 - 8784899942 fix syntax
 - 178cc1bd81 make sure names are correct
 - f179b97b52 add py3 for versionlock
 - 1958d18634 python2- prefix for fedora 26 packages
- **ISSUE #42688:** (hibbert) salt.modules.boto_efs module Invalid type for parameter Tags - type: <type 'dict'>, valid types: <type 'list'>, <type 'tuple'> (refs: #42689)
- **PR #42689:** (hibbert) boto_efs_fix_tags: Fix #42688 invalid type for parameter tags @ 2017-08-06 17:47:07 UTC
 - 791248e398 Merge pull request #42689 from hibbert/boto_efs_fix_tags
 - 157fb28851 boto_efs_fix_tags: Fix #42688 invalid type for parameter tags
- **ISSUE #42705:** (hbruch) salt.states.docker_container.running replaces container on subsequent runs if oom_kill_disable unsupported (refs: #42745)
- **PR #42745:** (terminalmage) docker.compare_container: treat null oom_kill_disable as False @ 2017-08-05 15:28:20 UTC
 - 1b3407649b Merge pull request #42745 from terminalmage/issue42705
 - 710bdf6115 docker.compare_container: treat null oom_kill_disable as False
- **ISSUE #42649:** (tehsu) local_batch no longer working in 2017.7.0, 500 error (refs: #42704)
- **PR #42704:** (whiteinge) Add import to work around likely multiprocessing scoping bug @ 2017-08-04 23:03:13 UTC
 - 5d5b22021b Merge pull request #42704 from whiteinge/expr_form-warn-scope-bug
 - 03b675a618 Add import to work around likely multiprocessing scoping bug
- **ISSUE #42741:** (kkoppel) docker_container.running keeps re-creating containers with links to other containers (refs: #42743)
- **PR #42743:** (kkoppel) Fix docker.compare_container for containers with links @ 2017-08-04 16:00:33 UTC
 - 888e954e73 Merge pull request #42743 from kkoppel/fix-issue-42741
 - de6d3cc0cf Update dockermodule.py
 - 58b997c67f Added a helper function that removes container names from container HostConfig:Links values to enable compare_container() to make the correct decision about differences in links.
- **ISSUE #42668:** (UtahDave) Minions under syndics don't respond to MoM (refs: #42710)
- **ISSUE #42545:** (paul-mulvihill) Salt-api failing to return results for minions connected via syndics. (refs: #42710)
- **PR #42710:** (gtmanfred) use subtraction instead of or @ 2017-08-04 15:14:14 UTC
 - 03a7f9bbee Merge pull request #42710 from gtmanfred/syndic
 - 683561a711 use subtraction instead of or
- **PR #42670:** (gtmanfred) render kubernetes docs @ 2017-08-03 20:30:56 UTC
 - 005182b6a1 Merge pull request #42670 from gtmanfred/kube

- bca17902f5 add version added info
- 4bbfc751ae render kubernetes docs
- **PR #42712:** (twangboy) Remove master config file from minion-only installer @ 2017-08-03 20:25:02 UTC
 - df354ddabf Merge pull request #42712 from twangboy/win_build_pkg
 - 8604312a7b Remove master conf in minion install
- **PR #42714:** (cachedout) Set fact gathering style to 'old' for test_junos @ 2017-08-03 13:39:40 UTC
 - bb1dfd4a42 Merge pull request #42714 from cachedout/workaround_jnpr_test_bug
 - 834d6c605e Set fact gathering style to 'old' for test_junos
- **PR #42481:** (twangboy) Fix `unit.test_crypt` for Windows @ 2017-08-01 18:10:50 UTC
 - 4c1d931654 Merge pull request #42481 from twangboy/win_unit_test_crypt
 - 102509029e Remove chown mock, fix path seps
- **PR #42654:** (morganwillcock) Disable ZFS in the core grain for NetBSD @ 2017-08-01 17:52:36 UTC
 - 8bcefb5e67 Merge pull request #42654 from morganwillcock/zfsgrain
 - 49023deb94 Disable ZFS grain on NetBSD
- **ISSUE #42421:** (bflipek) `archive.extracted` on Windows failed when `dir` not exist (refs: #42453)
- **PR #42453:** (gtmanfred) don't pass user to `makedirs` on windows @ 2017-07-31 19:57:57 UTC
 - 5baf2650fc Merge pull request #42453 from gtmanfred/makedirs
 - 559d432930 fix tests
 - afa7a13ce3 use logic from `file.directory` for `makedirs`
- **PR #42603:** (twangboy) Add `runas_passwd` as a global for states @ 2017-07-31 19:49:49 UTC
 - fb81e78f71 Merge pull request #42603 from twangboy/win_fix_runas
 - 0c9e40012b Remove deprecation, add logic to `state.py`
 - 464ec34713 Fix another instance of `runas_passwd`
 - 18d6ce4d55 Add global vars to `cmd.call`
 - 6c71ab6f80 Remove `runas` and `runas_password` after state run
 - 4ea264e3db Change to `runas_password` in docs
 - 61aba35718 Deprecate `password`, make `runas_password` a named arg
 - 41f0f75a06 Add new var to list, change to `runas_password`
 - b9c91eba60 Add `runas_passwd` as a global for states
- **PR #42541:** (Mareo) Avoid confusing warning when using `file.line` @ 2017-07-31 19:41:58 UTC
 - 75ba23c253 Merge pull request #42541 from epita/fix-file-line-warning
 - 2fd172e07b Avoid confusing warning when using `file.line`
- **PR #42625:** (twangboy) Fix the list function in the `win_wua` execution module @ 2017-07-31 19:27:16 UTC
 - 3d328eba80 Merge pull request #42625 from twangboy/fix_win_wua
 - 1340c15ce7 Add general usage instructions
 - 19f34bda55 Fix docs, formatting

- b17495c9c8 Fix problem with list when install=True
- **ISSUE #42514:** (rickh563) `module.run` does not work as expected in 2017.7.0 (refs: #42602)
- **PR #42602:** (garethgreenaway) Use superseded and deprecated configuration from pillar @ 2017-07-31 18:53:06 UTC
 - 25094ad9b1 Merge pull request #42602 from garethgreenaway/42514_2017_7_superseded_deprecated_from_pillar
 - 2e132daa73 Slight update to formatting
 - 74bae13939 Small update to something I missed in the first commit. Updating tests to also test for pillar values.
 - 928a4808dd Updating the superseded and deprecated decorators to work when specified as pillar values.
- **PR #42621:** (rallytime) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2017-07-28 19:45:51 UTC
 - b7cd30d3ee Merge pull request #42621 from rallytime/merge-2017.7
 - 58dcb58a47 Merge branch '2016.11' into '2017.7'
 - * cbf752cd73 Merge pull request #42515 from gtmanfred/backslash
 - cc4e45656d Allow not interpreting backslashes in the repl
 - * 549495831f Merge pull request #42586 from gdubroeucq/2016.11
 - 9c0b5cc1d6 Remove extra newline
 - d2ef4483e4 yumpkg.py: clean
 - a96f7c09e0 yumpkg.py: add option to the command "check-update"
 - * 6b45debf28 Merge pull request #41988 from redmatter/fix-dockerng-network-matching
 - 9eea796da8 Add regression tests for #41982
 - 3369f0072f Fix broken unit test test_network_absent
 - 0ef6cf634c Add trace logging of dockerng.networks result
 - 515c612808 Fix dockerng.network_* name matching
- **ISSUE #34245:** (Talkless) `ini.options_present` always report state change (refs: #41690)
- **PR #42618:** (rallytime) Back-port #41690 to 2017.7 @ 2017-07-28 19:27:11 UTC
 - **PR #41690:** (m03) Fix issue #34245 with `ini.options_present` reporting changes (refs: #42618)
 - d48749b476 Merge pull request #42618 from rallytime/bp-41690
 - 22c6a7c7ff Improve output precision
 - ee4ea6b860 Fix #34245 `ini.options_present` reporting changes
- **ISSUE #42588:** (ixs) salt-ssh fails when using scan roster and detected minions are uncached (refs: #42589)
- **PR #42619:** (rallytime) Back-port #42589 to 2017.7 @ 2017-07-28 19:26:36 UTC
 - **PR #42589:** (ixs) Fix ssh-salt calls with scan roster for uncached clients (refs: #42619)
 - e671242a4f Merge pull request #42619 from rallytime/bp-42589
 - cd5eb93903 Fix ssh-salt calls with scan roster for uncached clients
- **ISSUE #41982:** (abulford) `dockerng.network_*` matches too easily (refs: #42006, #41988)
- **PR #42006:** (abulford) Fix `dockerng.network_*` name matching @ 2017-07-28 15:52:52 UTC
 - **PR #41988:** (abulford) Fix `dockerng.network_*` name matching (refs: #42006)

- 7d385f8bdc Merge pull request #42006 from redmatter/fix-dockerng-network-matching-2017.7
- f83960c02a Lint: Remove extra line at end of file.
- c7d364ec56 Add regression tests for #41982
- d31f2913bd Fix broken unit test test_network_absent
- d42f781c64 Add trace logging of docker.networks result
- 8c00c63b55 Fix dockerng.network_* name matching
- ISSUE #12587: (Katafalkas) salt-cloud custom functions/actions (refs: #42616)
- PR #42616: (amendlik) Sync cloud modules @ 2017-07-28 15:40:36 UTC
 - ee8aee1496 Merge pull request #42616 from amendlik/sync-clouds
 - ab21bd9b5b Sync cloud modules when saltutil.sync_all is run
- PR #42601: (rallytime) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2017-07-27 22:32:07 UTC
 - e2dd443002 Merge pull request #42601 from rallytime/merge-2017.7
 - 36a1bcf8c5 Merge branch '2016.11' into '2017.7'
 - * 4b16109122 Merge pull request #42339 from isbm/isbm-jobs-scheduled-in-a-future-bsc1036125
 - bbba84ce2d Bugfix: Jobs scheduled to run at a future time stay pending for Salt minions (bsc#1036125)
 - * 6c5a7c604a Merge pull request #42077 from vutny/fix-jobs-scheduled-with-whens
 - b1960cea44 Fix scheduled job run on Master if *when* parameter is a list
 - * f9cb536589 Merge pull request #42414 from vutny/unify-hash-params-format
 - d1f2a93368 DOCS: unify hash sum with hash type format

 - 30d62f43da Update minion restart section in FAQ doc for windows
 - * 9a707088ad Merge pull request #42275 from terminalmage/issue42194
 - 663874908a pkg.installed: pack name/version into pkgs argument
 - * e588f235e0 Merge pull request #42269 from rallytime/fix-41721
 - f2250d474a Add a note about using different styles of quotes.
 - 38d9b3d553 Add some clarity to "multiple quotes" section of yaml docs
 - * 5aaa214a75 Merge pull request #42282 from rallytime/fix-42152
 - f032223843 Handle libcloud objects that throw RepresenterErrors with -out=yaml
 - * fb5697a4bc Merge pull request #42308 from lubyou/42295-fix-file-absent-windows
 - 026ccf401a Force file removal on Windows. Fixes #42295
 - * da2a8a518f Merge pull request #42314 from rallytime/fix-42267
 - c406046940 Add clarification to salt ssh docs about key auto-generation.
 - * acadd54013 Merge pull request #41945 from garethgreen-away/41936_allow_identity_files_with_user
 - 44841e5626 Moving the call to cp.get_file inside the with block to ensure the umask is preserved when we grab the file.
 - f9ba60eed8 Merge pull request #1 from terminalmage/pr-41945
 - 1b6026177c Restrict set_umask to mkstemp call only
 - 68549f3496 Fixing umask to we can set files as executable.
 - 4949bf3ff3 Updating to swap on the new salt.utils.files.set_umask context_manager
 - 8faa9f6d92 Updating PR with requested changes.
 - 494765e939 Updating the git module to allow an identity file to be used when passing the user parameter
 - * f90e04a2bc Merge pull request #42289 from CorvinM/bp-41543
 - 357dc22f05 Fix user creation with empty password
 - * a91a3f81b1 Merge pull request #42123 from vutny/fix-master-utils-import
 - 6bb8b8f98c Add missing doc for utils_dirs Minion config option
 - f1bc58f6d5 Utils: add example of module import
 - * e2aa5114e4 Merge pull request #42261 from rallytime/minor-doc-fix
 - 8c76bbb53d Some minor doc fixes for dnsutil module so they'll render correctly
 - * 3e9dfbc9cc Merge pull request #42262 from rallytime/bp-42224
 - c31ded341c Remove duplicate instruction in Openstack Rackspace config example

- * 7780579c36 Merge pull request #42181 from garethgreenaway/42137_backport_fix_from_2017_7
 - a34970b45b Back porting the fix for 2017.7 that ensures the order of the names parameter.
- * 72537868a6 Merge pull request #42253 from gtmanfred/2016.11
 - 53e25760be Only use unassociated ips when unable to allocate
- * b2a4698b5d Merge pull request #42252 from UtahDave/2016.11local
 - e6a9563d47 simple doc updates
- * 781fe13be7 Merge pull request #42235 from astronouth7303/patch-1-2016.3
 - 4cb51bd03a Make note of dig partial requirement.
 - 08e7d8351a Abolish references to *dig* in examples.
- * 83cbd76f16 Merge pull request #42215 from twangboy/win_iis_docs
 - c07e22041a Add missing config to example
- * 274946ab00 Merge pull request #42211 from terminalmage/issue40928
 - 22a18fa2ed Only pass a saltenv in orchestration if one was explicitly passed (2016.11)

Windows Changes

pkg Execution Module

Significant changes (PR #43708 & #45390, damon-atkins) have been made to the pkg execution module. Users should test this release against their existing package sls definition files.

- `pkg.list_available` no longer defaults to refreshing the winrepo meta database.
- `pkg.install` without a `version` parameter no longer upgrades software if the software is already installed. Use `pkg.install version=latest` (or simply use a `pkg.latest` state to get the old behavior).
- `pkg.list_pkgs` now returns multiple versions if software installed more than once.
- `pkg.list_pkgs` now returns `Not Found` when the version is not found instead of `(value not set)` which matches the contents of the sls definitions.
- `pkg.remove` will wait up to 3 seconds (normally about a second) to detect changes in the registry after removing software, improving reporting of version changes.
- `pkg.remove` can remove `latest` software, if `latest` is defined in sls definition.
- Documentation was updated for the execution module to match the style in new versions, some corrections as well.
- All install/remove commands are prefixed with `cmd.exe` shell and `cmdmod` is called with a command line string instead of a list. Some sls files in `saltstack/salt-winrepo-ng` expected the commands to be prefixed with `cmd.exe` (i.e. the use of `&`).
- Some execution module functions results, now behave more like their Unix/Linux versions.

cmd Execution Module

Due to a difference in how Python's `subprocess.Popen()` spawns processes on Windows, passing the command as a list of arguments can result in problems. This is because Windows' `CreateProcess` requires the command to be passed as a single string. Therefore, `subprocess` will attempt to re-assemble the list of arguments into a string. Some escaped characters and quotes can cause the resulting string to be incorrectly-assembled, resulting in a failure to execute the command.

Salt now deals with these cases by joining the list of arguments correctly and ensuring that the command is passed to `subprocess.Popen()` as a string.

Changelog for v2017.7.2..v2017.7.3

Generated at: 2018-05-26 21:36:50 UTC

- **ISSUE #45743:** (frogunder) Multi-master PKI not working on Py3 (refs: #45755)

- **PR #45653:** (rallytime) Back-port #45611 to 2017.7.3 @ 2018-01-24 05:20:11 UTC
 - **PR #45611:** (terminalmage) Fix unnecessary/incorrect usage of six.binary_type (refs: #45653)
 - 6fc293da46 Merge pull request #45653 from rallytime/bp-45611
 - 0a6b06d8ea Fix unnecessary/incorrect usage of six.binary_type
- **PR #45642:** (rallytime) Back-port #45636 to 2017.7.3 @ 2018-01-23 22:00:30 UTC
 - **PR #45636:** (Ch3LL) Fix mac service and pkg tests for 10.13 (refs: #45642)
 - 0a07e0d259 Merge pull request #45642 from rallytime/bp-45636
 - df0ad54c9a remove unnecessary variable for test
 - acb14fd43d fix pylint
 - a9b12cd1ea Fix mac service and pkg tests for 10.13
- **PR #45645:** (rallytime) Back-port #45606 to 2017.7.3 @ 2018-01-23 21:54:45 UTC

- PR #45606: (terminalmage) Fix bug affecting salt-ssh when root_dir differs from the default (refs: #45645)
- f37a5b6d8d Merge pull request #45645 from rallytime/bp-45606
- d52d96f30a Fix bug affecting salt-ssh when root_dir differs from the default
- PR #45641: (rallytime) Back-port #45508 to 2017.7.3 @ 2018-01-23 21:18:39 UTC
 - PR #45508: (frogunder) fix test_archive test for mac on 2017.7 branch (refs: #45641)
 - e659793c09 Merge pull request #45641 from rallytime/bp-45508
 - e6917a291e fix test_archive test for mac on 2017.7 branch
- PR #45604: (rallytime) Back-port #45582 to 2017.7.3 @ 2018-01-22 16:54:15 UTC
 - PR #45582: (terminalmage) Two salt-ssh fixes (refs: #45604)
 - ced3269ae8 Merge pull request #45604 from rallytime/bp-45582
 - bc8a450cc7 Remove state.py utils file from thin list
 - 629e6c9674 Further fixes to for salt-ssh test under heavy load
 - 0dff596b59 Add salt/utils/state.py to thin tarball
 - a61afda100 Pass on OSError if thin tarball already removed
- PR #45591: (gtmanfred) mark minion_blackout tests as flaky @ 2018-01-22 00:14:31 UTC
 - 4672baa6c8 Merge pull request #45591 from gtmanfred/2017.7.3
 - f7fd35fc4a test updating the minion blackout timeout to 10 seconds
- PR #45585: (rallytime) Back-port #45579 to 2017.7.3 @ 2018-01-22 00:13:59 UTC
 - PR #45579: (terminalmage) Test suite stability fixes (refs: #45585)
 - 2a992f9017 Merge pull request #45585 from rallytime/bp-45579
 - 0292c8345b Lint fix: use six's map
 - 108d8cbeef Use correct utils path for 2017.7
 - a38f4cb6d6 Restrict pyzmq optimizations to pyzmq >= 14.3.0
 - 58ad558346 Fix event unpack
- PR #45573: (gtmanfred) update 2017.7.3 tests @ 2018-01-20 20:05:13 UTC
 - 19cd97ed3b Merge pull request #45573 from gtmanfred/2017.7.3
 - bd3cb47fa7 fix mock for opensuse
 - 808e26e69a test simple website
- PR #45570: (gtmanfred) Fix tests for 2017.7.3 @ 2018-01-20 15:01:21 UTC
 - e72d81ef22 Merge pull request #45570 from gtmanfred/2017.7.3
 - 1f71f301ba specify checking man page path
 - 2ddbcb45c1 fix pkg_resources for usage with testing pip
 - 0ba39a7108 switch systemd-journald for sshd for arch service test
- PR #45538: (gtmanfred) Backport test fixes to 2017.7.3 @ 2018-01-19 14:39:44 UTC
 - 7bc60c56d4 Merge pull request #45538 from gtmanfred/2017.7.3
 - 801e0639b6 Merge branch '2017.7.3' into 2017.7.3

- **PR #45533:** (rallytime) Back-port #45529 to 2017.7.3 @ 2018-01-18 22:52:29 UTC
 - **PR #45529:** (Ch3LL) Fix UnboundLocalError for pacman pkg installs (refs: #45533)
 - 8ad65e3359 Merge pull request #45533 from rallytime/bp-45529
 - 6d56c64d88 Fix UnboundLocalError for pacman pkg installs
 - * 8d907ee1a0 fix moto version
 - * 1241ab5fc6 fix test boto imports
 - * f4b6367cf9 fix fedora pkg test
- **ISSUE #45394:** (dmurphy18) git.latest fails when "depth" is used with a non-default branch (refs: #45399)
- **PR #45442:** (rallytime) Back-port #45399 to 2017.7.3 @ 2018-01-17 17:20:48 UTC
 - **PR #45399:** (terminalmage) Fix git.latest failure when rev is not the default branch (refs: #45442)
 - 7379f9e3e5 Merge pull request #45442 from rallytime/bp-45399
 - 590a6db626 Lint: use support TMP path instead of integration TMP path
 - c081b2c62c Fix git.latest failure when rev is not the default branch
- **PR #45468:** (twangboy) Fix some issues with reg.py @ 2018-01-16 22:23:47 UTC
 - ee5090f69b Merge pull request #45468 from twangboy/win_reg
 - a0d21c6354 Fix some issues with reg.py
- **ISSUE #44913:** (ari) FreeBSD packaging install performance regression (refs: #45174)
- **PR #45434:** (rallytime) Back-port #45174 to 2017.7.3 @ 2018-01-14 12:43:16 UTC
 - **PR #45174:** (eradman) Do not force pkg reinstall on FreeBSD (refs: #45434)
 - ef7a896eb6 Merge pull request #45434 from rallytime/bp-45174
 - b310ff7ab8 Do not force pkg reinstall on FreeBSD
- **PR #45395:** (rallytime) Back-port #45380 to 2017.7.3 @ 2018-01-12 18:49:20 UTC
 - **PR #45380:** (twangboy) Backport changes from #45308 (refs: #45395)
 - **PR #45308:** (twangboy) Fix *integration.modules.test_state* for Windows (refs: #45380)
 - c3fdd1dcc4 Merge pull request #45395 from rallytime/bp-45380
 - 0356b3d56f Backport changes from #45308
- **ISSUE #44107:** (anlutro) salt-ssh 2017.7 doesn't work with Python 3, missing backports_abc (refs: #45294)
- **PR #45294:** (gtmanfred) include backports_abc @ 2018-01-11 18:18:16 UTC
 - f7da716d32 Merge pull request #45294 from gtmanfred/2017.7
 - 3633ceea7 Merge branch '2017.7' into 2017.7
 - 29806e4496 ignore salt.ext in pylint
 - 8b597a4890 include backports_abc
- **ISSUE #43130:** (boltronics) module.run documentation issues (refs: #45381)
- **PR #45381:** (gtmanfred) fix module.run docs @ 2018-01-11 18:02:38 UTC
 - f77a3e9cd4 Merge pull request #45381 from gtmanfred/module.run
 - 230e899192 fix module.run docs

- **ISSUE #43995:** ([dragonpaw](#)) Using zmq built with `-enable-draft` breaks Salt (refs: [#45368](#))
- **PR #45368:** ([DmitryKuzmenko](#)) Fixes to work with pyzmq with `-enable-drafts` @ 2018-01-11 17:53:16 UTC
 - [8efd29f4d9](#) Merge pull request [#45368](#) from DSRCorporation/bugs/zmq_draft
 - [7622e355cf](#) Minor: removed a stale comment.
 - [00f31bf9b5](#) Fixes to work with pyzmq with `-enable-drafts`
- **PR #45371:** ([rallytime](#)) Back-port [#45158](#) to 2017.7 @ 2018-01-11 17:51:38 UTC
 - **PR #45158:** ([terminalmage](#)) Fix `integration.modules.test_state.StateModuleTest.test_exclude` (refs: [#45371](#))
 - [22c3efda06](#) Merge pull request [#45371](#) from rallytime/bp-45158
 - [3565bc2bf2](#) Don't use `include-test` SLS in orch tests
 - [8bc17e0d7a](#) Fix `integration.modules.test_state.StateModuleTest.test_exclude`
- **PR #45387:** ([renner](#)) Set SHELL environment variable @ 2018-01-11 16:23:21 UTC
 - **PR #40630:** ([mateiw](#)) develop: SUSE specific changes to `salt-api.service` (refs: [#45387](#))
 - **PR #40620:** ([mateiw](#)) SUSE specific changes to `salt-api.service` (refs: [#40630](#), [#45387](#))
 - [3a0e2de995](#) Merge pull request [#45387](#) from renner/patch-2
 - [530ddd2d29](#) Set SHELL environment variable
- **PR #45388:** ([terminalmage](#)) Fix loader error in 2017.7 tests @ 2018-01-11 16:13:53 UTC
 - [dcf98a2260](#) Merge pull request [#45388](#) from terminalmage/fix-test-loader-error
 - [5473c085d9](#) Fix loader error in 2017.7 tests
- **PR #45382:** ([terminalmage](#)) Skip flaky test on 2017.7 branch @ 2018-01-11 14:23:05 UTC
 - [d15f9e1020](#) Merge pull request [#45382](#) from terminalmage/salt-jenkins-686
 - [ff3039db6c](#) Skip flaky test on 2017.7 branch
- **PR #45369:** ([rallytime](#)) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2018-01-10 22:14:05 UTC
 - [dbe21b2c0d](#) Merge pull request [#45369](#) from rallytime/merge-2017.7
 - [f65e091df8](#) Merge branch '2016.11' into '2017.7'
 - * [0959ae4ea3](#) Merge pull request [#45327](#) from lomeroy/bp-44861_2016.11

 - [1c01967943](#) Update 2016.11.9.rst
 - [a0d89882b8](#) Fix `pkg.install` packagename `version=latest` i.e. if on an old version upgrade to the latest
- **PR #45379:** ([rthoths](#)) Minor spelling/grammar fixes in the highstate returner documentation @ 2018-01-10 20:09:52 UTC
 - [55979b3a48](#) Merge pull request [#45379](#) from rthoths/rthoths-doc-highstate-1

- afbbd492cd Minor spelling/grammar fixes in highstate returner
- PR #45358: (UtahDave) gate the minion data cache refresh events. @ 2018-01-10 17:21:05 UTC
 - PR #45299: (garethgreenaway) [2017.7] config gate auth_events (refs: #45358)
 - 541e59fa75 Merge pull request #45358 from UtahDave/gate_data_cache_refresh
 - 379b6cd23e should be *self*, not *salt*
 - a82e158f2d gate the minion data cache refresh events.
- PR #45297: (Ch3LL) Allow macosx service state tests to check for pid return @ 2018-01-09 20:47:24 UTC
 - fb87010461 Merge pull request #45297 from Ch3LL/mac_service_state
 - 4e569b5802 Allow macosx service state tests to check for pid return
- PR #45351: (dmurphy18) Update debbuild to explicitly include source code for Debian, Ubuntu @ 2018-01-09 17:21:51 UTC
 - beedf6e815 Merge pull request #45351 from dmurphy18/upd_debbuild
 - 478dc70092 Update debbuild flags
- PR #45299: (garethgreenaway) [2017.7] config gate auth_events (refs: #45358) @ 2018-01-09 15:00:30 UTC
 - 66da9b47bc Merge pull request #45299 from garethgreenaway/config_gate_auth_events
 - 9a15ec3430 Updating versionadded string. Fixing typo.
 - edfc3dc078 Adding in documentation for *auth_events* configuration option
 - 3ee4eabffd Fixing small typo
 - 6a28bddcc9 Adding some code to config gate if auth_events are sent
- PR #44856: (Ch3LL) Add state.running ssh integration test @ 2018-01-08 21:40:50 UTC
 - 8d04c2b3d4 Merge pull request #44856 from Ch3LL/running_test
 - 9a35a73711 add time limit to while loop
 - aeb5f4e248 Add state.running ssh integration test
- ISSUE saltstack/salt-jenkins#675: (rallytime) [2017.7] unit.states.test_file.TestFileState.test_directory is failing on Fedora 27 and CentOS 6 (refs: #45295)
- PR #45295: (gtmanfred) test directory that doesn't exist @ 2018-01-08 20:59:53 UTC
 - d0e5e70277 Merge pull request #45295 from gtmanfred/test_directory
 - e6178fe6d4 Merge branch '2017.7' into test_directory
 - 24114e91c1 test was different slightly on 2017.7
 - d20fc93625 test directory that doesn't exist
- ISSUE saltstack/salt-jenkins#678: (rallytime) [2017.7] Proxy Minion Tests for Py3 are failing (refs: #45302)
- PR #45302: (gtmanfred) fix proxy tests for py3 on 2017.7 @ 2018-01-08 17:41:58 UTC
 - f49b204b75 Merge pull request #45302 from gtmanfred/proxyp3
 - b295ec0429 make dummy proxy module py3 compatible
 - 8736e21f65 fix starting proxy minion on py3
 - e2824a7253 fix py3 tests
- PR #45279: (rallytime) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2018-01-08 17:26:49 UTC

- eea7158e82 Merge pull request #45279 from rallytime/merge-2017.7
- 8025b14584 Merge branch '2016.11' into '2017.7'
 - * 1c5e905b61 Merge pull request #45256 from rallytime/bp-45034
 - 68f971b38f Apply test fixes from #45034 to parsers_test.py
 - 9454236694 Fix for pidfile removal logging
- PR #44853: (gtmanfred) remove not from vault utils @ 2018-01-05 17:43:18 UTC
 - dab4a8cff3 Merge pull request #44853 from gtmanfred/vault
 - bfee1cead6 set role for loading minion config
 - c5af2e5048 if utils is not loaded, load it
 - 6a5e0f9ac1 remove not from vault utils
- PR #45277: (rallytime) Back-port #45025 to 2017.7 @ 2018-01-05 15:35:53 UTC
 - PR #45025: (steverweber) Fix pillar include merge order (refs: #45277)
 - f09d0e5fdb Merge pull request #45277 from rallytime/bp-45025
 - 942c14bb29 pillar body overrides includes
 - 1152202fdc fix pillar includes from merging over the current sls defines
- PR #45276: (rallytime) Back-port #45260 to 2017.7 @ 2018-01-05 14:45:40 UTC
 - PR #45260: (gtmanfred) Make some kitchen-salt tests blue (refs: #45276)
 - fc84f1104f Merge pull request #45276 from rallytime/bp-45260
 - 9ab1af738f switch kitchen-salt to use rsync transport to preserve symlinks
 - cf98ed472e fix up symlinks
- ISSUE #43340: (slyphernl) Upgrading Salt via Salt results in dying minions and broken dpkg (refs: #45255)
- PR #45255: (rallytime) Back-port #44427 to 2017.7 @ 2018-01-04 21:46:17 UTC
 - PR #44427: (samodid) use KillMode=process for salt-minion.service (refs: #45255)
 - ff9880c498 Merge pull request #45255 from rallytime/bp-44427
 - 6cea9bbf3a use KillMode=process for salt-minion.service
- ISSUE #23454: (HontoNoRoger) SLS rendering error with Salt-SSH (pydsl) (refs: #45251)
- PR #45251: (forksaber) Fix #23454 : make pydsl work with salt-ssh @ 2018-01-04 21:33:09 UTC
 - e715eb603f Merge pull request #45251 from forksaber/salt-ssh-pydsl
 - b3660d5190 [#23454] make pydsl work with salt-ssh
- PR #45254: (Ch3LL) Add darwin value for ssh grain items tests on MacOSX @ 2018-01-04 21:31:35 UTC
 - 2934b60d53 Merge pull request #45254 from Ch3LL/fix_mac_grain_ssh
 - b4b59b89cd remove platform from salt.utils call for 2017.7
 - 85e853a63d Add darwin value for ssh grain items tests on MacOSX
- PR #45135: (twangboy) Fix win_dacl problems with SIDs @ 2018-01-04 21:01:48 UTC
 - af2d880303 Merge pull request #45135 from twangboy/win_fix_dacl
 - b31e08946a Merge branch '2017.7' into win_fix_dacl

- 35a417f510 Fix win_dacl problems with SIDs
- **ISSUE #43806:** (Ch3LL) Add spm man Test to Auto Test Suite (refs: #44930)
- **PR #44930:** (frogunder) man_spm_test @ 2018-01-04 20:58:02 UTC
 - d0a3770035 Merge pull request #44930 from frogunder/man_spm
 - 48e6953e1f fix_string_error
 - c9fa4ed2a7 man_spm_test
- **PR #45259:** (Ch3LL) Fix MacOSX Service Status Check and integration test @ 2018-01-04 14:25:01 UTC
 - 543eebf411 Merge pull request #45259 from Ch3LL/fix-mac-service-test
 - 74e6ed60ea Fix MacOSX Service Status Check and integration test
- **PR #45263:** (sumeetisp) Updating python version for 2017.7 @ 2018-01-04 14:16:26 UTC
 - bbbd1872a7 Merge pull request #45263 from sumeetisp/2017.7
 - e3a5ee3a08 Merge branch '2017.7' into 2017.7
 - 71aea9a3bc Merge pull request #1 from sumeetisp/sumeetisp-python-version
 - * 1b4806e2b9 Updating python version
- **PR #45244:** (twangboy) Fix search/replace in Py3 @ 2018-01-04 14:02:22 UTC
 - d46e1197be Merge pull request #45244 from twangboy/win_fix_portable.py
 - e3a8279c01 Get path to python binary based on executable
 - 03aec37040 Fix search/replace in Py3
- **PR #45233:** (rallytime) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2018-01-03 15:34:00 UTC
 - eba360870a Merge pull request #45233 from rallytime/merge-2017.7
 - a3d251b2cd Merge branch '2016.11' into '2017.7'
 - * b75f50afe3 Merge pull request #45235 from rallytime/bp-45209
 - 2d0a9bbf7e enable UsePAM for ssh tests
 - 5d9a1e91e9 Merge branch '2016.11' into '2017.7'
 - * 3ab962b01a Merge pull request #44965 from gtmanfred/2016.11
 - a5d8a6340e check if VALUE is a string_type
 - * 40fb30f63f Merge pull request #45232 from rasathus/2016.11
 - 7a2bd8f49b Merge branch '2016.11' into 2016.11
 - de53c45c29 Backport #27160 to 2016.11
- **PR #45175:** (amendlik) Pkg uptodate @ 2018-01-02 17:38:36 UTC
 - 693cc807e8 Merge pull request #45175 from amendlik/pkg-uptodate
 - 4f514a29a7 Merge branch '2017.7' into pkg-uptodate
- **PR #45226:** (gtmanfred) Update kitchen to use runtests verifier on 2017.7 @ 2017-12-31 18:13:28 UTC
 - 1b3f3ba1be Merge pull request #45226 from gtmanfred/2017.7
 - 4f3b089e0e fix copying back
 - f56f062a6a download xml for junit

- 7cc342a5d6 use new runtests verifier
- **PR #45221:** ([rallytime](#)) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2017-12-30 18:08:29 UTC
 - 7d3a6cbc65 Merge pull request #45221 from rallytime/merge-2017.7
 - 508599e159 Merge branch '2016.11' into '2017.7'
 - 707ef55175 Merge pull request #45161 from lomeroy/bp-44944_2016.11
 - * 0a4c6b5a83 remove references to six.unichr
 - * f3196d795d lint fixes for static regexes
 - * 11b637d108 lint fixes
 - * c14d6282ad do not decode registry.pol file wholesale, but instead decode individual elements of the file
 - 6f52034e08 Merge pull request #45199 from gtmanfred/status
 - * fb07f9ea7d status.pid returns pid ids not process names
- **ISSUE #45176:** ([thuhak](#)) osquery execution module doesn't work with attrs parameter (refs: #45204)
- **PR #45204:** ([garethgreenaway](#)) [2017.7] Fixes to osquery module & addition of unit tests @ 2017-12-30 13:25:38 UTC
 - abed378981 Merge pull request #45204 from garethgreenaway/45176_fixes_to_osquery_module
 - dc933e9e24 Fixing typo
 - d834bd1b6f Fixing some minor lint issues.
 - 4738205154 Fixing a bug when attributes are passed to various osquery module functions.
 - * 66884334d9 Update states.pkg for Python3 compatibility
 - * 2a7d76ad6e Fail pkg.uptodate if expected packages are not upgraded
 - * 29ef67bac2 Test pkg.uptodate with failed upgrades
 - * 23ab93353b Produce changes dict for pkg.uptodate dry-run mode
 - * 7c67ec39d9 Add tests for pkg.uptodate state
- **PR #45203:** ([rallytime](#)) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2017-12-29 01:11:03 UTC
 - 5991d8ca15 Merge pull request #45203 from rallytime/merge-2017.7
 - 430c913c8c Merge branch '2016.11' into '2017.7'
 - * d3381e27d0 Merge pull request #45118 from garethgreenaway/44728_nodegroups_seq
 - 0ff811de70 Swapping import to be the old path for 2016.11
 - b3e2f388f5 Fix to allow nodegroups to include sequences
 - * f969aca3a3 Merge pull request #45127 from twangboy/win_fix_pkg
 - 14639739f2 Fix issue with 1641 return code
 - * dc357b39f0 Merge pull request #45137 from twangboy/win_fix_reg_tests
 - b6f4ef8d73 Catch correct error type in list_keys and list_values
 - * 0aa1662731 Merge pull request #45130 from rallytime/api-groups
 - 2dcc8df845 Resolve groups for salt api
 - * 7dc3cc4641 Merge pull request #45114 from twangboy/win_fix_pam

- cf5eae1f77 Move pam library load to try/except block
- **PR #45201:** (rallytime) [2017.7] Check for running on python3 before decoding bytes @ 2017-12-28 22:59:14 UTC
 - **PR #45090:** (angeloudy) fix TypeError in python 3 (refs: #45201)
 - 882267314f Merge pull request #45201 from rallytime/fix-jinja-template-test-failure
 - b4af3bdff8 Check for running on python3 before decoding bytes
- **PR #45200:** (rallytime) [2017.7] Fix docstring integration test failure @ 2017-12-28 22:58:34 UTC
 - **PR #44552:** (Da-Juan) pip_state: Check if available upgrades fulfill version requirements. (refs: #45200)
 - 2e18398f12 Merge pull request #45200 from rallytime/fix-docstring-test-failure
 - a26d4795bd [2017.7] Fix docstring integration test failure
- **PR #45186:** (rallytime) Back-port #44922 to 2017.7 @ 2017-12-28 19:02:51 UTC
 - **PR #44922:** (dincamihai) Fix salt-master for old psutil (refs: #45186)
 - 67d97303b5 Merge pull request #45186 from rallytime/bp-44922
 - 6970fe8103 Fix salt-master for old psutil
- **PR #44624:** (eliasp) Fix Traceback when using the `service.enabled` state on non-booted systems @ 2017-12-28 10:58:43 UTC
 - 30d7f7257a Merge pull request #44624 from eliasp/fix-upstart-utmp-exception
 - 43d44e051a Do not blindly assume presence of either `/var/run/utmp` or `/run/utmp`, none of both might be available (e.g. on non-booted systems).
- **PR #45183:** (twangboy) Add libnacl dependency @ 2017-12-27 22:08:32 UTC
 - 3832e7b227 Merge pull request #45183 from twangboy/win_add_libnacl_2017.7
 - b46845888d Add libnacl dependency
- **ISSUE #44928:** (rcallphin) Duplicating master token when no match for Minion policy (Vault Module) (refs: #44966)
- **PR #44966:** (rcallphin) Fix bug with vault runner creating token on empty policy @ 2017-12-22 20:30:37 UTC
 - fbbf33574e Merge pull request #44966 from rcallphin/fix-bug-vault-empty-policy
 - 7f327ab760 Lint: Remove extra whitespace
 - 04ab6a5e9d Merge branch '2017.7' into fix-bug-vault-empty-policy

 - a416bf0112 No need to manually do connect_pub, use listen=True in run_job
 - 3ec004bd2e Fix a race condition in manage runner
- * 1032ca3290 Merge pull request #44385 from gtmanfred/schedule
 - 9e15c38da2 add comma
 - 855d933cb7 schedule should be a dict
- PR #45112: (Ch3LL) Fix spm big file build test to check /tmp @ 2017-12-20 22:09:21 UTC
 - 9550e742ac Merge pull request #45112 from Ch3LL/fix-arch
 - 1bd7110a14 Fix spm big file build test to check /tmp
- ISSUE #44303: (mwerickso) boto3_route53 module times out on retries (refs: #44976)
- PR #45068: (rallytime) Back-port #44976 to 2017.7 @ 2017-12-20 16:31:22 UTC
 - PR #44976: (tkwilliams) Fix bad variable name in boto3_route53 module - resolves #44303 (refs: #45068)
 - 71f9c7ee49 Merge pull request #45068 from rallytime/bp-44976
 - 0ca0f37805 44303 - resolves #44303
- ISSUE #44961: (golmaal) The archive tar function fails to untar file when dest argument is passed (refs: #44983)
- PR #45099: (rallytime) Back-port #44983 to 2017.7 @ 2017-12-20 14:41:22 UTC
 - PR #44983: (golmaal) Ref:44961 - Modified archive.tar to add dest at the end of the tar cmd (refs: #45099)
 - 54a33c0e1d Merge pull request #45099 from rallytime/bp-44983
 - 23361de8a2 Ref:44961 - Modified archive.tar to add dest argument at the end of the tar cmd.
- ISSUE #43533: (Ch3LL) Add status.pid Test to Auto Test Suite (refs: #44650)
- PR #44650: (frogunder) add status.pid test @ 2017-12-19 16:21:09 UTC
 - e0d7b330fa Merge pull request #44650 from frogunder/status
 - 904c0da893 Merge branch '2017.7' into status
 - 619bd2be1e fix lint error
 - d406cb07a3 add status.pid test
- ISSUE #44516: (doesitblend) Windows PY3 Minion Returns UTF16 UnicodeError (refs: #45161, #44944)
- PR #44944: (lomeroy) win_lgpo registry.pol encoding updates (refs: #45161) @ 2017-12-19 14:42:49 UTC
 - 422d8b8f1b Merge pull request #44944 from lomeroy/update_regpol_encoding
 - 07d04c7bc7 lint fixes for static regexes
 - d17c46ce41 lint fixes
 - ab8e431729 do not decode registry.pol file wholesale, but instead decode individual elements of the file
- PR #44938: (The-Loeki) Libcloud dns fixes @ 2017-12-18 15:47:18 UTC
 - d9a4b9681e Merge pull request #44938 from The-Loeki/libcloud_dns_fixes
 - 276e8828ae libcloud_dns: pylint fix

- c994423286 Merge branch '2017.7' into libcloud_dns_fixes
- **PR #44951:** (rallytime) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2017-12-16 13:16:24 UTC
 - 5137be01ec Merge pull request #44951 from rallytime/merge-2017.7
 - a0d2dd2069 Lint fix
 - 9db4179462 Merge branch '2016.11' into '2017.7'
 - * 68d901b12c Merge pull request #44770 from cruscio/2016.11
 - e2682bf441 Fix minion ping_interval documentation
 - * d4ab55ec47 Merge pull request #44335 from gtmanfred/2016.11
 - 3f1268d67f fix patching for python 2.6
 - 1d0bd5bb32 Merge branch '2016.11' into 2016.11
 - f02b02032d Merge pull request #4 from terminalmage/pr-44335
 - b4eb1527a6 Add test for PR 44335
 - a30af3252e add docker-ce to docker subtype grains check
- **PR #44995:** (twangboy) Fix `unit.modules.test_file` for Windows @ 2017-12-15 17:05:49 UTC
 - 698b04779e Merge pull request #44995 from twangboy/win_fix_atomicfile
 - 8316481944 Comment the salt import
 - fe34f0c877 Set owner properly on Windows
- **ISSUE #44934:** (vernoncole) `http.wait_for_successful_query` does not pause for documented intervals (refs: #44968)
- **PR #44968:** (gtmanfred) fix http wait for state @ 2017-12-14 20:06:01 UTC
 - 2e1a57b9bc Merge pull request #44968 from gtmanfred/http
 - ca6936f6eb fix http wait for state
 - * c72db283d5 libcloud_dns: Further fixes to state output, pylint fixes
 - * e9bbc23b11 Merge branch '2017.7' into libcloud_dns_fixes
- **ISSUE #44811:** (xuhcc) `rbenv.installed` fails when `rbenv` installed globally (refs: #44900)
- **PR #44900:** (xuhcc) Fix `TypeError` during `rbenv` ruby installation when `rbenv` is not found @ 2017-12-14 17:37:14 UTC
 - c4f0894689 Merge pull request #44900 from xuhcc/rbenv-ret-fix
 - fdd8310c31 Merge branch '2017.7' into rbenv-ret-fix
 - bfd0972d25 Fix `TypeError` during `rbenv` ruby installation when `rbenv` is not found
- **PR #44974:** (twangboy) Skip `test_log_created` on Windows @ 2017-12-14 13:59:25 UTC
 - f0c2cf3cec Merge pull request #44974 from twangboy/win_skip_test_parsers
 - 40665d7b08 Skip `test_log_created` on Windows
- **ISSUE #44820:** (mstead) Custom returner breaks manage runner (refs: #44958)
- **PR #44958:** (terminalmage) Fix a race condition in manage runner (refs: #44972) @ 2017-12-13 15:20:36 UTC
 - dad2d723ca Merge pull request #44958 from terminalmage/issue44820
 - ef749abfc6 No need to manually do `connect_pub`, use `listen=True` in `run_job`

- 2ac70cfab5 Fix a race condition in manage runner
- **PR #44956:** ([terminalmage](#)) Avoid traceback when bogus value in pidfile @ 2017-12-13 14:30:12 UTC
 - db58345abb Merge pull request #44956 from terminalmage/fix-get_pidfile
 - d66f3a98d7 Avoid traceback when bogus value in pidfile
- **ISSUE #44932:** ([knine](#)) ACLs Not Completely Verified (refs: #44945)
- **PR #44945:** ([gtmanfred](#)) Fix handling of effective acls @ 2017-12-12 21:49:34 UTC
 - e8e3b3c8ff Merge pull request #44945 from gtmanfred/2017.7
 - 66bb755751 add test for effective acls
 - 0ff52a93dd use last entry in acl
- **PR #44942:** ([rallytime](#)) Update README with SaltConf18 info @ 2017-12-12 21:47:23 UTC
 - 47dc7b7afb Merge pull request #44942 from rallytime/readme-saltconf-update
 - d1317c44e2 Update README with SaltConf18 info
- **ISSUE #44665:** ([mvivaldi](#)) Documentation of salt renders jinja (refs: #44943, #44895)
- **PR #44943:** ([mvivaldi](#)) Fix for the jinja documentation @ 2017-12-12 20:20:41 UTC
 - 7572982419 Merge pull request #44943 from mvivaldi/filters-doc
 - d23ac4eabc Fix for the jinja documentation
- **ISSUE #43417:** ([damon-atkins](#)) win_pkg: pkg.install and pkg.remove general issues (refs: #44832, #43708)
- **PR #44832:** ([damon-atkins](#)) win_pkg: Merge full copy of 2016.11 with many fixes and improvements to 2017.7 @ 2017-12-12 18:30:06 UTC
 - 465cacad83 Merge pull request #44832 from damon-atkins/2017.7_replace_with_newer_2016.11_win_pkg
 - a4f0b41ba2 Should be a smaller change set since recent update from 2016.11
 - 695334b201 Merge branch '2017.7_replace_with_newer_2016.11_win_pkg' of github.com:damon-atkins/salt into 2017.7_replace_with_newer_2016.11_win_pkg
 - * 843e204582 Merge branch '2017.7' into 2017.7_replace_with_newer_2016.11_win_pkg
 - 4b60b1ec84 Merge remote branch 'refs/remotes/upstream/2017.7' into 2017.7_replace_with_newer_2016.11_win_pkg
 - b46f818a57 Raise a PR to fix 2016 issues committed here, fixed issues with merge.
 - 32ef1e12ae Merge branch '2017.7' into 2017.7_replace_with_newer_2016.11_win_pkg
 - 494835c3f2 I backported develop and applied a long list of fixes to 2016.11 this brings these fixes into 2017.7 - Software was not always being removed, general if & was in the string or msi was downloaded to uninstall the software - pkg.list_upgrades failed. Added support for 'latest' and 'Not Found' for version_cmp() to fix this. - output fixes - pkg.list_available no longer forces a pkg.refresh_db this is no longer required, as by default it will update if older than 6 hours - cmd /s /c is prefixed for all commands i.e. installs and removes. - cmd are now strings, instead of a list when using cmd.run. As windows only supports strings. And the " were being broken
- **PR #44754:** ([twangboy](#)) Fix inet_pton for Windows on Py3 @ 2017-12-12 14:04:20 UTC
 - a811a92b17 Merge pull request #44754 from twangboy/win_fix_inet_pton
 - 25a20109fe Merge branch '2017.7' into win_fix_inet_pton
 - 849b99eb34 Merge branch '2017.7' into win_fix_inet_pton

- df1e6a202b Use salt.ext.six
- 5ac8112585 Use six to ensure unicode value
- 9b5d8c421b Handle unicode values
- **PR #44931:** (pkruk) add missing parenthesis to keep integration with python3 @ 2017-12-12 13:49:39 UTC
 - 53b34e24cd Merge pull request #44931 from pkruk/fix-missing-parenthis
 - b1ed739b44 Merge branch '2017.7' into fix-missing-parenthis
 - 4f1b1f12d2 Merge branch 'fix-missing-parenthis' of <https://github.com/pkruk/salt> into fix-missing-parenthis
 - * 3475d3fa01 add missing parenthesis to keep integration with python3
 - adf38cacfb add missing parenthesis to keep integration with python3
 - * ad55e33f57 libcloud_dns: fix state output
 - * a68d594e3a libcloud_dns: copy args before deleting from them
- **PR #44891:** (twangboy) Fix issue with unsafe path in Windows jenkins tests @ 2017-12-11 21:10:43 UTC
 - ba6146250a Merge pull request #44891 from twangboy/win_fix_verify
 - 7232579167 Allow test suite file_roots as a safe path
- **PR #44921:** (Ch3LL) Add test to ensure log files are created @ 2017-12-11 18:24:16 UTC
 - 85160fd297 Merge pull request #44921 from Ch3LL/log_test
 - 3bb58fb577 skip salt-key log creation test
 - 6a379195bc Add test to ensure log files are created
- **PR #44787:** (rallytime) GroupAdd test: Add destructive test decorator to entire class @ 2017-12-11 18:14:18 UTC
 - 54d29a61cb Merge pull request #44787 from rallytime/groupadd-destructive-clean
 - 817ac002b0 Add destructive test decorator to test class
- **ISSUE #44665:** (mvivaldi) Documentation of salt renders jinja (refs: #44943, #44895)
- **PR #44895:** (mvivaldi) Jinja Filters doc @ 2017-12-11 15:32:07 UTC
 - 0292e3612a Merge pull request #44895 from mvivaldi/filters-doc
 - 62409d608a Added Escape Filters and Set Theory Filters in jinja documentation
- **PR #44879:** (rallytime) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2017-12-10 16:53:44 UTC
 - **PR #44855:** (rallytime) [2017.7] Merge forward from 2016.11 to 2017.7 (refs: #44879)
 - df28f312ac Merge pull request #44879 from rallytime/merge-2017.7
 - 23c5a4ca3e Merge branch '2016.11' into '2017.7'
 - * bb1f8dceaf Merge pull request #44579 from roaldnefs/fix-cron-identifier
 - df73a4c051 Merge branch '2016.11' into fix-cron-identifier
 - * af0131fa1f Merge pull request #44852 from damon-atkins/2016.11_win_pkg_typo_n_fix
 - 0e7c19084f Lint: Remove extra whitespace
 - 7c7e21f94d Fix spelling typo, and fix backwards compatible minion option for repo location
 - * 88c0d66b4e Merge pull request #44794 from terminalmage/issue44365

- 3b8b6f25e6 Remove debugging line
- 153bf45b03 Fix regression in file.managed when source_hash used with local file
- * c8bb9dfbbb Merge pull request #44738 from rallytime/bump-oxygen-warnings
 - ead3c569e1 Bump deprecation warnings from Oxygen to Fluorine
- * 88e3aab00d Merge pull request #44741 from gtmanfred/rhip
 - 439dc8dce6 if gateway is not specified use iface
 - 3ec4329307 Merge branch '2016.11' into fix-cron-identifier
 - 99fa05a456 Fix for bug in cron state
 - 97328faeac Fix for bug in cron module
- **PR #44880: (UtahDave)** Determine windows hardware arch correctly @ 2017-12-08 22:24:09 UTC
 - 8e14bc3941 Merge pull request #44880 from UtahDave/2017.7local
 - 6e3c7ac1ac Merge branch '2017.7' into 2017.7local
- **PR #44861: (twangboy)** Fix win_lgpo for unknown values (refs: #45327) @ 2017-12-08 18:52:05 UTC
 - dc51174670 Merge pull request #44861 from twangboy/win_fix_lgpo_invalid_value
 - 89f65e19ff Check for values other than 0 or 1
- **PR #44621: (isbm)** Bugfix: errors in external pillar causes crash, instead of report of them @ 2017-12-08 18:46:56 UTC
 - f5a143f8c5 Merge pull request #44621 from isbm/isbm-bsc1068446-2017.7
 - 0d2675c4fe Use variable, instead of direct value
 - 1ddc47da0a Add unit test for _get_pillar_errors when external pillar is clean and internal contains errors
 - 68480d5dc9 Add unit test for _get_pillar_errors when both external and internal pillars contains errors
 - 218a59e93b Add unit test for _get_pillar_errors when external pillar has errors and internal is clean
 - 3ce19356c2 Add unit test for _get_pillar_errors when external and internal pillars are clean
 - 67034139d9 Fix unit test: wrong error types in side effect
 - d9359bca13 Bugfix: unit test mistakenly expects pillar errors as a string, while it is a list
 - 8c2bdc696b Bugfix: do not pull '_errors' from unchecked objects
 - d5e30999c7 Remove unused variable (no exception, within the try/finally block)
 - aad668d559 Fix and clarify docstring.
 - c2c47e4e71 Rename function from ambiguous name
 - 265de8e61c Bugfix the logic according to the exact described purpose of the function.
 - * dae9c6aa5c Determine windows hardware arch correctly
- **PR #43379: (twangboy)** Fix file.managed on Windows with test=True @ 2017-12-07 21:10:43 UTC
 - abe089ad54 Merge pull request #43379 from twangboy/win_fix_file.managed
 - edcd581ca5 Merge branch '2017.7' into win_fix_file.managed
 - a27bb6993a Fix py3 error
 - 0ff9fa498a Fix test_directory

- 187bc1e61e Add back the try/finally blocks
- d7241d004f Fix 2 more tests
- d5dd42aebc Fix integration tests for Windows
- d56bc9aae9 Fix typo
- af5565859e Use file functions for symlink and remove
- 72ac59c991 Fix some more integration tests for Linux
- 3f0499cbc4 Fix some integration tests
- a24b964ea5 Fix unit test to handle new Exception
- e3c3845f73 Raise CommandExecutionError when file doesn't exist
- 4602f499a2 Remove loader module mixin, add linux paths
- 99b27c037f Add tests to avoid future regression
- 5c215ed8c2 Fix documentation formatting
- 6a4e77e4b9 Return empty or unmodified dict on file not found
- **ISSUE #44565:** (arthurlogilab) NameError: global name '__jid_event__' is not defined when running a runner in the scheduler (refs: #44570)
- **PR #44570:** (gtmanfred) Include client mixin globals in scheduler for runner modules @ 2017-12-07 20:23:33 UTC
 - cf4cbcd340 Merge pull request #44570 from gtmanfred/2017.7
 - 7b17f9f63c Merge branch '2017.7' into 2017.7
- **PR #44494:** (skizunov) Fix broken *beacons_before_connect* feature @ 2017-12-07 18:24:49 UTC
 - **PR #38289:** (skizunov) Add config options for running beacons/scheduler before connect (refs: #44494)
 - febb913743 Merge pull request #44494 from skizunov/develop2
 - 7adcfbf8ec Merge branch '2017.7' into develop2
- **ISSUE #44298:** (skjaro) ipset state check problem (refs: #44356)
- **ISSUE #39552:** (Xiami2012) ipset.check new implementation by @lingonl has countless critical bugs (refs: #44356)
- **PR #44512:** (rallytime) Back-port #44356 to 2017.7 @ 2017-12-07 14:44:50 UTC
 - **PR #44356:** (skjaro) Fix ipset state with multiple entries and subtypes separated with comma (refs: #44512)
 - 284a817565 Merge pull request #44512 from rallytime/bp-44356
 - 6f92c71834 Merge branch '2017.7' into bp-44356
 - 9a325146df Fix lint violation
 - 5aac729855 Fix check multiple entries with subtypes separated with comma
- **PR #44748:** (twangboy) Fix auto login support for OSX @ 2017-12-07 14:22:23 UTC
 - 74ee7ce541 Merge pull request #44748 from twangboy/osx_fix_auto_login
 - 068e463870 Fix lint, add integration tests
 - 3df886df75 Fix lint, add gtmanfreds change

- 16cb24614f Add kcpasword functionality
- **PR #44842:** (twangboy) Win fix lgpo unicode on Py3 issue @ 2017-12-07 14:21:14 UTC
 - b60cca174c Merge pull request #44842 from twangboy/win_fix_lgpo
 - efe77999d1 Gate log.debug statement behind successful pop
 - 1c0ec79cd1 Fix py3 issue
- **PR #44843:** (twangboy) Fix 2 typos in lgpo module @ 2017-12-06 17:56:44 UTC
 - bb58e2fec0 Merge pull request #44843 from twangboy/win_fix_lgpo_typo
 - c8f93e6dd7 Fix 2 typos, shorten line lengths for spellchecking
- **PR #44827:** (mz-bmcqueen) add more clone options to virtualbox and add better dhcp handling @ 2017-12-06 15:02:23 UTC
 - d6c37ea19c Merge pull request #44827 from mz-bmcqueen/2017.7
 - 4ead3014b7 Merge branch '2017.7' into 2017.7
 - b7ce154014 Merge branch '2017.7' of <https://github.com/mz-bmcqueen/salt> into 2017.7
 - * 2f80f431b3 Merge branch '2017.7' into 2017.7
 - c2018c9021 fix pylint complaints
 - c38ff74261 add more clone options to virtualbox and add better dhcp handling
- **PR #44824:** (Ch3LL) Add spm -y and -f arg integration tests @ 2017-12-05 21:49:32 UTC
 - 019169ed61 Merge pull request #44824 from Ch3LL/spm_args
 - d8f81d2e4d fix pylint
 - 61ac5cf157 Add spm -y and -f arg integration tests
- **PR #44742:** (Ch3LL) Add salt-cloud action rename integration test @ 2017-12-05 17:44:50 UTC
 - 59b930668c Merge pull request #44742 from Ch3LL/cloud_action_test
 - 951d09ca2f remove unnecessary try/except block
 - c329ced7ee Add salt-cloud action rename integration test
- **ISSUE #42676:** (mind-code) Changes in Pillar defined Beacons only apply after Minion restart (refs: #44771)
- **PR #44771:** (garethgreenaway) [2017.7] Back porting #44071 @ 2017-12-05 17:16:06 UTC
 - **PR #44071:** (garethgreenaway) [develop] Various fixes to beacons (refs: #44771)
 - 10442d9211 Merge pull request #44771 from garethgreenaway/42676_backport_44071
 - ec2a8b2032 Merge branch '2017.7' into 42676_backport_44071
 - 180971203e Updating minion to respond to list_available events for beacons
 - db6fcfe62 Adding list_available which is used by the add function to verify that a becaon exists.
 - e9e0318bc6 Backporting fixes related to having beacons in pillar from #44071
- **PR #44784:** (rallytime) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2017-12-05 17:13:49 UTC
 - **PR #44732:** (rallytime) [2017.7] Merge forward from 2016.11 to 2017.7 (refs: #44784)
 - 23d151b40a Merge pull request #44784 from rallytime/merge-2017.7-1
 - 3d9eafc4bd Lint: Remove extra empty lines at end of files

- 239f3511bf Merge branch '2016.11' into '2017.7'
 - * 97e0cf569c Merge pull request #44699 from jfindlay/attr_file
 - 9e5a40ea7c Merge branch '2016.11' into attr_file
 - 5c34607f6c utils/files remove temp file upon move failure
 - * 7434e0afdf Merge pull request #44714 from rallytime/fix-44556
 - 1bbe1abeb2 Allow `-static` option to display state runs with highstate output
 - * 998d714ee7 Merge pull request #44517 from whyte wolf/publish_port_doc_missing
 - 4b5855283a missed one place where i didnt chanbge master_port from my copy to publish_port
 - e4610baea5 update doc to have publish port
 - * 6169b52749 Merge pull request #41279 from Ch3LL/add_grain_tests
 - 1b64f15692 Merge branch '2016.11' into add_grain_tests
 - * dc6de050a9 Merge pull request #44563 from creideiki/pgjsonb-timestamps-44544
 - 231e412ca4 Merge branch '2016.11' into pgjsonb-timestamps-44544
 - * 4369df020b Merge pull request #44602 from rallytime/fix-44601
 - ff303fd060 Handle `timeout_monitor/TimeoutError` issues for new versions of CherryPy
 - * 4a4756fc37 Merge pull request #44604 from lorengordon/doc-exclude
 - c4a6c40eb3 Documents the `exclude` argument in state execution module
 - 15c445e6b9 Send Unix timestamps to database in pgjsonb
 - 095f1b7d7a Merge branch '2016.11' into add_grain_tests
 - * 91d46d4cfc Merge pull request #44434 from whyte wolf/1837
 - d148e39dda change from md to rst for code reference
 - 955e305bda fix bad english, as requested by cachedout
 - 7256fcc1c9 update note to take into account `grains_cache`
 - 7a2981585e Merge branch '2016.11' into 1837
 - aca0405b26 add a note that describes grain rebuilding on restart and refresh
 - 9ea4db4224 mock `socket.getaddrinfo`
 - 78a07e30f4 add more `fqdn` tests and remove some of the mocking
 - 5dbf4144ce add `ipv6` in `opts`
 - eabc1b4f9c Add `fqdn` and `dns` core grain tests
 - * a3bd99317f Merge pull request #44321 from gvengel/fix-file-line-diff-output
 - 69a50204a6 Add newline for lint.
 - ef7b6bbb81 Fixed issue with `file.line` on Windows running Python 2.
 - 8f89c99fa5 Fix `FileModuleTest` `setUp` and `tearDown` to work on Windows.
 - 3ac5391f5f Namespace missing functions for `file.line` on Windows.
 - b2b8f075b9 Fixed test to work on Windows.

- 5a5a2dd026 Added integration test for issue [#41474](#)
 - 24d7315f1a Fix file.line diff formatting.
 - * 9ca563718d Merge pull request [#43708](#) from damon-atkins/2016.11_43417_Backport_and_Fixes
 - 04d03ea6b8 Updated comment
 - 1dd565e585 Merge remote branch 'upstream/2016.11' into 2016.11_43417_Backport_and_Fixes
 - dd48ba2616 Merge remote branch 'upstream/2016.11' into 2016.11_43417_Backport_and_Fixes
 - a0d08598bf dco fix
 - 9467899fc6 Merge remote branch 'upstream/2016.11' into 2016.11_43417_Backport_and_Fixes
 - 6dc180fd0e doco fixes
 - 2496a42ea4 lint fix
 - 2c937fbe19 Merge remote branch 'upstream/2016.11' into 2016.11_43417_Backport_and_Fixes
 - c9c8c48a4d all remove/install commands are passed to cmd.exe /s /c and commands are passed as strings to cmdmod
 - 350244bd93 typo in comments and doc strings.
 - ec31f5a9bd 2017.11/develop version() was ignoring saltenv setting.
 - b314549a32 Backport of develop to 2016.11 with additional bug fixes
 - * 68ea22188e Merge pull request [#44477](#) from rallytime/bp-44424
 - 4a9f8dcc96 Fix [#44423](#): Handle index=None and index=0 distinctly
 - * 2c89050a24 Merge pull request [#44483](#) from terminalmage/issue44034
 - a9db8becea salt-call: account for instances where `__pillar__` is empty
 - * b5c2028680 Merge pull request [#44489](#) from whyte wolf/1956_log-granular-levels
 - 9cdeb4e903 update log-granular-levels to describe what they are filtering on
 - * ea07f9c54c Merge pull request [#44193](#) from twangboy/win_fix_reg
 - 44d6d9f46d Remove unused import (lint)
 - f7502436bd Fix various issues
 - 221e6e3b91 make salt.utils.to_unicode return none when passed none
 - ce41acc788 Fix many issues with reg.py
 - 4a19df1f7f Use six.text_type instead of str
 - 1b12acd303 Check type before casting
 - 03fa37b445 Cast vdata to it's proper type
 - * ed8da2450b Merge pull request [#43863](#) from nicholasmhughes/fix-atomicfile-permission-copy
 - ea852ec5d3 remove index use with stat module attributes
 - dbeeb0e917 fixes [#38452](#) atomicfile only copies mode and not user/group perms
- **PR #44788:** ([kris-anderson](#)) Example yaml of influxdb_user state @ 2017-12-04 14:28:45 UTC

- 4643a112e7 Merge pull request #44788 from kris-anderson/example-yaml-of-influxdb-user-state
- afd23d058c converted yaml example to use 2 spaces
- 29e410c1ea added a code-block example of how the yaml should be formatted
- **ISSUE #42713:** (boltronics) 2017.7.0 master upgrade breaks mine data on non-glob matching on minions (refs: #44735)
- **PR #44735:** (gracinet) Backported issue #42713 to 2017.7 @ 2017-12-04 01:43:23 UTC
 - 4ebac09f60 Merge pull request #44735 from gracinet/42713_backport_2017.7
 - 6806d83314 Merge branch '2017.7' into 42713_backport_2017.7
 - fb586c6dce Backported issue #42713 to 2017.7
- **PR #44766:** (twangboy) Fix *unit.utils.test_process* for Windows @ 2017-12-02 13:15:53 UTC
 - 06ce7b7328 Merge pull request #44766 from twangboy/win_fix_test_process
 - a5737e8fc3 Fix lint errors
 - be96de09cc Fix pickling error by decorating
- **ISSUE #44083:** (ari) *timezone.system* fails when */etc/localtime* is missing on FreeBSD (refs: #44605)
- **PR #44716:** (rallytime) Back-port #44605 to 2017.7 @ 2017-12-01 23:12:24 UTC
 - **PR #44605:** (campbellmc) Add handling for FreeBSD in *timezone.zone_compare* (refs: #44716)
 - f8b8a8966d Merge pull request #44716 from rallytime/bp-44605
 - 9d43221422 Correct indentation
 - d6e28ebed1 Add handling for FreeBSD in method *zone_compare* to avoid exception when */etc/localtime* file does is absent. This is valid configuration on FreeBSD and represents UTC.
- **ISSUE #41869:** (mirceaulinic) Thorium: unable to execute runners (refs: #44781)
- **PR #44781:** (mirceaulinic) Correct the thorium runner @ 2017-12-01 22:55:52 UTC
 - 8ed6287762 Merge pull request #44781 from cloudfare/thorium-fix-41869
 - 83c73a69cb Instance the Runner class instead of the RunnerClient as we're running on the Master
 - b72b7c5402 Correct the thorium runner
- **PR #44466:** (twangboy) Fix *unit.modules.test_disk* for Windows @ 2017-12-01 22:31:42 UTC
 - 52596be102 Merge pull request #44466 from twangboy/win_fix_test_disk
 - 5615862f23 Fix some lint
 - 627d5ab0c9 Mock *salt.utils.which*
 - e5a96fe00f Skip test_fstype on Windows
- **ISSUE #42763:** (xuhcc) *acme.cert* state falsely reports about renewed certificate (refs: #44667)
- **PR #44719:** (rallytime) Back-port #44667 to 2017.7 @ 2017-12-01 15:20:49 UTC
 - **PR #44667:** (oarmstrong) Fix *acme.cert* to run certbot non-interactively (refs: #44719)
 - b9ad4bba2d Merge pull request #44719 from rallytime/bp-44667
 - 3d85a260c4 Fix *acme.cert* to run certbot non-interactively
- **ISSUE #44744:** (brmzkw) *roster_defaults* breaks salt-ssh globbing (refs: #44747)
- **PR #44747:** (gtmanfred) use a copy so *roster_defaults* doesn't mangle @ 2017-12-01 15:13:48 UTC

- d23192c492 Merge pull request #44747 from gtmanfred/roster_defaults
- 911411ed8f add unit test
- eefcfc719c use a copy so roster_defaults doesn't mangle
- ISSUE #44694: (thuhak) state module at.absent does't work (refs: #44717)
- PR #44717: (garethgreenaway) [2017.7] Fixes to at module @ 2017-12-01 14:37:05 UTC
 - 20f20ad9e1 Merge pull request #44717 from garethgreenaway/44694_at_absent_failing_to_find_jobs
 - 1f2b3c5f46 Merge branch '2017.7' into 44694_at_absent_failing_to_find_jobs
 - 3bb385b44e removing debugging logging
 - 7f0ff5a8b0 When passing IDs on the command line convert them all the strings for later comparison.
 - 99e436add4 When looking for job ids to remove based on the tag_name the comparison was comparing an INT to a STR, so the correct job id was not being returned.
- ISSUE #44136: (dupsatou) KeyError: 'runas' after updating to latest salt in yum repo. (refs: #44695)
- PR #44695: (gtmanfred) pop None for runas and runas_password @ 2017-12-01 14:35:01 UTC
 - 6e61aa787f Merge pull request #44695 from gtmanfred/pop
 - 0efb90b6f7 Merge branch '2017.7' into pop
- PR #44725: (whytewolf) document note suggesting systemd-run --scope with cmd.run_bg @ 2017-11-30 19:18:06 UTC
 - 20391c54c0 Merge pull request #44725 from whyteolf/1919_cmd.run_no_daemons
 - 4b11f8d66d add quick documentation suggesting systemd-run --scope if using cmd.run_bg with systemd
- ISSUE #42300: (mirceaulinic) Grains state doesn't work (fine) with proxy minions (refs: #44760)
- ISSUE #42074: (mirceaulinic) How to configure static grains for proxy minions (refs: #44549)
- PR #44760: (mirceaulinic) Fix the grains.setvals execution function when working with proxy minions @ 2017-11-30 18:27:02 UTC
 - PR #44549: (mirceaulinic) Allow proxy minions to load static grains (refs: #44760)
 - 85451ae977 Merge pull request #44760 from cloudflare/px-grains-set-42300
 - 655139d01c Different path to the static grains file when running under a proxy minion
 - 3eec8dbc63 Dummy proxy: catch EOFError instead of IOError
- ISSUE #44583: (creideiki) Using splay in cron schedule throws exception "unsupported operand type(s) for +: 'NoneType' and 'int'" (refs: #44640)
- PR #44640: (vutny) Fix #44583: splay with cron-like scheduled jobs @ 2017-11-30 15:30:41 UTC
 - 06fb80b69c Merge pull request #44640 from vutny/fix-cron-schedule-splay
 - d1f247e49e Add basic unit tests for schedule util eval func
 - 6ff8e75ac6 Fix #44583: splay with cron-like scheduled jobs
- PR #44712: (Ch3LL) Add pillar ssh integration tests @ 2017-11-30 15:29:33 UTC
 - e5a1401b82 Merge pull request #44712 from Ch3LL/ssh_pillar_items
 - 97ec0e6ea0 Merge branch '2017.7' into ssh_pillar_items
 - c7f5af1274 Add pillar ssh integration tests

- **PR #44763:** ([mirceaulinic](#)) Just a small improvement to the Thorium documentation @ 2017-11-30 14:38:03 UTC
 - 2e1c946990 Merge pull request #44763 from cloudflare/thorium-doc
 - f8d69dd0ba Add thorium_roots configuration example
 - 4610fb4e62 thorium_roots not thorium_roots_dir
- **PR #44531:** ([mirceaulinic](#)) Add deprecation notes for the NAPALM native templates @ 2017-11-30 14:18:56 UTC
 - 8ba2df1ea0 Merge pull request #44531 from cloudflare/deprecate-napalm-tpl
 - b462776d8b Add deprecation notes for the NAPALM native templates
- **PR #44737:** ([twangboy](#)) Skip `unit.transport.test_ipc` for Windows @ 2017-11-29 19:18:21 UTC
 - 7bde48282e Merge pull request #44737 from twangboy/win_skip_test_ipc
 - 4e0359b603 Skip IPC transport tests in Windows, not supported
- **PR #44629:** ([Ch3LL](#)) Add masterless state.highstate integration test @ 2017-11-29 19:05:23 UTC
 - c5206113ce Merge pull request #44629 from Ch3LL/high_masterless
 - 9b7421b261 Change check to the state id
 - 9cc853e3d5 Add masterless state.highstate integration test
- **PR #44613:** ([Ch3LL](#)) Add pillar.items test for masterless @ 2017-11-29 14:43:11 UTC
 - 2dc3e5c42a Merge pull request #44613 from Ch3LL/pillar_masterless
 - 2c2e1e2332 Merge branch '2017.7' into pillar_masterless
 - 69134e83ca Change order of local kwarg in run_call method
 - b3b5ecc6ff Add pillar.items test for masterless
- **PR #44659:** ([Ch3LL](#)) Add state.sls_id to ssh wrapper and tests @ 2017-11-29 14:41:47 UTC
 - cc05481026 Merge pull request #44659 from Ch3LL/ssh_sls_id
 - 04b5a3dd4e Add state.sls_id to ssh wrapper and tests
- **PR #44698:** ([Ch3LL](#)) Add salt-ssh mine.get integration test @ 2017-11-28 22:15:29 UTC
 - 642eed11e1 Merge pull request #44698 from Ch3LL/mine_ssh
 - f6a72acfe3 Merge branch '2017.7' into mine_ssh
 - 9e67babf85 Add teardown to remove ssh dir
 - f90b4f7653 Add salt-ssh mine.get integration test
- **PR #44697:** ([Ch3LL](#)) Sort the show_top results for test_state_show_top test @ 2017-11-28 20:35:41 UTC
 - 5d82df5667 Merge pull request #44697 from Ch3LL/show_top_test
 - 974db59dc1 convert the assert to a union set instead
 - add43c4cfe Sort the show_top results for test_state_show_top test
- **PR #44608:** ([Ch3LL](#)) Add jinja to ssh sls test file @ 2017-11-27 22:00:28 UTC
 - f2f6817e86 Merge pull request #44608 from Ch3LL/ssh_jinja
 - df669b551d Merge branch '2017.7' into ssh_jinja
 - ca97517795 Add jinja to ssh sls test file
- **ISSUE #33957:** ([ghost](#)) grains.setval doesn't setval if set in /etc/salt/minion (refs: #44663)

- **PR #44663:** ([whytewolf](#)) Update notes around grains topic, and salt.modules.grains and salt.state.grains @ 2017-11-27 21:33:38 UTC
 - 04b97bcfad Merge pull request #44663 from whytewolf/ZD1777_ensure_understanding_of_minion_config_over_grains_fil
 - c9122e4b85 fixed pylint error, and updated description on at the top the the module and state.
 - 7fb208b5ad Update note in topics/grains to reflect that not all grains are ignored. only those set in the minion config
- **PR #44332:** ([mirceaulinic](#)) Improve the net.load_config execution function @ 2017-11-27 21:22:18 UTC
 - 364deee6ac Merge pull request #44332 from cloudflare/improve-net-load
 - cd0bac87e6 Merge branch '2017.7' into improve-net-load
 - 6d861f9a74 Disable pylint warning
 - 3a0945ce3d Merge pull request #11 from tonybaloney/gh_44332_clone
 - * 88ef9f18fc ignore lint error on import
 - * 25427d845e convert key iterator to list as python 3 wont index an iterator
 - bce50154e5 Merge branch '2017.7' into improve-net-load
 - ba4a62769c Fix trailing spaces
 - 0a47a7acbf Merge pull request #10 from tonybaloney/gh_44332_clone
 - * ba0280e727 linting updates
 - * 78b90f3d0c add remaining tests
 - * 386c4e5791 add tests for all the getters
 - f3d2d1aaaa Merge pull request #9 from tonybaloney/gh_44332_clone
 - * c63222358b update tests with correct assertions and mock methods on device instance
 - * b69c559c52 fix kwargs typo
 - edea76d3f3 Improve the net.load_config function
- **PR #44664:** ([mvivaldi](#)) Patch 1 @ 2017-11-27 21:17:20 UTC
 - b6a1ed06b8 Merge pull request #44664 from mvivaldi/patch-1
 - 4551999ec7 Update jinja.py
 - ae13d57307 Update file.py
- **ISSUE #42074:** ([mirceaulinic](#)) How to configure static grains for proxy minions (refs: #44549)
- **PR #44549:** ([mirceaulinic](#)) Allow proxy minions to load static grains (refs: #44760) @ 2017-11-27 20:57:09 UTC
 - 9ea4ee1479 Merge pull request #44549 from cloudflare/fix-proxy-grains
 - 7b03574ab6 Merge branch '2017.7' into fix-proxy-grains
 - 0320174ea4 Add doc note regarding static grains on proxy minions
 - 509d1af832 Allow proxy minions to load static grains
- **PR #44572:** ([Ch3LL](#)) Add watch_in integration test @ 2017-11-27 20:52:31 UTC
 - 5ec7ea0bb5 Merge pull request #44572 from Ch3LL/watchin_test
 - 0a54584ddb Merge branch '2017.7' into watchin_test
 - 898c28e6d9 Merge branch '2017.7' into watchin_test

- 3df70f3fed remove iter for watch_in failure test
- ac437ddf90 add order check and remove iter
- 5f2b4f434e Add watch_in integration test
 - * c6733ac1ee pop None
- **PR #44616:** (Ch3LL) Add Non Base Environement salt:// source integration test @ 2017-11-22 16:13:54 UTC
 - d6ccf4bb30 Merge pull request #44616 from Ch3LL/nonbase_test
 - 80b71652e3 Merge branch '2017.7' into nonbase_test
 - c9ba33432e Add Non Base Environement salt:// source integration test
- **PR #44617:** (Ch3LL) Add ssh thin_dir integration test @ 2017-11-22 16:12:51 UTC
 - 3ace504c8c Merge pull request #44617 from Ch3LL/thindir_ssh
 - 071a1bd65b Merge branch '2017.7' into thindir_ssh
- **PR #44625:** (Ch3LL) Add salt-key -d integration test @ 2017-11-22 03:15:23 UTC
 - 2cd618f99b Merge pull request #44625 from Ch3LL/delete_key_test
 - 443dc1e16b Merge branch '2017.7' into delete_key_test
- **ISSUE #44601:** (rallytime) CherryPy 12.0 removed support for "engine.timeout_monitor.on" config option (refs: #44602)
- **PR #44614:** (rallytime) [2017.7] Move PR #44602 forward to 2017.7 @ 2017-11-21 21:21:06 UTC
 - **PR #44602:** (rallytime) Handle timeout_monitor attribute error for new versions of CherryPy (refs: #44614)
 - 4f30e845ee Merge pull request #44614 from rallytime/44602-2017.7
 - 628f015c1b Move TimeoutError check lower down in exception list
 - d26d9ff5e4 Handle timeout_monitor/TimeoutError issues for new versions of CherryPy
 - 359a59dd64 Add salt-key -d integration test
 - 74ededafa7 Add ssh thin_dir integration test
 - * 4d0806e28c Merge branch '2017.7' into develop2
 - * 4d0d023115 Fix broken *beacons_before_connect* feature
 - 98536110d9 Merge branch '2017.7' into 2017.7
- **PR #44571:** (rallytime) Back-port #43822 to 2017.7 @ 2017-11-20 19:01:26 UTC
 - **PR #43822:** (chnrxn) check_result: Correctly check the __extend__ state. (refs: #44571)
 - 136b9e3bc4 Merge pull request #44571 from rallytime/bp-43822
 - f81bb61f2d check_result: Correctly check the __extend__ state.
- **PR #44588:** (rallytime) Add documentation about logging before modules are loaded @ 2017-11-20 18:43:18 UTC
 - **PR #44576:** (rallytime) Remove logging from top of napalm util file (refs: #44588)
 - **PR #44439:** (mirceaulinic) Adapt napalm modules to the new library structure (refs: #44576)
 - bea7f65291 Merge pull request #44588 from rallytime/logging-in-virtual-funcs
 - 90d1cb221d Add documentation about logging before modules are loaded

- **PR #44513:** (rallytime) Back-port #44472 to 2017.7 @ 2017-11-20 16:09:02 UTC
 - **PR #44472:** (mephi42) nova: fix endpoint URL determination in `_v3_setup()` (refs: #44513)
 - a8044b73c3 Merge pull request #44513 from rallytime/bp-44472
 - 6e00e415d3 nova: fix endpoint URL determination in `_v3_setup()`
- **PR #44596:** (roaldnefs) Fixed Mattermost module documentation @ 2017-11-19 23:30:53 UTC
 - f55b9daa63 Merge pull request #44596 from roaldnefs/fix-mattermost-doc
 - 549f4806ce Fixed documentation in Mattermost module
- **PR #44528:** (tkwilliams) INFRA-5978 - fix for <https://github.com/saltstack/salt/issues/44290> @ 2017-11-17 17:35:44 UTC
 - f84a2b5ab1 Merge pull request #44528 from bodhi-space/infra5978
 - ba1d57f5eb Merge branch '2017.7' into infra5978
 - 021692b6c9 INFRA-5978 - pylint / whitespace fix
 - c2210aaf7c INFRA-5978 - fix for <https://github.com/saltstack/salt/issues/44290>
- **PR #44537:** (Ch3LL) Add multiple salt-ssh state integration tests @ 2017-11-17 17:17:48 UTC
 - 7f2dd0382c Merge pull request #44537 from Ch3LL/ssh_highlow
 - b98df6de24 Add known_hosts_file to salt-ssh opts_pkg in wfuncs
 - 913eedc699 Add multiple salt-ssh state integration tests
- **PR #44576:** (rallytime) Remove logging from top of napalm util file (refs: #44588) @ 2017-11-17 14:55:13 UTC
 - **PR #44439:** (mirceaulinic) Adapt napalm modules to the new library structure (refs: #44576)
 - 1975fb41bc Merge pull request #44576 from rallytime/remove-napalm-logging
 - eb91af999e Remove logging from top of napalm util file
- **PR #44575:** (Ch3LL) Add service.running integration state test @ 2017-11-16 22:27:57 UTC
 - c2c3048f46 Merge pull request #44575 from Ch3LL/ser_run_test
 - 7536150567 Add service.running integration state test
- **PR #44518:** (twangboy) Pass root_dir to the win_verify_env function @ 2017-11-16 20:57:49 UTC
 - 24b1d7af31 Merge pull request #44518 from twangboy/win_fix_verify_env
 - 47114fdb30 Pass root_dirs to the win_verify_env function
 - * 3385f7faf3 fix pylint
 - * a2af3cb857 Include client mixin globals in scheduler for runner modules
- **PR #44551:** (mirceaulinic) Removes proxy minions false alarms and security risks @ 2017-11-16 15:09:14 UTC
 - 1643bb7fd4 Merge pull request #44551 from cloudflare/annoying-tmpnam
 - ce1882943d Use salt.utils.files.mkstemp() instead
 - 6689bd3b2d Dont use dangerous os.tmpnam
 - 2d6176b0bc Fx2 proxy minion: clean return, like all the other modules
- **ISSUE #30454:** (favoretti) Using yaml serializer inside jinja template results in unicode being prepended by '!!python/unicode' (refs: #30481, #42064, #38554)
- **PR #44541:** (terminalmage) Fix test to reflect changes in YAML dumper @ 2017-11-15 13:23:58 UTC

- PR #42064: (The-Loeki) utils.jinja: use utils.yamldumper for safe yaml dumping (refs: #44541)
- PR #38554: (multani) Fix YAML deserialization of unicode (refs: #42064)
- PR #30481: (basepi) Add yaml_safe jinja filter (refs: #38554)
- 60083ac27b Merge pull request #44541 from terminalmage/fix-yaml-test
- 5b8f54084b Merge branch '2017.7' into fix-yaml-test
- PR #44538: (gtmanfred) Fix up some test kitchen stuff @ 2017-11-14 20:36:56 UTC
 - 5c123eb551 Merge pull request #44538 from gtmanfred/kitchen
 - 3e04d2d44c use kitchen-sync for copying files
 - 9bc70fd31b back up to 2017.7.1 for kitchen tests
 - 3b93ea058b ubuntu 14 and centos 6 should not have py3 tests
 - 958e1aeb8d Fix test to reflect changes in YAML dumper
- ISSUE #30454: (favoretti) Using yaml serializer inside jinja template results in unicode being prepended by '!!python/unicode' (refs: #30481, #42064, #38554)
- PR #42064: (The-Loeki) utils.jinja: use utils.yamldumper for safe yaml dumping (refs: #44541) @ 2017-11-13 19:45:14 UTC
 - PR #38554: (multani) Fix YAML deserialization of unicode (refs: #42064)
 - PR #30481: (basepi) Add yaml_safe jinja filter (refs: #38554)
 - 27a7b607b1 Merge pull request #42064 from The-Loeki/jinja_unicode
 - b1cf43c02d Merge branch '2017.7' into jinja_unicode
 - 8c2ac58523 Merge branch '2017.7' into jinja_unicode

 - 0a8346b585 Merge branch '2017.7' into jinja_unicode
 - 393fe061b2 jinja utils: yaml import still necessary
 - 3c9130f9f0 utils.jinja: use utils.yamldumper for safe yaml dumping
- PR #43692: (mirceaulinic) Addressing a bug in the network find runner @ 2017-11-13 19:42:24 UTC
 - b1f14c7518 Merge pull request #43692 from cloudflare/fix-net-runner
 - 02ffb4f38e Merge branch '2017.7' into fix-net-runner
 - 4b2f791bd2 Check if addr is short IPv6
 - 765504c137 Add all the possible keys to the result
- ISSUE #42393: (The-Loeki) pillarenv ignored with Salt Master pillar_cache: True (refs: #43689)
- ISSUE #36153: (krcroft) Pillarenv doesn't allow using separate pillar environments (refs: #43689)
- PR #43689: (The-Loeki) make cached pillars use pillarenv rather than saltenv @ 2017-11-13 19:30:00 UTC
 - 1e94a5bd5f Merge pull request #43689 from The-Loeki/cached_pillarenv
 - 395c0c424d Merge branch '2017.7' into cached_pillarenv
 - 60e001733b make cached pillars use pillarenv rather than saltenv
- PR #43837: (twangboy) Fix unit.states.test_archive for Windows @ 2017-11-13 19:12:19 UTC
 - f9b273a894 Merge pull request #43837 from twangboy/win_unit_test_archive

- 5505a8819a Merge branch '2017.7' into win_unit_test_archive
- b1dfe9c3c8 Format patching with statements for easier reading
- ba2f2eb788 Add Erik's changes
- 4ef1e3eb97 Fix *unit.states.test_archive* for Windows
- PR #44507: (Ch3LL) Increase sleep timeout for pillar refresh test @ 2017-11-13 18:29:06 UTC
 - caa81728a0 Merge pull request #44507 from Ch3LL/pillar_time
 - ffa4bddcad Increase sleep timeout for pillar refresh test
- PR #44302: (morganwillcock) Fix traceback and incorrect message when resolving an unresolvable SID @ 2017-11-13 18:19:01 UTC
 - cffea5ac71 Merge pull request #44302 from morganwillcock/badsid
 - f3af106e33 Merge branch 'badsid' of <https://github.com/morganwillcock/salt> into badsid
 - * 95733fbb3b Merge branch '2017.7' into badsid
 - * facc2cd16e Merge branch '2017.7' into badsid
 - c7cf5f6f70 Format pywintypes.error
 - 9572aabb67 Fix traceback and incorrect message when resolving an unresolvable SID
- PR #44439: (mirceaulinic) Adapt napalm modules to the new library structure (refs: #44576) @ 2017-11-13 17:43:24 UTC
 - 32fc952000 Merge pull request #44439 from cloudflare/fix-napalm
 - f45378af04 Lint: remove extra spaces
 - c6a38258a3 Add napalm>2.0.0 note and update URLs
 - 52f73835b8 Adapt napalm modules to the new library structure
- PR #44457: (twangboy) Remove wmi monkeypatching @ 2017-11-13 17:38:52 UTC
 - ebb5949ea Merge pull request #44457 from twangboy/win_remove_wmi_monkeypatching
 - 6c872e95e6 Add back the setup_loader_modules function
 - 20273e3697 No need for setup_loader_modules since we're actually importing wmi
 - 8c107873cd Remove wmi monkeypatching
- PR #44490: (Ch3LL) Enable test_deploy ssh test @ 2017-11-13 17:12:48 UTC
 - 1da1a97d7d Merge pull request #44490 from Ch3LL/ssh_ping
 - e952cd6712 Enable test_deploy ssh test
- PR #44491: (Ch3LL) Add salt-ssh raw integration tests @ 2017-11-13 15:47:12 UTC
 - 18624d6798 Merge pull request #44491 from Ch3LL/ssh_raw
 - 3dc8673417 change class name to raw
 - 308596ac8d Add salt-ssh raw integration tests
- PR #44492: (twangboy) Fix *unit.utils.test_cloud* for Windows @ 2017-11-13 15:44:31 UTC
 - aa17bfa8e7 Merge pull request #44492 from twangboy/win_skip_mode_check
 - 2f30ad93b1 Skips mode check in Windows
- PR #44484: (Ch3LL) Add orchestration tests when target exists or not @ 2017-11-10 19:24:22 UTC

- 5b95495e75 Merge pull request #44484 from Ch3LL/orch_test
- f3ec6df76e Add orchestration tests when target exists or not
- PR #44480: (Ch3LL) Add integration pillar command line test @ 2017-11-10 19:14:31 UTC
 - 62c42ca6fb Merge pull request #44480 from Ch3LL/override_pillar
 - 12fed1b4d8 Add integration pillar command line test
- PR #44317: (Ch3LL) Add state tests and state request system to salt-ssh @ 2017-11-10 18:28:43 UTC
 - cc08ad2edc Merge pull request #44317 from Ch3LL/ssh_test
 - 46bce3bd5e add additional parser argument for ssh integration tests
 - e9231430b5 remove logic similar to cloud/proxy tests
 - c731eb8ea6 add ssh dir to test runner when -ssh-tests set
 - 8089a885c2 add wipe function to other run_ssh method
 - 200b12ae6a change versionadded salt version
 - e3ebb5e9b3 fix comment and variables
 - faef0886a7 Add state tests and state request system to salt-ssh
- PR #44478: (rallytime) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2017-11-10 18:00:56 UTC
 - 6669035a30 Merge pull request #44478 from rallytime/merge-2017.7
 - 9fcc2a70b5 Merge branch '2016.11' into '2017.7'
 - * a66cd67d15 Merge pull request #44260 from seanjnkns/issue-39901
 - ed8cccf457 #39901: Fix pylint
 - 43c81dfdee #39901: Add unit tests
 - 613d500876 Merge branch '2016.11' into issue-39901
 - b97e8046ca Utilize salt.utils.validate.net.* and _raise_error_iface
 - 6818f3631d Fixes #39901 for RH/CentOS 7
- PR #44444: (twangboy) LGPO: Issue with Maximum Password Age @ 2017-11-10 17:26:53 UTC
 - 60719d0683 Merge pull request #44444 from twangboy/win_lgpo_non_zero
 - de6b394445 Remove unneeded functions
 - ee0914f7e9 Fix some lint, remove unnecessary function
 - d52a7c12db Fix typo in PasswordComplexity policy
 - 44f8f43812 Fix problem where 0 isn't 0
- PR #44467: (twangboy) Fix *unit.test_doc* for Windows @ 2017-11-10 15:21:58 UTC
 - 4f3a79df07 Merge pull request #44467 from twangboy/win_fix_test_doc
 - 0a9e862bf4 Use regex to split
- PR #44443: (Ch3LL) Add salt-ssh grains.items test @ 2017-11-09 00:42:11 UTC
 - ff4f13877f Merge pull request #44443 from Ch3LL/ssh_grains
 - 5d1a9af4b5 Add salt-ssh grains.items test
- PR #44429: (Ch3LL) Fix orch doc from pillat.get to pillar.get @ 2017-11-07 23:06:38 UTC

- dcd2d4c90 Merge pull request #44429 from Ch3LL/orch_doc
- 38ca5520f0 Fix orch doc from pillat.get to pillar.get
- ISSUE #42568: (clallen) Orchestration runner doesn't populate __pillar__ based on pillarenv (refs: #43817)
- PR #43817: (The-Loeki) Orchestrate runner forces pillarenv and saltenv to None @ 2017-11-07 06:00:16 UTC
 - 62c4addef8 Merge pull request #43817 from The-Loeki/orch-pillarenv
 - 3fd652623c orchestrate runner: retain default envs
- PR #44408: (rallytime) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2017-11-06 15:53:00 UTC
 - 9e4708b7b9 Merge pull request #44408 from rallytime/merge-2017.7
 - edbbd5fc2b Merge branch '2016.11' into '2017.7'
 - 5e289f42ba Merge pull request #44383 from gtmanfred/2016kitchen
 - * b65f4ea4ea switch salt-jenkins over to saltstack
 - cab54e34b5 Merge pull request #44173 from twangboy/win_system_docs
 - * 8e111b413d Fix some of the wording and grammer errors
 - * a12bc5ae41 Use google style docstrings
 - 7aaea1d179 Merge pull request #44304 from jfindlay/cron_id
 - * cc038c5bec states.cron identifier defaults to name
 - e4dbbde734 Merge pull request #44322 from rossengeorgiev/saltssh-docs-update
 - * b18f2e5a6d fix program name and description for -static
 - * 5b10918f02 updated CLI docs for salt-ssh
- PR #44358: (The-Loeki) Kubernetes client certificate file usage fix @ 2017-11-03 21:51:27 UTC
 - b11da0d2da Merge pull request #44358 from The-Loeki/kube-client-cert-file
 - 35a8b0bb38 Kubernetes client certificate file usage fix
- PR #44347: (rallytime) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2017-11-03 21:48:21 UTC
 - 1974e52c06 Merge pull request #44347 from rallytime/merge-2017.7

 - * bebc33daf5 Merge pull request #44295 from HeinleinSupport/issue44272
 - f972715a45 fixes issue #44272
 - * e7ca9f8407 Merge pull request #44286 from gtmanfred/2016.11
 - 193e715e37 use our git repo for kitchen-salt
- PR #44364: (Ch3LL) Include disk size check for test_spm_build_big_file test @ 2017-11-01 13:57:24 UTC

- aea9f4a115 Merge pull request #44364 from Ch3LL/fix_size_test
- 952c6bfea4 Include file size check for test_spm_build_big_file test
- ISSUE #44239: (boltronics) –progress fails when hosts routed via syndic (refs: #44273)
- PR #44273: (DmitryKuzmenko) Workaround progressbar failure if minion is behind syndic. @ 2017-10-31 17:07:17 UTC
 - 609de9367a Merge pull request #44273 from DSRCorporation/bugs/44239_syndic_progress
 - e1a7605623 Workaround progressbar failure if minion is behind syndic.
- PR #44350: (gtmanfred) update salt-jenkins repo to 2017.7 @ 2017-10-30 21:31:30 UTC
 - eef6dbfa58 Merge pull request #44350 from gtmanfred/2017.7
 - cf71e3d9f2 update salt-jenkins repo to 2017.7
- PR #44346: (gtmanfred) remove binding from erb template rendering (2017.7) @ 2017-10-30 20:57:19 UTC
 - d586b3bf97 Merge pull request #44346 from gtmanfred/2017.7
 - bf577c3d8b remove binding
- PR #44343: (gtmanfred) render template files platforms.yml and driver.yml (2017.7) @ 2017-10-30 20:04:22 UTC
 - 547aac6658 Merge pull request #44343 from gtmanfred/2017.7
 - ec24fbc0c2 render template files platforms.yml and driver.yml
- ISSUE #44336: (corywright) Docs for archive.tar should not use leading dash for tar options (refs: #44339, #44338)
- PR #44338: (corywright) Remove leading dash from options in archive.tar docs (2017.7 and develop) @ 2017-10-30 18:59:33 UTC
 - 6e2a74c18b Merge pull request #44338 from corywright/issue-44336-fix-archive-tar-docs-2017-7-and-newer
 - 49b0abc284 Remove leading dash (-) from options in archive.tar documentation
- PR #44265: (Ch3LL) Add service.status integration test @ 2017-10-30 15:00:12 UTC
 - 71923bed97 Merge pull request #44265 from Ch3LL/service_test
 - 716aabc0bf Merge branch '2017.7' into service_test
 - dd5c823210 remove skipIf import
 - ff92f31cbe remove skipif for docker
 - c13f37eee4 change service name depending on os
 - 980c43ebc9 change skip message check to docker
 - 3955537609 change skip if check to docker
 - aa8875a0e2 change service name to docker
 - 654071028b change service to crond
 - 7911b4b3eb Add service.status integration test
- PR #44294: (nasenbaer13) Boto asg fixes, Backport of #43858 @ 2017-10-30 14:48:52 UTC
 - PR #43858: (nasenbaer13) Boto_ASG fixes for scaling policy rate limiting and tag conversion (refs: #44294)
 - 8ae9769bfb Merge pull request #44294 from eyj/boto_asg

- f5ad6aeb70 Debug log added when throttled by API
- c05d9aeced Encode tags as utf-8, retry policy readout
- **PR #44312:** (rallytime) Back-port #44287 to 2017.7 @ 2017-10-30 14:25:56 UTC
 - **PR #44287:** (jf) Fix utils.files.guess_archive_type to recognize the "tbz" extension as well (refs: #44312)
 - 68a9bebf90 Merge pull request #44312 from rallytime/bp-44287
 - 4d02e61f97 Merge branch '2017.7' into bp-44287
 - ba0eaae95e Fix utils.files.guess_archive_type to recognize the "tbz" extension as well (also tidy up list of extensions)
- **ISSUE #44258:** (oarmstrong) docker_container.running recreates containers with multiple links (refs: #44262)
- **PR #44311:** (rallytime) Back-port #44262 to 2017.7 @ 2017-10-30 14:25:35 UTC
 - **PR #44262:** (oarmstrong) docker_container.running sort list of links (refs: #44311)
 - b8854e27c0 Merge pull request #44311 from rallytime/bp-44262
 - 72d617cfbe Merge branch '2017.7' into bp-44262
 - ae34a15503 docker_container.running sort list of links
- **PR #44314:** (gtmanfred) update .kitchen.yml to run py3 tests too @ 2017-10-30 14:23:15 UTC
 - 48df79ef77 Merge pull request #44314 from gtmanfred/2017.7
 - 54265769c4 Merge branch '2017.7' into 2017.7
- **PR #44316:** (rallytime) Fix lint failure on 2017.7 branch @ 2017-10-27 18:36:08 UTC
 - dbc5e224e9 Merge pull request #44316 from rallytime/fix-lint
 - 6d2490f6a0 Fix lint failure on 2017.7 branch
 - 39262b625e update .kitchen.yml to run py3 tests too
- **PR #44279:** (rallytime) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2017-10-27 16:17:19 UTC
 - b2b0c770a4 Merge pull request #44279 from rallytime/merge-2017.7
 - 8237f45a46 Add print_function to __future__ import list
 - 055b0701de Lint fix from sloppy merge conflict resolution
 - 1c3cb5c6a4 Merge branch '2016.11' into '2017.7'
 - * 8a1ea165af Merge pull request #44259 from gtmanfred/2016.11
 - 56a3ad8f68 fix pylint comments
 - 4add666db1 add comment to Gemfile and move copyartifacts
 - b4c8f7eb57 fix pylint
 - 392fd4f837 try newest salttesting
 - 79251287d0 add logging
 - 38963d5a82 use transport if not set in state_file
 - 10e309a64f which vagrant should go to stderr
 - 9307564de0 fix output columns
 - 2da22f87e1 test opennebula

- 9f38f16905 add opennebula to Gemfile
- 7465f9b27a add script for copying back artifacts
- 255118cfd7 run tests with kitchen
- * 9d6bc8509b Merge pull request #44268 from twangboy/win_fix_lgpo_typo
 - a6a4c10a77 Fix typo
- * 0beb65a283 Merge pull request #44269 from terminalmage/fix-log-message
 - bc9cd65496 Fix log message in salt.utils.gitfs
- * 304dd2529d Merge pull request #44160 from gtmanfred/directory
 - a7d3d668f4 missed removing changes in the next test
 - ac0b5ec440 fix test
 - d3d00c3e62 add changes to test return
- * e10395483d Merge pull request #44205 from rallytime/bp-44177
 - b9940f8521 Fixing default redis.host in documentation
- **PR #44291:** (Ch3LL) add saltutil.refresh_pillar test @ 2017-10-27 15:19:43 UTC
 - bd5b9dd0aa Merge pull request #44291 from Ch3LL/pillar_test
 - 34e2955445 add saltutil.refresh_pillar test
- **PR #44267:** (twangboy) Fix type and Py3 issues in LGPO module @ 2017-10-27 14:27:50 UTC
 - ba17a1c4d0 Merge pull request #44267 from twangboy/win_fix_lgpo
 - 5d22d34cac Use unicode_literals
 - 40636397d8 Fix set for Py3
 - 8f8c706426 Fix typo
- **PR #44285:** (Ch3LL) add spm integration tests for remove and build @ 2017-10-26 21:20:10 UTC
 - e16707c403 Merge pull request #44285 from Ch3LL/all_spm
 - 1f77f3e6a3 add skipif logic for fallocate cmd
 - 03b5c4bc6d add spm integration tests for remove and build
- **PR #44301:** (twangboy) Fix test_pydsl on Windows @ 2017-10-26 21:14:21 UTC
 - 6392896a22 Merge pull request #44301 from twangboy/win_fix_test_pydsl
 - 6db23757bc Fix test_pydsl on Windows
- **PR #44293:** (UtahDave) Fix documentation grammar and spelling errors @ 2017-10-26 13:05:31 UTC
 - 8787d02688 Merge pull request #44293 from UtahDave/fix_unittest_docs
 - c919648ab4 Fix documentation grammar and spelling errors
- **PR #44248:** (Ch3LL) SPM tests: use _spm_build_files method during test_build setup @ 2017-10-25 19:45:03 UTC
 - 6e33743c1a Merge pull request #44248 from Ch3LL/spm_create_repo
 - 0a387c2ecd fix pylint
 - f383f05a93 Add SPM create_repo integration test

- **PR #44253:** (Ch3LL) Add multiple spm integration tests @ 2017-10-25 13:36:03 UTC
 - bd75be24ca Merge pull request #44253 from Ch3LL/spm_install
 - 9e2e785034 add spm tests to test runner
 - 4729ccd32b Add multiple spm integration tests
- **PR #44254:** (twangboy) Fix `unit.modules.test_win_groupadd` for Windows @ 2017-10-25 13:33:40 UTC
 - 75ee1ebc50 Merge pull request #44254 from twangboy/win_fix_test_win_groupadd
 - 609361bf48 Fix some lint errors
 - 1f44d8d5e6 Document helper functions
 - b0caec320e Move `_get_all_groups` up to the top
 - 7a3ff9387d Mock the rest of the tests
 - 5ce14df82c Change how members are retrieved in `win_groupadd`
 - 6ab82394be Set up mocking
- **PR #44266:** (Ch3LL) Add state, grains and service proxy tests @ 2017-10-25 13:08:50 UTC
 - 4c23fa63bb Merge pull request #44266 from Ch3LL/proxy_tests
 - e5701b472d Add state, grains and service proxy tests
- **ISSUE #43187:** (mirceaulinic) How to point from an execution module that a certain function failed (refs: #44244)
- **PR #44244:** (mirceaulinic) Add explicit non-zero retcode to napalm config functions @ 2017-10-24 09:23:40 UTC
 - c849f350ba Merge pull request #44244 from cloudflare/add-retcode
 - a1f27c9f00 Add explicit non-zero retcode to napalm config functions
- **ISSUE #44227:** (rklaren) salt-cloud leaves a broken vm around when the salt bootstrap fails (refs: #44228)
- **PR #44228:** (rklaren) Fixes #44227, make salt-cloud/libvirt cleanup after errors more robust @ 2017-10-23 17:09:35 UTC
 - 195b225540 Merge pull request #44228 from rklaren/fix-salt-cloud-libvirt-cleanup-after-errors
 - 7917d1e61e Incorporate review comments.
 - 3a10b6aef1 Fixes #44227, make salt-cloud/libvirt cleanup after errors more robust
- **ISSUE #19532:** (stolendog) salt-ssh running git clone with not root user (refs: #43769)
- **ISSUE #10582:** (mtorromeo) Git ssh helper may be unable run (refs: #43769)
- **PR #44008:** (mtorromeo) Backport #43769 to 2017.7 @ 2017-10-23 14:19:57 UTC
 - **PR #43769:** (mtorromeo) Copy git ssh-id-wrapper to /tmp only if necessary (Fixes #10582, #19532) (refs: #44008)
 - 01e7bab990 Merge pull request #44008 from mtorromeo/git-noexec-fix
 - a7a841d9d2 Merge branch '2017.7' into git-noexec-fix
 - d177240cfc Merge branch '2017.7' into git-noexec-fix
 - a63e6ca963 Copy git ssh-id-wrapper to /tmp only if necessary (Fixes #10582, Fixes #19532)
- **PR #44202:** (rallytime) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2017-10-23 14:18:30 UTC
 - 85c0ef493f Merge pull request #44202 from rallytime/merge-2017.7

- 99ff7a5c12 Merge branch '2016.11' into '2017.7'
 - * 09ddfd0c08 Merge pull request #44167 from garethgreenaway/44140_debian_ip_fixes
 - 5f7555846f When looping through the various pre, post, up and down commands put them into the interface dict using the right internet family variable.
 - * 9f9e936b52 Merge pull request #43830 from rallytime/bp-43644
 - 12845ae802 Several fixes for RDS DB parameter group management
 - * 07db6a3d8b Merge pull request #43994 from oeuftete/fix-manage-runner-presence
 - f3980d7d83 Fix manage.present to show lost minions
 - * a07537e258 Merge pull request #44188 from terminalmage/issue44150
 - 0692f442db yumpkg: Check pkgname instead of name to see if it is a kernel pkg
 - * 715edc0cea Merge pull request #44158 from rallytime/bp-44089
 - 534faf0b7a Catch on empty Virtualbox network addr #43427
- PR #44208: (twangboy) Fix some lint in PR: 44080 @ 2017-10-20 16:42:02 UTC
 - d7dc2bd0e8 Merge pull request #44208 from twangboy/win_fix_group.present
 - 61e2e9ccda Fix some lint
- PR #43843: (twangboy) Fix `unit.states.test_mount` for Windows @ 2017-10-20 14:27:25 UTC
 - c6d27ada51 Merge pull request #43843 from twangboy/win_unit_test_mount
 - a862e0bf2d Remove unneeded import
 - d78f27466d Fix `unit.states.test_mount` for Windows
- PR #44111: (anlutro) Try to correctly parse debian codename from `/etc/os-release` @ 2017-10-19 22:23:26 UTC
 - 372820ea38 Merge pull request #44111 from alprs/fix-deb8-py3-oscodename
 - 1e1e5a3ff6 try to correctly parse debian codename from `/etc/os-release`
- PR #44187: (twangboy) Fix pickling errors on Windows @ 2017-10-19 20:36:51 UTC
 - 75136152c1 Merge pull request #44187 from twangboy/win_fix_unit_test_daemons.py
 - 64d2e4f732 Fix pickling errors on Windows
- ISSUE #44181: (jonans) Scheduler with multiple when values doesn't run (refs: #44186)
- PR #44186: (garethgreenaway) [2017.7] scheduler fixes @ 2017-10-19 20:36:04 UTC
 - 7a89cd8697 Merge pull request #44186 from garethgreenaway/44181_scheduler_multiple_whens
 - 7eef3b3571 Adding a `copy.deepcopy` to the for loop that looks for old jobs to avoid stale jobs ending up in the list.
- PR #43896: (twangboy) Fix `win_lgpo` execution module @ 2017-10-19 20:13:18 UTC
 - 1d16ae8ba7 Merge pull request #43896 from twangboy/win_fix_lgpo_scom
 - 648d1b8d99 Catch `CommandExecutionError`
 - 0040082d0a Fix pylint error
 - 91258cd6a8 Fix typo
 - 261dba347d Put the `file.remove` in a `try/except/else` block
 - 020c2a2b85 Fix syntax error

- d5bec99126 Fix some lint
- b96186d60d Fix INSTALL_LANGUAGE
- 5471bd521f Fix problem with file handle
- 5ec58c6200 Use System Install Language as default fallback
- f9ad446019 Fix win_lgpo execution module
- **PR #44080:** (twangboy) Fix a regression in `group.present` in Windows @ 2017-10-19 20:10:44 UTC
 - 98356b86af Merge pull request #44080 from twangboy/win_fix_group.present
 - 29bc80ff87 Improve `get_sam_name`
 - ef759a3875 Fix example in function docs for `get_sam_name`
 - 43740c5fed Document 15 character limit
 - 83f36cc2ef Account for 15 character limit in hostname
 - aa278966de Remove `*args`, pass `gid` as a keyword
 - 5230ecd7e1 Accept `*args`
- **PR #44171:** (Ch3LL) Add SPM Build Integration Tests @ 2017-10-19 19:49:14 UTC
 - 5ef124bf2d Merge pull request #44171 from Ch3LL/spm_int
 - cd79e9444e remove unneeded kwarg
 - 1541376c4f Add spm build test
- **PR #44157:** (benediktwner) Added 'versionadded' tags to sensehat modules @ 2017-10-19 14:13:31 UTC
 - 34a843252d Merge pull request #44157 from benediktwner/2017.7
 - bd825b51cc Changed sensehat versionadded from 2017.7 to 2017.7.0
 - f1d3c5bbcf Added 'versionadded' tags to sensehat modules
- **PR #44164:** (terminalmage) Fix examples in `docker_container.{stopped,absent}` docstrings @ 2017-10-19 14:12:37 UTC
 - 1427c72e1e Merge pull request #44164 from terminalmage/fix-docker-docstring
 - 7b46489e33 Fix examples in `docker_container.{stopped,absent}` docstrings
- **PR #44168:** (twangboy) Fix `unit.test_auth` for Windows @ 2017-10-19 14:12:22 UTC
 - 77969c4161 Merge pull request #44168 from twangboy/win_skip_pam_eath
 - bb1d2eb85b Skip tests that are failing on PAM eauth
- **PR #44151:** (rallytime) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2017-10-18 16:52:30 UTC
 - 88a776d9d2 Merge pull request #44151 from rallytime/merge-2017.7
 - 6aa8f03a4a Merge branch '2016.11' into '2017.7'
 - * 0cd493b691 Merge pull request #44131 from rallytime/bp-44029
 - bebf301976 fixed test addressing issue #43307, `disk.format_` to `disk.format`
 - b4ba7ae2fc addresses issue #43307, `disk.format_` to `disk.format`
 - * 3a68e356f8 Merge pull request #44093 from gtmanfred/fix-44087
 - 5455c5053b fix pylint

- f749cafa25 don't filter if return is not a dict
- * c785d7a847 Merge pull request #44122 from cachedout/gpg_pr_template
 - e41e3d76be Typo fix
 - 37c7980880 Add note about GPG signing to PR template
- * bf90ea1f51 Merge pull request #44124 from rallytime/merge-2016.11
 - 59861291c8 Merge branch '2016.11.8' into '2016.11'
 - 57623e2abe Merge pull request #44028 from rallytime/bp-44011
 - 89e084bda3 Do not allow IDs with null bytes in decoded payloads
 - 206ae23f15 Don't allow path separators in minion ID
- * 13f3ffa83a Merge pull request #44097 from gtmanfred/openneb
 - c29655b2c2 Merge branch '2016.11' into openneb
 - bd2490b149 OpenNebula does not require the template_id to be specified
- * ac3e4df964 Merge pull request #44110 from roaldnefs/fix-doc-local-returner
 - efd58f7594 Merge branch '2016.11' into fix-doc-local-returner
 - 881f1822f2 Format fix code example local returner doc
- ISSUE #43918: (mwerickso) subset argument does not work with saltmod.state (refs: #43933)
- PR #43933: (gtmanfred) if expect_minions is passed use that instead @ 2017-10-18 16:43:39 UTC
 - 0b47eb7242 Merge pull request #43933 from gtmanfred/2017.7
 - 272dcc6ba5 add inline comment about popping expect_minions
 - b615ce1762 if expect_minions is passed use that instead
- PR #44081: (skizunov) Windows: Fix usage of pkgrepo state @ 2017-10-18 16:16:46 UTC
 - 36da1a7fac Merge pull request #44081 from skizunov/develop3
 - 351d16840b Move strip_uri to salt/utills/pkg/deb.py
 - f54c7a6f01 Windows: Fix usage of pkgrepo state
- PR #43913: (twangboy) Fix *unit.templates.test_jinja* for Windows @ 2017-10-17 21:09:05 UTC
 - afcaa0c591 Merge pull request #43913 from twangboy/win_fix_test_jinja
 - a4e2d8059d Fix *unit.templates.test_jinja* for Windows
- PR #43917: (twangboy) Fix *unit.test_pillar* for Windows @ 2017-10-17 21:06:46 UTC
 - fc5754c6a1 Merge pull request #43917 from twangboy/win_unit_test_pillar
 - 00dbba5712 Fix *unit.test_pillar* for Windows
- PR #44133: (cachedout) Fix typos in parallel states docs @ 2017-10-17 15:24:19 UTC
 - 6252f82f58 Merge pull request #44133 from cachedout/fix_paralell_docs
 - 8d1c1e21f0 Fix typos in paralell states docs
- PR #44135: (timfreund) Insert missing verb in gitfs walkthrough @ 2017-10-17 14:32:13 UTC
 - 0d3f5db867 Merge pull request #44135 from timfreund/insert_missing_verb
 - 9557504b75 Insert missing verb in gitfs walkthrough

- **PR #44055:** (nasenbaer13) Activate `jid_queue` also for `SingleMinions` to workaround (Backport) @ 2017-10-16 20:14:52 UTC
 - **PR #43860:** (nasenbaer13) Activate `jid_queue` also for `SingleMinions` (occurs on reconnect) (refs: #44055)
 - a9700f6061 Merge pull request #44055 from eyj/jid_queue
 - 4bdd5bbf6b Merge branch '2017.7' into `jid_queue`
 - facef2227d Merge branch '2017.7' into `jid_queue`
 - 2fedcec6bb Merge branch '2017.7' into `jid_queue`
 - 255aa94c64 Activate `jid_queue` also for `SingleMinions` to workaround `0mq` reconnection issues
- **PR #44125:** (rallytime) [2017.7] Merge forward from 2017.7.2 to 2017.7 @ 2017-10-16 20:02:25 UTC
 - 2fba45cd3f Merge pull request #44125 from rallytime/merge-2017.7
 - c4ae4a6b50 Merge branch '2017.7.2' into '2017.7'
 - * 5d719a2219 Merge pull request #44027 from rallytime/bp-44012
 - * f7824e41f3 Don't allow path separators in minion ID
 - * 44060dc9c1 Do not allow IDs with null bytes in decoded payloads
- **ISSUE #43307:** (marek-knappe) Filesystem creation is failing on newly created LV (refs: #44029)
- **PR #44029:** (msummers42) addresses issue #43307, `disk.format_` to `disk.format` (refs: #44131) @ 2017-10-16 19:59:20 UTC
 - 68974aa74d Merge pull request #44029 from msummers42/2017.7
 - 16e1c1dfc8 fixed test addressing issue #43307, `disk.format_` to `disk.format`
 - 3d597db51c Merge branch '2017.7' into 2017.7
 - 18fb0be96a addresses issue #43307, `disk.format_` to `disk.format`
- **PR #44079:** (skizunov) `opkg`: Fix usage with `pkgrepo.managed` @ 2017-10-16 19:58:13 UTC
 - d0bbe65ffa Merge pull request #44079 from skizunov/develop2
 - 0614d1af30 Merge branch '2017.7' into `develop2`
 - b6b12fe495 `opkg`: Fix usage with `pkgrepo.managed`
- **PR #44090:** (pratik705) Fix `create_attach_volumes` salt-cloud action for `gcp` @ 2017-10-16 19:04:22 UTC
 - 22a8253595 Merge pull request #44090 from pratik705/fix-create_attach_volumes_salt-cloud_action-GCP
 - 3eefd334c5 Fixed "create_attach_volumes" salt-cloud action for `GCP`
- **PR #44121:** (benediktwnerner) Fixed code snippet in unit testing documentation @ 2017-10-16 18:28:36 UTC
 - 888e5f51a2 Merge pull request #44121 from benediktwnerner/2017.7
 - 1319c822bd Fixed code snippet in unit testing doc
- **PR #44098:** (twangboy) Return multiprocessing queue in `LogSetupMock` class @ 2017-10-16 18:14:30 UTC
 - 9fe94d7843 Merge pull request #44098 from twangboy/win_mock_test_parsers
 - cc43ca27af Return multiprocessing queue in `LogSetupMock` class
- **PR #44118:** (rallytime) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2017-10-16 17:01:38 UTC
 - 0ee04eaf1d Merge pull request #44118 from rallytime/merge-2017.7

- bbec47afbc Merge branch '2016.11' into '2017.7'
 - * c960ca32c2 Merge pull request #44092 from techhat/awsunicode
 - bbd9db4d00 One more encoding
 - 0e8b325667 Apparently `__salt_system_encoding__` is a thing
 - 1e7211838d Use system encoding
 - 1af21bbe5e Made sure that unicoded data is sent to sha256()
 - * d89c317d96 Merge pull request #44021 from whiteinge/cpstats-attribute-error
 - bf14e5f578 Also catch cpstats AttributeError for bad CherryPy release ~5.6.0
 - * bbdabe242a Merge pull request #44025 from dayid/lover_typo
 - 385980c21a Merge branch '2016.11' of <https://github.com/saltstack/salt> into lover_typo
 - 266dc00a23 Typo correction of lover to lower
 - * d8f3891a5e Merge pull request #44030 from rallytime/merge-2016.11
 - 53eaf0d75c Merge branch '2016.3' into '2016.11'
 - 64fd839377 Merge pull request #44010 from Ch3LL/2016.3.7_follow_up
 - 9a00302cd8 fix 2016.3.7 release notes merge conflict
 - 63da1214db Do not allow IDs with null bytes in decoded payloads
 - ee792581fc Don't allow path separators in minion ID
 - 8aab65c718 fix 2016.3.7 release notes merge conflict
 - bd73dcb02c Merge pull request #43977 from Ch3LL/3.8_sec
 - 5fb3f5f6b1 Add Security Notes to 2016.3.8 Release Notes
- **PR #44099:** (twangboy) Skip Master, Minion, and Syndic parser tests @ 2017-10-16 16:07:00 UTC
 - 28fa097b9b Merge pull request #44099 from twangboy/win_skip_test_parsers
 - caf086c05a Skip Master, Minion, and Syndic parser tests
- **PR #44106:** (roaldnefs) Fix mattermost returner documentation @ 2017-10-16 13:12:23 UTC
 - dbf112ead7 Merge pull request #44106 from roaldnefs/fix-doc-mattermost_returner
 - b3761a0401 Fix doc indentation in mattermost_returner
- **PR #44054:** (nasenbaer13) Backport of missing delete_on_termination @ 2017-10-13 15:45:25 UTC
 - **PR #43859:** (nasenbaer13) Add missing delete_on_termination passthrough. Adapt docs. (refs: #44054)
 - fd2c51b76c Merge pull request #44054 from eyj/boto_lc
 - 34d4629a64 Merge branch '2017.7' into boto_lc
 - 9efd63526a Adapted documentation of delete_on_termination parameter
 - eb2bfd047b Add missing delete_on_termination passthrough. Adapt docs.
- **PR #44076:** (Ch3LL) Add spm shell tests @ 2017-10-13 14:32:19 UTC
 - b61ed96268 Merge pull request #44076 from Ch3LL/spm_test
 - d2e91c33bd Add spm shell tests

- **PR #44051:** (twangboy) Fix some documentation formatting issues in the win_dacl state @ 2017-10-12 15:40:17 UTC
 - e38f313ac0 Merge pull request #44051 from twangboy/win_fix_docs_dacl
 - 377d6b6171 Fix some docs in the win_dacl state module
- **PR #44066:** (Ch3LL) Add Known CherryPy Issue to 2017.7.2 Release Notes @ 2017-10-12 15:18:25 UTC
 - a85837d72b Merge pull request #44066 from Ch3LL/cherry_release
 - 8e597f9ce9 Add Known CherryPy Issue to 2017.7.2 Release Notes
- **ISSUE #43643:** (doublez13) salt-ssh: multiple targets fails after upgrade to 2017.7 (refs: #43889)
- **ISSUE #43449:** (ecgg) salt-ssh -L with hosts down or unreachable returns wrong results (refs: #43889)
- **PR #43889:** (CorvinM) Fix issue with using roster_defaults with flat or cloud rosters. @ 2017-10-11 23:22:11 UTC
 - fcab77ac7b Merge pull request #43889 from CorvinM/issue43449
 - fefd28d896 Add futureproofing to roster_defaults to support roster dictionary options
 - aebe76b6f8 Fix issue with using roster_defaults with flat or cloud rosters. fixes #43449 fixes #43643
- **PR #44031:** (rallytime) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2017-10-11 22:03:31 UTC
 - 3ad1c6d1d9 Merge pull request #44031 from rallytime/merge-2017.7
 - 1d4a6c3949 Lint: Fixup undefined variable errors
 - 788ad0609a Merge branch '2016.11' into '2017.7'
 - * 0dbf41e79e Merge pull request #44011 from Ch3LL/2016.11.7_follow_up
 - c0149101c0 Do not allow IDs with null bytes in decoded payloads
 - 19481423dd Don't allow path separators in minion ID
 - * d61300df20 Merge pull request #44023 from Ch3LL/11.9rn
 - 7f9015eb41 Add 2016.11.9 Release Note File
 - * 9ff53bf63a Merge pull request #44019 from benediktwerner/2016.11
 - bc53598027 Fixed spelling mistake in salt_bootstrap tutorial
 - 6c30344824 Added missing tutorial docs to the tutorial index
 - * 364523f5f8 Merge pull request #43955 from meaksh/2016.11-fix-2291
 - a81b78381b Merge branch '2016.11' into 2016.11-fix-2291
 - 44bc91bb98 Enable '-with-salt-version' parameter for setup.py script
 - * fec714b91d Merge pull request #43962 from bobrik/kmod-built-in
 - 95ab901553 Report built-in modiles in kmod.available, fixes #43945
 - * e434c39c4e Merge pull request #43960 from cro/ldap_nopw_bind2
 - 962a20cf4b Require that bindpw be non-empty if auth.ldap.anonymous=False
 - 9df3d91d8f Release notes blurb for change to bindpw requirements
 - * e9dfda2177 Merge pull request #43991 from Ch3LL/3.8_sec_2
 - 1977df8462 Add Security Notes to 2016.3.8 Release Notes
 - * 2346d2691e Merge pull request #43968 from rossengeorgiev/fix-zenoss-prod_state

- e6d31c1ea6 fix zenoss state module not respecting test=true
- * 8d56a5ac45 Merge pull request #43776 from Ch3LL/2016.11.8_docs
 - f72bc00000 [2016.11] Bump latest and previous versions
- * 21bf71c3f5 Merge pull request #43976 from Ch3LL/11.8_sec
 - f0c3184288 Add Security Notes to 2016.11.8 Release Notes
- * 1d5397ab5b Merge pull request #43973 from terminalmage/fix-grains.has_value
 - bf45ae6e6a Fix grains.has_value when value is False
- * 9ac3f2ea7b Merge pull request #43888 from rallytime/bp-43841
 - 87d676f08a add -n with netstat so we don't resolve
- * f880ac4c08 Merge pull request #43916 from dereckson/fix-typo-cloud-scaleway
 - 15b8b8a9f4 Fix typo in salt-cloud scaleway documentation
- **PR #44045:** (isbm) Bugfix: always return a string "list" on unknown job target type. @ 2017-10-11 21:58:12 UTC
 - 5db1e8c6ca Merge pull request #44045 from isbm/isbm-tgtype-fix-2017-port
 - 471ff35c2f Bugfix: always return a string "list" on unknown job target type.
- **ISSUE #43949:** (arthurlogilab) [logger] [sentry] KeyError: 'SENTRY_PROJECT' (refs: #43950)
- **PR #44026:** (rallytime) Back-port #43950 to 2017.7 @ 2017-10-11 15:27:49 UTC
 - **PR #43950:** (arthurlogilab) [log/sentry] avoid KeyError: 'SENTRY_PROJECT' (refs: #44026)
 - 6c8f7fd5ec Merge pull request #44026 from rallytime/bp-43950
 - a37e0bad62 [log/sentry] avoid KeyError: 'SENTRY_PROJECT'
- **PR #44012:** (Ch3LL) Security Fixes for 2017.7.2 (refs: #44027) @ 2017-10-10 20:04:08 UTC
 - 369ee8a132 Merge pull request #44012 from Ch3LL/2017.7.1_follow_up
 - 92e05cf1c0 Don't allow path separators in minion ID
 - 70133aa305 Do not allow IDs with null bytes in decoded payloads
- **PR #44024:** (Ch3LL) Add 2017.7.3 Release Note File @ 2017-10-10 20:03:12 UTC
 - 4fe029a0ab Merge pull request #44024 from Ch3LL/7.3rn
 - 027f509368 Add 2017.7.3 Release Note File
- **ISSUE #43997:** (unthought) gce cloud provider breaks for make_master: True (refs: #43998)
- **PR #43998:** (unthought) Fix gce make_master @ 2017-10-10 20:01:25 UTC
 - e484d16817 Merge pull request #43998 from unthought/fix-gce-make_master
 - 6e9f0fa24e Fix GCE provider: #create returns bootstrap result
- **ISSUE #44013:** (DenisBY) pkgrepo.managed broken in 2017.7.2 (refs: #44016)
- **PR #44016:** (terminalmage) Fix on_header callback when not redirecting and no Content-Type present @ 2017-10-10 19:59:24 UTC
 - 82b92d54b3 Merge pull request #44016 from terminalmage/issue44013
 - d594b95f92 No need to set a specific encoding if one hasn't been provided via the headers
 - 425ede4b84 Fix on_header callback when not redirecting and no Content-Type present

- **PR #43952:** (t0fik) add requisites to stateconf (backport #43920) @ 2017-10-10 13:03:31 UTC
 - **PR #43920:** (t0fik) Added missing requisites to stateconf renderer (refs: #43952)
 - bd879eb66e Merge pull request #43952 from jdsieci/2017.7_add_requisites_to_stateconf
 - 9994c64670 Merge branch '2017.7' into 2017.7_add_requisites_to_stateconf
- **PR #43777:** (Ch3LL) [2017.7] Bump latest and previous versions @ 2017-10-09 17:21:57 UTC
 - a4358dfa36 Merge pull request #43777 from Ch3LL/2017.7.2_docs
 - 410c624f7a [2017.7] Bump latest and previous versions
- **PR #43978:** (Ch3LL) Add Security Notes to 2017.7.2 Release Notes @ 2017-10-09 17:20:04 UTC
 - 2a064c1a72 Merge pull request #43978 from Ch3LL/7.2_sec
 - 57fd6f7bcb Add Security Notes to 2017.7.2 Release Notes
- **PR #43932:** (techhat) Don't try to modify dict while looping through it @ 2017-10-06 21:20:54 UTC
 - d9530e3c52 Merge pull request #43932 from techhat/moddict
 - 4a77560646 Don't try to modify dict while looping through it
- **PR #43956:** (terminalmage) Fix fileclient's get_url when redirecting to a redirect @ 2017-10-06 21:19:41 UTC
 - 39893a1dab Merge pull request #43956 from terminalmage/fix-get_url-redirects
 - 9a4f6a260f Fix fileclient's get_url when redirecting to a redirect
- **PR #43943:** (twangboy) Fix `unit.utils.test_utils` for Windows @ 2017-10-06 19:35:24 UTC
 - 1baf286719 Merge pull request #43943 from twangboy/win_unit_test_utils
 - 254dac7723 Fix `unit.utils.test_utils` for Windows
 - * 89200ff28e rebase from 2017.7.2
- **PR #43939:** (terminalmage) Fix typo in log message @ 2017-10-05 23:20:04 UTC
 - a8f1750323 Merge pull request #43939 from terminalmage/fix-typo
 - 29d8cf4f26 Fix typo in log message
- **ISSUE #43909:** (frogunder) `state.highstate` not working on py3 setup (refs: #43910)
- **ISSUE #43605:** (cruscio) `Module.Run: Passed invalid arguments to state.apply: can't serialize dict_keys(['task.create_task'])` (refs: #43910)
- **PR #43910:** (terminalmage) Don't put unserializable `dict.keys()` into state return @ 2017-10-05 20:33:47 UTC
 - 1a718eb1ed Merge pull request #43910 from terminalmage/issue43605
 - 042e092ac8 Don't put unserializable `dict.keys()` into state return
- **ISSUE #41894:** (DR3EVR8u8c) Salt-cloud can't resize root volume with public ami images (refs: #43907)
- **ISSUE #39257:** (aig787) Using `del_root_vol_on_destroy` option in salt-cloud gives `IndexError` (refs: #43907)
- **PR #43927:** (rallytime) Back-port #43907 to 2017.7 @ 2017-10-05 20:10:16 UTC
 - **PR #43907:** (richardsimko) Make sure EBS volume exists before querying (refs: #43927)
 - **PR #33115:** (rbjorklin) Fix override of `ec2.volumetype` (refs: #43907)
 - a7a59868c8 Merge pull request #43927 from rallytime/bp-43907
 - f62e8ca87f Make sure volume exists before querying

- **PR #43934:** (rallytime) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2017-10-05 20:07:36 UTC
 - 4fcd4709ea Merge pull request #43934 from rallytime/merge-2017.7
 - eaca3291e2 Merge branch '2016.11' into '2017.7'
 - * 2ab7549d48 Merge pull request #43884 from UtahDave/2016.11local
 - e3b2857285 Merge branch '2016.11' into 2016.11local
 - * 4b882d4272 Merge pull request #43869 from terminalmage/issue43522
 - fe28b0d4fb Only join cmd if it's not a string
 - 8c671fd0c1 Update SaltConf banner per Rhett's request
 - * a2161efda3 Merge pull request #43707 from terminalmage/issue43373
 - 3ebde1895f Merge branch '2016.11' into issue43373
 - e580ed4caa Merge branch '2016.11' into issue43373
 - 5b3be6e8af Fix failing unit test
 - f73764481b Add missing support for use/use_in requisites to state.sls_id
- **ISSUE #43658:** (kvnaveen) KeyError: 'as_dict' [DEBUG] LazyLoaded nested.output (refs: #43886)
- **PR #43886:** (techhat) Fix object_to_dict in azure @ 2017-10-05 19:33:56 UTC
 - 7d174172a0 Merge pull request #43886 from techhat/azuredict
 - 223a1eea83 Fix object_to_dict in azure
- **PR #43899:** (gtmanfred) enable tox for tests @ 2017-10-04 15:08:16 UTC
 - 7038248820 Merge pull request #43899 from gtmanfred/2017.7
 - 51eca1a6bd enable tox for tests
- **PR #43828:** (rallytime) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2017-10-04 13:10:13 UTC
 - a5abe33e1c Merge pull request #43828 from rallytime/merge-2017.7
 - 2ff02e4320 Merge branch '2016.11' into '2017.7'
 - * 85b3aa332a Merge pull request #43807 from terminalmage/issue43522
 - d8708bf698 cmdmod: Don't list-ify string commands on Windows
 - * ea8d273c2b Merge pull request #43768 from vutny/fix-pylint-deprecation-warnings
 - f8b3fa9da1 Merge branch '2016.11' into fix-pylint-deprecation-warnings
 - 651ed16ad3 Fix Pylint deprecated option warnings
- **PR #43854:** (keesbos) Map __env__ in git_pillar before sanity checks @ 2017-10-02 20:44:53 UTC
 - **PR #43656:** (keesbos) Git pillar fixes (refs: #43854)
 - 36b0b1174b Merge pull request #43854 from keesbos/2017.7
 - fba9c9a935 Map __env__ in git_pillar before sanity checks
- **PR #43847:** (cachedout) Fix to module.run @ 2017-10-02 19:25:03 UTC
 - c81e8457b8 Merge pull request #43847 from cachedout/module_run_compare
 - b11f8c8f29 Merge pull request #17 from terminalmage/pr-43847
 - * 93eaba7c54 Use six.iterkeys() instead of dict.keys()

- * 5d56a03a67 Improve failures for module.run states
 - 71780beb5a Merge branch '2017.7' into module_run_compare
- **ISSUE #43819:** (mephi42) archive.extracted shows the http password in the comment field on failure (refs: #43844)
- **PR #43844:** (garethgreenaway) [2017.7] Changes to states/file.py and states/archived.py @ 2017-10-01 09:08:48 UTC
 - dd01e0ce67 Merge pull request #43844 from garethgreenaway/43819_redact_url_additions
 - c58c72aff9 When using URLs in archive.extracted, on failure the username & password is in the exception. Calling salt.utils.url.redact_http_basic_auth to ensure the credentials are redacted.
 - * f0b985cbbe Merge branch 'module_run_compare' of ssh://github.com/cachedout/salt into module_run_compare
 - aefc773c2f Merge branch '2017.7' into module_run_compare
- **PR #43840:** (twangboy) Fix *unit.states.test_augeas* for Windows @ 2017-09-29 21:53:21 UTC
 - 1f52546eab Merge pull request #43840 from twangboy/win_fix_test_augeas
 - fd1d6c31de Fix *unit.states.test_augeas* for Windows
- **ISSUE #43553:** (dafyddj) Vagrant setup (Windows guest) broken on upgrade to 2017.7 (refs: #43801)
- **PR #43801:** (terminalmage) Properly handle UNC paths in salt.utils.path.readlink() @ 2017-09-29 09:58:02 UTC
 - c6fd2cd452 Merge pull request #43801 from terminalmage/issue43553
 - 66e6e89dc7 Properly handle UNC paths in salt.utils.path.readlink()
- **PR #43800:** (Ch3LL) Add note to nitrogen release notes about pip for cent6 @ 2017-09-28 17:36:49 UTC
 - 7304907db6 Merge pull request #43800 from Ch3LL/update_7.0
 - 50779c3b1c Add note to nitrogen release notes about pip for cent6
- **PR #43779:** (twangboy) Fix *unit.modules.test_state* for Windows @ 2017-09-28 14:27:03 UTC
 - 6f687fdcff Merge pull request #43779 from twangboy/win_fix_test_state
 - a64fe75816 Use os agnostic paths
- **PR #43782:** (twangboy) Fix *unit.modules.test_virt* for Windows @ 2017-09-28 14:25:16 UTC
 - db0f569f7a Merge pull request #43782 from twangboy/win_fix_test_virt
 - 7192332758 Fix *unit.modules.test_virt* for Windows
- **PR #43723:** (nicholasmhughes) Fix ini_manage error and change handling @ 2017-09-28 09:52:09 UTC
 - dd4fc52f1e Merge pull request #43723 from nicholasmhughes/ini_manage-error-handling
 - d68c5c4be0 prevent exception when test=True
 - cfe37916c3 handling changes per section
 - 1c484f6ad5 prevent exception when test=True
- **PR #43781:** (twangboy) Fix *unit.modules.test_status* for Windows @ 2017-09-28 09:06:19 UTC
 - 5e29507c21 Merge pull request #43781 from twangboy/win_fix_test_status
 - 16ae8253c1 Mock which, use os.linesep for cmd.run return
- **PR #43785:** (twangboy) Fix *unit.modules.test_znc* for Windows @ 2017-09-28 08:56:11 UTC

- 05c78ae649 Merge pull request #43785 from twangboy/win_fix_test_znc
- 7d90721f6b Merge branch '2017.7' into win_fix_test_znc
- 228e74c8e3 Fix *unit.modules.test_znc* for Windows
- PR #43786: (twangboy) Fix *unit.modules.test_zypper* for Windows @ 2017-09-28 08:51:59 UTC
 - 10ddb8491c Merge pull request #43786 from twangboy/win_fix_test_zypper
 - 1c05e37a66 Merge branch '2017.7' into win_fix_test_zypper
 - aafec7ab0e Fix *unit.modules.test_zypper* for Windows
- PR #43773: (rallytime) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2017-09-28 08:48:39 UTC
 - 9615ca32d5 Merge pull request #43773 from rallytime/merge-2017.7
 - f7035ed7da Merge branch '2017.7' into merge-2017.7
 - dfef4a722c Merge branch '2016.11' into '2017.7'
 - * 1a8cc60bb4 Merge pull request #43772 from gtmanfred/2016.11
 - 0194c60960 dont print Minion not responding with quiet
 - * 9dee896fb9 Merge pull request #43747 from rallytime/gpg-verification
 - 7a70de19f4 Merge branch '2016.11' into gpg-verification
 - 23bb4a5dde Add GPG Verification section to Contributing Docs
- PR #43784: (twangboy) Fix *unit.modules.test_win_service* @ 2017-09-28 03:14:39 UTC
 - 9a9cc69d55 Merge pull request #43784 from twangboy/win_fix_test_win_service
 - 058e50e530 Fix *unit.modules.test_win_service*
- PR #43774: (The-Loeki) typo fix aka what is a 'masterarpi' @ 2017-09-27 18:52:19 UTC
 - 1254da1df5 Merge pull request #43774 from The-Loeki/patch-1
 - 84bbe85e60 typo fix aka what is a 'masterarpi'
- PR #43732: (twangboy) Skip *unit.stats.test_mac_packages* on Windows @ 2017-09-27 14:48:08 UTC
 - 3f888753d4 Merge pull request #43732 from twangboy/win_skip_mac_pkg_tests
 - 1c01e06097 Only skip test on Windows
 - ec99a3ce3c Fix lint error
 - 61f8a2f7ff Skip mac specific tests
- PR #43761: (Ch3LL) Release Notes for 2017.7.2 @ 2017-09-27 14:34:52 UTC
 - fb86935d99 Merge pull request #43761 from Ch3LL/release_2017.7.2
 - caf5795856 add mac patch notes
 - 3d5fce0955 Add 2017.7.2 Release Notes
- PR #43767: (twangboy) Skip *unit.modules.test_snapper* on Windows @ 2017-09-27 14:10:27 UTC
 - 5ea603cf16 Merge pull request #43767 from twangboy/win_skip_test_snapper
 - b41b9c8378 Skip snapper tests on Windows
- PR #43759: (rallytime) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2017-09-27 13:30:38 UTC
 - 77c2c7cbf7 Merge pull request #43759 from rallytime/merge-2017.7

- 120f49f2c4 Merge branch '2016.11' into '2017.7'
 - * 1cc3ad1c8d Merge pull request #43733 from terminalmage/issue43729
 - 6e5c99bda0 Allow docker_events engine to work with newer docker-py
 - * 5d38be4ff7 Merge pull request #43458 from terminalmage/issue42082
 - 5f90812b12 Fix missing PER_REMOTE_ONLY in cache.clear_git_lock runner
 - * 023a563657 Merge pull request #43727 from rallytime/fix-43650
 - babad12d83 Revise "Contributing" docs: merge-forwards/release branches explained!
- **ISSUE #43737:** (syedaali) salt.loaded.int.module.boto_kinesis.__virtual__() is wrongly returning *None*. It should either return *True*, *False* or a new name. If you're the developer of the module 'boto_kinesis', please fix this. (refs: #43748)
- **PR #43748:** (rallytime) Add message to boto_kinesis modules if boto libs are missing @ 2017-09-27 13:19:33 UTC
 - 5c203df056 Merge pull request #43748 from rallytime/fix-43737
 - 5a2593dbd3 Add message to boto_kinesis modules if boto libs are missing
- **PR #43731:** (twangboy) Fix *unit.beacons.test_status* for Windows @ 2017-09-26 16:25:12 UTC
 - 2581098595 Merge pull request #43731 from twangboy/win_unit_beacons_test_status
 - dc1b36b7e2 Change expected return for Windows
- **PR #43724:** (brejoc) Improved delete_deployment test for kubernetes module @ 2017-09-26 16:19:31 UTC
 - 10f3d47498 Merge pull request #43724 from brejoc/2017.7.kubernetes_delete_test
 - 85b0a8c401 Improved delete_deployment test for kubernetes module
- **PR #43734:** (twangboy) Fix *unit.modules.test_poudriere* for Windows @ 2017-09-26 14:13:47 UTC
 - 13cc27bdab Merge pull request #43734 from twangboy/win_unit_test_poudriere
 - 922e60fa67 Add os agnostic paths
- **PR #43742:** (terminalmage) Fix incorrect value in docstring @ 2017-09-26 13:55:00 UTC
 - 41aeec7ac8 Merge pull request #43742 from terminalmage/fix-docstring
 - 553335b1c9 Fix incorrect value in docstring
- **PR #41998:** (twangboy) Fix *unit.modules.test_environ* for Windows @ 2017-09-26 12:25:48 UTC
 - d78b9a3294 Merge pull request #41998 from twangboy/win_unit_test_environ
 - d73ef44cf6 Mock with uppercase KEY
 - 048e16883f Use uppercase KEY
- **PR #42036:** (twangboy) Fix *unit.modules.test_file* for Windows @ 2017-09-26 12:23:10 UTC
 - 7fbbea3806 Merge pull request #42036 from twangboy/win_unit_test_file
 - 056f3bb4c0 Use with to open temp file
 - 352fe69e35 Clarify the purpose of the for loop
 - b55172d5dc Split by Windows and Linux style line endings
 - e20aa5c39b Fix line, use os.sep instead of os.linesep
 - d5f27901e3 Fix additional bytestring issue

- 716e99c453 Fix py3 bytestring problems
- 543610570c Fix bytestring issues, fix errored tests
- 9fe83a34a5 Remove old variable declaration
- c5cf5e92c1 Fix many tests
- **PR #43557:** (clan) disable modify yaml constructor @ 2017-09-25 14:03:47 UTC
 - a81d4b8d8d Merge pull request #43557 from clan/yaml
 - 485471c8a7 Merge branch '2017.7' into yaml
 - da15658304 remove modify yaml constructor
- **PR #43566:** (damon-atkins) 2017.7 update salt.utils.files.safe_filepath func @ 2017-09-25 13:58:29 UTC
 - b5beec16e8 Merge pull request #43566 from damon-atkins/2017.7_update_safe_filename_func
 - c7a652784a remove blank line at end of file
 - e97651d49b Merge branch '2017.7' into 2017.7_update_safe_filename_func
 - 3b4c1bbf7f Merge branch '2017.7' into 2017.7_update_safe_filename_func
 - 4c88c80ef9 Merge branch '2017.7' into 2017.7_update_safe_filename_func
 - 4171d11838 utils.files.safe_filepath add support to override the os default directory separator
- **ISSUE #43711:** (wedge-jarrad) fcontext_get_policy emits command error if policy doesn't exist (refs: #43712)
- **PR #43712:** (wedge-jarrad) Ignore retcode on call to grep in selinux.py module @ 2017-09-25 13:56:17 UTC
 - 3bb337cf6a Merge pull request #43712 from wedge-jarrad/fix-43711
 - 96c1ef48e6 Ignore retcode on call to grep in selinux.py module
- **ISSUE #43659:** (gaborn57) unable to retrieve pillar data in postgres db (refs: #43716)
- **PR #43716:** (gaborn57) Corrected custom port handling @ 2017-09-25 13:44:58 UTC
 - 5b7411e335 Merge pull request #43716 from gaborn57/2017.7
 - 78137c0860 Corrected custom port handling
- **PR #43700:** (rklaren) Ensure salt-cloud with libvirt provider does not write low level errors to stderr @ 2017-09-25 01:47:25 UTC
 - **PR #43684:** (rklaren) salt-cloud libvirt updates (refs: #43700)
 - 6bbd50c453 Merge pull request #43700 from rklaren/fix-libvirt-stderr-spam
 - 88530c4cb6 Lint fixes
 - 235bec492e salt-cloud + libvirt: Mention Fedora 26 support
 - 9aecf5f847 Remove stderr spam when using salt-cloud with libvirt
- **PR #43702:** (rallytime) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2017-09-25 01:26:20 UTC
 - 437ac03801 Merge pull request #43702 from rallytime/merge-2017.7
 - 132b1b343b Merge branch '2017.7' into merge-2017.7
- **ISSUE #38971:** (morganwillcock) archive.extracted: lots of unnecessary file transferring, copying, and hashing (refs: #43681, #43518)
- **PR #43681:** (terminalmage) Backport the non-fileclient changes from PR 43518 to 2017.7 @ 2017-09-22 19:27:25 UTC

- PR #43518: (terminalmage) Reduce unnecessary file downloading in archive/file states (refs: #43681)
- 47cd8723c6 Merge pull request #43681 from terminalmage/issue38971-2017.7
- 91edf865e2 Merge branch '2017.7' into issue38971-2017.7
- 84f34c93be Backport the non-fileclient changes from PR 43518 to 2017.7
- ISSUE #43396: (mkurtak) yumpkg pkg.installed slowed down due to wildcard namig support (refs: #43687)
- PR #43687: (mkurtak) yumpkg.py: install calls list_repo_pkgs only if wildcard is used in pkg name @ 2017-09-22 19:23:18 UTC
 - 0a1c5185f5 Merge pull request #43687 from mkurtak/fix-43396
 - b1e64b11fb yumpkg.py: install calls list_repo_pkgs only if wildcard in pkg name is used
- ISSUE #43124: (UtahDave) publisher_acl with regex on username not working and has no documentation (refs: #43467)
- PR #43467: (DmitryKuzmenko) Bugs/43124 users regex @ 2017-09-22 19:21:09 UTC
 - 3a79549af4 Merge pull request #43467 from DSRCorporation/bugs/43124_users_regex
 - 14bf2dd8ff Support regex in publisher_acl.
 - 9fe32f8b6e Regex support for user names in external_auth config.
- ISSUE #43381: (V3XATI0N) Sharing minion data cache causes false errors in returns (refs: #43670)
- PR #43670: (DmitryKuzmenko) Fix for list and contains redis cache logic. @ 2017-09-22 17:56:58 UTC
 - 0e86266b93 Merge pull request #43670 from DSRCorporation/bugs/43381_redis_cache_fix
 - 1c979d5809 Update redis cache contains logic to use more efficient sismember.
 - 039d236948 Fixed list and contains redis cache logic.
 - * 6e5cf65d65 Merge branch '2016.11' into '2017.7'
 - * f46c858f25 Merge pull request #43648 from rallytime/handle-boto-vpc-errors
 - 54842b5012 Handle VPC/Subnet ID not found errors in boto_vpc module
- PR #43697: (rallytime) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2017-09-22 17:31:09 UTC
 - aa47da35dd Merge pull request #43697 from rallytime/merge-2017.7
 - cbae45bec4 Lint: Remove extra line at end of file
 - fca4e5563a Merge branch '2016.11' into '2017.7'
 - 9dba34aa06 Merge pull request #43575 from akissa/fix-csr-not-recreated-if-key-changes
 - * b1b4dafd39 Fix CSR not recreated if key changes
 - 1d4fa48209 Merge pull request #43672 from rallytime/bp-43415
 - * 3fb42bc238 Fix env_order in state.py
 - ff832ee607 Merge pull request #43673 from rallytime/bp-43652
 - * d91c47c6f0 Salt Repo has Deb 9 and 8
 - 365cb9fba8 Merge pull request #43677 from terminalmage/runners-docs-2016.11
 - * 2fd88e94fa Fix RST headers for runners (2016.11 branch)
 - be38239e5d Merge pull request #43534 from twangboy/win_fix_pkg.install_2016.11
 - * 1546c1ca04 Add posix=False to call to salt.utils.shlex_split

- 0d3fd3d374 Merge pull request #43661 from moio/2016.11-multiprocessing-doc-fix
 - * 625eabb83f multiprocessing minion option: documentation fixes
- 6b4516c025 Merge pull request #43646 from brejoc/2016.11.4-pidfile-tests
 - * 96f39a420b Fixed linting
 - * 08fba98735 Fixed several issues with the test
 - * 3a089e450f Added tests for pid-file deletion in DaemonMixIn
- cfb1625741 Merge pull request #43591 from rallytime/merge-2016.11
 - * 57b9d642c2 Merge branch '2016.11.8' into '2016.11'
 - e83421694f Merge pull request #43550 from twangboy/osx_fix_preinstall_2016.11.8
 - 1b0a4d39d2 Fix logic in `/etc/paths.d/salt` detection
 - a648f75949 Merge pull request #43508 from rallytime/bp-43333
 - d4981a2717 Update doco
 - a7c8b9e048 Update `win_pkg.py`
 - 1d6dc6fb72 Docs are wrong `cache_dir` (bool) and `cache_file` (str) cannot be passed on the cli (#2)
 - e7009877bc Merge pull request #43434 from rallytime/2016.11.8-release-notes
 - 68f529ee5e Add 2016.11.8 release notes
- 8671b91f62 Merge pull request #43572 from vutny/fix-salt-cloud-list-min-instance-set
 - * 21966e7ce8 `cloud.action: list_nodes_min` returns all instances
- **PR #43314:** (twangboy) Fix `unit.utils.test_verify` for Windows @ 2017-09-21 22:26:13 UTC
 - e6dc4d64df Merge pull request #43314 from twangboy/win_fix_unit.utils.test_verify
 - 9ada7f626c Merge branch '2017.7' into `win_fix_unit.utils.test_verify`
 - c0dc3f73ef Use `sys.platform` instead of `salt.utils` to detect Windows
 - e496d28cbf Fix `unit.utils.test_verify` for Windows
- **ISSUE #43599:** (vernondcole) Incorrect default for `salt.cache.Cache()` if `opts` does not define "cache" (refs: #43680)
- **PR #43680:** (vernondcole) correct default value for `salt.cache.Cache` @ 2017-09-21 20:09:36 UTC
 - ec34df2c27 Merge pull request #43680 from vernondcole/fix-salt.cache.Cache-default
 - 292f8c79b8 correct default value for `salt.cache.Cache`
- **PR #43530:** (twangboy) Fixes removal of double-quotes by `shlex_split` in `winrepo` @ 2017-09-21 18:04:48 UTC
 - 99d9d784b1 Merge pull request #43530 from twangboy/win_fix_pkg.install
 - 7f59119f95 Merge branch '2017.7' into `win_fix_pkg.install`
 - f146399f7a Use `posix=False` for `shlex.split`
- **PR #43671:** (rallytime) [2017.7] Merge forward from 2017.7.2 to 2017.7 @ 2017-09-21 16:39:49 UTC
 - 12b5e62d81 Merge pull request #43671 from rallytime/merge-2017.7
 - a401166bd5 Merge branch '2017.7.2' into '2017.7'
- **PR #43676:** (terminalmage) Fix RST headers for runners (2017.7 branch) @ 2017-09-21 16:36:21 UTC

- e3a2fbc2a3 Merge pull request #43676 from terminalmage/runners-docs-2017.7
- 9b74634b23 Fix badly-formatted RST in mattermost runner docstring
- c0a79c70a4 Fix RST headers for runners (2017.7 branch)
- **PR #43235:** (brejoc) Improve delete_deployment handling @ 2017-09-20 21:33:33 UTC
 - d02953ce6a Merge pull request #43235 from brejoc/improve-async-operation-handling-in-kubernetes-module
 - 4e8da3045f Fixed logic for windows fallback
 - 3b1cb884b9 Merge branch '2017.7' into improve-async-operation-handling-in-kubernetes-module
 - d1b5ec098c Merge branch '2017.7' into improve-async-operation-handling-in-kubernetes-module
 - 35cf69bc50 Moved exception Salt core
 - 7431ec64e3 Removed unused sys import
 - 0c71da95f6 Using salt method to identify MS Windows, single instead of double quotes
 - 20619b24c4 Fixed test for delete_deployment
 - 91076bbafa Merge branch '2017.7' into improve-async-operation-handling-in-kubernetes-module
 - 7b600e2832 Added pylint-disable statements and import for salt.ext.six.moves.range
 - 99fe138325 Code styling and added log message for timeout
 - dcd8d4f639 Merge branch '2017.7' into improve-async-operation-handling-in-kubernetes-module
 - 702a058c38 Fixed linting
 - 3fe623778e Added Windows fallback
 - 52b1cb8147 Compatibility with Python3.6
 - 767af9bb4f Added timeout for checking the deployment
 - 32d7d34fe5 First simple draft for the deletion verification
- **PR #43554:** (twangboy) Win fix chocolatey @ 2017-09-20 16:06:18 UTC
 - 73cb0c27b5 Merge pull request #43554 from twangboy/win_fix_chocolatey
 - e04acb6216 Merge branch '2017.7' into win_fix_chocolatey
 - 56be5c35eb Improve logic for handling chocolatey states
 - bcbf7b4e68 Add logic for test=True
- **ISSUE #43598:** (davidvon) Passed invalid arguments to mysql.file_query: unsupported operand type(s) for +=: 'int' and 'tuple' (refs: #43625)
- **PR #43625:** (gtmanfred) results and columns are lists for mysql returns @ 2017-09-20 15:42:59 UTC
 - ed7eeaaafb Merge pull request #43625 from gtmanfred/2017.7
 - f84b50a06b results and columns are lists for mysql returns
- **ISSUE #43560:** (smitelli) salt.states.linux_acl requires setfacl/getacl binaries but this is not obvious (refs: #43587, #43580)
- **PR #43587:** (rallytime) Add reason to linux_acl state loading failure @ 2017-09-19 16:26:51 UTC
 - **PR #43580:** (garethgreenaway) Updating ACL module and state module documentation (refs: #43587)
 - 1bda4832ef Merge pull request #43587 from rallytime/fix-virtual

- e5297e3869 Add reason to linux_acl state loading failure
- **PR #43584:** (cachedout) Enhance engines docs @ 2017-09-18 20:40:57 UTC
 - 2e19533e3c Merge pull request #43584 from cachedout/engines_doc_clarification
 - 634536b0ff Merge branch '2017.7' into engines_doc_clarification
 - 1a619708c1 Enhance engines docs
- **PR #43519:** (terminalmage) Fix incorrect handling of pkg virtual and os_family grain @ 2017-09-18 20:35:01 UTC
 - 50b134ef4c Merge pull request #43519 from terminalmage/fix-aptpkg
 - 0e3c447567 Fix incorrect handling of pkg virtual and os_family grain
- **PR #43520:** (clan) _search_name is " if acl type is other @ 2017-09-18 20:33:51 UTC
 - dd953f36ae Merge pull request #43520 from clan/acl
 - 54216177c1 _search_name is " if acl type is other
- **PR #43561:** (wedge-jarrad) Clean up doc formatting in selinux state & module @ 2017-09-18 20:28:47 UTC
 - ad9663a7fc Merge pull request #43561 from wedge-jarrad/selinux-doc-cleanup
 - 1bd263cd51 Clean up doc formatting in selinux state & module
- **ISSUE #43560:** (smitelli) salt.states.linux_acl requires setfacl/getacl binaries but this is not obvious (refs: #43587, #43580)
- **PR #43580:** (garethgreenaway) Updating ACL module and state module documentation (refs: #43587) @ 2017-09-18 20:11:26 UTC
 - cc3d9c1a01 Merge pull request #43580 from garethgreenaway/43560_update_linux_acl_documentation
 - e63fae4c91 Merge branch '2017.7' into 43560_update_linux_acl_documentation
- **PR #43523:** (skizunov) Add back lost logic for multifunc_ordered @ 2017-09-18 17:46:16 UTC
 - **PR #38168:** (skizunov) Add support for a multi-func job using same func more than once (refs: #43523)
 - bf7b23316f Merge pull request #43523 from skizunov/develop2
 - fb579321a9 Add back lost logic for multifunc_ordered
 - * 117a0ddbbc Updating the documentation to call out the requirement for the getfacl and setfacl binaries
 - 49f25b9f19 Lint
 - 31d17c0124 Fix typo found by @s0undt3ch
 - 5dba74d2cb Fix to module.run [WIP]
- **ISSUE #43447:** (UtahDave) When using Syndic with Multi Master the top level master doesn't reliably get returns from lower minion. (refs: #43526)
- **PR #43526:** (DmitryKuzmenko) Forward events to all masters syndic connected to @ 2017-09-18 16:54:46 UTC
 - e29efecf4f Merge pull request #43526 from DSRCorporation/bugs/43447_syndic_events_forwarding
 - 64d6109654 Merge branch '2017.7' into bugs/43447_syndic_events_forwarding
 - 3b2a529385 Merge branch '2017.7' into bugs/43447_syndic_events_forwarding
 - 0e4a744d95 Forward events to all masters syndic connected to.
- **ISSUE #43077:** (Manoj2087) Issue with deleting key via wheel (refs: #43330)

- **PR #43330:** ([terminalmage](#)) Fix reactor regression + unify reactor config schema @ 2017-09-18 16:46:11 UTC
 - 56b671e087 Merge pull request #43330 from terminalmage/issue43077
 - a7b4e1f782 Simplify client logic
 - b85c8510c7 Improve the reactor documentation
 - 20f6f3cc39 Include a better example for reactor in master conf file
 - 4243a2211d Rewrite the reactor unit tests
 - 9db3f5ae6d Unify reactor configuration, fix caller reactors
 - 34b6c3b65f Un-deprecate passing kwargs outside of 'kwarg' param
- **ISSUE #33793:** ([mstarostik](#)) states.ssh_auth adds bogus newline before newly added keys (refs: #43483)
- **PR #43505:** ([rallytime](#)) Back-port #43483 to 2017.7 @ 2017-09-15 21:22:12 UTC
 - **PR #43483:** ([3add3287](#)) Handle bogus newline before newly added keys (refs: #43505)
 - 078d5d17de Merge pull request #43505 from rallytime/bp-43483
 - c68dd5b8a4 Lint: fix spacing
 - 406f61ac9a Fix indentation from tabs to spaces
 - 923ec62771 Copy paste typo
 - 6f6619242f Fix checking for newline on end of file by properly checking the last byte of the file if the file is non empty.
- **ISSUE #43464:** ([psagers](#)) acme.cert state: IOError on failure to create a new certificate (refs: #43465)
- **PR #43491:** ([rallytime](#)) Back-port #43465 to 2017.7 @ 2017-09-15 18:24:47 UTC
 - **PR #43465:** ([psagers](#)) acme.cert: avoid IOError on failure. (refs: #43491)
 - a6df3f2acc Merge pull request #43491 from rallytime/bp-43465
 - 3118faca0a acme.cert: avoid IOError on failure.
- **PR #43492:** ([rallytime](#)) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2017-09-15 18:23:49 UTC
 - 3620c15c9a Merge pull request #43492 from rallytime/merge-2017.7
 - 4251ce5a27 Merge branch '2016.11' into '2017.7'
 - * f2b86fa2db Merge pull request #43461 from twangboy/win_norestart
 - 2d269d1a76 Change all comment markers to '#'
 - d80aea16cb Handle ErrorCodes returned by VCRedist installer
 - fb31e9a530 Add /norestart switch to vcredist install
 - * 90e8ca9c36 Merge pull request #43366 from brejoc/2016.11.pidfile-fix
 - 6e3eb76c79 Removed unused format argument
 - daf4948b3d Catching error when PIDfile cannot be deleted
 - * a6c458607a Merge pull request #43442 from garethgreen-away/43386_2016_11_schedule_kwargs_pub
 - e637ecbe86 Merge branch '2016.11' into 43386_2016_11_schedule_kwargs_pub
 - 6114df8dc3 Adding a small check to ensure we do not continue to populate kwargs with __pub__ items from the kwargs item.

- * 3c429299f9 Merge pull request #43456 from rallytime/43445_follow_up
 - 35c1d8898d Add Neon to version list
- * 6db7a721c0 Merge pull request #43441 from meaksh/2016.11-salt-bash-completion-fix
 - be4f26ab21 Use \$HOME to get the user home directory instead using '~' char
- * 05fff44a50 Merge pull request #43445 from rallytime/bump-deprecation-warning
 - c91cd1c6d9 Bump deprecation warning for boto_vpc.describe_route_table
- * c57dc5f0e3 Merge pull request #43432 from rallytime/bp-43419
 - c471a29527 make cache dirs when spm starts
- ISSUE #43479: (haam3r) Mattermost runner failing to retrieve config values due to unavailable config runner (refs: #43513)
- PR #43513: (haam3r) Issue #43479 No runners.config in 2017.7 branch @ 2017-09-15 14:58:27 UTC
 - 8a90c7059b Merge pull request #43513 from haam3r/2017.7
 - 58f7d051c9 Issue #43479 No runners.config in 2017.7 branch
- ISSUE #42926: (nixjdm) network.system not setting hostname in hosts file, preventing sudo. (refs: #43431)
- PR #43431: (mattLLVW) Fix /etc/hosts not being modified when hostname is changed @ 2017-09-13 18:35:55 UTC
 - c3d9e2d9b2 Merge pull request #43431 from mattLLVW/fix-hosts-deb
 - c6320b1dff Merge branch '2017.7' into fix-hosts-deb
 - a3b2e19149 Fix /etc/hosts not being modified when hostname is changed
- PR #43403: (twangboy) Proper timestamp conversion in *redis.lastsave* @ 2017-09-12 21:18:06 UTC
 - a09f289fbb Merge pull request #43403 from twangboy/win_fix_redismod
 - f6da23e1aa Properly handle timestamp conversion
- PR #43463: (twangboy) Add */norestart* switch to vcredist installer @ 2017-09-12 20:29:27 UTC
 - 0eaa5acb72 Merge pull request #43463 from twangboy/win_norestart_2017.7
 - 6984b8fd60 Add /norestart to vcredist installer
- ISSUE #43386: (rajvidhimar) Scheduler's job_kwarg not working as expected. (refs: #43443, #43442)
- PR #43443: (garethgreenaway) [2017.7] Fixes to scheduler __pub values in kwarg @ 2017-09-12 18:14:46 UTC
 - 2fc237a806 Merge pull request #43443 from garethgreenaway/43386_2017_7_schedule_kwarg_pub
 - a29a9855a6 Fixing typo.
 - 2681b7d3fa Merge branch '2017.7' into 43386_2017_7_schedule_kwarg_pub
- ISSUE #39775: (mirceaulinic) Proxy *mine_interval* config ignored (refs: #41547)
- PR #41547: (mirceaulinic) Override proxy minion opts with pillar data @ 2017-09-11 21:47:51 UTC
 - 5378ac7756 Merge pull request #41547 from cloudflare/px_merge_pillar_opts
 - aad39ba665 Document the new opts
 - cdc0d9674a Allow disabling the mines details merge
 - 732b63b0b9 Merge mine details whenever possible
 - 96b31d5643 Override proxy opts with pillar data when required

- fd499887f9 Define new proxy merge pillar in opts... opts
- abab6fd91c Override minion opts with pillar data
- PR #41943: (twangboy) Fix *unit.returners.test_local_cache* for Windows @ 2017-09-11 21:34:03 UTC
 - 08d102c869 Merge pull request #41943 from twangboy/win_unit_test_local_cache
 - 3777b34572 Merge branch '2017.7' into win_unit_test_local_cache
 - 35b79ecde6 Remove *cur* variable, use *time.time()* in comparison
 - 9b61533b09 Get more accurate currnet time in *local_cache*
 - 844e3f65bc Fix unit tests for Windows
- PR #43424: (twangboy) Fix *unit.modules.test_hosts* for Windows @ 2017-09-11 21:28:41 UTC
 - 50ab79f0cb Merge pull request #43424 from twangboy/win_unit_test_hosts
 - 90dcf8287c Fix *unit.modules.test_hosts* for Windows
- PR #42652: (skizunov) Fix *loader.py*'s *raw_mod()* to look in all module dirs @ 2017-09-11 19:43:48 UTC
 - 0f0ed5a093 Merge pull request #42652 from skizunov/develop3
 - d82e406f15 Fix *loader.py*'s *raw_mod()* to look in all module dirs
- PR #43438: (rallytime) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2017-09-11 18:33:39 UTC
 - ca091bc8a4 Merge pull request #43438 from rallytime/merge-2017.7
 - ef7b4242c3 Merge branch '2016.11' into '2017.7'
 - * 57cccd75d0 Merge pull request #43390 from aogier/43387-genesis-qemu
 - 496f14a7e7 forgot to mock the proper one
 - 51c7a1ba00 only check if *static_qemu* is *executable()*
 - 70642e495d better *qemu_static* parameter mangle in *debootstrap* management, tests
 - * 6106aec696 Merge pull request #43356 from gtmanfred/2016.11
 - 3f19b247f3 Add *handler.messages* back in for test comparison
 - 9911b04208 fix test
 - 3c6ae99a77 *never-download* got readded
 - * e638fac54e Merge pull request #43325 from doesitblend/salt-mine-doc-fix
 - 1e94d0ac3a Lint: Remove trailing whitespace
 - 51af8f8757 Fix *mine_interval* phrasing in default file
 - ba0cdd4536 Fix phrasing for *mine_interval* description
 - 9ff03c2d43 Update Salt Mine documentation to show that the *mine_interval* option is configured in minutes.
 - * fc587f784a Merge pull request #43105 from aogier/43086-no-member
 - 5111cf8bad Merge branch '2016.11' into 43086-no-member
 - * d97a680372 Merge pull request #43333 from damon-atkins/2016.11
 - 92de2bb498 Update doco
 - fc9c61d12e Update *win_pkg.py*

- c91fc14704 Merge branch '2016.11' into 2016.11
- cb3af2bbbd Docs are wrong cache_dir (bool) and cache_file (str) cannot be passed on the cli (#2)
- 42a118ff56 fixed cmd composition and unified his making across module
- 3fd59ed369 Adding a small check to ensure we do not continue to populate kwargs with __pub_ items from the kwargs item.
- **PR #43320:** (twangboy) Fix *unit.modules.test_alternatives* for Windows @ 2017-09-11 17:28:00 UTC
 - a9592dd3e2 Merge pull request #43320 from twangboy/win_fix_alternatives
 - a909813fa5 Remove unused import (lint)
 - 3ef8d714cb Fix unit tests to mock salt.utils.path.readlink
 - c0d81aa1ce Use salt.utils.path.readlink
 - 7c4460164b Fix alternatives for Windows
- **PR #43363:** (twangboy) Fix *unit.modules.test_ini_manage* for Windows @ 2017-09-11 17:10:31 UTC
 - 9b89e49846 Merge pull request #43363 from twangboy/scratch_ini_tests
 - a94319a082 Make sure formatting of TEST_FILE_CONTENT matches original
 - 6263bc8983 Remove print statement
 - 79cd3831ae Fix empty value preserved test
 - 85997391f1 Is this handled the same on Linux and Windows
- **PR #43421:** (gtmanfred) Revert "Reduce fileclient.get_file latency by merging _file_find and ... @ 2017-09-11 17:07:18 UTC
 - 673ce387c1 Merge pull request #43421 from gtmanfred/compat
 - f85bf8c18f Revert "Reduce fileclient.get_file latency by merging _file_find and _file_hash"
- **ISSUE #42165:** (arount) top_file_merging_strategy: merge does not works (refs: #43415)
- **PR #43415:** (mattLLVW) Fix env_order in state.py (refs: #43672) @ 2017-09-11 15:18:08 UTC
 - 47d982fd37 Merge pull request #43415 from mattLLVW/fix-env-order
 - f6313a1b2c Merge branch '2017.7' into fix-env-order
 - e93a962980 Fix env_order in state.py
- **PR #43422:** (twangboy) Fix *unit.cloud.clouds.test_ec2* for Windows @ 2017-09-11 15:17:20 UTC
 - e89e23a32e Merge pull request #43422 from twangboy/win_unit_cloud_ec2
 - 1379627334 Fix *unit.cloud.clouds.test_ec2* for Windows
- **PR #43423:** (twangboy) Fix *unit.modules.test_gem* for Windows @ 2017-09-11 15:15:28 UTC
 - 54f833ac59 Merge pull request #43423 from twangboy/win_unit_test_gem
 - b2cea18d13 Fix *unit.modules.test_gem* for Windows
- **PR #43419:** (gtmanfred) make cache dirs when spm starts (refs: #43432) @ 2017-09-11 13:42:50 UTC
 - b3116109e5 Merge pull request #43419 from gtmanfred/2017.7
 - 58378866e5 make cache dirs when spm starts
- **PR #43371:** (rallytime) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2017-09-08 15:39:12 UTC

- 9b27473763 Merge pull request #43371 from rallytime/merge-2017.7
- 7b07b58396 Merge branch '2016.11' into '2017.7'
 - * 0c986f5eba Merge pull request #43361 from rallytime/bp-43329
 - b09e5b4379 Fix #43295, better handling of consul initialization issues
 - * 22287439e6 Merge pull request #42903 from junovitch/issue-35840-fix-preserve-minion-cache-2016.11
 - c9d4fdbd45 Merge branch '2016.11' into issue-35840-fix-preserve-minion-cache-2016.11
 - 93a68e32a5 Merge branch '2016.11' into issue-35840-fix-preserve-minion-cache-2016.11
 - 079f097985 Fix 'preserve_minion_cache: True' functionality (fixes #35840)
 - * 4860e10757 Merge pull request #43360 from terminalmage/sj-496
 - 433bca14b1 Fix KeyError in yumpkg configparser code on Python 3
 - f6c16935d8 Move -showduplicates before repository-packages
 - * 4ba2dbe41e Merge pull request #43244 from rallytime/release-branch-clarifications
 - 0d5a46dbaa Update release branch section with a few more details
 - * 1a012eb3d7 Merge pull request #43359 from gtmanfred/ipaddr
 - 23d9abb560 ipaddr_start ipaddr_end for el7
 - * 8f88111be8 Merge pull request #43247 from rallytime/mentionbot-backports
 - 2b85757d73 Always notify tkwilliams when changes occur on boto files
 - 40b5a29f90 Add basepi to userBlacklist for mention bot
 - bad8f56969 Always notify ryan-lane when changes occur on boto files
- **PR #43398:** (twangboy) Fix *unit.modules.test_mount* for Windows @ 2017-09-08 13:39:29 UTC
 - 97f05ff603 Merge pull request #43398 from twangboy/win_fix_test_mount
 - 4a8d7e522c Fix tests, Use full path to salt.utils.which
- **PR #43399:** (twangboy) Fix *unit.modules.test_pam* for Windows @ 2017-09-08 13:37:50 UTC
 - 6a4cc5c1b0 Merge pull request #43399 from twangboy/win_fix_test_pam
 - 6257aa964a Fix *unit.modules.test_pam* for Windows
- **PR #43400:** (twangboy) Fix *unit.modules.test_parted* for Windows @ 2017-09-08 13:37:00 UTC
 - 2b5cfae3f8 Merge pull request #43400 from twangboy/win_unit_test_parted
 - 8e3e897ee2 Fix *unit.modules.test_parted* for Windows
- **PR #43401:** (twangboy) Fix *unit.modules.test_pw_group* for Windows @ 2017-09-08 13:35:45 UTC
 - 332deeb013 Merge pull request #43401 from twangboy/win_unit_test_pw_group
 - 78e39a1b9d Fix *unit.modules.test_pw_group* for Windows
- **PR #43402:** (twangboy) Fix *unit.modules.test_qemu_nbd* for Windows @ 2017-09-08 13:34:58 UTC
 - c0f54bfef1 Merge pull request #43402 from twangboy/win_unit_test_qemu_nbd
 - 531ce8022b Fix *unit.modules.test_qemu_nbd* for Windows
- **PR #43404:** (twangboy) Fix *unit.modules.test_seed* for Windows @ 2017-09-08 13:32:41 UTC

- be88fbb45f Merge pull request #43404 from twangboy/win_unit_test_seed
- 6ceb895a84 Use os.path.join for paths
- PR #43301: (twangboy) Fix `unit.test_spm` for Windows @ 2017-09-08 13:24:35 UTC
 - 612c6a8756 Merge pull request #43301 from twangboy/win_fix_unit_test_spm
 - 8608a6b303 Merge branch '2017.7' into win_fix_unit_test_spm
 - b8da04c04d Add Mike's changes
 - f36efbd6a7 Fix `unit.test_spm` for Windows
- PR #43372: (skizunov) Fix `system.set_system_time` when no hw clock is present @ 2017-09-07 17:45:33 UTC
 - f959113694 Merge pull request #43372 from skizunov/develop5
 - 281e471853 Fix `system.set_system_time` when no hw clock is present
- PR #43193: (jetttero) Prevent spurious "Template does not exist" error @ 2017-09-06 20:16:58 UTC
 - PR #39516: (jetttero) Prevent spurious "Template does not exist" error (refs: #43193)
 - 6d13535ed0 Merge pull request #43193 from jetttero/template-dne-again
 - cde8aed2cf Merge branch '2017.7' into template-dne-again
- ISSUE #42706: (blarghmatey) Parallel Cache Failure (refs: #43018, #43159)
- PR #43159: (jubrad) Bp 43018 @ 2017-09-05 22:29:16 UTC
 - PR #43056: (damon-atkins) `safe_filename_leaf(file_basename)` and `safe_filepath(file_path_name)` (refs: #43159, #43172)
 - PR #43018: (jubrad) Update `state.py` (refs: #43159, #43727)
 - 015cbc57d9 Merge pull request #43159 from jubrad/bp-43018
 - 25419a56db Merge branch '2017.7' into bp-43018
 - 971b4c0890 Merge branch '2017.7' into bp-43018
 - 4f8e6c65e5 access `safe_filename_leaf` through `utils.files`, changed in #43172
 - 42064883ea `state.py` remove unused `urllib` import
 - 4957268b37 update `state.py` to use `safe_filename_leaf`
 - b8ead879ed Fixing lint issues
 - 446457d017 Swapping `from` for `import`
 - fb80e17400 `state.py`: fix `import` and `utf8` encode before quote
 - 1dcf167bb7 Update `state.py`
- PR #43232: (terminalmage) Improve inheritance in `salt.utils.gitfs` @ 2017-09-05 20:37:06 UTC
 - 6e1b541b46 Merge pull request #43232 from terminalmage/gitfs-inheritance
 - 53bd3a3e23 Improve inheritance in `salt.utils.gitfs`
- PR #43238: (s0undt3ch) Include the line number by default on the log file format @ 2017-09-05 20:31:54 UTC
 - 086b220091 Merge pull request #43238 from s0undt3ch/2017.7
 - 630a1db3ab Include the line number by default on the log file format
- PR #43294: (twangboy) Win build scripts @ 2017-09-05 20:12:54 UTC

- 09dc58cde5 Merge pull request #43294 from twangboy/win_build_scripts
- 9979ccb613 Remove Py2 and Py3 in the same run
- a5d9f85db6 Modifications to build scripts
- **PR #43322:** (rallytime) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2017-09-05 18:21:26 UTC
 - 21ab306ef4 Merge pull request #43322 from rallytime/merge-2017.7
 - b1062f8c15 Merge branch '2016.11' into '2017.7'
 - * 02867fdcd2 Merge pull request #43277 from rallytime/owners-file
 - 2b4da0f0e7 Add CODEOWNERS file
 - * 1c1c484479 Merge pull request #43312 from lordcirth/fix-cron-docs
 - ec94a13750 cron docs: Remind user to use quotes for special strings
 - * 0d1ed4b750 Merge pull request #43290 from lordcirth/fix-file-path-docs
 - 14a4591854 file.py docs: correct group and mode
 - d4214ca283 file.py docs: specify absolute paths
 - * 26ff89539e Merge pull request #43274 from terminalmage/fix-int-types
 - d533877743 Use six.integer_types instead of int
 - * cf21f91fb2 Merge pull request #43271 from twangboy/win_fix_pkg.install
 - 91b062f564 Fix formatting issue, spaces surrounding +
- **PR #43324:** (twangboy) Fix `unit.modules.test_chef` for Windows @ 2017-09-05 16:40:11 UTC
 - 62429c547d Merge pull request #43324 from twangboy/fix_unit.modules.test_chef
 - 5bd5ea042a Fix `unit.modules.test_chef` for Windows
- **PR #43268:** (rallytime) Back-port #43237 to 2017.7 @ 2017-09-01 18:17:13 UTC
 - **PR #43237:** (timka) `.utils.aws.get_location()` expects a dict (refs: #43268)
 - 367668a0a3 Merge pull request #43268 from rallytime/bp-43237
 - 047ad07da4 `.utils.aws.get_location()` expects a dict
- **PR #43270:** (rallytime) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2017-09-01 18:09:46 UTC
 - 02504dd363 Merge pull request #43270 from rallytime/merge-2017.7
 - f8b025f6dc Merge branch '2016.11' into '2017.7'
 - 3a0b02f3ae Merge pull request #43228 from twangboy/win_fix_pkg.install
 - * 13dfabb1ce Fix regex statement, add .
 - * 31ff69f0ad Add underscore to regex search
 - * 3cf2b6575c Fix spelling
 - * ed030a35a5 Use regex to detect salt-minion install
 - * e5daff495a Fix pkg.install
 - b4c689dff5 Merge pull request #43191 from viktorkrivak/fix-apache-config-multi-entity
 - * c15bcbe1cc Merge remote-tracking branch 'upstream/2016.11' into fix-apache-config-multi-entity

- * 4164047951 Fix apache.config with multiple statement At this moment when you post more than one statement in config only last is used. Also file is rewritten multiple times until last statement is written. Example: salt '*' apache.config /etc/httpd/conf.d/ports.conf config="{ 'Listen': '8080', 'Proxy': 'Something' }" Ends only with Proxy Something and ignore Listen 8080, This patch fix this issue.
- b90e59ede9 Merge pull request #43154 from lomeroy/bp-43116-2016.11
- 8f593b0b02 verify that files exist before trying to remove them, win_file.remove raises an exception if the file does not exist
- 33a30bac06 correcting bad format statement in search for policy to be disabled
- acc3d7ac82 correct fopen calls from salt.utils for 2016.11's utils function
- 2da1cdd109 lint fix
- 61bd12c0de track xml namespace to ensure policies w/duplicate IDs or Names do not conflict
- f232bed9f9 add additional checks for ADM policies that have the same ADMX policy ID (#42279)
- ISSUE #42459: (iavael) Broken ldap groups retrieval in salt.auth.ldap after upgrade to 2017.7 (refs: #43283)
- PR #43283: (DmitryKuzmenko) Fix ldap token groups auth. @ 2017-09-01 17:49:46 UTC
 - ece0e393ef Merge pull request #43283 from DSRCorporation/bugs/42459_broken_ldap_groups
 - 3ad6911210 Fix for tests: don't require 'groups' in the eauth token.
 - 1f104cf85b Fix ldap token groups auth.
- PR #43149: (BenoitKnecht) Fix iptables.get_rules when rules contain -nmask or -ctmask @ 2017-09-01 15:57:05 UTC
 - 4f023c4cb6 Merge pull request #43149 from BenoitKnecht/2017.7.1
 - 3c1ddc9bde modules: iptables: correctly parse -nmask/-ctmask
- ISSUE #43258: (nomeelnoj) metadata_server_grains problems (refs: #43265)
- PR #43265: (gtmanfred) make sure meta-data grains work on ec2 @ 2017-09-01 15:31:12 UTC
 - cf2b75bb86 Merge pull request #43265 from gtmanfred/2017.7
 - 04dd8ebdb make sure meta-data grains work on ec2
- PR #43299: (twangboy) Fix unit.netapi.rest_cherry.py.test_tools for Windows @ 2017-09-01 15:13:43 UTC
 - 618b221895 Merge pull request #43299 from twangboy/win_fix_netapi_cherry.py
 - fd74acb603 Merge branch '2017.7' into win_fix_netapi_cherry.py
- PR #43300: (twangboy) Fix unit.netapi.rest_tornado.test_handlers for Windows @ 2017-09-01 13:10:11 UTC
 - aee654da92 Merge pull request #43300 from twangboy/win_fix_netapi_rest_tornado
 - c93d2ed386 Use os.sep instead of '/'
 - 3fbf24b91a Use os.sep instead of '/'
- ISSUE #43259: (mahesh21) NameError: global name '__opts__' is not defined (refs: #43266)
- PR #43278: (gtmanfred) bootstrap can come from dunder @ 2017-08-31 13:31:20 UTC
 - PR #43266: (gtmanfred) switch virtualbox cloud driver to use __utils__ (refs: #43278)
 - aed2975979 Merge pull request #43278 from gtmanfred/virtualbox
 - c4ae2de30f bootstrap can come from dunder

- **PR #42975:** (brejoc) Added unit tests for Kubernetes module @ 2017-08-30 20:30:16 UTC
 - 479e0e06ac Merge pull request #42975 from brejoc/tests-for-kubernetes-module
 - fdad9177b5 Merge branch '2017.7' into tests-for-kubernetes-module
 - c227cb25ad Skipping test on ImportError
 - bd76a870ce Dunder vars are now defined via setup_loader_modules
 - 3c99e61637 Renamed test to match new convention
 - caf78d206d Fixed imports for pytest
 - c8e98c8d8a Added unit tests for Kubernetes module
- **ISSUE #42935:** (BenjaminSchubert) docker_image.present always ends up failing even on correct result. (refs: #43176)
- **PR #43176:** (terminalmage) docker_image states: Handle Hub images prefixed with "docker.io/" @ 2017-08-30 20:08:13 UTC
 - ca7df1d4cf Merge pull request #43176 from terminalmage/issue42935
 - df18a89836 Lint: Remove unused import
 - 7279f98e92 docker_image states: Handle Hub images prefixed with "docker.io/"
 - f7c945f6e4 Prevent spurious "Template does not exist" error

27.2.14 Salt 2017.7.4 Release Notes

Version 2017.7.4 is a bugfix release for 2017.7.0.

Changelog for v2017.7.3..v2017.7.4

Generated at: 2018-05-26 21:48:28 UTC

- **PR #46074:** (Ch3LL) Update 2017.7.4 Release Notes with new fixes @ 2018-02-16 16:47:56 UTC
 - b5b083fd26 Merge pull request #46074 from Ch3LL/update-7.4
 - 8d0eeeb059 Update 2017.7.4 Release Notes with new fixes
- **ISSUE #45790:** (bdarnell) Test with Tornado 5.0b1 (refs: #46066)
- **PR #46066:** (rallytime) Pin tornado version in requirements file @ 2018-02-16 16:40:05 UTC
 - 32f3d00e44 Merge pull request #46066 from rallytime/pin-tornado
 - 6dc1a3b9dc Pin tornado version in requirements file
- **PR #46036:** (terminalmage) git.latest: Fix regression with identity file usage @ 2018-02-16 13:57:23 UTC

- 85761ee650 Merge pull request #46036 from terminalmage/issue43769
- e2140d9a84 Mock the ssh.key_is_encrypted utils func
- 169924b3fe Move ssh.key_is_encrypted to a utils module temporarily
- 54f4d78f7a Only keep ssh.py in the Windows installer
- 5f04531e1b Keep ssh state and execution modules in the installer
- f2b69f703d git.latest: Fix regression with identity file usage
- **PR #46009:** (Ch3LL) Add 2017.7.4 Release Notes with PRs @ 2018-02-13 16:40:30 UTC
 - 6d534c6e7e Merge pull request #46009 from Ch3LL/rn_7.4
 - ac0baf4b34 Add 2017.7.4 Release Notes with PRs
- **ISSUE #45976:** (ghost) 6a5e0f9 introduces regression that breaks Vault module for salt masterless (refs: #45981)
- **PR #45981:** (gtmanfred) use local config for vault when masterless @ 2018-02-13 15:22:01 UTC
 - ca76a0b328 Merge pull request #45981 from gtmanfred/2017.7.3
 - 0d448457dc apparently local is not set by default
 - 2a92f4bc16 use local config for vault when masterless
- **ISSUE #45915:** (MatthiasKuehneEllerhold) 2017.7.3: Salt-SSH & Vault Pillar: Permission denied "minion.pem" (refs: #45928)
- **PR #45953:** (rallytime) Back-port #45928 to 2017.7.3 @ 2018-02-09 22:29:10 UTC
 - **PR #45928:** (garethgreenaway) [2017.7] Fixing vault when used with pillar over salt-ssh (refs: #45953)
 - 6530649dbc Merge pull request #45953 from rallytime/bp-45928-2017.7.3
 - 85363189d1 Fixing vault when used with pillar over salt-ssh
- **ISSUE #45893:** (CrackerJackMack) archive.extracted ValueError "No path specified" in 2017.7.3 (refs: #45902)
- **PR #45934:** (rallytime) Back-port #45902 to 2017.7.3 @ 2018-02-09 16:31:08 UTC
 - **PR #45902:** (terminalmage) Check the effective saltenv for cached archive (refs: #45934)
 - fb378cebb0 Merge pull request #45934 from rallytime/bp-45902
 - bb83e8b345 Add regression test for issue 45893
 - cdda66d759 Remove duplicated section in docstring and fix example
 - 4b6351cda6 Check the effective saltenv for cached archive
- **PR #45935:** (rallytime) Back-port #45742 to 2017.7.3 @ 2018-02-09 14:02:26 UTC
 - **PR #45742:** (marccardinal) list.copy() is not compatible with python 2.7 (refs: #45935)
 - 0d74151c71 Merge pull request #45935 from rallytime/bp-45742
 - 6a0b5f7af3 Removed the chained copy
 - ad1150fad4 list.copy() is not compatible with python 2.7

27.2.15 Salt 2017.7.5 Release Notes

Version 2017.7.5 is a bugfix release for 2017.7.0.

Statistics

- Total Merges: 213
- Total Issue References: 58
- Total PR References: 202
- Contributors: 52 (Ch3LL, DmitryKuzmenko, GwiYeong, L4rS6, SteffenKockel, The-Loeki, amendlik, andrea-spe, angeloudy, aphor, bdrung, cebe, ciiqr, damon-atkins, danlsgiga, ddoh94, dmurphy18, dwoz, eliasp, frogunder, garethgreenaway, gclinch, gtmanfred, jfindlay, kstreee, marccardinal, mcalmer, mchugh19, meaksh, michelsen, nullify005, oarmstrong, oeuftete, philpep, racker-markh, rallytime, redbaron4, roaldnefs, rongshengfang, rongzeng54, rroo, samilaine, samodid, skizunov, terminalmage, tintoy, twangboy, viktordaniel, vutny, while0pass, whytewolf, zer0def)

Changes to `file.blockreplace` State

The `append_newline` argument was added to this state. Additionally, to improve idempotence, if the string represented by `marker_end` is found in the middle of the line, the content preceding the marker will be removed when the block is replaced. This allows one to remove `append_newline: False` from the SLS and have the block properly replaced if the end of the content block is immediately followed by the `marker_end` (i.e. no newline before the marker).

Note: This will require changes to your SLS if your `marker_end` does not include the very beginning of the content you want to keep.

See the `file.blockreplace` state documentation for further information.

Changelog for v2017.7.4..v2017.7.5

Generated at: 2018-05-26 21:50:00 UTC

- **PR #46612:** (Ch3LL) Add changelog to 2017.7.5 release notes @ 2018-03-19 20:47:38 UTC
 - 19bb725698 Merge pull request #46612 from Ch3LL/7.5_rn
 - 6076bfa2ee Add changelog to 2017.7.5 release
- **PR #46572:** (dmurphy18) Addition of `-sa` flag to allow for revision numbers other than `-0` or `-1` @ 2018-03-19 20:07:26 UTC
 - 31c78aef11 Merge pull request #46572 from dmurphy18/update_xxxbuild
 - c87511570d Merge branch '2017.7.5' into update_xxxbuild
- **ISSUE** saltstack/salt-jenkins#884: (gtmanfred) [2017.7.5][Fedora 27][py2/py3] integration.states.test_npm.NpmStateTest.test_npm_install_url_referenced_package (refs: #46577)
- **PR #46577:** (gtmanfred) Fix npm issue @ 2018-03-19 11:51:04 UTC
 - cdd768fa4d Merge pull request #46577 from gtmanfred/2017.7.5
 - 78cbf7b5cd Fix npm issue
 - c76f7eb028 enable debug logging on the minionlog
- **PR #46551:** (terminalmage) Fix failing pkg integration test on OpenSUSE @ 2018-03-19 11:50:12 UTC
 - e6682c660c Merge pull request #46551 from terminalmage/salt-jenkins-885

- 703b5e7e65 Change versionadded to show that 2018.3.0 will not have this function
- 010d260d06 Rewrite failing Suse pkg integration test
- f3f5dec239 zypper.py: fix version argument being ignored
- 214f2d6ad3 Add pkg.list_repo_pkgs to zypper.py
 - * 0a541613f2 Additon of -sa flag to allow for revision numbers other than -0 or -1
- **ISSUE** [saltstack/salt-jenkins#886](#): ([gtmanfred](#)) [2017.7.5][Fedora 26/Ubuntu 17.10][py3] integration.states.test_pip.PipStateTest.test_46127_pip_env_vars (refs: [#46563](#))

- **PR** [#46337](#): ([gtmanfred](#)) Fix using names with listen and listen_in @ 2018-03-12 18:50:00 UTC
 - [22d753364b](#) Merge pull request [#46337](#) from [gtmanfred/2017.7](#)
 - [d6d9e36359](#) add tests for names and listen/listen_in
 - [3f8e0db572](#) let listen_in work with names
 - [7161f4d4df](#) fix listen to be able to handle names

- **PR #46413:** (meaksh) Explore 'module.run' state module output in depth to catch "result" properly @ 2018-03-12 18:49:07 UTC
 - b7191b8782 Merge pull request #46413 from meaksh/2017.7-explore-result-in-depth
 - 885751634e Add new unit test to check state.apply within module.run
 - 9f19ad5264 Rename and fix recursive method
 - 1476ace558 Fix Python3 and pylint issue
 - 726ca3044d Explore 'module.run' response to catch the 'result' in depth
- **PR #46496:** (gtmanfred) more test kitchen clean up @ 2018-03-12 18:28:34 UTC
 - 02a79a2014 Merge pull request #46496 from gtmanfred/kitchen
 - da002f78d0 include virtualenv path for py3 windows
 - fe2efe03ea remove duplicate setup
- **ISSUE #46329:** (bdrung) test_create_deployments fails with python-kubernetes 4.0.0 (refs: #46330)
- **PR #46330:** (bdrung) Fix ValueError for template in AppsV1beta1DeploymentSpec @ 2018-03-12 16:56:18 UTC
 - 5c4c182d75 Merge pull request #46330 from bdrung/fix_kubernetes_test_create_deployments
 - 5008c53c44 Fix ValueError for template in AppsV1beta1DeploymentSpec
- **ISSUE #46479:** (rongshengfang) boto_ec2.instance_present throwing KeyError exception when associating EIP to an existing instance (refs: #46482)
- **PR #46482:** (rongshengfang) Fix KeyError in salt/states/boto_ec2.py @ 2018-03-12 15:13:13 UTC
 - c7e05d3ff4 Merge pull request #46482 from rongshengfang/fix-keyerror-in-instance_present
 - ed8c83e89a Fix KeyError in salt/states/boto_ec2.py when an EIP is being associated to an existing instance with the instance_present state.
- **PR #46463:** (terminalmage) Update requirements files to depend on mock>=2.0.0 @ 2018-03-09 19:24:41 UTC
 - 573d51afec Merge pull request #46463 from terminalmage/mock-2.0
 - b958b4699c Update requirements files to depend on mock>=2.0.0
- **ISSUE #46299:** (gclinch) debconf module fails on Python 3 (refs: #46300)
- **PR #46422:** (rallytime) Back-port #46300 to 2017.7 @ 2018-03-09 19:19:25 UTC
 - **PR #46300:** (gclinch) Python 3 support for debconfmod (fixes #46299) (refs: #46422)
 - a154d35fc7 Merge pull request #46422 from rallytime/bp-46300
 - 829dfde8e8 Change stringutils path to old utils path for 2017.7
 - 91db2e0782 Python 3 support
- **PR #46320:** (mcalmer) add warning about future config option change @ 2018-03-09 17:48:29 UTC
 - 2afaca17a1 Merge pull request #46320 from mcalmer/warn-kubernetes
 - c493ced415 add warning about future config option change
- **PR #46449:** (bdrung) Make documentation theme configurable @ 2018-03-09 17:47:15 UTC
 - c7f95581e3 Merge pull request #46449 from bdrung/make-doc-theme-configurable
 - 4a5da2d144 Make documentation theme configurable
- **PR #46162:** (rallytime) Add team-suse to CODEOWNERS file for zypper files @ 2018-03-09 17:46:13 UTC

- 10ce0e9e20 Merge pull request #46162 from rallytime/team-suse-zypper-owner
- 13a295a3b7 Add *pkg* and *snapper* to team-suse
- 35c7b7b0d3 Add btrfs, xfs, yumpkg, and kubernetes file to team-suse
- 485d777ac0 Add team-suse to CODEOWNERS file for zypper files
- PR #46434: (gtmanfred) split return key value correctly @ 2018-03-09 17:45:21 UTC
 - cac096b311 Merge pull request #46434 from gtmanfred/highstate_return
 - d18f1a55a7 fix pylint
 - 9e2c3f7991 split return key value correctly
- ISSUE #44452: (konstest) salt-cloud can't create snapshots, because there is a bug in the Unicode name of the virtual machine (refs: #46455)
- PR #46455: (whyte wolf) .format remove fix for #44452 @ 2018-03-09 17:37:19 UTC
 - 7dd71101ce Merge pull request #46455 from whyte wolf/Issue_44452_unicode_cloud
 - 5fe474b1a8 .format remove fix for #44452
- PR #46428: (twangboy) Fix issue with dev env install on Windows @ 2018-03-09 14:52:46 UTC
 - 4c8d9026d3 Merge pull request #46428 from twangboy/win_fix_reqs
 - e7ab97cc17 Remove six as a hard dep for Salt
 - cc67e5c2ef Set six to 1.11.0
- PR #46454: (gtmanfred) fix windows for kitchen @ 2018-03-08 21:19:31 UTC
 - e834d9a63b Merge pull request #46454 from gtmanfred/kitchen
 - b8ab8434a5 fix windows for kitchen
- ISSUE #46451: (gmacon) SPM fails to start with customized cache location (refs: #46452)
- PR #46452: (gtmanfred) make spm cache_dir instead of all cachedirs @ 2018-03-08 21:12:20 UTC
 - 2886dca88f Merge pull request #46452 from gtmanfred/spm_cache_dir
 - 169cf7a4e2 make spm cache_dir instead of all cachedirs
- PR #46446: (bdrung) Fix various typos @ 2018-03-08 21:11:47 UTC
 - a188984cd9 Merge pull request #46446 from bdrung/fix-typos
 - 7e6e80be87 heat: Fix spelling mistake of environment
 - a3c54b50f6 Fix various spelling mistakes
- ISSUE #20581: (notpeter) Many environments: one pillar_root (all your envs are belong to base) (refs: #46309)
- PR #46309: (bdrung) Support dynamic pillar_root environment @ 2018-03-08 19:15:35 UTC
 - e35fc5263c Merge pull request #46309 from bdrung/dynamic-pillarenv
 - 584b451fd1 Support dynamic pillar_root environment
- ISSUE #44032: (PhilippeAB) blockreplace marker_end isn't applied with newline (refs: #46430)
- PR #46430: (terminalmage) Improve reliability/idempotence of file.blockreplace state @ 2018-03-08 15:41:38 UTC
 - 35fe9827fe Merge pull request #46430 from terminalmage/issue44032
 - f9f187e915 Improve reliability/idempotence of file.blockreplace state

- **PR #46429:** (twangboy) Fix problem with `__virtual__` in `win_snmp` @ 2018-03-07 23:26:46 UTC
 - 2bad0a21c0 Merge pull request #46429 from twangboy/win_fix_snmp
 - 8995a9b8de Fix problem with `__virtual__` in `win_snmp`
- **PR #46100:** (jfindlay) Handle IPv6 scope parameter in `resolv.conf` @ 2018-03-07 19:51:20 UTC
 - 93a572f229 Merge pull request #46100 from jfindlay/resolv_scope
 - d5561bedaf tests.unit.grains.core add scoped IPv6 nameserver
 - 4e2e62d508 salt.utils.dns parse scope param for ipv6 servers
- **PR #46420:** (bdrung) Fix SSH client exception if SSH is not found @ 2018-03-07 17:49:00 UTC
 - 5acc1d5c54 Merge pull request #46420 from bdrung/2017.7
 - e48c13d9e0 Fix SSH client exception if SSH is not found
- **PR #46379:** (angeloudy) TypeError: a bytes-like object is required, not 'str' @ 2018-03-07 15:00:47 UTC
 - ca6a76e317 Merge pull request #46379 from angeloudy/2017.7
 - 3acb59c74c Merge branch '2017.7' into 2017.7
 - d971e0c08b Fix indent
 - 269514683f Update http.py
 - 908c040ac3 Update http.py
 - 51ba3c135b Update http.py
 - 14aba24111 fix bytes-object required error in python 3
- **PR #46404:** (gtmanfred) get 2017.7 ready to switch over to the new jenkins @ 2018-03-07 14:29:30 UTC
 - 73f9233557 Merge pull request #46404 from gtmanfred/kitchen
 - c56baa95a8 clone .git for the version tests
 - 3620611b5b fix unhold package for debian
 - 5219f7d2ba fix minion log path
- **ISSUE #46192:** (asymetrixs) salt-log-setup: AttributeError 'NoneType' object has no attribute 'flush' (refs: #46310)
- **PR #46310:** (twangboy) Update the Windows installer build scripts @ 2018-03-06 20:21:58 UTC
 - ca28cfd4e4 Merge pull request #46310 from twangboy/win_update_installer_build
 - bcf8b19566 Update the installer build
- **PR #46316:** (twangboy) Fix issues with the DSC module @ 2018-03-06 20:16:18 UTC
 - deccccbeca3 Merge pull request #46316 from twangboy/win_fix_dsc
 - 2042d33d59 Fix issues with the DSC module
- **PR #46394:** (Ch3LL) Add mac py2 and py3 packages to mac installation docs @ 2018-03-06 16:45:30 UTC
 - 95586678c3 Merge pull request #46394 from Ch3LL/mac_doc
 - 158add6661 change oxdownload to oxdownload-{python_version}
 - 21aa848c89 Add mac py2 and py3 packages to mac installation docs
- **ISSUE #44831:** (kivoli) cmd.wait deprecated but cannot replicate conditional execution with onchanges (refs: #46338)

- **PR #46338:** (rallytime) Remove cmd.wait deprecation reference in docs @ 2018-03-05 21:48:52 UTC
 - 07b5d09ac1 Merge pull request #46338 from rallytime/fix-44831
 - 90771da999 Remove cmd.wait deprecation reference in docs
- **ISSUE #42438:** (ajoaugustine) Failed to send message: hipchat-message (refs: #46333)
- **PR #46333:** (danlsgiga) Fixes color parameter mismatch and handles 204 responses correctly @ 2018-03-05 19:42:26 UTC
 - 3849e7a085 Merge pull request #46333 from danlsgiga/issue-42438
 - 3b13f37b44 Revert changes in the code and change docs instead
 - 38114a65d8 Fixes color parameter mismatch and handles 204 responses correctly
- **ISSUE #44935:** (grinapo) module.file.replace string seems to be mutated into arrays (refs: #46322)
- **PR #46322:** (terminalmage) yamlify_arg: don't treat leading dashes as lists @ 2018-03-05 15:40:17 UTC
 - a8f2f1b063 Merge pull request #46322 from terminalmage/issue44935
 - 85ac6a9893 yamlify_arg: don't treat leading dashes as lists
- **PR #46327:** (samilaine) Modify the way a FQDN is handled in the vmware cloud provider. @ 2018-03-05 15:35:37 UTC
 - da5c282cb2 Merge pull request #46327 from samilaine/fix-vmware-cloud-fqdn
 - 4b8dfb326f Modify the way a FQDN is handled in the vmware cloud provider.
- **PR #46318:** (terminalmage) Skip type-checking for several gitfs/git_pillar/winrepo params @ 2018-03-05 15:04:27 UTC
 - 78c45d3786 Merge pull request #46318 from terminalmage/squelch-warnings
 - 5889b36646 Skip type-checking for several gitfs/git_pillar/winrepo params
- **ISSUE #45535:** (whytewolf) module_dirs left out salt-ssh, leaving custom ext_pillars and modules out of salt-ssh (refs: #46312)
- **PR #46312:** (gtmanfred) add module_dirs to salt ssh thin tarball @ 2018-03-05 15:00:48 UTC
 - bb0d6fc263 Merge pull request #46312 from gtmanfred/2017.7
 - 749ae580ed add module_dirs to salt ssh thin tarball
- **ISSUE #46127:** (redbaron4) pip.installed does not pass env_vars when calling freeze to check if package is already installed (refs: #46242)
- **PR #46242:** (redbaron4) Pass env_vars to pip.freeze @ 2018-03-05 14:53:13 UTC
 - 88b5f7383d Merge pull request #46242 from redbaron4/fix-46127
 - 06dba51617 Make changes from review
 - 727ebe1056 Merge branch '2017.7' into fix-46127
 - 08d1ee8baf Fix Python3 test errors
 - aa9d709015 Pass env_vars to pip.freeze
- **PR #46265:** (Ch3LL) Add username/password to profitbricks conf for cloud tests @ 2018-03-02 21:40:22 UTC
 - a0716643e4 Merge pull request #46265 from Ch3LL/profit_cloud
 - d4893eab4c Add username/password to profitbricks conf for cloud tests
- **PR #46306:** (rallytime) Back-port #46256 to 2017.7 @ 2018-03-02 21:37:26 UTC

- PR #46256: (rallytime) Don't install msgpack 0.5.5 (refs: #46306)
- ed7bffa7e0 Merge pull request #46306 from rallytime/bp-46256
- 6439bce4a8 Don't install msgpack 0.5.5
- PR #46208: (terminalmage) Blacklist os.umask @ 2018-03-02 18:46:07 UTC
 - 8c2c4e3316 Merge pull request #46208 from terminalmage/audit-umask-usage
 - 9c92aadce8 Disable blacklisted-function check for legitimate uses
 - 58a11aaa26 Disable pylint check in salt-ssh shim
 - ecadf67659 Blacklist os.umask
 - 31b1d98fcb Replace direct use of os.umask with use of existing context manager
 - 82ce546e18 Prevent failed os.makedirs from leaving modified umask in place
- PR #46293: (eliasp) Fix Python3 comparison *TypeError* in *salt.modules.upstart* @ 2018-03-02 16:36:10 UTC
 - PR #44624: (eliasp) Fix Traceback when using the *service.enabled* state on non-booted systems (refs: #46293)
 - 978e869490 Merge pull request #46293 from eliasp/2017.7-44624-py3-compat
 - 2e08b0d9c8 Fix Python3 comparison *TypeError* in *salt.modules.upstart*
- ISSUE #46128: (Boulet-) Mountpoint in *git_pillar* (refs: #46264)
- PR #46264: (terminalmage) Fix incorrect merge conflict resolution @ 2018-03-02 14:21:13 UTC
 - bee4a66d0c Merge pull request #46264 from terminalmage/issue46128
 - 68000b7211 Fix incorrect merge conflict resolution
- PR #46296: (vutny) [DOC] Add missing params to *pillar.get* docstring @ 2018-03-02 14:19:41 UTC
 - 1e0b3aa348 Merge pull request #46296 from vutny/doc-pillar-get
 - 1faa8331e1 [DOC] Add missing params to *pillar.get* docstring
- PR #45874: (GwiYeong) fix for local client timeout bug @ 2018-03-01 19:39:35 UTC
 - c490a50452 Merge pull request #45874 from GwiYeong/2017.7-local-client-hotfix
 - 949aefc82b Merge branch '2017.7' into 2017.7-local-client-hotfix
 - 45d663f435 fix for local client timeout bug
- PR #46261: (rallytime) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2018-03-01 17:55:23 UTC
 - 8e8a3a2897 Merge pull request #46261 from rallytime/merge-2017.7
 - 8256ae5ee5 Merge branch '2016.11' into '2017.7'
 - * 140ef4d6b9 Merge pull request #46253 from rallytime/doc-banners
 - 07ed8c7db3 Update docbanner for SaltConf18
 - * 9fe86ee520 Merge pull request #46179 from wedge-jarrad/cifs-remount-fix
 - 9ca25c4313 Add credentials and secretfile to mount.mounted mount_invisible_keys
- ISSUE #44046: (t2b) *docker_container.running* states fail if the argument *ulimits* is set and a watch requisite is triggered (refs: #46276)
- PR #46276: (terminalmage) *salt.utils.docker.translate_input*: operate on deepcopy of *kwargs* @ 2018-03-01 15:37:44 UTC

- 88a3166589 Merge pull request #46276 from terminalmage/issue44046
 - a14d4daf8c salt.utils.docker.translate_input: operate on deepcopy of kwargs
- **ISSUE #46182:** (oeuftete) docker_container.running is sensitive to HostConfig Ulimits ordering (refs: #46183)
- **PR #46183:** (oeuftete) Fix docker_container.running HostConfig Ulimits comparison @ 2018-02-28 22:22:11 UTC
 - da60399b8f Merge pull request #46183 from oeuftete/fix-docker-container-running-host-config-ulimits
 - 5b09644429 Sort lists from Ulimits before comparing
 - 0b80f02226 Update old dockerng doc ref
- **ISSUE #46259:** (terminalmage) git_pillar_branch overrides branch defined in git_pillar configuration (refs: #46260)
- **ISSUE #46258:** (terminalmage) git_pillar_base doesn't work for values when PyYAML loads them as int/float (refs: #46260)
- **PR #46260:** (terminalmage) Normalize global git_pillar/winrepo config items @ 2018-02-28 22:05:26 UTC
 - 509429f08c Merge pull request #46260 from terminalmage/git_pillar
 - b1ce2501fd Normalize global git_pillar/winrepo config items
- **PR #46101:** (jfindlay) In OpenRC exec module, make sure to ignore retcode on status @ 2018-02-28 20:01:37 UTC
 - a97a3e6fb0 Merge pull request #46101 from jfindlay/openrc_ret
 - 2eef3c65a6 tests.unit.modules.gentoo_service add retcode arg
 - 81ec66fd8b modules.gentoo_service handle stopped retcode
- **PR #46254:** (rallytime) Update enterprise banner @ 2018-02-28 19:54:03 UTC
 - 1a17593c05 Merge pull request #46254 from rallytime/enterprise-banner
 - f5fae3dedf Update enterprise banner
- **PR #46250:** (terminalmage) Add documentation to the fileserver runner @ 2018-02-28 18:53:49 UTC
 - 8c50ff32bd Merge pull request #46250 from terminalmage/runner-docs
 - 91b4895087 Add documentation to the fileserver runner
- **ISSUE #46215:** (racker-markh) salt-cloud will only intermittently build rackspace cloud instances with purely private networks (refs: #46243)
- **PR #46243:** (racker-markh) Don't ignore 'private_ips' unnecessarily @ 2018-02-28 15:28:29 UTC
 - 53067cca43 Merge pull request #46243 from racker-markh/fix-openstack-private-network-issue
 - 50c1e140f0 Don't check deny private_ips already in the original list of private_ips
- **ISSUE #46109:** (rombert) archive.extracted takes a long time (> 4 minutes) even though directory exists (refs: #46239)
- **PR #46239:** (terminalmage) archive.extracted: don't check source file when if_missing path exists @ 2018-02-28 15:01:36 UTC
 - 15405c8760 Merge pull request #46239 from terminalmage/issue46109
 - 586d8b0dcf archive.extracted: don't check source file when if_missing path exists
- **PR #46221:** (terminalmage) Fix hanging tests in integration suite @ 2018-02-27 21:32:25 UTC

- 633e1208e4 Merge pull request #46221 from terminalmage/salt-jenkins-854
- 0eb012659c Fix hanging tests in integration suite
- **PR #46214:** (vutny) [DOC] Replace *note* rST block for GitHub @ 2018-02-27 17:42:37 UTC
 - 7917277345 Merge pull request #46214 from vutny/formulas-readme-formatting
 - d702846961 [DOC] Replace *note* rST block for GitHub
- **PR #46203:** (Ch3LL) Add 2017.7.5 Release Notes File @ 2018-02-26 21:17:48 UTC
 - a2e099b744 Merge pull request #46203 from Ch3LL/7.5_release
 - 6ddf3246ce Add 2017.7.5 Release Notes File
- **PR #46201:** (rallytime) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2018-02-26 18:56:47 UTC
 - 973b227818 Merge pull request #46201 from rallytime/merge-2017.7
 - 9ac2101baa Merge branch '2016.11' into '2017.7'
 - a4c5417d23 Merge pull request #46132 from rallytime/2016.11_update_version_doc
 - * d2196b6df3 Update release versions for the 2016.11 branch
- **ISSUE #34423:** (bdrung) oscodename wrong on Debian 8 (jessie) (refs: #46139)
- **PR #46139:** (bdrung) Add os grains test cases for Debian/Ubuntu and fix oscodename on Ubuntu @ 2018-02-26 16:44:04 UTC
 - 89cf2e5061 Merge pull request #46139 from bdrung/os-grains
 - 0b445f2a37 tests: Add unit tests for `_parse_os_release()`
 - f6069b77ed Fix osfinger grain on Debian
 - 8dde55a761 tests: Add `os_grains` test cases for Debian
 - ff02ab9937 tests: Add Ubuntu 17.10 (artful) `os_grains` test case
 - 77d5356aba Fix incorrect oscodename grain on Ubuntu
 - 7e62dc9fd2 tests: Support reading `os-release` files from disk
 - a92ec0db1b Make `_parse_os_release()` always callable
 - eee1fe5b38 tests: Dissolve `_run_ubuntu_os_grains_tests`
 - 1d6ef731fe tests: Deduplicate `_run_os_grains_tests()`
- **PR #46133:** (rallytime) Update release versions for the 2017.7 branch @ 2018-02-26 16:42:43 UTC
 - c8c71e75ca Merge pull request #46133 from rallytime/2017.7_update_version_doc
 - 0ed338e643 Update release versions for the 2017.7 branch
- **ISSUE #46124:** (moremo) GitFS saltenv ref won't pick up multiple of the same ref (refs: #46185)
- **PR #46185:** (terminalmage) gitfs: Fix detection of base env when its ref is also mapped to a different env @ 2018-02-26 14:52:16 UTC
 - 390d592aa6 Merge pull request #46185 from terminalmage/issue46124
 - 3b58dd0da0 gitfs: Fix detection of base env when its ref is also mapped to a different env
- **PR #46148:** (rallytime) [2017.7] Merge forward from 2017.7.3 to 2017.7 @ 2018-02-23 19:21:38 UTC
 - 705caa8cca Merge pull request #46148 from rallytime/merge-2017.7
 - 25deebf7a6 Merge branch '2017.7.3' into '2017.7'

- **PR #46137:** (damon-atkins) [2017.7] update ec2 pillar arguments with better names @ 2018-02-23 13:32:04 UTC
 - **PR #45878:** (damon-atkins) ec2_pillar update to fix finding instance-id (refs: #46137)
 - 10a47dcbc4 Merge pull request #46137 from damon-atkins/2017.7_fix_ec2_pillar2
 - 99e7f6a7d3 update ec2 pillar arguments with better names
- **ISSUE #46004:** (github-abcde) opts file_roots gets overwritten with pillar_roots in orchestration run (refs: #46145)
- **PR #46145:** (terminalmage) 3 small fixes for runners/orchestration @ 2018-02-22 22:11:11 UTC
 - d74cb14557 Merge pull request #46145 from terminalmage/issue46004
 - 467ff841cd pillarenv argument should default to None and not the value from opts
 - 2a185855ea Better solution for fixing the opts munging in pillar.show_pillar runner
 - e2c4702e0c Update tests to reflect changes to the SaltCacheLoader
 - f9301fcc34 Document behavior when orchestration runner invoked with non-orch states
 - 9644579cd0 Instantiate the SaltCacheLoader's fileclient in the __init__
 - f9a6c86e21 salt.runners.pillar.show_pillar: don't modify master opts
 - e0940a9fc4 Properly detect use of the state.orch alias and add orch jid to kwargs
- **PR #46135:** (rallytime) Back-port #46088 to 2017.7 @ 2018-02-22 15:11:14 UTC
 - **PR #46088:** (rongzeng54) fix kernel subpackages install bug (refs: #46135)
 - 0398ce0482 Merge pull request #46135 from rallytime/bp-46088
 - 57a60f62a3 fix kernel subpackages install bug
- **ISSUE #45837:** (johje349) Salt Cloud does not recognise all Digitalocean sizes (refs: #46115)
- **PR #46136:** (rallytime) Back-port #46115 to 2017.7 @ 2018-02-21 19:17:23 UTC
 - **PR #46115:** (samodid) update digitalocean salt-cloud driver (refs: #46136)
 - 1fcbbd1e02 Merge pull request #46136 from rallytime/bp-46115
 - 0a481d707f update digitalocean salt-cloud driver
- **PR #45911:** (twangboy) LGPO Module: Convert reg values to unicode for debug @ 2018-02-21 19:02:17 UTC
 - 11e5e8eb86 Merge pull request #45911 from twangboy/win_fix_lgpo_unicode
 - bcde5cc625 Update log statement
 - e9fa53d3b7 Change the Invalid Data Message
 - c818d4b791 Convert reg values to unicode for debug
- **ISSUE #46085:** (zmedico) 2017.7.3 salt master with "open_mode: True" becomes unresponsive if minion submits empty public key (refs: #46123)
- **PR #46123:** (gtmanfred) If no pubkey is passed in openmode fail @ 2018-02-21 19:01:47 UTC
 - 524a6a72a0 Merge pull request #46123 from gtmanfred/2017.7
 - 8d36730ef7 If no pubkey is passed in openmode fail
- **PR #46131:** (vutny) [DOC] Fix code-blocks for reStructuredText @ 2018-02-21 15:47:05 UTC
 - e48fa58012 Merge pull request #46131 from vutny/doc-formula-formatting
 - d8fb051e44 [DOC] Fix code-blocks for reStructuredText

- **ISSUE #42763:** (xuhcc) acme.cert state falsely reports about renewed certificate (refs: #44603)
- **ISSUE #40208:** (bewing) Inconsistent state return when test=True (refs: #44603)
- **PR #46118:** (rallytime) Back-port #44603 to 2017.7 @ 2018-02-21 15:21:42 UTC
 - **PR #44603:** (oarmstrong) Fix acme state to correctly return on test (refs: #46118)
 - 6cea44ee95 Merge pull request #46118 from rallytime/bp-44603
 - 2a2c23c66b Fix acme state to correctly return on test
- **PR #46121:** (rallytime) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2018-02-21 10:07:18 UTC
 - 16c382b55b Merge pull request #46121 from rallytime/merge-2017.7
 - 4c2f504a85 Merge branch '2016.11' into '2017.7'
 - * e197a0fbc5 Merge pull request #46076 from rallytime/bp-46066
 - b94d73c53e Pin tornado version in requirements file
 - * c72c1bde5f Merge pull request #46093 from wedge-jarrad/contributing-doc-typo
 - 5a0fe104f7 Fix contributing doc typo
 - * 3cb83ea87e Merge pull request #45992 from bgridley/fix-routes-present-state
 - 679787699c Add vpc_peering_connection_id to describe_route_tables route_keys
 - * 8a60635da0 Merge pull request #46000 from terminalmage/issue45910
 - 8cf13325ee salt.states.reg.present: Prevent traceback when reg data is binary
 - * 1f44e285dc Merge pull request #46011 from terminalmage/fix-solaris-runas
 - 8ee0a3a28b Move Solaris USER workaround up a bit
 - 13cdb52690 cmdmod.py: runas workaround for platforms that don't set a USER env var
 - * 30fb8f7be0 Merge pull request #45467 from twangboy/win_exclude_hidden
 - ea41215646 Make the regex pattern less greedy
 - 6d223cfa7 Add tip about passing bogus saltenv
 - 1282ae3a93 Skip hidden first
 - 437a457911 Skip hidden dirs in genrepo
 - 87dc554dc3 Add final updates to docs
 - 3646d5c897 Fix some docs formatting, add some warnings
 - 35c81faf5a Log the source_dir when caching the files
 - 91c3da8dfd Improve docs for pkg.refresh_db
 - 4803d92707 Add some documentation
 - 08b82e0875 Fix lint error, use raw
 - 2f712691cf Exclude hidden directories in pkg.refresh_db
- **ISSUE #46106:** (amendlik) yumpkg.refresh_db hangs (refs: #46107)
- **PR #46107:** (amendlik) Add -assumeeyes on YUM/DNF commands @ 2018-02-20 22:52:06 UTC
 - b92346645b Merge pull request #46107 from amendlik/yumpkg-assumeeyes
 - 8d9a432fb2 Add -assumeeyes to yum/dnf commands in yumpkg.refresh_db

- **PR #46094:** (kstreee) Fix memory leak @ 2018-02-20 21:36:02 UTC
 - 14fe423e0c Merge pull request #46094 from kstreee/fix-memory-leak
 - 48080a1bae Fixes memory leak, saltclients should be cleaned after used.
 - aba00805f4 Adds set_close_callback function to removes stream instance after closed from a set streams.
- **ISSUE #13:** (thatch45) Expand the stats module (refs: #46097)
- **PR #46097:** (vutny) [DOC] Put https link to the formulas doc page @ 2018-02-20 17:07:39 UTC
 - 320c2037e1 Merge pull request #46097 from vutny/fix-https-link
 - 2062fd0e5c [DOC] Put https link to the formulas doc page
- **PR #46103:** (bdrung) Fix skipping Kubernetes tests if client is not installed @ 2018-02-20 16:33:42 UTC
 - 0eb137fb4e Merge pull request #46103 from bdrung/2017.7
 - dd3f936557 Fix skipping Kubernetes tests if client is not installed
- **PR #46070:** (Ch3LL) add required arg to dns_check jinja doc example @ 2018-02-16 20:00:44 UTC
 - c3a938e994 Merge pull request #46070 from Ch3LL/fix-doc-dns
 - 2a5d855d97 add required arg to dns_check jinja doc example
- **PR #46067:** (rallytime) Back-port #45994 to 2017.7 @ 2018-02-16 19:55:27 UTC
 - **PR #45994:** (nullify005) Fix hosted zone Comment updates & quote TXT entries correctly (refs: #46067)
 - 01042e9d77 Merge pull request #46067 from rallytime/bp-45994
 - a07bb48726 Correct formatting for lint
 - e8678f633d Fix Comment being None not ” and inject quotes into the TXT ChangeRecords
- **ISSUE #42932:** (bobrik) cmd.run with bg: true doesn't fail properly (refs: #45932)
- **PR #45932:** (The-Loeki) Fix cmd run_all bg error @ 2018-02-16 14:53:15 UTC
 - **PR #39980:** (vutny) [2016.3] Allow to use bg kwarg for cmd.run state function (refs: #45932)
 - 5e0e2a30e2 Merge pull request #45932 from The-Loeki/fix_cmd_run_all_bg
 - f83da27ca5 Merge branch '2017.7' into fix_cmd_run_all_bg
 - 771758fbca Merge branch '2017.7' into fix_cmd_run_all_bg
 - c54fcf7a2d cmd: move separate DRY logging blocks into _run, prevent logging on bg=True, don't use vt on bg
 - ebb1f81a9b cmd run: when running in bg, force ignore_retcode=True
- **PR #46062:** (vutny) Fix typo in postgres_user.present state function @ 2018-02-16 14:44:29 UTC
 - 45ace39961 Merge pull request #46062 from vutny/pg-user-state-fix-typo
 - a5fbe4e95e Fix typo in postgres_user.present state function
- **PR #45763:** (twangboy) Fix rehash function in win_path.py @ 2018-02-15 20:05:16 UTC
 - edcb64de76 Merge pull request #45763 from twangboy/win_fix_path_rehash
 - b9a2bc7b29 Fix hyperlinks
 - 29912adc15 Move the test_rehash test to test_win_functions
 - adc594c183 Remove duplicate link

- e84628c1eb Add some comments to the code
- d50d5f582f Add additional info to docs for *broadcast_setting_change*
- 3a54e09cd9 Rename setting to message
- a3f9e99bc0 Change to a generic function to broadcast change
- 79299361c3 Create refresh_environment salt util
- 967b83940c Fix rehash function
- **PR #46042:** (jfindlay) Revise file_tree pillar module documentation @ 2018-02-15 19:29:52 UTC
 - **PR #46027:** (jfindlay) Revise file_tree pillar module documentation (refs: #46042)
 - a46fbc546c Merge pull request #46042 from jfindlay/file_tree_doc
 - 0ba4954a4b salt.pillar.file_tree revise module documentation
 - 3c6a5bf967 salt.pillar.file_tree provide better debug info
 - bb1cdc451e salt.pillar.file_tree no stack trace when nodegroups undefined
- **PR #46013:** (rallytime) Back-port #45598 to 2017.7 @ 2018-02-15 16:11:05 UTC
 - **PR #45598:** (nullify005) Patch around ResourceRecords needing to be present for AliasTarget (refs: #46013)
 - de86126dd8 Merge pull request #46013 from rallytime/bp-45598
 - 2ea3fef543 No lazy logging
 - f427b0feb9 Change formatting style of logging lines per review
 - ebb244396b Patch around ResourceRecords needing to be present for AliasTarget entries to work
- **ISSUE #45825:** (philpep) selinux.fcontext_policy_present doesn't work on Centos 6 with filetype = all files (refs: #45826)
- **PR #46016:** (rallytime) Back-port #45826 to 2017.7 @ 2018-02-14 18:16:24 UTC
 - **PR #45826:** (philpep) Fix selinux.fcontext_policy_present for Centos 6 (refs: #46016)
 - 07e5735471 Merge pull request #46016 from rallytime/bp-45826
 - 1916e5c4a4 Fix selinux.fcontext_policy_present for Centos 6
- **ISSUE #45784:** (oarmstrong) SELinux module fcontext_get_policy fails with long regex (refs: #45785)
- **PR #46015:** (rallytime) Back-port #45785 to 2017.7 @ 2018-02-14 18:16:09 UTC
 - **PR #45785:** (oarmstrong) m/selinux.fcontext_get_policy allow long filespecs (refs: #46015)
 - a1f4092811 Merge pull request #46015 from rallytime/bp-45785
 - ef6ffb1492 Resolve linting errors
 - 8047066c46 Remove unused import
 - 8f7c45935a Add tests for salt.modules.selinux.fcontext_get_policy
 - bafb7b4e6e Ensure parsed fields are stripped
 - a830a6e819 m/selinux.fcontext_get_policy allow long filespecs
- **PR #46012:** (rallytime) Back-port #45462 to 2017.7 @ 2018-02-14 18:14:56 UTC
 - **PR #45462:** (aphor) emit port cli version, variants as separate args (refs: #46012)
 - 96097c037e Merge pull request #46012 from rallytime/bp-45462

- 9f76836a6c emit port cli version, variants as separate args
- **PR #45991:** ([terminalmage](#)) yumpkg: Fix a couple issues with `_get_extra_opts` @ 2018-02-14 16:48:28 UTC
 - 1279924f5f Merge pull request #45991 from terminalmage/fix-duplicate-extra-opts
 - 916766f651 yumpkg: Fix a couple issues with `_get_extra_opts`
- **PR #46017:** ([rallytime](#)) [2017.7] Merge forward from 2017.7.3 to 2017.7 @ 2018-02-13 21:43:15 UTC
 - 8b9adc258e Merge pull request #46017 from rallytime/merge-2017.7
 - a06645ce71 Merge branch '2017.7.3' into '2017.7'
- **ISSUE #45796:** ([L4rS6](#)) aliases module doesn't follow symlinks (refs: #45797)
- **PR #45988:** ([rallytime](#)) Back-port #45797 to 2017.7 @ 2018-02-13 17:49:02 UTC
 - **PR #45797:** ([L4rS6](#)) follow symlinks in aliases module (close #45796) (refs: #45988)
 - d20ff89414 Merge pull request #45988 from rallytime/bp-45797
 - 953a400d79 follow symlinks
- **PR #45711:** ([bdrung](#)) Fix Unicode tests when run with `LC_ALL=POSIX` @ 2018-02-13 17:42:07 UTC
 - b18087cee0 Merge pull request #45711 from bdrung/fix-unicode-tests
 - b6181b5ed6 Fix Unicode tests when run with `LC_ALL=POSIX`
- **PR #45878:** ([damon-atkins](#)) `ec2_pillar` update to fix finding instance-id (refs: #46137) @ 2018-02-13 17:34:14 UTC
 - 5271fb1d40 Merge pull request #45878 from damon-atkins/2017.7_fix_ec2_pillar
 - 0e74025714 Merge branch '2017.7' into 2017.7_fix_ec2_pillar
 - b4d0b23891 py3 fix
 - 75d9e20d8a Add ignoring 'terminated', 'stopped' instances, to improve changes of a single match
 - 0093472a37 added `tag_key_list` and `tag_key_sep` to create `ec2_tags_list`
 - afb3968aa7 `ec2_pillar` could not find instance-id, resolved. add support to use any tag to compare minion id against.
- **PR #45942:** ([terminalmage](#)) Fix incorrect translation of docker port_bindings -> ports (2017.7 branch) @ 2018-02-13 16:10:03 UTC
 - cf367dbd04 Merge pull request #45942 from terminalmage/issue45679-2017.7
 - 89cbd72a0d Don't try to sort ports when translating docker input
 - 9cd47b39dd Fix incorrect translation of docker port_bindings -> ports
- **PR #45959:** ([rallytime](#)) A couple of grammar updates for the state compiler docs @ 2018-02-12 22:17:49 UTC
 - dae41de7a8 Merge pull request #45959 from rallytime/state-doc-update
 - 6f781cb95d A couple of grammar updates for the state compiler docs
- **ISSUE saltstack/salt#45884:** ([tintoy](#)) "TypeError: can't serialize <NodeImage" when calling salt-cloud with the dimensiondata driver (refs: #45908)

- * 30f06205f7 Fix some issues with reg.py
- **PR #45529:** (Ch3LL) Fix UnboundLocalError for pacman pkg installs @ 2018-01-18 19:01:49 UTC
 - 5e26282843 Merge pull request #45529 from Ch3LL/pacman-sources
 - e619d49ef3 Fix UnboundLocalError for pacman pkg installs
- **PR #45508:** (frogunder) fix test_archive test for mac on 2017.7 branch @ 2018-01-18 16:04:36 UTC
 - 840c97417d Merge pull request #45508 from frogunder/fix_mac_archive_tests_2017.7_branch
 - ccf062d62e fix test_archive test for mac on 2017.7 branch
- **PR #45444:** (rallytime) Back-port #45343 to 2017.7 @ 2018-01-17 17:17:59 UTC
 - **PR #45343:** (rrroo) Support expr_form for manage.up, manage.down (refs: #45444)
 - e1403b6813 Merge pull request #45444 from rallytime/bp-45343
 - c7d2081390 Support expr_form for manage.up, manage.down
- **PR #45465:** (terminalmage) Backport #45095 to 2017.7 branch @ 2018-01-17 15:13:05 UTC
 - **PR #45095:** (terminalmage) PY3: Make loader ignore .pyc files not in __pycache__ (refs: #45465)
 - 4b2c88e2e6 Merge pull request #45465 from terminalmage/bp-45095
 - 2f63a6dbf4 Optimization: don't allocate a new list to concatenate
 - 5074741130 EAFP
 - 85dbdc6a39 PY3: Make loader ignore .pyc files not in __pycache__
- **PR #45365:** (meaksh) Return an error when "gid_from_name" is set but group does not exist @ 2018-01-16 18:31:50 UTC
 - 5f58a87e84 Merge pull request #45365 from meaksh/2017.7-issue-45345
 - da23067f80 Refactor to prevent logical bug when gid is 0
 - 9fdaa0d5e9 Update documentation for 'gid_from_name' parameter
 - 52f9c06908 Fix integration tests for 'user.present' state.
 - e2c32dc6dc Make pylint happy
 - a18dbe0c11 Return error when gid_from_name and group does not exist.
 - ce7b1f4baf Ensure empty string gid is set to None
- **ISSUE #43535:** (Ch3LL) Add pkg.latest_version Test to Auto Test Suite (refs: #44822)

- **PR #44822:** (frogunder) add pkg_latest_version test @ 2018-01-16 14:16:54 UTC
 - de080983e3 Merge pull request #44822 from frogunder/pkg_latestversion
 - 08644e02a0 skip if mac
 - dfb68f32d2 fix if statements and string
 - 3504083849 add pkg_latest_version test
- **ISSUE saltstack/salt-jenkins#603:** (rallytime) [oxygen] CentOS 7 is failing several boto tests with module import failures (refs: #45401)
- **PR #45435:** (rallytime) Back-port #45401 to 2017.7 @ 2018-01-14 12:43:48 UTC
 - **PR #45401:** (gtmanfred) fix boto import failures (refs: #45435)
 - cb3e0cffb3 Merge pull request #45435 from rallytime/bp-45401
 - b9761971c2 fix moto version
 - 0cd95d1cc6 fix test boto imports
- **PR #45380:** (twangboy) Backport changes from #45308 @ 2018-01-11 19:45:21 UTC
 - **PR #45308:** (twangboy) Fix *integration.modules.test_state* for Windows (refs: #45380)
 - 2340f0b487 Merge pull request #45380 from twangboy/backport_45308
 - 419be8a9b5 Backport changes from #45308

27.2.16 Salt 2017.7.6 Release Notes

Version 2017.7.6 is a bugfix release for 2017.7.0.

Statistics

- Total Merges: 182
- Total Issue References: 60
- Total PR References: 217
- Contributors: 47 (Ch3LL, DmitryKuzmenko, GwiYeong, Quarky9, RichardW42, UtahDave, amaclean199, arif-ali, baniobloom, bdrung, benediktwner, bmiguel-teixeira, cachedout, dafenko, damon-atkins, dwoz, ezh, folti, fpicot, frogunder, GarethGreenaway, gtmanfred, isbm, jeroennijhof, jfindlay, jfoboss, kstreee, lomeroe, mattp-, meaksh, mirceaulinic, myinitialsarepm, mzbrosch, nages13, paclat, pcjeff, pruiuz, psyer, rallytime, s0undt3ch, skizunov, smitty42, terminalmage, twangboy, vutny, yagnik, yannj-fr)

Tornado 5.0 Support for Python 2 Only

Tornado 5.0 moves to using `asyncio` for all python3 versions. Because of this and changes in `asyncio` between python 3.4 and 3.5 to only be able to use one `ioloop`, which requires some rearchitecting, support for tornado 5.0 and python3 versions of salt has been delayed to a later release.

For now, to use tornado 5.0, the python 2 version of salt must be used.

Tornado 5.0 Support for Python 2 Only

Tornado 5.0 moves to using asyncio for all python3 versions. Because of this and changes in asyncio between python 3.4 and 3.5 to only be able to use one ioloop, which requires some rearchitecting, support for tornado 5.0 and python3 versions of salt has been delayed to a later release.

For now, to use tornado 5.0, the python 2 version of salt must be used.

Option to Return to Previous Pillar Include Behavior

Prior to version 2017.7.3, keys from *pillar includes* would be merged on top of the pillar SLS. Since 2017.7.3, the includes are merged together and then the pillar SLS is merged on top of that.

The *pillar_includes_override_sls* option has been added allow users to switch back to the pre-2017.7.3 behavior.

Changelog for v2017.7.5..v2017.7.6

Generated at: 2018-05-29 14:05:53 UTC

- **PR #47775:** (gtmanfred) catch UnsupportedOperation with AssertionError @ 2018-05-22 19:04:13 UTC
 - edf94c915e Merge pull request #47775 from gtmanfred/2017.7.6
 - 548f65d056 catch UnsupportedOperation with AssertionError
- **PR #47769:** (gtmanfred) skip test that breaks test suite @ 2018-05-22 15:12:54 UTC
 - 8c38ecd75f Merge pull request #47769 from gtmanfred/2017.7.6
 - 3fdcf0fa82 skip test that breaks test suite
- **PR #47747:** (Ch3LL) Add changelog to 2017.7.6 release notes @ 2018-05-21 14:25:00 UTC
 - 0d5b473ce2 Merge pull request #47747 from Ch3LL/rn_2017.7.6
 - d4aa83b92d Add changelog to 2017.7.6 release notes
- **ISSUE #47484:** (whytewolf) Windows: pkg.latest state not updating packages. (refs: #47702)
- **PR #47702:** (damon-atkins) State pkg.latest called win pkg.install with list of pkgs and the required versions @ 2018-05-19 11:21:23 UTC
 - 8a5b34f7d9 Merge pull request #47702 from damon-atkins/2017.7.6_fix_pkg.latest_state
 - adcc094e08 Merge branch '2017.7.6' into 2017.7.6_fix_pkg.latest_state
- **PR #47700:** (yannj-fr) fix roots modification time check @ 2018-05-18 18:42:17 UTC
 - d610c192d9 Merge pull request #47700 from yannj-fr/2017.7.6
 - 961c1ef61e fix roots modification time check
 - * 2a73e905df Merge branch '2017.7.6' into 2017.7.6
- **PR #47632:** (gtmanfred) handle new _create_stream in tornado 5.0 @ 2018-05-18 14:25:17 UTC
 - 266749420f Merge pull request #47632 from gtmanfred/2017.7.6
 - 2c50c0d2f5 fix pylint
 - 4a29057b16 Fix last test for tornado
 - 550ef2e272 allow using tornado 5.0

- 62e468448b handle new `_create_stream` in tornado 5.0
- **PR #47720:** (rallytime) Back-port #47692 to 2017.7.6 @ 2018-05-18 13:23:03 UTC
 - **PR #47692:** (dwoz) Default windows to m1.small for ec2-classic (refs: #47720)
 - 2643c356af Merge pull request #47720 from rallytime/bp-47692-2017.7.6
 - 6e5cb36839 Default windows to m1.small for ec2-classic
 - * 20d9785244 fix roots modification time check
 - aef37dd1ce fix roots modification time check
 - d51662e053 Ensure `targeted_pkgs` always contains value for non-windows.
 - 83b4224cf8 Adjusted based on feed back.
 - 12f983ce9f Whitespace lint issues
 - 075d3d3c49 `pkg.install` execution module on windows ensures the software package is installed when no version is specified, it does not upgrade the software to the latest. This is per the design. `pkg.latest` must provide the versions to install to `pkg.install`
- **PR #47667:** (Ch3LL) Update `test_mac_user_enable_auto_login` to test both py2 and py3 @ 2018-05-16 15:54:49 UTC
 - 16c2153385 Merge pull request #47667 from Ch3LL/mac_user_enable
 - ba40d3d1a1 Update `test_mac_user_enable_auto_login` to test both py2 and py3
- **PR #47645:** (Ch3LL) query the pip path for test `test_issue_2087_missing_pip` @ 2018-05-15 17:16:10 UTC
 - a4921e86c9 Merge pull request #47645 from Ch3LL/py3_rm_pip
 - 225d90ad4c query the pip path for test `test_issue_2087_missing_pip`
- **PR #47646:** (rallytime) Back-port #47601 and #47643 to 2017.7.6 @ 2018-05-15 14:04:45 UTC
 - **PR #47643:** (dwoz) Remove unwanted file (refs: #47646)
 - **PR #47601:** (dwoz) Skip tests when we can not use `runas` (refs: #47646)
 - e441733ac1 Merge pull request #47646 from rallytime/bp-47601-and-47643
 - 9e1d1a5ef8 Fix typo
 - 4e94609136 Remove unwanted file
 - 0109249c78 use `ignore-undefined-variable`
 - 37caecb7f4 Ignore pylint `WindowsError`
 - c1135d90c7 Better doc string
 - e53d6b9ed9 Skip tests when we can not use `runas`
- **PR #47570:** (gtmanfred) Update dependency to `msgpack` @ 2018-05-10 13:23:09 UTC
 - 6f178ca908 Merge pull request #47570 from gtmanfred/2017.7.6
 - 84aa034e03 Update dependency to `msgpack`
- **PR #47523:** (rallytime) [2017.7.6] Update man pages @ 2018-05-08 13:31:19 UTC
 - 98bd598701 Merge pull request #47523 from rallytime/man-pages
 - 48ecb78dec [2017.7.6] Update man pages
- **ISSUE #47443:** (skylerberg) Input validation does not raise `SaltInvocationError` in `win_dsc.py` (refs: #47505)

- **PR #47517:** (rallytime) Back-port #47505 to 2017.7.6 @ 2018-05-07 19:42:37 UTC
 - **PR #47505:** (dwoz) Raise proper invocation errors (refs: #47517)
 - e608ea9617 Merge pull request #47517 from rallytime/bp-47505-2017.7.6
 - 0734578533 Raise proper invocation errors
- **PR #47476:** (gtmanfred) Specify the cache directory for newer virtualenv modules @ 2018-05-04 19:20:45 UTC
 - 611ca1fc03 Merge pull request #47476 from gtmanfred/2017.7
 - 1f91a85587 specify cache dir for pip install
 - 99e150e09c check for kitchen-vagrant gem before loading windows tests
- **PR #47412:** (twangboy) Fix issue where the cwd was being removed @ 2018-05-04 17:28:11 UTC
 - 7c3f2c56da Merge pull request #47412 from twangboy/fix_47125
 - c9bab0b8e3 Merge branch '2017.7' into fix_47125
 - 2600e404d5 Fix overly long line
 - 5c8db05769 Fix issue where the cwd was being removed
- **PR #47467:** (twangboy) Remove unused settings, update NSIS @ 2018-05-04 17:11:37 UTC
 - 4846e957c4 Merge pull request #47467 from twangboy/cleanup_settings
 - 9d498293b1 Remove unused settings, update NSIS
- **PR #47196:** (twangboy) Fix issues with pip @ 2018-05-04 14:23:04 UTC
 - da9871d36b Merge pull request #47196 from twangboy/fix_47024
 - 14ee5537b9 Add @with_tempdir helper
 - 6c3b5fa6fa Fix typo
 - f031710af2 Merge branch '2017.7' into fix_47024
 - 7c46d9d0d4 Fix integration.modules.test_pip
 - 22ac81df63 Fix integration.modules.test_pip
 - 57d98224d4 Merge pull request #9 from terminalmage/twangboy/fix_47024
 - * 37a13d8004 Update pip unit tests to reflect changes
 - * 7f86779be0 Lint fix
 - c48d8f4f61 DRY and other fixes in pip module
 - b1117896a0 Change from global variable to __context__
 - 3e6e524eca Fix some tests
 - c94f0f20e4 Fix lint error
 - fd47b21530 Fix merge conflict
- **PR #47455:** (Ch3LL) Add In Progress Warning for 2017.7.6 Release Notes @ 2018-05-04 13:44:54 UTC
 - e8c4524bae Merge pull request #47455 from Ch3LL/unreleased_rn
 - b6d0cc2ab7 Add In Progress Warning for 2017.7.6 Release Notes
- **PR #47459:** (gtmanfred) update ubuntu-rolling to 18.04 @ 2018-05-03 20:39:20 UTC
 - 2c7a4b6179 Merge pull request #47459 from gtmanfred/2017.7

- d228e72477 update ubuntu-rolling to 18.04
- **PR #47462:** (terminalmage) Fix docs build on Sphinx 1.7+ @ 2018-05-03 20:06:57 UTC
 - 64a64c0ed7 Merge pull request #47462 from terminalmage/docs
 - 6d7803ece0 Fix docs build on Sphinx 1.7+
- **ISSUE #47436:** (lomeroy) Some Administrative Template policies are not properly set by lgpo (refs: #47438)
- **ISSUE #44516:** (doesitblend) Windows PY3 Minion Returns UTF16 UnicodeError (refs: #44944)
- **PR #47438:** (lomeroy) lgpo fix for issue #47436 @ 2018-05-03 14:40:27 UTC
 - **PR #44944:** (lomeroy) win_lgpo registry.pol encoding updates (refs: #46913, #47438)
 - 6cd0d31c03 Merge pull request #47438 from lomeroy/double_admx_test
 - 4902f1e2ba check if a policy has either an enabled value or enabled list entry or a disabled value or disabled list entry when determining the state of the policy
- **ISSUE #45790:** (bdarnell) Test with Tornado 5.0b1 (refs: #47106, #47433)
- **PR #47433:** (s0undt3ch) Add missing requirements files not committed in #47106 @ 2018-05-02 20:57:14 UTC
 - **PR #47106:** (DmitryKuzmenko) Tornado50 compatibility fixes (refs: #47433)
 - ed69821d19 Merge pull request #47433 from s0undt3ch/2017.7
 - 5abadf25d6 Add missing requirements files not committed in #47106
- **ISSUE #47424:** (bcharron) "salt-cloud -m" fails with nova driver: "There was a query error: u'state'" (refs: #47429)
- **PR #47429:** (gtmanfred) server_list_min should use state, not status @ 2018-05-02 16:27:56 UTC
 - 7ae3497b0c Merge pull request #47429 from gtmanfred/2017.7
 - 8ae32033cc server_list_min should use state, not status
- **PR #47399:** (isbm) zeromq 17 deprecation warning backport from 2018.3 + tornado 5 fixes @ 2018-05-02 15:11:16 UTC
 - 2f5fc4ecc5 Merge pull request #47399 from isbm/isbm-zeromq17-deprecationwarning-2017.7.2-v2
 - a36e49fd27 fix pylint
 - 98b5629b36 Fix imports
 - d94c0f0152 Remove unnecessary variable
 - 8e377b5653 Lintfix: E0203 and attribute access
 - 2aab70b1b8 Install ZMQ handler if <15 version
 - 296c589f4b Use ZMQ switch utility in the integration tests
 - ab5fa34d7c Use ZMQ_VERSION_INFO constant everywhere
 - 43b5558b82 Add trace logging on ZMQ sockets communication
 - 164204a9fe Remove duplicate code for ZMQ monitor handling
 - 834b1e4ff0 Remove obsolete ZMQIOLoop direct instance
 - 1c90cbdb3c Remove an empty line
 - ef2e0acd66 Add logging on ZMQ socket exception
 - 38ceed371d Lintfix: ident

- 1ece6a5f52 Lintfix: line too long
- 4e650c0b44 Remove code duplicate by reusing utilities functions
- 57da54b676 Fix imports
- 948368e9a1 Add libzmq version info builder
- 0b4a17b859 Update log exception message
- 116e1809fc Put a message alongside the exception to the logs
- 4bc43124b7 Remove unnecessary ZMQ import and check for its presence
- 05f4d40269 Use utility for ZMQ import handling in SSH client
- 457ef7d9a5 Use utility for ZMQ import handling in flo/zero
- 08dee6f5bd Use utility for ZMQ import handling
- e2a353cfb0 Remove unnecessary ZMQ extra-check for cache utils
- c8f2cc271d Remove unnecessary ZMQ extra-check for master utils
- 3940667bb9 Remove old ZMQ import handling
- f34a53e029 Use ZMQ utility for version check
- cbb26dcb28 Use ZMQ installer for master
- 453e83210a Add ZMQ version build
- af9601e21d Use ZMQ importer utility in async
- d50b2b2023 Incorporate tornado-5 fixes
- 1fd9af0655 Add ZMQ backward-compatibility tornado installer for older versions
- ad4b40415c Add one place for handling various ZMQ versions and IOloop classes
- **PR #47343:** ([Ch3LL](#)) Add additional service module integration tests and enable for windows @ 2018-05-02 13:39:46 UTC
 - b14e974b5f Merge pull request #47343 from Ch3LL/win_srv_test
 - 2173b6f549 ensure we are enabling/disabling before test
 - d58be06751 Add additional service module integration tests and enable for windows
- **PR #47375:** ([terminalmage](#)) Warn on use of virtual packages in pkg.installed state @ 2018-05-01 21:12:18 UTC
 - b0f3fb577f Merge pull request #47375 from terminalmage/issue47310
 - fa2bea52bb Remove extra blank line to appease linter
 - f8ab2be81c Add debug logging if we fail to detect virtual packages
 - 67c4fc56ac Warn on use of virtual packages in pkg.installed state
- **PR #47415:** ([kstreee](#)) Fixes a bug of rest_tornado's 'local' client, complement fix of #46326 @ 2018-05-01 21:11:25 UTC
 - **PR #47200:** ([kstreee](#)) Resolve a conflict with syndic timeout and bug fixes of the local client in rest_tornado (refs: #47415)
 - **PR #47123:** ([rallytime](#)) [develop] Merge forward from 2018.3 to develop (refs: #47200)
 - **PR #47110:** ([kstreee](#)) Fixes misusing of the timeout option. (refs: #47200)
 - **PR #46692:** ([mattp-](#)) saltnado bugfixes for ldap & syndics (refs: #47123, #47200)

- PR #46326: (kstreee) Fixes a timing bug of saltnado's client local. (refs: #47110, #47123, #47200, #47415)
- PR #45874: (GwiYeong) fix for local client timeout bug (refs: #46326)
- 56235032f4 Merge pull request #47415 from kstreee/fix-local-client-tgt-bug
- b8d37e0a1e To add a test case for the syndic environment, copies the test case which was written by @mattp- that was already merged into develop branch, related pr is #46692.
- 4627bad1fd Realizes 'tgt' field into actual minions using ckminions to subscribe results of the minions before publishing a payload.
- PR #47286: (baniobloom) fixed vpc_peering_connection_name option @ 2018-05-01 19:02:10 UTC
 - d65ceae03 Merge pull request #47286 from baniobloom/vpc_peering_connection_name_fix
 - a968965087 Merge branch '2017.7' into vpc_peering_connection_name_fix
- PR #47270: (meaksh) Fix minion scheduler to return 'retcode' from executed functions @ 2018-04-30 18:21:55 UTC
 - 8a5d4437bb Merge pull request #47270 from meaksh/2017.7-fix-retcode-on-schedule-utils
 - d299cf3385 Merge branch '2017.7' into 2017.7-fix-retcode-on-schedule-utils
 - b6da600fff Initialize __context__ retcode for functions handled via schedule util module
- ISSUE #47264: (jf) doc: <https://docs.saltstack.com/en/latest/ref/modules/all/salt.modules.grains.html#salt.modules.grains.delval> s/of pass/or pass/ (refs: #47371)
- PR #47371: (rallytime) Fix "of pass" typo in grains.delval docs: change to "or pass" @ 2018-04-30 18:18:46 UTC
 - 5b51075384 Merge pull request #47371 from rallytime/fix-47264
 - a43485b49c Fix "of pass" typo in grains.delval docs: change to "or pass"
- PR #47389: (dwoz) Older GitPython versions will not have close @ 2018-04-29 16:42:06 UTC
 - a86e53be66 Merge pull request #47389 from dwoz/moregittestfix
 - 67745c1362 Older GitPython versions will not have close
- PR #47388: (dwoz) Fix missing import @ 2018-04-28 18:33:14 UTC
 - a5367eaf63 Merge pull request #47388 from dwoz/test_pip_fix
 - eb26321e8b Fix missing import
- PR #47380: (gtmanfred) add io_loop handling to runtests engine @ 2018-04-28 17:25:28 UTC
 - 9b59b991c2 Merge pull request #47380 from gtmanfred/2017.7
 - 93d1445ec1 add io_loop handling to runtests engine
- PR #47384: (dwoz) Fix py2 version of pip test @ 2018-04-28 15:13:28 UTC
 - 37822c0cbb Merge pull request #47384 from dwoz/test_pip_fix
 - a37a9da1fb Fix py2 version of pip test
- PR #47382: (dwoz) Close the repo and fix multiple tests @ 2018-04-28 15:09:17 UTC
 - eefd96732e Merge pull request #47382 from dwoz/gitfs_tests
 - 1570708fac Close the repo and fix multiple tests
- PR #47369: (terminalmage) Return an empty dict if no search_order in ldap_ext_pillar config file @ 2018-04-27 20:58:52 UTC
 - 57c75ff660 Merge pull request #47369 from terminalmage/ldap_pillar

- 085883ae2d Return an empty dict if no search_order in ldap ext_pillar config file
- **PR #47363:** (DmitryKuzmenko) Tornado5.0: Future.exc_info is dropped @ 2018-04-27 18:30:18 UTC
 - bcc66dd9bf Merge pull request #47363 from DSRCorporation/bugs/replace_exc_info_with_exception
 - 3f7b93a23c Tornado5.0: Future.exc_info is dropped
- **PR #47334:** (terminalmage) pillar_ldap: Fix cryptic errors when config file fails to load @ 2018-04-27 17:53:51 UTC
 - bcef34f7e1 Merge pull request #47334 from terminalmage/ldap_pillar
 - 0175a8687c pillar_ldap: Fix cryptic errors when config file fails to load
 - 65c3ba7ff1 Remove useless documentation
 - 5d67cb27de Remove unnecessary commented line
- **PR #47347:** (dwoz) Proper fix for mysql tests @ 2018-04-27 17:27:53 UTC
 - 31db8ca7ad Merge pull request #47347 from dwoz/test_mysql_fix_again
 - add78fb618 Fix linter warnings
 - 2644cc7553 Fix linter nits
 - 799c601184 Proper fix for mysql tests
- **PR #47359:** (gtmanfred) add mention of the formulas channel to the formulas docs @ 2018-04-27 16:56:13 UTC
 - e573236848 Merge pull request #47359 from gtmanfred/2017.7
 - 6214ed8133 add mention of the formulas channel to the formulas docs
- **PR #47317:** (dwoz) Do not join a thread that is stopped @ 2018-04-27 13:15:09 UTC
 - **PR #47279:** (dwoz) Gracefully shutdown worker threads (refs: #47317)
 - 629503b2a8 Merge pull request #47317 from dwoz/threadshutdown
 - 6db2a0e4d3 Log exceptions at exception level
 - d4ae787595 Do not join a thread that is stopped
- **PR #47304:** (cachedout) Pass timeout to salt CLI for tests @ 2018-04-27 13:11:58 UTC
 - aacd5cefe3 Merge pull request #47304 from cachedout/test_cli_timeout_arg
 - 85025af83c Pass timeout to salt CLI for tests
- **PR #47311:** (Ch3LL) Add firewall execution modules tests for windows @ 2018-04-27 13:10:54 UTC
 - 55534fb659 Merge pull request #47311 from Ch3LL/firewall_windows
 - 4e16c18c16 Add firewall module windows tests to whitelist
 - 4b2fc4ec66 Add windows firewall execution modules integration tests
- **PR #47348:** (dwoz) Ignore gitfs tests when symlinks not enabled @ 2018-04-27 13:08:27 UTC
 - 1667375a80 Merge pull request #47348 from dwoz/no_symlinks
 - 94a70e847a Ignore gitfs tests when symlinks not enabled
- **PR #47342:** (dwoz) Fix mysql test cases @ 2018-04-27 00:50:53 UTC
 - dac04261b5 Merge pull request #47342 from dwoz/test_mysql_fix
 - 7496f4c5a8 Fix mysql test cases

- **PR #47341:** (dwoz) Fix python 3 support for inet_pton function @ 2018-04-26 23:35:45 UTC
 - 34e78ef564 Merge pull request #47341 from dwoz/inet_pton_fix
 - 85451f48d4 Fix python 3 support for inet_pton function
- **PR #47339:** (dwoz) Use salt.utils.fopen for line ending consistency @ 2018-04-26 22:39:56 UTC
 - e4779f3246 Merge pull request #47339 from dwoz/ssh_key_test_fix
 - e37a93a1ca Remove redundant close call
 - b2ae5889b7 Close the temporary file handle
 - 9f7f83a975 Use salt.utils.fopen for line ending consistency
- **PR #47335:** (dwoz) Remove un-needed string-escape @ 2018-04-26 21:49:27 UTC
 - b221860151 Merge pull request #47335 from dwoz/pip_test_fix
 - dcb6a22c00 Remove un-needed string-escape
- **PR #47331:** (dwoz) Do not encode usernames @ 2018-04-26 19:57:28 UTC
 - 1c527bfd3a Merge pull request #47331 from dwoz/py3_wingroup_fix
 - cc154ef857 Do not encode usernames
- **PR #47329:** (cachedout) Credit Frank Spierings @ 2018-04-26 16:37:59 UTC
 - 708078b152 Merge pull request #47329 from cachedout/frank_credit
 - 33c0644ac4 Credit Frank Spierings
- **PR #47281:** (Ch3LL) Add win_system integration module tests @ 2018-04-26 16:07:41 UTC
 - a545e55543 Merge pull request #47281 from Ch3LL/system_test
 - c9181a75a6 Add destructivetest decorator on tests
 - 0d0c8987fc Add win_system integration module tests
- **PR #47283:** (Ch3LL) Add windows ntp integration module tests @ 2018-04-26 16:04:44 UTC
 - b64d930df0 Merge pull request #47283 from Ch3LL/ntp_test
 - ced7f86546 Add windows ntp integration module tests
- **PR #47314:** (Ch3LL) Skip netstat test on macosx as its not supported @ 2018-04-26 16:00:37 UTC
 - 910aff910f Merge pull request #47314 from Ch3LL/net_mac_test
 - 67beb1451c Skip netstat test on macosx as its not supported
- **PR #47307:** (rallytime) Back-port #47257 to 2017.7 @ 2018-04-26 15:16:23 UTC
 - **PR #47257:** (jeroennijhof) Role is not a list but a dictionary (refs: #47307)
 - 0549ef7c16 Merge pull request #47307 from rallytime/bp-47257
 - 6c5b2f92bc Role is not a list but a dictionary
- **PR #47312:** (rallytime) Update bootstrap script to latest release: 2018.04.25 @ 2018-04-26 15:15:13 UTC
 - d6ff4689f6 Merge pull request #47312 from rallytime/update-bootstrap-release
 - 765cce06a2 Update bootstrap script to latest release: 2018.04.25
- **PR #47279:** (dwoz) Gracefully shutdown worker threads (refs: #47317) @ 2018-04-25 21:15:43 UTC
 - e0765f5719 Merge pull request #47279 from dwoz/py3_build_fix

- 21dc1bab91 Pep-8 line endings
- 717abedaf7 Fix comman wart
- 4100dcd64c Close might get called more than once
- db671f943 Stop socket before queue on delete
- 9587f5c69e Silence pylint import-error for six.moves
- 4b0c7d3b34 Fix typo
- 05adf7c2b1 Use six.moves for queue import
- fe340778fa Gracefully shutdown worker threads
- **PR #47113:** ([jfindlay](#)) Support proto for IPsec policy extension in iptables state @ 2018-04-25 18:01:19 UTC
 - 44f19b2f94 Merge pull request #47113 from jfindlay/iptables_state
 - 8bd08012ee modules,states.iptables support proto for policy ext
- **PR #47302:** ([Ch3LL](#)) Remove unnecessary code from core grains and add test @ 2018-04-25 17:58:48 UTC
 - b7a6206330 Merge pull request #47302 from Ch3LL/dead_code
 - daa68b4877 Add virtual grains test for core grains
 - a59dd2785d Remove dead code in core grains file for virt-what
- **PR #47303:** ([baniobloom](#)) Added clarity on oldest supported main release branch @ 2018-04-25 17:52:39 UTC
 - e29362acfc Merge pull request #47303 from baniobloom/bug_fix_doc
 - b97c9df5f3 added clarity on how to figure out what is the oldest supported main release branch
- **ISSUE #45790:** ([bdarnell](#)) Test with Tornado 5.0b1 (refs: #47106, #47433)
- **PR #47106:** ([DmitryKuzmenko](#)) Tornado50 compatibility fixes (refs: #47433) @ 2018-04-25 15:32:37 UTC
 - 0d9d55e013 Merge pull request #47106 from DSRCorporation/bugs/tornado50
 - 39e403b18d Merge branch '2017.7' into bugs/tornado50
 - 6706b3a2d1 Run off of a temporary config
 - d6873800d5 Allow running pytest>=3.5.0
 - 2da3983740 Tornado 5.0 compatibility fixes
- **ISSUE #47258:** ([drewmat](#)) service state no longer working after kernel upgrade (refs: #47271)
- **PR #47271:** ([gtmanfred](#)) load rh_service for amazon linux not booted with systemd @ 2018-04-25 14:47:06 UTC
 - 2e014f4746 Merge pull request #47271 from gtmanfred/amazon
 - 8a53908908 Do not load rh_service module when booted with systemd
 - e4d1d5bf11 Revert "support amazon linux 2 for service module"
- **ISSUE #44847:** ([malbertus](#)) netconfig.managed state.apply unexpected behaviour of test & debug variables (refs: #47246)
- **PR #47246:** ([mirceaulinic](#)) Attempting to fix #44847: allow a different way to get the test and debug flags into the netconfig state @ 2018-04-25 14:44:02 UTC
 - 599b0ed1e9 Merge pull request #47246 from cloudflare/fix-44847-2017.7
 - ad80028104 This way, we can pass flags such as debug into the state, but also test.

- **PR #47220:** (benediktwerner) Fix pip.installed when no changes occurred with pip >= 1.0.0 @ 2018-04-25 14:23:50 UTC
 - **PR #47207:** (benediktwerner) Fix pip_state with pip3 if no changes occurred (refs: #47220)
 - **PR #47102:** (gtmanfred) dont allow using no_use_wheel for pip 10.0.0 or newer (refs: #47220)
 - 4e2e1f0719 Merge pull request #47220 from benediktwerner/fix-pip-2017.7
 - 0197c3e973 Fix pip test
 - 34bf66c09f Fix pip.installed with pip>=10.0.0
- **PR #47272:** (rallytime) Add windows tests and reg module/state to CODEOWNERS file for team-windows @ 2018-04-25 13:25:29 UTC
 - 92e606251f Merge pull request #47272 from rallytime/reg-windows-codeowners
 - 9445af0185 Add windows tests and reg module/state to CODEOWNERS file for team-windows
 - * 8de3d41adb fixed vpc_peering_connection_name option
- **PR #47252:** (rallytime) Fix the matching patterns in the CODEOWNERS file to use fnmatch patterns @ 2018-04-24 14:10:42 UTC
 - 9dca5c0221 Merge pull request #47252 from rallytime/codeowners-fixes
 - 204b6af92b Fix the matching patterns in the CODEOWNERS file to use fnmatch patterns
- **ISSUE #47173:** (fpicot) pkg.installed ignores normalize parameter (refs: #47177)
- **PR #47177:** (fpicot) fix normalize parameter in pkg.installed @ 2018-04-24 13:37:54 UTC
 - 3de1bb49c8 Merge pull request #47177 from fpicot/fix_47173_pkg_normalize
 - 149f846f34 fix normalize parameter in pkg.installed
- **PR #47251:** (Ch3LL) Update Docs to remove unnecessary + sign @ 2018-04-23 19:37:04 UTC
 - 10e30515dc Merge pull request #47251 from Ch3LL/pub_fix_rn
 - fa4c2e6575 Update Docs to remove unnecessary + sign
- **PR #47249:** (Ch3LL) Add CVE number to 2016.3.6 Release @ 2018-04-23 19:05:42 UTC
 - bb7850a431 Merge pull request #47249 from Ch3LL/pub_fix_rn
 - 24dea24b7e Add CVE number to 2016.3.6 Release
- **ISSUE #47225:** (pruiz) zfs.filesystem_present takes forever on a dataset with lots (10k+) of snapshots (refs: #47226, #47227)
- **PR #47227:** (pruiz) Fix issue #47225: avoid zfs.filesystem_present slowdown when dataset has lots of snapshots (2017.7 branch) @ 2018-04-23 14:05:58 UTC
 - **PR #47226:** (pruiz) Fix issue #47225: avoid zfs.filesystem_present slowdown when dataset has lots of snapshots (refs: #47227)
 - 56933eb0b2 Merge pull request #47227 from pruiz/pruiz/zfs-dataset-present-slow-2017.7
 - fded61f19b Fix issue #47225: avoid zfs.filesystem_present slowdown when dataset has lots of snapshots
- **PR #47167:** (smitty42) Adding updates for python3 compatibility and new virtualbox SDK versi... @ 2018-04-23 13:20:42 UTC
 - 9825065048 Merge pull request #47167 from smitty42/vbox-skd-fix
 - 5de53139cd Merge branch '2017.7' into vbox-skd-fix

- **PR #47213:** (dwoz) Fix coverage on py3 windows builds @ 2018-04-20 22:09:57 UTC
 - 976f031170 Merge pull request #47213 from dwoz/py3win
 - ad9c7f63f0 Fix coverate on py3 windows builds
 - 91252bac95 Adding updates for python3 compatibility and new virtualbox SDK version support.
- **PR #47197:** (dwoz) Move process target to top level module namespace @ 2018-04-20 15:41:06 UTC
 - cebcd6d069 Merge pull request #47197 from dwoz/testfix
 - 25803c9176 Move process target to top level module namespace
- **PR #47193:** (Ch3LL) Add network module integration tests @ 2018-04-20 13:37:19 UTC
 - d4269c2b70 Merge pull request #47193 from Ch3LL/network_test
 - bbf9987c19 Add network module integration tests
- **PR #47189:** (Ch3LL) Add autoruns.list integration test for Windows @ 2018-04-19 21:16:34 UTC
 - c777248a78 Merge pull request #47189 from Ch3LL/autoruns
 - 6a88bedb7a Add autoruns to windows whitelist
 - e9e4d4af70 Add autoruns.list integration test for Windows
- **PR #47184:** (Ch3LL) Add status module integration modules tests for Windows @ 2018-04-19 19:38:56 UTC
 - 65f344e371 Merge pull request #47184 from Ch3LL/status_test
 - 25a84428b8 Add status module integration modules tests for Windows
- **PR #47163:** (rallytime) Updage jenkins module autodocs to use jenkinsmod name instead @ 2018-04-19 19:35:00 UTC
 - **PR #46801:** (yagnik) rename jenkins to jenkinsmod (refs: #46900, #47163)
 - 965600ad6c Merge pull request #47163 from rallytime/jenkins-autodoc
 - 0039395017 Updage jenkins module autodocs to use jenkinsmod name instead
- **PR #47185:** (twangboy) Add additional integration tests to whitelist @ 2018-04-19 18:20:25 UTC
 - 0a43dde5fc Merge pull request #47185 from twangboy/add_tests
 - 345daa0423 Add additional integration tests to whitelist
- **PR #47172:** (dwoz) Allow non admin name based runs on windows @ 2018-04-19 17:26:42 UTC
 - 1a600bb9a4 Merge pull request #47172 from dwoz/cover_without_admin
 - cadd759727 Use warnings to warn user
 - 144c68e214 Allow non admin name based runs on windows
- **PR #47110:** (kstreee) Fixes misusing of the timeout option. (refs: #47200) @ 2018-04-18 17:16:20 UTC
 - **PR #46326:** (kstreee) Fixes a timing bug of saltnado's client local. (refs: #47110, #47123, #47200, #47415)
 - **PR #45874:** (GwiYeong) fix for local client timeout bug (refs: #46326)
 - d5997d2301 Merge pull request #47110 from kstreee/fix-misusing-of-timeout
 - 0624aee0ed Fixes misusing of the timeout option.
- **ISSUE #40948:** (ScoreUnder) salt-call falsely reports a master as down if it does not have PKI directories created (refs: #40961)

- **PR #40961:** ([terminalmage](#)) Make error more explicit when PKI dir not present for salt-call @ 2018-04-18 16:08:17 UTC
 - 87ca2b4003 Merge pull request #40961 from terminalmage/issue40948
 - 6ba66cca41 Fix incorrect logic in exception check
 - fed5041c5f Make error more specific to aid in troubleshooting
 - 8c67ab53b4 Fix path in log message
 - 3198ca8b19 Make error more explicit when PKI dir not present for salt-call
- **PR #47134:** ([Ch3LL](#)) Add user integration tests for windows OS @ 2018-04-18 14:29:40 UTC
 - f5e63584d4 Merge pull request #47134 from Ch3LL/user_win_test
 - e7c9bc4038 Add user integration tests for windows OS
- **PR #47131:** ([gtmanfred](#)) add __cli opts variable for master processes @ 2018-04-17 21:33:57 UTC
 - da2f6a3fac Merge pull request #47131 from gtmanfred/cli
 - 1b1c29bf62 add __cli for master processes
- **ISSUE #47116:** ([pcjeff](#)) pip 10.0.0 can not import pip.req (refs: #47121)
- **PR #47129:** ([rallytime](#)) Back-port #47121 to 2017.7 @ 2018-04-17 20:45:11 UTC
 - **PR #47121:** ([pcjeff](#)) fix pip import error in pip 10.0.0 (refs: #47129)
 - 9b8e6ffb8c Merge pull request #47129 from rallytime/bp-47121
 - 11da526b21 add ImportError
 - bd0c23396c fix pip.req import error in pip 10.0.0
- **PR #47102:** ([gtmanfred](#)) dont allow using no_use_wheel for pip 10.0.0 or newer (refs: #47220) @ 2018-04-17 20:44:58 UTC
 - eb5ac51a48 Merge pull request #47102 from gtmanfred/2017.7
 - 3dc93b310b fix tests
 - 8497e08f8e fix pip module for 10.0.0
 - 4c07a3d1e9 fix other tests
 - b71e3d8a04 dont allow using no_use_wheel for pip 10.0.0 or newer
- **PR #47037:** ([twangboy](#)) Fix build_env scripts @ 2018-04-17 18:54:17 UTC
 - c1dc42e67e Merge pull request #47037 from twangboy/fix_dev_scripts
 - 990a24d7ed Fix build_env scripts
- **PR #47108:** ([dwoz](#)) Fix unit.utils.test_event.TestAsyncEventPublisher.test_event_subscription @ 2018-04-17 00:25:07 UTC
 - 6a4c0b8a1a Merge pull request #47108 from dwoz/async_test_fix
 - 3d85e30ce5 AsyncTestCase is required for AsyncEventPublisher
- **PR #47068:** ([cachedout](#)) Catch an operation on a closed socket in a test @ 2018-04-16 19:56:03 UTC
 - 03892eaf0b Merge pull request #47068 from cachedout/catch_value_error_socket_test
 - 7db5625632 Catch an operation on a closed socket in a test
- **PR #47065:** ([dwoz](#)) Jinja test fix @ 2018-04-16 16:16:42 UTC

- 1ea2885ec2 Merge pull request #47065 from dwoz/jinja_test_fix
- 673cd31c65 Merge branch '2017.7' into jinja_test_fix
- PR #47077: (dwoz) Fix failing state test by normalizing line endings @ 2018-04-16 15:48:39 UTC
 - 5293b5b5ca Merge pull request #47077 from dwoz/test_state_fix
 - 444da3f893 Fix py3 wart (chr vs bytesstring)
 - e8acca01c2 Fix failing state test by normalizing line endings
- ISSUE #46538: (HenriWahl) salt-cloud gives "FutureWarning: The behavior of this method will change in future versions." (refs: #47067)
- PR #47067: (gtmanfred) use the recommended opennebula lookup method @ 2018-04-16 15:48:15 UTC
 - ca967de5da Merge pull request #47067 from gtmanfred/2017.7
 - f913a7859c use the recommended opennebula lookup method
- PR #47064: (dwoz) Fix fileserver roots tests @ 2018-04-14 21:30:23 UTC
 - 7fddad6cd9 Merge pull request #47064 from dwoz/roots_tests_fix
 - 25fd7c0694 fix py3 wart, encode os.linesep
 - d79f1a1961 Fix fileserver roots tests
- PR #47069: (cachedout) Pass the timeout variable to the CLI when calling salt in tests @ 2018-04-14 15:20:25 UTC
 - 977c6939c4 Merge pull request #47069 from cachedout/match_timeout_arg
 - b8990f5258 Pass the timeout variable to the CLI when calling salt in tests
- PR #47074: (dwoz) Kitchn should ignore artifacts directory @ 2018-04-14 13:06:19 UTC
 - 2c4c19c622 Merge pull request #47074 from dwoz/ignore_artifacts
 - c3941efad0 Kitchn should ignore artifacts directory
- ISSUE #47000: (mvintila) Client API: full_return parameter missing from cmd_subset function (refs: #47055)
- PR #47055: (mattp-) #47000 - add proper handling of full_return in cmd_subset @ 2018-04-13 20:17:10 UTC
 - c484c0bd71 Merge pull request #47055 from bloomberg/GH-47000
 - 8af3f5b874 GH-47000: add proper handling of full_return in cmd_subset
- PR #47039: (twangboy) Fix winrm powershell script @ 2018-04-13 18:09:56 UTC
 - f3496030cc Merge pull request #47039 from twangboy/win_fix_winrm_script
 - 6635b9003f Fix winrm powershell script
 - * 46fa2c04de Fix py3 os.linesep wart
 - * 3c565d7e54 Use salt.utils.fopen
 - * aa965310f1 Clean up cruft
 - * efc9866580 Jinja test fixes
- PR #46326: (kstreee) Fixes a timing bug of saltnado's client local. (refs: #47110, #47123, #47200, #47415) @ 2018-04-13 13:59:28 UTC
 - PR #45874: (GwiYeong) fix for local client timeout bug (refs: #46326)
 - 1700a10ebe Merge pull request #46326 from kstreee/fix-client-local

- 0f358a9c9e Fixes a timing bug of saltnado’s client local.
- ISSUE #46877: (trudesea) Unable to apply GPO (Windows 2016) (refs: #46913)
- ISSUE #44516: (doesitblend) Windows PY3 Minion Returns UTF16 UnicodeError (refs: #44944)
- PR #46913: (lomeroy) 2017.7 Fix #46877 – win_lgpo start/shutdown script reading @ 2018-04-12 15:10:50 UTC
 - PR #44944: (lomeroy) win_lgpo registry.pol encoding updates (refs: #46913, #47438)
 - c3c00316c5 Merge pull request #46913 from lomeroy/2017_7-fix46877
 - 369a0645ed move exception for clarity
 - 32ce5bfda5 Use configparser serializer object to read psscript.ini and script.ini startup/shutdown script files.
- PR #47025: (terminalmage) Fix server_id grain in PY3 on Windows @ 2018-04-12 15:08:00 UTC
 - 9e37cfc9d6 Merge pull request #47025 from terminalmage/fix-server_id-windows
 - cb0cf89ed3 Fix server_id grain in PY3 on Windows
- PR #47027: (rallytime) Back-port #44508 to 2017.7 @ 2018-04-12 15:05:51 UTC
 - PR #44508: (mzbroch) Capirca integration (refs: #47027)
 - 2e193cfb45 Merge pull request #47027 from rallytime/bp-44508
 - 8e72f362f4 Add priority field to support the latest capirca.
 - 112f92baab Add priority field to support the latest capirca.
- PR #47020: (rallytime) Back-port #46970 to 2017.7 @ 2018-04-11 21:48:25 UTC
 - PR #46970: (garethgreenaway) [2017.7] fix to pkgrepo comments test (refs: #47020)
 - 385fe2bc1e Merge pull request #47020 from rallytime/bp-46970
 - 9373dff52b Update test_pkgrepo.py
 - 13cf9eb5b1 Removing debugging.
 - a61a8593e5 Removing suse from pkgrepo comments tests. the pkgrepo functions in SUSE pkg module do not support comments.
- ISSUE #46504: (jfoboss) ntp.managed fails on non-english systems (refs: #46539)
- PR #46539: (jfoboss) #46504 Fix @ 2018-04-11 14:13:24 UTC
 - 8f994e7cf9 Merge pull request #46539 from jfoboss/patch-1
 - 6890122e41 Merge pull request #1 from twangboy/pull_46539
 - * 19c3fadbe5 Fix unit test for win_ntp
 - 826a8d3099 Fixing #46504
- PR #46999: (gtmanfred) switch pip test package @ 2018-04-10 21:18:33 UTC
 - 74d70e95a5 Merge pull request #46999 from gtmanfred/2017.7
 - 791af8f6ce switch pip test package
- PR #46023: (mattp-) add parallel support for orchestrations @ 2018-04-10 19:26:04 UTC
 - 8adaf7f526 Merge pull request #46023 from bloomberg/parallel-orch
 - 0ac0b3ca29 Merge branch '2017.7' into parallel-orch
- ISSUE #46581: (qcpeter) puppet.fact tries to parse output to stderr (refs: #46613)

- **PR #46613:** ([myinitialsarepm](#)) Fix puppet.fact and puppet.facts to use stdout. @ 2018-04-10 15:18:07 UTC
 - 39d65a39cf Merge pull request #46613 from myinitialsarepm/fix_puppet.fact_and_puppet.facts
 - 44ecd13abc Update tests to use cmd.run_all
 - 7d7d40f541 Merge branch '2017.7' into fix_puppet.fact_and_puppet.facts
 - 0ce1520bd0 Merge branch '2017.7' into fix_puppet.fact_and_puppet.facts
 - 69e1f6f681 Fix puppet.fact and puppet.facts to use stdout.
- **PR #46991:** ([gtmanfred](#)) use saltstack salt-jenkins @ 2018-04-10 14:19:00 UTC
 - ba5421d988 Merge pull request #46991 from gtmanfred/windows
 - 98588c1dc5 use saltstack salt-jenkins
- **PR #46975:** ([gtmanfred](#)) Make windows work for test runs in jenkinsci @ 2018-04-10 13:41:18 UTC
 - 00c4067585 Merge pull request #46975 from gtmanfred/windows
 - 1f69c0d7f8 make sure windows outputs xml junit files
 - 4a2ec1bbb3 support new versions of winrm-fs
 - b9efec8526 remove libnacl on windows
 - 2edd5eaf9e fix path
 - b03e272e44 windows work
- **PR #46945:** ([vutny](#)) [DOC] Fix Jinja block in FAQ page @ 2018-04-09 13:05:28 UTC
 - 3cf2353e41 Merge pull request #46945 from vutny/doc-faq-fix-jinja
 - bdf54e61d [DOC] Fix Jinja block in FAQ page
- **PR #46925:** ([terminalmage](#)) Remove reference to directory support in file.patch state @ 2018-04-06 13:54:47 UTC
 - fc2f728665 Merge pull request #46925 from terminalmage/fix-file.patch-docstring
 - 97695657f0 Remove reference to directory support in file.patch state
- **PR #46900:** ([rallytime](#)) Back-port #46801 to 2017.7 @ 2018-04-06 13:47:44 UTC
 - **PR #46801:** ([yagnik](#)) rename jenkins to jenkinsmod (refs: #46900, #47163)
 - eef6c518e1 Merge pull request #46900 from rallytime/bp-46801
 - 6a41e8b457 rename jenkins to jenkinsmod
- **PR #46899:** ([rallytime](#)) Back-port #45116 to 2017.7 @ 2018-04-06 13:47:17 UTC
 - **PR #45116:** ([arif-ali](#)) fix adding parameters to http.query from sdb yaml (refs: #46899)
 - 71839b0303 Merge pull request #46899 from rallytime/bp-45116
 - b92f908da4 fix adding parameters to http.query from sdb yaml
 - * 3d5e69600b address lint issues raised by @isbm
 - * a9866c7a03 fix parallel mode py3 compatibility
 - * 6d7730864a removing prereq from test orch
 - * 6c8a25778f add integration test to runners/test_state to exercise parallel
 - * 2c86f16b39 cherry-pick cdata KeyError prevention from #39832

- * 26a96e8933 record start/stop duration for parallel processes separately
- * e4844bdf2b revisit previous join() behavior in check_requisites
- * f00a359cdf join() parallel process instead of a recursive sleep
- * 6e7007a4dc add parallel support for orchestrations
- **ISSUE #43529:** (Ch3LL) Add publisher_acl Test to Auto Test Suite (refs: #44926)
- **PR #44926:** (frogunder) whitelist_acl_test @ 2018-04-05 15:09:26 UTC
 - d0f5b43753 Merge pull request #44926 from frogunder/whitelisted_acl
 - 18e460fc30 Merge branch '2017.7' into whitelisted_acl
 - 1ad4d7d988 fix assert errors
 - e6a56016df update test
 - 19a2244cb7 whitelist_acl_test
- **ISSUE #46456:** (vitaliyf) "ValueError" when running orch with "subset" (refs: #46464)
- **PR #46464:** (gtmanfred) fix salt subset in orchestrator @ 2018-04-05 14:52:01 UTC
 - 7d822f9cec Merge pull request #46464 from gtmanfred/orchestration
 - 637cdc6b7b fix pylint
 - 0151013ddb document cli option for cmd_subset
 - 4a3ed6607d add test for subset in orchestration
 - 3112359dd6 fix salt subset in orchestrator
- **ISSUE #46523:** (dwoz) Add a test to the cloud suite for Windows minion on EC2 (refs: #46879)
- **PR #46879:** (dwoz) Fix multiple typos causing tests to fail @ 2018-04-05 13:59:28 UTC
 - 805ed1c964 Merge pull request #46879 from dwoz/cloudtestfix
 - dc54fc53c3 Fix multiple typos causing tests to fail
- **PR #46647:** (twangboy) Fix the tear down function in integration.modules.test_grains @ 2018-04-04 21:14:06 UTC
 - f70f6de282 Merge pull request #46647 from twangboy/win_fix_test_grains
 - c179388b0e Fix the tear down function in integration.modules.test_grains.GrainsAppendTestCase
- **ISSUE #46754:** (nages13) grain item virtual_subtype shows 'Xen PV DomU' on Docker containers (refs: #46756)
- **ISSUE #43405:** (kfix) LXD-created LXC container is detected as a Xen domU (refs: #46756)
- **PR #46756:** (nages13) fix grains['virtual_subtype'] to show Docker on xen kernels @ 2018-04-04 20:53:49 UTC
 - 91c078ce12 Merge pull request #46756 from nages13/bugfix-grain-virtual_subtype
 - 781f5030a4 Merge branch 'bugfix-grain-virtual_subtype' of <https://github.com/nages13/salt> into bugfix-grain-virtual_subtype
 - * cd1ac4b7f9 Merge branch '2017.7' into bugfix-grain-virtual_subtype
 - * 0ace76c0e7 Merge branch '2017.7' into bugfix-grain-virtual_subtype
 - * 9eb6f5c0d0 Merge branch '2017.7' into bugfix-grain-virtual_subtype
 - * 73d6d9d365 Merge branch '2017.7' into bugfix-grain-virtual_subtype
 - * a4a17eba6a Merge branch '2017.7' into bugfix-grain-virtual_subtype

- * bf5034dbdb Merge branch '2017.7' into bugfix-grain-virtual_subtype
- * 8d12770951 Merge branch '2017.7' into bugfix-grain-virtual_subtype
- 7e704c0e81 Moved down container check code below hypervisors to validate containers type running in virtual environment. Fixes #46754 & #43405
- 710f74c4a6 fix grains['virtual_subtype'] to show Docker on xen kernels
- ISSUE #46762: (ScoreUnder) prereq stack overflow (refs: #46788, #46799)
- PR #46799: (garethgreenaway) [2017.7] Adding test for PR #46788 @ 2018-04-04 20:41:23 UTC
 - PR #46788: (garethgreenaway) [2017.7] Ensure failed tags are added to self.pre (refs: #46799)
 - 058bbbed221 Merge pull request #46799 from garethgreenaway/46762_prereq_shenanigans_tests
 - 13875e78cf Fixing documentation string for test.
 - 3d288c44d4 Fixing test documentation
 - 6cff02ef6a Adding tests for #46788
- PR #46867: (terminalmage) Backport string arg normalization to 2017.7 branch @ 2018-04-04 18:06:57 UTC
 - d9770bf3f8 Merge pull request #46867 from terminalmage/unicode-logging-normalization
 - 7652688e83 Backport string arg normalization to 2017.7 branch
- PR #46770: (twangboy) Change the order of SID Lookup @ 2018-04-04 17:33:10 UTC
 - 9eb98b1f6e Merge pull request #46770 from twangboy/fix_46433
 - 89af0a6222 Merge branch '2017.7' into fix_46433
 - 67b4697578 Remove unused import (ling)
 - 9302fa5ab0 Clean up code comments
 - b383b9b330 Change the order of SID Lookup
- ISSUE #46826: (robgott) grain modules using tuples affect targeting (refs: #46839)
- PR #46839: (gtmanfred) match tuple for targets as well @ 2018-04-04 14:07:12 UTC
 - 9c776cffb7 Merge pull request #46839 from gtmanfred/tupletarget
 - 3b7208ce27 match tuple for targets as well
- ISSUE #40245: (czhong111) salt-api automatically restart caused by "opening too many files" (refs: #46817)
- ISSUE #36374: (szjur) Descriptor leaks in multithreaded environment (refs: #46817)
- ISSUE #20639: (GrizzlyV) salt.client.LocalClient leaks connections to local salt master (refs: #46817)
- PR #46845: (rallytime) Back-port #46817 to 2017.7 @ 2018-04-03 19:52:29 UTC
 - PR #46817: (mattp-) address filehandle/event leak in async run_job invocations (refs: #46845)
 - PR #32145: (paclat) fixes 29817 (refs: #46817)
 - 7db251dc11 Merge pull request #46845 from rallytime/bp-46817
 - 36a0f6d8ca address filehandle/event leak in async run_job invocations
- PR #46847: (dwoz) strdup from libc is not available on windows @ 2018-04-03 19:51:33 UTC
 - e3d17ab7bc Merge pull request #46847 from dwoz/missing-strdup
 - 55845f4846 strdup from libc is not available on windows

- **ISSUE #46765:** (roskens) pkg.mod_repo fails with a python error when removing a dictionary key (refs: #46776)
- **PR #46776:** (gtmanfred) fix shrinking list in for loop bug @ 2018-04-03 17:32:16 UTC
 - f2dd79f9c4 Merge pull request #46776 from gtmanfred/2017.7
 - edc1059ee0 fix shrinking list in for loop bug
- **PR #46838:** (gtmanfred) use http registry for npm @ 2018-04-03 17:02:32 UTC
 - 1941426218 Merge pull request #46838 from gtmanfred/npm
 - bff61dd291 use http registry for npm
- **ISSUE #42312:** (frogunder) salt-call -local sys.doc none gives error/traceback in raspberry pi (refs: #46823)
- **PR #46823:** (rallytime) Improve __virtual__ checks in sensehat module @ 2018-04-03 16:56:08 UTC
 - e544254e7b Merge pull request #46823 from rallytime/fix-42312
 - dafa820f93 Improve __virtual__ checks in sensehat module
- **PR #46641:** (skizunov) Make LazyLoader thread safe @ 2018-04-03 16:09:17 UTC
 - 37f6d2de35 Merge pull request #46641 from skizunov/develop3
 - c624aa4827 Make LazyLoader thread safe
- **PR #46837:** (rallytime) [2017.7] Merge forward from 2016.11 to 2017.7 @ 2018-04-03 14:54:10 UTC
 - 989508b100 Merge pull request #46837 from rallytime/merge-2017.7
 - 8522c1d634 Merge branch '2016.11' into '2017.7'
 - 3e844ed1df Merge pull request #46739 from rallytime/2016.11_update_version_doc
 - 4d9fc5cc0f Update release versions for the 2016.11 branch
- **PR #46740:** (rallytime) Update release versions for the 2017.7 branch @ 2018-04-03 14:36:07 UTC
 - 307e7f35f9 Merge pull request #46740 from rallytime/2017.7_update_version_doc
 - 7edf98d224 Update 2018.3.0 information and move branch from "latest" to "previous"
 - 5336e866ac Update release versions for the 2017.7 branch
- **PR #46783:** (twangboy) Fix network.managed test=True on Windows @ 2018-04-03 12:54:56 UTC
 - ebf5dd276f Merge pull request #46783 from twangboy/fix_46680
 - da5ce25ef3 Fix unit tests on Linux
 - b7f4f377cd Add space I removed
 - f1c68a09b5 Fix network.managed test=True on Windows
- **PR #46821:** (rallytime) Fix the new test failures from the mantest changes @ 2018-04-03 12:40:51 UTC
 - **PR #46778:** (terminalmage) Replace flaky SPM man test (refs: #46821)
 - f652f25cc1 Merge pull request #46821 from rallytime/fix-mantest-failures
 - 209a8029c3 Fix the new test failures from the mantest changes
- **ISSUE #46627:** (vangourd) Win_LGPO fails on writing Administrative Template for Remote Assistance (refs: #46800)
- **PR #46800:** (lomerio) fix win_lgpo to correctly create valuenames of list item types @ 2018-04-03 12:38:45 UTC
 - c460f62081 Merge pull request #46800 from lomerio/2017_7-46627

- 2bee383e9d correct create list item value names if the valuePrefix attribute does not exist on the list item, the value is the value name, other wise, the valuenam a number with the valuePrefix prepended to it
- **ISSUE #46347:** (twangboy) Buid 449: unit.modules.test_inspect_collector (refs: #46675)
- **PR #46675:** (dwoz) Skip test when git symlinks are not configured @ 2018-04-03 12:19:19 UTC
 - df26f2641e Merge pull request #46675 from dwoz/inspectlib-tests
 - d39f4852d8 Handle non-zero status exception
 - 83c005802b Handle cases where git can not be found
 - 628b87d5c4 Skip test when git symlinks are not configured
- **ISSUE #46808:** (ezh) Sharedsecret authentication is broken (refs: #46809)
- **PR #46815:** (terminalmage) Backport #46809 to 2017.7 @ 2018-04-02 20:05:15 UTC
 - **PR #46809:** (ezh) Fix sharedsecret authentication (refs: #46815)
 - 4083e7c460 Merge pull request #46815 from terminalmage/bp-46809
 - 71d5601507 Fix sharedsecret authentication
- **PR #46769:** (dwoz) Adding windows minion tests for salt cloud @ 2018-04-02 18:51:49 UTC
 - 3bac9717f4 Merge pull request #46769 from dwoz/wincloudtest
 - eabc234e5d Fix config override name
 - 5c22a0f88d Use absolute imports
 - 810042710d Set default cloud test timeout back to 500 seconds
 - 5ac89ad307 Use winrm_verify_ssl option causing tests to pass
 - 71858a709c allow not verifying ssl winrm saltcloud
 - ba5f11476c Adding windows minion tests for salt cloud
- **PR #46786:** (twangboy) Return int(-1) when pidfile contains invalid data @ 2018-04-02 18:42:12 UTC
 - f1be939763 Merge pull request #46786 from twangboy/fix_46757
 - b0053250ff Remove int(), just return -1
 - 7d56126d74 Fixes some lint
 - 49b3e937da Return int(-1) when pidfile contains invalid data
- **PR #46814:** (terminalmage) Backport #46772 to 2017.7 @ 2018-04-02 18:39:37 UTC
 - **PR #46772:** (bmiguel-teixeira) fix container removal if auto_remove was enabled (refs: #46814)
 - 89bf24b15c Merge pull request #46814 from terminalmage/bp-46772
 - a9f26f2ab8 avoid breaking if AutoRemove is not found
 - 97779c965d fix container removal if auto_remove was enabled
- **PR #46813:** (terminalmage) Get rid of confusing debug logging @ 2018-04-02 18:19:27 UTC
 - 5ea4ffbdb6 Merge pull request #46813 from terminalmage/event-debug-log
 - 5d6de3a2eb Get rid of confusing debug logging
- **PR #46766:** (twangboy) Change the way we're cleaning up after some tests @ 2018-03-30 18:01:03 UTC
 - e533b7182d Merge pull request #46766 from twangboy/win_fix_test_git

- 5afc66452c Remove unused/redundant imports
 - 88fd72c52c Use with_tempfile decorator where possible
- **PR #46778:** (terminalmage) Replace flaky SPM man test (refs: #46821) @ 2018-03-30 17:55:14 UTC
 - 69d450db84 Merge pull request #46778 from terminalmage/salt-jenkins-906
 - bbf35d3ea Replace flaky SPM man test
- **ISSUE #46762:** (ScoreUnder) prereq stack overflow (refs: #46788, #46799)
- **PR #46788:** (garethgreenaway) [2017.7] Ensure failed tags are added to self.pre (refs: #46799) @ 2018-03-30 17:11:38 UTC
 - c935ffb740 Merge pull request #46788 from garethgreenaway/46762_prereq_shenanigans
 - fa7aed6424 Ensure failed tags are added to self.pre.
- **ISSUE #46354:** (twangboy) Build 449: unit.test_state (refs: #46655)
- **ISSUE #46350:** (twangboy) Build 449: unit.test_pyobjects.RendererTests (refs: #46655)
- **ISSUE #46349:** (twangboy) Build 449: unit.test_pydsl (refs: #46655)
- **ISSUE #46345:** (twangboy) Build 449: unit.test_pyobjects.MapTests (Manual Pass) (refs: #46655)
- **PR #46655:** (dwoz) Fixing cleanUp method to restore environment @ 2018-03-29 18:31:48 UTC
 - 395b7f8fdc Merge pull request #46655 from dwoz/pyobjects-46350
 - 5aab442f2 Fix up import and docstring syntax
 - 62d64c9230 Fix missing import
 - 18b1730320 Skip test that requires pywin32 on *nix platforms
 - 45dce1a485 Add reg module to globals
 - 09f9322981 Fix pep8 wart
 - 73d06f664b Fix linter error
 - 009a8f56ea Fix up environ state tests for Windows
 - b4be10b8fc Fixing cleanUp method to restore environment
- **ISSUE #36802:** (rmarcinik) using clean=True parameter in file.recurse causes python process to spin out of control (refs: #46632)
- **PR #46632:** (dwoz) Fix file.recurse w/ clean=True #36802 @ 2018-03-29 18:30:42 UTC
 - af45c49c42 Merge pull request #46632 from dwoz/file-recurse-36802
 - 44db77ae79 Fix lint errors and typo
 - cb5619537f Only change what is essential for test fix
 - eb822f5a12 Fix file.recurse w/ clean=True #36802
- **ISSUE #46660:** (mruepp) top file merging same does produce conflicting ids with gitfs (refs: #46751)
- **PR #46751:** (folti) top file merging strategy 'same' works again @ 2018-03-28 21:12:27 UTC
 - 6e9f504ed1 Merge pull request #46751 from folti/2017.7
 - 7058f10381 same top merging strategy works again
- **PR #46691:** (Ch3LL) Add groupadd module integration tests for Windows @ 2018-03-28 18:01:46 UTC
 - d3623e0815 Merge pull request #46691 from Ch3LL/win_group_test

- 7cda825e90 Add groupadd module integration tests for Windows
- **ISSUE #46352:** (twangboy) Build 449: `unit.test_client` (refs: #46696)
- **PR #46696:** (dwoz) Windows `unit.test_client` fixes @ 2018-03-28 17:55:47 UTC
 - 14ab50d3f4 Merge pull request #46696 from dwoz/win_test_client
 - ec4634fc06 Better explanation in doc strings
 - d9ae2abb34 Fix spilling in docstring
 - b40efc5db8 Windows test client fixes
- **ISSUE #45956:** (frogunder) CTRL-C gives traceback on py3 setup (refs: #46032)
- **PR #46732:** (rallytime) Back-port #46032 to 2017.7 @ 2018-03-28 13:43:17 UTC
 - **PR #46032:** (DmitryKuzmenko) Workaroung python bug in `traceback.format_exc()` (refs: #46732)
 - 1222bdbbc00 Merge pull request #46732 from rallytime/bp-46032
 - bf0b962dc0 Workaroung python bug in `traceback.format_exc()`
- **ISSUE #28142:** (zmalone) Deprecate or update the copr repo (refs: #46749)
- **PR #46749:** (vutny) [DOC] Remove mentions of COPR repo from RHEL installation page @ 2018-03-28 13:20:50 UTC
 - 50fe1e9480 Merge pull request #46749 from vutny/doc-deprecate-copr
 - a1cc55da3d [DOC] Remove mentions of COPR repo from RHEL installation page
- **PR #46734:** (terminalmage) Make busybox image builder work with newer busybox releases @ 2018-03-27 21:14:28 UTC
 - bd1e8bcc7d Merge pull request #46734 from terminalmage/busybox
 - 6502b6b4ff Make busybox image builder work with newer busybox releases
- **ISSUE saltstack/salt-jenkins#902:** (rallytime) [2017.7/.5] Test failures for NPM on CentOS 6/7, Ubuntu 14, and OpenSUSE (refs: #46742)
- **PR #46742:** (gtmanfred) only use npm test work around on newer versions @ 2018-03-27 21:13:28 UTC
 - c09c6f819c Merge pull request #46742 from gtmanfred/2017.7
 - fd0e649d1e only use npm test work around on newer versions
- **PR #46743:** (Ch3LL) Workaround `getpwnam` in auth test for MacOSX @ 2018-03-27 21:10:47 UTC
 - 3b6d5eca88 Merge pull request #46743 from Ch3LL/mac_auth
 - 4f1c42c0e3 Workaround `getpwnam` in auth test for MacOSX
- **ISSUE #26920:** (david-fairbanks42) MySQL grant with underscore and wildcard (refs: #46171)
- **PR #46171:** (amaclean199) Fix mysql grant comparisons @ 2018-03-27 17:54:48 UTC
 - b548a3e742 Merge pull request #46171 from amaclean199/fix_mysql_grants_comparison
 - 97db3d9766 Merge branch '2017.7' into fix_mysql_grants_comparison
 - 0565b3980e Merge branch '2017.7' into fix_mysql_grants_comparison
 - 8af407173d Merge branch '2017.7' into fix_mysql_grants_comparison
 - 00d13f05c4 Fix mysql grant comparisons by stripping both of escape characters and quotes. Fixes #26920
- **ISSUE #5721:** (ozgurakan) salt-minion can't restart itself (refs: #46709)

- **PR #46709:** (vutny) [DOC] Update FAQ about Salt self-restarting @ 2018-03-27 14:34:58 UTC
 - 554400e067 Merge pull request #46709 from vutny/doc-faq-minion-master-restart
 - d0929280fc [DOC] Update FAQ about Salt self-restarting
- **PR #46503:** (psyer) Fixes stdout user environment corruption @ 2018-03-27 14:20:15 UTC
 - 3f21e9cc65 Merge pull request #46503 from psyer/fix-cmd-run-env-corrupt
 - e8582e80f2 Python 3-compatibility fix to unit test
 - 27f651906d Merge pull request #1 from terminalmage/fix-cmd-run-env-corrupt
 - * 172d3b2e04 Allow cases where no marker was found to proceed without raising exception
 - * 35ad828ab8 Simplify the marker parsing logic
 - a09f20ab45 fix repr for the linter
 - 4ee723ac0f Rework how errors are output
 - dc283940e0 Merge branch '2017.7' into fix-cmd-run-env-corrupt
 - a91926561f Fix linting problems
 - e8d3d017f9 fix bytes or str in find command
 - 0877cfc38f Merge branch '2017.7' into fix-cmd-run-env-corrupt
 - 86176d1252 Merge branch '2017.7' into fix-cmd-run-env-corrupt
 - 3a7cc44ade Add python3 support for byte encoded markers
 - 09048139c7 Do not show whole env in error
 - ed94700255 fix missing raise statement
 - 15868bc88c Fixes stdout user environment corruption
- **PR #46432:** (twangboy) Default to UTF-8 for templated files @ 2018-03-26 19:02:14 UTC
 - ac2a6616a7 Merge pull request #46432 from twangboy/win_locales_utf8
 - affa35c30d Revert passing encoding
 - a0ab27ef15 Merge remote-tracking branch 'dw/win_locales_utf8' into win_locales_utf8
 - * 9f95c50061 Use default SLS encoding, fall back to system encoding
 - * 6548d550d0 Use salt.utils.to_unicode
 - * 8c0164fb63 Add ability to specify encoding in sdecode
 - * 2e7985a81c Default to utf-8 on Windows
 - 8017860dcc Use salt.utils.to_unicode
 - c10ed26eab Add ability to specify encoding in sdecode
 - 8d7e2d0058 Default to utf-8 on Windows
- **PR #46669:** (terminalmage) Add option to return to pre-2017.7.3 pillar include merge order @ 2018-03-26 19:00:28 UTC
 - fadc5e4ba4 Merge pull request #46669 from terminalmage/pillar-merge-order
 - b4a1d34b47 Add option to return to pre-2017.7.3 pillar include merge order
- **PR #46711:** (terminalmage) Add performance reminder for wildcard versions @ 2018-03-26 18:07:31 UTC

- b90f0d1364 Merge pull request #46711 from terminalmage/wildcard-versions-info
- fc7d16f1af Add performance reminder for wildcard versions
- ISSUE #46353: (twangboy) Build 449: unit.returners.test_smtp_return (refs: #46693)
- PR #46693: (dwoz) File and Pillar roots are dictionaries @ 2018-03-26 15:15:38 UTC
 - 6c80d90bb6 Merge pull request #46693 from dwoz/test_smtp_return
 - 5bf850c67f File and Pillar roots are dictionaries
- ISSUE #36153: (krcroft) Pillarenv doesn't allow using separate pillar environments (refs: #46543)
- PR #46543: (dafenko) Fix missing saltenv and pillarenv in pillar.item @ 2018-03-26 15:05:13 UTC
 - 9a6bc1418c Merge pull request #46543 from dafenko/fix-add-saltenv-pillarenv-to-pillar-item
 - 6d5b2068aa Merge branch '2017.7' into fix-add-saltenv-pillarenv-to-pillar-item
 - 5219377313 Merge branch '2017.7' into fix-add-saltenv-pillarenv-to-pillar-item
 - b7d39caa86 Merge branch '2017.7' into fix-add-saltenv-pillarenv-to-pillar-item
 - 25f1074a85 Add docstring for added parameters
 - 973bc13955 Merge branch '2017.7' into fix-add-saltenv-pillarenv-to-pillar-item
 - 164314a859 Merge branch '2017.7' into fix-add-saltenv-pillarenv-to-pillar-item
 - 267ae9f633 Fix missing saltenv and pillarenv in pillar.item
- PR #46679: (vutny) [DOC] Correct examples in pkg state module @ 2018-03-26 14:40:07 UTC
 - f776040e25 Merge pull request #46679 from vutny/doc-state-pkg
 - 4a730383bf [DOC] Correct examples in pkg state module
- PR #46646: (twangboy) Fix unit.returners.test_local_cache for Windows @ 2018-03-26 14:16:23 UTC
 - 47409eaa6e Merge pull request #46646 from twangboy/win_fix_test_local_cache
 - 8d93156604 Fix unit.returners.test_local_cache for Windows
- ISSUE #46595: (aboe76) saltstack server_id changes with each run on python3 (refs: #46649)
- PR #46649: (terminalmage) Make server_id consistent on Python 3 @ 2018-03-26 13:58:59 UTC
 - 0c2dce0416 Merge pull request #46649 from terminalmage/issue46595
 - e82a1aa1ec Make server_id consistent on Python 3
- PR #46588: (UtahDave) Don't crash when saltwinshell is missing @ 2018-03-21 20:26:31 UTC
 - 4e7466a21c Merge pull request #46588 from UtahDave/no_crash_winshell
 - b7842a1777 Update error message.
 - 95dfdb91ca Don't stacktrace when salt-ssh w/o saltwinshell
- ISSUE #22063: (jeanpralo) Wildcard inside top.sls file for pillar (refs: #41423)
- ISSUE #20581: (notpeter) Many environments: one pillar_root (all your envs are belong to base) (refs: #46309)
- PR #46631: (rallytime) Fix pillar unit test failures: file_roots and pillar_roots environments should be lists @ 2018-03-21 19:22:49 UTC
 - PR #46629: (terminalmage) Fix symlink loop when file_roots/pillar_roots is a string instead of a list (refs: #46631)
 - PR #46569: (rallytime) [2018.3] Merge forward from 2017.7 to 2018.3 (refs: #46631)

- PR #46309: (bdrung) Support dynamic pillar_root environment (refs: #46631)
- PR #41423: (RichardW42) pillar: target's state list support wildcard in top.sls (refs: #46631)
- 33af3cfc7c Merge pull request #46631 from rallytime/update-pillar-unit-tests
- 0f728186aa Fix pillar unit test failures: file_roots and pillar_roots environments should be lists
- ISSUE #26450: (typeshige) file.copy: source file is not present. (refs: #46640)
- PR #46640: (terminalmage) Clarify the docs for the file.copy state @ 2018-03-21 19:14:50 UTC
 - d329e7af78 Merge pull request #46640 from terminalmage/file.copy-docs
 - 480c5f8faa Clarify the docs for the file.copy state
- PR #46642: (vutny) [DOC] Unify cloud modules index header @ 2018-03-21 19:13:28 UTC
 - ff40590c06 Merge pull request #46642 from vutny/doc-cloud-index
 - 51e6aa54a1 [DOC] Unify cloud modules index header
- PR #46619: (rallytime) [2017.7] Merge forward from 2017.7.5 to 2017.7 @ 2018-03-20 19:03:30 UTC
 - 83ed40c06a Merge pull request #46619 from rallytime/merge-2017.7
 - bcbddf5d07 Merge branch '2017.7.5' into '2017.7'
- PR #46584: (twangboy) Fix issue LGPO issue @ 2018-03-20 17:48:33 UTC
 - df12135439 Merge pull request #46584 from twangboy/lgpo-46568
 - 661017104b Detect disabled reg_multi_sz elements properly
- PR #46624: (twangboy) Fix a few inconsistencies in the installer script @ 2018-03-20 17:47:44 UTC
 - 2fd3aa487c Merge pull request #46624 from twangboy/win_fix_installer
 - fa0b0efe46 Fix some installer script inconsistencies
- ISSUE #46552: (JeffLee123) State with require requisite executes despite onfail requisite on another state. (refs: #46571)
- PR #46571: (garethgreenaway) [2017.7] fixes to state.py @ 2018-03-20 13:40:04 UTC
 - f038e3c452 Merge pull request #46571 from garethgreenaway/46552_onfail_and_require
 - 152c43c843 Accounting for a case when multiple onfails are used along with requires. Previously if you have multiple states using 'onfail' and two of those states using a 'require' against the first one state, the last two will run even if the 'onfail' isn't met because the 'require' is met because the first state returns true even though it didn't excute. This change adds an additional hidden variable that is used when checking requisities to determine if the state actually ran.
- ISSUE #46512: (blarghmatey) git.pull failing when run from the salt scheduler (refs: #46520)
- PR #46520: (gtmanfred) pass utils to the scheduler for reloading in modules @ 2018-03-20 13:35:49 UTC
 - 2677330e19 Merge pull request #46520 from gtmanfred/2017.7
 - caefedc095 make sure utils is empty for pickling for windows
 - 2883548e6b pass utils to the scheduler for reloading in modules
- ISSUE #44299: (nhavens) 2017.7.2 breaks pkgrepo.managed yum repo comments (refs: #46531)
- PR #46531: (terminalmage) Fix regression in yumpkg._parse_repo_file() @ 2018-03-20 13:34:59 UTC
 - 7bc3c2e588 Merge pull request #46531 from terminalmage/issue44299
 - b70c3389da Fix case where no comments specified

- ce391c53f4 Add regression test for #44299
- c3e36a6c94 Fix regression in yumpkg._parse_repo_file()
- f0c79e3da3 Slight modification to salt.utils.pkg.rpm.combine_comments()
- **ISSUE #46521:** (dwoz) `-name` argument not honored for cloud test suite (refs: #46567)
- **PR #46567:** (dwoz) Honor named tests when running integration suites @ 2018-03-20 13:24:42 UTC
 - b80edb5d26 Merge pull request #46567 from dwoz/runtest-n-wart
 - 3b6901e19d Honor named tests when running integration suites
- **PR #46580:** (twangboy) Clarify some issues with msu files in win_dism.py @ 2018-03-16 18:57:55 UTC

 - 79f2a76609 Merge pull request #46549 from Ch3LL/dimension_test
 - bb338c464c Fix dimensionsdata test random_name call
- **PR #46529:** (gtmanfred) retry if there is a segfault @ 2018-03-13 22:41:54 UTC
 - 083846fe0e Merge pull request #46529 from gtmanfred/kitchen
 - 50d6e2c7be retry if there is a segfault
- **PR #46511:** (rallytime) Back-port #45769 to 2017.7 @ 2018-03-13 17:08:52 UTC
 - **PR #45769:** (Quarky9) Suppress boto WARNING during SQS msg decode in sqs_engine (refs: #46511)
 - 5cc11129f1 Merge pull request #46511 from rallytime/bp-45769
 - a8ffceda53 Suppress boto WARNING during decode, reference: <https://github.com/boto/boto/issues/2965>

27.2.17 Salt 2017.7.7 Release Notes

Version 2017.7.7 is a bugfix release for [2017.7.0](#).

The 2017.7.7 release contains only a small number of fixes, which are detailed below.

This release fixes two critical issues.

The first is Issue [#48038](#), which is a critical bug that occurs in a multi-syndic setup where the same job is run multiple times on a minion.

The second issue is [#48130](#). This bug appears in certain setups where the Master reports a Minion time-out, even though the job is still running on the Minion.

Both of these issues have been fixed with this release.
